The revenues of the Colony of Southern Nigeria alone are liable in respect of the above Stock, and the dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of His Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Stock or of the dividends thereon, or for any matter relating thereto (Act 40 and 41, Vict. Cap. 59).

Forms of Application and a Statistical Statement relative to the Revenue, Expenditure, and Trade of the Colony from 1898 to 1908 inclusive, and a Memorandum as to the position of the Colony, which has been prepared by the Government of Southern Nigeria, may be obtained by applying at the Offices of the Crown Agents for the Colonies in Whitehall Gardens, S.W., and at No. 1, Tokenhouse Buildings, E.C.; at that of Messrs. Mullens, Marshall and Co., 13, George St., Mansion House, E.C.; of Messrs. J. and A. Scrimgeour, South Sea House, Thre dneedle Street, E.C.; and at the Bank of British West Africa, Limited, 17, Leadenhall Street, E.C.; and copies of the Ordinances under which the Loan is raised may be seen on application at the Office of the Crown Agents in Whitehall Gardens.

Office of the Crown Agents for the Colonies,
Whitehall Gardens, London,
2nd May, 1908.

METROPOLITAN WATER (B) STOCK.

(Issued under the Metropolis Water Act, 1902, the Metropolitan Water Board Act, 1906, the Metropolitan Water Board (Various Powers) Act, 1907, and the Metropolitan Water Stock Regulations, 1903).

INTEREST AT £3 PER CENT. PER ANNUM.

Payable Half-yearly, on the 1st March and 1st September, at the Bank of England.

ISSUE OF £1,500,000 STOCK.

Minimum Price of Issue—£90 per Cent.

First Dividend, being a full Six months' Interest, payable 1st September, 1908.

Trustees are authorised by the Metropolis Water Act, 1902, and the Trustee Act 1893, to invest in this Stock, unless expressly forbidden by the instrument creating the Trust.

THE METROPOLITAN WATER BOARD give notice that they are prepared to receive, at the Bank of England, tenders for £1,500,000 Metropolitan Water (B) Stock, bearing interest at £3 per cent. per annum, such Stock to rank *pari passu* with Metropolitan Water (B) Stock already created and issued.

The money is required to pay off all outstanding Metropolitan Water Board Bills, and for further expenditure in connection with the construction of Reservoirs, Filter Beds, Engine Houses and Machinery, Extension of Mains, and other authorised purposes.

The Stock is secured on the Water Fund, and on all the revenues of the Water Board. In the event of any deficiency, such deficiency is chargeable upon the rates leviable by the Common Council of the City of London, the Councils of the Metropolitan Boroughs and the Councils of the other Boroughs and Districts within the area of the Board, upon an aggregate rateable value exceeding £56,000,000.

The Acts provide that, in accordance with regulations made by the Local Government Board, there shall be established Sinking Funds sufficient to secure the redemption of the Stock within certain periods, as prescribed in such Acts or sanctioned by the Local Government Board; and the Regulations provide that the Stock shall be redeemable at par, at the option of the Water Board, after the 1st September, 1934.

The Books of the Metropolitan Water (B) Stock are kept at the Bank of England, where all Assignments and Transfers are made. Dividend Warrants are transmitted by post, unless otherwise desired.

All Transfers and Stock Certificates are free of Stamp Duty.

Tenders must be delivered at the Chief Cashier's Office, Bank of England, before 2 o'clock, on Thursday, the 7th May, 1908, and a deposit of £5 per cent. on the nominal amount of the Stock tendered for must be paid at the time of the delivery of the tender. The deposit must not be enclosed in the tender.

Where no allotment is made the deposit will be returned, and in the case of partial allotment the balance of the deposit will be applied towards the first instalment.

Tenders must be for even hundreds of Stock, and may be for the whole or any part of the Stock in multiples of £100. Each tender must state what amount of money will be given for every £100 of Stock. The minimum price, below which no tender will be accepted, has been fixed at £90 for every £100 of Stock. All tenders must be at prices which are multiples of sixpence.

In the event of the receipt of tenders for a larger amount of Stock than that to be issued, at or above the minimum price, the tenders at the lowest price accepted will be subject to a *pro rata* diminution.

The dates on which the further payments on account of the Loan will be required are as follows:—

On Monday, the 18th May, 1908 { so much as, when added to the deposit, will leave Sixty Pounds (Sterling) to be paid for each hundred pounds of Stock.

On Thursday, the 18th June, 1908, £30 per cent.

On Thursday, the 16th July, 1908, £30 per cent

The instalments may be paid in full on or after the 18th May, 1908, under discount at the rate of £3 per cent. per annum. In the case of default in the payment of any instalment at its proper date, the deposit and instalments previously paid will be liable to forfeiture.

Script Certificates to bearer will be issued in exchange for the provisional rece pts.

As soon as these Scrip Certificates to bearer have been paid in full they can be inscribed (i.e., converted into Stock); or they can be exchanged for Stock Certificates to bearer, with Coupons attached, in denominations of £100, £500 and £1,000, without payment of any fee, provided that they be presented for exchange on or before 4th August, 1908.

Inscribed Stock will be convertible into Stock Certificates to bearer at any time, free of charge; and Stock Certificates to bearer can be inscribed on payment of a fee of one shilling per Certificate.

Tenders must be on printed forms, which may be obtained at the Bank of England, or at any of its Branches; at the Offices of the Metropolitan Water Board, Savoy Court, Strand; and of Messrs. Mullens, Marshall & Co., 13, George Street, Mansion House, London, E.C.

By Order,
A. B. PILLING,
Clerk of the Board.
ARTHUR NEWTON,
Accountant to the Board.

Metropolitan Water Board,
Savoy Court, Strand.
1st May, 1908.

FINANCIAL REVIEW OF REVIEWS

For MAY NOW READY.

THE WORLD'S CABLES AND THE CABLE RINGS.

A Plea for Penny-a-word Telegrams throughout Europe, and a Cheaper Cable Service with our Colonies.

By J. HENNIKER HEATON, M.P.

With Map in Colours of the World's Cables.

SOME NOTES ON THE AMERICAN POSITION. By Henry Clews.

The New York correspondent of the *Daily Telegraph* says:—"There is no one in America whose opinion on matters of finance is more highly prized than that of Mr. Henry Clews."

Other Important Articles, Comments, Reports and Letters.

"Quite a monument of careful compilation."—*The Globe.*

300 pp. One Shilling.

2, Waterloo Place, Pall Mall, S.W.

Printed for the Proprietors by St. Clements Press, Limited, Newspaper Buildings, Portugal Street, Kingsway, London, W.C., and Published by Clement Wilson, at Norfolk House, Norfolk Street, Strand, W.C.—May 2, 1908.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 540. New Series. SATURDAY, MAY 9, 1908. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the head ng of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Mr. Asquith's Third Budget.

It may be said to be really only his second budget because his first essay in finance was necessarily based in great measure upon the legacy left him by his predecessor at the Exchequer, but take it as his third, and let us see what his achievements have been. Last year he reduced the tea duty, and graduated the income-tax in a manner which gave a decided relief to the humbler classes of taxpayers, or to those whose incomes depended upon their labour, and the income-tax changes have worked well in several respects. The graduated duty has made the taxpayer more honest, Mr. Asquith says, and perhaps that is true, but as he introduced measures of greater rigour calculated to induce fuller disclosure of earnings or settled income, it is probable that the honesty has been to a considerable extent involuntary. Be this as it may, Mr. Asquith deserves credit for this reform. In the budget he unfolded yesterday he tried, as it were, further to balance the account with the taxpayer by knocking £3,400,000 off sugar duties, lowering the duty that is from 4s. 2d. per cwt. to 1s. 10d. That also is an excellent step from the Free Trader's point of view, and one that will be welcomed all over the country. Our only regret is that when he was about it he did not abolish this vexatious tax altogether; or he might have reduced it by a third, since the machinery for its collection must be kept going, and taken another 1d. in the lb. off tea. However, this point need not occupy us now, and we are thankful for the boon accorded. It represents humdrum finance, but of an excellent kind, and if the Prime Minister's achievements had been as good in other directions we should have had nothing but praise to accord to him as Chancellor of the Exchequer. Another point upon which he took credit to himself, and not without good ground, was the reduction effected in the amount of the national debt during his tenure of office. That has been quite remarkable. Against £27,500,000 of debt redeemed by the previous Government in the last years of its tenure of office, the present Government has wiped off £46,700,000, and at the end of the current fiscal year the calculation is that almost another £15,000,000 or so may be knocked off the debt so that it will be brought back to the total of twenty years ago.

This calculation, however, leaves out of account the new burden to be imposed by old-age pensions. It is only a beginning, and the prospective charge on this account is, as Mr. Asquith himself indicated in the final sentence of his speech, only the herald of further burdens to come. Summing his achievements up, he said, "After meeting every obligation that the service of the country requires, we ask the House to sanction the application of the residue of the national income at our disposal in cheapening the raw material of some of our most important industries, in mitigating the cost to the consumer of one of the prime necessaries of life, and in laying a solid basis for fuller and more humane provision for old age." Just so, it is a solid basis, and only that he lays for others to expand upon, as we may be sure others will. Who would rest satisfied with 5s. a week? It would not pay the recipient's rent, in towns at least, might indeed afford a pretext for raising the rent. The solidity, however, of the basis may be judged by the fact that, assuming the numbers to be endowed with an old-age pension of 5s. per week, or

£13 per annum, to be only 500,000, the equivalent addition to the national debt represented by the annuities thus created would be at least £200,000,000. That would be the consequence if the annuity charge was turned into permanent stock. Pensions, in other words, are on the proposed present scale equivalent in the burden they will ultimately impose on the taxpayer to that amount of new debt. From this point of view, therefore, the debt redeeming achievements of the present Government are not quite so brilliant as they seem, and as Mr. Asquith himself plainly intimates, this is by no means the worst of it. Already the Protectionist party is rubbing its hands in anticipation of what it is going to do, boasting that the pensions budget is preparing the way for them, and many Liberals are only too much in accord with that party in considering this measure alone as a kind of guarantee that Protection is sure of coming back. Again and again we have intimated our objections to any such measure as this, and nothing that Mr. Asquith advanced in his speech in the slightest degree tends to modify our hostility to it. There is a shirking of manifest duty in the Government's method of handling this dangerous project, inasmuch as the Poor Law is left alone with all its hoary abuses, its revolting inhumanity, and its scandalous waste. Surely a higher ideal of statesmanship would have sought to do something to mitigate this crying evil before putting upon the nation an additional burden which even at its initial stage is one of such grave magnitude.

Another point on which we should like to offer a word of caution is the sanguineness of Mr. Asquith's estimates of current revenue. He was quite jocular about the perennially prolific nature of the crop of millionaires, and seemed to think that the industrial and trading reaction now plainly visible was only a passing thing likely to give place at no distant day to a renewal of expansion. With this idea he reckons for an increase—what might be called a further natural increase—in the revenue for the current year amounting to £1,232,000, taking the taxation as unchanged. Superficially he appears to be right. The fact that the income-tax completely falsified his anticipation of last year in a favourable direction by giving the Treasury nearly £2,000,000 more than was anticipated in spite of the concession bestowed upon earned incomes, as well as the fact that the death duties, in spite of their backwardness throughout the greater part of the year, wound up with an increase of £600,000 beyond the budget estimate, as well as the further circumstance that most of the other branches of revenue, except the drink revenue in which there was a small decline, continue to show marvellous stability, appear undoubtedly to warrant Mr. Asquith's sanguineness. We are, however, disinclined to subscribe to his view of the future for many reasons, many of which are not yet capable of being specified. It is our continually expressed belief that the reaction in business has not nearly reached its limit, and that as the months pass by we shall find the sources of revenue shrinking, and receipts both direct and indirect tending to diminish. Mr. Asquith spoke as if the prosperity of this country could never be shaken, as if the experience of recent past years was going to be repeated indefinitely, and the nation go on from wealth to wealth so that it did not matter how enormous the expenditure on the army and navy might be, how rapidly the burden of the bureaucracy was increased by the multiplication of new departments, and the creation of fresh offices with their staffs, and as if a few millions more or less distributed as pauper doles to people of seventy years old and upwards would never be missed. Had he understood at all the real condition of business, not only in this country but throughout the world, had he followed out the effects only now becoming visible of generations of capital wasting, or made any attempt to measure up the results of living on and by credit to the populations not only of these kingdoms and of India and our colonies of all kinds, but to foreign nations, which have followed the same dangerous habit, he would have been slower to count upon a further increase in the public income, and rather have endeavoured to make some genuine and far-reaching attempt to limit the extravagance to which he has good-naturedly ministered during his tenure of the Exchequer. The beginnings of the settling down of credit-born and credit nourished industry and commerce are alone what we yet see, and we as a nation and as an Empire have been living on our capital to an unsuspected extent.

Mr. Asquith's speech was in form and substance so good and well ordered, so apt in phrasing and logical, that we should have liked to print the whole of it, the more so as it is a speech which promises to be of much historical interest. Unfortunately space peremptorily forbids, and we can only summarise two or three other points. Already the reduction in debt has been mentioned, but it may be well to add that last year's diminution amounted to £16,839,000, and that Mr. Asquith calculates the further operations in this direction out of the revenue of the current year to be sufficient to bring the capital figure at March 31 next down to £696,500,000. This compares with £770,700,000 at March 31, 1903, after the close of the South African war, and with £697,000,000, the total at March 31, 1889. On the whole it is well that there is to be a pause in this debt redemption lest it should prove to be little more than a clearing of the way for fresh borrowing when another war comes. And the fact that the redemption of nearly £75,000,000 of the nation's obligations in the course of six years has done nothing to revive stock markets or invigorate trade and industry seems to convey a warning that the pace has been too fast for the taxpayer's capacity. Of the realised surplus, which amounted to £4,726,000 for the year ended March 31 last, an amount very nearly corresponding with the forecast made by this journal, the whole will not be devoted to buying stock in the market for cancellation, but £600,000 will be utilised as capital in the Indian manner to avoid debt. In other words, the money will be applied as new capital expenditure, and that is a most sensible course to take. What is the use of buying in stock on the one hand for the sinking fund and creating new stock or new floating debt with the other in order to pay for public buildings, new defensive works and other things of that kind? A reduction of £151,000 in last year's beer, spirit and wine duties might have suggested to the Government that the drink evil tends to cure itself, but that is another story. It may be added that the taxation revenue for the past year at £130,320,000 was £268,000 more than the revenue of the preceding year and £2,635,000 more than the budget estimate, and seeing that the Chancellor of the Exchequer looked for a diminution instead of an increase of £1,888,000 as a result of graduation of the income-tax, this majestic revenue is really a remarkable testimony to the extent of the nation's unexhausted resources. The gross income on which income-tax was paid last year was £980,000,000, an increase of £37,000,000 on the figure for the previous year. How much of this increase is due to greater diligence in hunting up shirkers, how much to a more thorough collection of the tax within the fiscal year, Mr. Asquith did not say. As a final note, it may be mentioned, that instead of £201,000, which was Mr. Asquith's estimate of the Mint receipts. the amount realised last year was £721,000.

This further summary relating to the surplus and its disposal, together with the rules laid down for determining who are to get pensions of 5s. a week and how they are to be paid, may also prove useful. The explanatory text is from the *Morning Post* :—

Last year Mr. Asquith produced a middle-class Budget—a Budget which relieved earned incomes up to £2,000 of one-fourth of the Income-Tax. This year it is a poor man's Budget. Not only does it lay the foundations of a system of Old-Age Pensions at a cost in the present year of £1,200,000 and an eventual cost of £6,000,000 per annum, but it reduces the duty on sugar from 4s. 2d. to 1s. 10d., or by one farthing per lb., thus sacrificing revenue to the amount of £3,400,000.

The only other source of revenue abandoned is part of the stamp duty on marine insurance policies. This will eventually cost the Exchequer £80,000, but in the present year the loss is only £20,000. A further loss to the Exchequer of £40,000 is accounted for by a grant to be made to the local authorities for collecting certain licence duties.

It will be remembered that last year Mr. Asquith "earmarked" a sum of £2,250,000 with the object of forming the nucleus of an Old-Age Pensions Fund. Of this nest-egg only £1,500,000 is available. The remaining three-quarters of a million, the uncollected arrears of last year's income-tax, reached the Exchequer much more rapidly than was expected, and has had to be handed over to the National Debt Commissioners for the payment of debt.

The estimated revenue and expenditure of the year 1908-9 can best be shown in tabular form:—

	£
Estimated revenue	157,770,000
Estimated expenditure	152,869,000
Leaving available surplus	£4,901,000
This surplus is thus disposed of:	
Reduction in the Sugar Duty from 4s. 2d. to 1s. 10d. per cwt., or by one farthing per lb.	£3,400,000
Reduction in Stamp Duty on Marine Insurance Policies for the voyage	20,000
Cost during the present year of Old-Age Pensions	1,200,000
Grant to Local Authorities for collection of certain licence duties	40,000
	£4,660,000
Leaving a final balance for contingencies of	£241,000

The Prime Minister's proposals for the establishment of an Old-Age Pensions Scheme may be thus summarised:—

(1) From January 1, 1909, poor persons who are British subjects and of the age of 70 and upwards are to be entitled to a pension of 5s. a week (£13 a year), or in the case of married couples living together 3s. 9d. a week (£9 15s. a year) each.

(2) An applicant for the pension will be disqualified if he or she has an income of £26 a year, this income limit being subject to reduction in the case of married couples from £52 to £39 for the two.

(3) Stringent conditions concerning forfeiture or suspension will be provided. These will follow in the main the conditions of the New Zealand scheme.

(4) There will be no sliding scale for apportioning the amount of the pension to the needs of the pensioner. Everybody who fulfils the prescribed conditions will receive the fixed payment of 5s., or, in the case of married couples, 3s. 9d. each.

(5) All persons will be disqualified who have within five years been convicted of serious crime, or such offences as desertion or habitual vagrancy. Persons actually in receipt of Poor Law relief and lunatics will be excluded from the scheme.

(6) Intending applicants will be supplied at post-offices with forms of application, in the filling up of which it will be the duty of the postmaster to give all assistance. These applications will be transmitted to and adjudicated upon by local pension authorities, consisting of committees appointed by County Councils or Municipal Boroughs, and of pension officers, who will be Excise officers.

(7) In case of difference of opinion respecting applications between the pension officer, who will represent the Treasury, and the local committee, there will be an appeal to the Local Government Board.

(8) Persons whose claims to pensions are established will receive books of coupons payable at the local post-office.

Here is a summary of the Budget figures for reference:—

ESTIMATED REVENUE, 1908-9.

	£	Increase + or Decrease —. £
Customs	32,600,000	+ 110,000
Excise	35,500,000	— 220,000
Estates, &c., Duties	19,500,000	+ 430,000
Stamps	8,100,000	+ 130,000
Land Tax	700,000	— 30,000
House Duty	1,900,000	— 60,000
Property and Income Tax	33,000,000	+ 620,000
Total Receipts from Taxes	131,300,000	+ 980,000
Postal Service	18,250,000	+ 370,000
Telegraph Service / Telephone Service	452,000	+ 100,000
Crown Lands	500,000	+ 10,000
Receipts from Suez Canal Shares and Sundry Loans	1,170,000	— 20,000
Miscellaneous	2,000,000	— 252,000
Total Receipts from Non-Tax Revenue	26,470,000	+ 252,000
Total Estimated Revenue	157,770,000	+ 1,232,000

ESTIMATED EXPENDITURE, 1908-9.

I.—Consolidated Fund Services.

National Debt Services:		
(a) Interest and Management, as in Table IV.	18,215,000	— 1,500,000
(b) Repayment of Capital	9,785,000	
Other Consolidated Fund Services	1,685,000	
Payments to Local Taxation Accounts, &c.	11,250,000	
Total Consolidated Fund Services	40,935,000	

II.—Supply Services.

Army (including Ordnance Factories)	27,459,000	— 301,000
Navy	32,319,000	+ 960,000
Civil Services	30,510,000	+ 227,000
Customs and Inland Revenue Departments	3,324,000	+ 221,000
Post Office Services	18,322,000	
Total Supply Services	111,934,000	
Total Estimated Expenditure	152,869,000	+ 1,047,000
Balance	4,901,000	
Total	157,770,000	

Rand Mines, Limited.

It would not be a difficult matter to fill the whole of this issue of the Investors' Review with facts and figures concerning the past and present position and future prospects of the Rand Mines, Limited, the whole of them instructive and significant, affording material for the moralist as well as for those whose sole conception of business life is the amount of profit that can be squeezed out of any kind of industry, let the method of its production be what it will. From force of circumstances, this Rand Mines Company, the greatest enterprise of its kind in the world, is becoming every year a more strictly mining concern, and less a pure creation of profits out of nothing more tangible than the rashness of the foolish to buy wares they know absolutely nothing about, or at best very little, at prices which the sellers declare them to be worth. Out of purely financial operations, what the company calls "realisation of assets," but which must include much in-and-out buying and selling—"punting," as it is colloquially called—in addition to the ordinary marketing of big blocks of subsidiary stocks, profits to the amount of £3,364,350 have been made since the inception of the thing; but with the exception of 1904, when the revenue from this source exceeded half a million sterling, that side of the business has played a steadily diminishing part in the company's fortunes. The best year was 1895, made for ever memorable by the great Kaffir boom, when the financial distillery produced £941,690, while the worst comes within very recent history, the year before last, in fact, the directors so inaccurately gauging the course of the markets during that period that their share transactions landed them in a loss of £58,035. But from 1902 onwards the more legitimate and reliable section of the enterprise has yielded an ever-growing revenue, and shareholders must view with no small satisfaction the lessening dependence upon what may fairly be described as fancy finance. During 1907 the profits on realisations of assets came to the trifling sum of £17,834, mainly due to a sale of shares in the Robinson Central Deep, but the dividend income for the year totalled £664,318, being an increase of £87,404 compared with 1906, owing to the improved dividends paid by several subsidiaries.

Thus the Rose Deep increased its return by 7½ per cent., the Crown Deep by 30 per cent., the Village Main Reef by 5 per cent., and the Robinson Central Deep by 2½ per cent. On the other hand, the Geldenhuis Deep temporarily reduced its distributions by 7½ per cent. to wipe out liabilities on capital account. All told the income for the twelve months was £709,859 and the actual nett balance £675,082, an increase compared with the previous twelve months of £156,405. Yet the dividends paid aggregated only 6s. 6d. per share or 130 per cent. as compared with 9s. or 180 per cent. in 1906, but thanks to this the diminution in the cash and cash assets is not on the same enormous scale that it was in the latter period. At the end of 1905 the liquid assets, in effect the undivided balance, amounted to the fine sum of £1,203,870, but thanks to the dividend for 1906 being heavily in excess of the income, this figure was reduced to £757,244, a drop of £446,626. The dividend for 1906 takes only £583,686, but £171,444 has been used to increase the shareholdings or redeem debentures, so that the free or unappropriated balance is further reduced to £677,197. Shares were purchased in the Durban Roodepoort Deep and Paarl Central Gold Mining, and

5,875 shares of the Simmer and Jack West were exchanged for 7,050 shares of the Jupiter Gold Mining on the amalgamation of those companies. Sundry miscellaneous shares were acquired at a cost of £38,358. Interests are now held in 20 separate undertakings, of which 11 are actual subsidiaries, the proportion of the total share capital possessed ranging from 21.352 per cent. in the Durban Roodepoort Deep to 82.177 per cent. in the case of the Langlaagte Deep. Nine subsidiary and other companies contributed to the revenue for the past year, and since the close of the financial period the Langlaagte Deep has entered the dividend-paying stage with a distribution of 7½ per cent. Given uninterrupted working and a labour supply free from disorganisation, the dividend income for the current year is estimated at £820,000 in round figures, and the chairman forecasted a dividend of 8s., or perhaps slightly more.

Although the capital of Rand Mines, Limited, is only £448,989 and the outstanding debenture debt £378,850 the balance-sheet adds up to £4,556,007, and it seems that no less than £2,660,897 of the company's profits has been reinvested in mining undertakings, the total cost and book value of the entire holding being £3,246,616. Separate claims, mynpachts and water rights, farms and other similar property stand at comparatively small sums, but reservoirs and pumping plants are in the balance-sheet at £162,768. The amount due to sundry creditors is £390,073, including £43,704 payable for shares subscribed for against debtors of £311,720, but the actual cash and bills amount to £733,542. The reduction of the debenture debt is progressing rapidly, the total paid off during the year being £121,159, while of the total outstanding on December 31 of £378,050 a further regular instalment of £83,350 was got rid of on the following day. That, of course, entails a further substantial reduction in the supply of liquid assets, and it will not be wise to run down these too far because one can never tell when a subsidiary company may want help or cash be required for other purposes. For example, the South Nourse, one of the eleven dependents, was compelled to suspend development operations at the close of the year thanks to the exhaustion of the working capital, although doubtless it could have had money from the company had such a course been deemed advisable. Moreover, at the annual meeting the chairman referred to the probability of the erection of a large central power station calculated to give the Victoria Falls Power Company one in the eye. At the same meeting something was said about that much advertised Gordon drill which was not nearly so flattering as some of the accounts mailed or cabled to this side, and the reference is a little curious because we thought the Gordon was an Eckstein pet. "One of the difficulties seems to be that neither the white men nor the natives take to the machine" was one of the chairman's remarks, and "some of the working parts have unfortunately been made of poor material, which has occasioned delays in running," was another. We thought there must be something in the eagerness to offer further prize money for the "best drill," but it is hoped that existing troubles with the Gordon will be overcome.

Mr. Reyersbach had a tilt at the majority report of the Transvaal Mining Commission, taking exception to their views on what constitutes honest mining finance which was natural, but we have not yet had time to thoroughly examine the ponderous tome, and for the moment will leave Mr. Reyersbach in the enjoyment of his own utterance, in which "socialism run mad" and "scatter brain suggestions" were among the more elegant phrases. For the rest the speech was not characterised by any exhibition of feeling, was almost mild and conciliatory, showing that the magnates are slowly learning their lesson, even the labour question not provoking any violent outburst. The producing subsidiaries' Chinese force has been reduced by rather more than 2,000 during the year, but the natives were increased by over 6,000. Glad are we to note a drop in the white death rate of 0.8 per 1,000 to 13.1 per thousand and in the coolie rate from 19.1 to 15.1 for each 1,000, but, on the other hand, the native death rate went up from 35.9 to 43.4, "notwithstanding the care bestowed upon their personal comfort, improvements in hospital arrangements and diet." A few brief facts relating to the nine producing subsidiary companies, and we are finished. We are sorry to note, on looking through the complete individual accounts of these concerns, that in the case of six of them the tendency of the ore to diminish in value still continues, three only showing an improvement on the year. No doubt working costs have been reduced, permitting the treatment of slightly lower grade ore, but we should think the reduction in expenditure must be approaching finality, so that if values still diminish profits per ton must recede.

However, the nine mines milled between them 2,736,045 tons of ore, which yielded 1,100,888 fine ozs. of gold or 8.047 dwts. to the ton, the highest percentage being that of the Ferreira Deep with 11.997 dwts. per ton, and the lowest the Rose Deep with 6.563 dwts. per ton. The value of this vast stream of gold was £4,616,286 or £1 13s. 8.931d. per ton, and it cost to recover £2,893,798 being £1 1s. 1.838d. per ton, so that the profit was £1,722,487 or 12s. 7.093d. per ton. Compared with the previous year the tonnage milled increased by 368,122, the milling duty was 0.509 tons per stamp per day higher, and the actual extraction was increased by 1 per cent., due to the introduction of tube mills. The grade of ore was slightly poorer, but the improved extraction rendered the actual yield almost the same as that of the year before, while working costs were down by 1s. 3.625d. per ton. This with the larger tonnage led to an increase in profit of £375,115, exclusive of reserve gold which was increased during the year by £59,755. Capital expenditure of the lot for the 12 months may be considered moderate at £238,137 as against £421,242, and the ore reserves are put at 9,304,896 tons. Much of this shows the industry to be in a highly flourishing condition, but the chances still seem all against the man who buys a 5s. Rand mine share at £5 10s. or more, while the unfortunate people who bought much higher up the scale, the top figure for the split share was £13, have not the faintest chance of even seeing their capital repaid let alone any interest in the meantime.

Some Facts about United States Business.

With considerable judgment Mr. Seymour Bell, British Commercial Agent in the United States, has gathered together a variety of odds and ends of information relating to the business of the Republic for the past year. No attempt is made to systematise or co-ordinate the various groups of statistics brought together, but for a mere report or record the thing is by no means badly done and the facts are certainly worth looking at. Almost at the start Mr. Bell tells us that a country which produces crops valued at nearly £1,500,000,000 is unlikely to suffer long from industrial stagnation since that represents too large an amount to be held for long uninvested. Probably the crops may often be worth such an amount as this, but does Mr. Bell really mean us to infer that the whole proceeds of a year's crop can be turned into money and invested? Surely the greater part of it, and an increasing part as the population increases, is consumed in ways that never represent exchange into currency in any guise. It is only the surplus of all products that is available for what is called investment, and the history of the United States proves to us that whatever the crops may do they have not furnished the community with the means of carrying out the dazzling improvements and extensions of business and manufacturing appliances so characteristic of recent years. In another part of the report, for example, Mr. Bell informs us that the flotation of new securities during the last three years has been about £1,000,000,000, of which £247,800,000 was issued in 1906. And

although he does not say so, no small part of that £248,000,000 failed to be placed with home investors, much of it indeed came to Europe seeking lodgment.

For all that the United States is a great and progressive country; its people are remarkably intelligent and ready to adopt whatever measures or inventions may promise to increase income. Mr. Bell mentions, for instance, that about ten years ago the Government spent about £2,000 in introducing durum wheat, a variety suitable for growing where the rainfall is slight, and the crop is now worth about £6,000,000 per annum. In fact, agriculture is being attended to after a fashion we might very well imitate. The Agricultural Department in Washington is one of the most efficient and actively progressive in the entire administration. It has devoted attention to the improvement of the soil so that a considerable increase in the yield per acre is expected soon to make its appearance. It looks after adulteration, and has taken steps to protect farmers from having inferior seed supplied to them. It is always ready to give advice, and it has even gone so far as to "present to the people" certain apparatus for separating heavy seed from light, which has been patented by their experts. That is to say, the Department has presumably compensated the patentee and thrown the invention open. Let us hope it will not be captured by a machinery trust and made dearer than ever. Drought-resisting alfalfa is being introduced from Siberia by the same department, and is expected to greatly extend the use of this kind of forage. Last year's hay crop was valued at about £20,000,000. Still more remarkable is the assiduity with which soil is being brought into cultivation through irrigation where the land is dry and by drainage where it is wet. The area under irrigation alone is now about 11,000,000 acres and the value of crops raised on that watered land was estimated at £35,000,000 last year. It is expected that an additional 5,000,000 acres will be ready for settlement in 1908. And soon, if its population goes on growing at the speed of the last decade, the United States will need all the produce the farmers can raise upon every acre they are able to bring into cultivation by any means, in order to feed its own people.

In certain lines of manufacture the United States leads the world, but it is manufacture in raw, or what we should call unfinished products freely utilised by the higher orders of finished goods-makers in other countries, when exported at all, in their particular industries. The United States produced 342,393,000 tons of bituminous coal last year of a value of £91,312,000. Of anthracite coal the weight produced was almost 76,000,000 tons, and the value rather exceeded £33,046,000. Compared with 1906 the weight of the bituminous coal showed an increase of 37,367,000 tons, and of the anthracite an increase of 11,477,000 tons. No wonder that the country is now suffering from a severe depression, not only in mining, but in manufacturing industry of every description. Its production of copper alone fell off last year 22,516,000 lbs., and there was a decline of nearly 313,000 ozs. in the output of gold. But the production of pig-iron increased by 669,000 tons and the increase in the output of petroleum was over 34,101,000 barrels. All these are raw materials, and the output of other minerals was in most cases equally progressive. This increase was accordingly reflected in the returns of what may be called semi-manufactured articles. Of iron ore, for example, the output from the Lake Superior region alone was last year 42,289,000 tons, and since the first of the mines in the Lake Superior ranges was opened they have yielded altogether nearly 380,000,000 tons. By its purchase of the Tennessee Coal and Iron Company's properties it is calculated that the United States Steel Corporation has increased its ore holdings by about 700,000,000 in the States of Alabama and Tennessee, leaving only about 400,000,000 tons unappropriated. Naturally such figures about coal and iron when converted into manufactures, or carried a stage further as it were, find expression in an enormous increase in the output of pig-iron. In 1898 the total output of this commodity was only 11,774,000 tons, and last year it was over 25,781,000 tons, the progress having been nearly unintermittent with just one dip in 1904. Had it not been for the collapse in October last we may be sure that the figure for 1907 would have been more dazzling still. And what is done with all this pig-iron? It is mostly required by home consumers. Very little of it goes abroad. On the contrary, last year, as in most recent years, the United States had to import considerable amounts of pig-iron in addition to the enormous domestic output. The steel ingot making capacity of United States blast furnaces is now about 25,000,000 tons per annum, 2,000,000 tons having been added during the past year, and early in that year every iron and steel mill was working at its fullest capacity, but before the close the output was cut down by from 50 to 60 per cent. The whole year through, moreover, whether trade was good or bad, the price of heavy steel rails was kept at £5 15s. 8d. per ton, and the United States Steel Trust is endeavouring to hold it there to this hour; in fact, the more finished steel products have all through kept up in price, "black sheets No. 28," for instance, being quoted at £10 10s. per ton from January to December and steel bars at £6 8s., although the price of the raw material, pig-iron, varied from month to month. That is the American idea of stable trade, and their way of dealing with bad times is not to cut down wages so much as to throw more and more men out of employment as work falls off. The masters of industry will learn better in time. And it cannot be so very long before the iron and steel trade will revive again, because not only do the 300,000 miles of railroad stand under the continual necessity of renewing and replacing worn materials, but the building trade throughout the Republic, now so depressed, is in the worst of times an enormous consumer of iron and steel.

Since 1900, for instance, the railways have required, or the shops have built, nearly 38,000 locomotives, and last year's production of freight and passenger cars, including the Canadian, was almost 290,000 different vehicles. No wonder that there are at this hour some 300,000 freight cars lying idle. In other directions the railways are making great demands upon the producing capacity of the country and causing the United States Forestry Department to wake up to the necessity of reafforesting. It is calculated by that department that the amount of wood used each year in sleepers is equivalent to the production of 600,000 acres of forest land every year. Two trees must be growing to maintain every sleeper in the track. In the total railroad system of the United States there are over 800,000,000 sleepers now constantly subject to wear, and the railway sleeper lasts at the longest about eleven years, many being of much shorter endurance, it all depending upon the quality of timber used, cedar apparently showing the best wearing capacity. Figures like these give some slight conception of the energy demanded of the people in supplying its own wants, and they also explain to a certain extent the inability of the United States people to see that they are being hurt by their cast-iron system of Protection. As yet their resources are not exhausted at any point, though approaching exhaustion at some. As yet they have not felt the consequences of the stimulus given by their dog-in-the-manger policy to the development of rival producers in other lands, and it will only be when the country has endured a long period of depression—reduced wages, lack of employment, dwindling values in public securities, and so on—that the citizens will begin to understand how they have been robbed.

When put alongside totals such as some of those we have been giving, the figures of the foreign trade of the Republic look insignificant, and that effect would be further heightened were we to compare them with those of this little island of ours. We at least ought to be able to see how the Republic is hampered by its tariff. Its total imports last year were valued at only

£294,068,000 and its exports of £391,596,000 were necessarily larger because, with all the resources the country has, it is dependent upon foreign capital, not only for much of the means of developing its industries, but for the agencies with which its oversea trade is carried on. The United Kingdom carries most of the exports and imports of the United States, Europe at least does, and we are by much the largest European carrier. The total tonnage of American steam vessels entered and cleared at domestic ports in 1907 was barely 13,470,000 tons, while that of foreign steam vessels was over 52,951,000 tons. Since 1890 the American tonnage has increased by only 4,226,149 tons, while the foreign tonnage has increased by 14,371,000 tons, and Mr. Seymour Bell does not make it plain whether the figures relating to the American tonnage include lake shipping as well as the ocean-going vessels. That this ought to have been made clear, however, is proved by the remarkable statistics relating to the lake commerce, which is itself greater than the ocean trade of some important countries. The total freight east and west carried through the Sault Ste. Marie, Michigan and Ontario canals was last year 51,980,000 tons and in 1905 it was little more than 39,527,000 tons. Most of the traffic thus carried is in raw materials—coal, grain and mineral ores. United States statisticians, however, are fond of treating lake steamers as if they were part of the international mercantile marine of the country, and Mr. Bell should have been more particular. It is a fact worth noting that our share of the foreign export trade of the United States, or rather the share of the British Empire, last year was 45 per cent. This includes Canada to be sure, but even so the intimate relations between the two countries is signally illustrated by this one fact. And it is also worth noting that in spite of the tariff the United States continues to be one of our best customers for certain kinds of our manufactures, and that we are the intermediary for the transmission of considerable portions of her purchases in other parts of the world. Last year, of the total imports above given, the United Kingdom's share was 16.8 per cent. as against 13.2 per cent., which was Germany's share, and 8.7 per cent., the share of France. Our proportion was not so high last year as in 1906, but the fluctuation is immaterial, for the fact stands out that we are not only the best customer the United States has, whether as a kingdom or as an empire, but that the very fact of our being such a customer compels her people to buy more largely from us, tariff or no tariff.

Economic and Financial Notes.

Our Foreign Trade in April.

The figures look very bad indeed. Imports show a decrease of £9,683,000 or 17 per cent. at £47,100,000. Exports are also 10.7 per cent. or £3,711,528 down at £30,705,338, and the re-exports of foreign and colonial produce are no less than 30 per cent. or £2,879,000 down at £6,773,228. The only mitigating fact that we can cite is that April had at least one working day less this year than last, because the whole of Easter fell within it instead of Easter Monday only. And for the four months that have expired the show is not nearly so disheartening. It is true that imports for that period at £207,962,465 are £19,997,424 less, but that is a decline of only 4.3 per cent. on the first four months last year, most of which would be accounted for by the recoil in prices. Exports, moreover, although not charged 473 less for the four months at £129,973,379, almost decline of rather less than 3 per cent. on the magnates of periods. On the other hand, the re-labour ques foreign and colonial produce show a decrease The produci 9,164,000, or 25.6 per cent. at £26,835,365 reduced by re months. This steady and grave shrinkage the natives ling of foreign and colonial produce would we to note icate that the recoil in business has hit the d foreign countries more than it has yet United Kingdom, but it is too early to draw inferences. All that we can be sure about is that the general tendency is bad, and apparently in an accentuating degree. Moreover, prices have not gone down all round to the extent that might be laying the foundation for an early recovery. We are still paying more than we did a year ago for most of our cereals, and great though the fall of the price of raw cotton has recently been it has not for the past month brought the figure quite down to the level of a year ago, the decrease in the quantity of raw cotton imported having been 64.4 per cent. as against a decline of only 61.7 per cent. in the value. We are, however, paying decidedly less for hemp, and especially for jute and silk, but amongst articles of consumption other than cereals there is very little relief shown thus far. Our sugar, for instance, is

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.

The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board values."

sensibly dearer, so that, for a time at least, the proposed reduction in the Customs duty may not be visible to the consumer, and dead meat although cheaper is not materially so, while butter is dearer and cheese almost as dear.

Our export trade would be worse than it is but for the high price of coal. The decline in the quantity of this and other fuels exported was a little over 2 per cent. for April but the value increased by 3 per cent., the fact being that our coal merchants are still busy dumping British coal in Germany, helped in this exercise of their talents as traders by the obstinate refusal of the German coal ring to reduce its prices. The stability of this important branch of our export business therefore affords an interesting object lesson in the blessings of Protection. Amongst other exports, the material decline in the value of piece goods has only been to a small extent compensated for by rather better prices. Most serious of all, however, is the relapse in our exports of iron and steel which have dropped back nearly 22½ per cent. in weight, compared, however, with a decline of little more than 17 per cent. in the value. From this we should infer that shrunk though the business is, it remains fairly profitable. Naturally a most serious relapse has taken place in the export of linen piece goods, although prices there have not fallen quite so fast as quantities. This is due mainly to the disorganisation of trade in the United States, and is bound to continue for some time to come. The decline in the value of jute piece goods has been almost disastrous, and our exports for the month show a relapse of nearly 37 per cent. in the value compared with a decline of less than 18 per cent. in the quantity. We have exported larger quantities of raw wool, but at decidedly lower prices, the increase in quantity having been over 143 per cent. while in value it has only been 52.5 per cent. The exports of woollen and worsted yarn and tissues have also declined to an unpleasant extent, and prices have in some instances gone back almost as far as quantities. In woollen and worsted yarn particularly prices are relatively lower, but not in woollen or worsted tissues or woollen carpets. Thus the exhibit is a mixed one, on the whole, however, rather pointing to a continuation of the recoil than to any proximate rally, and it is impossible that this diminution in business and fall in prices can proceed much further without bringing the country face to face with credit difficulties in many directions. Abroad, especially in Germany and Spain, these credit difficulties have already come to a head, and seem to be spreading in spite of the resolute efforts made to cope with them or at least veil them from the public eye. Here we have yet had but few commercial failures, and no bank within the United Kingdom has betrayed the least symptom of being in distress. Nevertheless our day must come unless something happens to bring about a change in the tendency of business. There is nothing yet visible which can bring this welcome change about that we can see. No doubt the diligent emission of fresh loans and of new capital for industrial undertakings may contribute to sustain business, but the disease, we fear, lies deeper than any mere assiduity in credit manufacturing can cope with.

Sir Eldon Gorst's First Report on Egypt.

Were it not that our own budget blocks the way, we could say a great deal about this interesting report. It is quite up to the high standard set by Lord Cromer and is really fascinating reading, exhibiting as it does British administrative capacity at its best. Sir Eldon supports the view of the Egyptian crisis which we have all along held and indicates its, one might say, superficial character so far as the general progress of Egypt is concerned. But we must at present look only to the financial statement. This shows that for 1907 the actual revenue was £E16,368,000 compared with an estimate of £E14,740,000. The anticipated surplus in the budget was only £E500,000 and the actual surplus was £E2,088,000, the expenditure having been increased by only £E40,000 over the budget estimate to £E14,280,000. The revenue was not only £E1,628,000 in excess of the estimates, but £E1,031,000 more than that of 1906. These figures do not indicate much of a crisis, but then the cotton crop was not only the largest ever gathered, but the price obtained was about the highest, certainly for many years past. The fellah, therefore, has not fallen behind in paying his rent or interest charges, and thanks to the great inflow of foreign capital, as addition to the increased native wealth, the foreign trade of the country has expanded in a perfectly marvellous way. For the three years ended with 1890 the average value of the exports was only £E13,507,000 and the figures were then thought good, but for the two years ended with 1907 the average was £E30,920,000. Contrasting the same dates, the three years' average value of imports of merchandise was £E7,613,000 in the three earlier years, and for the last two years it was £E25,066,000. Imports, indeed, have latterly grown faster than exports, so that the excess of imports and foreign charges over exports was on the average of the last two years only £E3,800,000, and as the charges of the Egyptian debt alone amount to £E3,641,000, while over and above there is the profit of foreign traders and the numerous foreign companies now carrying on business in Egypt to be accounted for, it would follow that but for the steady inflow of capital from abroad the finances of the country might become embarrassed, but of this there can really be no danger in present circumstances.

For 1908 the estimated income is put at the moderate figure of £E15,030,000 and the estimated expenditure at £E14,730,000, showing an estimated surplus of £E300,000. Thus the budget is framed on the usual cautious lines, and in spite of the lingering effects of the crisis the actual figures will probably exceed the forecast at the end of the year. With all this abounding prosperity, however, the debt is not diminishing so very fast, for only £E347,000 was paid off in 1907. On 31st December therefore the total capital of the debt was still £E95,834,000 involving an annual charge of £E3,641,000. But of that debt £E8,386,000 is held either by the Government or by the Commissioners of the Debt, and £E317,000 of interest is in this way kept at home. The total amount of debt in the hands of the public was consequently only £E87,448,000 at the end of last year, and the charge this involved, all, or nearly all, going abroad, was £E3,324,000. There is good reason why the debt should not be rapidly diminished. Money is continually wanted for improvements, above all for the extension of irrigation and the railways. It is estimated by the financial adviser that within the next few years £20,000,000 sterling of new capital will be required, and as the Government endeavours most laudably to avoid creating more debt, the only other sources from which this money can be drawn are budget surpluses and the balances at the credit of the reserve fund. This reserve fund showed a credit balance of £E11,055,000 on 1st January, 1907, but this was reduced by various credits open and and payments made to £E6,662,000 at the end of the year, and capital expenditure authorised out of the fund for the current year amounts to £E3,408,000. In the unappropriated balance of the fund, it should be added, the surplus for the past year is included. It will thus be seen that the margin is not a very large one, and delicate handling as well as much vigilance in preventing waste will be required to ensure Egypt against material fresh additions to its public debt.

Johannesburg Municipal Accounts.

These cover the financial year ended June 30 last, and are very full and explicit. The display is not altogether encouraging, because the revenue from rates seems to have fallen back, or the security is diminished, but that may be only a passing symptom, a product of the hard times through which the city has been passing. Now that the Chinese labourers are being sent home, and that larger numbers of whites are finding employment in and around the mines, it is possible enough that the capacity of the town to pay rates may recover. Perhaps the worst symptom about the accounts is the failure of sundry of the public under-

takings to cover the interest upon their cost. Altogether the town spent last year £2,160,342, of which £560,430 was on capital account and £992,679 on maintenance account. Then the various trading departments, water, tramways, markets, and light and power ran away with £607,233, of which light and power took £227,197 and the tramways department £208,477. Of the interest and redemption charges laid upon the city by its public debt of £5,500,000, £180,103 fell upon the rates, an amount equivalent to a charge of 1.05d. in the £. Altogether the rate involved by the shortages in the various businesses carried on by the municipality amounted to 2½d. in the £, and that certainly cannot be described as an onerous charge, unless the property levied upon should be unreasonably overvalued. The excess of expenditure over income in the scavenging department was £60,000, maintenance of streets and street watering cost £109,000, and other expenditure met out of rates amounted to about £77,000. Altogether the town had to provide £426,000, which the rate just mentioned seems to have been sufficient to do. The municipality, moreover, appears to be accumulating reserves, and when capital expenditure is at an end there is nothing whatever to indicate that the finances may not become sufficiently prolific to enable the debt to be redeemed, or the redemption to be provided for, at an increasingly rapid pace. What a costly thing, however, borrowing comes to be, for the three loans issued by the corporation involved an outlay, or pure dead-weight charge, or loss of £315,830 to the municipality! That is to say discount amounted to £235,000, which is the money that may have to be paid back in excess of the amount received, and the expenses of issue took about £80,830.

But why should the expenses of the two earlier loans of £1,500,000 each, viz., that of December 2, 1903, and that of May 13, 1904, have involved such an enormous initial outlay as contrasted with the cost of issuing the £2,500,000 loan of March, 1905? The 1903 issue cost in expenses £39,086 and the 1904 £38,932 against only £2,811, the cost of issuing the large loan of 1905. There is a loan redemption fund credited in the books at £355,671, and represented by stock bought in at a cost of £334,713, and it is explained that the difference between this and the par value represents a gain to the fund of £20,958, which is included in the valuation of £355,980. That is quite right, because this amount of debt has actually been redeemed, and if the price of the stock keeps low at the same time that the revenues of Johannesburg continue to show strength sufficient to meet all obligations and something over, the final liquidation may represent a saving of a portion at least of the initial expenditure and discount just mentioned. By-and-by, however, the price of Johannesburg Municipal stock is likely to improve, because the mining industry will last beyond the ultimate dates of redemption, which are October 1, 1933, for the earliest loan, and April 1, 1934, for the two later loans, amounting together to £4,000,000, and then the profit on redemption by purchase may vanish. A notable reduction took place in the valuation of the town for rating purposes, and that gives, perhaps, the best indication of all that the inhabitants have not been prosperous. For the December half of 1906 the valuation for rating purposes was £45,783,000, and a rate of 1¼d. in the £ was calculated to produce at that valuation £238,451, but the same rate for the first half of 1907 was reckoned to yield only £187,806, because the valuation of property had been reduced to £36,058,999, a reduction of no less than £9,724,000. The trading departments belonging to the municipality give perplexing results. Thus in 1904-5 gas and electric supply yielded a nett income of £19,909, and in the following year one of £25,503, but in 1906-7 the loss was £36,928. It is explained that interest and redemption only to May 15, 1907, has been borne by this department on the sum of £271,355, being the amount paid for property and plant no longer in use, but that does not seem to be enough to account for this startling difference between one year and another. Water supply, on the other hand, has been profitable since the municipality took over its management and liabilities, and last year the nett revenue from this source was £26,566. Tramways, on the other hand, yielded a profit of £10,028 in 1904-5, which came down to £3,479 in the succeeding year, and dropped to a loss of £4,944 last year. Altogether the position of these undertakings seems to be far from satisfactory, and water, at any rate, is dear even now, although the rate charged seems to be lower than it was in former years. For the past year it was equivalent to 5s. 9.84d. per 1,000 gallons sold, and the profit at this rate was only 9.84d. per 1,000 gallons. What it will be under the new arrangement, in virtue of which the rate to general consumers has been reduced from 6s. to 5s. 6d. per 1,000 gallons and that charged to the town engineers' department for street watering purposes from 5s. 6d. to 4s. per 1,000 gallons, we may not estimate, but we should like to know how the accounts between the municipality and departments are made up on a transaction of this kind. Does the water supplied at a lower rate to the municipality involve increased charge to the general consumer, and would it not be clearer finance to charge the town water at actual cost of distribution, and try the effect of a lower general rate in increasing consumption?

Edmundson's Electricity Corporation.

A perusal of sundry papers issued in connection with the affairs of this clogged-up company forces us to the conclusion that the debenture-holders have no alternative but to accept the proposal of the board to issue £200,000 in prior lien debentures. It seems to be either that or liquidation and reconstruction on terms disastrous to shareholders and all concerned. This company, indeed, affords another striking illustration of the folly of forcing business. It created customers, and took shares and other paper of subsidiaries thus brought into existence in payment for work done. The result is that its total investments in the securities of companies created by it or in undertakings promoted by local public authorities is £1,450,700 at the par value. Against this there are reserves, partly made up of premiums received on capital issues, aggregating with the balance in hand £294,879, but the large figure is the stake that Edmundson's Company has accepted out of a total capital creation of £2,826,986 by its offspring, and the income received by it from these investments for the year ended March 31, 1907, was only £31,673, or say about 2.2 per cent. upon the investment. Moreover, the company in its zeal for business guaranteed 5 per cent. dividends upon the ordinary and preference share capital of the Urban Electricity Supply Company down to December 31, 1910, and in that company alone its investments amount to £449,283, of which £212,462 represents advances yielding no return. Its involvements in other directions are, if not so onerous, of a similar description, and, in order to keep its big business going, it had to keep pouring out capital obligations until it is now in a quite helpless position, the actual condition and prospects of business considered. Whether the £200,000 of prior lien debentures will be enough to enable it to pull round may be doubted. The committee of investigation, whose report is a full and judicious one, says that £250,000 will be required, and we fear even that sum may not be enough. But, at any rate, before consenting to allow this charge to be placed ahead of them, the present debenture-holders ought to insist upon receiving pledges from the board binding it to stop those methods of business which have brought the corporation into its present trouble. If a manufacturing industry can only be carried on by financing subsidiary undertakings in order to secure orders, it had much better pull up.

New Zealand Finance.

Sir Joseph Ward has been using very bad language indeed in a political sense with regard to the financial

criticisms of the *Dominion* newspaper, of Wellington, New Zealand. It has been stating some of the true facts about the colony's financial position and commitments, and Sir Joseph likes no facts but his own. Where would he have been if truth, all naked, had always prevailed? Where the colony would have been we can guess, and also where it will go in a financial sense if its wise men do not interfere. One of these wise men, Mr. John Duthie, of Wellington, a well-known merchant, an honest man, an able and very keen politician, has recently been delivering himself of some well-considered observations on the subject which so excites the wrath of the Premier when not handled in his way, and accordingly a letter of Mr. Duthie's that appeared in the same *Dominion* newspaper last March seems worth quoting. What is wanted is the creation of a public opinion, both in New Zealand and here, which will force the administration to slow down, to cease to live upon loans, and so give a fine country some chance to grow up into a healthy nation. Replying to some of the wild words of Sir Joseph Ward, Mr. Duthie's borrowing prospect of "£4,000,000 a year for New Zealand" is calculated to give our market the shivers :—

Now I am not about to undertake such a task, but I propose to comment briefly upon certain urgent and prominent points. As a basis I turn to the public debt, which by the table of March, 1907, was then shown to be £64,179,040. Of this, £47,757,279, usually spoken of as funded, only falls due in 1929, 1944, and 1945, and of the balance, if we assume that the amounts maturing in the remainder of 1907 have been renewed, we have a total of £11,369,987 to be paid within the term of the five years, 1908-12. Against this there is no sinking fund, and so all will have to be renewed. Surely this is an undesirable position. During the last ten years we have added £19,215,616 to our public debt, and the present commitments point to an increased future ratio. The position really amounts to this: that New Zealand in future, under the Premier's system, needs to renew or borrow at least four millions annually.

The position is disquieting, since it is possible that the Dominion with such needs, and in any crisis, could not always borrow so largely; and under such circumstances we might have to pay still higher rates of interest. That this is so is borne out by the fact that of the debt shown to be due in 1908-12, £6,222,815 carries 4 per cent. or over, and only £4,015,672 is at 3½ per cent. or under, and where the lower rate is paid, it is largely on moneys borrowed from the Savings Bank, the Government Life Insurance, or Trust Office. Leaving the debt obligations for the moment, let me turn to the question of interest, and ask why, in view of the market rates ruling for the last fifteen years, we are paying on any debt contracted within that term a higher rate than 3½ per cent. In 1895, with much elation, the treasurer started the 3 per cent. series, due in 1945, and on this there has since been at least two issues, but all were issued at an unsatisfactory discount and cost. In presence of the market rate of these 3 per cents., the Treasurer has chosen to have resort to this 4 per cent. short debt (with, in some cases, a London option) which being unquoted, further complicates and prejudices the market. Yet, all the time money could, as now, have been got at 3½ per cent. and at par. Probably he will soon have to resort to this rate and to a fresh fifty-year issue, and some such step ought to be speedily taken. This question, owing to the tactics of the Premier and the practical supersession of the Public Accounts Committee, has been too much lost sight of, and the effect is that the financial administration and the position developed is becoming intolerable.

Life in Canada for the Worker.

So attenuated is the trickle of information permitted to appear in the Canadian Press or to leak through to this country that letters like the following one are most valuable. It appears in the Bolton *Evening News*, and is the joint production of several emigrants from that part of the country residing in Montreal. The news that seven more Bolton men are about to go out prompts the letter, and those parts of it which possess general interest seem well worth preserving :—

Only three weeks ago the C.P.R. here [*i.e.*, in Montreal] laid off 800 men, and are only working eight hours a day five days a week. The G.T.R. are only working the same, and other firms in this city are on short time, while some have gone spark out. Now, it is all very well for men like Alderman Haslam to sit in a chair and say what these men are going to do. Let me give him one or two instances of Englishmen here. There are hundreds of others as bad as, if not worse than, these. A labourer—an Englishman, a married man with one child—has been on short time since last November. His average earnings per month have been $22. Out of this he pays $7 a month for rent, $1½ a month for tram car tickets (he lives two miles from his work because the house rent is cheaper), his fuel costs another $2 (a very small estimate), leaving him $11½ for food and clothing in a land where food is pretty high.

On Monday morning an English fellow came into our workshop after a job. It looked pitiable to see him, lean and care-worn-looking. How he has lived I don't know, but believe me, sir, as true as there is a God above, the man had no shirt on, in a land where it is sometimes 28 below zero. I was coming home the other night when I purchased five cents' worth of fried potatoes from a cart in the street. I had just got them when a man came up and said to me, "For God's sake, mate, give me a few; I am starving." I gave him the whole bagful, and the way he ate them would have fetched tears from a stone. He was literally starving. So much for the city.

Mr. Cunliffe says he does not think there is much competition on the land. What does he mean by that—farm land or railway land? If he were here he would see this very night a placard in a Labour Bureau which says, "Wanted, for working on the land up West, 800 men. Italians, Swedes, or Scandinavians." This is on one of the main streets here—St. James'-street. Where does the English or Scotchman come in here? An Englishman cannot compete with these men, some of whom have lost all sense of decency, living like swine and taking any wage offered them. Mr. Knott says he believes there is plenty of work on the land. Let him come and have a go at it, and mix with men like these.

Let me give you an instance of a young Bolton fellow here, who was engaged in England as a farm labourer to work on a farm at Ormond, about 100 miles from this place. He started work at 4 o'clock every morning, and for six days a week worked till 8 p.m., and on Sundays till 12 a.m. For this he got the magnificent salary of $10 a month, and board. During the eight weeks he was there he had to help to dig a trench three-quarters of a mile long and two feet deep. How's that for navvying, Mr. Popplewell? Mr. Rothwell is right when he says there are hundreds of eligible men here out of work, but he ought to have said thousands. If Mr. Cunliffe or Alderman Haslam cannot spend the money of the Distress Committee any different, let them send two of the committee out here to investigate for themselves, and I guess they will send no more emigrants just yet. The sun will shine again, but we think we who are on the spot are doing right in advising our Bolton friends not to come to Canada whilst trade is so much slumped, and the money is so tied up.

American Business Notes.

No sign of the excitement over the Pennsylvania Railroad bond issue is visible in the accounts of the New York Associated Banks for the past week. On the contrary their loans and advances show a decrease of £12,600, and they are stronger only in cash, and naturally also in deposits. The specie average shows an increase of £661,400 and the greenbacks an average increase of £355,000, making £1,016,400 more in the average cash holdings for the week. This increase, too, has taken place in spite of an export of about £1,250,000 in gold during the week. Nett deposits, moreover, have risen by £1,371,000 and yet the surplus reserve is higher by £673,600 at a total of £12,470,600 which compares with only £1,365,000 a year ago. Exports of gold may therefore continue for some time to come without apparently putting the New York market in any danger of stringency, but then the trade of the country continues to shrink and the total clearings for the entire country last week showed, according to Bradstreet's, a decrease of 21 per cent. compared with the same week last year. Excluding New York the decrease was 20.80 per cent. and that shows the rest of the country to be doing worse and worse as the weeks go by. Well may Mr. Cortelyou call in Treasury deposits from the Banks. He took £4,000,000 from them this week and proposes to take £5,000,000 on May 23rd, and will need it all for the spending of the Washington Government is not slowing down.

The non-clearing banks and trusts seem to have done most of the local finance business in connection with the Pennsylvania issue, for their loans and investments show an increase of £2,871,400 on the week, and the total of the week's average under this head was £165,826,000. Specie, too, went up by £34,000 to £9,419,000, but the holding of greenbacks was about £99,000 less at £2,338,000. Their deposit average, however, was up £2,734,600 to a total of £134,038,000, and the proportion of reserve to deposits is officially given at 31.6 per cent., against 31.5 per cent. a week ago. We make it under 8.8 per cent. Be that as it may, the outside banks and trusts seem to have done most of the financing, and to have provided the funds

required for market rigging last week. Are they taking over the paper that the astute master players have been selling under cover of the Pennsylvania "success"?

That Pennsylvania Railroad bond subscription was just prodigious. Only £8,000,000 was demanded and the total amount applied for came to £250,000,000, so the small applicants seem to have got nothing at all, and those who applied for £3,000 and upwards received only 5 per cent. of the amount written for. Success of this kind ends generally by doing more mischief than many an actual failure, and it certainly gave an uncontrollable impulse to the rush after the money of the public, or credit of the market, by all sorts and conditions of borrowers. New York City promptly put up £8,000,000 six months notes or bills, offered at a price equivalent to an interest of 3⅞ per cent., and half the amount was at once taken at that figure by Messrs. Kuhn, Loeb and Co. and the Guaranty Trust Co. Another £2,000,000 was sold in small amounts to scattered buyers at a price equivalent to 3¾ per cent., and a considerable number of bills are also said to have been placed in Paris. It was apparently the first intention to try Europe with the whole amount. The security should be good enough, and a market for paper of that sort might be found anywhere, but the credits will have to be renewed in the same form six months hence should the market not be favourable to the issue of a new long-term loan. "Several large bankers" are said to have formed a syndicate in order to advance £2,000,000 on Gould's Western Pacific Road.

After much talk and many rumours it is at last made public that the board of the Union Pacific Company wants only a mere £10,000,000. The stockholders who met at Salt Lake City last Tuesday were asked and promptly agreed to authorise an issue of £20,000,000, but it has been given out that at most one half of this will be put upon the market now, and the further assurance is given that the outside amount of the new debt to be issued against properties at present "owned" by the company is £10,000,000. The remainder of the sanctioned loan will accordingly be kept in reserve available for other projects, extensions, capital refreshers, and so forth. The loan has been taken in hand by Messrs. Kuhn, Loeb & Co., and Messrs. Baring & Rothschild will manage the English portion. Even with their names it will not go off like the Pennsylvania one.

What would our bucket-shopkeepers say to a law like that passed by the legislature of the State of New York? That measure is familiarly known as the Cassidy Anti-Bucket-Shop Bill, and it makes it a felony for any individual firm or corporation to enter into a contract for the purchase or sale, upon credit or margin, of stocks or bonds upon the basis of public market quotations and without intending a *bonâ-fide* purchase or sale. Brokers are to be required to furnish upon written demand to any customer or principal for whom an order has been executed, a written statement containing the names of the persons from whom such property has been bought or to whom it has been sold, as the case may be, and refusal or neglect to furnish such statement within forty-eight hours after demand will be regarded as *primâ facie* evidence of a violation of the law. The Bill further defines a bucket-shop as any building or any room, apartment, booth, office or store therein, or any other place where any contract prohibited by this Act is made or offered to be made, and the penalty for the violation of the law is five years' imprisonment or a £200 fine or both for a single person, and for a corporation a fine of £1,000 for the first offence and dissolution or exclusion from the State in the event of a second conviction. We want something like that here, and apparently the New York Stock Exchange would also be, like our own, the better of a law dealing rigorously with brokers or commission houses who misappropriate the securities of their clients entrusted to them. The now insolvent McIntyre firm seems to have been doing that and its members have stirred up great indignation on Wall Street by alleging this kind of free and easy, help yourself style of business to be quite usual.

Dealing with the big battle-ship agitation in the United States the New York *Commercial Chronicle* points out that the Washington Treasury is at present labouring under a monthly deficit of more than £2,000,000 and that the deficit for the fiscal year, ended 30th June will probably be £12,000,000 as compared with a surplus of £14,400,000 in 1906-7. If in face of these conditions the expenditure of £3,000,000 additional upon four new battle-ships had been sanctioned, it is not difficult to comprehend what the state of the federal budget would have been a year hence. The naval bill, as it is called, has already been increased by £4,000,000 over the figures of last year, and as the expenditure in other directions grows at a terrifying speed it was the clear duty of Congress to restrain Mr. Roosevelt's imitative imperial ambition.

Passing Events.

The House of Commons passed the second reading of the Licensing Bill on Monday evening, after a week of rhetoric and sometimes eloquence, by a majority of 250, or 397 for and 147 against. This does not mean that the Bill will pass in its present form, or indeed that it will be allowed to go through in any form, but it does indicate the power which zealous reformers have over the House and the private opinions of many members on the Liberal side. We have nothing more to say on the subject until it is seen how the Bill shapes in committee, but it is worthy of notice that even the Prime Minister did not seem to be unaware of the fact that other ways might be found of dealing with this social trouble, and perhaps the conflict will yet end in the introduction of a measure calculated to give the State fuller control over the drink traffic by a system of graduated licences. The great merit of such a course would be that by embodying the new licence duties in the budget, they could be forced through the House of Lords. What we feel, and have felt throughout, is that much precious time is being wasted on side issues, on patchings and mendings, whereas what the constitution of the country requires is structural alterations and repairs, the work of master builders, not that of journeymen masons.

We are glad to see that a fund has been started for the relief of the famine-stricken population in India under the patronage of the King. Without his name we fear the response would have been poor, and even helped in this way it is but too certain that the subscriptions will fall immeasurably short of the miserable people's necessities. These necessities are on the increase because the spring harvest is now over in India, and hungry peasants are crawling back on to the relief works in distressing numbers. The Viceroy telegraphed on Monday last that the total number then in receipt of relief was 1,385,000 persons, of whom 1,196,000 were in the United Provinces and 131,000 in Central India. As the harvests gathered were poor, or almost non-existent in the most stricken parts of the Peninsula, it follows that the hunger of the people will increase rather than diminish for probably another two or three months. What can we do against such distress by subscriptions and charitable gifts? The one effectual remedy is a drastic reduction in public expenditure, and of that there is at present no hope.

Too much should not be made of the Indian frontier troubles, nor any great attention paid to the Press attempts to implicate the Amir of Afghanistan in the risings. For one thing, we know nothing whatever as to what the Amir's real sentiments may be, and although it is probable enough that the fuss and adulation bestowed upon him when he visited India have had a bad influence upon his mind and attitude towards us, it is also true, that being alone and without support from Russia or any other Great Power, he cannot be fool enough to court another invasion. The real utility of these frontier disturbances is that of the grindstone. They serve to keep our native Indian army in condition, its arms polished; they lead to mobilisations of masses of armed items, to hurryings hither and thither, promotions of British officers, bulletins of glory, new titles, and a few casualties that don't count. After all we are very much restricted to India so far as liberty

to exercise the professional killing trade is concerned. There are practically no people, except these mountain tribes lying around our too distended north-western border, upon which we can exercise our fighting talents. It is useless to attempt to get up a disturbance with the Shan tribes at the frontiers of China. We tried Tibet and found it a very poor business indeed. Chitral also yielded neither glory nor gain. There is no longer the fear of a Russian invasion to keep the spirits of our troops at murder pitch, and we must not attack the Nepalese lest the supply of Ghourkas should fail us. Thus nowhere can our army find an exercise ground on which to indulge in some semblance of real war, and yet such a ground is necessary if the army is to justify its existence or remain in any real sense a disciplined and capable force. One might just as well expect a butcher to continue an expert at his trade after all his customers had become vegetarians as that an army which never fires a shot could be of any sure use on a field of battle. It is in the social condition of India, not in these frontier troubles, so called, that the real cause for anxiety lies, and we fear internally the temper of the people is becoming increasingly hostile to British rule, not merely in Bengal but all over the Peninsula. And the native army can only be kept in a condition of lip and salute loyalty by the exercise of much discretion.

Incidentally the assembling of the South African Inter-colonial Conference has given the *Times* Pretoria correspondent an opportunity to send some notes about financial affairs out there. Briefly, he says that there may be a small deficit in the Transvaal owing to the total loss of revenue from the Premier Mine, that the Orange River Colony is in much the same position, but that the Intercolonial budget may show a large surplus because of the revenue derived from the new Klerksdorp line, which has been unexpectedly good. With the coast colonies matters are very much worse; Natal looks for a deficit of £124,000 on the top of three successive previous deficits and a large increase in the State debt, while Cape Colony, as Mr. Merriman recently said with great frankness, expects a deficit of £965,000, which is only too likely to be increased by the collapse of De Beers. This deficit comes along with an increase in the public debt of more than £12,000,000, all made within the last four years. How far colonial development has been furthered by outlays of money such as this we have no means of knowing, but Natal at least has frivolously and wastefully expended in wars with the natives much of the proceeds of the loans it has issued, and it has no security worth considering to offer for more.

No doubt it is the financial distress, actual or prospective, of most of these colonies which prompted the Conference to forthwith adopt a resolution to recommend the several Parliaments to appoint delegates to a national convention to be held for the purpose of framing a draft constitution of unity. Their embarrassments, actual and imminent, are compelling the white inhabitants of the various colonies to draw together, and the coast colonies are more eager than ever they were before to be put in a position that would enable them to share in the wealth of the Transvaal. In many respects this movement deserves support. It would be a good thing for British South Africa were it to cease to be sectionalised. Politics might then become more sane and the disposition to parochialism less hurtful to general progress; yet we fear disappointment would follow unification simply because the burdens already assumed are so excessive, so much beyond the permanent resources of the various States. Even the Transvaal is very heavily loaded with debt.

It seems that the German Imperial revenue would have to be raised by from £3,000,000 to £4,000,000 if the proposals for a sinking fund are put in force. That alone is enough to indicate how inopportune these proposals are, and the hostility of the states composing the federation called empire to any increase in direct taxation will probably be sufficient to give any scheme of the kind the *coup de grâce*. Reform of the finances in Germany as elsewhere means, as the *Frankfurter Zeitung* bitingly says, primarily an increase of taxation, and direct taxation at least is not going to be increased within the empire if the federated states can prevent it. Therefore the Government will be obliged to fall back upon indirect taxes; and it has again and again been pointed out in these columns that this particular fountain seems to be nearly dried up, the latest additions to the list of indirect taxes having been on the whole suggestively unprolific.

Mr. Deakin shrewdly enough argues that were the debts of the Australian colonies unified and one borrower substituted for half-a-dozen, the credit of the Commonwealth would be so much higher than that of the individual states as to secure better terms for the borrower. "One Australian stock means, broadly speaking, cheap money," he said; and he is right enough, but there are other considerations which must determine not only the attitude of markets, but the policy of the Australian states. So far as the Money market here is concerned, the credit of the Australian Commonwealth would not long be improved if the various states were still allowed to borrow for their several purposes. That liberty must be taken away from them if unification of their debts is to do any good. We cannot have the Commonwealth coming with a big loan and each state or municipality offering small ones, after the fashion of Canada, else the last state of Australia would soon be worse than the first. Then what attitude will the unifiers of debts assume towards the separate state loans falling due this year and within the next few years? Will they be taken into the new unified scheme and converted into a long term security or will they be left out? If taken in, what becomes of the sinking funds, presumably, in some instances at least, brought into existence with a view to contribute something towards debt redemption? One other question—the unification of the debt and the transfer of all obligations of the kind to the federation or Commonwealth Government will involve a readjustment of Australian inter-state finance. The Commonwealth cannot continue to hand over such a proportion of the revenue it enjoys to the various states after the debt burden is laid upon it as it does now. In the ten months ended April 30 last, for example, the Commonwealth collected through Customs and Excise £9,941,516, or £1,816,986 more than in the same ten months of the previous year. Where would future increases go? To debt extinction or where? New South Wales, by the way, has also collected about £806,000 more in the same ten months, at £11,840,000, and no doubt part of the Commonwealth increase is included in that fine display, but the whole financial position will have to be readjusted.

We are glad to see from the annual report of the Institute of Chartered Accountants in England and Wales that the Council is doing its best to discourage the practice, which they rightly term objectionable, of giving certificates to outside brokers or "bucket shops" with regard to profits on speculative transactions. It points out what must be obvious to even those accountants who have given such certificates, that the sole object for which they are required is to encourage gambling, and it might have added that the gambling in many cases was with loaded dice. One Associate of the Institute was recently suspended for six months for giving a certificate of this character, and if a step of that kind does not deter others it might be advisable to consider whether a second offence should not be followed by expulsion.

The Council of the Institute has further issued a joint opinion on the question of an auditor's duty and the form of balance-sheet and report required under the Companies Act, 1907, signed by such eminent counsel as Sir Robert Finlay, K.C., Mr. Felix Cassel, K.C., Mr. A. R. Kirby, and Sir F. B. Palmer. We have not space to give the whole of this document, most of which refers to matters of routine, but the final paragraph is well worth quoting, in view of the hazy ideas some auditors seem to have of what constitutes their duty:—"Lastly, we do not consider that the auditor's duties are limited to a comparison of the figures in the balance-sheet and those in the books. No doubt he has to examine the

books, but, as Lord Justice Lindley said in Re The London and General Bank (1895, 2 Ch. 683), 'he does not discharge his duty by doing this without inquiry and without taking any trouble to see that the books themselves show the company's true position. He must take reasonable care to ascertain that they do so.'"

The directors of the Rio de Janeiro Tramway, Light and Power Co., Ltd., have issued a circular to the shareholders giving recent facts with regard to the progress of the undertaking, and intimating that the further capital requirements amount to £3,500,000. The company has accordingly authorised an issue of second mortgage debentures to that amount, and the sale of one half of this issue is being negotiated with a group of bankers in Paris and Brussels. Of that half £900,000 has been arranged for, and will be offered to the public in these two cities during the present month. Already the company has received payment for the first £400,000. In the circular it is intimated that all the construction work in Brazil connected with the light and power business is nearing completion, and that the circuits are sufficiently advanced to enable the company to contract for business throughout the area of the city in which a great demand for power and light exists. Particulars of the number of lamps already connected and of the motors supplied, &c., &c., are set forth, and obviously the business is expanding fast. Negotiations for a large amount of power business are pending, of which several thousand horse-power are practically assured. Of the tramway system it is stated that the entire route controlled extends to 130 miles, of which 37 miles are worked by electric and 93 by animal traction. This latter portion is now being converted and the rails, &c., are already in Rio, so that no time will be lost in waiting for materials. It is expected that 30 miles will be turned into electric traction and at work by the end of the year, while the whole system will be converted within two years' time. Nett earnings amounted to £437,210 for 1907 compared with £300,545 in 1906, and for the first three months of the current year a further noticeable expansion is visible.

The Week in Mines.

Kaffir Shares.

It has been a little more interesting than usual because one of those periodical attempts to give a spark of vitality to the Kaffir Circus has been made. The effort met with a certain success for a day or two, and prices wind up somewhat better on the week, but if professionals thought the display was going to alter the resolute attitude of the public never again to have anything to do with South African shares they were much mistaken. As usual, a "syndicate" was supposed to have been at work, but this kind of thing seems to be a bit played out, and the wonder is that the people comprising these so-called syndicates have not grown tired. Each time they land themselves with more shares at higher prices, and, goodness knows, the shops and finance houses have enough already. The latest affair seems to be comparatively mild compared with many former movements, and it did not really last more than one day. On the second there were signs of exhaustion, and on the third no one could have imagined that the market had once more been roused up. Germany and the Cape backed up the enthusiasts here with a few orders, although it is hard to believe that the business did not originate on this side, but Paris was in doleful mood, the monthly settlement there creating much anxiety. A certain amount of option buying appeared to be in progress, and helped to keep quotations on the move for a little time, while great play was made with the good results for April by some of the individual companies. Of course, no one took notice of the corrected labour return for March sent out by the Chamber of Mines, showing that the nett increase in natives was only 4,015 instead of 11,230 as previously reported, a notable difference. However, good output and labour returns for April were declared to be a certainty, and it is quite on the cards that another demonstration will be made next week. Punters snatching half-crown profits were partly responsible for the dulness at the end of this week, but when Monday's contango business is out of the way there will be a clean run of a fortnight, and the market leaders will strive hard to keep up the play.

Diamonds, Land and Rhodesians.

But there is this diamond situation to be reckoned with. Month after month goes by and the position of the diamond trade gets worse rather than better. The chances of early improvement are remote indeed, and French operators are beginning to view the outlook with the greatest anxiety. De Beers have been heavily sold all this week and close a flat, miserable, despondent market. The deferred shares were driven below 9 at one time, a fact which will come as no surprise to those who read these notes closely. About three weeks ago when the shares stood at about 11 we spoke of 8 as the price to which the shares must almost certainly go, remarking that a lot of bears were waiting to cover between 8 and 9. We are inclined to revise this estimate and put the figure lower still. Many have grown so accustomed to seeing De Beers shares stand at big figures that they lose sight of the fact that the nominal value is only £2 10s. and that no justification ever existed for the tremendous price to which they were rigged on the strength of one or two exceptionally prosperous years. Of course, we have been treated to a variety of rumours, the most striking and the most likely to have foundation being those relating to the company's finances. Early weakness in Consols was attributed partly to selling by the De Beers company, and if true the fact would not be astonishing, because the company's outlay can hardly be less than £150,000 a month, even with the reduced scale of operations, and the sales of stones have reached an almost irreducible minimum. All hopes of the preference dividend in July being paid have been completely abandoned, and it is indeed practically impossible for the company to provide the £400,000 which the half-yearly payment requires. The next story was that the debenture sinking fund would be raided, which is not unlikely, although doubtless every effort will be made to maintain the service of the debenture debt. It is a desperate situation, which must get worse before it can get better. When the price of the deferred shares fell under 9 bears began to cover, just as we said, and brought about a small rally, but the market is like a house built on a sand-hill, and may collapse at any moment despite the fact that negotiations between the Premier, De Beers, and the syndicate have been revived. Premier shares were also flat, but their performance was less nerve-shattering than that of De Beers. During the six months to April 30 the Premier washed 3,853,476 loads of mine ground, 223,516 loads of cylinder lumps from dump, and 86,950 loads of overburden for a total production of 1,084,774 carats of diamonds. We wonder how many have been sold. For the previous six months the yield was 1,115,748 carats. There is little to be said about the Land, Finance and Rhodesian sections, as they followed quite closely the lead set by Kaffir shares. Central Mining, Gold Mines Investment and South African Gold Mines were prominent, but no amount of shouting could get Chartereds above 14s.

West Africans and Australasians.

West African shares created a little more activity than we have been accustomed to see of late, the chairman's speech at the Cinnamon Boppo meeting being considered encouraging, while good development news from the Taquah mine caused the shares to rally. Broken Hills were very quiet, and the tendency was the wrong way. Suspension of dividend payments is announced in the report of the British Broken Hill Company, and the outlook does not seem very hopeful just now. West Australians were off colour with the exception of Golden Horseshoes. The Great Boulder Proprietary report exercised no influence.

COPPER, TIN AND MISCELLANEOUS.

Copper metal has fluctuated a good deal but Rio Tinto, and other copper shares have been subject to additional influences. The slump in De Beers and unrest in Paris made for lower prices, but the Yankees were endeavouring to drive things the opposite way, so that movements have been fairly wide with the "bears" on top at the end. There was a report that the Metals Selling Company had managed to raise the price of copper in New York, but the story was distrusted and a fresh cut would create no particular surprise. Tin moved irregularly, but shares were lower as a rule, and Briseis received no assistance from the declaration of a quarterly dividend of 6d. per share. In the Miscellaneous group Strattons were weakened by the proposal to issue £50,000 in 6 per cent. debentures, to be entitled to an additional 19 per cent. out of profits and redeemable at 25 per cent. premium not later than 1914. Esperanzas kept up, but the rest of the American group were a little dull. Indian Gold shares were good all round.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

GINSBERG GOLD MINING.—The average number of stamps working during 1907 was 68.46 crushing 109,557 tons which produced 37,163 ozs. valued at £157,860 or 28.818s. per ton. Working costs were £124,545 equal to 22.736s. per ton, and the profit came to £33,315 or 6.082s. for each ton treated. Working expenses were less by 0.092s. per ton against the preceding year, and the yield was slightly better. Rents and interest produced £1,548 and £68,557 was credited from previous account, a total of £103,421, from which no less than £78,028 is allowed for depreciation. Profits tax comes to £1,482 and £25,393 remains to be carried forward. This does not look a very striking result, but much capital outlay has been provided for and the position of affairs was decidedly better at the end of the year than at the beginning and the full mill of 80 stamps is now at work. The consulting engineer says that the "enlarged mill, improved sorting and more economical arrangement of surface plant have all combined to bring about a state of affairs that, so far as one can see at present, should ensure steady profits for some time to come." Payable ore reserves have increased by 144,253 tons to 293,393 tons and the directors look forward to an early resumption of dividend payments now that outlays on equipment have ceased.

WITWATERSRAND GOLD MINING.—This is the well-known Knight's mine, and in the twelve months to the end of December the value of the gold produced, including a small amount underestimated in the previous year, was £539,820 against which working expenses came to £341,239 and general expenses to £22,490 leaving the balance of profit at £176,091. That is supplemented by the heavy amount of £287,269 brought forward and other items amounting to £17,114 bringing up the disposable sum to £480,474. But in addition to providing very large sums for depreciation the directors have decided to write off the entire development account amounting to £154,153 the total involved being £249,166. Two dividends of 15 per cent. each require £127,500 and after providing other usual items there remains a sum of £91,233 to be carried forward. Tons crushed during the year were 402,100 producing 126,720 ozs. of gold worth 26s. 10.129d. per ton against an expenditure of £363,729 or 18s. 1.098d. per ton leaving the profit at £176,091 or 8s. 9.031d. per ton. Payable ore reserves at the end of the year were 1,094,767 tons, an increase compared with 1906 of 58,903 tons. All the Chinkees that went to South Africa did not prove to be desirable acquisitions, but we are pleased to see that this company reduced its average daily number of loafers from 204 in 1905 to five in the first three months of 1907.

LANCASTER GOLD MINING.—The year 1907 proved an unsatisfactory period, and at one time the question of closing down pending further development was seriously considered, but it was decided that such a step would entail losses greater than those resulting from operations, more particularly as all expenditure for shaft sinking and development was charged to working costs. Profits for the opening four months of the year were fairly satisfactory, but in May and June there was a material decline, and every subsequent month showed a loss. The deficits, too, have continued into the current year. The poor results were mainly due to the fact that the ore developed during the past year in the Botha mine was of low grade, but the Battery reef also contributed, for the development work in this section has not yet reached those portions of the reef south-east of the big Lancaster fault which, from the indications in the levels alone should, the directors think, carry good values. In a few months' time the Botha mine will be closed down, as the directors do not feel justified in expending further moneys at present on its development, leaving the mill dependent upon the Battery reef, but it is expected that the full mill can be fed from this reef by the time the other section is shut down. Quantity of rock milled in the 12 months was 188,050 tons, and the yield from all sources was 45,862 ozs. or 20s. 7.856d per ton, being round about 4s. 8d. less than in the preceding 12 months. Value of the gold was £194,205, but working costs although nearly 2s. 6d. per ton less came to £184,054 or 19s 6.901d. for each ton, so that the profit was only 1s. 0.955d., equal to £10,151. Other items increased this to £11,860, and after providing debenture and other interest the debit balance is reduced from £9,301 to £9,098. Total indebtedness to Messrs. A. Goerz and Co. amounts to £123,642. Payable ore reserves at the end of the year amounted to 93,466 tons, assaying 6.62 dwts. per ton.

LANCASTER WEST GOLD MINING.—During 1907 this company kept its total equipment of 40 stamps at work and crushed 77,955 tons of ore, which yielded 15,097 ozs., while 10,8[illegible] ozs. were recovered by the treatment of residues, making the total from all sources 25,958 ozs., worth £109,913 or 28s. 2.388d. per ton. Working costs were £29,010 or 23s 7.272d. per ton, which includes 4s. for development, and the profits come out at £17,903 or 4s. 7.116d. per ton. Add to this balance brought forward, rents, &c., and the total for disposal is £36,363. Out of that debenture interest and premium on debentures redeemed accounts for £9,925, and loan interest for £5,011. A further sum of £10,418 is allowed for depreciation, and £10,810 is carried forward. This is considerably less than the profit and the amount brought in, so that actually the company went back on the year. In the opinion of the general manager, however, the prospects of the mine are now much better than they have been some time past. In the Battery reef mine there are 109,458 tons of payable ore developed, and the prospects at the lowest level indicate the continuance of this class of ore to a greater depth, and also indicate a more favourable formation from a working point of view.

CITY DEEP.—This is the company which is going to absorb the South City, Wolhuter Deep, South Wolhuter and Klipriversberg Estate, in accordance with a scheme already dealt with in these columns. Shaft sinking operations were steadily proceeded with during the year, and 1,502 ft. were attained, an average progress of 125 ft. per month. This rate is considered satisfactory, in view of the fact that hard dyke matter was encountered for some 280 ft. Expenditure in connection with the work was £45,712, of which one-half has been recovered from the South City, making the company's outlay, after spending £2,769 on equipment, £25,625. Some plant has been disposed of, and the nett cost is £25,108. A further sum of £5,365 spent on mine and general administration brings the total outlay to £30,474, and makes the aggregate to date £135,276. Towards the end of March what is believed to be the main reef leader was cut, a couple of samples giving 11¼ dwts. over an assumed stoping width of 42 inches. On the Wolhuter Deep shaft sinking operations have been in progress, and 1,340 additional feet sunk brings the total depth to 2,648 ft. Cost of sinking, including timbering, pumping and hoisting water, was £43,467. Reef matter was exposed on one or two occasions, but without satisfactory result. This company works on joint account with the South Wolhuter, as the City Deep does with the South City, and the information given in the one company's report is merely repeated in that of the other. Allowing for the expenses incurred during March and the expenses incidental to the reconstruction of this company and the liquidation of the others, the new concern will have £450,000 available for the completion of the two shafts, the necessary development and the erection of the reduction works. The amount should suffice to bring the company to the producing stage with a minimum of 100 stamps and three tube mills capable of dealing with 22,000 tons per month.

DURBAN ROODEPOORT DEEP.—Since this mine commenced operations gold to the value of £1,361,097 has been taken from it, but the cost has been £1,052,496, and from one cause or another it has not yet been possible to commence the payment of dividends. A certain amount of money has been laid out on capital account and the war cost £127,717 in expenditure and losses, but shareholders hardly get a chance when so much of the mine's substance is exhausted before dividends begin. During 1907 137,130 tons of ore were treated for a yield of 38,699 ozs., while the treatment of 91,216 tons of sands and 45,687 tons of slimes gave a further amount of 13,967 ozs., a total from all sources of 52,666 ozs. Value of the return was £220,553 or £1 12s. 2.004d. per ton, an increase of 1s 10.562d over that of the preceding year, and the working costs of £180,107 were £1 6s. 3.375d. per ton, a reduction of 1s. 1.149d. Profits therefore came to £40,355 or an average of 5s. 10.629d. per ton, which is roughly 2s. better than in 1906. Balance brought in was £132,199, making £173,273, of which £75,790 was laid out on capital account, including £20,000 for debenture redemption. Transvaal Government taxes came to £2,484 and debenture premium £600, leaving an unappropriated balance of £94,399. Ore reserves are estimated at 637,700 tons, averaging 7.3 dwts., an increase in quantity of 243,903 tons and a decline in grade of 1 dwt. It is proposed to add 40 stamps to the mill, increasing the number to 100, and when the work is completed about the end of the year increased profits are looked for.

SIMMER DEEP.—Under this name four companies—the South Geldenhuis Deep, the South Rose Deep, the Rand Victoria East and Rand Victoria Mines—were amalgamated in 1906, and the report now issued covering the period to December 31 is the first of the new company. The property taken over from these concerns and situated on the dip of the Simmer and Jack Proprietary Mines and the South Rose Deep consists of over 1,800 claims. A large amount of development work has been accomplished during the ten months to December 31, and it is calculated that there are some 500,000 tons of ore developed

of an average assay value of 6.7 dwts. In addition there is a very large tonnage of a lower grade, part of which will eventually be milled at a profit. The erection of the joint reduction plant of 300 stamps and four large tube mills with other necessary secondary plant for treatment is proceeding satisfactorily. Stopes are being opened out in the western section of the mine in readiness for the commencement of crushing operations during the latter part of this year. By the time this stage is reached the company will have a pretty heavy debit balance to face, and it will probably be some little time before profits are available for distribution. The company's debenture debt is very heavy at £1,040,000, and interest on this for the period under review was £49,903. Altogether the outgo came to £94,764, including £23,924 for preliminary expenses and the existing deficiency is £66,086. Outlay to date on equipment of the property has been £1,415,551, but liquid assets are still large. The company has important share holdings in the Victoria Falls Power Company and the Rand Mines Deep, and these together with some smaller interests are valued at £103,647.

Glencoe (Natal) Collieries.—Trade done during 1907 was 127,888 tons, an increase of 28,713 tons over 1906, the business for the second half of the year being 93,651 tons, or at the rate of 187,302 tons per annum. With everything running smoothly the capacity of the mine is probably about 250,000 tons per annum. Profit for the twelve months was £33,373, an increase of £13,179, mainly due to a considerable reduction in the mine working costs consequent upon cheaper and more efficient native labour, but also to the good demand for Natal coal. After allowing £7,980 for depreciation the nett profit is £21,625, and the directors propose dividends aggregating 5 per cent. requiring £12,500. This leaves £24,975 to be carried forward as against £15,849 brought in. A bad accident involving heavy loss of life took place almost immediately after the general meeting in March, but the destruction of property was not extensive.

Van Dyk Proprietary Mines.—In the 1906 report shareholders were informed that the sinking of No. 2 shaft was suspended in August of that year, when it had reached a depth of 1,057 ft., with a view to concentrating work on the sinking of and development from the No. 1 shaft. During the past year No. 1 shaft main ore station was completed, the main incline portion of the shaft sunk a distance of 481 ft. and a considerable amount of development was accomplished by drives east and west from the main station. Speaking generally, ore of good average values has been exposed in the east drive raise and shaft, while that exposed in the west drive beyond the dyke is unpayable. The development work is laid out with a view to prospect the reef over the greatest area with the least expenditure of money. It is hoped that the company may be permitted to begin mining from the No. 1 shaft before the expenditure for the further sinking of No. 2 shaft and the completion of the connection is necessary. Total expenditure to date is £233,759, including £16,958 for administration, preliminary and flotation charges and the balance of cash and cash assets now amounts to £90,943.

Tudor Gold Mining.—The general conditions which prevailed last year precluded the raising of fresh working capital, and consequently further operations are still suspended. The directors hope that the time may not be far distant when further funds can be secured, as they feel that a payable mine will be opened up. There is no reason to believe, says the chairman, that the ground is inferior to that of the French Rand Company, the immediate neighbour to the north, which is carrying on profitable operations. No. 1 shaft has been sunk to a depth of 998 ft. and No. 2 shaft to 1,565 ft. The reef is expected to be cut in the former at a depth of 2,100 ft., while it is estimated that the No. 2 shaft will only have to be deepened another 235 ft. to strike the reef. Revenue in 1907 was £998 and the expenditure £3,988, the debit balance now being £9,672. Cash and cash assets amount to £13,632.

Paarl Central Gold Mining and Exploration.—We do not know whether shareholders of non-productive mines take the trouble to read the annual reports, but if so they must be getting as tired of the phraseology contained therein as we are. The report of this one tells the usual story of depression and inability to do anything with the property, the funds in hand being insufficient to recommence work. It is hoped, however, that an opportunity will arise ere long of dealing with the company's affairs. That is a little vague, but it is as good as anything else, and was supplemented at the meeting by a reference to possible amalgamation. Expenditure in the 12 months was £1,660 against a revenue of £1,141, leaving a deficit of £519. The company's accumulated slimes will be sold for £4,500.

Glencairn Main Reef.—For 1907 the quantity of ore crushed was 225,020 tons yielding 54,517 ozs. of gold worth £231,564 or 20.581s. per ton. Working costs were £176,924 or 15.725s. per ton, leaving a profit of £54,640 or 4.856s. per ton. Working costs were less by 1.064s. and the profits by 2.683s. for each ton of ore treated. Balance brought in was £36,846 and other items gave £2,911 making £94,397, from which two dividends of 5 per cent. each take £55,000. Depreciation allowance is £19,255, and the much reduced balance of £19,155 is carried forward. In fact, the dividends paid were a little in excess of the mining profits. Payable ore reserves at the end of the year were 900,103 tons, but the grade of ore is not mentioned.

Scottish Australian Mining.—A good demand for coal was experienced in the second half of 1907, the pits being well employed during the greater part of the period, but the company had much labour trouble to contend against. The disputes culminated in a general strike at all the Northern collieries in November last, and the intervention of the Premier of New South Wales was necessary to get points in question referred to a special court of arbitration. As a result the pits were reopened early in December, and have worked with fair regularity since. The price of screened coal has been fixed from January 1 last at 11s. a ton, and while a moderate trade has been done in the current year the financial and commercial conditions prevailing in some of the foreign markets will probably lead to a lessened demand for Australian coal. Profits on the six months' working were £14,100, including £3,019 brought forward, and after providing a dividend of 7½ per cent. the increased amount of £4,725 is credited to the current year.

Edinburgh Collieries.—In the year to January 31, 1908, this amalgamation of collieries produced over a million tons of coal and earned a profit of £85,280, exclusive of £1,328 brought forward. Dividends aggregating 12½ per cent. are paid on the ordinary shares, £20,000 is allowed for depreciation, and £13,976 is carried forward, after providing for amalgamation expenses. Wages have been further increased by the substantial amount of 31¼ per cent., and when the coal boom came to an end this adversely affected profits, but the company did quite well enough from the consumers' point of view. The pits are now on short time, but the resources of the company can give a large increase over last year's output should the demand arise. No less than £233,480 was added to the property account during the year, making a total of £505,655, and it may be mentioned that there is no reserve fund.

Waihi Gold Mining.—The splendid Waihi mine again produced first-rate results for its owners during the year to December 31 last and must take rank among the most consistent gold-producers in existence. In the twelve months 356,974 tons of ore were treated, and produced gold and silver worth £878,486, in addition to which £10,099 was received for interest, increasing the total gross revenue to £888,585. Expenditure in New Zealand and London, including development work at the mine, amounted to £357,674, leaving a profit of £530,911, which compares with £502,073 in 1906. Out of this the directors, with their usual prudence, have provided £53,300 for sinking shafts, new plant, and machinery, and written off £35,012, being 10 per cent., from machinery and plant. Reserve for income-tax is £31,893 and already shareholders have received 13s. in dividends equal to £322,339. A bonus of 3s. per share is now proposed with £10,000 to reserve, making it £140,000, and £22,155 carried forward, against £18,176 brought in. For the full year the distributions amount to 80 per cent., or 5 per cent. more than in 1906, and on account of the current year 3s. 6d. was paid in March, while another 3s. 6d. will be distributed in June along with the bonus just mentioned. Further additions have been made to the ore reserves, which at December 31 were estimated at 1,299,979 short tons as against 1,029,658 at the same date in 1906. The financial position is thoroughly satisfactory.

Myalls and Peak Hill Gold Mines.—In the year to December 31, 1907, proceeds of sales of bullion from Myalls were £6,612, and from Peak Hill, £16,343, a total of £22,956. Against this expenditure at Myalls was £7,057 meaning a deficit of £444 and at Peak Hill £13,903 or a credit of £2,440, the nett profit being £1,996. Out of that £1,145 is written off for depreciation, and £851 is carried forward. The directors say that the loss at Myalls was due to the limited amount of payable ore available for treatment, a statement which should appeal to the intelligence of all, but the general manager is living in hope, and is quite prepared for the discovery of a large body of payable quartz. The outlook at Peak Hill is declared to be "a promising one for better results," and attention is called to the low working costs at the mine, only 6.8s. per ton, notwithstanding the extensive developments undertaken. The general manager's plan of development for the sulphide zone was communicated to shareholders in January last and there is no further information to convey until progress has been made with the scheme. The financial position is only fair, but there is a small credit to profit and loss. Preliminary expenses of £1,674 have still to be got rid of.

Alaska United Gold Mining.—In the twelve months which ended on December 31 last this company crushed from its Ready Bullion Mine a total of 213,370 tons of ore, giving a yield of $360,351. Sums payable by the Alaska, Mexican and Alaska Treadwell on account of the 700 ft. claim and steam plant, together with interest, brought up the entire revenue to $420,497, against which the expenditure was $405,628, leaving a profit of $14,869 only. The outgoings in connection with the 700 ft. claim was considerably more than the income. Balance brought down from the previous year was $278,809 and a further amount of $27,638 was payable by the Alaska Mexican Company on account of 1906 profits from the 700 ft. claim, bringing up the disposable sum to $321,397. A dividend of 6 per cent. takes $54,060 and $75,000 is written off property and plant, leaving $192,337 to be carried into the current year. The company suffered severely during the past year from shortage of coal. Ore reserves at the Ready Bullion Mine are estimated at 1,378,651 tons.

Mason and Barry.—The total quantity of ore raised and broken at the mine during the year 1907 was 227,739 tons as against 218,217 tons in 1906, and the shipments for the same period were 363,465 tons compared with 353,273 tons. The ore sold and invoiced for its sulphur value in the twelve months amounted to 361,408 tons or 10,649 more than in the preceding year. After providing £9,500 for depreciation, adjusting value of stocks and meeting general expenses, &c., the balance of nett

profit is £53,656. Other items increase this to £66,135, and £18,017 was brought forward, making £84,152. Out of this £1,000 is written off La Sabina shares, a dividend of 6s. per share or 30 per cent. is proposed, £1,000 goes to the staff pension fund, and £26,601 is carried forward. It need hardly be said that the financial position is a magnificent one. Since the reorganisation shareholders have had capital to the amount of £4 per share returned to them, and the amount now outstanding is £185,172 in shares of £1 each. Yet the total book value of the property is only £24,328, and the company has a great volume of liquid assets, exceeding £173,000, besides stocks standing at £51,018.

Mountain Copper.—This company took advantage of the high price of copper during the early part of the year ended December 31, and treated as much ore as possible. Quantity marketed was 3,407 tons, as compared with 2,854 tons in 1906, but when the fall in value occurred it was decided to restrict the output, and "the directors are keeping down the production in order to have larger quantities to sell when more profit can be realised." Costs, however, continued high, thanks to the trade inflation in the States, but it is hoped that the expenses of the current year will be materially reduced. Profit on sales of produce and other revenue came to £161,317, and the nett balance to £150,255, but it is not proposed to pay off any debenture stock. It is considered essential to maintain the cash resources at a high level, as it is desirable to have ample funds for ordinary working purposes, including the purchase of flux and other Custom ores, from the treatment of which additional profits are made, and regard must be had to possible developments involving outlay on the increase of plant, and for fresh mining operations. During the year the company's entire output of acid found a market at remunerative prices, and the fertilizers produced were also disposed of.

Esperanza Copper and Sulphur.—A period of 22½ months to December 31, 1907, is embraced in this company's accounts, and the directors are clearly satisfied with the credit balance of £6,859 taking into consideration the delays and difficulties inseparable from operating new mines on a large scale. This figure is arrived at after providing debenture interest and writing off £14,700 against mine development and depreciation. At first shipments of ore were small, but they are now important, and steadily progress, and the directors have sold on favourable terms the whole of the company's output of cupreous pyrites to the end of the year 1911. For the past three months of the current year the shipments were 20,224 tons. Arrangements for treating the lower grade ores by the leaching or cementation process are well advanced, and the directors propose to commence operations next year. Mining costs hitherto have been high, but now that regular shipments on a much larger scale are being made they will be materially reduced during the coming year. An action by certain vendor debenture holders for the appointment of a receiver and manager has been commenced which, if successful, would place the control of the property in other hands, but there seems a prospect of a settlement.

Libiola Copper Mines.—This company's nett profit for the year 1907 was £5,546 exclusive of £2,096 brought forward. The dividends paid, however, of 2s. 6d. per share will require £6,300, so that the balance to next account is reduced to £1,342. The mine is said to be yielding a satisfactory quantity of ore, but owing to the continued scarcity of labour and the still insufficient supply of wagons by the railways the deliveries to consumers have again been restricted. Further exploration work is being actively carried on at the mine and the indications of the ground developed are described as encouraging.

Mount Lyell Consols Mining.—This company commenced milling on November 25 last on low-grade ore, but it was soon discovered that with the grade of ore and low price of copper it would be necessary to treat at least 1,000 tons per week. So the mill was closed down again pending further developments, and while these are being pushed ahead as rapidly as possible, progress is slow, owing to the hard nature of the ground, and some time must elapse before milling can be resumed. The work so far carried out has disclosed 40,000 tons of ore reserves, but this quantity is expected to be considerably augmented as the various levels are opened up. The company has been obliged to secure a little more cash, and as further sums will be required, it is proposed to raise £15,000 on 7 per cent. debentures. Debit balance on working acount is £1,048, and the total profit and loss deficiency £3,923, including £1,921 brought in.

Mount Molloy.—A cabled summary of this company's accounts for the half-year to December 31 shows that the revenue was £22,264, while total expenses, including depreciation and ore purchases, were £28,517. Sum brought forward was £47,696, and after providing for dividends to the amount of £10,250, there remains a sum of £31,192 to the credit of profit and loss. The company has very little cash, and in order to extinguish existing liabilities and to provide funds for carrying on the operations, it has been decided to make an issue of 50,000 preference shares, on most unusual terms. They will be issued credited with 10s. paid up, and will be entitled to receive out of profits preferential dividends until 5s. has been paid on each share, after which they are to rank equally in every respect with the ordinary shares now existing.

Tingha Consolidated Tin Mines.—The collapse in the price of tin and difficulties connected with the mines meant a poor result for this concern on account of the half-year to January 31 last. Output was only 134¼ tons of tin, the yield per cubic yard being 1.18 lbs., the value 11.1d., and the expenses 10.96d., so that the margin of profit was small. Its amount was only £476, but the preference share dividend amounting to £5,000 was paid from the balance brought in, leaving £934 to be carried forward. Better results are promised for the current half-year, and the new plant, which is being pushed forward after being delayed by the company, is expected to be at work at an early date. Good rains have recently fallen, and all the plants have an abundant supply of water.

West African Gold Trust (1906).—It was in March, 1906, that this wretched affair (formed with such a flourish in the year 1900) was reconstructed, unhappy shareholders receiving a new 5s. share with a 2s. assessment for every one of £1 held. The first report since the writing down, covering the period from April 25, 1906, to December 31, 1907, is now issued, and is a perfectly deplorable exhibit. In addition to the now existing share capital of £40,589 there is an issue of £36,640 first mortgage debenture stock redeemable at 102 in 1910, and the market value of the investments standing in the balance-sheet at £70,165 is "about £18,000"! Other choice and immediately realisable "assets" are debenture issue expenses £1,843 and general and other expenditure £5,250. The company has interests in 15 different ventures, but we would not waste space by publishing the list. At present the directors and trustees are not drawing any fees, and do not propose to do so until the financial position improves. To comment further on the position would be quite useless, and we can only strongly advise shareholders never to find another penny of money.

Ore Concentration (1905).—The directors give an account of much good work accomplished in their report for the year to December 31, 1907, and say that, notwithstanding the recognised difficulties attendant upon the introduction of new metallurgical methods excellent progress has been made in connection with the adoption of the Elmore Vacuum process. In no single case where the process has been adopted and worked under normal conditions has it failed to secure satisfactory metallurgical results. Orders received for machines now total ninety-nine; some of these are in course of construction, some in course of erection, and others are in regular work on a variety of ore in widely separated parts of the world. No profit and loss account is yet presented, but the balance-sheet shows that in the year £1,974 was spent on testing and development and £7,012 for general administration, &c., against which the revenue was £5,847. We are sorry to note that the company is engaged in important litigation.

London City and Midland Bank.—The statement for period to April 23 showed current, deposit and other accounts of £51,676,758, and acceptances on account of customers £2,171,867 against assets consisting of cash in hand and at Bank of England £9,851,165, money at call and short notice £6,098,643, investments £6,597,854, bills of exchange £4,887,702, and advances on current account &c., £29,318,620.

London and Westminster Bank.—Liabilities on May 2, consisted of current accounts and deposits £24,630,074, acceptances and endorsements £1,101,235, and other liabilities, £1,207,003, against which there were cash in hand and at Bank of England £3,373,313, money at call and short notice £4,694,330, Imperial Government securities £3,885,000, bills discounted, loans, &c., £16,679,318, and other securities £1,405,115.

Capital and Counties Bank.—Liabilities on April 28 consisted of £34,116,629 on simple contracts and £498,350 on bills, and assets of £5,544,804 cash in hand and at Bank of England, £5,505,010 money at call and short notice, £4,938,828 Consols and other investments, and £19,618,392 bills of exchange, promissory notes and advances to customers.

London and South-Western Bank.—The statement for April 30 shows current accounts and deposits of £14,435,791, other liabilities £561,205, and acceptances and endorsements £42,184, against assets consisting of cash in hand and at Bank of England £2,183,711, money at call and short notice £1,295,000, British Government and other securities £3,996,990, and bills discounted, loans, &c., £9,521,295.

Lloyds Bank.—The balance-sheet for April shows liabilities consisting of current and deposit accounts £68,797,466, and bills accepted or endorsed £1,594,657, and assets of cash in hand and at Bank of England £11,382,484, cash at call and short notice £4,881,797, bills of exchange £7,359,593, Consols and other investments £11,600,157, and advances to customers and other securities £38,893,104.

Parr's Bank.—Liabilities on current and deposit accounts, &c., on April 30 amounted to £27,004,159, and on drafts current, acceptances on behalf of customers, &c., to £2,397,453, against which cash in hand and at Bank of England stood at £4,404,030, money at call and short notice £6,483,933, Government and other first-class securities £3,668,329, bills of exchange £1,985,979, and loans and advances to customers £13,591,157.

An extraordinary general meeting of the Santa Fé Land Company has been called for the 15th inst., when shareholders will be asked to increase the nominal capital to £1,000,000 by the creation of 187,500 shares of £1 each. The directors state that they have no immediate intention of issuing these shares, but they consider it essential for the well-being of the company that they should be empowered to do so when they think expedient, so as to raise cash to meet the demands on capital account that must arise through the rapid development of the business. In view of the results to date, an interim dividend of 2½ per cent or 6d. per share is declared on account of the current financial year.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for the 9 days ended April 30, $4,104, decrease $881; aggregate from July 1, $195,256, increase $38,409.

Argentine North Eastern.—Traffic Receipts for week ended May 1, £3,621, decrease £177; aggregate from July 1, £138,869, decrease £8,423.

Assam Bengal.—Traffic receipts for 7 days ended April 4, Rs. 82,000, increase Rs. 2,593; aggregate from Jan. 1, Rs. 12,29,573, decrease Rs. 72,687.

Bilbao River and Cantabrian.—Traffic returns for April £8,016, decrease £1,062; aggregate from January 1, £32,599, decrease £5,081.

Buenos Ayres Central.—Gross receipts for March £11,436, decrease £1,133; aggregate from Jan. 1, £93,412, decrease £3,664.

Canadian Northern Railway.—Traffic receipts for 9 days ended April 30, $172,200, increase $40,500; total from July 1, $7,683,100, increase $2,023,700.

Egyptian Delta.—Traffic receipts for week ended April 18, £4,722, decrease £49; aggregate from April 1, £12,306, decrease £1,836.

Lucknow Bareilly Railway.—Traffic receipts for 7 days ended March 28, Rs. 40,311, decrease Rs. 17,156; aggregate from January 1, Rs. 4,48,026, decrease Rs. 53,735.

Midland Uruguay.—Receipts for month of April, £6,277, decrease £898; aggregate from July 1, £57,177, decrease, £5,044.

North Western of Uruguay.—Traffic receipts for March, $21,300, increase $736; aggregate from July 1, $175,429, decrease $11,930.

Quebec Central Railway.—Traffic receipts for the 4th week of April, $31,483, increase $2,174; aggregate from January 1, $340,219, increase $77,325.

Quebec and Lake St. John.—Traffic receipts for Feb. $31,941, decrease $2,037; aggregate receipts $68,216, decrease $1,606.

Rohilkund and Kumaon Railway.—Traffic receipts for 7 days ended March 28, Rs. 23,838, decrease Rs. 5,599; aggregate from Jan. 1, Rs. 2,74,517, decrease Rs. 29,206.

Uruguay Northern.—Gross receipts for month of Feb., £1,200, decrease £943; aggregate from July 1, £14,009, decrease £699.

White Pass and Yukon Railway.—Traffic receipts for week ended April 21 amounted to $14,700.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending May 2, £1,507, decrease £4; aggregate from January 1, £21,059, decrease £3,422.

Cockermouth and Keswick Railway.—Receipts for week ending May 2, £786, decrease £21; aggregate from January 1, £12,219, decrease £1,044.

East and West Yorkshire Union Railway.—Traffic receipts for week ended May 2, £459, decrease £7; aggregate from January 1, £7,984, decrease £21.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffics receipts for week ending April 29, £624, decrease £79; aggregate from Jan. 1, £10,328, decrease £1,161.

Blessington and Poulaphouca.—Traffic receipts for week ending April 29, £8; aggregate from Jan. 1, £127, decrease £19.

Bristol Tramways and Carriage.—Traffic receipts for week ending May 1, £4,763, increase £27; aggregate from Jan. 1, £83,188, decrease £2,374.

British Electric Traction.—Receipts of all the Associated Companies for the week ending May 1, £26,940; 430½ miles.

Burnley Corporation.—Traffic receipts for week ending May 2, £1,200, increase £40; aggregate from January 1, £22,753, increase £370.

Dublin and Blessington.—Traffic receipts for week ending April 29, £133, increase £16; aggregate from January 1, £1,799, decrease £75.

Dublin and Lucan.—Traffic receipts for week ending May 1, £113, increase £14; aggregate from Jan. 1, £1,794, increase £58.

Dublin United.—Traffic receipts for week ending May 1, £5,152, decrease £11; aggregate from Jan. 1, £83,685, increase £753.

Hastings and District.—Traffic receipts for week ending April 30, £865, increase £77.

Isle of Thanet.—Traffic receipts for week ending May 2, £398, increase £56; aggregate from Oct. 1, £8,651, decrease £338.

London County Council.—Traffic receipts for week ending April 25, £32,110, increase £3,560; aggregate from April 1, £114,243, increase £11,720. Miles 119, against 113½.

London General Omnibus.—Traffic receipts for week ending May 2, £21,781, increase £836; aggregate from Jan. 1, £324,430, decrease £20,129.

London Road Car.—Traffic receipts for week ending May 2, £8,264, decrease £151; aggregate from Jan. 1, £119,732, decrease £6,398.

London United.—Traffic receipts for week ending May 2, £6,220, increase £307; aggregate from January 1, £95,961, decrease £2,165.

Provincial Trams.—Traffic returns for week ending May 2, £1,579, increase £61; aggregate from Oct. 1, £45,654, increase £717.

Rossendale Valley.—Traffic receipts for week ending May 1, £173, decrease £38.

Sunderland District.—Traffic receipts for week ending April 29, £466, increase £5; aggregate for 26 weeks £11,824, increase £1,225.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending May 3, £1,159, increase £49; aggregate from January 1, £19,689.

FOREIGN.

Anglo-Argentine.—Traffic receipts for 7 days ending April 29, £18,389, increase £1,381; aggregate from January 1, £313,233, increase £35,003.

Auckland Electric.—Traffic receipts for 28 days ending March 27, £11,212, increase £1,366; aggregate from January 1, £37,100, increase £4,948.

Brisbane.—Traffic receipts for month of April £14,460, increase £1,801.

British Columbia Electric.—Nett earnings for March $53,475, increase $9,102. Aggregate nett earnings, including income from investments from July 1 to Mar. 31, $727,130, increase $196,689.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for 7 days ending May 5, £7,779, increase £887.

Calcutta.—Traffic receipts for week ending May 2, Rs. 45,746, increase Rs. 370.

Cape Electric.—Traffic revenues for the month of March, Cape Town, £10,448; Port Elizabeth, £4,265.

Carthagena and Herreiras.—Traffic receipts for the month of April, £1,807. decrease £3,483; total from January 1, £8,428, decrease £13,991.

Geneva Trams.—Earnings for March, fr. 174,112; decrease fr. 1,660.

Kalgoorlie Electric.—Gross receipts for March, £4,264; aggregate from January 1, £11,319.

Lisbon Electric.—Earnings for March, milreis 120,041.

Madras Electric.—Traffic receipts for fortnight ended April 30, Rs. 18,651, increase Rs. 1,336; aggregate from January 1, Rs. 1,53,876, increase Rs. 15,986.

Melbourne Tramways and Omnibus.—Traffic receipts for April, £47,000.

Mexico.—Nett earnings for month of March, $207,846, increase $34,789; aggregate nett earnings from January 1, $598,469, increase $180,800.

Monte Video United.—Gross receipts for April, £17,736, increase £1,591.

Perth (W.A.) Electric.—Gross receipts for week ended May 1, £1,381, decrease £45; aggregate from January 1 £25,524, decrease £955.

Rio de Janeiro.—Gross earnings for 16th week 1908, $25,565: increase $1,303.

Sao Paulo.—Traffic returns for March: nett earnings, $131,943, increase $6,809; aggregate from Jan. 1, $381,762, increase $22,791.

Twin City Rapid.—Traffic receipts for the month of March, $484,622, increase $5,321; aggregate from January 1, $1,408,458, increase $52,517. Nett traffic receipts, $231,788, decrease $13,782. aggregate from January 1, $643,789, decrease $17,855.

The Investors' Review.

The Week's Money Market.

Bank Rate 3 per cent. (Reduced from 3½ per cent. on Thursday, March 19.)

Norfolk House, Friday Evening.

At the end of last week bankers were still getting 2 to 2½ per cent. for seven-day money, and call loans ran up to 2½ per cent. They are now getting only 2 per cent. for seven-day loans, and floating balances lent from day to day are often to be had at 1½ per cent. They rarely cost as much as 2 per cent. This cheapness of bankers' floating balances is the consequence of stagnant business throughout the country much more than of great accumulations of cash at the Bank of England. The same influence is affecting discount rates, and yesterday two and three months' remitted bills were discounted at 2 7/16 to 2½ per cent., with a tendency downwards. So far as we can see, the condition of the markets in this way expressed must last for some little time. There is still a demand for gold on French account, but before long that must be satisfied, and unless Germany is forced to make sacrifices in order to draw in the metal, the supply from the mines and any further shipments that may come from New York ought to be ample to protect our market from any great disturbance or anxiety on account of gold withdrawals. To-day's shipment of £101,000 from the Bank to Paris is thought to finish the repayments to the Bank of France.

Nominally, to-day's working rate was 2⅝ per cent. for two and three months' bank bills, and June paper was in strong request. The tendency of rates is, therefore, downward, and one far-seeing dealer predicts a 2 per cent. working rate before we again see a 2½ per cent. one. Business was done in fine threes at 2¼ per cent. this morning. Loans are so abundant that call money was little better than 1 per cent., and the quotation of 1¾-2 per cent. for seven-day credits was not a firm one.

Obviously the spot in Europe visibly weakest at the present time is Germany. At the end of the month the Reichsbank was again subjected to such a sharp pressure for help that its stock of gold went down simultaneously with an unpleasantly suggestive increase in the note circulation. That is to say instead of that note circulation being below the legal maximum to the extent of £4,902,000, as it was the week before, it rose above that maximum by more than £2,170,000, cash in hand having dwindled by £1,036,000 simultaneously with an increase of £4,548,000 in the active note circulation. The position is such as implies continued distress amongst credit users, and no doubt the difficulty of financing the requirements of the Imperial and State Governments has a good deal to do with market misery thus indicated, but at the same time the whole of the German banks are to a greater or less extent in a position somewhat similar to that so noticeably occupied by some of our electric manufacturing companies. They have created companies in order to augment their business, and now these companies are weighing them down, locking up their credit resources, compelling them to renew bills, and to in other ways finance structures that without help of this kind would instantly collapse.

Elsewhere in Europe the situation is really not much more satisfactory, and it cannot be said that any country is showing signs of working out of its troubles. Some of them, like Spain, are only entering upon a period of industrial distress. France, in fact, looks the best placed of all, and the return of the Bank of France for the past week indicates a greater accretion of strength than that of any other bank in Europe. The note circulation fell off last week by £6,292,000 simultaneously with an increase of £2,431,000 in the stock of gold in hand. These changes have made the proportion between bullion and circulation rise from 75.17 to 78.93 per cent. Our own Bank of England is also stronger, but the movements in its accounts for the past week were extremely limited. Other deposits, however, have gone up by £1,227,000 to £44,359,000, thanks to the disbursement of £995,000 by the Exchequer and to a slight addition of £184,000 in the other securities. Thus in spite of the extreme ease the market has on balance apparently borrowed a little. It has now, however, paid all its temporary debts off, and will be out of the Bank's debt when the bills still held there run off. Other deposits, however, are not at a figure assuring prolonged ease at a total of £44,359,000 for that is still £776,000 below the total of a year ago, and a year ago we had a 4 per cent. Bank rate.

More gold is coming back from Egypt, but there will only be about £350,000 in the metal on sale in the open market next Monday. The price is still nominally 77s. 10 3/8d. per oz., but the Paris cheque quotation is less adverse, and the competition may not be sufficient to hold the market up.

Next week's total calls on new issues amount to £2,622,450 which is a considerable sum for the market, mostly the underwriters therein, to find. Less than £5,000 is payable next Monday on Morrison and Fleet Dairies shares, but on Tuesday the stocks altogether amount to £1,492,000 made up of £750,000 payable on New South Wales 3½ per cents., £192,000 due on the new shares of the Capital and Counties Bank, and £550,000, the amount of the call on County Council 3½ per cents. Thursday brings demands for £587,500, of which £425,000 has to be found on Peruvian Corporation new debentures, £150,000 on Charing Cross, West End and City Electricity Company debentures and £12,500 on Blackwater Mine shares. On Friday a further £538,500 falls due, viz., Claremont (Cape Colony) 5 per cents. £12,500, Antofagasta preferred stock £130,000 and Grand Trunk guaranteed £200,000, Goldsmiths and Silversmiths ordinary shares £96,000 and Newcastle Electric ordinary shares £100,000.

Silver.

A rally of 1/16d. per oz. for spot and ⅛d. for future metal shown in the end of last week was followed by a further plunge downwards, and on Wednesday prices touched 24d. per oz. for cash and 24 1/16d. per oz. for delivery two months forward. These were the lowest figures recorded since April, 1903, and although a recovery of 3/16d. was brought about on Thursday by a little bazaar buying and some diminution in supplies the market is far from settled. Quotations eased off again to-day more because buyers and sellers were alike disinclined to work, and final values were 24⅛d. and 24 3/16d. per oz. respectively. Although the drafts offered by the India Council each week still amount to Rs. 10,00,000 the response continues small, and applications this week only reached a total of Rs. 35,000, all in bills, and tenders at 1s. 3 29-32d. per rupee received in full.

BANK OF ENGLAND.

The Stock Markets.

Investment brokers say they are doing a quiet steady business, but at the best it would not be enough to keep one-twentieth of the Stock Exchange membership in daily bread. As for speculation, it is no doubt active in a sporadic way, and the accounts open for the fall in some directions are of considerable magnitude. We fear a good many people are bears of American railroad shares here, as well as in France and Germany, particularly Germany. The only immediate consequence is to give the Wall Street operators for the rise a powerful help in sustaining or forcing up prices. There is also a large speculation for the fall open in diamond and copper shares, but more on the Continent than in London. The bear account in Home Railway stocks does not seem to be extensive, but take it altogether, the public is happily not doing much, and we doubt whether it has any great amount of un-earmarked money to play with. Cheap money on the London market does not mean full pockets for the public, or need not mean that; and the fact that the underwriters are continuing to be saddled with most of the new issues is at least an indirect proof that there is no great rush to invest. At the same time, we do not regard the comparative failure of the Metropolitan Board of Works loan as by itself any indication that there is little money to put away. The fact that tenders at 6d. over the minimum of 90 got 65 per cent. of the amount applied for means an error of tactics more than anything else. As an experienced broker said to us yesterday, if the stock had been offered at a fixed price of 91, it would probably have gone off at once. The fact is the tendering system is out of date, and the investor hardly ever responds now to an invitation couched in that form. He has been so completely out-manœuvred in the past when he attempted to get in on the best terms that he has contracted a thorough dislike for this system of issuing loans. Next time the Metropolitan Water Board will be wise if it takes courage, and asks a straight price.

In time doubtless cheap money will generate speculative activity in many directions, possibly even in the South African market, although the splash made there this week has not had any appreciable influence in stirring up the general appetite of dabblers to join in the play, but we can be by no means sure that the financial crisis which began in the United States last October has as yet worked itself out. The reverse appears to us to be true, and we see no reason to change the opinions frequently expressed in this journal to the effect that 1908 will try credit the world over much more than the last three months of 1907 did. At the present time a severe crisis is raging throughout Spain, and playing havoc with credit and genuine business throughout the peninsula. Portugal is financially in a hopeless state, and in the larger countries of Europe there are plenty of indications that the worst of the recoil has not yet been seen. Towards the end of the week large failures are announced in Russia, and, crossing the Atlantic, the state of business in the North American Union and in Canada points emphatically to a revival of the state of crises, sometimes possibly in a form more acute than the *dégringolade* of last October, and that before the year is out. Unless facts are recognised and the attempts to substitute credit for solid assets restrained or abandoned, what can be looked for except a more or less permanent liability to crises the world over?

Trustee and Government Securities.

The early part of the week was marked by the disquieting news from India regarding both unrest and anarchist plots in Calcutta and the invasion of the North-West frontier by 20,000 Afghans, and all gilt-edged securities suffered with Consols and Indians. On Tuesday Consols collapsed in confusion to 85⅜, and actually were made up two points lower than on the April contango day, but on more reassuring news recovered the major part of the loss, and are only ⅝ down on the week. The fall was accentuated by bear sales and liquidation attributed to a large deceased account and also to the De Beers Company, though this is repudiated by the officials of the company. India stocks naturally suffered, 3½ per cents. touching 97¾, 3 per cents. 89¼, and 2½ per cents. 75½, but the recovery in these has not been so marked, and losses on the week are still large, particularly in India 3 per cent., which are 1¼ down. In Trustee stocks generally little is to be noticed, except the continued marked abstention of the public. The only exceptions to the prevailing depression were Transvaal 3 per cents., which, after touching 96¾, are ¼ to the good, and National War Loan, which shows a similar improvement. Water Board stock fell at one time below the issue price of the new stock, and finally is left in parity with it. Applications for the new issue at 6d. over the minimum received 65 per cent. The many *contretemps* of the week might easily have caused a disappointment, for out of total tenders amounting to £1,913,300 odd, one of £1,500,000 is credited by rumour to the Bank of England. In Foreign Government stocks, although there was no great pressure to sell, the tone was not satisfactory, owing to liquidation from Paris in De Beers and Rio Tintos. Peru Corporations were sold on exaggerated fears of revolution, but eventually show no change, and the latest news is comforting. Japanese and Russian stocks sympathised with the general tendency, but while Russian have recovered the lost ground, Japanese are a fraction to the bad in the end. The new Nigeria loan proved a complete failure, leaving the underwriters with 95 per cent., and after trying to look like ½ premium before the allotments were out, is now only kept a little better than 1 discount by shop support.

Home Rails.

Brilliant weather, prospects of a Brighton Kursaal, and the new exhibition all at first tended to put a rosy aspect on Southern stocks, while the shipbuilding

troubles kept Northern lines in the dumps. But while hopes of a settlement and some Glasgow buying of Scotch stocks improved the tone of the latter, the rest of the list failed to retain their earlier advantage with the exception of Great Central issues and one or two Tubes. A better traffic on the Brighton line was not reflected in the price, and advantage was taken to put out a few bear sales. Added to this the gloomy view on the situation as regards Southern railways, expressed in an interview with the general manager of the Brighton line, depressed passenger railways generally. The Great Northern 3 per cent. preference issue gained little response, and it was decided to keep the list open for an apparently indefinite period.

Indian and Colonial Railways.

The absence of speculative interest in Indian Rails leaves them without exception to the bad after the war scare at the beginning of the week, while Canadian Pacifics, with a wretched traffic return showing a decrease of $530,000, have rallied 2 points from the bottom, hoisted by the manipulation from Wall Street and a considerable bear account, and Trunks, despite a decrease of £51,300, are actually to the good on the week, telegrams announcing cheerful crop prospects in the west putting heart into the market.

United States and Foreign Railways.

Yankees still pursue their Jack-o'-Lantern course, but the hollowness and unreliability of it all is so well appreciated that there is no inducement to take a hand on this side at all. The effort to give the Union Pacific issue a good send-off has apparently been a severe strain. The delay in the announcement appears to be occasioned by the reluctance of bankers to accede to Mr. Harriman's demand for more than the Pennsylvania Board got, and prices have fallen back in consequence. Pennsylvania new bonds at one time dropped $1 to 1¾ premium when the stags who sold before allotment had climbed in. Movements in South Americans are fairly numerous and in a downward direction, but are indicative of the absence of business rather than any tendency towards liquidation. The chief interest, however, centred in Cuba as a result of cables announcing copious rains and hopeful sugar prospects. Here United of Havana put on no less than 6 points, and the movement was shared in a lesser degree by other companies in the island. On the other hand, Leopoldina has dropped a point. In Mexicans, the losses occasioned by sales in anticipation of the report have been replaced to a fair extent, but the report, which is dealt with in another column, does not appear to have entirely pleased the market, and prices are still down on balance.

Miscellaneous Securities

can hardly be said to have any tendency at all, and alterations in price are often only expressions of opinion. Lyons showed a little life on hopes of business from the Brighton Kursaal, but later lost the ground gained. Rubbers were firm and really better than quotations show, having a rise in the raw material to assist them. Motor companies are quite friendless, depressed both by bad trade and the, now groundless, fears of further taxation. With the exception of United States Steel, which have their own reasons, or no reason at all, for a rise of a point, Iron and Steel descriptions were neglected with the exception of Vickers and Armstrongs which, despite labour troubles in the North, have more than recovered their early losses. South Durhams have to go without their dividend, but took the blow philosophically, and owing probably to the fact being well discounted actually show a rise of 1/16.

Financial and Land concerns have been almost entirely neglected, and the same may be said of Breweries, which remain in a state of suspended animation. A point was added to Dock stock to mark approval of the second reading of the Port of London Bill, the objection of the Conservancy being neglected. Among Tramways, &c., B.E.T. issues shed a bit all round, but Tillings, having digested the bad report, show a marked recovery. Foreign undertakings, on the other hand, brightened up, Rio de Janeiro bonds marking a rise of ½, and Mexico common $4½, with active business. Tea shares have been irregular, the prominent feature being a fall in Darjeeling, on reduced profits and no dividend. Telegraphs and Telephones, too, have not moved in unison, for while Anglo "A" shows a small rise, the preferred stock is down ½, National preference up a similar fraction, and Great Northern of Copenhagen a whole point to the bad.

Friday Evening.

Very little influence one way or another was exercised on markets by the Budget. No doubt those who keep motor cars are relieved that the rumour of a tax upon these vehicles was never mentioned, and the story which hurt the feelings of some about a further graduation of the income-tax in virtue of which rich people would pay 2s. in the £, has vanished like the morning mist. Business, however, was not revived in any way, and nothing in the Budget was calculated to give it a fillip. The sentiment was against Consols, however, and seems to have been rather increased by the outlook opened up by old age pensions. Prices as a rule were merely dull in the way that indicates very little going on, and markets abroad were just as inert. Some of the catering shares were rather better on the reduction in the sugar duties, but American Railroad shares were at first disposed to recede on the delay in fixing the price for the new Union Pacific issue. They closed better, and Canadas and Trunks rose with them. Kaffirs have lost the bloom, De Beers are still moving simply as bull or bear prevails, and altogether the market is dreary enough.

New issues are for the most part let alone, but Pennsylvania paper is quoted again at 2½ premium, and new Water Board "B" stock is at ¼ premium. South Nigeria, on the other hand, is quoted at ⅞—¾ discount, and the Salvador loan is at no less than 9 discount.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: Transvaal Govt. Acct. ⅜, to 97⅛-8. **Fall:** 2½ p.c. Ann. 1905 and Acct. both ⅜, to 84-⅛, Irish Ld. Stk. and Acct. both ⅛, to 89⅜-90½, Egyptian Govt. 1, to 98-100, Bk. of England 3, to 263-8, India 1931 Acct. ½, to 101½-¾, do. 1948 Acct. 1¼, to 80⅞-90¼, do. 1926 Acct. 1, to 76-7, Indian R. Paper 1, to 61-3, do. 1854-5 ½, to 62½-3½.

CORPORATION AND COUNTY STOCKS.—Rise: Cardiff 1925-65 1, to 99-101. **Fall:** Metro. Water "B" Acct. 1½, to 89½-90½, Metrop. Cons. Stk. ¼, to 101-2, do 3 p.c. ½, to 92-3, Birmingham 3½ p.c. 1, to 102-4, Leeds 3 p.c. 1, to 88-90.

COLONIAL AND PROVINCIAL GOVERNMENT SECURITIES.—Rise: N.S.W. 1930-50 ½, to 98-100. **Fall:** Straits Settlmts. 1, to 102-4, Cape 4 p.c. Cons. 1, to 100-2, Natal 3 p.c. Cons. 1, to 83½-4½, N.S.W. 3 p.c. 1, to 87-8, Queensland 1921, ½, to 99-100, do. 3 p.c. Ins. ½, to 88½-9½, S. Nigeria 2, to 94-6, Straits Settlmts. ½, to 96-8.

COLONIAL AND FOREIGN CORPORATION STOCKS.—Rise: Bergen 1, to 99-101, B. Ayres 1, to 91-3, Otago 1881 1, to 115-7, Para (Belem) 1, to 76-9, Yokohama 1, to 97-9. **Fall:** Johannesburg 1, to 86-8, Rand Water ½, to 92½-3½, S. Melbourne 1, to 102-4.

FOREIGN STOCKS, BONDS, &c.—Rise: Brazilian 1889 ⅜, to 82½-¾, do. Fndg. Bds. ½, to 103-4, Bulgarian Gd Ln. 2, to 99-101, Chilian 1885 1, to 87-9, do. 1887 1, to 88-90, do. 1889 Gd. 1, to 87-9, do. Coquimbo Rly. 1, to 85-7, Chinese Imp. Rlys. (Kowloon) ½, to 101-2, Greek 1889 Rnts. ⅜, to 36¾-7½, do. 1902 Rlys. Ln. ⅛, to 92-3, San Paulo 1899 1, to 100-2. **Fall:** Argentine 4 p.c. Bds. 1897-8-9-1900 and Laws all ½, to 83⅜-4½, do. 1907 Gd. Ln. ½, to 98½-⅝, B. Aires ½, to 60½-¾, Colombian Con. ½, to 42-3, Guatemala ½, to 25-7, Japan Stlg. Ln. ½, to 80½-1, do. 4½ p.c. Bds. ½, to 80½-¾, do. 1907 Stlg. ½, to 96½-7, Para (State) 1, to 87-9, Uruguay 1905 Ln. 1, to 88-90, Austrian 1868 1, to 96-9, German Ln. ½, to 79½-80½.

HOME RAILWAYS.—Rise: Centl. Lon. Pfd. 1, to 85-7. **Fall** Caledonian Pfd. Ord. 1½, to 61½-2½, E. Lon. ½, to 2-½, Gt. Nthrn. "A" 1, to 35½-0½, do. "B" 1, to 137-40, Barnsley ½, to 45½-½, Mersey 1, to 1-3, S. Estrn. Pfd. 1, to 99-101.

Leased.—Fall Birkenhead Cons. 1, to 112-5, Nott and Grantham, 1, to 110-3.

Debenture.—Fall: Barry 2½, to 80-3, Gt Centl 4½ p.c. 1½, to 121-4, do. 2nd ½, to 91-4, Gt. Nthrn. ½, to 87-9, Gt. TEA, COFFEE, AND RUBBER.—Rise: Anglo-Malay ⅛, to 2⅜-3, Consolidated 2nd Pf. ½, to 12-3, Cooper, Cooper, and J. Deb. 1, to 86-8, Dumont Deb. 1, to 98-100, Lungla (Sylhet) Pf. ½, to 10-½, Nuwara Eliya ½, to 11-2. **Fall:** Assam Co. ½, to 29-30, Chargola Ord. 1/16, to 1 3/16-5/16, Darjeeling Co. 1, to 9-10, Darjeeling Cons. Ord. ½, to 3½-⅜, E. India and Ceylon Pf. ½, to 7½-8½, Jokai (Assam) Ord. ½, to 10½ 1½.

TELEGRAPHS AND TELEPHONES.—Rise: American Cap. 1, to 120-4, Anglo-Amer. Dfd. ½, to 14-4½, National Pfd. ½, to 107½-9½. **Fall**: Anglo-Amer. Pfd. ½, to 98½-100½, G. Northern 1, to 29-31.

TRAMWAYS AND OMNIBUS.—Rise: Brit. Columbia Elec. Dfd. 1, to 129-32xd., B.A and Belgrano Ord. 1-32, to 4 11/16-¾, Mexico Com. 4½, to 87⅛-9½xd., do. ½, to 86⅜-7⅜ p.c., Rio de Janeiro ½, to 82-4. **Fall**: B.E.T. Pf. ⅜, to 3⅜-4½, do. 5 p.c. Deb. 1½, to 89-93, do. 2nd Deb. 4, to 66-70xd., Metro. Elec. Dfd. 1-32, to 1-32—3-32.

Royal Mail Steam Packet.—£2½ per cent., making £5 per cent. per annum on the preference stock, and £2½ per cent. on the ordinary stock.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending May 2, 215,000 poods, equals 3,466 tons.

Critical Index to New Investments.

Province of Manitoba.

The Canadian Agency, Ltd., having purchased an issue of £308,500 4 per cent. debenture bonds of this Province, now offers them for subscription through Parr's Bank at the price of 99 per cent. These debentures form part of a series of £719,100 of similar debentures, which were issued to the Bell Telephone Company in payment for its system within the Province, and are a direct obligation of the Government. It is officially stated that the assets of the Province, including public buildings, deferred payments due on land sold, and some 7,050,000 acres still in hand, have a total value of £6,024,103, and exclusive of this issue the only direct liability amounts to £1,188,258. The ordinary revenue for 1907 was £435,362, and the bonds, although somewhat dear, should be a fair enough investment.

Agricultural Bank of Egypt.

Applications will be received by the Bank of England for an issue of £1,500,000 sterling 3½ per cent. bonds which is offered at the price of 87½. The amount forms part of an authorised total of £6,570,000, of which £2,350,000 is reserved against a like amount of outstanding 3½ per cent. bonds, and £2,720,000 has already been issued. As is well known, the bank's operations are confined to making advances to small farmers, either in sums not exceeding £E500, repayable in 20½ years, and secured by first mortgage on land of at least double the value of the loan, or in amounts up to £E20, repayable within 15 months. According to the last balance-sheet the advances in the first class on December 31 totalled 207,899 for £8,124,000 sterling, and in the second class 5,082 for £66,979 sterling, and the operations for the year resulted in a surplus of £247,216, after providing £166,410 for bond interest, £14,286 for reserve, £50,000 for preference dividend and for all other outgoings. The bonds are repayable at par not later than April 1, 1949, and being unconditionally guaranteed as to principal and interest by the Egyptian Government are a very attractive security.

Harrod's Stores, Ltd.

An issue of 44,000 5 per cent. cumulative preference shares of £5 each was offered by this big enterprise at the price of £5 17s. 6d. per share, or about ¼ under the market quotation for the existing shares. The proceeds will be applied partly in replacing sums already expended on capital account, partly in repayment of loan, and the balance will be available as additional working capital. Remarkable progress has been made by the company, and during the eight years ended January 31 last, the profits increased from £87,012 to £172,837, while a reserve fund of £641,506 has been built up, mostly however out of premiums on shares, and not out of revenue. The block of buildings in the Brompton Road is partly freehold and partly long leasehold, and the company has other freehold and leasehold properties, including extensive depositories at Barnes, the total valuation, according to the last balance-sheet, having been £1,371,764 on January 31. Big dividends have been paid on the ordinary shares throughout the company's existence and the new shares, although far from cheap, appears to be a good enough if rather speculative investment as things go.

State of Espirito Santo Loan.

This Brazilian State offered for subscription in Paris and London an issue of frs. 30,000,000 (£1,200,000) in bonds of frs. 500 (£20) at the price of frs. 475 or £19 per bond. The money is required to repay the existing interior debt of frs. 14,024,000 and the floating interior debt of frs. 7,508,047, to convert the existing interior debt of 6 % to 5 %, and to extend the present railway communication, develop the colonies, and carry out other work. As guarantees of the loan the State assigns to its service an annuity of frs. 1,748,335 based upon the proceeds of all export duties, and secondly upon all ordinary and extraordinary revenues of the State with preferential priority over all other loans, exterior or interior. During the past three years the value of

exports has arisen from frs. 21,337,000 to frs. 27,398,700, and the revenue from frs. 2,920,460 to frs. 3,257,510. The State is doing a good deal to attract immigrants for the development of its natural resources which appear to be both abundant and varied, and is spending more than frs. 1,000,000 per annum for this purpose. Provided the State is not involved in any general upset of Brazilian finance the security offered should be good.

LEGAL INSURANCE CO., LIMITED.

Formed with a capital of £1,000,000 in £5 shares, this company proposes to provide for the special requirements of the legal profession with regard to all descriptions of insurance other than life. It is pointed out in the prospectus that the bulk of the fire insurance business influenced by the profession is on private houses and other risks of a more hazardous nature, and by confining its operations to this class it should be possible to build up a very profitable undertaking. The company will also transact personal accident, burglary, third party and general contingency insurance, and in addition will take over the profits branch of the Profits and Income Insurance Co., Limited. For this it will pay £35,000, which includes the agreements for the branch offices, the reserve fund of the department subject to unexpired risks, and the benefit of the re-insurance facilities. Only half the shares are to be offered at present, on which £1 per share will be called up, and the minimum subscription has been fixed at 75,000 shares, all underwritten at a commission of 6d. per share. Only members of the legal profession are eligible for seats on the board, and they should be able to find sufficient support to the project without help from the ordinary investor.

GLENSHIEL RUBBER ESTATES CO., LTD.

This is another of the little companies formed to take over estates planted within the past year or two, and shareholders will have to resign themselves to wait some considerable time for any return on their money. One thing in this particular undertaking's favour is the small amount of actual cash to be paid for the property, the vendors handing over three estates in Selangor, Federated Malay States, containing about 1,620 acres for £8,000 in shares and £1,000 in cash. The total capital is only £30,000, in £1 shares, of which 18,000 were offered for subscription and 4,000 were held in reserve. Of the total area 670 acres will be under cultivation when handed over, but it is proposed to clear and plant a further 330 acres, and on this it is estimated that the expenditure up to the end of 1912 will amount to £15,575. On the other hand it is expected that on a basis of only 3s. per lb., the nett revenue in 1913 from the 482 acres already planted should amount to £4,610, increasing to £9,735 in the following year.

REPUBLIC OF LIBERIA 6 PER CENT. CUSTOMS LOAN OF 1907.

Messrs. Emile Erlanger and Co. this week offered for sale at 101 per cent. £100,000 of the above loan in bonds to bearer of £20 each which they had taken at par in satisfaction of an advance of a similar amount. Of the total approximately £69,000 has been applied in the extinction of the Treasury Notes of Liberia, thereby placing the finances of the Republic on a gold basis, and in the construction of roads, etc., leaving £31,000 unexpended. Interest and amortisation of the bonds is provided for by a fixed annual sum of £6,000, and by 5 per cent of the excess over £50,000 of the revenue and receipts of the Liberian Government from Customs in each year, with a maximum of £2,000. Subject to certain reservations in respect of the 1871 loan, which is secured by the export duty on rubber and by one half of the duties on tobacco and powder, the new bonds are a first charge upon the whole of the Customs revenue, the collection of which is supervised by two European Inspectors and Financial Advisers recommended by the British Government. They are redeemable within thirty-five years by drawings at 105 per cent. or by purchase in the open market, but may be repaid at any time at 105 per cent. on not less than one month's notice. For the year ended March 31, 1906, the Customs revenue amounted to $230,580, or at the fixed rate of 4s. 2d. per gold dollar £48,037; and for the following year it was £68,315; while for the past twelve months it is stated to have been not less than £75,000. On paper, therefore, there would seem to be plenty of margin, but having regard to the past history of the Republic the bonds do not seem over attractive, in spite of the high yield.

Continental Memoranda.

Complaints are as rife on Continental markets as in the City over the lack of business. Not even the Pennsylvania Railroad success, which has done such wonders on Wall Street has produced any revival on the Continent, and the Germans are angry even with the Pennsylvania loan because they say the small investor has been neglected. German markets, however, are in a discontented mood for various reasons, not least because of the uncomfortable position created by the demands of the Imperial Government. One organ of public opinion has been contrasting the situation of the German Empire at its foundation with its state now and winds up by remarking that it makes one tremble to think what would happen if the Kaffirs or the Hereros would really rebel. In any case, it adds, "this does not seem to be a fitting time to talk of creating a fleet which would be strong enough to make the universal coast line German territory." The way Imperial debt has mounted was recently dealt with in these columns, and we need not labour that point. Bank shares have been depressed by fears lest the commission on banking now sitting should put the probe in too deeply for the convenience of the company floating, loan subscribing industry of these institutions, so there is plenty to be bothered about.

About French affairs, there is nothing whatever new to be said this week, at any rate nothing of interest to people here. Bourse prices have been dull, and French speculators are still troubled by the position of the Copper market, and by that still only partially revealed mess in diamonds. No new loans of any magnitude have made their appearance on the Paris market since we wrote last, although it is apparently prepared to participate in any good thing going, and in some things where the risk might be fascinating. Prices have tended downwards for shares of French banks, and there is no elasticity in any other direction.

It would seem, however, that the new Russian iron and steel combination is getting into shape for it has been officially recognised, and as its capital will be a large one there may be plenty of occupation for the commission earners and premium hunters before very long.

The only Bourses on the Continent which seem to have been lively this last week or so are the Italian, and there business is described as being not only active but expanding. For all that the F.I.A.T. Motor Co. does not appear to be quite out of its difficulties yet, but the increase of its capital by £360,000 nominal has been decided, and the shareholders have been called upon to pay 65.85 lire per 100 lire new share. The payments, however, will be made as easy as possible. The company's assets are said to have depreciated by £120,000 and its engagements amount to £440,000, so it wants new money badly enough.

The Prussian Government is beginning to disburse some of the proceeds of its new loan and among other steps has ordered 515 new locomotives to be delivered by the end of April next year. The cost of these engines is said to be £1,600,000.

It is stated from Hamburg that the Brazilian Government has refused an offer made to it for 3,000,000 sacks of its coffee, the price being apparently unsatisfactory. Negotiations, however, have been entered into for the sale of the entire stock of 8,000,000 sacks "at favourable prices," and the Government had better hurry up else the new crop will be in the market and there may be no purchaser at all for the hoarded stock, the new crop being a good one.

An additional £20,000 of annual subsidy has been granted to the North German Lloyd Co., on condition that it provides the monthly service between New Guinea, Japan and Australia. This may not be altogether money wasted, but it is pretty near it, and the grant is not particularly wise in the present state of German Imperial finance. We sympathise all the same with the anxiety of the Germans to participate more and more in the international carrying trade. Subsidised ships may involve a direct loss to the Treasury, but they undoubtedly help to open up markets for a country's productions.

Paris brokers are said to be not only surprised but disappointed at the introduction of the Austrian slice of the Russian loan of 1906 on the Paris Bourse. They are convinced that at the end of this year a new Russian loan of £28,000,000 will be issued, and next year £3,200,000 of 5 per cent. Russian Treasury bonds will mature. The Russian Government it seems persuaded the French Government to allow that issue on the half promise that the new loan would on no account exceed £3,200,000, and that it should not be regarded as a fresh loan, but merely as a conversion of the Treasury bonds. The Russian Government, however, was particularly anxious to have the Austrian portion of the 1906 quoted in Paris, but, instead of helping the price of other Russian securities, its appearance caused a noticeable increase in the depression.

The Argentine Government has issued some particulars illustrative of the rapid progress the country has made in recent years, and the summary figures are well worth quoting:—

	1895.	1907.	
Population	3,954,000	6,210,000	
Railways in kilometres ..	14,400	22,000	
Cultivated area	4,892,000	14,611,000	hectares
Corn	2,049,000	5,759,000	"
Flax	387,000	1,391,000	"
Maize	1,244,000	2,730,000	"

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

F. E. D.—Hardly. There is far too much of the stuff in the hands of the underwriters, and prospects are not too brilliant.

Nopir.—We should put (2) third. (1) is the best of the three, and might well serve as receptacle for 10 per cent. of your capital, but both the others are rather speculative. Your (2) should be all right, only we must see what the effect of the new money is, and your (3) is uncertain, partly because of the Government, and also through competition. (4) We are just a little afraid of the speed at which new capital is being raised, although the business ought to be good.

J. H.—If you are receiving more in dividends than you pay in interest we think you should hold on rather than cut a loss which ought to be recovered one day. When the price will rise though we cannot forecast as the market for all this group of securities is being held down by the abundance of new issues.

Rion.—(1) On the whole, yes. The use of the metal is extending fast, and something like a union among producers exists which should be advantageous to this company, which is better managed than formerly. (2) This stock is good, too, excellent of its kind, but it is liable to ups and downs in price which dictate prudence in buying low. Barring this, we should prefer it to the other.

J. B. C.—Hardly yet, though the closing of bear accounts is causing the stock to recover. But traffic receipts will probably continue to look thoroughly bad all this month.

Edinburgh.—We rather think the stock worth buying. All depends upon the ability, or willingness of the Yankee leasing company to keep its engagements. Should it do so, the dividends on the stocks might gradually rise to, say, 2½ per cent. On balance the chance seems favourable. With the addition just received and allowing for these answers the balance at your credit is 57s.

J. S.—Apply to several of the offices whose advertisements will be found in the Investors' Review. All are sound. Select the one whose terms are most favourable, or divide the money between two.

Tenders for £1,500,000 Metropolitan Water "B" stock were opened on Thursday at the Bank of England, and amounted to £1,913,300, at prices varying from £92 to £90 (the minimum). Tenders at £90 0s. 6d. will receive about 65 per cent. of the amount applied for, those above that price being allotted in full. The average price obtained for the stock is £90 2s. 5·95d.

TRADE AND PRODUCE.

Wheat.—The tone of markets has been even firmer, and prices generally show an upward movement. River Plate grades have been in more request, holders of spot have obtained prices well above those of last week, and shippers have again advanced their quotations 6d. to 9d. per quarter. Lighter shipments have helped to improve matters, and also the decrease in Bradstreet's visible supply. This week's quantities on passage are again lower at 3,185,000 qrs., against 3,495,000 to the United Kingdom, and 2,280,000 qrs. against 2,415,000 to the Continent. Imports also were less, though still in excess of those of the same week last year, being 519,400 qrs. against 372,750. Samples of English wheat were not very plentiful. Farmers' deliveries amounted to 44,192 qrs. averaging 31s. 6d., against 63,344 qrs. averaging 27s. in 1907, and holders were not inclined to do business except at 6d. to 1s. advance. Americans had excited and irregular markets at the first. Interest was entirely centred in crop news, which was unfavourable at the start. Later advices were less pessimistic, and prices reacted but hardened again under good export buying. The visible supply shows a reduction of 5,547,000 bushels on the week.

Cotton (from our Manchester correspondent).—Our market has presented a firmer appearance throughout the week, and quotations in yarn and cloth have tended to harden. The chief feature of interest has been the decided advance in the price of American cotton in Liverpool. This has been brought about to a large extent by the less favourable conditions in the belt, the poor weather causing some anxiety as to the future of the crop. Any real revival in the demand for yarn and cloth, however, has not come round. Buyers know that spinners and manufacturers are poorly situated, and owing to stocks being held goods can be secured as wanted. Certain buyers, however, have not been prepared to wait any longer, and covering to a moderate extent has been done. In piece goods for export rather more inquiry has come through for various markets, but numerous offers have not been of a practicable character. Shirtings for India have been in request, and so have lighter goods. Shippers are not prepared to operate freely, but in small lots certain manufacturers have not done badly. China demand improves very slowly, the price of silver being against anything like an active business. Various smaller markets have given little support, but it can scarcely be said that shippers have been fortified by the upward movement in cotton to anticipate future requirements. Quotations all along the line are very irregular, and weak sellers fix the prices throughout departments. Home trade cloths have again moved off slowly. Manufacturers cannot expect large orders until the distributing houses clear part of their heavy stocks. A manufacturing firm has this week called a meeting of creditors, and it is also announced that a yarn agent is in financial difficulties. American yarns for home use have moved off slowly, but spinners have met with rather better sales than in recent previous weeks. Users, however, know the position of spinners, and are not prepared to pay more than low prices. In shipping bundles a fair turnover has transpired for China in both single and double counts. Bolton yarns have improved a little owing to the sales being more extensive. Stocks, however, prevent any permanent improvement in the position of spinners.

American cotton in Liverpool, according to Sir Jacob Behrens and Sons' report, has advanced fully ¼d. per lb. since our last report, and all the American markets have been active and against buyers. The daily sales of spot cotton in Liverpool have been larger than for some time past, and transactions in futures have been very numerous, more especially for July-August deliveries. The chief cause of this advance was the attempt to cover "bear" sales, which had accumulated to a very large extent. The market was feverish, and easily affected one way or the other. Weather reports were unfavourable, and a reaction was only natural after the long period of depression. Yesterday's advance has not been held, weather reports being better, and "bear" sales appear to have been covered for the present. The tone of the market is, however, less pessimistic, and another sharp advance is probable in case of any adverse news about the growing crop.

Wool.—It cannot be said that the situation shows any improvement, nor is there likely to be much change one way or another till the London sales have opened. Bradford market has appeared a little less depressed this week. There has been a little speculative buying of forties crossbreds, and quotations were raised ¼d. to ½d. Consumers had to buy to cover requirements, and besides concluded that even if prices were not at their lowest they might not go much lower, and the loss could in any case not be great. Merinos are weaker, and in the yarn market nothing is doing, and machinery, which up till now has been kept going on old contracts is now standing idle. The blanket and cloth trades and manufacturers generally are slack in some districts, and it is the mills turning out the cheaper class of goods that are the worst off for orders, and in others finer goods are suffering. The unsettled and depressed condition of trade in the north is having a bad effect upon ready-made clothes. In exports the United States show that values of goods sent there are about one-half what they were in April, 1907, and the colonies, who are quiet, but the Continent is doing a fair trade in fine cloths.

Coal.—Exports continue large and important, and are chiefly responsible for keeping up the high prices which home consumers have to pay, and which the present state of trade does not justify. According to the *Engineer*, by maintaining prices at home owners are able to make mere concessions to foreign buyers and retain or even extend their trade, in spite of foreign competition. Gas

coal contracts are still in abeyance, as owners will not give way, and until any decision is come to on the Miners' Eight Hours Bill owners are determined to stick to their demands. Not only so, continues the *Engineer*, but forms of contract for future delivery, it is said, stipulate that prices will be increased by 1s. 6d. per ton when the projected limitation of the hours of labour comes into operation.

Iron and Steel.—Never has the position of the hematite trade been worse apparently. Barrow-in-Furness is producing not much more than half the quantity of six months ago, and cannot get rid of even that. Moreover, the cost of raw material is higher than the produced metal can be sold at in the open market. Nor is the outlook elsewhere any better. East Coast trade is more or less at a standstill. Cleveland pig-iron business continues in the hands of speculators, against whom warrant-holders maintain their prices, and no genuine buyer cares to commit himself more than a few days ahead. In manufactured iron and steel conditions continue the same—nothing doing except in rails. Producers will not reduce prices, as they do not think even that would bring forth buyers.

Copper.—The market has only been moderately active, but prices have been irregular, a certain unsettled feeling being due to bad monthly statistics and poor American reports. Prices for forward metal at one time jumped to £58 10s. 6d. and three months to £57 10s., the sudden buoyancy of American share markets on Thursday, and the report that the Amalgamated interests had raised their price to 13 cents, being responsible for the improvement, but it did not last. Demand was easily satisfied, bear depression and liquidation of nervous holders caused a set-back to £56 17s. 6d. cash and £57 12s. 6d. three months. The close was perhaps a trifle harder at these figures.

Tin.—Prices have given way gradually all the week. Lower American quotations, some large liquidation, and Eastern selling, all helping the downward tendency. A slight rally appeared on Thursday morning, due to restricted offering, but persistent liquidation again led to a fresh break, and prices closed at £139¼ cash and £139 three months. The market was active to the close, and final prices were:—Cash, 138¼; three months, 138.

Tea.—The Budget has brought about no change in the position of tea, which is still, from the point of view of most of those concerned in the trade, too heavily taxed, particularly seeing that the industry, as Messrs. Gow, Wilson, and Stanton, Limited, point out, is almost entirely supported by British capital. Markets continue strong, and in the Indian section demand was active. Fine to finest sorts were again the most sought after, and went slightly dearer in price, the average for the week coming to 7.99d. per package for 26,598 packages sold on garden account out of 28,952 packages offered, against an average of 8.19d. for 29,600 packages sold in the same week last year. Ceylon importers brought forward a moderate supply of 25,511 packages, but demand was scarcely so pronounced as in Indian and some irregularity was noticeable in medium qualities. Fine sorts, though, were keenly competed for at fully last week's rates and 8.02d. was the average for the week against 8.23d. in 1907. Javas had a comparatively large sale of 4,103 packages, and prices occasionally showed an advance. 108 packages from Goalpara averaged 9½d. per lb.

Sugar.—Mr. Czarnikow announces that deliveries in the United Kingdom for April have after all not come up even to the moderate expectations, because a considerable proportion of the fairly liberal imports—say about 43,000 tons—went into bonded stores, British refined stocks, too, increasing 9,200 tons, against a decrease of 3,700 tons, so that United Kingdom stocks are now 33,000 tons above instead of being 13,000 tons below last year. In spite of American prices, we attracted 10,000 tons more cane. Of course, deliveries are not real consumption; the falling off is largely due to a reduction of invisible stocks, but whether the difference will be made good in May is doubtful, because we have lost seven days of it through the Budget already, and have a very heavy month with which to compare. The Budget was presented on Thursday, and, contrary to expectations, the sugar duty was reduced to 4s. 2d. to 1s. 10d. per cwt. The above figures are sufficient to show that the market during the week must have been very slow with United States traders, whilst from the United States and the Continent there was no news to cause a speculative demand, America refusing all offers. The weather in Cuba has turned more favourable for the growing crop, rains having set in, and as they have begun earlier than last year, some of the damage done by the drought may be made good if they continue, but as fresh plantings were much neglected, it is more than doubtful that even a normal crop can be reached in the best of circumstances. There are at present still 25 centrals grinding, mostly in outports, and probably of more than average capacity, but in six ports the receipts were only 8,000 tons. The weather on the Continent was better, too, but the sowings very late. The market has been but slightly affected by all this, and in the absence of pressure to sell or desire to buy, prices gave way only 1d. on old and ½d. on new crop. The American market has been quiet, with quotations for 96 per cent. centrifugals ranging between 4.42 and 4.48 cents. Landings in the three ports were 49,000 tons, meltings 40,000 tons, and stocks 273,000 tons.

The board of the Argyll Motors, Limited, announce that they have decided not to pay a dividend. Last year at this time a dividend of 5 per cent. was paid, but the accounts ultimately showed a loss of £8,000.

MINING RETURNS.

Abbontiakoon, Block 1.—Crushed 4,616 tons; fully treated 4,828 tons, yielding 1,349.5 ozs. from plates, and 539.3 ozs. from sands and slimes.

African Gold Dredging and Mining Concessions.—509 ozs.

Angelo.—Milled 33,000 tons, 13,595 ozs.; £30,048.

Antenior (Matabele).—Crushed 582 tons, 152 ozs.; cyanide 380 tons, 31 ozs.

Associated Northern Blocks.—Milled 3,609 tons; treated 1,475 tons slimes; yield, £9,100 sterling.

Balaghat.—Quartz 4,650 tons, 2,310 ozs.; tailings 4,368 tons, 296 ozs.; total, 2,606 ozs.

Barrett.—380 ozs., valued at £1,450; profit, £300.

Boston Consolidated.—7,052 tons sulphide, 308,000 lb.; 12,600 tons porphyry, 1,223 tons concentrates, contents 288,000 lb. copper.

Broken Hill South Blocks.—Treated, 7,006 tons ore, assaying 17 per cent. Pb., 2.7 ozs. Ag., 9.5 per cent. Zn. per ton; produced, 1,354 tons concentrates, containing 843.5 tons lead, and 11,644 ozs. silver.

Broomassie.—Crushed 1,876 tons, 2,021 ozs., 24 tons concentrates of an assay value of £24 10s. per ton, 2,526 tons tailings for 705 ozs.

Burbanks Birthday.—Crushed 475 tons, 503 ozs.

Burma Ruby.—71,000 loads washed, producing rubies valued at Rs.40,000. Royalties, Rs.8,000.

Cason.—Milled, 30,000 tons, 13,560 ozs.; profit, £26,153.

Champion Reef.—14,100 tons, 7,786 ozs.; 18,310 tons tailings; 2,401 ozs.; total, 10,187 ozs.

Charlotte Plains.—Havillah—530 fathoms, 272 ozs. Charlotte—610 fathoms, 199 ozs.

Chinese Engineering.—Output, 25,500 tons; sales, 28,500 tons; consumption, 1,275 tons.

Consolidated Langlaagte.—7,803 ozs. from 22,629 tons; profit, £10,671.

Crown Deep.—Crushed 35,985 tons, 10,924 ozs.; cyanide 36,509 tons, 5,367 ozs.; total, 16,291 ozs.; profit, £38,000.

Crown Reef.—Crushed 24,000 tons, 6,115 ozs.; secondary treatment 23,993 tons, 3,520 ozs.; total, 9,635 ozs.; profit, £21,019.

Day Dawn Block.—690 tons quartz, value, including concentrates, tailings, &c., £2,100.

Dharwar Reefs.—Crushed 1,306 tons, 653 ozs.; tailings assay per ton 3 dwts. 18 grs.

Driefontein Consolidated.—Milled 30,510 tons, 11,403 ozs.; profit, £22,635.

Duff Development.—182 ozs.

Durban Roodepoort Deep.—Crushed 11,230 tons, 3,417 ozs.; by cyanide 11,067 tons, 1,422 ozs.; total, 4,839 ozs.; profit, £4,550.

Eldorado Banket.—Crushed 2,850 tons, 1,360 ozs.; cyanide 2,850 tons, 287 ozs.; total, 1,647 ozs.; profit, £3,450.

Famatina Development.—Smelted 2,300 tons ore; produced 700 tons matte, containing 140 tons copper, 1,400 ozs. gold, and 12,600 ozs. silver; value, £15,000.

Ferreira.—Crushed 23,550 tons, 8,715 ozs.; by secondary treatment 24,860 tons, 4,198 ozs.; total, 12,913 ozs.; profit, £31,021.

Ferreira Deep.—Crushed 32,800 tons, 13,165 ozs.; by cyanide 32,740 tons, 5,607 ozs.; total, 18,772 ozs.; profit, £52,000.

Forbes Rhodesia.—Veracity crushed 292 tons, 154 ozs.; cyanide 200 tons, 36 ozs. Dumbleton crushed 187 tons, 89 ozs. fine; cyanide 300 tons, 13 ozs. fine. Electric Reef crushed 970 tons, 146 ozs. fine.

French Rand.—Crushed 17,700 tons, 3,161 ozs.; secondary treatment 19,230 tons, 1,645 ozs.; total, 4,806; profit, £1,715.

Geldenhuis Deep.—Crushed 30,500 tons, 6,922 ozs.; cyanide 31,360 tons, 3,520 ozs.; total, 10,442 ozs.; profit, £14,000.

Geldenhuis Estate.—Crushed 19,275 tons, 3,891 ozs.; tailings 1,933 ozs.; slimes 451 ozs.; total, 6,275 ozs.; profit, £12,763.

Giant.—Treated 6,010 tons, 2,570 ozs.; profit £6,480.

Ginsberg.—11,105 tons, 4,070 ozs.; profit, £5,087.

Glen Deep.—Crushed 19,940 tons, 4,390 ozs.: cyanide 19,615 tons, 2,870 ozs.; total, 7,260 ozs.; profit, £10,000.

Glencairn Main Reef.—20,900 tons, 4,619 ozs.; profit, £4,523.

Glynn's Lydenburg.—Crushed 2,564 tons, 586 ozs.; cyanide 1,680 tons, 729 ozs.; slimes 884 tons, 418 ozs.; total, 1,733 ozs.

Golden Horseshoe.—Ore treated 22,980 tons, 12,09 ozs.

Golden Pole.—Crushed 1,278 tons, 646 ozs.; 900 tons sands and 8 tons concentrates 148 ozs.; total, 794 ozs.

Great Cobar.—17,075 tons, output matte 1,556 tons, contents 410 tons copper, 1,160 ozs. gold, 6,729 ozs. silver. Ingot copper made at Lithgow 427 tons; despatched 417 tons.

Great Fingall.—Treated 21,281 tons, 4,961 ozs.; tailings 20,783 tons, 1,686 ozs.; concentrates 498 tons, 1,632 ozs.; total, 8,279 ozs.

Great Fitzroy.—2,225 tons crude ore for 287 tons copper matte, containing 87 tons copper, and 499 ozs. gold.

Gwalia Consolidated.—Crushed 4,637 tons; sands treated 1,880 tons; slimes 1,950 tons; 1,287 ozs.

Hutti (Nizam's).—Crushed 2,400 tons, 979 ozs.; tailings 1,500 tons, 150 ozs.; total, 1,129 ozs.

Ida H.—Crushed 1,000 tons, 737 ozs.; profit, £376.

Ivanhoe.—Crushed 19,030 tons, 2,504 ozs.; sands 8,750 tons, 1,447 ozs.; slimes 8,720 tons, 3,866 ozs.; concentrates 1,560 tons, 2,100 ozs.; total, 9,917 ozs.; profit, £21,140.

Jumpers Deep.—Crushed 19,630 tons, 4,583 ozs.; by cyanide 19,439 tons, 1,875 ozs.; total, 6,458 ozs.; profit, £4,000.

Kalgurli.—10,710 short tons, 6,986 ozs.

Knight's Deep.—41,500 tons, 14,155 ozs.; profit, £26,607.

Koffyfontein.—5,300 carats diamouds (including a good stone of 83 carats); 304,000 loads of blue ground on floors.

Lake View Consols.—9,513 tons ore, 2,657 ozs.; profit, £1,173.

Lancaster.—Crushed 12,100 tons, value £6,340; cyanide 8,570 tons, value £4,194.

Lancaster West.—Crushed 6,450 tons, value £5,709; cyanide 5,192 tons, value £4,251; value of by-products, £1,190; total, £11,150; profit, £4,145.

Langlaate Deep.—Crushed 35,226 tons, 7,933 ozs.; cyanide 35,249 tons, 3,856 ozs.; total, 11,789 ozs.; profit, £16,000.

Le Roi No. 2.—Josie: Shipped 2,410 tons; net receipts, £10,687, being payment for 2,398 tons shipped and £286 for 46 tons concentrates shipped.

"Lloyd" Copper.—Treated 5,200 tons stone for 150 tons copper.

Luipaards Vlei Estate.—Crushed 14,720 tons, 4,687 ozs.; profit, £6,523.

May.—Crushed 14,800 tons, value £14,522; cyanide 10,505 tons, value £5,885; slimes 4,910 tons, value £1,072; value of by-products sold, £51; total, £21,530; profit, £9,106.

Messina (Transvaal) Development.—390 tons copper ore; of this 50 tons is shipping ore assaying 54½ per cent. copper; balance remaining for future treatment.

Meyer and Charlton.—Crushed 12,700 tons, 1,700 ozs.; cyanide 3,273 ozs.; total, 4,973 ozs.; profit, £8,730.

Mount Morgan (Queensland).—Treated 20,005 ton, 6,500 ozs.; copper treated 16,338 tons ore and metaliferous flux produced 540 tons blister copper containing 535 tons copper and 6,152 ozs. gold; 49 tons copper precipitate containing 37 tons copper and 14 ozs. gold.

Myalls and Peak Hill.—3,564 tons, 456 ozs.

Mysore.—16,100 tons, 15,290 ozs.; tailings 15,227 tons, 2,144 ozs.; total, 17,434 ozs.

Mysore West, Mysore-Wynaad.—cyanided 2,496 tons, 232 ozs.

New Comet.—Milled 25,000 tons, 8,681 ozs.; profit, £13,196.

New Goch.—Crushed 22,848 tons, 4,859 ozs.; cyanide 2,387 ozs.; total, 7,240 ozs.; profit, £11,526.

New Heriot.—Crushed 9,240 tons, 4,365 ozs.; profit, £7,532.

New Kleinfontein.—Milled 37,832 tons, total 13,360 ozs.; profit, £22,274.

New Modderfontein.—Crushed 25,800 tons, 8,084 ozs.; by secondary treatment 28,806 tons, 3,637 ozs.; total, 11,721 ozs.; profit, £20,019.

New Primrose.—7,462 ozs. from 19,020 tons; profit, £14,414.

New Reitfontein.—9,038 ozs. from 17,896 tons; profit, £16,512.

New Unified.—3,985 ozs. from 9,842 tons; profit, £6,507.

New Vaal River Diamond.—Diamonds registered by diggers £1,205.

New Zealand Crown.—Crushed 1,533 tons; value, £3,577.

Newhouse.—Treated 17,890 tons for 549,000 lbs. copper

Nigel.—Crushed 10,600 tons, 4,499 ozs.; profit £7,049.

Nigel Deep.—4,243 tons, 1,614 ozs.; profit £171.

North Broken Hill.—Treated 2,620 tons, assaying 15.8 per cent. lead, 6.8 ozs. of silver per ton, producing 445 tons concentrates, containing 306 tons 16 cwt. lead and 9,345 ozs. silver.

North White Feather.—Crushed 1,980 tons, 916 ozs.

Nourse.—Crushed 33,533 tons, 8,064 ozs.; by cyanide 33,415 tons, 4,614 ozs.; total 12,678 ozs.; profit £18,100.

Nundydroog.—6,900 tons quartz, 5,985 ozs.; 5,018 tons tailings, 481 ozs.; total 6,466 ozs.

Ooregum.—10,027 tons, 5,740 ozs.; 9,509 tons tailings, 995 ozs.; total 6,645 ozs.

Oroya Black Range.—Crushed 4,140 tons, 2,447 ozs.

Oroya-Brownhill.—Crushed 11,681 tons, 3,775 ozs.

Premier (Transvaal) Diamond.—Six months: Loads of mine ground, 3,853,476; loads of cylinder lumps from dump 223,516; loads of overburden, 86,950; yielding 1,084,774 carats of diamonds.

Prestea Block A.—Crushed 7,315 tons, 2,870 ozs.; 4,198 tons tailings, 638 ozs.; total, 3,508 ozs.

Princess Estate.—Crushed 8,775 tons, value £11,687; cyanide 5,966 tons, value £5,739; profit, £5,572.

Queensland Copper.—Ore treated 1,284 tons; production, 213 tons matte, containing 118 tons fine copper; shipment, 281 tons matte.

Queensland Exploration.—Treated 392 tons ore, yielding 69½ tons matte, containing 52 tons copper.

Roberts Victor.—5,368 loads washed, producing 3,688 carats, including second sortings.

Robinson Central Deep.—Crushed 29,237 tons, 10,998 ozs.; by secondary treatment, 28,909 tons, 4,852 ozs.; total, 15,850 ozs.; profit, £46,002.

Robinson.—Crushed 41,600 tons, 16,280 ozs.; by secondary treatment 42,486 tons, 9,130 ozs.; total, £25,410 ozs.; pcofits, £8,076.

Robinson Deep.—50,643 tons, 19,461 ozs.; profit, £39,052.

Roodepoort Central Deep.—Crushed 8,335 tons, value £9,706; cyanide, 5,620 tons, value £4,634; total, £14,340; profit, £3,424.

Rose Deep.—Crushed 33,300 tons, 7,324 ozs.; by cyanide 32,996 tons, 3,254 ozs.; total, 10,578 ozs.; profit, £16,100.

St. John Del Rey.—Gold produce April £25,000; yield per ton ·65 of an ounce troy.

Scottish Gympie.—Crushed 7,000 tons, 1,900 ozs.

Selukwe.—Crushed 6,011 tons, 1,456 ozs.; cyanide 3,850 tons, 350 ozs.; total, 1,806 ozs.

Sheba.—8,800 tons, 2,141 ozs.

Simmer and Jack East.—34,400 tons, 9,707 ozs.; profit, £11,223.

Simmer and Jack.—66,300 tons, 25,600 ozs.; profit, £63,658.

Sons of Gwalia.—Ore crushed, 2,528 tons, 2,810 ozs.; tailings, 6,780 tons, 998 ozs.; concentrates, 919 tons, 490 ozs.; slimes, 4,549 tons, 428 ozs.; total, 4,726 ozs.

Spassky Copper.—Bar copper 6,600 poods = 106 tons.

Talisman Consolidated.—Tons treated, 4,086; value, £17,296.

Transvaal Gold Estates.—Crushed 9,757 tons, 3,432 ozs.; Central Cyanide: 4,470 tons, 1,558 ozs.; Central Slimes: 3,430 tons, 1,002 ozs.; Kameel's Cyanide: 1,230 tons, 259 ozs.; Kameel's Slimes: 627 tons, 118 ozs.; Elandsdrift: 271 tons, 185 ozs.; total, 6,554 ozs.

Van Ryn.—Crushed 22,600 tons, 7,088 ozs.; sands 15,299 tons, 2,035 ozs.; slimes 7,371 tons, 676 ozs.; total, 9,821 ozs.; profit, £20,477.

Victoria Proprietary.—553 ozs. from 1,545 tons crushed; plates yielded 85 ozs.

Village Deep.—Crushed 27,200 tons, 4,454 ozs.; by secondary treatment 27,231, 4,016 ozs.; total, 8,470 ozs.; profit, £9,000.

Village Main Reef.—Crushed 40,000 tons, 10,407 ozs.; cyanide 27,725 tons, sands and concentrates 3,320 ozs.; slimes 14,768 tons, 1,135 ozs.; total, 14,862 ozs.; profit, £28,025.

Vivien.—Milled 2,704 tons, 519 ozs.; tailings 2,100 tons, 270 ozs.; concentrates 52 tons, 55 ozs.; current slimes 552 tons, 93 ozs.; accumulated slimes 526 tons, 177 ozs.

Voorspoed Diamond.—23,377 loads washed, producing 4,751 carats.

Waihi.—Crushed 30,173 tons, and £70,283 gold and silver produced.

Weardale Lead.—Ore raised 324 tons, pig lead smelted 296 tons, average price obtained for pig lead sold £13 5s. per ton nett.

Whim Well Copper.—Shipment 95½ tons copper ore sold £959.

Witwatersrand.—10,160 ozs. from 33,370 tons; profit, £15,035.

Zinc Corporation.—Treated 2,610 tons tailings for 770 tons zinc concentrates averaging 45 per cent. zinc, 7·5 lead, 13·7 ozs. silver; and 24 tons lead concentrates, averaging 55·4 per cent. lead, 36·12 ozs. silver, and 15·2 per cent. zinc.

NEXT WEEK'S MEETINGS.

Monday, May 11.

Australian and New Zealand Mortgage.—Cannon Street Hotel, 1.30 p.m.
London Bank of Australia.—Winchester House, noon.
National Electric Construction.—Winchester House, noon.
Paramatta Copper Mines.—22, Chancery Lane, E.C., 10 a.m.
South Metropolitan Electric Trams and Lighting.—Donington House, noon.

Tuesday, May 12.

Alabama Coal, Iron, Land and Colonisation.—2, Princes Street, E.C., 2.30 p.m.
City and West End Properties.—Cannon Street Hotel, noon.
Consolidated Assurance.—23, Fleet Street, E.C., 4.30 p.m.
Eastern Telegraph.—Electra House, 12.30 p.m.
Hotchkiss Ordnance.—Winchester House, 2.30 p.m.
London and Lancashire Life Assurance.—66, Cornhill, E.C., 2 p.m.
Ouvah Ceylon Estates.—5, Dowgate Hill, E.C., noon.
Potteries Electric Traction.—Donington House, 2.30 p.m.
Rohilkund and Kumaon Railway.—Gresham House, noon.
Spring Valley Ceylon Estates.—5, Dowgate Hill, E.C., 12.15 p.m.
Submarine Cables Trust.—Electra House, E.C., 2 p.m.
Sutherland Steamship.—Newcastle, 3 p.m.

Wednesday, May 13.

British Oil and Guano.—Edinburgh, 2 p.m.
Commercial Union Assurance.—24, Cornhill, E.C., noon.
Darjeeling Company.—138, Leadenhall Street, E.C., noon.
Eastern Extension, Australasia and China Telegraph.—Electra House, 3 p.m.
Fuller's Earth Union.—Hamilton House, 3 p.m.
Lisbon Electric Trams.—1, London Wall Buildings, E.C., noon.
P.P.K. (Ceylon) Rubber.—Mincing Lane, E.C., noon.
Tara Tea.—1, Great Winchester Street, E.C., 3.30 p.m.
Taylor's Eagle Brewery.—Manchester, 11 a.m.
Warner Estate.—Norfolk Street, W.C., noon.
Western Telegraph.—Electra House, 2 p.m.

Thursday, May 14.

Alcoy and Gandía Railway and Harbour.—Dashwood House, 2.30 p.m.
Bombay Gas.—6, Draper's Gardens, E.C., noon.
British Broken Hill Proprietary.—Salisbury House, 12.15 p.m.
Diesel Engine.—Cannon Street Hotel, noon.
Great Boulder No. 1.—Great Eastern Hotel, 12.45 p.m.
Great Boulder Proprietary Gold Mines.—Great Eastern Hotel, noon.
Mexican Railway.—River Plate House, 2.30 p.m.
Montana Mining.—24, St. Mary Axe, E.C., noon.
N.S.W. Mortgage and Agency.—Cannon Street Hotel, noon.
San Miguel Copper Mines.—23, Queen Victoria Street, E.C., 2.30 p.m.
Texas Land and Mortgage.—2, Suffolk Lane, E.C., noon.
Tilt Cove Copper.—9, Queen Street Place, E.C., 2.30 p.m.
Trust and Agency of Australasia.—Cannon Street Hotel, noon.
Waihi Gold Mining.—Cannon Street Hotel, 12.30 p.m.

Friday, May 15.

British S. African Explosives.—Winchester House, 12.30 p.m.
John I. Thornycroft and Co.—Winchester House, noon.
Santa Fé Land.—River Plate House, 11 a.m.

It is officially stated that the receiver and manager of Thomas Salt and Co., brewers, of Burton, will this week, under the scheme of reconstruction approved by the debenture-holders, creditors, and shareholders, pay the whole of the arrears of the debenture interest, and that the liquidator expects in the course of a few weeks to be discharged.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

MEXICAN RAILWAY CO., LIMITED.

In the half-year closed December 31 last gross receipts rose by $447,727 and the expenses by $415,885, so the nett revenue was only $31,842 better at $1,697,957. Converting the Mexican dollar into sterling at 24.57d., this gave £173,828, made up to £174,271 by a gain on exchange of £443 (compared with a loss of £289 a year ago). Vera Cruz Pier also gave £4,670 more at £14,724, but interest and transfer fees gave £359 less and the final result was a nett income £6,706 up at £191,820. After paying debenture stock interest £60,000, but without giving anything either to the suspense account, which got £1,000 twelve months ago or to write down the value of the investments—in the December half of 1906 £2,000 was thus put aside—the balance left allowed the board to pay a dividend of 5¾ per cent. per annum on the 6 per cent. second preference stock as against a 3⅞ per cent. rate for 1906, and left £797 to carry forward to the credit of holders of this stock compared with £235 brought from the June half-year. All branches of the company's business displayed improvement except the pulque traffic, which was about the same. The earnings per kilometre of line open were $7,856 against $6,990 in the second half of 1906. The capital account is £130,243 in credit, and there is nothing singular about the balance-sheet to demand notice. Investments, which cost the company £97,668, have been written down to £89,912. Cash amounted to £90,942, of which £68,354 was in London, and this is exclusive of debtors to the company for £44,303. Capital expenditure on new works in suspense figures at £87,201. The capital account statement is not so explicit, and detailed as it might be, but, including £7,723,399 subvention moneys, the total receipts on that head were £8,593,119.

LEOPOLDINA RAILWAY CO., LIMITED.

Considerable interest attaches to this company's report for the year 1907, because of the recent market guessings about the dividend, and it turns out that the optimists had the best of it, for the directors increase the distribution on the ordinary stock by ½ per cent. to 4¼ per cent. per annum, and in so doing reduce the balance forward by £6,797 to £99,565. Gross receipts were £71,732 larger at £1,254,557, but working expenses rose by £56,240 to £836,443, so that the nett income of £418,114 was only £15,492 higher. Other adjustments—£15,429 more brought forward and £46,773 less provided by Federal Government guarantees—brought the nett free balance out at £552,380, which was £15,810 below that of twelve months before, and the extra dividend could not have been paid but for the smaller assignments to reserve and contingency funds. Thus the amount placed to the reserve for redemption of the debenture stock was £23,000 against £50,000 a year ago, when also £45,000 was charged against revenue for repairs called for by extraordinary damage done to parts of the property. For the past year, however, the contingency fund gets only £20,000 and £6,000 is credited to a pension fund. Altogether, after meeting debenture interest and setting aside these amounts, the nett revenue is £355,646, out of which the dividend above mentioned is paid. Working expenses took 65.96 per cent. of the gross receipts, and include £24,504 cost of damage by floods, which was £10,000 to £12,000 above the average. Passenger receipts rose by £6,818 or 3.57 per cent., parcels and baggage receipts by £1,266 or 2.46 per cent., and goods traffic by £63,601 or 6.93 per cent., coffee furnishing the largest part of the goods. Last year £550,000 in new 5½ per cent. preference shares was added to the capital, and the company bought from the State the Sal do Espirito Santo Railway. It has also bought the Espirito Santo and Caravellas Railway, and the line is to be extended to connect the company's Minas system with the coast and the port of Victoria. The company has contracted with the State of Minas Geraes to build within five years 241 kilometres of new line, to forego the State guarantees for 1905-8, these terminating in any case on December 31 next, and to contribute £125,000 during this year and next to the Government's colonisation fund. The capital account was overdrawn by £339,497 at the end of the year, but the company seems easy enough as to resources, and £450,000 of the preference share capital is unissued. Including the prices paid for the railways bought, last year's capital outlay was £618,000, bringing the total cost of the properties up to £10,060,187.

ROHILKUND AND KUMAON RAILWAY CO., LIMITED.

The total revenue of the entire system worked by this company for the half-year ended December 31 was Rs. 94,337 larger at Rs. 12,35,628. Practically the whole of this increase came from goods, and was due to larger imports of food grains and salt and exports of fodder and seeds owing to the scarcity caused by the partial failure of the monsoon and to an improvement in the timber and firewood traffic. In passenger traffic a considerable increase on the company's lines was neutralised by a decrease on the State line and the total number carried was only 25,658 up, while sundries yielded less and earnings from the cart and tonga service dropped from Rs. 15,707 to Rs. 9,297. Working expenses rose by Rs. 82,169 to Rs. 6,26,732 or 47.72 per cent. compared with 46 per cent. a year ago, owing to a variety of causes, amongst others being the cost of coal and oil, heavier repairs to locomotives, additional station staff, and lastly the grant of famine allowance in accordance with the Government scale to all the lower paid staff. The gain in nett revenue was therefore only Rs. 12,169 at Rs. 6,08,896, but the company's share after deducting contribution to the provident fund was Rs. 23,905 larger at Rs. 2,50,419. Converted into sterling this gave £16,695 against £15,101, and with £5,041 brought forward, £1,266 for share of surplus profits of the Lucknow-Bareilly State Railway and miscellaneous receipts the nett revenue came to £25,254. Nothing has to be deducted for nett earnings of the Bareilly-Soron extension which were credited to interest during construction, so that the balance available was £9,792 better at £18,173, but, on the other hand, more capital ranks for dividend, and the larger sum at their disposal enables the directors to maintain the dividend and bonus on the ordinary stock at the old figures of £3 and 10s. per cent. respectively, with an increase of £3,492 to £4,873 in the sum carried forward.

EMU BAY RAILWAY CO., LIMITED.

During the past year the balance-sheet of this company was given a better appearance by a reduction of £65,000 in the capital, which enabled the directors to eliminate the heavy item of £36,125 for preliminary expenses and to write off £28,875 of the debit to profit and loss account. A small sum of £1,677 was left to be dealt with, and as business was better this has not only been wiped out from revenue, but the preference shareholders get something on account of the arrears of dividend which have been accumulating over eight years. Receipts from passenger traffic for the 12 months rose by £3,544 to £17,685 and goods, mails and live stock yielded £3,997 more at £23,374, but minerals fell off by £2,053 to £24,598, leaving a gain of £5,488 in gross income. Most of this increase, however, was absorbed by expenses which rose by £4,100 to £31,418, and the nett revenue was therefore only £1,388 better at £34,240, but as nothing had to be provided for preliminary expenses compared with a year ago, the nett surplus after providing for rent of leased line, interest, &c., and writing off £3,198 for depreciation was £2,480 up at £10,671. Of this £4,792 is used to pay 1s. 11d. per share on one-half of the preference shares and 1s. 7d. per share on the remainder, and £245 is carried forward. Arrears of preference dividend will now amount to £22,457 or a reduction on balance of £4,750, but the item of deferred interest warrants and rent has now disappeared, and the position is decidedly more healthy. Liabilities to the lessors for plant, rolling stock, &c., remain at £11,990, but a small increase of £486 to £2,943 in sundry creditors is offset by an advance of £462 in debtors at £4,003, and against a reduction of £2,789 to £5,257 in the amount due to the company on Bank of Australasia debenture coupon accounts may be set an improvement of £6,872 to £8,015 in cash balances.

LONDON BANK OF AUSTRALIA.

For 1907 this company's gross profits of £155,864 were £3,765 less than in the previous year, but the balance of £23,908 brought forward was £7,801 up. General charges, however, also rose by £1,509 to £65,716, and the London expenses took £844 more at £10,056, but interest on transferable deposit receipts for the year was £4,787 less at £42,311. Thus the nett profit balance was £6,298 up at £58,859, and the directors are able to distribute 1 per cent. more at 3½ per cent. to the ordinary shareholders. This at £12,876 takes £3,679 beyond the amount distributed a year ago. They again also place £10,000 to the reserve fund, raising it to £20,000, and still have £26,527 left to carry forward or £2,619 more than was brought in. Transferable deposits due 1917 show a decrease of £3,006 in the balance-sheet at £939,220. Other deposits and current liabilities have risen by £175,219 to £3,466,393, and bills payable, &c., form an item £236,449 larger at £990,968, while notes in circulation are down £1,608 to £127,381. Amongst the assets cash, bullion, &c., form an item £26,608 lower at £797,951, and investments, including those held against note issues and bills receivable, are also £11,678 lower at £654,888, but money at call and short notice in London shows an increase of £105,000 at £190,000, and bills discounted, advances, &c., are £357,636 up at £4,115,236. Bank premises, however, are £1,000 down at £382,762, and the total of the balance-sheet is £6,140,837.

EASTERN TELEGRAPH CO., LIMITED.

It is impossible to make a detailed comparison between the accounts of this wealthy company for the second half of last year with the corresponding period of 1906 because the dates for making up the accounts were altered then and the figures to December 31, 1906, cover only three months' business. For the past half-year the revenue was £595,483, of which ordinary expenses absorbed £198,229. A further £63,527 was laid out on maintenance of cables, depreciation of spare cable, sundry differences in exchange and income-tax payable abroad, so that the nett balance was £333,727, or including £41,651 brought forward, £375,378. After meeting British income-tax, debenture stock interest and preference dividend, the balance of £292,795 left was £8,043 larger than that shown at December 31, 1906, and of this sum £70,000 was placed to the general reserve as compared with £150,000 a year ago, and £7,000 to the reserve fund for maintenance, or the same as usual. From the balance the dividend on the ordinary stock is made up to 7 per cent. for the year by paying a final quarterly dividend of 1¾ per cent., together with a bonus of 2 per cent. for the whole year. This leaves £35,795 to be carried forward or £5,856 less than was brought in. The total of the company's reserves now amounts to £1,779,970, the general reserve fund representing £1,144,730 of this. There is further a marine insurance fund of £214,644, fire insurance and guarantee funds of £100,000, and a land and building depreciation fund of £51,991, besides £10,000 representing cost of insurance of goods in transit. The traffic and other debit balances amount to 597,838, and

the traffic and other credit balances to £366,914. Quite a fleet has to be employed by the company in the maintenance of its cables, no less than seven vessels being devoted to this work and the expenses attending the maintenance of cables, including the value of the cable used, sundry expenses at stations, &c., came last half-year to £96,474, against which, however, has to be set £43,016 representing charters and other credits, including £4,000 taken from maintenance of ships fund towards cost of a new boiler, &c., for the steamer *Duplex*, so that the nett charge upon the half-year's revenue was only £53,458.

EASTERN EXTENSION, AUSTRALASIA AND CHINA TELEGRAPH CO., LIMITED.

In the December half of 1907 this company's gross receipts rose by £8,022 to £304,416, but working expenses expanded by £14,654 to £154,203. This includes £26,669 spent on maintenance of cables. The nett revenue balance was accordingly £150,213, and after meeting income-tax, debenture interest and other extraordinary expenses, the balance left is £130,442, or with the £74,947 brought forward, £205,390 in all. The directors accordingly complete the 5 per cent. dividend for the year by paying 1¼ per cent. for the last quarter thereof, and make the distribution up to 7 per cent. by a bonus of 4s. per share or 2 per cent. Then £50,000 is transferred to the reserve, leaving £20,390 to be carried forward. Several partial renewals of the company's cables have been effected during the half-year at a cost of £28,850, which has been charged to the general reserve fund. That fund is easily able to bear such charges since its total at December 31 last was £1,081,935, and the company's accumulations under various other heads added in, the total reserves of all kinds amount to £1,468,533, the marine insurance fund alone standing at about £147,000. The traffic and other debit balances amount to £213,235 and there is £53,200 against bills receivable, while cash at bankers, &c., stands at the handsome figure of £147,319. Traffic and other credit balances amount to £291,280.

WESTERN TELEGRAPH CO., LIMITED.

Notwithstanding the upset in America, this company managed during the half-year ended December 31 to improve still further on its already excellent record. Receipts from messages, it is true, only rose by £2,482 to £319,506, but this is hardly surprising seeing that in the corresponding period of the two preceding years the gains were £43,043 and £46,675 respectively. With interest on investments, dividends on holdings in other telegraph companies and sundry small items the total revenue was £13,128 better at £353,815, while expenses, including £43,508 for maintenance of cables, were reduced by £1,232 to £126,862. Debenture interest having been met, income-tax took an extra £1,049 at £4,465 leaving £206,488, to which was added £6,864 or £4,201 more brought in, making an available surplus of £213,352 compared with £195,840. After paying the usual quarterly dividends of 1⅝ per cent. each the contribution to reserve is again increased by £20,000 to £120,000, maintenance ships' reserve gets another £5,000 and £10,000 each goes to marine insurance fund and land and buildings depreciation account, leaving £2,488 less at £5,973 to be carried forward. The general reserve fund has been debited with a further £100,000 on account of investment fluctuations, but is still £104,974 above the total of a year ago, and the total accumulations show an increase of £119,234 at £1,386,576, of which £1,200,369 is represented by investments and £56,820 by spare cable. Expenditure on capital account was trifling, and as £42,640 was deducted for cost of two cable steamers sold this item is £30,513 lower on balance at £2,866,542. Trading balances are decidedly in the company's favour, liabilities being £82,144 against £135,235 to come in and, in addition, cash, bills receivable and remittances in transit reach the very comfortable figure of £129,507.

GREAT NORTHERN TELEGRAPH CO., LIMITED, OF DENMARK.

A further decline of £13,586 to £530,159 is shown in the gross revenue of this important undertaking for the year ended December 31, partly because of the greater competition of other lines and partly because exchange operations resulted in a loss of £4,936. Expenses, as foreshadowed by the directors a year ago, were increased by the higher wages paid to meet the enhanced cost of living, but the increase was not a very serious one, and with about £1,700 more paid for rates and taxes only amounted to £8,522 at £163,420. The sum brought forward was a little larger at £67,861 making the nett profits £434,600 against £456,472, of which £55,556 is put to reserve and £8,333 to staff pension fund, or the same as a year ago in both cases, and the dividend and bonus aggregating 20 per cent. are repeated leaving £68,211 to be carried forward. To make this distribution possible the directors have had to forego any appropriation out of income to dividend equalisation fund, but £13,828 was added from interest and the total now stands at the very respectable figure of £359,517. The reserve also was increased by £55,628 for interest and profit on drawn bonds and £1,245 for profit on reserve cable sold, but extraordinary expenses, cost of new St. Petersburg-Libau-Denmark cable and payments on account of new office building at Shanghai, &c., came to £133,975, so that on balance the fund is £11,546 lower. But the total is still £1,987,266 and with the amortisation fund of £400,000 the renewal fund for cable steamers of £69,283 and the dividend fund the total accumulations come to £2,816,066 against a paid-up capital of £1,500,000, and as no less than £1,508,821 of this is invested in high-class securities the position is exceedingly strong. Cables and land lines are valued at £2,055,556 or the same as a year ago, but participation in other telegraph undertakings is slightly lower at £635,000 and advances guaranteed by banks have been reduced by £55,556 to £222,222 owing to the necessity of providing cash for the exceptional expenditure above mentioned. Sundry creditors amount to £122,212 or £16,754 less, while debtors have risen by £9,225 to £128,291 and cash is £28,309 up at £144,030. The directors report that in consequence of the difficulties caused in the Far East by the war and by the approaching expiration of the Company's exclusive privileges in Japan they have been engaged in complicated negotiations throughout the year. As far as China is concerned the proposals put forward appear to be satisfactory to the Government, but the company has not been so fortunate in Japan and the discussion of the question is to be resumed in Europe during or after the International Telegraph Conference, which meets at Lisbon on May 4.

ORIENTAL TELEPHONE AND ELECTRIC CO., LIMITED.

Nett trading profit from all sources for the year ended December 31 amounted to £31,216 and sundry commissions, interest and fees brought the total to £32,164, an increase of £2,230. London expenses were a few pounds higher at £3,254. Debenture interest took £883 more at £4,883, so that nett revenue is £2,278 up at £23,451. With £1,039 or £702 less brought forward the sum available is £24,480. After providing preference dividend and debenture stock sinking fund £3,500 is again transferred to reserve and the dividend on the ordinary shares is raised from 7 to 8 per cent., leaving £1,873 to go forward. Property account is increased by £28,949 to £170,245, in this being included purchase of land at Rangoon for new sub-exchange and £6,268 for expenses of debenture issue. The interest in subsidiary companies is £53,500 greater at £241,758 owing mainly to the holding in Telephone Company of Egypt preferred shares being increased by 8,000 to enable that company to carry out contracts for installation of telephones in Fayoum. Investments are £1,209, stores are taken at £19,591 and dividends due from subsidiaries total £13,277. Sundry debtors owe £7,854 and cash is £6,491, but on the other side £12,319 is due to creditors and £28,500 to bankers. Reserve now aggregates £43,652, while debenture sinking fund amounts to £2,293 and share capital reserve to £2,420. During the year £50,000 debenture stock was issued raising the amount to £150,000 less £900 redeemed out of the authorised issue of £200,000. The Bengal and Bombay Telephone Companies have paid the same dividends—viz., 5 per cent. and 6 per cent. respectively, while the China and Japan Telephone and Electric Company at Hong Kong and Kowloon will shortly declare a first dividend.

WEST COAST OF AMERICA TELEGRAPH CO., LIMITED.

The improvement of £17,241 recorded for 1906 has been followed by a set-back during the 12 months ended December 31, when the gross receipts from all sources fell off by £6,194 to £61,854. Expenses at the same time rose by £635 to £34,809, leaving the nett revenue £6,829 down at £27,045, to which was added £1,923 or £261 more brought forward. Interest on debentures and income bonds have been met and another £2,000 is transferred to maintenance ship's reserve fund, but in order to repeat the dividend of 2½ per cent. paid a year ago for the first time the amount added to reserve is reduced by £6,000 to £16,000 and £568 less at £1,354 is carried forward. The smaller appropriation to reserve is not of very great consequence, as that fund now stands at £58,185 against a capital outlay of £258,481, while the cost of the cable steamer is now fully covered by the maintenance ship's fund of £10,000. Investments at cost, in part representing the reserves, have been increased by £21,590 to £54,770 and spare cable is valued at £7,214 or £676 more. Floating liabilities are £5,049 smaller at £13,506, but debtors are £1,275 down at £7,923, bills receivable and remittances in transit come to £7,907 less at £23,755, and cash has dropped by £1,310 to £7,138.

JOHN I. THORNYCROFT AND CO., LIMITED.

It cannot be said that this old company made much progress during the past year, but it was hampered a good deal by the gradual removal of its shipbuilding works from Chiswick. Then, too, the contract for the five coastal destroyers which was completed in June proved far from profitable, while a considerable loss was also incurred over a contract for a paddle-steamer. Work at Southampton generally, apart from this one instance, was carried on at a profit, but it was neutralised by poor business done elsewhere, and the directors complain that owing to the large number of new and second-hand chassis offering at prices very considerably below the manufacturing cost, the sales of motor vehicles have been the lowest in the company's history. Trading profits improved by £3,364 to £27,052, but £574 less at £1,068 was brought forward, and although there were small reductions of £241 to £12,531 in the sum written off for depreciation and £99 to £1,016 in directors' fees the nett surplus was only £3,130 better at £14,573. But, at the same time, the amount required to meet debenture interest was £3,125 larger at £13,500, so that it is again impossible to pay any dividend on either preference or ordinary shares, and in the end the nett result was an increase of £5 to £1,073 in the balance carried forward. Additions to property for the year were just about balanced by the depreciation allowances, leaving this item £332 up at £288,422, while goodwill, of course, is unaltered at £80,672, and the company is still carrying as an asset £10,000 of expenses of debenture issue and creation of new capital. Debtors show a decrease of £25,096 at £31,741 against a reduction of £15,722 to £74,388 in sundry creditors, but stocks and works in progress have risen by £5,542 to £255,542, and cash is £607 higher at £16,452.

HOTCHKISS ORDNANCE CO., LIMITED.

An active demand for ordnance was experienced in the early part of 1907, but the financial crisis interfered with business later, deliveries being delayed and new contracts postponed. In the

automobile department over-production has been accompanied by a reduced demand for chassis, and altogether the company appears to have had a poor time of it. Profits on sales, royalties, commission, and dividends receivable from the French company dropped by £8,313 to £17,319, but interest, &c., produced £6,808 or £1,849 more, making a total revenue of £24,126 compared with £30,592. Expenses, however, were rather heavier, and with £3,933 less at £1,859 brought forward the disposable surplus was £11,004 down at £21,237. Debenture interest took an extra £2,124 at £8,725, and after providing the usual £1,500 for debenture redemption and writing off £1,748 for expenses of second debenture stock issue, £9,264 was left against £21,029. As the directors have to apply a sum equal to 2 per cent. of the nominal amount of second mortgage debenture stock issued up to December 31 for the service of the sinking fund, it is out of the question that the dividend of 3 per cent. paid on the ordinary shares a year ago should be repeated, and the sum carried out is therefore increased by £6,205 to £8,064. Goodwill, patents, &c., are still carried in the balance-sheet at £253,632, a figure which, we imagine, must be considerably above their real worth, and against this the reserve only reaches £14,342 apart from the redemption fund of £12,000 for first debenture stock. Shares in the French Hotchkiss Company are likewise unaltered at £239,820, but the American and British Manufacturing Company having written down its capital from $10,000,000 to $4,000,000 the company's holding is reduced to £4,270, and the directors have deemed it advisable to utilise the reserve of £5,000 set aside in 1901 to bring the book value down to £1,071. The French company's indebtedness for working capital secured by mortgages is unchanged at £110,000, but the current account, including dividend payable, has been increased by £12,417 to £36,098. Cash, exclusive of £1,500 in the hands of the first debenture stock trustees is down by £21,170 to £2,944 and sundry debtors owe £1,139 less at £862, while creditors are £2,012 higher at £4,650.

POTTERIES ELECTRIC TRACTION CO., LIMITED.

This subsidiary of the B.E.T. Company made very little headway during the year ended December 31, although its gross traffic receipts rose by £2,539 to £97,417, and the total income including the usual £11,630 for interest and dividends received from the North Staffordshire Tramways Company was £2,404 up at £111,671. Power expenses were reduced by £754 to £33,276, but repairs and maintenance cost £1,966 more at £18,216, and as other outgoings were heavier the gain in nett revenue after providing £12,050 for the North Staffordshire Company under agreement was only £933 at £27,875. Adding £616 or £108 less brought forward the disposable total amounted to £28,491 out of which an extra £1,000 at £3,500 is placed to renewals fund, £2,500 is again added to depreciation and reserve account and the dividend of 4 per cent. is repeated on the ordinary shares leaving £441 to be carried to the new account. The total expenditure on the improvement, renewal and repair of the permanent way during the year was £13,773 or an increase of £6,007, but of this £6,299 or only £10 more was provided out of revenue, the balance being charged against the renewals suspense account. Capital outlay was moderate at £3,880, principally on doubling the permanent way, but with the debentures and shares held in the North Staffordshire Company the total is now £748,156 against which the depreciation and reserve fund now stands at £19,000. Sundry creditors have been reduced by £1,019 to £10,740, while ordinary debtors are £4,685 higher at £8,237, but the indebtedness of the North Staffordshire Company has gone up by £7,331 to £30,083 and apparently the strain of carrying this is severe, as this company has had to raise a further £20,333 at £23,508 at its bankers and even then its cash balances have only been increased by £102 to £173. Renewals suspense account, after adding the above noted expenditure and deducting the appropriation from profits, stands at £6,451.

SWANSEA IMPROVEMENTS AND TRAMWAYS CO., LIMITED.

The tramways undertaking of this company showed an increase of £2,741 at £27,817 in gross receipts for 1907, and after deducting all expenses, debenture interest, and the rents payable to the Swansea Corporation £2,500 is set aside as provision for renewals, leaving a surplus of £5,288. Adding £3,443 from the previous account, the disposable total is £8,731, out of which £2,000 is placed to reserve, the ordinary shares receive 3 per cent., and £1,532 is carried forward. Cost of the old tramways still stands at the heavy figure of £102,923, and £145,278 has been spent on reconstruction and electrical equipment, against which the company has actually managed to scrape together a reserve of £21,858 or 8¾ per cent. Its share and debenture capital totals £206,250, so that £20,000 has had to be borrowed from the B.E.T. Company and £9,158 is due to sundry creditors. On the other hand the "Improvements" undertaking owes £5,143, sundry debtors, including £667 advanced to the Mumbles Railways and Pier, come to £2,319, and cash is £4,762. The balance-sheet is still disfigured by such "assets" as Parliamentary costs £4,137, debenture issue expenses £405, and expenses of lease from the Swansea Corporation £144, all that was written off the last item for the year being £4. The Improvements undertaking continues to flounder along in a hopeless way, and in the six months ended December 31 the debit balance was increased by £234 to £6,585. Liabilities specifically charged upon the assets, consisting of lands and buildings £82,949 and the Palace Theatre of Varieties £17,659, now amount to £13,966, in addition to which £5,143 is due to the tramways undertaking and £135 has been borrowed from the bank. Sundry creditors amount to £117 against sundry debtors £188 and there is only a few shillings in cash. Gross receipts of the Mumbles Railways and Pier, which constitute the third of the company's irons in the fire, were slightly up at £23,370, but of this only £391 was retained as nett profit and is payable to the B.E.T. Company on account of interest. That company has advanced £48,568 to date, of which £37,743 was for capital expenditure, £1,042 for stores, &c., and £8,861 to meet working deficiencies. Other creditors come to £1,933, but debtors owe £2,178 and cash is £1,066.

LISBON ELECTRIC TRAMWAYS, LIMITED.

After providing for the amount payable to the municipality of Lisbon and for expenditure under lease, the profits on working for the year ended December 31 amounted to £118,220, and with £3,764 from interest and transfer fees gave a total revenue of £122,983. Administration expenses took £5,180 of this and debenture interest required £25,000, leaving £92,803 as nett profit, to which was added £15,711 brought forward. Preference dividend having been paid £35,000 is transferred to depreciation reserve and £5,000 to exchange reserve, after which the ordinary shares receive 5 per cent. and £13,271 is carried out. The depreciation account was charged with £9,077 for renewal of permanent way and now stands at £135,933, but the directors say that still further increase is necessary in view of the fact that the track and plant have been in constant use for many years, and will now require renewals from time to time. Including £19,013 from premiums on shares the total accumulations amount to £185,325 against a capital outlay of £1,651,180, and of this a good proportion is invested in securities, mostly first class, having a book value of £109,774, on which, however, there is a depreciation at market values of £6,224. The issued share and debenture capital is £1,519,741, so that the company has to lean pretty heavily on credit and owes £86,911 on current accounts. while debtors come to £7,915, stocks and stores to £48,119, and cash and bankers' acceptances to £42,452.

KALGOORLIE ELECTRIC TRAMWAYS, LIMITED.

A year ago the directors explained that the falling off in the revenue of this company was due to the installation of labour saving machinery at the mines displacing a number of men. These conditions are apparently to be permanent, as the same reasons are put forward in the report for the year ended December 31 to account for a further decrease of 168,487 in the number of passengers carried. The number of car miles run was reduced by 23,014, in consequence of this decline, but the number of units consumed was only 2,872 smaller, and the saving under this head a mere £271. Earnings per car mile dropped from 18.22d. to 17.63d. and the total receipts from all sources showed a decrease of £3,372 at £48,008. On the other hand savings of £2,096 were effected in expenses at £31,738, the proportion to earnings being 63.36 per cent. against 62.24, and nett profits were consequently only £1,276 lower at £16,270. The balance brought forward, however, was £2,703 down at £2,089, making the total available £18,359 compared with £22,338, and as debenture service required £100 less at £15,050, notwithstanding an increase of £235 to £4,340 in the sinking fund, the amount left was £3,309 against £7,188. Last year the directors were able to transfer £3,000 to reserve and to appropriate an additional £2,100 for the sinking fund, but this time they prefer to carry forward the surplus intact. Capital expenditure for the year was £581, but the total was reduced by £4,748 through the sinking fund for redemption of "A" debenture stock, and now stands at £442,253, against which there are the renewal fund of £3,000 and the reserve of £2,000 for proportion of sinking fund to date. Floating liabilities at £3,094 exceed debtors by £2,639, but stores are valued at £3,036, and with £2,000 lent out and £4,224 in cash the company is in a comfortable enough position.

KALGOORLIE ELECTRIC POWER AND LIGHTING CORPORATION, LIMITED.

Since new life was put into this undertaking in December, 1906, it seems to have gone ahead, and the directors state that the amount of power sold during the year ended December 31 "constitutes a record." Just what the extent of the improvement was we are not told, but it must have been considerable, as profits, although they did not increase in proportion, owing to the reductions made in price, showed a very substantial improvement at £26,597 compared with about £19,000 for the previous twelve months. After writing off £850 for reconstruction and registration expenses and £3,737 for cost of issuing debentures to replace those which matured on February 12, 1907, the available balance was £22,010. Of this debenture interest and preference dividends absorbed £8,842 and dividend tax in Western Australia £337, and the directors now transfer £7,500 to a reserve for repairs and renewals and carry forward £5,331. Since the date to which the accounts were made up a dividend has been declared on the preference shares for the six months ended March 31, and the directors propose to pay a dividend on the ordinary shares at the rate of 5 per cent. per annum for the half-year ending June 30 next. The new plant installed towards the end of 1906 has proved more reliable and economical than the original installation, and it has now been decided to add a 1,000 kilowatt set of up-to-date machinery. Capital expenditure in the twelve months was £5,310, making a total of £233,250, and the amount just taken from revenue is the first attempt made to form a reserve fund of any kind. Creditors are comparatively light at £2,751 against debtors £8,926 and the possession of £3,706 in cash puts the company in a fairly comfortable position.

PRIMITIVA GAS AND ELECTRIC LIGHTING COMPANY OF BUENOS AYRES, LIMITED.

A further decline of £7,667 to £82,362 is shown in the revenue for the year ended December 31, and with £21,083 interest from the German Transatlantic Electricity Company and £73 from transfer fees the total profit of £105,421 is £8,067 down. Deducting charges for debenture interest £22,829 and other items making up £31,930 the nett profit is finally reduced by £8,873 to £73,490. The balance brought in was £16,612 or £374 less, making the total sum disposable £90,103 compared with £99,349. Out of this, after paying preference dividends, £6,221 as against £14,737 is placed to reserve, so enabling 7 per cent. or the same as last year to be paid on the ordinary shares and £15,882 to go forward. Capital expenditure to the extent of £34,035 has been made during the year, raising lands, works, &c., to £1,146,121, but beyond the reserve no provision appears to have been made for depreciation, although the directors certify that the works have been kept in efficient repair. On account of the sale of electric section another £7,000 has been paid, reducing the sum outstanding to £570,800, and £2,991 has come in from debtors for property sold, bringing that item down to £10,752, while sundry debtors owe £38,307, bills receivable in transit and cash amount to £14,105 and stocks are valued at £95,099. The debenture debt has been reduced during the year by £7,600 to £565,600. Floating liabilities total £45,198, being £10,000 to bank, £31,004 to sundry creditors and £4,194 interest and dividends outstanding. With the year's contribution the reserve is now £85,000, of which £69,113 is invested separately. An increase is reported in the demand for cooking and heating stoves, and the company's works have been considerably extended.

CAPE TOWN AND DISTRICT GAS LIGHT AND COKE COMPANY.

For the year 1906 this company was able to pay a dividend of 7 per cent. on its ordinary shares, but so bad was business last year that it not only failed to earn money sufficient to pay any dividend whatever upon this ordinary capital, but was able only to distribute half the dividend upon the cumulative preference shares. The year's working profit was only £11,483, making with £1,059 brought forward £12,542 altogether, and after meeting the debenture and debenture stock interest and paying the April half-year's dividend on the preference shares there is only £292 left to carry forward. Various reasons are set forth by the board to account for this disastrous state of affairs, and they are mostly valid. The company has had to reduce the price of its gas, and although the production shows an increased 7,215,000 cubic feet for the year, the reduction in price, the energetic efforts in canvassing for customers and so on not only prevented an increase in profit, but seem to have been productive of loss. The average quantity of gas consumed by each customer has decreased during the year, but as customers are increasing fast it is held that 1908 will do better than 1907. For some years past the directors have been diligently searching for coal produced in South Africa suitable for gas-making, and at last they seem to have discovered what they required, but the matter is still in the experiment stage. Were good gas coal to be found in South Africa, as one day it no doubt will be, the whole position would be at once altered for the better. Meanwhile the company must be rather hard up. Its cash amounts to only £4,356 and it owes to sundry creditors, including bills payable, over £20,000, or twice the amount due by sundry debtors. Stocks in hand stand at £32,729 and the company has borrowed £11,700, part of it against lodgment of bills payable. This is in addition to the creditors and outstanding bills already mentioned.

BUENOS AYRES (NEW) GAS CO., LIMITED.

Although this company increased its capital during the past year the profits including interest on investments were £2,916 lower at £60,690, and under such circumstances we think shareholders have a right to expect something more from their directors than a mere recital of figures. That, however, is all they are offered in this case, as apart from a remark on the growth of the South Barracas Gas and Coke Company, which is owned by this undertaking, the report for the 12 months ended December 31 contains no reference to the business done. The balance of £25,044 brought forward was £4,494 larger, so that the disposable surplus showed an increase of £1,577 at £85,733, of which debenture interest took £10,000 and another £2,112 was written off discount and expenses on the debenture stock issue. A sum of £1,348, however, had to be provided for interest on the new capital to June 30 and an extra £4,000 was required to maintain the dividend at 7 per cent., so that the renewal fund, which a year ago got £5,000, is this time passed over, leaving £26,273 or £1,229 more to be carried forward. Property account was increased by £9,395 to £708,940, and service pipes, &c., are now valued at £130,456 or £4,030 more, but notwithstanding these additions the reserve of £80,000, the suspense account in respect of £13,295, the renewal and contingency fund of £5,477, and the capital reserve of £2,258 are all unaltered, the only change in any of the funds being an increase of £1,029 to £3,934 in the public lamps redemption account. Sundry creditors are £3,736 higher at £32,538, against which debtors have risen by £2,791 to £31,154, and cash and bills are £5,809 up at £23,312. Investments, including South Barracas shares taken at par, show an increase of £1,050 at £155,592, and in addition the subsidiary owes £26,945.

LAND AND MORTGAGE COMPANY OF EGYPT.

This old company has kept clear of the land gamble which upset Egyptian affairs last year, and in doing so has managed to give a very good account of itself. Its gross earnings for the twelve months ended March 31 amounted to £47,212 or an increase of £1,710, and although outgoings were heavier the nett profits were £1,104 up at £18,581. The balance brought forward, however, was smaller at £2,113, making the disposable surplus £20,694 compared with £19,813, out of which a bonus of 1 per cent. is again paid in addition to the regular dividend of 10 per cent. Reserve for contingencies then get another £1,000 and an extra £100 at £300 is transferred to staff's provident fund, leaving £2,894 or £781 more to be carried to the new account. With a paid-up capital of £154,000, the company has raised £280,800 on redeemable debentures and £111,656 on debenture stock, and has also borrowed £17,500 from its bankers on security of a portion of the reserve fund investments. In addition reserves of £75,180 have been accumulated exclusive of the fund for contingencies, which is included in sundry credit accounts of £28,481, and other liabilities, apart from debenture interest and dividends accrued or unclaimed, consist of £5,063 for deposits. On the other hand, loans on mortgage total £606,745, commissions and interest accrued come to £21,732, debtors to £4,430, and cash and bills receivable to £6,041. Reserve fund investments stand at £50,000, but on these there is an admitted depreciation of £2,074.

ABOUKIR CO., LIMITED.

In pursuance of the policy of restricting sales of its land, announced by the directors a year ago, this company during 1907 only disposed of some 3 feddans for cash and 68 feddans on deferred payments, making the total sales to date 19,324 feddans on which £68,523 has been received in cash and £498,721 is due on deferred payments. The canalisation of new lands was carried on at a slightly more rapid rate than was foreshadowed in the last report and 2,782 feddans were dealt with leaving 1,347 to be canalised during the current year. Only a very small proportion of the land, however, appears to have been let, the total being 2,033 feddans out of 10,970, from which a rent of £E10,029 is expected for the current year. The cotton crop was a good one, and a further advance of 7s. 10d. per kantar was secured on the price of £4 for the previous season, which was the best the company had ever obtained. Owing to the trifling amount of the sales profits for the year, including rents and crops sold, were £1,576 lower at £24,998 and miscellaneous items also yielded less, but interest rose by £2,073 to £6,692 and the total income was only £41 smaller at £27,701. A year ago, however, £82,478 received from the premium on new shares was added to revenue, and as there is nothing of the kind on the present occasion the available surplus shows an apparent decrease of £82,519. The sum brought in was £7,230 smaller at £26,238 and after providing for administration and other charges the balance was £41,828 compared with £132,906. As the above noted premium was utilised to pay a bonus of £5 per share on the old ordinary shares the distinction between the two classes disappeared, and the directors now find themselves able to pay a dividend of 8 per cent. on the entire capital in its new form compared with 7 per cent. at the cost of a reduction of £8,409 to £17,828 in the amount carried forward.

PACIFIC LOAN AND INVESTMENT CO., LIMITED.

Receipts from all sources for the 12 months ended December 31 were short of those for the previous year by £1,057 at £48,427, and as outgoings took £34,439 or £1,817 more nett profits were only £13,808 compared with £16,417. Adding the larger balance of £5,853 brought forward the available total amounted to £19,661 against £21,478, out of which the dividend of 7 per cent. is repeated, but £1,000 less at £1,500 is written off for depreciation on railroad investments, and the sum carried out is cut down by £817 to £5,036. Mortgages, loans, &c., have been reduced by £8,404 to £537,821, real estate is £10,655 lower at £52,543, and railroad investments after deducting the amount now written off will stand at £67,228 or £8,296 less, while farm stock and produce is valued at £12,798. Interests accrued but not collected shows a decrease of £1,182 at £14,135, but cash, bills receivable, and balances due by agents have risen by £21,575 to £28,318, while on the other hand liabilities to bankers come to £8,818. Reserve is unaltered at £100,000 and real estate suspense account is only £333 up at £5,595.

EDINBURGH INVESTMENT TRUST, LIMITED.

"The past year has been very favourable so far as revenue is concerned, and the directors have out of interest and dividends received applied £12,000 (as against £6,000 in the previous year) in reduction of the cost of investments," which seems to be the Edinburgh way of saying that there has been considerable depreciation in investments which an increased revenue has fortunately been able to provide for. In addition £5,904 profit on sales of securities has been applied to writing off depreciation on four particular but unspecified investments. Allowing for the extra appropriation gross income for the year ended March 15 was £6,509 better at £52,719. Debenture interest absorbed £1,416 more at £12,708, and management expenses at £3,600 were £25 higher, so that the nett revenue came out at £36,351 or £932 less. After paying preference dividends the ordinary again get 10 per cent. and £4,271 is carried to surplus revenue, raising that account to £23,679. Investments after writing down stand at £983,591 or £222 higher, and are according to valuation "worth not less than this amount." The sum of £9,647 is due from bankers, brokers, &c., but £13,519 is owing to sundry creditors. The reserve stands at a comfortable round £100,000.

MANCHESTER BREWERY CO., LIMITED.

Profits for the twelve months ended February 29 amounted to £159,374 of which administration charges, excise duties, rates and taxes, &c., took £80,025, mortgage and debenture interest £30,599, and brewery repairs £3,899. Contribution to compensation fund amounted to £4,218, and after providing £8,000 for repairs to properties, £1,860 for depreciation, and writing £714 off long leaseholds, the nett profits were £31,918. Adding

£6,121 brought in the disposable total was £38,039, out of which the preference dividend is met and the ordinary shares receive 5 per cent., leaving £17,019 to be carried forward. The directors state that under normal conditions they would have recommended the payment of the contingent dividends on the first and second preference shares, but fear to do so owing to the Licensing Bill. They add that if the Bill is passed in its present form the sacrifices of the shareholders in writing off £191,928 of their capital and giving up nearly two years' dividends will be of no avail, as to provide an adequate sinking fund for the extinction of licences and the purchase of the monopoly value of those remaining at the expiration of the proposed time limit would absorb more than the full profits in each year. The Licensing Bill is also made responsible for the decision to suspend further outlay on improvements of the properties. Goodwill and ingoings stand in the balance-sheet at £172,166 or nearly half the share capital, freehold and copyhold properties have been reduced by sales from £1,050,524 to £1,014,761, and leasehold properties are down by £1,714 to £38,986, while £18,357 is still carried in suspense for alterations and improvements to houses. Against these the debenture debt amounts to £570,000, £241,757 is due to sundry mortgage creditors, and sundry creditors on loan and trade accounts and reserve for unascertained liabilities come to another £121,419. Plant is slightly lower at £2,663, rolling-stock and horses are valued at £6,797, furniture at £9,806, and bottling machinery, plant, &c., at £4,330, the last two items showing increases of £2,133 and £2,509 respectively. Stocks are £41,444, debtors owe £12,354, and cash apart from £7,595 in the hands of the trustees is only £265

GROVES AND WHITNALL, LIMITED.

Trading profits on this Salford brewery for the year ended December 31, including rentals and income from investments and after making all usual allowances, amounted to £100,703. Adding £10,442 brought in and deducting £8,462 for depreciation of short leasehold, directors' salaries, and trustees' fees the sum of £102,684 is available. After paying interest on debenture stocks and preference shares £10,000 is again added to reserve, and the balance of £24,924 is carried forward, subject to directors' fees. No distribution is made on the ordinary shares "in view of the unsettled outlook caused by the predatory proposals of the Government." For 1906 the ordinary dividend was 3 per cent. In the balance-sheet land, brewery buildings, &c., are valued at £102,581, freehold and long leasehold properties are increased by nett addition of £28,917 to £1,692,377, while short leasehold properties, less depreciation allowed of £5,012, are £2,855 lower at £23,584, and plant, &c., is £1,453 less at £32,357. Stock is not unduly heavy at £77,699, while £21,356 is represented by public-house fittings, &c. Debtors owe £66,920, but floating liabilities amount to £218,861, including bank advance for properties purchased. Cash, however, is comfortable at £74,970, apart from £16,016 in debenture trustees' hands. Reserves with the present addition come to £67,030, but of this only £6,417 is represented by investments, and over £100,000 by valueless assets such as goodwill £83,574 and alterations suspense £17,003. So that the apprehensions of the directors are not unreasonable, and the ordinary shares should go without dividend for some years before the financial position can be regarded as healthy.

PETER JONES, LIMITED.

This drapery business so far recovered lost ground during the 12 months ended February 22 that its nett profits improved by £1,033 or just about the amount of the drop in the previous year, but even so the total of £6,577 is not one to arouse enthusiasm. Adding £790 or £221 more brought forward the available total after providing £690 for redemption of leases and £228 for audit fee and income-tax was £1,269 up at £6,459. This is sufficient to meet the preference dividend with a surplus of £2,059, which the directors deem it advisable to carry forward. Leasehold premises, fixtures, &c., have been increased by £4,804 to £120,372 against which the redemption fund is only £517 higher at £4,731, although £690 was transferred from revenue, while the reserve, of course, remains at the insignificant total of £188. The directors have surrendered the redemption policy which was to secure £80,000 on the expiration of the leases, and in its place have bought freehold ground rents in Chelsea for £10,711, for which payment has been partly made by means of a loan of £6,000. Sundry debtors at £9,626 only exceed creditors and loans by £605, but stocks have risen by £4,010 to £40,829, and cash amounts to £2,975.

ARAUCO CO., LIMITED.

Last calendar year this company did not quite make the progress that the previous year's results led people to hope. The fault, however, lay not with the business done, but with the fall in the rate of exchange which came down from 1s. 2d. per $1, the rate at which the previous year's accounts were closed, to 9 15/16d. per $1, the rate taken at December 31 last. Thus there is £15,906 at the debit of nett revenue account for loss in exchange, and the nett income for the year is only £49,618, whereas, as the chairman indicated in his speech a year ago, the company would have required £59,000 to provide all fixed charges, and to obliterate the remaining balance at the debit of nett revenue. Small, however, though the income was it met the service of the debentures and left £10,578, which was utilised to reduce the outstanding revenue debit, bringing it down to £5,433. But for the fall in the exchange earnings compare favourably with those of the previous year and the improvement in the receipts from the general railway traffic continues to indicate a permanent advance in the prospects of the company. After allowing for differences on exchange the nett earnings of the railway have progressed as follows:—in 1904 £19,716, in 1905 £21,892, in 1906 £37,975, and in 1907 £35,455. There is a good and growing demand for the company's coal and extensive improvements are being carried out, so that the output may be largely increased. This involves a certain amount of capital expenditure, but it appears to be moderate, and will no doubt prove remunerative.

WARNER ESTATE, LIMITED.

In this company's year ended March 31 last the gross rental was £74,466, an increase of £6,916 on the previous year, 239 new houses added then having last year contributed to the revenue. Including interest, dividends and transfer fees, the entire revenue was £76,554 or £5,440 more, interest and dividends having yielded £1,467 less. Out of the increased revenue the directors are able to make up the dividend on the ordinary shares to 6 per cent. for the year by a final distribution at the rate of 7 per cent., and also to add the usual £5,000 to the reserve fund, raising it to £73,000, at the same time writing off £1,902 to cover depreciation in investments. In addition to the expenditure on repairs £700 was spent out of income in permanent improvements to the company's property, and the position appears to be comfortable, since the balance of £1,708 carried forward is only £315 less than that brought in. During the year the property has been increased by the purchase of 11 shops and 49 houses, and now consists of 1,805 houses each containing a pair of self-contained flats, 489 single houses, shops, villas, &c., a total of 2,294, giving accommodation for over 4,000 tenants. Other premises are in course of erection for the company, and will be taken over during the current year. Last year £27,380 was spent on capital account, making the value of the properties £682,528. Investments are entered at £21,639, sundry debtors at £2,736, and cash amounts to £7,435. The company owes sundry creditors for rates and taxes, &c., only £1,327.

ATLAS ASSURANCE CO., LIMITED.

In the life department last year this company earned £12,750 in new premiums, and the total premium income was £172,799. There was also £70,444 received as interest and dividends, and claims and surrenders took £125,313, or about 72.2 per cent. of the premium income, or 51 per cent. of the total income. The life business was worked at an expenditure of less than 14 per cent. of the premium income. A further £34,000 has been transferred from the profits of the life investment reserve fund, raising it to £102,067, which covers the depreciation shown at December 31st last. In the fire department the premium income was £1,029,447, and the losses took £468,514 of this, being 45.5 per cent. of the premium income. Expenses absorbed £361,610 or about 35.18 per cent. of the premium income, and the profit, after charging 40 per cent. of the increased premiums to meet the increased risk was £150,881. The fire insurance fund, after carrying £48,351 to profit and loss, has been increased by £137,296 to £676,215. In the accident and general department the premium income was £22,924 and claims and expenses absorbed £10,377, the balance having been added to the fund of this branch, raising it to £63,719. A depreciation is also shown in the shareholders' securities amounting to £33,063, which has been transferred from profit and loss and reserve fund to the investment reserve, raising it to £48,156. All these adjustments made, the profit for the year is brought out at £55,000, and out of this a dividend of 5s. per share, or nearly 21 per cent., is distributed on the paid-up capital of £264,000. Two shillings of the dividend was paid in October last. Altogether the funds of the company now amount to £2,808,887, exclusive of the paid-up capital, the life funds alone being £2,013,504, which is an increase of £77,852 on the year.

CALEDONIAN INSURANCE COMPANY.

In the life department a nett new premium income of £19,425 accrued from new business and the total premium income was £242,556. Interest and rents less income-tax gave £105,133, and there were some other items of revenue, including £4,655 income-tax repaid by the inland revenue and £2,819 in capital received for annuities sold. Claims of all kinds, including bonuses and surrenders, took £169,778, and expenses and commission amounted to nearly 14 per cent. of the premium income. Owing to the depreciation in investments the directors have carried £94,000 taken out of the profits of the quinquennium to investment reserve account, so that the life funds were increased by only £15,729 on the year to a total of £2,539,736. In the fire department the premium income was £5,674 up at £445,634 and £5,909 was received at interest on the fire funds. Claims took 46.82 per cent. of the premium revenue and commission expenses and taxes 36.79 per cent., or together and including £1,892 as additional reserve for unexpired risk £374,488. This left £77,056 to be carried to profit and loss, and out of this the directors have placed £23,000 to the credit of the investment reserve account. The new employers' liability and burglary department has only been in operation for six months, but it gathered in £3,959 in premiums and had £2,082 of this in hand at the end of the year. After making these various assignments to reserve the profit balance was £76,554, and out of this the directors recommend a dividend at the rate of 15s. per share, an increase of 3 per cent. on the previous year's distribution. This will leave £60,429 to be carried forward. Last year ended the quinquennium, and in spite of the heavy assignment out of profits to meet a depreciation already in part obliterated the directors are able to pay the usual bonuses to profit-sharing policy-holders at the rate of £1 3s. 6d. per cent. per annum on the ordinary whole life policies and 1 per cent. per annum on the endowment assurances, with other assignments. The fire fund, it should be added, is now £148,545, which does not seem to be

excessive, but then the Caledonian has suffered severely through losses in America.

THE EQUITY AND LAW LIFE ASSURANCE SOCIETY.

In 1907 the new business brought new premiums to the amount of £30,169, of which £10,974 represented single premiums. The total premium income was thus brought up to £338,386 and the interest and dividend income amounted to £143,403. A profit of £3,456 was also received on reversions fallen in and £5,790 on freehold estates sold. Claims took £300,567, bonuses paid in cash £1,105, and surrenders £22,460. Expenses and commission took less than 10¼ per cent. of the premium income according to the report, but as we work them out, the ratio slightly exceeds 11 per cent. Interest on the society's funds averaged £4 2s. per cent. for the year, excluding the reversions, outstanding premiums, and interest and cash at bank. As a result of the year's business the life funds were increased by £116,898 to £4,401,301. The company is a proprietary one, and out of the proprietors' fund a dividend of £11,250 was paid to the shareholders, or slightly under 19 per cent. on the paid-up capital. Altogether the profit for the year accruing to the proprietors was £25,257, so that the proprietors' capital of £60,000 was brought up to £77,126 at the end of the year by the balance on profit undistributed.

ARMY AND NAVY CO-OPERATIVE SOCIETY, LIMITED.

Sales during the year ended February 1 amounted to £3,144,126 and trading account shows a profit of £472,862. Adding miscellaneous receipts £14,710, the gross revenue was £487,571 of which working expenses absorbed £249,913, interest £25,522 and £12,740 was written off premises. After deducting £863 subscriptions to charities £198,534 remains, which with £65,953 brought forward gives a disposable total of £264,487. Out of this provisions are made of £4,048 for provident fund, £10,000 for contingency, £1,500 for Indian good service fund and £3,000 as bonus to selected countermen. The same dividend as last year, 2s. 10d. per share, is paid and £65,639 is carried forward. Stock comes to about £16,000 more at £674,029. Cash amounts to £46,708 and investments aggregate £551,486. Various Indian transactions represent £38,936 and £76,792 is owing by canteens, messes, &c., while trade creditors are down for £235,531. Premises total £485,400 having been written down altogether by close on £250,000. Fixtures and furniture have been steadily reduced from £256,455 to £85,416 and plant and fixtures from £115,325 to £32,761. On the other side life ticket account is £1,586 and permanent ticket account £6,615. Creditors, other than trade accounts, come to £711,841, being made up of deposit orders £169,389, provident fund £100,000 and deposit interest and deferred pay £442,451. Manager's remuneration and good service funds amount to £30,142, contingency to £476,096 and leases redemption to £83,989. The share capital is £60,000 in 1s. shares and the balance-sheet totals £1,991,528.

SPILLERS AND BAKERS, LIMITED.

After making all usual provisions and reserving £1,750 to cover bonus to workmen under profit-sharing scheme this milling business operating in Cardiff and Bristol declares its profits for the year ended February 29 at £108,516. To this is added £101,486 brought forward, making £210,002 available. The preference dividend provided for, £500 goes to the chairman and the munificent sum of £7,577 is paid to the directors apart from payments to managing directors, which, as no profit and loss account is given, are not disclosed. Then the reserve and insurance funds both get £10,000, and the regular 10 per cent. is paid on the ordinary shares, leaving the sum carried forward increased by nearly £10,000 to £110,675. It is true that this practice of carrying forward a large amount of undivided profits creates a dividend equalisation fund, but it is difficult to see how more could be distributed under the financial circumstances of the company. With the big figures disclosed cash and bills in hand seem ridiculously small at £2,073; trade balances appear to be favourable enough though on a heavy scale, debtors owing £505,306 against creditors for £247,772, but in addition £387,601 has been borrowed from the bankers against security of deeds and £26,803 raised by mortgage, together aggregating £414,404, not far short of the £435,296 representing the book value of property, &c. Investments, without description or any note as to market value, are given as £98,610; goodwill remains (as purchased) at £64,031 and stocks on hand, including floating cargoes, come to the huge sum of £912,675, nearly equalling the issued capital of £950,000. Reserve funds reach the respectable figure of £255,000, partly represented by investments. Taking into consideration that the capital actually employed is getting on for £2,000,000, the profits are not so large proportionately as they would at first seem. Still the company appears to thrive, although it relies to an almost dangerous degree on credit. A contract has been made to purchase the Cardiff Grain Company, Limited, but was not completed at the date of the balance-sheet.

HIGHLANDS AND LOWLANDS PARA RUBBER CO., LIMITED.

During the year ended December 31 this company tapped 10,184 new trees, and although they only yielded a small amount of rubber the total crop was 59,222 lbs. larger at 193,507 lbs. or 8,500 lbs. more than the estimate. The price realised, however, fell off sharply from 5s. 2¾d. to 4s. 0¾d., and the gross receipts were only £4,828 up at £38,360, while sales of seeds and stumps brought in £792 less at £5,257. Proceeds of the coffee crop, too, were £2,621 lower at £7,352 owing to the cutting out of the coffee amongst the old rubber, and although interest and transfer fees gave £572 or £407 more the gain in the total income was no more than £1,822 at £52,541. Expenses took £2,343 more at £15,697, the cost of weeding having been heavier than expected, but as the company had nothing to write off against £3,255 for preliminary expenses a year ago the surplus was £36,844 compared with £34,110. Last year a considerable proportion of the nett profits was not available for distribution and was written off cost of the estates, but, on the other hand, more capital now ranks for dividend, and the directors content themselves with paying a dividend of 12½ per cent. against 11, leaving £5,784 or £6,333 more to be carried forward. Block account stands at £219,873, but £20,558 was spent on development, and this item now comes to £31,746, while additional buildings [illegible] 10 per cent. depreciation are valued at £1,829, and the company has not yet begun to think about such things as reserve or depreciation funds. Creditors have been reduced by £3,862 to £3,312 against a decrease of £7,855 to £13,400 in stocks of produce and an increase of £2,630 to £4,997 in sundry debtors, including £1,698 or £770 more for coolie advances. Cash, notwithstanding the addition of £16,175 to the paid-up capital, is £4,391 lower at £2,378.

MINOR NOTICES OF COMPANY REPORTS.

ANGLO-RUSSIAN COTTON FACTORIES.—Russian manufacturers, according to the directors of this company, again met with an active demand for their goods in 1907, and there was a cessation of labour troubles, but costs were enhanced by the high rates ruling for the raw material. Receipts from the Russian companies for dividends and interest on advances amounted to £59,652, and after providing for administration expenses and debenture interest the nett profits, including £7,199 brought in, were £34,370. Out of this a dividend of 4 per cent. is paid, £5,000 is put to reserve, and £10,557 is carried forward. The paid-up capital of £470,320 is invested in shares of three Russian undertakings, valued at a similar figure, against which there is a reserve of £45,000, but the company has made advances of £545,216, providing the means by issuing debentures. A sinking fund of £67,936 has been accumulated for redemption of the 4½ per cent. first charge debentures, and of these 679 have been repaid, leaving £232,100 outstanding, together with £200,000 6 per cent. irredeemable second charge debentures. Creditors are trifling at £1,900, while debtors owe £23,056 and cash comes to £11,269.

AUSTRALIAN AND NEW ZEALAND MORTGAGE CO., LIMITED.—Last year a nett credit of £353 resulted from the transactions, and was utilised to reduce by a like amount the debit at profit and loss, which is still £71,437. The directors are pleased to report that the gradual liquidation of the company is progressing in a satisfactory manner, but it has still properties on hand standing in the books at £349,329, and the debenture stock outstanding is £372,509. Income from the properties, however, amounted to £22,440, the entire gross earnings having been £24,623, of which interest on debenture stock absorbed £18,886, expenses in London £2,334 and general expenses in the colonies, including exchange and income-tax £3,051.

BATU CAVES RUBBER COMPANY.—This estate is being gradually weaned from coffee to rubber, and receipts for the year ended December 31 show that coffee produced £314 compared with £952 and rubber £723 compared with £10. The income from Durian fruit and tin royalties was little changed at £170 and total receipts were £90 more at £1,217. Expenses, however, were somewhat higher, so that nett profits were only £17 better at £302, making £431 in all to credit of profit and loss account. Bills payable are still heavy, though £562 less at £3,242 against debtors £20 and cash £158, but produce sold since December 31 has realised £317 nett. Estates figure at £22,252 against a paid-up capital of £19,000, but since the closing of the accounts 4,750 shares have been issued at a premium of 25s. per share.

BEN EVANS AND CO., SWANSEA.—Profits for year ended February 29 with transfer fees total £14,968. From this is deducted debenture interest, fees and £1,365 written off goodwill, property, &c., leaving £8,990 in addition to £1,319 to credit of ordinary dividend and £60 to credit of founders' dividend accounts. After meeting preference dividend 7 per cent. was paid on ordinary and 2s. 6d. on founders' shares, leaving £1,674 and £40 to credit of the two classes respectively and £79 is put to reserve making it £4,242. Balance-sheet items are property, goodwill, &c., £135,367, stock £41,000, cash £10,052, sinking fund investments £1,878 and debtors £28,058 against creditors for only £8,940 including salaries and rents accrued.

BOMBAY GAS COMPANY.—An improvement of £5,227 to £58,701 in gross revenue for 1907, of which £2,590 came from private rentals, £318 from public lamps and £2,016 from residuals, sounds very encouraging, but all the gilt was rubbed off the gingerbread by the increase in expenses. Cost of coal went up by £2,983, partly because of the larger quantity carbonised, and partly because of the higher prices, while the outlay on repairs and maintenance was swollen by £3,180 for special expenditure on gas-holders and retorts, and total outgoings were £6,882 heavier at £43,308. Including £3,522 brought forward the nett profits amounted to £18,825 or £1,402 less and the dividend has to be cut down by ½ per cent. to 6½, and even this can only be paid by reducing the balance carried out by £207 to £3,225, while the reserve is once more ignored. The insurance fund was increased by £46, but the total accumulations now amount to £22,000 against a capital outlay of £237,030, and no part of this is separately invested.

BOLANDS.—Nett profits for the twelve months ended March 28 amounted to £18,502 and £2,350 was brought in, making a total of £20,853, of which directors' fees took £1,250, income-tax £600, and debenture interest and preference dividend £7,837, leaving £11,016. Out of this two dividends aggregating 5%

per cent. for the year have been paid, £1,000 is put to reserve, and £2,540 is carried to the new account. The reserve fund will now amount to £5,500, but is not much to brag about seeing that properties, goodwill, trade marks, patent rights, &c., are unaltered from a year ago at £240,119. Special expenditure on mills in 1906-7 figures as a separate asset for £1,481, horses, rolling stock, &c., are valued at £6,068, and investments at cost at £9,239. Debtors owe £27,804 against £25,899 due to creditors, and stocks and cash, given as one item, come to £36,779.

Brazilian Extract of Meat and Hide Factory.—Trading profits for 1907 were £5,909, and after meeting all charges the nett surplus including £3,869 brought forward was £7,778. Out of this a dividend of 10 per cent. and a bonus of 1s. per share, or 15 per cent. in all, is paid and £4,612 is carried forward. Properties are valued at £25,000 and machinery and buildings at £6,000, and in view of the fact that no depreciation seems to be considered necessary, the reserve of £5,000 can hardly be regarded as adequate. Creditors and bills payable are heavy at £16,697 against £2,580 due from sundry debtors, but goods and products on hand amount to £20,951 and cash is £5,468. The company has an exchange account of £5,515 as provision against any fall that may affect the sterling value of the assets standing in Brazilian currency, and the directors state that ample provision has been made for fluctuations in the value of stocks and other trading contingencies.

Balijan Tea Company.—A moderate increase of 2,744 lbs. to 473,984 lbs. in the crop for 1907 was offset by a drop of ½d. to 10 25-32d. in the average price realised and gross receipts fell by £619 to £21,525. Cost of production at the same time rose by 5/8d. to 7 1/8d. owing partly to the loss on rice, which amounted to £3,133, and after providing for all outgoings the nett profits were £1,915 smaller at £6,117. Balance brought forward, however, was £9,657 or £1,432 more, making the total available £15,774 against £16,657, so the directors repeat the dividend at the rate of 15 per cent. to which it was raised a year ago, but without the 5 per cent. bonus then added and carry £10,524 or £867 more to the new account. Creditors come to £815 less at £2,250 against a reduction of £3,087 to £11,820 in sundry debtors, but cash has risen by £1,616 to £4,841.

City and West-End Properties.—A minute gain of £55 at £150,744 in the gross rentals for the twelve months ended March 25 was accompanied by a reduction of £845 in the outgoings for ground rents, rates, housekeeping, &c. Cost of upkeep rose by £423 and other charges were also higher, but nett profits nevertheless showed an improvement of £336, and with £1,649 or £173 more brought in the disposable total was £509 up at £50,773. Debenture interest and premium on redemption policy having been met the ordinary shares again get a modest 2¾ per cent., and after putting an extra £254 at £4,442 to reserve, £787 is carried forward. Leasehold properties are valued at £1,009,944, a small sum of £123 having been paid for redemption of land tax, and of this £877,500 is insured by redemption policies, on which £34,454 has been paid in premiums to date, while the reserve fund now stands at £38,662. Investments, including £4,000 of the company's own debenture stock, amount to £48,206 or £6,631 more, and debtors are £1,767 up at £43,028 against an increase of £554 to £26,791 in sundry creditors, but cash has dropped by £3,153 to £2,895.

Craigpark Electric Cable Company.—Gross profits for the year ended March 31 amounted to £17,872, of which expenses, including £301 for bad debts, absorbed £10,744, leaving a balance of £7,129. With £604 brought in £7,733 is available and preference dividend having been met, maiden appropriations of £1,000 each for depreciation of buildings and reserve fund are made and 6 per cent. paid on the ordinary shares, leaving £1,203 to go forward subject to payment of directors' fees. Machinery and buildings stand at £71,056 and stock is taken at £23,981, but goodwill is modest enough at £4,500. Creditors seem decidedly heavy at £28,362, and exceed debtors by no less than £11,071, while cash is decidedly poor at £152.

Darjeeling Company.—The unseasonable weather last year made a considerable difference to this company as the crop was 122,998 lbs. smaller than in the previous season, and although the price obtained was practically the same at 10.14d. the proceeds came to £4,175 less at £21,775. Miscellaneous receipts yielded a trifle more, but the total revenue was still £5,073 down at £22,548, and as expenses rose by £324 the nett surplus amounted to no more than £945. Balance brought forward was also smaller at £149, making a total of £1,094 compared with £6,697, so shareholders, after receiving 4½ per cent. per annum for two years, have now to go without a return on their money, and after paying managers' and managing director's commission £1,003 is carried forward. Block account is unaltered at £133,724 but the reserve has been increased by £500 received as a bonus on shares held in Buller's Wharf, Limited, and a corresponding sum has been added to investments for a call on the same company's shares, making the totals £6,151 and £6,850 respectively. Creditors are about £100 down at £9,184, while debtors have risen by £228 to £2,640, and expenditure on account of 1908 is £225 up at £1,950, but stocks are £785 lower at £7,242, and cash has shrunk from £5,766 to £346.

Edinburgh Life Insurance Company.—In 1907 this company's nett new premium income was £31,130, and it sold 63 annuities for £58,031. This entire premium income was £317,855 and its interest and dividend revenue £171,094, making a total income exclusive of the annuity capital received of £491,202. Claims took £294,696 and surrenders £19,510. At the end of the year the accumulated assurance and annuity fund was increased by £131,676 to £4,242,840, from which £50,000 has been deducted out of the profits of the five years for depreciation on investments, reducing the fund by that amount. The total funds, however, stand at £4,307,590. As a result of the quinquennial valuation a surplus of £316,323 is brought out, exclusive of £18,127 paid away in intermediate bonuses. Adding that and deducting the just mentioned £50,000 the available surplus is £284,450, out of which one-tenth goes to the proprietors and £256,005 in all to the policyholders. This enables the board to declare bonuses for the five years ranging from 5 per cent. at age 20 to over 23 per cent. at the oldest ages, and a dividend at the rate of £2 per share is given to the proprietors.

Electric Traction Company of Hongkong.—Gross receipts for 1907 were £1,643 better at £42,706, but owing to the very large loss sustained in respect of subsidiary coinage, amounting to £4,400, or over 16 per cent. of the working expenses, the profit was again adversely affected. After providing for debenture interest and all other charges, the nett surplus, including £580 brought forward, was £6,530, out of which £6,000 is put to reserve and £530 is carried forward. Outlay on the undertaking is £520,279, and the auditors seem doubtful whether the reserve fund of £12,000 is sufficient provision for depreciation. Creditors come to £2,717, and on the other hand stocks and goods in transit are valued at £5,819, debtors owe £592, and in addition to £1,558 in cash the company has £7,000 out on loan. The directors state that the committee appointed by the Governor in the latter part of last year to inquire into the subsidiary coinage question was unable to come to a decision as to the best solution of the difficulty, and unless something is done at an early date it will be necessary to raise the fares charged.

Extract Wool and Merino Company.—Nett profits for the year ended March 31 amounted to £21,752, and with £4,586 brought in gave a total of £26,338, of which debenture interest and preference dividend took £6,155. Out of the balance of £20,183, the ordinary shares get 7½ per cent. and £10,000 is transferred to reserve, leaving £4,883 to be caried forward. The reserve will now stand at £34,045 against property valued at £49,124, and goodwill, plant, &c., of £96,375. Debtors at £32,713 exceed creditors by £16,335, while stocks amount to £38,811 and cash investments total £37,145.

F. Reddaway and Company.—The profits for the year ended December 31, of which no working account is appended, is declared at £47,403. From this is deducted £5,620 for depreciation and £18,526 for debenture and other interest, legal expenses, and income-tax, leaving £23,256, which, with £3,220 brought in, gives £26,476 disposable. Out of this is paid the full preference dividend and 2½ per cent. on the ordinary shares, the first distribution on these shares since 1900, when 8 per cent. was paid. £10,000 is added to reserve and £2,820 carried forward. Mills, machinery, &c., stand at £94,118, having been enlarged by £147,939, including £6,892 during 1907, from the original cost price of £23,590, and written down by £77,411 in all. Stock-in-trade figures at £164,984. Book debts, bills, cash, &c., are lumped at £117,492, but, on the other hand, creditors amount to £139,269, while against this it is noted that for some unstated portion of the amount, "B" debentures have been issued. Investments are entered at £242,329, and goodwill and patents at £81,868, while the reserve with the present addition comes to £95,000.

Johnson and Phillips.—Trading profits for 1907, after providing £4,312 for maintenance of buildings, plant, &c., were £31,530, and with £11,452 brought forward gave a total of £42,982. Of this £5,500 is written off for depreciation and £500 off investments, debenture interest took £8,498 and directors' and auditors' fees £1,360 leaving £27,123, out of which a dividend of 7 per cent. is paid, £8,000 is transferred to reserve and £6,873 is carried forward. Additions to property cost £29,031 making £182,388, patents, licenses, &c., are valued at £7,222 and investments now stand at £4,422, while the reserves consist of the present appropriation from revenue and a debenture redemption suspense account of £1,908. Creditors and bills payable come to £103,946 against £128,708 due from debtors, but stocks, work in progress, &c., aggregate £133,768 and cash is £16,827.

Kidderminster and District Electric Lighting and Traction Company.—Including £2,520 received as dividend from the Kidderminster and Stourport Electric Tramway Company, the gross income for 1907 was £9,388, and with £687 brought forward gave a total of £10,076. Expenses of debenture interest and preference dividend absorbed £7,361, and after putting £750 to depreciation and renewals fund and £500 to debenture and loan redemption reserve, a dividend of 2½ per cent. is paid on the ordinary shares, leaving £289 to be carried forward. The total number of units sold was 1,042,204, or an increase of 336,363 units, and the profit from the electrical supply business was £795 up. Capital expenditure, chiefly on the installation of the new 500 K.W. generating set and auxiliary plant which was brought into service on November 24, amounted to £5,024, making a total of £50,798, apart from the £56,000 paid for the Kidderminster and Stourport Tramway shares. The debit balance under this head is now £2,298, and in addition preliminary expenses of £110 and expenditure on new lighting order of £400 still figure as assets. As the depreciation fund is only £645, the company has borrowed £2,150 from the Tramways Company and £890 from its bankers, while £2,558 is due to sundry creditors. On the other hand debtors owe £5,022, but cash is trifling at £15. The profit and loss account of the Tramways Company shows gross earnings of £6,335, or £18 less, with an increase of £68 in expenses. Nett profits, including £39 brought in, were £3,106, of which £500 is transferred to

reserve, £2,574 is distributed in a 4½ per cent. dividend, and £32 is carried forward.

La Guaira Harbour Corporation.—Gross receipts from harbour dues and rents for the year ended December 31 improved by £6,056 to £60,448, while expenses only rose by £842, so that the working profit was £5,214 better at £31,229. After deducting management expenses £3,065, interest on first mortgage £19,850, and tax and small interest items, £8,098 remains as nett profit, which is transferred to credit of second mortgage stockholders, making a total of £8,167. Out of this interest is paid at the rate of 1¾ per cent., compared with ½ per cent. for 1906, leaving £216 to go forward. Construction account, with the addition of £143, stands at £1,083,543. Plant, with £230 added and £1,913 written off, is valued at £8,006, and stores at £5,899. Debtors owe £3,269 against creditors for £946. Cash comes to £14,122, and bills receivable £8,980, while the debit of nett revenue account is £189,160, and with expenses of capital issues, premiums granted on conversion of 7 per cent. debenture stock, discounts, &c., make up the large total of £355,566. In addition to capital liabilities, £84,508 is owing to contractors, payable when the Corporation has paid 7 per cent. on its share capital. Goods handled showed an increase of 4,174 tons to 94,098, foreign imports and exports being larger, while the coastwise trade declined. Working expenses were 41 per cent., against 43 per cent. for 1906.

Lamb Brewery, Frome.—The nett profit on trading for the year ended March 31 shows a slight decrease at £6,098. After providing the preference dividend and interest on the various mortgage debentures and adding £195 from interest on investments and £171 brought forward £3,318 is available, out of which the usual dividend of 15 per cent. is paid for the sixth successive year and £693 is carried forward subject to directors' remuneration. Property, goodwill and plant, &c., are valued at £82,239 and stock at £6,934. Cash comes to £2,442, investments in Hong Kong stock at cost to £3,949 and book debts and loans to £13,334 less £1,400 reserved for discounts, bad debts, &c., and creditors are small at £2,426. Reserve plus a transfer of £189 from first mortgage debenture account totals £10,689 and £1,750 stands to credit of dividend equalisation fund. The directors are frankly outspoken on the Licensing Bill, finding it difficult to believe such a measure can be seriously brought forward in a civilised country and regarding it as an effort to punish political opponents rather than to further temperance. They are, however, so doubtful of its taking practical form that they do not feel justified in withholding any extra portion of the profits legitimately earned.

Lang Bros.—This wine and distillery business shows a profit for the year ended February 29 of £6,424, and adding £1,338 from last account £7,762 is available. Preference dividend allowed for, 7 per cent. is paid on the ordinary shares as compared with 8 per cent. for the two previous years and 10 per cent for 1902-3 and 1903-4, leaving £3,914 for accrued preference dividend, managing director's salary and allowances for reserve, &c. Property and goodwill are down for £48,022, stock £27,638, cash £14,725 and debtors £20,815, against creditors £6,627. Reserve and depreciation accounts total £8,000, the addition made twelve months ago being apparently £800.

Meldrum Bros.—The directors of this Manchester engineering business state that, in accordance with the request made at the last general meeting, the accounts for 1907 have been prepared in detail, and express the hope that the form of the balance-sheet will be acceptable to the shareholders generally. No profit and loss account, however, has been included in the reforms, and until that is added the statement of the company's business must be regarded as imperfect. Several of the large contracts mentioned a year ago have been completed, and are now working to the utmost satisfaction of the municipalities concerned. Unfortunately, owing to unforeseen circumstances, other contracts have not reached the stage at which work can be commenced on them, and the nett result for the twelve months was a loss of £6,655, making the debit balance to date £14,539. Patents and goodwill are valued at £47,053 and patterns and drawings at £6,550 or the same figures as at the end of 1906, while the depreciation allowances on the items of land and buildings, and plant, &c., are under 2½ and 5½ per cent. respectively, leaving them at £20,002 and £7,863, and machine tools, &c., less an unspecified provision for depreciation, stand at £8,942. Creditors, including £20,025 for overdraft at the bank, total £54,277, but debtors come to £13,659, the Société Meldrum, Limited, owes £50,611, and stocks and work in progress is down for £11,546. Cash is only £156, of which £93 is on capital account, and the reserve is a comparatively trifling one of £2,427.

Merthyr Electric Traction and Lighting Company.—Gross receipts from the supply department for 1907 rose by £1,090 to £5,872, and expenses were £183 less at £2,104, while in the light railways branch an improvement of £626 in gross earnings was accompanied by an increase of £337 in expenses. Nett revenue from all sources was £9,301, and after providing for administration expenses, debenture interest and preference dividend and transferring £1,000 to a renewals provision account, the available balance, including £436 brought in, was £3,283. Out of this £1,250 is put to depreciation and reserve account and a dividend of 5 per cent. is paid on the ordinary shares, leaving £533 to be carried forward. During the year £2,368 was spent on capital account, but £269 was deducted for surplus material transferred to stores, and the property stands at £107,288, against which the reserve fund of £4,024, or about 3¾ per cent., does not look particularly brilliant. Like so many of the B.E.T. Company's progeny, this company has had to lend a helping hand to one of its companions, and has advanced £1,212 to the Penarth Electric Lighting Company. Other debtors owe £3,046 against £2,175 due to sundry creditors, but cash is poor at £723, considering that £1,500 has to be found for the ordinary share dividend. The renewals provision account just established has been charged with £263 for renewals during the year, leaving it at £737.

National Mutual Life Association of Australia, Limited.—In its year ended September 30, 1907, this company gathered in £126,592 in new premiums, of which £10,432 was in single premiums. For the first time in its history its total new business exceeded £3,000,000 in liabilities on policies issued. Including £217,143 received as interest on investments and £681,053 representing the entire premium income, the total receipts of the year came to £898,253, and of this £374,809 was paid away to policyholders, the total expenditure of the year having been £532,321. The payments to policyholders represented rather less than 42 per cent. of the total income for the year. Expenses and commissions absorbed 10 25 per cent. of the premium income.

Nestlé and Anglo-Swiss Condensed Milk Co.—Nett profits for 1907, with 3,479 francs brought in, were 8,512,333 francs, and after writing off 700,000 francs for depreciation and paying the statutory dividend of 5 per cent., 5,812,333 francs was left. Of this, 290,443 francs is transferred to reserve, 220,000 francs to the pension and sick funds, and 765,552 francs goes to the directors, after which a supplementary dividend of 45 francs per share or 11¼ per cent. is paid and 36,338 francs is carried forward. Before arriving at the above profits the directors wrote off no less than 2,163,928 francs for depreciation of securities, of which 2,000,000 francs was on shares in the Société Générale Suisse de Chocolates, 112,880 francs in Swiss Federal Railway Bonds, and 51,048 francs in sundry securities, together with 11,309 francs loss on the sale of 408 Swiss Federal Railway bonds. In December last the company purchased the Cressbrook Dairy Company of Brisbane for £67,500 in cash, this price including the "Cressbrook" brand of condensed milk, two factories in Queensland, four large farms, and 1,443 head of dairy cows.

New South Wales Mortgage, Land and Agency Co., Limited.—This company's accounts are made up to January 31 and show a nett revenue of £21,821, or including £7,676 brought forward, of £29,497. After providing debenture interest and transferring £2,500 to reserve, raising that credit to £7,804, the directors are able to pay a dividend at the rate of 5 per cent. on the share capital of £261,450 paid up, and have £7,524 left to carry forward. Property and assets, including £104,421 in urban and other property, stand at £411,644, and investments at £16,034. Cash amounts to £4,837, and unrealised stock stands at £20,951. The debenture debt is £160,000.

North of England Trustee Debenture and Assets Corporation, Limited.—Profit for the year ending March 31st last was £52,998, and after deducting £21,680 against depreciation of investments and paying the directors' fees of £2,000, the nett balance was £29,317, made up to £46,541 by £17,224 brought forward. Out of this the founders' shares get £997, and the ordinary shares 7½ per cent. in dividend, with a further bonus of 2½ per cent. or 1s. 3d. per share. Then £5,000 is transferred to reserve fund and £15,561 left to carry forward. The reserve is now £90,000. No less than £105,808 of the corporation's money is out on loan, but £72,450 of this money has been borrowed on security and open account. The total of the company's investments is £739,502 and its cash stands at £21,341. Contingent liabilities aggregate £141,118, of which £92,100 is in respect of debentures guaranteed by the corporation and the remainder on investments not fully called up. These items are not taken into the balance-sheet.

Pacific Trust Association.—A little extra money was raised in 1907, partly by the issue of £9,420 in debentures, making the issued share and loan capital £144,025, and partly by an increase of £1,624 to £2,592 in the amount borrowed from the bank. Against these £9,518 at £133,287 was added to the mortgages, loans and investments, but real estate showed a decrease of £4,931 at £10,747. Other assets consisted of farm stock and produce valued at £6,375, interest accrued £3,102, balance due by agents £6,680 and remittance in transit £2,500. The additional resources did not give any material help to the company, and the total revenue including £1,138 brought forward was only £471 larger at £13,078, of which £5,959 or £321 more was retained as nett profit. Out of this a dividend of 4½ per cent. is again paid and the balance carried out is increased to £1,459. Reserve is once more passed over and remains at £8,000, while the real estate suspense account is also unaltered at £1,845.

Quebec Central Railway Company.—A grievous loss amounting to about $85,000 was inflicted upon this Canadian railway last year by the dishonesty of an old and trusted servant of the company, its treasurer. Of that amount $13,000 has been provided out of the year's surplus, which amounted to $321,111. Gross receipts at $1,012,741 rose by $107,875, but working expenses increased by $115,504, so that the nett earnings fell off $7,629, but $51,000 laid out on renewals was included in the working expenses instead of being written off nett revenue at the end of the year. From the balance, including $12,700 brought forward, the prior lien bonds and 4 per cent. debenture stock interest is paid, together with the full interest upon the second debenture stock and on the 7 per cent. income bonds, leaving a balance of $28,453, out of which the above-mentioned $13,000 has been set aside. This leaves $15,453 to be carried forward.

Sir Elkanah Armitage and Sons.—Profits for the year ended March 28 are shown as £22,106, which, with £6,551 brought in, gives £28,658 to be dealt with. Out of this £5,000 is added to reserve, and 10 per cent., including the interim dividend of 3 per cent., is paid on the share capital, leaving £8,658 to go forward, subject to directors' remuneration. The business seems to be progressive, 10 per cent. being paid for 1906, 8 per cent. for 1905, and 4 per cent. for 1904. Land, buildings, plant, &c., figures at £111,396, with the addition of £2,690, and depreciation allowance of £5,540 made during the past year. Stock is valued at £93,099, investments at £8,613, but cash is microscopic at £124. Debtors seem heavy at £71,389, and £35,793 is owing to creditors, including £10,461 advanced on shipments. Reserve account is ample at £80,000, but it is nearly all in the business, and credit seems generally to be a large factor.

S. Blanckensee and Son.—Trade account for the year ended January 31 shows a profit of £9,099, depreciation of £454 is allowed on machinery, leaseholds, &c., and £3,722 written off bad debts. With a transfer of £1,500 from bad debt reserve compared with £250 in 1906 the nett profit is made £5,930, giving, with £9,329 brought in, £15,260 to deal with. Preference shares provided for, the ordinary dividend is dropped 1½ to 6 per cent., and £3,500 retransferred to bad debt reserve, making a nett addition of £2,000 on the year, and leaving £7,741 to go forward. Leaseholds, machinery, &c., are valued at £8,271 after deducting depreciation allowed. Stocks of jewellery are pretty large at £62,656, investments represent £3,600, and cash comes to £1,120. Trade balances are cumbersome, although the right side, debtors owing £90,430 against creditors for £50,036, while in addition £1,505 is owing on mortgage. Reserves with alterations noted aggregate £32,000 and leaseshold amortisation totals £1,138. The balance-sheet is marked "Private, for shareholders only"; but beyond the not unusual heavy credit trading, with the possibility of increased bad debts, uninvested reserves, and limited cash resources, there is nothing much to hide from the public.

Shahdar (Daelhi) Sahranpur Liglt Railway Co., Limited. A dividend at the rate of 4 per cent. per annum for the period from October 15 to December 31, 1907, is paid by this Indian enterprise, although the line has only been in operation throughout since October 15 last. Part of the line, however, was working as early as May 7. Earnings have steadily improved since the opening, though the famine prevailing in the district has somewhat retarded expansion of traffic. Interest on debenture stock and share capital has been paid out of capital up to the opening of the line, and the nett revenue, out of which the dividend is paid, has amounted to Rs. 13,841.

Scottish Ceylon Tea Company.—With an increase of 13,951 lbs. to 729,005 lbs. in the crop and an advance of 0.47d. to 6.63d. in the average price this company's gross profits for 1907 were £1,317 up at £5,502, and adding £281 brought forward the nett surplus, after meeting administration expenses, amounted to £4,337 or £1,376 more. This comparative prosperity, however, has not been utilised in the most satisfactory way as the directors are in too much of a hurry to return to the old days of big dividends to consider the need for prudence. For the past three years no provision has been made either for reserve or depreciation of the estates, yet in spite of that all the directors can now spare is £500 in reduction of block account, while they raise the dividend from 5 per cent. to 7, and carry forward an extra £56 at £337. The estates now stand at £51,366 or just under £30 per acre, against which the reserve is £7,000. This fund is represented by investments having a book value of £6,999, but whether this figure is anywhere near the market value or not we cannot say, as the securities are not specified, and both directors and auditors are silent on the matter. Floating liabilities are only £63 up at £9,096, but far outweigh liquid assets, as although cash has increased by £1,292 to £3,209, stocks have dropped by £502 to £3,975, and debtors owe no more than £288. Coast advances are decidedly heavy at £2,551.

South Metropolitan Electric Tramways and Lighting Co., Limited.—In 1907 the capital expenditure was £40,580, bringing the total up to £486,801. Last year's revenue from all sources was £51,371, and after paying the debenture interest the directors have enough left to enable them to give the full dividend on the preference shares with £431 left to carry forward against £339 brought in. From the tramways alone the traffic receipts were £41,413 or £23,689 more than in the previous year, but the system was not then in full operation, and last year's figures were adversely affected by the bad weather. Good results have followed from the through service of cars between Penge and Croydon, and from the connection of the company's system with that of the London County Council at Tooting. From the electricity supply department the receipts were £7,372 against £5,435 in the previous year.

Steel, Coulson and Co.—This Glasgow brewery made a gross profit for the year ended February 29 of £20,569, to which was added £1,224 brought forward. After meeting administration charges, debenture and other interest, and providing £3,545 for depreciation and repairs, the nett surplus was £10,843, of which preference dividend took £3,990. Out of the balance £4,000 is transferred to reserve, making it £20,000, and the ordinary shares receive a dividend of 3½ per cent., leaving £1,024 to be carried forward, subject to directors' and auditors' fees, which last year amounted to £263. In addition to a paid-up capital of £125,000 the company has raised £86,200 by debentures and £32,000 by mortgages, against which brewery premises, plant, goodwill, &c., stand at £124,777 and licensed properties and goodwill of businesses in England at £87,441. Creditors amount to £23,263, and there is a further liability of £19,330 on bills discounted for the trade, which appears on the credit side as "trade loans." Stocks are valued at £32,346, debtors owe £21,448, and cash and bills receivable come to £25,656.

Submarine Cables Trust.—Revenue from dividends and interest for the 12 months ended April 15 fell off by £1,336 to £23,942, and after providing for expenses the nett balance, including £454 brought forward, was £992 lower at £23,238. Of this £18,378 or £249 less was absorbed by the payment of two coupons of £3 each, and £4,811 was transferred to redemption fund compared with £5,149 a year ago, leaving £49 to be carried to the new account. During the year 41 certificates were redeemed at a cost of £4,811 or an average of £117 7s. each against 43 at an average of £119 15s. last year.

Shahdar (Daelhi) Sahranpur Light Railway Co., Limited. rent of £33,500, this company received £862 from interest and transfer fees, making a total income for the year ended December 31 of £34,362, of which expenses took £1,278. Adding £13,480 brought in, and deducting £12,953 for debenture interest, the disposable surplus was £33,611, and after paying preference dividend, the ordinary shares receive 5 per cent. and £14,556 is carried forward. Nothing was spent on capital account during the year, but there is a debit balance of £37,467, part of which apparently is covered by the reserve suspense account amounting to £35,428.

Thomas Brown and Sons.—Profits for the year ended December 31, including £2,194 brought in, amounted to £26,151, and after providing for administration charges and debenture interest and writing off £1,292 for depreciation £16,449 was left. Out of this arrears of preference dividend for 18 months to November 15, 1906, have been paid, and £5,312 is carried forward. Freehold properties are valued at £168,096, fittings at £13,969 and goodwill at £64,894, and against these the reserves all told only come to £5,239. Creditors are heavy at £145,040 compared with book debts and bills receivable of £92,822, but stocks are valued at £223,301. Cash comes to £3,194, but would seem to be the result of borrowing, as £6,963 has been obtained from the bank. What does the item of £4,438 for "debts in suspense partly secured" mean? The directors do not enter into details, and the auditors' report is only to be read at the meeting, which means that many shareholders will never know anything about it.

Tynemouth and District Electric Traction Company.—Gross receipts from all sources for the year ended December 31 were £12,847, of which expenses, including £573 set aside as provision for renewals, took £7,946, and debenture interest £666. With £373 brought forward, the disposable surplus amounted to £4,608, and out of this £500 is put to depreciation and reserve fund, and £500 to capital redemption fund, and after paying preference dividend, the ordinary shares get 4 per cent., leaving £226 to be carried forward. Outlay on the old line is only £5,059, but £93,502 has been spent on electrical construction, making £98,561 in all; against this the reserves now apparently total £9,569, and are represented in part by an investment of £1,453 in Consols and £2,750 in a sinking fund policy, securing £4,966 at the expiration of 20 years from April 9, 1903. Creditors at £1,341 exceed debtors by £717, but stores, &c., are valued at £1,154 and cash comes to £3,029.

William Dixon.—Nett profits for the year ended February 29, after providing for administration charges, debenture interest and depreciation, amounted to £136,862, and £15,174 was brought forward, making a total of £152,037. Of this £15,000 is paid to the mortgage debenture stock trustees for redemption of stock, £30,000 is put to reserve, preference dividend takes £15,000, and £39,000 is absorbed by dividends, aggregating 11 per cent. on the ordinary shares, leaving £20,537 to be carried forward. Iron works, collieries and other properties are valued at £927,656, and stocks of materials and utensils at the various works represent another £358,757, while the ordinary reserve with the present addition will only come to £40,000. The company has a special reserve fund for preference dividends of £45,000 and a debenture redemption fund of £15,000, of which £13,300 is in the hands of the trustees. Creditors come to £53,765 against debtors £97,821, cash is £27,825, and investments stand at £58,743.

The directors of Furness, Withy and Co., Limited, West Hartlepool, intimate that, although the financial year ended April 30, the audited accounts cannot be completed before the end of next month. The profits, as far as can be ascertained, compare satisfactorily with those of the previous year. The dividends received from investments amount to £142,236, compared with £135,323 last year, and £101,806 the preceding year. An improvement is to be recorded in nearly every department of the company's business both at home and abroad, the exception being the shipbuilding department, a succession of sectional strikes having greatly interfered with the progress and cost of work during the whole of the year, and matters have been made worse by the general strike now extending over the North-East Coast. The annual meeting of the company will be held in July as usual, and in the meantime the question of a bonus on the ordinary shares, in addition to the two interim dividends paid, will be considered by the directors.

Baku Russian Petroleum.—Production of crude oil for week ending May 2, 186,000 poods, equals 2,999 tons.

COMPANY MEETINGS.

EQUITABLE LIFE ASSURANCE.

The 146th annual general meeting of the Equitable Life Assurance Society was held on Tuesday at the society's premises, Mansion House Street, E.C. Sir Samuel Hoare, Bart., presided.

The Actuary and Secretary (Mr. George J. Lidstone, F.I.A.) having read the notice convening the meeting and also the minutes of the previous annual meeting,

The Chairman said that the board were glad to be again able to submit a satisfactory statement of the society's affairs. The new business of the past year amounted to a total of £271,571, of which £22,200 was reassured with other offices, so that the net amount assured was £249,371, and in addition there were deferred annuities amounting to £410 per annum. The total nett amount was within a few thousand pounds of the average sum transacted during the two previous years of the current quinquennium, and it showed an appreciable increase over the average of the preceding quinquennium. The number of policies, however, was slightly less, so that the average sum assured per policy, £1,150, was even higher than usual. The total premium income of the year was £189,932, or £1,700 more than in 1906. There had also been an increased return of interest. After deduction of income-tax—still at the high rate of 1s. in the pound which affected so considerably the interest returns of insurance companies and other large investors—the net amount received in interest was £175,530, or £5,300 more than in the previous year, and over £20,000 in excess of the corresponding figures five years ago. This increase was partly due to the growth in the society's assets, but a considerable part of it represented a satisfactory advance in the average yield of the invested funds. The death claims for the past year were exceptionally light, the total amount having been only £235,437. This was considerably below their average, and very far below the amount expected and provided for in the actuary's valuation. The policies again showed results which were remarkable in themselves, though happily they represented the normal experience of their society. The original sums assured by the policies amounted to exactly £125,000, while the bonuses added, some of which had been commuted in the life time of the assured, came to £133,390, so that each £1,000 originally insured had, on the average, been increased to £2,067, or more than double the original amount, and in many individual cases the policies were trebled or quadrupled. The working of the business for 1907 resulted in an addition of over £77,000 to the society's funds, which, at December 31 last, amounted to over £4,987,000, and he hoped that £5,000,000 would be attained before very long. The past year closed both at home and abroad amid financial gloom and depression such as had not been experienced for a generation. In these exceptional circumstances it was only to be expected that the society, in common with other offices, should experience some depreciation of its investments when valued at the prices current at the end of the year. The depreciation increased during 1907 to £115,000, representing about 5½ per cent. on the book value of the investments, or less than 2½ per cent. on the total funds of the society. A revaluation of the securities made on March 31 last showed that at that date the depreciation had already been reduced by nearly 20 per cent., and there was every reason to hope that with cheaper money and more settled conditions there would be a considerable further improvement in values, so that before the end of the current quinquennium, now more than 18 months hence, the depreciation might be much reduced or extinguished. Any balance of depreciation that might then remain would have to be dealt with in the accounts. There was another side to the picture, for the society was able to take advantage of the existing depression in prices, and, therefore, to make its new permanent investments on very advantageous terms. The society's total funds, after deducting the amount set against annuities and depreciation, represented no less than 74 per cent. of the total sums assured in force at the end of the year, or 54 per cent. of the total amount, including bonus addition, and this was without taking into account anything for the value of future premiums. Mr. T. L. Devitt seconded the motion, which was agreed to unanimously.

KALGOORLIE ELECTRIC TRAMWAYS.

The fourth ordinary general meeting of the Kalgoorlie Electric Tramways, Limited, was held on Wednesday at the Chamber of Commerce, Oxford Court, E.C., Mr. Allen H. P. Stoneham (chairman) presiding.

The Secretary (Mr. Frank A. Holyfield) having read the notice convening the meeting and auditors' report,

The Chairman said: You will see that the gross receipts for the year were £48,008 compared with £51,379 in the previous year, showing a falling off of £3,000, for which we are, of course, sorry. The falling off in receipts, however, is not due, I am glad to say, to any falling off in the output of Kalgoorlie. I have just received the details of the April output of gold, which is 15,000 ozs. more than the output for April of last year. This shows that although we have heard a good deal about Kalgoorlie not progressing, the output of gold is progressing, and the town, no doubt, has entered on a period of commercial and economic prosperity. The decrease in receipts is consequent on the decrease in the number of men employed, owing to improved methods of mining, the installation of more up-to-date machinery, and the consequent non-employment of inefficient workmen. To-day in Kalgoorlie only real mines are being worked; better methods are being employed, and the mines are being worked cheaper. Kalgoorlie, I contend, has entered on a stage of permanent, economic, and lasting prosperity. This, perhaps, does not mean such prosperity for the tramways as in the old days of spendthrift speculation, but it means certainty. Unfortunately, the wages which we have to pay to our employees maintain the same high level, and although it seems natural that in times of depression wages should fall they have not fallen in Kalgoorlie. But there is one good feature upon which we must congratulate ourselves; we have every year to put aside a certain sum for payment of interest and sinking fund on our debentures. That sum is fixed by the trust deed entered into on behalf of the debenture-holders, and in ordinary times the operation of that trust deed would redeem the "A" debentures in 17 years from the commencement and the "B" debentures in 26 years. Some of the debenture-holders have thought it proper—perhaps they have been compelled by circumstances—to sell their debentures at low prices. That is a distinct benefit for the company, although a distinct disaster to the debenture-holders; but if that state of affairs continues the result will be that we shall be able to redeem our debentures several years earlier than we otherwise should be—probably the "A" debentures in about 13 or 14 years and the "B" debentures in about 20 years. As our concession lasts for 35 years, I want the shareholders to remember that directly the debentures are redeemed the whole of the profit will come to the shareholders. Although there will be a period of waiting before the shareholders obtain dividends, when they do get them they will, provided things continue as they are, be exceedingly satisfactory. I have been asked by several shareholders whether we can give any information as to the Transcontinental Railway. There is no very definite information about the Transcontinental Railway except that the Bill has been brought in and passed by the Federal Government for the survey to be made, and it is confidently anticipated by everybody who studies Australian politics that this big work will be carried out. If and when it is carried out Kalgoorlie must benefit, because the line will commence from Kalgoorlie, which will be the centre for repairs and outfit, and certainly the centre from which the work will be carried on. There still seems to be in the minds of many people an idea that Kalgoorlie is only a temporary town, and that some day or other the mine will disappear entirely. We do not share that idea, nor is it shared by those most competent to pass an opinion upon the mines.

Mr. Oliver Wethered seconded the adoption of the report.

Replying to questions, the Chairman stated that during the past year the directors had been able to buy the "A" debentures at an average price of 90. If they had any money over which they could legitimately apply to the redemption of the "B" debentures, it would be a very good thing to do so. The "A" debentures must be redeemed first, but any surplus over £15,000 a year could be applied to the redemption of the "B" debentures.

The resolution was carried unanimously.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Anglo-Chilian Nitrate and Railway.—After placing £25,000 to reserve, 10s. per preference share and 10s. per ordinary share, making 15 per cent. for 1907.

Delhi, Umballa, Kalka.—Interim on the ordinary stock at the rate of 6 per cent. per annum for half-year ended Dec. 31.

Leopoldina.—4½ per cent., carrying £99,565 forward.

Pennsylvania.—At the rate of $1.50 per share, payable May 29.

Salvador.—6s. per share upon 25,000 fully paid preference shares of £10 each, Nos. 25 001 to 50,000 inclusive, on account of year ending June 30, 1908, to the holders on the register on the 16th instant.

INSURANCE.

Guardian.—Further of 6s. per share, making 10 per cent. for 1907.

Sun.—Final in respect of 1907 of 5s. per share.

MINES.

Briseis Tin.—Further interim of 6d. a share, payable 28th inst.

Hyderabad (Deccan).—For 1907 of 3s. per share, carrying forward £9,544.

MISCELLANEOUS.

Calcutta Electric Supply.—Final at the rate of 9½ per cent. per annum for half-year ended Dec. 31, making 8 per cent. for the year.

Dalgety and Co.—Interim for half-year ended Dec. 31 of 3s. per share, being at the rate of 6 per cent. per annum, payable May 15.

Grand Hotel, Eastbourne.—Interim at the rate of 6 per cent. per annum, for six months ended March 31, payable May 15.

Linoleum Manufacturing.—Interim of 2s. 6d. per share.

London Scottish American Trust.—Interim on the deferred stock at the rate of 3 per cent.

Neuchatel Asphalte.—Final on the ordinary shares of 7s. per share, and a bonus of 1s., making 11s. per share for 1907.

Union-Castle Mail Steamship.—Six shillings per share on the ordinary £10 shares, making 10s. per share on the ordinary shares for 1907.

Western Australian Bank.—Usual of 20 per cent. per annum.

It is announced that the 1908 edition of McNeill's well-known Telegraphic Code is now ready and will be sold to subscribers at £2 2s. per copy. No cipher word is employed in this Code, which is too well known to require more than a mention here.

The List of Applications will be opened on Wednesday, the 13th May, and will be closed on or before Saturday, the 16th May, 1908.

The Legal Insurance Company, Ltd.

(Incorporated under the Comp Acts, 1862 to 1900).

CAPITAL - - £1,000,000.

Divided into 200,000 Shar f £5 each.

ISSUE OF 100,000 SHARES OF EACH AT PAR.

Payable 5s. per share on application; 5s. per share on allotment; 10 r share on 1st July, 1908.—£1 per share.

It is not anticipated that any further calls be made.

TRUSTEES.

The Hon. Mr. JUSTICE CHANNELL. The Hon. Mr. J TICE BARGRAVE DEANE.

ADDRESS:—THE PUBLISHER, PRINTING HOUSE SQ., LONDON.

THE
BOOK MONTHLY.

An Illustrated
RECORD, GUIDE, AND MAGAZINE,
for
BOOKSELLERS, LIBRARIANS, & PUBLISHERS,
for
BOOK-BUYERS, READERS, AND WRITERS.

This is **A MAGAZINE *DE LUXE*,** a most tasteful and dainty sample of the typographer's skill, and at the same time one of the most painstaking and useful serials of the kind ever published. Its **ILLUSTRATED ARTICLE** is always packed with interesting Notes and Pictures, its **GENERAL ARTICLES** are both Useful and Entertaining, and its **LIST OF BOOKS ABOUT TO APPEAR** and of **BOOKS THAT HAVE APPEARED** are month by month Complete and Valuable as a **GUIDE** to the Bookbuyer and for **REFERENCE.**

The price is only
SIXPENCE NETT PER MONTH,
or Eightpence post free, or 6s. and 8s. per annum, post free, and its publishers are

SIMPKIN, MARSHALL, HAMILTON, KENT & CO., LIMITED.

**** *Kindly order it of your bookseller, and judge for yourself.*

Printed for the Proprietors by St. Clements Press, Limited, Newspaper Buildings, Portugal Street, Kingsway, London, W.C., and Published by Clement Wilson at Norfolk House, Norfolk Street, Strand, W.C.—May 9, 1908.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 541. New Series. SATURDAY, MAY 16, 1908. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Great Eastern Railway.

For many a year this company seemed destined to go the same way as the Great Central and some of the lines south of the Thames, but it has been rather skilfully managed on the whole, and, in spite of mistakes, the position of its affairs has been much improved compared with the old days when Great Eastern ordinary stock was a gambler's football, so to say, the byword and sport of the stock markets. For one thing, its capital expenditure has not been allowed to get out of hand in recent years, and for another, some measure of enlightenment has been displayed in the development of business within the company's system. Its management has sought to open up new sources of revenue, and has thereby done a good deal to lift Essex out of the condition of blight and decay into which it had fallen. For all that the company is not over prosperous, and the development of electric tramway systems in the suburbs of London, as well as of motor traction throughout the country, has begun to tell with considerable severity upon its receipts. In the past year, for example, the gross income of £5,972,277 was only £13,922 larger than in 1906, while the working expenditure of £3,790,414 rose by almost £103,000. There was actually a decline of almost £89,000 in the passenger, parcels, and mails earnings at £2,181,863. First-class traffic, for example, fell off by £10,737 and second-class by £9,197. There was also a decrease of almost £48,000 in the third-class traffic, a striking testimony to the effectiveness in competition of new and cheaper modes of locomotion, therefore had it not been for an increase of £25,122 in the merchandise and cattle, and of £58,725 in the mineral traffic, the exhibit for 1907 would have been depressing in the extreme. The company did not even gain anything appreciable by its season class traffic, which represents a most important branch of the passenger earnings, for the total of £408,904 was only £3,282 greater than that of 1906. An equally discouraging exhibition was made by the Continental steamboat figures, for they show a decrease of £16,916 in the income against an increase of £3,135 in the expenses, with the result that the nett profit, if it may be called that, from this traffic was only £12,347 last year compared with £32,398 the year before.

It followed that the total nett revenue of the company showed a decrease of £88,590 at £2,196,418, and accordingly the ordinary stock suffered. To begin with, there was £95,503 less available for it, and £96,617 less was distributed. Had it not been that the prior charges were but little increased, the product would have been worse than it actually was. As it was, debenture stock and other interest charges rose by only £1,518, and rents and leases cost only £856 more, but dear money towards the end of the year no doubt caused an increase of £5,698 in the bankers' and general interest charges, which amounted last year to £29,199. No increase at all, however, took place in the rentals or preference and guaranteed charges, and therefore the company was able to give its shareholders 2¾ per cent. for the year, as compared with 3¾ per cent. for the preceding year, a decrease, however, of 12s. 6d. What it will do in the current year we must not try yet to forecast. Perhaps the passenger earnings will benefit in a minor degree by the Anglo-French

Exhibition now so diligently advertised, and it may be that the Continental business of the company will improve generally, but the suburban competition around London within its district appears certain to increase in efficiency as time goes on, and the gross receipts so far published for the current year are the reverse of cheering to holders of the ordinary stock.

Items in working expenditure are interesting for several reasons. For instance, the outlay on maintenance of way per mile of line worked was only £451 last year, and per mile owned and part owned it came to but £497, which is decidedly a low average. On the other hand, the locomotive power outlay appears to be high—higher, in fact, than on any other large English company. We cannot, however, make an exact comparison, because 30 new engines were added to the stock during the past year; but taking a mean of 670 engines for the whole year, the cost of locomotive power at about £988,000 shows an average of £1,475 per engine, whereas even the Great Western with its large array of non-stop expresses only spent £985 per engine, and the North-Western and Midland respectively £933 and £942 per engine. What is the meaning of the apparently excessive outlay of the Great Eastern Company in this particular direction? We should like also to know how much it loses by its first and second class traffic, for the revenue yielded by both these segments of its business was anything but cheering, first-class giving barely £185,000 last year and the second-class less than £296,000. The passenger traffic is altogether in an unsatisfactory position, and it must surely be a question with the board whether it could not be stimulated by a revision of fares. How much, for example, of the entire earnings is drawn from special low fares, week-end return tickets at single fare, cheap race-course tickets, Continental tourist tickets, and so on, and does that cheap part of the traffic yield a profit? Would business generally be stimulated were all fares revised in a direction of greater cheapness? Every item of expenditure in the past year went up except rates and taxes, but on these at £307,406 there was a saving of £12,341 compared with 1906. The cost of earning the revenue, however, amounted to 63.48 per cent. of the gross receipts, and we fear it is not likely to be a smaller percentage in the current year, because neither wages nor prices of materials have shrunk to any appreciable extent thus far, while, as we have indicated, the earnings of the company are steadily going down.

Some items in the capital account of the company deserve emphasis. Altogether its Board of Trade returns show an expenditure of capital amounting to £57,339,000, and in the past year the outlay under this head was £252,315, reduced, however, to £180,536 by credits to steamboat insurance and depreciation amounting in all to £71,779. This is a modest sum, the fashion allowed for, yet last year £150,633 of new capital was laid out on lines open for traffic. Only £31,918, however, was spent on new rolling-stock, bringing the total capital thus consumed up to about £5,608,000. The total capital expenditure represented by steamboats and docks was on December 31 last £1,545,480, and last year £56,700 was laid out in these directions, which was, however, less than the credits to insurance and depreciation already mentioned. From first to last the company has received only £1,570,312 in the shape of premiums on its various issues of capital.

In spite of the comparative prudence displayed by the board in capital outlays, the capital overdraft on December 31 last was £1,160,473, but the company possesses trust funds of various descriptions to the amount of £1,545,000. Unlike other English railways, however, over £1,000,000 of this trust money seems to be separately invested, so that there is not much more than £500,000 of it available for the capital account overdraft unless the investments have been made in the company's own stocks. This is a most interesting point, and it is made increasingly so by an entry in the nett revenue statement, from which we gather that the interest payable to depositors in the company's saving bank, or perhaps also in other trust funds, came to £12,184 more last year than the interest received on the investments. This was an increase of £1,296 for the year, and it would therefore be valuable to have a statement of the position of these funds. What rate of interest does the company pay to its humble creditors, and how much is that charge always likely to be in excess of the interest earned on the investment moneys? Where are the moneys invested and what is the amount of the depreciation now shown upon their market price, if there be any market price? We hope the committee about to investigate the position of railway trust funds will not overlook the performance of the Great Eastern in this respect. Its management, as we judge from the meagre balance-sheet exhibit, displayed unusual foresight in setting aside the moneys received for the various superannuation and pension funds and the saving bank depositors by placing them in special investments, but what are these investments, and why does the company lose so heavily by them in the matter of interest received? Such a charge as £12,000 for excess interest payable is a serious matter in the present state of railway business, and the whole subject requires to be thoroughly examined.

But if the trust money is only in the business to the extent of £500,000 or so, how is the overdraft covered? Some of it must be in the £699,694 due by the company on "sundry outstanding accounts," and the remainder hidden away under various entries. There is £441,000, for example, credited to fire, steamboat depreciation, and other funds, and all of their money is utilised in the capital account. The accumulation of profit at the end of the half-yearly periods must also serve the same end. Thus the balance at credit of nett revenue on December 31 last was £783,856, and £386,647 was held for privileged dividend and interest payments. Against these amounts, aggregating with £4,708 of unpaid dividends and interest about £1,176,000, the cash available was only £439,332, including £200,000 deposited at interest. Inasmuch as the company on the year's trading pays interest to its bankers instead of receiving it, or beyond what it receives, we can hardly avoid the inference that part of the money distributed each half-year in dividends and interest has to be borrowed because of the overdrawn condition of the capital account.

General Mining and Finance Corporation.

As Rand finance and controlling companies go, the General Mining and Finance Corporation has a considerable reputation. Its many subsidiary interests are well and capably managed, and the financial handling of the group is in marked contrast to the methods adopted by other similar ventures whose affairs it becomes our duty to criticise at regular intervals. It is not our intention to preach a sermon, but it is doubly unfortunate that well-meant and straightforward efforts should meet with no greater reward than the many discreditable incidents that have brought Rand mining finance into such ill-repute. We are often told that all these South African nursing companies are entitled to no end of sympathy in the troubles which have recently beset them. They are under responsibilities and obligations that cannot be shirked without seriously endangering their own existence, and these responsibilities become the greater as market depression and share depreciation render them more difficult to carry out. In the light of actual events, it is very questionable whether these finance companies are not a source of weakness rather than of strength. Past improvident and imprudent finance, together with ill-luck, have put nearly all of them in a tight corner, and their diminished credit can easily become a barrier to the proper financing of properties which in themselves might prove to

be profitable dividend-earning enterprises. No doubt had everything gone the way the magnates fondly hoped, the controlling companies would have reaped a rich reward, but as things are, they must bear the brunt of all misfortune resulting from combinations of circumstances which cannot in any way be controlled. Any call for assistance on the part of the subsidiaries must meet with ready response, often with the knowledge that repayment can only be hoped for many years ahead, and should developments turn out otherwise than expected, there is the possibility that the money may be gone never to return. In addition to all this, depreciation in market value of subsidiary companies' shares must inevitably pile up stupendous losses, and the provision for these eats up capital in a fashion that is rarely appreciated. Appropriations from reserves or share premiums are plain enough, but when actual revenue from the controlled mines is swallowed up as well, the substance of the undertaking is gradually worn away, because practically every dividend paid by a mining company is a return of capital. Each year brings the lives of the mines nearer to an end, and unless shareholders receive the benefit of dividends paid, their chances of seeing a fair return on the money put into the controlling company, usually at a big premium, steadily diminishes.

In our issue of April 11 we gave a brief account of the results secured by the General Mining and Finance Corporation during 1907, and separate reference has been made to each of the mine subsidiaries, but the full report now before us contains much of general interest deserving of recognition. We learn, for example, that in the course of the last three years no less a sum than £943,808 has been written off the book value of some of the company's assets, in order to bring them into line with the quotations ruling on the Stock Exchange. Yet in that time the mining industry has made steady and substantial progress, in which the Corporation's producing mines, the Meyer and Charlton, New Goch, Roodepoort United, and Van Ryn have had a full share. Comparing the collective operations of these four companies for the past year with those for the year 1904 (from which date the depreciation in market values has been continuously intensified), there is an increase in tonnage milled of 366,963 tons, in revenue of £536,061, and in profits earned of £233,137. Now let us look at market prices, for they are an object-lesson. In 1904 Meyer and Charlton shares were never below 4½, and touched 6, whereas the present quotation is 2 11/16; New Goch had extremes of 3⅜ and 2 7/16 against the current figure of ⅝; Roodepoort United were up to 4¼ and rarely under 3, whereas the price to-day is only 1¼, while Van Ryn reached 4⅜ with a lowest of 3, and the Stock Exchange value now is 3 1/16. That is a very sad story, and inevitably something similar has to be told of the parent concern. Its shares were up to 3 15/16 in 1904, while the worst quotation was 2⅝, but the latest price is scarcely better than 15s.

All this carries its own moral, and makes curious reading beside the mass of statistics showing the real progress made by the Rand mining industry during 1907, concurrent with the repatriation of 50 per cent. of the Chinese labourers, as we know. A few of the figures may be given. They are fascinating and valuable for reference. In the twelve months just over 16 million tons of ore were treated, the product from which was almost 27½ millions sterling, and the dividends paid by gold mining companies alone, that is excluding the duplicated payments of the controlling groups, amounted to £7,131,612. At the end of December, 1907, there were 77 companies milling, operating with 8,741 stamps, and the gold yield for the last month was £2,478,659, or at the rate of £29,743,908 per annum. At the end of 1906 there were 76 companies crushing with 8,410 stamps, and the gold output for the year was £24,579,987, the dividends paid being £5,735,161. Carrying the story further, we find that in the 23 years to the end of 1907 the total gold production from the Transvaal was £197,029,455, and in 20 years to the end of last year the mines of the Witwatersrand crushed 92,075,205 tons, from the proceeds of which dividends were distributed to the shareholders amounting to £45,614,643, or just about 10s. per ton of ore treated. Working costs in 1907 were 20s. 10d. as compared with 22s. 2d. in 1906, and if we take stock of the four producing mines already mentioned, it can be seen that a steady reduction has taken place in the expenditure per ton from £1 5s. 3d. in 1904 to £1 1s. 5d. in 1907, a decline of 3s. 10d. The total ore crushed by them in the twelve months was 839,107 tons, yielding gold and other revenue to the amount of £1,427,559 and a gross profit of £528,744. These figures show a notable advance over the previous year, and the quantity of payable ore developed and in reserve is over two million tons of an average assay value of 8.3 dwts. over stoping width.

All this would be exceedingly satisfactory if it coincided with a genuine improvement instead of retrogression in the position of the undertaking which ought to benefit therefrom. The total dividends paid by three of the mines, the Meyer and Charlton, the Van Ryn and the Roodepoort United since their inception amount to £1,599,558, and one feels bound to ask how much of this money has found its way into the pockets of General Mining and Finance shareholders. For 1907 the revenue in respect of dividends, interest, transfer fees and other items came to £57,643, and £14,816 was realised as profits on stocks and shares, making a total of £72,459. But the administration expenses, after crediting amounts received from other companies, came to £40,092, none the less, an enormous sum even though it includes managing directors' fees and the salaries in the engineering department. Another £2,000 is required for directors' fees and £2,580 is allowed for depreciation of office furniture and bad debts, leaving the trifling sum of £27,786 to help provide the year's depreciation. The total amount written off stocks and shares is £195,170, and an additional sum of £10,000 is reserved against possible loss in respect of advances against security and sundry debtors. Loss on ventures is £3,670, so that the year's wastage provision is £208,840. It is met by transferring the whole of the special reserve amounting to £189,118, this with the profits of the year leaving the small balance of £8,064 to be carried forward. But even when all this is done there remain two stocks, showing a loss of £83,469, on which the depreciation has not been provided for. Fortunately this is more than counterbalanced by the considerable surplus shown on certain other investments, the book cost of which is less than the market prices at the date of the accounts. Of this unrealised profit no account has been taken and in no case has an asset been written up in value. This is satisfactory, and in the circumstances it would be useful to know the exact market value of the stocks and shares standing in the balance-sheet at £1,199,372.

Advances against securities, including stocks and shares taken in, amount to £230,686, and sundry debtors and advances to mining companies amount to £730,125, together £960,811. At the end of 1906 the reserve against this huge sum was £140,000, and it was increased by the £10,000 already referred to and £33,774 provision in respect of interest accrued but not paid, making it £183,774. But the directors saw fit to provide for losses to the amount of £62,934, leaving the reserve at £120,840 and the balance-sheet value of the items at £845,971. The company has money deposited with it, by subsidiaries no doubt, to the amount of £472,252 and owes £228,355 to sundry creditors, while the cash balances amount to £168,667. In guarded and careful language the directors seek to put forward the view that the undoubted progress made by the industry must in time again turn public opinion in favour of South African mining shares, but we fear the evidence still points strongly the other way, and are face to face with the fact that the lives of many outcrop mines are getting desperately short.

Economic and Financial Notes.

Old-Age Pensions.

Many things are happening calculated to excite amusement in the minds of observers, only the principles underlying this new departure and the risks involved are too grave for laughter. At the annual dinner of the Association of County Bankers held on Wednesday evening, Mr. Haldane is said to have spoken in defence of a non-contributory scheme of old-age pensions, and he went on to observe that the £18,000,000 spent annually on poor relief, with probably £4,000,000 more on what might be called public health work, made the pension fund which had just begun look less alarming than it might appear to be to some people. Perhaps this is true from the Ministry's point of view, but it is most misleading. A better way to look at the proposal is found by adding the £6,000,000 now to be granted out of the Imperial Treasury for a beginning of old-age pensions to the £11,250,000 already withdrawn therefrom in doles to local authorities. We have always been against this practice of feeding local extravagance out of the national purse, and an addition of £6,000,000 to the sum already thus paid out is a most serious matter, especially as no attempt whatever has been made to relieve the ratepayer of the monstrous burdens imposed by the existing poor law. A commission is engaged in investigating the workings of this law, and will doubtless presently issue a report containing the usual supply of remedial suggestions. It is, however, a long way usually from the publication of a document of that kind to remedial legislation. Meantime the country is to be saddled with this £6,000,000, and only as a beginning. Already political factions are getting ready to outbid each other for the workman's vote, to bribe him by promises of further extensions in the same direction, and we were amused to see one of the leaders of the Labour party, Mr. Hudson if we recollect aright, eagerly deprecating any scheme which would involve contributions from the workmen themselves towards the relief of their old age. These schemes, he said, never worked when established by the men themselves, and that is perhaps true, though not all the truth, for the habit of all Englishmen, rich and poor, is to use up capital as revenue and give no heed to the future. The workman who exhausts his physical strength or uses up his sight and his mechanical skill, while able to work, too often spends all he gets and takes no thought of the future, just as the company shareholder contentedly spends his own capital under the name of dividends and thinks himself rich.

But what is to be the end of this system of bribery out of the national purse? Where is it going to lead us? We may be quite certain that the working classes will not be satisfied with an age limit of 70. They are already clamouring for one of 65, and some have begun to hint at 60. The Government, therefore, cannot stop, and its members, indeed, candidly admit that the £6,000,000 or thereby now arranged for is only a beginning. In a few years time, therefore, especially as the day of the General Election draws near, we are certain to witness an extension of this method of securing votes, and in a very short time instead of £17,250,000 going out of the Treasury in relief of local charges £27,000,000 or £37,000,000 may become the figure, and all the while the only relief the ratepayer can hope to get is some diminution in the doles granted out of the poor law rates to outdoor paupers. This whole system of charging the Exchequer with what should be the obligation of local authorities is bad. We have always opposed the grants in aid originally established in their extended form by Mr. Goschen, and regard this old-age pension scheme as at best merely an extension of the same pernicious usage. The poor ought to be taken charge of by the authorities in the districts where they reside, and the means for their relief ought to be furnished out of local resources. Give us a reform of the poor law, a reconstitution of the governing bodies in control of poor law relief, and throw the whole charge of pensions and other kinds of assistance upon the populations in each district. This would not prevent old-age pensions from coming into existence, but the money for them would not be paid out by the Imperial Treasury, and their recipients would not so readily regard themselves as paid adherents of any political party. No doubt it will be said that the present poor law system has broken down utterly because the local bodies appointed to supervise it have not done their duty, but the answer to this is—reform these bodies, elevate them, make them portions of the responsible local authorities, county councils, borough councils, municipal bodies or other, and take effective measures to make them give an account of their administration. Take the metropolis as an example. Why should not the numbers of the County Council be enlarged so that it might be able to establish a poor law committee accountable to it for all money received and spent in relief of the indigent, maintenance of hospitals, and so on? Sweep away the workhouse system furthermore, except perhaps for the helpless and altogether friendless, and we should judge that at least half the money now spent on poor law relief would be saved. We think also that the German system of workmen's contributions ought to be introduced in this country. There is no reason whatever against it, and if the workmen do not like it, then they must go without pensions of any kind. But we are not at all sure that the workmen would dissent, for look how many millions of money they provide every year for mere burial insurance. It should be easy to divert much of this money into a pension fund managed by local authorities over whom the Local Government Board would only exercise a supervising or auditing control, and in this way also the burden of poor relief might be materially lessened. As matters stand, however, we are left with the poor law untouched, only being subject to inquiry and report, and a new burden is laid upon the already overloaded taxpayer, for we are over-taxed notwithstanding the prosperity budgets which Chancellors of the Exchequer year after year take pride in laying before the nation, as if the glory of good government lay in much spending.

Insurance Statistics.

Now that Mr. Winston Churchill has proved himself to be, in the language of his once favourite poet, "a first-class fighting man," we look to him to give proof also of his ability as an administrator and lawmaker. He will doubtless have many opportunities in which to display his constructive and executive capacities, and there is one small reform which we hope he may be induced to carry through at once. It relates to the summary of accounts of our life insurance companies issued every year by the Board of Trade. Under the law regulating life insurance business, all our home offices are obliged to send in returns every year relating to their business done, together with their balance-sheets and other illustrative papers, and these are gathered into a volume at the end of which the figures are all summarised. But there is one gap in this return, in that fourteen companies doing business in this country are left out of the summary. None of their figures are given there, and the excuse for the omission is that they are colonial and foreign companies the extent of whose business in the United Kingdom is not officially made known. Just so, but it ought to be officially made known. Why should foreign and colonial companies be permitted to compete for life insurance business in this country without being placed upon the same footing as domestic companies in the matter of returns relating to their British business. There have been not a few disgusting scandals in connection with some of these alien companies, and now and then grievous losses have been inflicted by them upon the too trustful British public. Quite recently two of the New York officials of that "Mutual Reserve" imposture which at one time did a large, dishonest business in this kingdom were sent to gaol for fraud, and there must be many hundreds

of victims of that American "gold brick" sort of enterprise now living in this country. The other year, too, we had to occupy much space in describing the scandals and robberies surrounding the management of the three large American companies still doing business in the United Kingdom, and in spite of their great display of reforms and retrenchments, we continue distrustful of these and other alien concerns. With scarcely an exception they all spend a much larger proportion of their premium incomes in current expenses and commissions than any first-class home office does, and there is no check whatever upon their operations. This ought not to be, and we therefore look to the new President of the Board of Trade to introduce and carry a short enactment providing that the business done by these alien corporations in the United Kingdom must be set forth by itself every year on the same lines as the business done by home offices. We want to know what amount of money they collect in premiums, what their British business costs to conduct, the proportion their claims paid bear to their gross income, and the directions in which the money gathered together is invested. Will Mr. Churchill kindly make note of this request and set about remedying the defect forthwith?

Altogether the annual return of the Board of Trade relating to life companies embraces 91 different undertakings, of which 74 are classed as ordinary, eight as industrial and nine as doing both ordinary and industrial business. During the past year four names have been added to the official list of companies—viz., the British Union and National, the Central, the Liverpool Victorian, and the Phœnix. For the first time also the figures of the Confederation Life Association of Toronto are included in the return. Indeed, the figures of all, or nearly all, the alien concerns are printed as a matter of course, but these contain their entire exhibit, and the business done in the United Kingdom is buried in the aggregates displayed. We repeat, the British business should be stated separately, and until it is such figures as the summary contains are misleading. The figures are as a rule of no later date than December 31, 1906, or the earlier half of 1907, but that, we suppose, cannot be avoided, and some of the totals are, any way, worth setting forth. In the period covered, for example, the total premium income of the institutions doing ordinary life business was £26,014,232. They also received £11,349,052 as interest on their investments, and £2,059,584 of capital was handed over to them in payment for annuities. Altogether the income, excluding this annuity capital, amounted to £37,363,284. Out of this £18,437,550 was paid away in claims and £2,250,335 was absorbed in expenses, while interest and dividends to shareholders took £353,646, a very small toll upon the great revenues shown. There was also a decrease of £274,155 in the value of the investments held, and miscellaneous outgoings took away £436,655, while commissions paid absorbed £1,382,766, expenses and commissions together having run away with £3,633,101 or nearly 14 per cent. of the premium income. The offices doing industrial business numbered 16 altogether, including those who have also an ordinary branch, and their premium income, all presumably drawn from the working classes, aggregated £12,440,868 in 1906, while the income from interest was only £1,126,549, of which £873,432 was ascribable to the industrial branch of the Prudential Company alone, investments being rather a neglected item in the accounts of the industrial or burial branch of life insurance. This may be partly explained by the fact that the commissions paid to get in the premium income ran away with £3,183,540 and the expenses of management with £2,217,748, the two together amounting to £5,401,288 or 43.41 per cent. of the premium income. Some day perhaps a way of doing this business in a less expensive fashion will be found, but in the meantime the magnitude of the overturn appears to indicate that the instincts of thrift are much stronger amongst the working classes than some of their leaders seem willing to admit, and that fact might be taken into consideration when the further discussion of the "humane" old-age pension scheme comes up.

Some Points in United States Finance.

When Mr. Esme Howard, Councillor of his Majesty's Embassy at Washington, has a little leisure we wish he would undertake the compilation of a few statistics relating to the total expenditure of the North American Republic. It must be tremendous if we could only get handily at the figures which are doubtless published by the various States composing the federation and by the municipalities, great and small, with which the country is dotted. As it is, Mr. Howard presents in a report recently published by our Foreign Office an interesting summary of federal finance, and the gross figures he sets forth are calculated to make spendthrift Governments elsewhere green with envy. In the year ended June 30, 1907, the total federal revenue was £174,582,444, and in spite of the great spendings of Mr. Roosevelt's Cabinet, the year closed with a surplus of £17,368,370, the total outlay having been only £157,214,174. This is in spite of the charge of nearly £30,000,000 for pensions alone. In the current year to close at June 30 next the estimated charge for pensions is put at £30,721,649, and there seems to be no limit whatever to this enormous insurance premium for permanency in the Republican party's tenure of power or against internal revolution. No other single branch of the outlay, except the postal service, which is estimated to take £41,448,554 in the current year, is so heavy as this pension charge. The Civil Government of the Republic is put down to cost no more than £27,216,494—quite a round sum in its way when added to State outlays—and the army is put at only £20,000,000, while Mr. Roosevelt's naval fervour has been unable to get the outlay for the navy in the fiscal year now drawing to a close up to a higher figure than £19,794,000. But the good man did his best to hoist it well for next year. Most of the revenue comes from indirect taxation, and Customs alone are expected to provide £64,330,000 in the current year, an expectation which the crisis of October last will unquestionably disappoint. Yet in the past fiscal year the Customs income was £68,501,724, or £6,594,121 higher than that of the preceding year, while the internal revenue went up by £4,230,218 to £55,601,396.

There is one interesting point about these revenue figures to which we should like to direct the attention of our temperance reformers. In a very interesting and well-written little book recently put out by Mr. Charles Roberts, M.P., entitled, "Time Limit and Local Option," much play is made with the action of the United States and some of our colonies in the matter of restrictions upon the consumption of alcoholic liquor, and the information relating to what has been done in the United States is particularly striking. Apart from six States within the Union which have now a State law of prohibition, there are about 30 States which allow individual localities the option of complete suppression by direct popular vote, and in all cases without exception by the vote of the majority. Success is claimed for this method of restricting the consumption of strong drinks, and in an appendix we have a most vivid account of the way Cambridge, Massachusetts, a city of 100,000 inhabitants, cleared out the liquor sellers from the place altogether with incalculable benefit to its inhabitants. Instead of spending their money in the drink saloon, the working classes used it to acquire land and build houses. Well, this is all most interesting, although we are to build houses on borrowed money for our working men; but how is it that in spite of this widespread system of restriction or absolute removal of all open means of getting strong drink there should have been distilled within the last fiscal year of the United States 168,573,913 taxable gallons of spirits? That was an enormous reservoir of the poison; an increase, moreover, of nearly 23,000,000 gallons upon the production

of the preceding year. It is true that the distilleries fell off in number by 298, but there were still 1,587 of them at work during the year, and the breweries were also busy, for they produced 58,622,000 barrels of beer, or 3,897,449 barrels more than in the fiscal year ended June 30, 1906. Now we should really like to know how this comes about in defiance of prohibition, local option and every other expedient of the reformer. All this drink would not be produced merely to furnish revenue to the Treasury, there must be a demand for it. Who consumes it; how much of it goes into the territories where its consumption is prohibited; what means have the American people to get at this drink in spite of the law? This is the only point in the interesting memorandum furnished by Mr. Howard that we can deal with just now, but we shall return to others later.

American Business Notes.

Increasing signs of renewed inflation are week to week visible now in the returns of the New York banks, whether associated or dissociated. Last week, for example, the loans and advances of the Associated Banks show an increased average of £1,178,000, and the deposits rose by over £2,513,000 because of the further increase of £1,052,000 in the specie averages. This was reduced to about £934,000 nett owing to the small decrease of about £118,000 in the average stock of greenbacks, but it none the less helped together with the increase in the loans to augment the deposit liabilities by £2,512,000. The surplus reserve was also up £306,200 to £12,777,000, against little more than £1,697,000 a year ago.

Again, however, the banks and trusts outside the Clearing House appear to have borne the brunt of the market inflation, for their loans and investments at £170,550,000 show an increase of £4,724,600. Against this there is an increase of only £183,000 in the specie average of £9,602,000, and of £77,400 in the greenbacks, whose total average was £2,415,400. Thanks, however, to these small aids, the deposit averages show an increase of £5,665,400 at a total of £139,703,200, and the official percentage of reserve to deposits is given at 32·5 per cent. against 31·6 per cent. the previous week. We make it a little more than 8½ per cent., but perhaps the new laws regulating banking reserves and other credit affairs just sanctioned by the Governor of the State of New York will give us clearer accounts in the near future upon points like this.

Meanwhile, the New York market has been rushing ahead as if prosperity had already returned to the whole of the Union. Operators for the rise have not only disregarded the decline in trade throughout the country, a decline illustrated not only by shrinking railway traffic receipts and bank clearings, but by the resumption of gold shipments to Europe. These gold shipments are borne with the greatest equanimity because the internal trade of the country gives no scope for issuing the money at home. Money accumulates indeed in New York, and probably in other centres of credit, to an extent which makes the outflow of gold inevitable, and the poor condition of trade is indicated by the fact that the number of railroad cars idle at the beginning of this month was 413,000. This compares with 375,000 a fortnight earlier and 296,000 at March 18th. Crop reports, however, are favourable, and have already been utilised to stimulate speculative buying, not only in the United States but in Canada. Everywhere a bumper harvest is confidently predicted, as if there were no intervening months between now and then. The Canadian optimists indeed surpass themselves in their prophecies of a record season, for at the date of the telegram sent last week to Lord Strathcona from the Minister of the Interior at Ottawa, 20 per cent. of the crop was still to sow. "80 per cent. of the entire wheat crop is now sown," said the Minister, "and there is every indication of a record season." That, surely, was hopefulness of very highest order, and we begin to wonder what happen if there is a fine crop of wheat all over the world. Things are shaping rather towards that condition in Europe, and if we have simultaneously fine harvests here, in the United States, Canada, Australia, and the Argentine Republic, there may be no market at all for these record harvests, or the price may be such as will make it impossible for the railways to earn any dividend in carrying the grain to the sea ports. Your speculator never thinks of anything of that kind.

An interesting letter has been published by the *Times* from its New York correspondent dealing with the waste of United States resources. The forests of the republic in particular have been destroyed with a recklessness that is perfectly ghastly to think of, and we find our consolation in Baltimore, Mr. Fraser declaring that in the State of Maryland there is only one county left where large tracts of original forests are still uncut. Thousands of acres even there have been sacrificed to wasteful lumbering, followed by fires, that have completely killed the trees left, so that probably in five years' time nearly all that timber will have disappeared. There is still plenty of timber in the Appalachian mountains, but it appears to be difficult of access, and although heavy cutting has been going on there for the last hundred years, the district still possesses fully one half of the present supply of hard wood, but all over the Union the destruction of forests has been proceeding at an appalling speed, with the result that the soil is washed away, that moisture is not retained, but rushes down into the water courses and rivers, causing floods and mischief of all descriptions. Mr. Roosevelt has been actively interesting himself to find remedies for this waste, or to put checks upon them, and Mr. Gilbert Pinchot, chief of the Forestry Service, has been for some time, the *Times* correspondent says, conducting a vigorous campaign against the further monopoly of public lands, in the course of which considerable forest reserves have been established in the west, and portions of the coal supplies and mineral fields conserved, presumably for the State. How serious the matter is in other directions than the destruction of the timber may be judged from Mr. Pinchot's estimate that at the present rate of consumption the country's anthracite coal will not last more than fifty years and bituminous coal not more than a hundred years. Not a few coalfields in Ohio and Missouri are already exhausted, and the prodigality thus shown is due to lack of restriction, and to the unscrupulous methods by which many coalfields have been acquired. Mr. Garfield, Secretary of the Interior, declares that serious frauds have been perpetrated in this direction, but the Statute of Limitations bars recovery. Facts of this kind suggest many thoughts, tending to dissipate the glamour with which people's minds everywhere have become possessed regarding the boundless and enduring prosperity of the United States. The actual state of affairs is impressively summarised in the concluding sentences of President Roosevelt's address to the Governors of States gathered at Washington. To us the point of immediate interest is to know how far these wasted resources are represented by mortgages expressing over valuation:—

> They had assembled to consider a vital question, the weightiest problem now before the nation, because the natural resources of the country, the final basis of national power and perpetuity, were in course of rapid exhaustion. Already the limit of unsettled land was in sight. They had begun with an unapproached heritage of forests. More than half of the timber was gone. They had begun with coalfields more extensive than those of any other nation, and with iron ores regarded as inexhaustible, and many experts now declared that the end of both iron and coal was in sight. The mere increase in their consumption of coal during 1907 over 1906 exceeded the total consumption in 1876. The enormous stores of mineral oil and gas were largely gone. Their natural waterways were not gone, but they had been so injured by neglect and other causes that there was less navigation on them now than there had been 50 years ago. Finally, they had begun with soils of unexampled fertility, and they had so impoverished them by injudicious use and by failure to check the erosion, that their crop-producing powers were diminishing instead of increasing. It was unpardonable for the nation or the states to permit any further cutting of timber save on a system which would provide that the next generation should see the timber increased rather than diminished. Irrigation and drainage would add enormously to the extent and value of agricultural land, and transportation facilities could be enormously increased by the canalisation of the

rivers so as to complete a great system of waterways. But all these various uses of natural resources were so closely connected that they should be co-ordinated and should be treated as part of one coherent plan and not in haphazard and piecemeal fashion.

"Finally, let us remember that the conservation of our natural resources, though the gravest problem of to-day, is yet but part of another and greater problem to which this nation is not yet awake, but to which it will awake in time, and with which it must hereafter grapple if it is to live—the problem of national efficiency, the patriotic duty of ensuring the safety and continuance of the nation. When the people of the United States conciously undertake to raise themselves as citizens, and the nation and the states in their several spheres, to the highest pitch of excellence in private, state, and national life, and to do this because it is the first of all the duties of true patriotism, then, and not till then, the future of this nation, in quality and in time, will be assured."

Mortgage business all the same goes on merrily, and within the week various new emissions of capital have either been made or contracted for. There appears, however, to be a hitch in the negotiations for putting out that £10,000,000 of Union Pacific paper, and it is roundly denied from the Continent that the Rothschilds are having anything to do with it. Assuredly the loan ought not to be welcomed here, for even if the security should appear to be sufficient the unscrupulous character of the Harriman or Standard Oil management makes the financial position of the Union Pacific agglomeration always a matter of doubt. The delay in the issue of this loan, however, may have spurred on other borrowers to hasten forward their attempts to get money, and the stockholders of the Delaware and Hudson Company have authorised an issue of £10,000,000 in thirty-five year 4 per cent. bonds. Only half this amount, however, is to be placed immediately. Also the Denver and Rio Grande Railroad Company has sold £3,000,000 of two year 6 per cent notes with the privilege of extending them for another three years, this issue being made on behalf of the Western Pacific Railroad, and the Southern Railway Company, which is really in a dilipidated condition, is said to contemplate the issue of £3,000,000, also in short notes, while the New York Central and the Illinois Central will both be borrowers at no distant day. The Denver and Rio Grande Company's board also comes forward with a proposal to create a mortgage of £30,000,000, but £18,000,000 of this sum would be reserved for refunding purposes, and only £12,000,000 used as the medium for raising new money. Altogether, during the month of April, the new securities created or put upon the market by American railways and industrial undertakings amounted to almost £48,000,000, which was £6,456,000 more than the emissions for April, 1907.

An Italian banker in New York declares that within the last twelve months the Italians who left the United States took away nearly £83,000,000 in money, and adds that this sum represents more than the States have received for the cotton exported so far this year. It is six times the total value of the petroleum exported since the end of June, 1906, more than double the value of cereals sent abroad within the last nine months, and four times more than the total amount of gold imported from Europe during the crisis. If this statement is anything like near the truth, it would help to account for the persistently adverse position of the New York exchange and the renewal of exports of gold. Altogether it is estimated that £1,600,000 in gold will leave the country for Europe this week and as Germany is clamouring for the metal, it is only too probable that in present circumstances the outflow will continue until New York bankers wake up once more to discover that the paradise in which they try to live and ruffle it is really after all a paradise of fools.

Here are some items of information received from a friend in New York. Happily we have no knowledge of the great Mr. Schwab here, not as yet at least, and after all he seems but a clumsy sort of fellow beside some of our South African mine bosses. But he will not place any of his wares on our market if we can prevent it :—

"We have at present a Harriman-Standard Oil manipulated market to finance U. Pacific. Business is very dead. One or two of our brokers have been caught on the rise—borrowing stocks in the loan crowd to keep them afloat. Usual result is bankruptcy, suicide, &c. Weather has been good and crop prospects are very fine so far. We are a month ahead of last year. Please turn the full measure of your wrath on this man C. M. Schwab :—Montgomery Shoshone : Came out at $10 per share. All his friends and many of his employees were allotted stock at this figure in a pool. Price was washed up to $21. Schwab and his secretary Wrenn sold theirs. Pool holders had their stock given to them when market was at $7. Yesterday stock sold at 50 cents. per share. I saw on the books of the brokers the sale of Schwab and Wrenn holdings at the high prices. The mine is practically worthless. Tonopah Extension : Another Schwab property. Sold up to $18—same game now selling on our Broad Street curb at $1¼ per share. San Toy : brought out at $1, now 25 cents. Big lawsuit going on in regard to title. Schwab gave out, personally, tips to brokers' office boys at the Waldorf when stock came out at $1, to buy it. U. S. Shipbuilding Co. : Dubbed in the courts here as an artistic swindle.

"Our papers are full of some big, new mining deals in Mexico, financed by London money, in connection with Schwab. Pittsburgh is wearing crape for the Schwab mining deals. Last time he entered the Duquesne Club, members got up and turned their backs to him."

Passing Events.

Why the Socialists should now hate Mr. John Burns with a bitter hatred is more than we can quite understand, but they do. Yet he is in some respects a Socialist of the most ardent and, one might say, revolutionary type, if we may judge from his Housing Bill read for the second time in the Commons on Tuesday without a division. The Bill is full of faults ; even its friends say crude, voluminous, overloaded with clauses and provisions, but it was read a second time, and it may pass in some shape. Why it should have been brought in before the promised Property Valuation Bill we are not tacticians enough to be able to guess, but our view remains constant that it would have been more statesmanlike and more in furtherance of real, lasting reform if a comprehensive measure dealing with the valuation and assessment of real property the country over had been introduced and passed before thinking of an ill-knit measure of this description, with its 61 clauses, its new powers and additional troops of permanent officials, its attempt to strengthen the forces of centralisation, and its disregard of how the wherewithal is to be found. Mr. Burns, however, like too many of his colleagues, seems to think that money is to be obtained for the asking, and pays no regard at all to what the obtaining of it may mean to his fellow citizens.

Now that the budget is over and done with we shall once more get a weekly revenue and expenditure show. The Treasury account published this week covers the period from April 1 to May 9, and shows a decrease of £2,256,000 in the receipts compared with the corresponding period of last year. We are not going to infer anything of a sinister description from this fact, or from the further fact that the outgoings were reduced by little more than £500,000, at the same time the reduction in the receipts from the death duties were £717,000, and every other branch of revenue gave something less than a year ago. Presumably Mr. Asquith had the figures up to date before him when he brought out his estimates last week, and therefore it is altogether too early to begin to talk of over-sanguineness or anything of that kind. Still, the fact did seem to be rather too much overlooked by the Prime Minister that trade is shrinking and likely to go worse, that profits are therefore being reduced in all directions, and it is but too probable that the revenue will to an increasing extent show the consequences of business reaction as the weeks pass. In other words, the figures now made public should warn observers to keep a close eye upon the Treasury accounts. One good thing we have to note—there were only £12,000,000 of Treasury bills outstanding on Saturday last. We should be glad to see the whole lot paid off.

An interesting and not too sanguine speech was that delivered by Sir Edgar Speyer at the meeting of those

concerned in the Underground Electric Railways Company last Monday. He made a mistake, we think, in talking of the competition of the County Council Electric Tramways system as "rate supported," for even the reactionaries now in power have had to admit that the tramways more than meet all revenue and capital charges. It was quite natural, however, in the circumstances, for a man in Sir Edgar's position to take this view, especially when the over-rating of the tube lines is considered, and because among the various influences carefully summarised in his speech that have adversely influenced the progress of the tube lines, the cheap tramway service of the County Council has unquestionably been one of the most powerful. However, we have little doubt that these tubes will in time surmount all the difficulties that beset them, and undoubtedly they are bound to be victorious over the motor bus service as now constituted and conducted. But why ask for a traffic commission for the metropolis to co-ordinate the various services and regulate fares? Would it not be possible for the various parties interested to do this for themselves? Why always fly to the Government to ask it to do this and that? Presently all the owners of surface modes of locomotion will probably be in a mood to submit to a good deal of friendly coercion. If not they will have to give up the fight. In the meantime, the scheme recently formulated was accepted unanimously by those present at the meeting, and the money asked for will now be raised to enable the company to meet its bond interest for the three or four years that may yet elapse before the nett revenues of the various tubes make the company in this respect self-supporting. Their traffic receipts are steadily expanding, and they are honest enterprises well executed. But what a mess they would have been in financially if Messrs. Speyer had not come to the rescue!

Telegraphing on the 11th inst., the Governor-General of India stated that 1,418,000 persons were then in receipt of relief. Of this number, 1,200,000 are in the United Provinces and 138,000 in Central India. More lamentable even than the magnitude of the number driven to seek State assistance, a number which increased by 22,000 on the week, is the announcement that very little rain fell during the week except in Madras, Eastern Bengal, and Assam. Unless rain falls soon all over India the famine is likely to become aggravated in intensity to an extent greater even than in 1900. What wonder, then, that revolts and schemes of vengeful destruction should be nurtured in the Oriental mind?

President Alcorta gave some interesting facts about Argentine finance in his message to Congress, which opened its ordinary session on Monday last. Altogether the debt of the Republic seems now to amount to fully £75,000,000, and of this almost £64,000,000 represents foreign debt, although that portion of the debt was reduced by £964,000 during the past year. The internal debt is partly in gold and partly in paper, and it rose by £7,000,000 in the course of the year to a total of £11,101,140. Part of the new money, however, was required for the purpose of definitely redeeming the loans made to close the Morgan loan, and the rest of it, or £3,375,000, was utilised as increase in the capital of the National Bank. This, however, is not all the story, for paper money in circulation amounted to £46,564,299 against a gold circulation of £24,975,255. Whether this gold total includes the amount held by the Conversion Office, which was £25,900,000, the telegraphic summary does not enable us to determine, but there is a gold conversion fund of £4,400,000, taking the peso roughly at $5 to the £. Passing on from finance, the President vigorously denounced the revolutionary movements in sundry up-country provinces, and intimated that more money would have to be spent upon armaments, notwithstanding the fact that the relations of the Republic were excellent with all countries.

Messrs. J. Henry Schröder & Co. have received a cable from their Santos agents advising them that they have further encashed £13,600 in respect of the Surtax collected weekly for the service of the State of San Paulo 5% Exchequer Bonds, making a total of £768,650 encashed since the 1st August.

Continental Memoranda.

Some interesting statements have been made by M. Cruppi, the French Minister of Commerce, with regard to the extent of the Republic's business with the United Kingdom. He repeats the statement that England is the best customer France has, more than a quarter of the total exports of the Republic coming to this country. In the past three years the increase has been £20,000,000. No doubt part of the goods sent to England are re-exported, but that allowed for, he estimates that the people in this country consume annually more than one-fifth of the total exports of France, which exports, according to the latest statistics, amount to more than £200,000,000, but he proceeds to say that satisfactory as this exhibit is, his countrymen must not flatter themselves that the excellent display is the result of their own energy, it is much more due to the dissimilarity between the two climates, and "our trade with England is not so prosperous as it ought to be," as is shown by the per head proportion of our purchases. "Belgium," he says, "consumes 108 frs. per head of French produce, Switzerland 84 frs. and England only 30 frs." and the French are allowing the Germans in some measure to oust them.

It is reported in Paris that the Portuguese Finance Minister is endeavouring to arrange for the issue of a loan amounting to £15,000,000 in England. He will have very considerable difficulties in so doing.

It is said that the situation in Barcelona is improving considerably owing to the measure taken by the Bank of Spain in accepting the stocks of the Nord and Alicante Railway Companies at 60 per cent. of their par value as security for a forty-five day loan.

Owing to the bad condition of the European markets, which made the placing of securities there very difficult, the business of the Agricultural Bank of Egypt was considerably reduced last year. Only £E1,000,000 out of the £E2,500,000 of debentures remaining to be issued at the end of 1906 were placed during 1907, and the loans granted by the bank amounted to only £E1,526,000 as against £E3,466,000 in 1906.

Business on the Paris Bourse has not been very satisfactory in spite of the stimulus applied from New York, and the speculative public continue to suffer most cruelly through the collapse in diamond and copper s curities, a collapse, we fear, not yet at an end in spite of the partial resumption of work by the Dutch diamond cutters, and occasional spurts in copper worked by the Rockefeller gang.

German foreign commerce is beginning to show signs of the reaction and the figures for April exhibit reductions all down the list of leading securities; in fact, coal remains the only great item the import of which was larger last month than in April, 1907, although slightly more refined petroleum and Chilian saltpetre were also imported. The decline in pig iron has been severe, and still more so was the falling off in cotton and jute manufactures imported. Iron ore, too, has declined, but fears are expressed that American producers may begin to throw their surplus products in iron and steel upon European markets. There is little ground for these fears, because any attempt to do so would drive prices down so far as to pretty well ruin the Yankee monopolists. We wish they would try it on.

The sugar industry of Russia seems to be in a thoroughly bad condition and last year's fine beet harvest has been the immediate cause of the disastrous failures among sugar manufacturers there. Owing to the heavy crop reaped last year the stocks in Russia have more than doubled and a gigantic supply is weighing down the home markets. The consumption per head in Russia is only about 12lbs. as against nearly 37½ in Germany and 88 in England. Taxation is said to be at the bottom of this minute home demand, and no doubt that is the case, for the sur-tax levied on refined sugar in Russia is about £2 16s. per ton, whereas in the states belonging to the Sugar Convention it is less than 5s. But a tax of this kind can only prevent imports into Russia, although no doubt that also checks exports by keeping the home price at a monstrous figure.

The Bank Commission in Germany is exercising its ingenuity to discover some means of increasing the stock of gold held by the Reichsbank, and the solution will be a difficult one in present circumstances unless Germany can place loans of all kinds on foreign markets, and so create a temporary fictitious credit. Many states and corporations in the empire are much in need of money, and in the first four months of this year the total issue of negotiable stocks in Germany has amounted to £125,000,000. The amount of municipal loans already put upon the market is £73,000,000 of which £19,000,000 have been launched on the Berlin Bourse alone, while £3,000,000 are still retained by the issuing syndicates. The town of Berlin itself wants £2,500,000, and the suburb of Charlottenburg £2,000,000, while Cologne is coming for over £1,800,000, Elberfeld for £1,250,000 and Munich for over £1,000,000.

Failures continue to occur in the jewellery trade and three Berlin firms stopped last week, a consequence apparently of stoppages in Paris and New York. Stoppages in other trades and industries also continue much too frequent in Germany.

Emigration from Germany has fallen off to a remarkable extent during the first four months of this year, according to statistics furnished from Bremen. In the first four months of 1907 the number of people who left the country by that port was 86,700 and in the first four months of the current year only 14,500 have gone away.

It is said that the Austrian Finance Minister has come to an agreement with the Austrian Savings Bank, the most powerful institution of the kind in the country, and the house of Rothschild for a loan of about £7,625,000 in 4 per cent. rente to be offered at 96.25. The Hungarian Government will also issue a loan of £2,500,000 a little later for the purpose of carrying out the public improvements voted by Parliament. That Government, indeed, has been empowered to issue a loan of nearly £21,500,000, of which upwards of £6,000,000 will be required for military purposes, and the proposed issue is merely a slice of this larger loan.

In his statement to the Brazilian Congress, the President gave the value of the external debt of that federal republic at £72,133,000, and put the value of the guarantee funds in paper money at £5,939,000. The budget for the current year has been framed so as to just about balance. We hope it may, but have doubts.

Last week we mentioned that the Italian bourses were buoyant while those of all the rest of Europe were more or less in the dumps, but the elasticity has not lasted very long and the advance in prices brought about realisations which have kept the various markets of the Peninsula in a depressed condition ever since.

The Week in Mines.

The Carry-Over.

Monday was carry-over day in the mining sections, and on the whole the market had a fairly comfortable making-up list to contemplate. The diamond group had of course fallen heavily, De Beers deferred and preferred being 1 3/16 and 1 1/16 lower respectively. Other prominent declines were falls of 5/16 in Eldorados and 1/4 in Roodepoort United, but the great majority of movements were the right way. Crown Deep rose 1/8, Jubilee 5/16, Modders 3/8, and Central Minings, Robinsons, and South African Options and South Rands each 1/4. Other improvements ranged from 3/16 downwards, and among West Australians Kalgurlis showed a rise of 5/16 and Horse Shoes of 1/4. Broken Hill Proprietary shares were 5/16 lower, and in the Copper list the chief movement was the sharp drop of 3 3/4 in Rio Tintos. Namaquas fell 1/8, Capes 1/2, Mount Elliotts 1/4, and Great Cobars and Famatinas each 3/16. Anacondas were 1/4 up, and in the Miscellaneous group there was a rise of 5/16 in Esperanzas and 3/16 in Mexico El Oros. Alaska Treadwells made up 1/16 lower, and Dharwar Reefs were also that much down. The carry-over was readily arranged, the general charge on Kaffir shares being 5 1/2-6 1/4 per cent. with the usual exceptions. De Beers were taken in at 1-3 per cent., and Premiers at 2 1/2-3 1/2 per cent., while Chartereds were down at 1/4d.-1/2d. The West African and Rhodesian shares were continued at 5-7 per cent., Siberians at 6-7 per cent., and West Australians at 5 1/2-6 1/2 per cent. Broken Hills and the Australian copper group were arranged at 5-7 per cent., except Proprietarys, which went off to a "back." The American list was also done at 5-7 per cent

Kaffir Shares.

As soon as the contango business had been disposed of, dealers in the Kaffir Circus came to the conclusion that prices must be given a run. It was time to make a real effort, they said, to show the public that the market was really as sound as a rock and that anybody who came in at present figures was certain of a nice profit before many weeks or perhaps only days had elapsed. So the shops and finance houses proceeded to lay their plans in the familiar style. A number of orders were distributed round the market and instructions sent to the Cape, Paris and Berlin to bid for shares, but not to overdo it lest the public should only smile instead of being fooled. Up to the present the bait has been ineffective, but the shops have got a good many more shares at higher prices and that is something gained. Holders need not hesitate to sell on every rise, because there can be no question that prices have already been raised much above their true worth. Here are Modders at 7 1/4 when only last year they might have been picked up below their par value of £4. We do not overlook the announcement just made that the directors have decided to increase the reduction plant from a monthly capacity of 30,000 to 45,000 tons by increasing the number of stamps, tube-mills, &c. The probable cost is put at £100,000, which will be met out of accumulated profits without interfering with the payment of dividends, and it is anticipated that the additional plant will be completed in nine months. This is all very well, but it means the shortening of the mine's life to an enormous extent. However, it was regarded as a fine bull point and it is said that the rise is not done yet. The output figures for April were very satisfactory, and next month's dividends are expected to show an increase in many cases.

Diamonds, Land and Rhodesians.

One of the reasons for the Kaffir Circus optimism was the sudden and quite unexpected uplifting of diamond shares, particularly De Beers. It was stated, with little truth we fear, that the inquiry for stones was showing signs of revival and this was quite good enough to set people declaring that the preference dividend would almost certainly be paid, that there was in fact never any real doubt about it. We have already referred to the statement that agreement negotiations have been revived and we think the sharp rally is almost entirely due to the fact that the troubles at the recent Paris settlement have somehow been smoothed over and that French sales have ceased. The market on this side are bears almost to a man and that is always a source of strength liable to send the market running up at any moment. Premier shares also had a jump, but the closing up by the bears leaves the market minus a very powerful support. Land and Finance shares did not perform very brilliantly, although the tendency was naturally upward, and it was hard work to get a move in Rhodesians.

West African and Australasian.

Apart from Broomassies and Ashanti Gold Fields West Africans were rather miserable, the Nigeria Bitumen things going back in consequence of some trouble having been experienced in the borehole. Broken Hills hardened in a small way in response to a few Colonial buying orders, but the market was very quiet. West Australians held up fairly well, and Lake Views put on a few pence on the first results from the new plant erected to treat the residue dump amounting to 250,0000 tons. The quantity put through was 4,070 tons which produced £1,152 at a cost of £767, and £548 in gold was still left in the solutions. New Zealands were dull apart from Waihis.

Copper, Tin and Miscellaneous.

Rio Tintos have fluctuated rather considerably under the influence of Paris impulses and the movements in the metal. The lowest price was 59½, and the best 63 11/16, the market finishing with some strength. Anaconda had a good rise on reports of a rich discovery, and the market, all round, showed a fair degree of firmness. Mount Lyells had a rise on the dividend and bonus of 1s. 9d., which was something above the best anticipations, and all the Yankee group got the benefit of the American Railroad blaze. Amalgamated were very prominent. Tin was flat, and shares dull. Among miscellaneous things the American list of shares was inclined to go off, Esperanzas being prominently heavy, but El Oros picked up. Indian shares were irregular.

MINING NEWS.

*** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

New Primrose Gold Mining.—The experience of this Barnato company during the past year was not too satisfactory, and we note that the working costs per ton showed an increase of 1.535s. per ton, whereas most companies succeeded in reducing their expenditure. An average number of 125 stamps was in operation crushing 221,086 tons of ore which yielded 89,821 ozs. of gold worth £381,537 or 34.515s. per ton. Expenditure was £221,647 or 20.051s. per ton, not a high figure although larger than in the previous year, and the operating profit came to £159,890, equal to 14.464s. per ton. Balance brought forward was £129,277 and £5,714 came in from other sources, making in all £294,882, but whereas the June dividend was 25 per cent., that announced in December was 20 per cent., being a total of 45 per cent. for the year. Profits tax amounted to £10,681 and £57,753 was allowed for depreciation, so that £80,197 was left to be carried forward. Owing to the considerable supply of native labour available it was deemed advisable to resume operations on the May Deep section of the mine, and the necessity of stoping with hand labour instead of machines, the reefs being narrow, was the principal reason for the increased costs. Ore reserves are estimated at 462,134 tons or a considerable decrease compared with the end of the year, partly due to the miners' strike, but also to the exclusion of certain blocks of middle reef near the Primrose shaft, formerly considered to be payable, but about which there now exists considerable doubt. It is hoped to more than recover the deficit in the current year, as development both in the Primrose and May Deep sections is said to be "opening up very satisfactorily." The company's finances are in good order.

Transvaal Gold Returns.—Last month's return from the Witwatersrand and outside districts was 565,832 ozs., worth £2,403,500, bringing the total for the first four months of the year to 2,242,992 ozs, valued at £9,527,617. Against the preceding month there is a decrease of 9,069 ozs. in weight, and £38,522 in value; but April contained one working day less, so that the rate of production was more than maintained.

Native and Coolie Labour.—The number of natives at work again shows a small improvement, and the total is now almost 131,000. On the other hand the Chinese have been reduced by 2,445 to 24,059. Here are the full details for the past year:—

Month.	Natives Joined.	Natives Left.	Nett Gain or Loss.	Natives Employed end of Month.	Chinese.
April, 1907	8,318	7,335	983	91,824	53,588

Consolidated Langlaagte Mines.—This company has the substantial share capital issued of £890,000, besides £250,000 in debentures, whose redemption commences in 1910, and it is not remarkable therefore that the past year's profits should be devoted to strengthening the financial position. Their amount was £109,343 and the balance of £47,544 was brought in, making with sundry items of £2,549 an aggregate of £159,436. Debenture interest takes £15,000 and £9,910 is allowed for profits tax, but no less a sum than £117,337 is provided for depreciation, leaving £17,189 to be carried forward. The important sum of £83,953 is written off machinery and plant and £21,313 off development account, but the balance-sheet still adds up to £1,194,450. The company has large cash balances. The full complement of 140 stamps was in operation and crushed 268,258 tons at a cost of £271,895 equal to 20.271s. per ton. Yield of gold was 89,435 ozs. valued at £381,238 or 28.423s. to the ton, and the profit of £109,342 represents 8.152s. per ton. Costs were less by 1.665s., but the grade of ore was slightly better, and profits per ton were larger by 2.120s. Payable ore reserves are estimated at 444,427 tons or an increase of 43,079 tons, but it is a curious thing about these Barnato companies that the value of the ore is never mentioned.

New Unified Main Reef Gold Mining.—According to the consulting engineer's report the most noticeable feature of the development accomplished during 1907 was the satisfactory values obtained from the South reef, which has hitherto been regarded as practically unpayable. Recent work has, however, proved that there exists, at any rate in the lower levels of the mine, a large tonnage of South reef which is not only payable but even well above the average in value. Development has been kept well ahead of the mill and at the end of the year the payable ore reserves were put at 184,600 tons or an increase of no less than 52,747 tons, of which 38,674 represent added reserve on the South reef. Sixty stamps were in operation during the year and crushed 111,403 tons at a cost of £123,833 or 22.231s. per ton, but the gold recovered was only 34,888 ozs. worth £148,364, so that the profit was £24,531 or 4.404s. per ton. Nevertheless this is 3.210s. more than last year, the costs being smaller by 1.485s. Rents amounted to £566, bringing up the total income to £25,098, and after extinguishing the deficiency of £23,004 brought forward there is a credit of £2,094 to be carried into the current year.

Robinson Central Deep.—This company's operations were on a slightly larger scale during 1907 than in the previous year, the tonnage milled being 236,557 as against 201,095. Gold recovered amounted to 142,624 ozs. against 128,056 ozs., so that the yield per ton came down from 12.736 dwts. to 12.058 dwts. Working expenses were reduced about 4d. per ton to 16s. 7.698d., a very low figure, the total being £196,833 as compared with the revenue from gold of £600,136, and the working profit is up from £368,486 to £403,302. Sundry revenue was £6,964 and £48,158 was brought forward, making £458,425, from which are deducted capital expenditure of £4,746, profits tax £39,385, and donations £495. Two dividends of 37½ per cent. and 40 per cent. took £341,000, and £72,798 is carried forward. There can be no question of the excellence of these results, and they are expected to be largely improved upon in future in consequence of the addition of the Bonanza company's battery, purchased for £9,000, but, of course, working on a bigger scale will reduce the life of the mine. It was estimated that on December 31 last there were 1,965,000 tons to be mined, leaving out the main reef, which would give a life of five to six years, but efforts will be made to extend the life of the property either by the purchase of addi-

tional claims which the directors have long had in view or by a consolidation of interests in the immediate neighbourhood of the mine. There was an interesting discussion at the annual meeting on the broad question of amalgamation, full of instructive points, and we may have occasion to refer to them later on.

Village Deep.—During the year 1907 this company had an average of 165 stamps in operation, being 20 more than in 1906, but the tons milled increased only 1,520 to 281,380. Value per ton was 2s. 6.760d. better at 29s. 8.343d., so that the revenue from gold produced showed an improvement of £38,126 at £417,783. On the other hand, the working expenditure was larger by £32,605 at £341,131 being 24s. 2.904d. per ton compared with 22s. 0.583d., and the working profit of 5s. 5.379d. per ton represented £76,651, not a very striking result from such extensive operations. Balance brought forward £72,848 and sundry items £156 increase this to £149,656, and after providing for profits tax, donations, and interest £136,190 remains to be carried forward. The principal part of this is represented by equipment, but it is worth noting that whereas at the end of 1906 the company's liabilities in excess of the cash and cash assets were £201,727 by the close of last year they had been reduced to £131,564, a reduction of £70,163. Loan account, including an overdraft from the bank, has been lowered from £233,699 to £14,907, so that all round the position has been much improved, albeit some time must still elapse before the debt can be wiped off and dividends commenced. Payable ore reserves at the end of the year were estimated at 540,413 tons, having an average value of 6.49 dwts., but it is proposed to increase the capacity of the plant by the installation of tube mills, which would have the effect of bringing in a large quantity of ore not payable on the present basis of treatment. An amalgamation with the Turf Mines is in the air, the bait being a much earlier payment of dividend than if the company continued on its own.

Geduld Deep.—This company adopted a policy of masterly inactivity during the year to December 31 last, and from hints thrown out by the chairman at the annual meeting it seems very improbable that the company will ever begin operations on its own account. In other words, an amalgamation with some neighbouring property or properties seems the most likely course. Attention is specially called to the progress made by the Geduld Proprietary Mines, but a section of the shareholders do not seem to attach very much importance to this, and are clearly tired of the waiting policy of the board. An immediate distribution of the cash balances amounting to over £108,000 was urged, and the directors promised to take the matter into consideration. During the past year the revenue from interest amounted to £4,870 and the expenditure to £1,601, leaving a surplus of £3,269. In addition, a nett profit of £208 came from the township, giving a total of £3,478 to be added to the existing credit of £13,517, giving £16,995 in all.

New Kleinfontein.—This company belongs to the well-known Farrar group, and the operations for the year to December 31 last may be considered reasonably satisfactory, inasmuch as they showed an improvement on the previous twelve months. The full complement of 200 stamps milled 389,221 tons of ore, which produced a total amount of 148,973 fine ozs. or 7.655 dwts. per ton. Value of the metal was £634,434 or 32s. 7.202d. per ton. Total working costs were £396,579, equal to £1 0s. 4.537d., and the profit per ton came out at 11s. 10.318d. These figures are an all-round improvement compared with 1906, and it is hoped that the costs for the current year will be still further reduced. Profit from operations is returned at £230,804, and after crediting and debiting sundry small items the disposable balance is £226,924, exclusive of £7,535 brought forward. Two dividends of 10 per cent. take £180,000, a sum of £12,500 is provided for debenture redemption, and £23,167 allocated for sinking permanent shafts. Profits tax absorbs £14,298 and £2,495 is carried forward. Developed ore reserves at the end of the year were 949,434 tons assaying 8.34 dwts. per ton as compared with 947,038 tons of an average value of 9.1 dwts, and an additional 20 stamps have been erected, making a total of 220. The cost of these will be provided from revenue to be spread over a period so as to obviate undue fluctuations in profits.

Great Boulder Proprietary.—This famous West Australian mine continues to operate in a very successful fashion, and within a few pounds the output for 1907 was up to the company's best year—1903. Tons crushed during the year to December 31, 1907, were 152,118, producing 151,371 ozs. of gold worth £564,274. Charges of every kind took £224,286, leaving £339,988 nett, to which is added £9,105 brought forward, making a total of £341,978. Of that £45,000 is transferred to depreciation fund, and provision for income-tax amounts to £28,043, so that the disposable balance is £268,935. Four dividends of 9d. per share, making 3s. in all, have been paid and £6,435 is brought into the current year. Development operations appear to have been highly satisfactory, and the ore exposed at the end of the year was 650,870 tons or an increase of more than 100,000 tons. The gold contents are put at 561,409 ozs., having a value of £2,250,000. The work on extensions and improvements of the reduction plant has been continued, and the machinery generally has received additions and modifications. The financial position is a strong one, mainly because the capital has never been inflated, although the original £1 shares were divided into a 2s. denomination.

Great Fingall Consolidated.—It is anything but an encouraging report that the directors of this well-known West Australian mine have just issued, but previous intimations from the company will have prepared shareholders for a comparatively poor display. During 1907 the quantity of ore treated was 261,057 tons, being an increase of 11,411 tons over the previous twelve months. But the gold recovered fell off by over 22,000 ozs. to 99,215 ozs., so that the shrinkage in the value of the ore was considerable. Value per ton was £1 12s. 3.80d. and the costs per ton 18s. 11.39d., a decline of a shilling compared with 1906, total value of the bullion being £423,193, and the actual working expenditure £247,291. Outgo under all heads was £252,999 and the balance of profit £174,194, which includes interest and other receipts to the amount of £4,278. Income and colonial taxes amount to £24,666 and depreciation is allowed to the extent of £12,249, leaving £137,558 to be added to £82,586 brought forward, making a disposable sum of £220,144, which compares with £359,086. So the total dividends have to come down to 11s. per share as against 25s. in the previous twelve months and 38s. in 1905. And it cannot be said that the developments of the year open out a very encouraging prospect. There is still sufficient ore in the mine above the No. 13 level of high enough grade to continue the present output to the middle of next year, and it all depends upon the current year's developments whether the output of £35,000 per month can be maintained for a longer period. Large quantities of low-grade ore have been exposed below the No. 13 level, but how much is payable cannot be said. The financial position is very sound, but the attempts to widen the scope of operations by securing other properties have not hitherto proved successful.

Mount Lyell Mining and Railway.—Cable advices from the head office state the total quantity of ore treated for the past six months at £202,014 tons, apart from 7,525 tons of metal bearing fluxes and 204 tons of purchased ore. Production was 4,247 tons of copper, 344,608 ozs. of silver, and 10,489 ozs. of gold. Operations for the half-year resulted in a profit of £128,980 nett, and a dividend is proposed of 1s. 3d. per share, together with a bonus of 6d., making 1s. 9d. in all, or something in excess of market anticipations. The 2,389 tons of copper unsold at the end of September, 1907, realised an average price of £61 7s. 7d., while of the past half-year's production 3,311 tons were sold at an average of £61 8s., leaving 908 unsold at the close of the half-year, which has been taken into account at £50 per ton. Outlay on works, &c., was £45,245, and next month the company must provide £42,105 to redeem the outstanding balance of the debentures taken over from the North Mount Lyell, but this will free the company from all debenture liability. Credit balance to profit and loss is £406,332, and liquid assets in excess of liabilities are put at £455,563. Ore reserves in the Mount Lyell mine are estimated at 3,523,416 tons of an average value of 0.54 per cent. copper, 1.96 ozs. silver, and 0.030 ozs. gold per ton, while in the North Lyell and Lyell Tharsis the reserves are put at 606,658 tons, making the known reserves in these mines larger than at any previous period of the company's history.

British Broken Hill Proprietary.—In the half-year to December 31 the company treated 69,417 tons of crude ore containing 10,160 tons of concentrates, which yielded 6,272 tons of lead and 271,797 ozs. of silver. Working account, after charging renewals of plant, shows a gross profit of £23,255, which is reduced to £14,367 by the provision of administration charges and the usual allowance for depreciation. Ore reserves above the 600 ft. level were estimated on December 31 at about 460,000 tons, and the general manager is of opinion that when the 800 ft. level section is opened up the reserves will be materially increased. Unfortunately the negotiations referred to in the last report for the sale of the company's output of concentrates for the current year were not satisfactorily concluded, and it was decided to close down the mine and mill on December 24. Various negotiations have since taken place, but no terms sufficiently favourable have at present been forthcoming, and while it is hoped that before long a sale will be effected no considerable profits can be looked for, as labour is dear and metal prices low. In the circumstances it is no surprise to find that the directors do not see their way to pay a dividend.

Broken Hill Proprietary Block 10.—According to a cable just received this company's operations for the half-year ended March 31 resulted in a nett profit of £24,594 only. On the other hand, £30,000 was paid out in dividends, £10,145 allowed for depreciation, and £12,338 refunded on account of concentrates, leaving a balance of £128,700 at the credit of profit and loss. Expenditure on capital account was £128,700, and the cash balance amounted to £30,648.

Montana Mining.—This company could produce a profit of £2,423 only in the year 1907 and this added to the sum of £1,070 remaining after payment of legal expenses, incidental to the compromise ground lawsuit, makes a total of £3,493 to be carried forward. As is well known, the company has long been engaged in troublesome litigation with the St. Louis Company and no sooner did it win one suit than a further claim was put forward on account of another portion of the property adjoining the compromise ground, over which the previous action was fought. Damages to the extent of one million dollars were claimed as the value of the ore extracted from the disputed ground. Naturally this fresh claim is to be opposed, but pending the trial the District Court has placed an injunction on the compromise ground. It has been appealed against, but operations on the ground were brought to an abrupt termination, so that the company is unable to report any realisations from that part of the property during the year. The old workings on the Drumlummon mine and the tailings at

Marysville are practically exhausted. Operations at Edgemont, Nevada, were carried on without interruption during the past year and although no discovery of importance was made the working of the property resulted in a profit after payment of all expenses, including prospecting and development.

Berry United Deep Leads.—This company was incorporated in December, 1906, the properties being taken over from the 1st of the month, so that the first annual report covers a period of thirteen months to December 31, 1907. It is too early yet to speak of probable results, but the current market quotation of 3s. 9d. for the £1 share does not indicate a very hopeful prospect. However, the directors say that since the issue of the circular last year explaining why it was necessary to create £60,000 first mortgage debenture stock, of which £40,000 was subscribed, very favourable progress has been made. With the funds in hand the directors hope that the programme outlined in their circular will be carried out in its entirety, and the company brought to a producing stage in the course of next year. At one time it was proposed to seek a Government grant under the Mines Development Act, and in reporting favourably to the company's action the Government engineer gave his opinion that the property "will become a profitable alluvial mine." The necessity for this grant was obviated by the debenture issue. Outlay on account of pumping, mine development and general expenditure was £15,478 against an income of less than £100, the debit being £15,390. Preliminary and formation expenses appear at £5,348, and the cash balance at the end of the year was £6,170.

Hyderabad (Deccan) Company.—Output at the Singareni Collieries was affected during 1907 by epidemics and scarcity of labour, while the "squeeze" at the Batten pit workings also helped to curtail the output for a short time. The workings are now safe, but an accumulation of water has still to be dealt with. Colliery profits were £48,929, a sum of £12,831 was brought forward, and other items brought up the total credit to £64,475. After providing £10,000 for depreciation and £2,000 each for ordinary reserve and investment depreciation the available balance is £43,145, out of which the directors propose a dividend of 3s. per share, absorbing £33,600, and leaving £9,545 to be carried forward. The arbitration between the company and the Nizam's Government was decided in the company's favour on all points.

Critical Index to New Investments.

East Indian Railway Company.

Applications will be received at the Bank of England for £2,450,000 3½ per cent. debenture stock of this company, at the price of 96½. The sanction of the Secretary of State for India in Council has been obtained to this issue, which is required for the general purposes of the company, and is in addition to 3 per cent. debenture stock for £8,000,000, and 3½ per cent. debenture stock for £2,000,000 already existing, ranking *pari passu* with them as far as regards security. Payment of interest and of principal, when notice of redemption is given, is guaranteed by the Secretary of State under the agreement of July 10, 1907. The company is not bound to redeem the stock at any fixed date, and it will not be repaid until on or after August 4, 1937, but it may be redeemed, either wholly or in part, at par at any time after that date with the consent of the Secretary of State on twelve months' notice being given. At the price offered the stock looks attractively cheap compared with the Government's own 3½ per cent. stock.

Sansinena Frozen Meat Company.

Acting as agents for Messrs. Ernesto Tornquist and Co., the Sansinena Company's bankers in Buenos Ayres, Messrs. Glyn, Mills, Currie, and Co., announce that they will receive subscriptions for an issue of £300,000 of that company's 5 per cent. first mortgage debentures at the price of 92½ per cent. These debentures cannot be redeemed until 1913, after which they may be so at par, on six months' notice given. Subscribers can pay up in full on allotment or on any instalment date under 4 per cent. per annum discount. Messrs. Tornquist have sent a letter to Messrs. Glyn and Co., which is quoted in the prospectus giving details as to the company's profits during the past ten years. They show considerable fluctuation, but the lowest figure, that of about £70,000 for 1906, is double what these debentures require, and the total was as high as £376,700 in 1902. Last year this company shipped more than one-fifth of the frozen meat exported from the Argentine Republic, and it has secured a special advantage by works established at the port of Bahia Blanca, whence direct shipments are made to Europe. The debentures are secured by a first mortgage under Argentine law and registered in the name of the River Plate Trust, Loan and Agency Company as trustee, and as the properties conveyed to the Trust have been valued at £825,000, including £250,000 representing the value of the land alone, the debentures would seem to be amply secured.

London, Chatham and Dover Railway Company.

The directors of this company announce that they are prepared to receive applications for an issue of £500,000 3½ per cent. debenture stock, forming part of an unissued balance of £625,000 authorised by the company's Act of 1904, of which £125,000 is reserved to meet Lloyd's bonds maturing towards the close of 1909 and 1910. Of this amount, £134,810 has been already applied for, and will be allotted in full, and the remainder is offered at 87½ per cent., making the yield on it 4 per cent. The issue is made to repay temporary loans, which according to the last balance-sheet amounted to about £435,300 but have probably been increased since, and it will not therefore involve any additional burden on the revenues of the company. For the 12 months ended December the nett income amounted to £704,435, and including interest on this issue the fixed charges will amount to £486,134, leaving a surplus of £218,301. This looks all right, no doubt, but the way in which the company has been and is still being mismanaged takes off a good deal of the apparent attractiveness.

A. W. Gamage, Limited.

As stated in the recently issued report this company has acquired the business of Benetfink and Co., Limited, for £39,715 in cash, which was temporarily advanced by the company's bankers. In order to provide for the repayment of this sum, as well as for further building operations, the directors offered for subscription 40,000 cumulative 5½ per cent. £1 preference shares at par, and a like number of £1 ordinary shares at a premium of 5s. per share, and the issue met with an immediate response, the amount being fully subscribed on the day the lists were opened. From a very modest beginning in 1878, when the turnover was only £1,632, the business has grown to huge proportions, and in 1907 the turnover amounted to £479,685. Profits during the seven years ended January 31 last have risen from £10,549 to £24,023, after providing for depreciation on short leaseholds, patent rights and leases redemption fund, and for the past three years the dividends on the ordinary shares have been at the rate of 8 per cent. per annum. The company's premises in Holborn were valued in 1904 at £171,056, and since that date a further £93,408 has been spent in new buildings and fresh leases, but the total value in the last balance-sheet was only £162,957, while goodwill remains at its original figure of £43,300. With the premium on the new ordinary shares added the reserves will stand at nearly £24,000, but only a very small portion of this total has been derived from revenue, while we are somewhat doubtful as to whether the provision for depreciation in the past has been altogether adequate. Still, the business is energetically managed, and although it is really a "one man show," Mr. Gamage's co-directors being departmental managers, the shares should be good enough so long as he remains in control.

Bromboro Port Estate, Limited.

This company acquires from Lever Brothers, Limited, an estate of about 698 acres adjoining Port Sunlight on the south bank of the River Mersey, with a view to its development as an industrial centre. It is claimed that amongst the advantages possessed are a deep water frontage to the river, connection by sidings with the North Western and Great Western Joint Railways, and proximity to the entrance to the Manchester Ship Canal. An agreement has been entered into with the Bayer Company, the representative in this country of certain German firms, for the sale to it of 24 acres for £24,000, and this amount will be handed over to the new company. Out of a capital of £120,000 in £1 shares and £180,000 in 4½ per cent. debenture stock the vendors ask £200,000 in cash, but are willing to take up and pay for 39,993 of the shares, and the present

issue consists of 80,000 shares and all the debenture stock. No independent valuation of the property is given, so that it is impossible to say whether the high price is justified, and although the vendors guarantee the interest on the debenture stock, that in itself is hardly sufficient to make it an attractive investment.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1908, and May 9, 1908:—

REVENUE AND OTHER RECEIPTS.

—		Total Receipts into the Exchequer from April 1, 1908, to May 9, 1908.	Total Receipts into the Exchequer from April 1, 1907, to May 11, 1907.

Bills otherwise issued	1,500,000
Total	£12,000,000

Treasury, May 12, 1908.

LAND MORTGAGE INVESTMENT AND AGENCY OF AMERICA.—Little remains to be done in the inglorious ending of this moribund concern beyond the funeral obsequies. During the year ended December 31 last £542 was received in interest on mortgages and £226 on deposits, giving with £1 transfer fees £769 in income. Of this the directors took £375 and £297 was lost on realisation of real estate, leaving £94 to be deducted from the loss outstanding of £46,175. After paying off 4s. 4d. per share in reduction of capital the final position is 47,246 shares of 20s. 8d. or £48,821 against assets in cash £2,414 and furniture £48, the balance of £46,082 being to the debit of profit and loss account.

P.D.K. (CEYLON) RUBBER ESTATES.—During the year ended December 31 this company sold 14,800 lbs. of rubber, for which it was lucky enough to get 5s. 0½d. per lb. nett, and it also disposed of 170,036 lbs. of tea at 6.14d. per lb. nett. Total receipts, including transfer fees, &c., were £8,131, of which estates expenses took £3,904, and administration charges, interest, &c., £546. Then £142, being one-third of the total amount, is written off preliminary expenses, leaving £3,538, and after payment of a dividend of 5 per cent. £288 is carried forward. Creditors and bills payable amount to £804 against £1,604 due from debtors, coolie advances come to £933, and as the cost of the property is only £61,561 out of a total capital of £65,000, the company still has a substantial balance of £4,960 in cash.

Answers to Correspondents.

Deposits against future queries may be lodged with the Publisher.

Mithra.—(1) It is so asserted by a large shareholder, but there appears to be some manipulation, and this does not make the shares attractive. (2) There has been some recovery in these. We do not think they should be bought now, as the company's prospects are not over bright. There has been considerable shutting down of works. (3) Quite speculative; there has been a rise in one or two similar undertakings, although accounts from that part of the world are not encouraging. If the glowing crop accounts continue you might make something on a short turn, but the shares are not good to keep. (4) We cannot hear of anything to cause alarm. Traffics are fair; we think you might hold in hope of a recovery. (5) Yes. Should not be touched.

B. W. J.—A very good security, and you should be all right in taking all you can do with.

Delta.—We cannot do so this week; your letter did not reach us in time, but you shall have a reply next week. Meantime leave it alone.

J. H.—Your broker is right in his view of the market mood, and buying has commenced. So you may do wisely in following the example set, although the start has been made earlier than we expected.

A. E. J.—(1) We do not like the way this concern is raking in capital, and think you had better not buy its shares. (2) We do not like this thing. It is likely enough holders of the shares will soon find themselves confronted either by liquidation or reconstruction and assessment.

E. S.—(1) We fear these will go lower presently, and you had better not buy. (2) The security here may be all right, only do not buy at a premium. (3) These are best of the three, and seem to us to be worth buying to hold.

GRASSINGTON.—Many of the company's dependents are doing little good, but we think the security you hold should be covered. For all that, the price is not likely to recover much, and may even go lower in the present state of business.

LENNOX.—(1) An excellent investment; (2) Not very marketable; should not be bought at present; (3) good, and perhaps improving if you do not mind the liability of £20 per share in the event of liquidation. (4) No immediate default probable, and the new stock does not worsen the position of this one. Some day soon, however, the whole capital may have to be consolidated and reduced.

Letters to the Editor.

CANADIAN IMMIGRANTS.

SIR,—In the last issue of your valuable journal, as part of an article entitled, "Life in Canada for the Worker," you quote a letter appearing in the *Bolton Evening News*, for the information of your readers.

I have seen the letter you quote before. It has done good duty for those who want to tell a poor story for reasons of their own, and I am not disposed to disagree with the writer of this letter, so long as he confines himself to the statement, that it was extremely difficult for men to find work in the cities of Canada during the past winter. A reference to the authorised Government publications will show that such were not invited by the Canadian Government, and if they went to the City of Montreal and stayed there, as they admit they did, they had no more chance of getting employment than if they had wandered from one city to another city in England, and they formed a portion of the very class which during the winter months created the congestion so often referred to in large cities like Montreal and Toronto.

In contradistinction to the statement also made in the quoted letter, that Englishmen cannot compete with others who are going to Canada, allow me to quote a letter from Winnipeg appearing in the *Huddersfield Examiner* of the 2nd instant, in which the writer says as follows:—

"I have been out here for several years, and have still to find that an Englishman is despised, so long as he is straightforward, and not afraid of work. The Englishman who is not afraid of work can always make his way in Canada, but one has to work hard. Englishmen are at the head of practically all our business houses; our Mayor is an Englishman, two of the aldermen come from Yorkshire, and they all came out as emigrants. A man is not looked down upon should he do manual labour, as Canada first and last is an agricultural country."

In view of the prominence which you have given to the extracted letter, may I ask the favour of sufficient space for this communication?

Yours respectfully,

J. W. SMITH.
Assistant Superintendent of Emigration.

Department of the Interior, Government of Canada Emigration Branch,
11 and 12, Charing Cross, London, S.W.,
May 11, 1908.

RAILWAY TRAFFIC RETURNS.

The Investors' Review.

The Week's Money Market.

Bank Rate 3 per cent. (Reduced from 3½ per cent. on Thursday, March 19.)

Norfolk House, Friday Evening.

Many people appear to have expected a reduction in the Bank rate yesterday, but there was no substantial ground for nourishing this hope. On the contrary, the danger signals are up in two quarters. Not only does the Paris cheque keep at a point sufficiently adverse to permit French buyers to take all they want of the gold arriving in the open market, but to withdraw some of the metal from the Bank of England, and the Berlin rate has now gone down to a point which renders shipments of gold to Germany by no means unlikely. If the Bank of England rate had been put down to 2½ per cent. amid circumstances like these we should probably have seen gold begin to leave the country at an unpleasantly accelerated speed, notwithstanding the resumption of shipments from New York. Had this happened, there would presently have arisen a demand for higher rates, and the Bank of England would have had to move up again. Why gold should be in such demand for Paris is to some minds a mystery, but the fact probably is that French banks have ceased to buy bills in this market owing to the lowness of our current rates of discount, and as the paper they already hold runs off, there is nothing for it but to liquidate the debt by shipping bullion. And apparently the Bank of France continues prepared to take a good deal of the metal, wants, report has it, to again reach the handsome total of £120,000,000. Large financial operations will probably have to be undertaken in Paris during this year, and some of the French banks may have over-stretched themselves to an extent that renders the strengthening of the cash reserve prudent. Whatever the reason for the gold hunger, the actual state of the account between the two markets renders a continuance of shipments of gold to Paris probable. It may be that New York will supply most of what the Continent, including Germany, wants over and above what the mines yield, but we could not possibly count on this being the case if our Bank rate were further lowered. As it is, withdrawals on both French and German account are only too probable.

Some difference of opinion was expressed regarding to-day's withdrawals as to whether they were for Paris or Berlin. It was French coin that went, and its going hardened the discount market as well as short loan rates. One house called the three months' remitted bill rate 2⅛, another 2 1/16 to 2⅛ per cent., and six months' bills continued at 2¼ per cent. As indicating, however, the bent of the market we are told that buyers to-day offered 2¼ per cent. for threes, 2⅜ per cent. for fours, and 2¾ per cent. for sixes, to be delivered in June, but there are no sellers yet at these rates. The majority hope to see the market settle down again. It may, but the German houses are eager to bring about a reduction in the Imperial Bank rate, and are getting control of credit here at a rate which seems to indicate gold withdrawals at an early date.

Advocates for a reduction in our rate say: "But the open market discount rate is down almost to 2 per cent. and call money cannot always be lent overnight at 1 per cent. Even seven-day money can be had at 1½ per cent., and when the market is firm 1¾ per cent. is all the banker can get." All this is true enough, but not in present circumstances warrant for another reduction in the Bank of England rate. Our market is weak chiefly because the supply of bills is falling off in consequence of the reduced volume of trade, and to some extent the diminished supply of finance paper. But there is no really large surplus of bankers' money for the total of the other deposits shown in yesterday's Bank return was only £43,434,000, and showed a decrease of £925,000 on the week, thanks to the increase in the public deposits or Government balances, the decrease of £622,000 in other securities, and the nett increase of about £168,000 in the active circulation. The Bank has seemingly disbursed £260,000 against further investments by it in Government stock, but at the best the market is not far off scarcity in floating credits. The decrease shown in other securities this week does not represent money repaid by the market, because the market was already out of the Bank's debt. Most likely it means that the Metropolitan Water Board has been repaying out of the proceeds of the new loan a temporary advance granted to it by the Bank. Even so, the market is deprived of so much of its available balances when it has little to spare, and it only needs some disturbance of credit somewhere of sufficient prominence to disturb men's minds to cause rates to harden with a snap. Look how to-day's gold withdrawals have acted, and there is more going, for though harder the Paris cheque is to-night only 25.11¾.

In view of the present condition of business the world over, no responsible banker can afford to leave the untoward chance out of sight. For in spite of the superficial ease at moments settling down more or less on all Money markets, even the German Money market, this year will be more trying to the stability of credit institutions than the last one was. Look how the return of the Imperial Bank of Germany plunges about, one week showing a passable degree of strength, and the next renewed pinch. Its last return shows the note circulation brought below the tax free legal maximum by £1,415,000 against an excess the week before of £2,170,000. But this readjustment is due principally to a reduction in the note circulation, which fell off £2,621,000 during the interval between the previous return and the last one, cash in hand having risen by little more than £516,000, and the total of that cash is still only £47,844,000 compared with a note circulation of £74,458,000. How much of the cash is gold we do not know. Our market will not be burdened next week with the payment of calls on new issues.

Silver.

A fair amount of silver has been taken by the Indian bazaars this week, but apart from that business has continued small. Prices, therefore, have again fluctuated within very narrow limits, and as the Indian demand was almost entirely for immediate shipment both spot and forward metal have been quoted the same for the first time for over nine months. After dipping to 24 1/16d. per oz. for cash and 24⅛d. per oz. for delivery two months forward prices recovered to 24¼d. per oz. for both positions, but close to-night 1/16d. lower. Applications for the Rs. 10,00,000 India Coun-

cil drafts offered on Wednesday amounted to no more than Rs. 45,205 in bills and tenders at 1s. 3 29-32d. per rupee received in full. Next week another Rs. 10,00,000 will be offered.

The Stock Markets.

Quite a refreshing looking change has come over markets this week. Prices have been improving and the turnover has been larger. All important classes or groups of stocks have more or less shared in this pleasant change except Trustee and other first-class securities, which, although better in some instances, have been by comparison inert. The press has been upon groups of speculative stocks led by Yankee Railroad shares, in which the gamble has this week surpassed anything seen since the crisis. Along with these, South American Railroad stocks have rebounded in a welcome fashion, and towards the close of the week there was something like a stampede of bears in the Canadian market. The account whose settlement concluded yesterday involved the taking up by arbitrage houses of large amounts of American gambling counters sold during the last fortnight by the Continent, but in spite of that the forces behind the movement for the rise were so strong as to enable the bulls more or less to corner the bears.

The movement is really almost entirely a matter of bull and bear. Investment houses say that a little more business has been going on, but investors are frightened away rather than attracted by violent movements, such as those that have developed since we last wrote. There is more inclination on the part of the public to sell than to buy on these occasions, which is just as well, for the markets are not solid, and whenever we see prices rising in bounds without appreciable help from the multitude of small buyers, it is safe to give markets a wide berth, or to let them have any speculative security which the holders may desire to get quit of on the advance. The present movement is entirely a manipulated one, and the violent jump in Grand Trunk stocks yesterday was attributed to the closing of an unwieldy account for the fall open on behalf of a big bucket-shop, whose daring adventures have often excited the wonder, if not the admiration, of beholders. "We have got it at last," the market man said, and if that is so we may look for a few sensational events as fruit of the violent advance. But the markets throughout are hollow, and must be that as long as the facts about trade and industry all point towards lower prices, narrowed operations, decreased profits. It is only the speculative manipulator who can set facts at defiance, and he is often helped to do so by the state of the account. Professional selling for the fall must have been much more extensive in many directions than the outsider could gauge or than the market itself knew, and directly the way is thus prepared for the bull he has only to concentrate his forces first on one part of the field and then on another to effect sensational upward movements and crush out great numbers of those who had sold what they could not deliver. Sometimes his triumph is so complete that it ruins him, but as long as he remains master of the available credit, or as the bear account remains extensive, the player for the rise can do pretty well what he pleases.

People are asking us why Canadian Railways should be flying up as they have done, why, in particular, Grand Trunk stocks are so buoyant. There are plenty of reasons good enough for the bull over and above the extent of the bear account. First of all, the seed has been got in early in the North-West, and this we are told means the high probability of a good harvest. Already, therefore, the players for the rise see that harvest reaped and sold, feel money in their pockets. Then the Dominion Government has agreed to subsidise a line of railway to a port on Hudson's Bay, and that has stimulated buying in Hudson's Bay shares as well as in Grand Trunk and other stocks. No doubt this subsidy will be handsome, and include money enough to erect apparatus whereby the icebergs and fogs which choke up or obscure the entrance channel to the Bay for 45 to 50 weeks out of the 52 will be melted or cleared away. Powerful bellows will be required to dispel fogs, and perhaps the freight and insurance charges on vessels venturing into that dangerous part of the world will be by such means so reduced as to permit the enterprise to show a profit. Whether the line can be served by ships or not does not matter at all to the players for the rise. The subsidy is to be given, that is all they want; it constitutes a most effective "bull point."

Contangoes.

Money was obtained from the banks for the Stock Exchange end of the month settlement at 2½ to 2¾ per cent., the higher rate being that charged to the ordinary market borrower. No difficulty was found in supplying all wants, for the wants were moderate, and contangoes were, if anything, lighter than at the end of April. This was not always so, for the rate on Dover "A" stock went up, but as a rule the charge on Home Railways rarely represented more than 5 per cent., everything included, and on United States Railroad shares money seldom cost more than 3 to 3½ per cent., while 4 per cent. was about the average rate upon Argentine rails. The contango on Hudson's Bay shares nearly doubled, but was at 2s. still comparatively light, and

loans could not be arranged on Foreign stocks at any appreciable profit.

Trust Securities.

Consols have little more than held their own on the week, but they are fully 10s. better in spite of occasional hesitations, and the only prominent depression amongst Trustee securities has been falls of 3 in Bank of England and of 6½ in Bank of Ireland stocks. Some Home Municipal securities have been dull, but not those of the Metropolitan Water Board or County Council. India stocks, however, have been depressed, partly by the famine and war news and partly by the new issue made on behalf of the East Indian Railway. Colonial Inscribed stocks have kept their prices with hardly an exception, and a few of them are higher on the week, but the movements in Colonial and Foreign Corporation stocks have been of no importance either way. The new Copenhagen loan has improved.

Foreign Government Stocks.

Prices have been good here for Japanese bonds in which there has been a smart recovery, on bear closing more than anything else. Russian bonds have also strengthened, and, in fact, the whole Foreign list is better, down even to the Chilian group, where most prices are 1 to 2 higher. German 3 per cents. have gone up with other things, and had there been any business to speak of the market would have been quite cheerful. Now and then there was a little more doing, but nobody would admit being oppressed with orders to execute.

Home and Other Railway Stocks.

Quite a large business has been doing in some of the lighter Home Railway stocks and in Great Western and North Western, and prices are better. Last week's traffic figures were not so bad all things considered, less than £19,000 down, and the contangoes were so light at the settlement as to frighten bears or tempt buyers to come in, so North Western stock is 2 higher on the week and North Eastern has recovered 1¼, while the stocks of the southern lines have been helped by the prospects of exhibition traffic. Up north, too, the labour outlook was considered less ugly, and altogether the market was disposed to be hopeful. Preference stocks, however, were still neglected or offered, especially the lower preferences of the Great Central Company.

The changes amongst the prices of Indian Railway stocks were adverse, except for Southern Punjab, where a demand caused an advance. As for the Colonial group, business developed this week to an amazing extent in the lower Grand Trunk stocks, so that they have quite eclipsed Canadian Pacifics for the time being; none the less are Canadian Pacific shares up nearly $5 on the week against a rise of £5 in Grand Trunk thirds and of over 2½ in the ordinary. It is wonderful, something to look at and pass by.

At the bottom of the whole movement we may place the Harriman manipulation of Yankee railroad shares, although none of them have jumped further this week than the Canadian group. Dealings, however, have been much more extensive, and many stocks besides Union Pacific have been taken up and tossed about with the utmost vigour, not to say violence. At the end of the week, therefore, improvements of from $2 to $4 are quite general; only as the public here stands by and does next to nothing it is unnecessary to go into particulars. More noteworthy is the general improvement in bond prices, and New York advices say that there is a larger investment business doing in that class of security. It is a little suspicious, however, to find the Erie group of bonds amongst those that have risen with most prominence.

A happy change has come over the Foreign Railway market, and especially the Argentine assortment, where improvements of 3 to 4 are the result of the week's dealings, trading having been much more extensive in the leading stocks, especially in B.A. and Pacific and Rosario ordinary. Why this change should have come about except in response to the general sentiment, it would be hard to indicate, but it has, on the whole, more reason behind it than some of the other advances noted, and the improvement has spread to Cuban, Uruguayan, Antofagasta, and other securities in this category. Paraguay Central debenture stock, however, has been kicked down to 36½ for no new reason that we can discover, and South Manchurian Railway bonds have also gone off.

Banks, Breweries, &c.

The Bank market has been firm this week with, however, very few transactions in any particular share. It is a small, scattered business with fractional improvements in a majority of instances, and a rise of 1 in the old shares of the Chartered Bank of India as well as in National of Egypt shares. Brewery securities have been heavy, and just as little regarded as usual. Nor have there been any movements worth speaking of amongst Dock securities, while the heave of markets has not yet extended to the great Commercial and Industrial section. Changes there, in fact, are too often the wrong way, but to such a minute degree that although after a few weeks the loss may be sensible, it is impossible to particularise changes further than is done in our price movements. Gordon Hotels ordinary shares, though, have dropped back to 3, and the decision to restrict the output of nitrate in Chili so as to prevent a collapse in the market for the sale here, has not stimulated Nitrate shares. United Alkali shares have been flat.

Miscellaneous Securities.

A few fractional declines have taken place amongst Electric shares, but the common stock of the Mexican Light and Power Company has been pushed up to about 54. As already noted, play was vigorously resumed in Hudson's Bay shares, and they are 4 better on the week. Peruvian Corporation stocks and bonds have also been lifted with a certain vigour, especially the preference stock, otherwise the Financial, Land and Investment group is uninteresting enough, and there is nothing at all to say about Financial Trusts beyond noting the continued relapse in things like Foreign and Colonial preferred and the preferred and deferred stocks of the Gas, Water and General Trust. Stock Conversion ordinary, too, has been sold as low as 50¼.

The Gas market is left to sleep in peace, and among Insurance shares the tendency has been uncertain, some being down, others up a little, but the largest changes have been declines of 1 in North British and Mercantile and of 2 in Northern Assurance shares. Marine shares, though, seem mostly to have been firmer.

Quotations have not been strong, nor has business been good for Iron, Coal and Steel shares and debentures. Cammell Laird's shares, though, have recovered a fraction as well as Vickers' ordinary, and no particular weakness has developed at any point, although Pease and Partners ordinary have lost 7s. 6d. United States Steel things have gone up with other Yankee securities. In Shipping, Royal Mail ordinary stock is down on the dividend and Bucknall debentures continue depressed.

Business has been quite absent from the Tea, &c., share market, but amongst Telegraphs and Telephones there has been a small sensation, buying having suddenly developed in Anglo-American deferred with the result that it is up 1¾. Eastern Telegraph ordinary stock, on the other hand, has been sold down to about 130. Among Tramways, the changes are mostly adverse, although B.E.T. preference shares have been rather better, and the ordinary shares of the Mexico Tramways Company also higher, together with Rio Light and Power bonds. Anglo-Argentine Tramways securities are also attracting some amount of buying. London General Omnibus stock has been as low as 26, and was not much better at the close last night.

Friday Evening.

Profit-taking has caused some set-back to-day, and the bad weather has damped the energy of players in

the Home Railway market, but high-class stocks have been firmer. Consols have rallied, and the decline in Home and American Railway stocks has not been at all important. The Stock Exchange, in fact, has been in a hesitating mood and hardly knows what to expect next. Grand Trunks have receded a little, but not Canadian Pacific shares, and the wave has just receded slightly in the Argentine and Yankee market, as well as in the market for Foreign Government bonds. There is a rumour in the Mining market of a new issue of Great Cobar debentures, but it is said that the loan of £2,250,000 charged by the Central Railway of Canada will not be issued just yet. Plenty of new demands, however, are at hand and the Transvaal loan is expected almost immediately.

New issues continue to go off badly with the public. We hear that fully 80 per cent. of the Agricultural Bank of Egypt issue has fallen upon the underwriters to take up, and it is expected that a considerable portion of the East Indian Railway loan, underwritten for a commission of 1 per cent., will fail to reach either investors or market just at once.

THE WEEK'S PRICE MOVEMENTS.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

MEXICAN SOUTHERN RAILWAY, LIMITED.

This company again did appreciably better during the past year, especially on its main lines, where the gross earnings amounted to $1,198,955 or $69,968 more. Of this increase $14,363 came from parcels traffic, and was largely due to the policy adopted by the company of fostering fruit and vegetable growing at suitable points along the line, while goods and animals produced $54,379 more, thanks to substantial advances in sugar, ore, coal and coke, metals, groceries, flour, and liquors. Working expenses were $29,529 up at $683,440, chiefly under the heading of locomotive charges, although maintenance of way and traffic expenses both showed some increase. In the tramway division earnings rose by $1,492 and expenses were reduced by $7,627, the manager having found it possible to effect this saving, owing to the coming conversion of the line from Tehuacan to Esperanza, to steam traction power. Gross revenue from both sources was consequently $71,460 larger at $133,841, while expenses took $21,902 more at $764,658, the proportion being 1.51 per cent. smaller at 57.33 per cent. Nett receipts converted into sterling amounted to £58,237 compared with £53,727, and with interest and miscellaneous receipts gave a total of £60,898 or £3,752 more to be dealt with. Interest and other charges absorbed about the same as a year ago at £25,983, but the balance brought in was so much less at £10,659 that the surplus for disposal came out at £45,574 against £45,659, and after putting another £5,000 to the renewal and contingency fund, and repeating the dividend of 3 per cent. on the ordinary stock, £10,574 or £85 less is carried forward. The renewal and contingency fund was debited with £6,478 for special expenditure on improvements, &c., and now stands at £37,522, against which there is an investment in £45,000 War stock valued at £44,550. Thanks to an issue of £100,000 first mortgage debenture stock, which was made during the year at 82 per cent., there is a credit balance on capital account of £43,324, but as £75,735 has been spent on stores, floating liabilities are large at £14,305 against £9,399 to come in from debtors. Cash amounts to £9,399, and in addition the company has £7,703 invested in Midland Railway preferred ordinary stock. The conversion of the tramway to steam traction and to the same gauge as the main line, is expected to be completed during the current year.

ALCOY AND GANDIA RAILWAY AND HARBOUR CO., LIMITED.

Gross receipts from this railway for the year ended December 31 fell off by £1,656 to £14,193, of which £7,117 was in passengers and £962 in goods. This decrease was partly offset by a gain of £739 at £9,334 in harbour receipts, but interest, &c., yielded less, and instead of the company having a profit of £610 on exchange £37 had to be provided for loss under this head. Total receipts therefore were £1,580 down at £23,914, and although expenses were slightly reduced the nett profits, after providing £1,000 for interest on the prior lien debenture stock, £500 for depreciation of rails, buildings, and rolling-stock, and £37 loss on exchange as above noted, was £5,358 compared with £7,066. A considerably larger sum of £1,123 brought forward, however, made the available surplus £6,481 against £7,123, and the distribution of 1⅛ per cent. on the 4 per cent. first mortgage debentures is repeated, leaving £481 to be carried to the new account. Capital outlay for the year, less the depreciation allowance, was £2,505, of which £2,366 was on the new sheds at harbour and £609 was on removal of sandbank at the new breakwater, leaving a credit balance of £10,060 still in hand. The directors say that owing to the increasing competition and the complaints arising from the coal business being handled at the same wharf as the fine fruit traffic, it is becoming evident that the existing wharf accommodation will have to be extended. As the harbour is held in perpetuity as a freehold property, they consider all money prudently expended upon it to be most desirable, and are giving constant attention to the improvement. The scheme of arrangement referred to a year ago, under which the moratorium is extended until 4 per cent. has been paid for four consecutive years on the first mortgage debentures, has been successfully carried through.

NOBEL DYNAMITE TRUST CO., LIMITED.

In the twelve months ended April 30 last the nett profits of this trust amounted to £263,227, a decrease of £56,474 on the return for the previous year. Including, however, £11,717 brought forward, which was £6,162 higher on the comparison of years, the sum available is only £50,312 less at £274,944. The directors are accordingly able to pay the preference dividend and to distribute 8 per cent. upon the ordinary shares, together with a bonus of 2 per cent. just as a year ago. They also reserve £2,000 for the dividend on the new preference shares from the date of allotment to April 30, and have £19,404 or £7,688 more left to carry forward. A year ago, however, £60,000 was added to reserve, which this time gets nothing. It is explained by the board that 1907 was a record year in the blasting explosives trade and the trust's subsidiary and allied companies, so far as quantities manufactured and sold went. Prices, however, were unsatisfactory, and only began to show improvement towards the end of the year. A marked decrease also took place in the orders for war materials, and it is chiefly to this that the decline in profits must be ascribed. Raw materials have also been dear, including coal, so that, all things considered, the wonder is the trust came out as well as it has done. Dividends received by it in 1907 on the shares held in dynamite and explosive companies showed a decrease of £62,173 at £232,090, but £5,021 more was received in interest at £46,160. This increase in the interest received is no doubt due to the fact that loans to subsidiary companies increased during the year by £454,500, and now amount to £1,212,000, the only other formidable item in the balance-sheet being an outlay on capital account, which stands at the previous year's figure of £2,295,946. Cash, debts, and dividends due to the company aggregate £308,351, a decrease of £62,781. The reserve amounts to £380,000, and of the £25,000 received as premium in the new issue of shares £20,819 remains after meeting the cost of issue to date, £4,181. This has been carried to a special account. The 50,000 new £10 5 per cent. preference shares were all taken up, and the paid-up capital of the company, including the previous £500,000 of preference shares and the ordinary capital of £2,285,400 now stands at £3,145,955. In their report the directors state that they have discontinued to supply the auditors with particulars of the directors' fees and managerial remuneration received by those of their number who are also directors or managers of companies in which the trust itself holds shares. This step has been taken on legal advice based on the resolution passed at the meetings of shareholders in 1900, the advice being sought in consequence of recent decisions in the Courts. From the trust itself the board gets £6,000 in fees, which is not a large sum when divided amongst thirteen gentlemen, and looking at the fine profits earned even in the worst of times.

CALLENDER'S CABLE AND CONSTRUCTION CO., LIMITED.

In 1907 this company's nett profit, after paying income-tax, was £20,319 down at £60,454, but £16,600 more was brought forward at £55,522, so that the actual decline shown by the available balance of £115,076 was only £3,719, and as rather less at £11,119 was applied to depreciation of building, plant, and machinery, the sum of £81,357 for distribution among the shareholders or other purposes was only £1,615 down compared with the previous year. The directors are accordingly able to pay the usual 10 per cent. dividend on the ordinary shares together with a bonus of 5s. per share, making 15 per cent. for the year and to place £10,000 to a suspense account, with £45,107 still left to carry forward or £11,615 less than was brought in. The directors consider these results highly satisfactory and in the circumstances this is undoubtedly the case. Almost everything was against electrical business in the past year. Over the greater part of it the price of the metals used was almost prohibitive and towards its close the stringency in the money market became a scourge to those businesses that depend to a considerable extent on credit. One large firm with which this company has dealings was forced into liquidation, and against the involvement in that direction the above-mentioned £10,000 has been placed to suspense account. Meanwhile energetic measures have been taken to extend the company's connections in the colonies and abroad, and its business in Germany has been consolidated and registered as a separate company under German laws with headquarters in Hamburg. In spite of the continued depression in every branch of engineering, the factories both at Erith and Leigh are fairly well employed, and everything in those factories is in first-class order. A well-deserved tribute is paid to the memory of Mr. W. O. Callender, founder of the business and the originator of the process which has brought success and fortune to the company. He died on March 14 last. Some changes in the balance-sheet may be mentioned. Amongst the liabilities, for example, there is a decrease of £84,783 in the bills payable, and trade creditors and other liabilities, the one being £95,959 and the other £69,828. The company has, however, a loan of £36,000 from the London and South-Western Bank on account of the St. Helens Company. Property at Erith has been written down by £5,129 nett to £301,502, and goodwill and patents are entered at nil. Stock-in-trade amounts to £104,689 or £183 more, and expenditure on contracts in course of execution at £83,947 is £35,900 less. Sundry debtors and money retained by corporations and others for fulfilment of contracts, together £274,211, show a reduction of £50,684, the reduction in the money retained by corporations, &c., alone being £56,668 at £82,875, so that sundry debtors at £191,336 owe the company little more. Cash and bills receivable, together £80,292, show an increase of £14,412, and the Anchor Cable Company is again entered at £74,000, while the £41,307 set against the St. Helens Cable and Rubber Company shows a reduction of £862. Shares and investments in other companies are estimated to be worth £94,309, an increase of £4,990, the total of the balance-sheet being £75,288 less at £1,074,507. Gross profit for the year, it should be added, was £14,353 less at £108,573.

NATIONAL ELECTRIC CONSTRUCTION CO., LIMITED.

Although gross receipts for the year ended December 31 showed a decrease of no less than £11,939, expenses were almost identical at £11,659. Management cost £922 more, but this was nearly balanced by a reduction of £663 in the allow-

ance on contracts, bad debts, &c., while a saving of £1,948 was absorbed by the additional charge of £2,049 for debenture interest. In the end £18,117 is carried down as compared with £30,035. Out of this the cost of debenture issue, £4,488, is written off, £3,000 or £2,000 less is put to reserve, £200 less at £1,000 to reserve against capital charges, and £500 more at £1,000 is applied to cover doubtful debts; depreciation on free wired installations is allowed only £451 against £4,289, and debenture redemption, a new charge, requires £1,550, so that only £6,706 remains, which is carried forward, making with £2,343 from last account a credit of £9,049 to profit and loss account. For the previous year a dividend of 10 per cent. was paid. The directors report, however, that the depression of last year appears to be passing away, and that should the negotiations in progress to deal with certain concessions materialise the declaration of an interim dividend will be taken into consideration. Purchase of business remains at £27,064; free wired installations, less depreciation, figure at £32,079; and contracts in course of completion £313,792 less £282,750 payments to date represent £31,042, and £56,745 has been expended on concessions secured. Investments have risen by £36,740 to £143,409, but income therefrom is £286 less at £1,642, the directors stating that delay in construction renders their investments in tramway and lighting syndicates unrealisable. Parliamentary deposits in Consols are responsible for £13,173, and cash is a bit more substantial at £6,185 against £704. Debtors owe £40,434 against the very unequal sum of £87,652 due to creditors. General and capital charge reserves aggregate £20,200. The finances generally seem to require steadying up before the question of any resumption of dividends can be safely considered.

CONSOLIDATED TEA AND LANDS CO., LIMITED.

In its year ended November 30 last this company's crop of tea amounted to 15,537,034 lbs., a decrease of 547,672 lbs. on the previous year. The average price obtained, however, was .32d. higher at 7.64d. The company also reaped 492,062 cocoanuts, besides 5,678 lbs. of rubber and 3 tons 13 cwt. of sisal. The profit brought out by the accounts was £42,347 better at £213,933. Debenture stock interest, commissions on profits to managing agents and secretaries and income-tax took £38,625 of this. The directors also wrote off the whole of the block expenditure of the year, £14,227. These deductions left £161,080 to be dealt with. Out of this the first preference shares get their dividend for the past year and the second 7 per cent. cumulative preference shares receive in all 17½ per cent., being the whole dividend for 1901 and 1902, together with 3½ per cent. on account of the dividend for the year ended November 30, 1903. These payments leave £36,080 to be carried forward or £18,442 more than was brought in, and over and above £5,000 has been transferred to the insurance reserve account against £2,000 to the general reserve a year ago. Things would thus seem to be looking up considerably with the company, and yet its accounts remain nearly as much of a puzzle as ever, and the cost of its cultivated area which now extends to 33,203 acres, of which 29,612 acres are under tea, 1,682 acres under cocoanuts, 1,468 acres under Para rubber, and 441 acres planted with sisal hemp, is about £61.44 per acre. Further plantings are going on, but it will be some three years yet before the rubber trees are in full bearing. The accounts show that the charges for conducting the business amounted to £23,295, this item including general charges in connection with the estates £5,717, Calcutta and Colombo agencies £5,858, London agency £2,417, and Glasgow office, directors' and auditors' fees £3,414. The value of the tea unsold at the date of the balance-sheet was £273,994, and cash at bankers was as usual meagre at £1,420, but cash at gardens and remittances in transit came to £11,796, and sundry debtors owe the company £35,875, while the loans outstanding at Calcutta and Colombo and at the gardens amounted to £46,510. On the other hand, advances, deposits and bills payable by the company came to £193,960, which, however, was £47,869 less than a year ago. The general reserve stands at £90,000 and the insurance reserve at £12,000. The Hopewell properties are now included in the balance-sheet and accounts, and are entered among the assets at £182,393.

AMALGAMATED TEA ESTATES CO., LIMITED.

In the year ended November 30, 1907, this company's tea crop was larger by 173,829 lbs. at 3,855,711 lbs., but the price realised was .38d. less than last year at 9.21d. The cocoanut estates yielded 58,773 more nuts at 1,136,844, and the rubber crop was 7,173 lbs. higher at 7,823 lbs. Though the market was not favourable for this company's stocks of tea the year's working gave rather a large profit owing to the increased return received on its investments. In order to help things along, moreover, the managing agents and secretaries have again made a rebate of interest on their advances to the company, and handed back the whole of their remuneration. The directors have also returned one-half of their fees which is really most honourable conduct on their part, and this Finlay, Muir group of companies is evidently pulling round a bit under its present management although the accounts are still far from clear to us. The profit for the year amounted to £61,475 against which £19,898 was paid away as interest, discount on bills and income-tax. Furthermore, one-half the cost of the Edengoda property has been written off together with the block expenditure of £2,230. From the balance of £39,347 left the directors have placed £15,500 to reserve against £16,000 a year ago, of which £3,000 is put to the insurance fund as compared with £1,000 out of the previous year's £16,000 in all set aside. Then the 5 per cent. cumulative preference shares will get on June 6 next a 5 per cent. distribution, of which 2 per cent. represents the balance of the dividend due for the year ended November 30, 1904, and the remaining 3 per cent. a dividend on account for the succeeding year ended November 30, 1905. These payments leave £2,847 to carry forward or £1,652 more than was brought in. The planted area of the company is now 13,033 acres, viz., 12,707 acres of tea, 1,111 acres of cocoanuts and 115 acres of Para rubber. It is proposed to put out 100 acres of sisal during the current season. The balance-sheet shows sundry investments at cost £191,490 which compares with £614,898, the cost of the Consolidated Tea and Lands investments, and this company seems to have received about 4.3 per cent. upon its portion while the Consolidated Company got a little more than 5 per cent. We cannot be quite sure because the items are entered, "dividends and interest on investments, shares in bonded warehouses, &c.," which gave £21,231 in the case of the Amalgamated and £30,732 in the case of the Consolidated Company. Altogether the Amalgamated Company owes £414,328, of which £270,137 has been advanced by shareholders, &c., and by James Finlay and Co., the balance of £144,191 being due to bankers and others on bills payable. This, however, is reduced in the balance-sheet exhibit by £62,647, being the value of the produce to be accounted for on November 30 last, the total value of such produce for the year having been £147,712, of which £84,892 worth was sold before the date of the accounts. Cash at bankers was £381, and bills receivable £3,000 and sundry debtors owing £21,817 came together to only £24,817.

ANGLO-AMERICAN DIRECT TEA TRADING CO., LIMITED.

We did not get the report of this Finlay, Muir company for the previous year, but last year's figures are interesting enough by themselves. The tea crop was 5,152,273 lbs. against 5,192,285 lbs. the previous year. The cocoa crop was 2,545 cwt. and coffee and cardamom crops amounted to 2,300 cwt. and 50,394 lbs. respectively, and the rubber crop to 23,994 lbs. Weather was unfavourable during the season, but the tea sold well and the average was .79d. higher than in 1906 at 7.70d. The coffee crop though was a very poor one. However, the balance at the credit of profit and loss was £66,045 at November 30 last, all these Finlay, Muir companies winding up their year on the same date, and after writing £6,000 off suspense account for block expenditure and meeting interest, discount on bills, commission on profits to managing agents and secretaries and income-tax which took £3,818, the balance left was £56,227, from which £5,000 has been transferred to insurance reserve account, and out of what remains the preference dividend has been paid together with a 5 per cent. dividend on the ordinary shares for the company's year. This leaves £2,967 to be carried forward. The area planted is now 16,919 acres, of which 10,904 acres are under tea, 2,792 under coffee, 1,260 under rubber, 965 under cardamoms, 803 under cocoa, 168 under Chinchona and 27 under camphor. The company's distributing businesses as a whole show an increased profit on the year, but the Russian business did not do so well. Altogether the value of the produce sold and to be accounted for is put at £181,725 and £50,817 of this was in pawn to bankers at November 30 last, the total amount due to bankers and others and on bills payable being £119,453, in addition to which the company owed sundry creditors £109,540, so that altogether it was using borrowed money to the extent of about £229,000 against which loans outstanding at Calcutta and Colombo and at the gardens amounted to £79,141, while sundry debtors owed the company £54,544 and it had £66,427 to get in on bills receivable. The stock of the American business was valued at £31,222, and the company's sundry investments were entered at £115,934. The income from dividend and interest, profit on the American business, shares in bonded warehouses, &c., amounting to £19,175 represents about 10½ per cent. upon these sundry investments, but, of course, there is much more money than that involved in the production of this revenue. Half the London agency charge was returned, leaving the amount entered at £551. The Glasgow office, directors' and auditors' fes took £1,224, and commission on profits to managing agents and securities £1,852.

KANAN DEVAN HILLS PRODUCE CO., LIMITED.

In its year ended November 30 last, this Finlay, Muir Co gathered a crop of tea weighing 7,011,529 lbs., an increase of 731,579 lbs. on the previous year. The price, however, obtained was .40d. up at 7.72d. as an average, although the produce of the Assam estates was not up to the usual standard. Coffee yielded 764 cwts. more at 1,864 cwts., but chinchona bark showed a decrease of 97,938 lbs. at 117,629 lbs. Nevertheless, the balance at credit of profit and loss was brought out at £77,294, an increase of £25,338, and after charging off interest, discount, commission, &c., which came altogether to £18,580, or £641 less, the directors write £10,000 off block expenditure suspense account and still have £48,615 left to distribute. Of this they place £3,000 to the insurance reserve fund, both these assignments comparing with nothing to either a year ago, and pay a dividend of 4 per cent. on the ordinary shares as compared with 2 per cent. twelve months back, leaving £615 to carry forward, or £2,020 less than was brought in. The planted area is 10,048 acres, of which 14,618 acres are under tea and 502 acres under para rubber. From the balance-sheet it is seen that the company owes depositors, &c., £170,412 for advances, and that it has borrowed from bankers and others, or has due on bills payable, another £105,441, against which £98,200 worth of unsold tea is pledged. That is £12,300 worth more than a total of a year ago. We should like to know how the directors of these companies manage to adjust their average prices when so much of the produce is always left over for the next account. The value of the entire produce was £222,330, and the company received as dividend and interest, &c., &c.,

£15,279 on sundry investments at cost amounting to £252,520. Commission on profits take altogether a little over £5,000, and the interest paid came to £16,758. Cash at gardens and at bankers was £486 down at £666. Loans outstanding at Calcutta and gardens amounted to £39,289, and sundry debtors owe £3,512 more at £16,484. In spite of the £10,000 written off there is still £10,142 representing what is called block expenditure suspense account carried as an asset.

AUCKLAND ELECTRIC TRAMWAYS CO., LIMITED.

This company again increased the number of passengers carried by over 1,300,000, and its gross receipts from this source for the year ended December 31 improved by £7,381 to £137,718. It was, however, a dearly bought improvement, as working expenses, including £3,435 more spent on repairs and maintenance, rose by £11,609 to £82,886 or from 55 to 60 per cent. of the earnings. Miscellaneous revenue was £706 up at £2,734, making a total income of £140,452 compared with £132,365, but payments to the Auckland City Council for rent and percentage of profits took an additional £322 at £3,568, and after providing for debenture interest and transferring another £10,000 to depreciation account the nett profits were £3,861 smaller at £29,722. Adding £3,102 brought forward the disposable total was £32,824 compared with £36,601, and as £2,658 is required for dividend on the preference shares issued during the year the directors have not only to cut down the ordinary dividend by 1 per cent. to 6, but reduce the appropriation to reserve by £2,500 to £10,000 and have £936 less at £2,165 to carry forward. Capital expenditure for the year was pretty heavy at £71,398, this sum including the acquisition of the necessary material for the Mount Eden, Mount Roskill and Grey Lynn extensions, the cost of a new generating set of 600 kilowatt capacity and the purchase of additional rolling-stock. With £12,684 for cost of old tramways now constructed and £19,496 for real estate in Auckland the total outlay on the property comes to £696,571. On the other hand, the depreciation fund was charged with £18,726 for renewals leaving it at £32,408, so that this and the reserve fund together only amount to rather less than 8 per cent. of the capital outlay. Liabilities to creditors and for accrued interest are £14,975 up at £33,931, and as debtors owe no more than £2,641, and cash has dropped by £8,110 to £22,833, the position does not seem particularly good in spite of the £50,000 of fresh capital raised.

MONTEVIDEO GAS CO., LIMITED.

Since this company reduced the price of its gas in April, 1905, the sales have increased in a very substantial manner, with such satisfactory results that the directors are now contemplating a further reduction. In the twelve months ended December 31 the revenue from sales, including residuary products, &c., improved by £11,565 to £79,266, and with £24,060 or £5,301 more from the dock, workshops, &c., the total income was £16,866 better at £103,326. Expenses at Montevideo were £7,339 heavier owing to the increased cost of coal and the addition to the wages bill caused by the shorter hours worked by the employees, but after meeting London office charges the nett revenue was £9,703 up at £34,677. Adding £10,938 brought forward, £1,858 from interest and profit on exchange, and £280 for directors' fees waived, the available total amounted to £47,753 compared with £37,650, or an improvement of £10,103. Debenture interest only requires £1,434, but £286 more at £753 is written off for bad and doubtful debts and an extra £184 at £4,905 is allowed for depreciation, after which another £1,000 is added to renewal reserve. The surplus left is still substantially larger than that of a year ago, but instead of increasing the dividend beyond the regular figure of 3¾ per cent. the directors transfer £4,240 to reserve and £5,000 to contingency account and carry forward a slightly increased balance of £11,311. Reserve now amounts to £28,000 and the contingency fund to £18,764, and in addition the company has an insurance fund of £12,500 and a renewal reserve of £2,500, making the total accumulations £61,764 against a capital outlay of £541,174. Creditors have risen by £1,583 to £6,697, but on the other hand debtors are £2,940 up at £15,627 and bills receivable come to £7,000 more at £17,000, while cash is £681 down at £5,114. Investments have been reduced by £3,006 to £47,748, and stocks and furniture are valued at £29,570.

TAYLOR'S EAGLE BREWERY, LIMITED.

Only a very tiny improvement of £251 at £26,011 was secured in gross profits for the year ended February 29, and to earn even this extra trifle cost £1,138 more, the outgoings, including £679 for bad and doubtful debts, £798 for managed houses and £1,172 for compensation fund charge. Nett profits were therefore £887 down at £12,225, and as rents less expenditure on repairs, &c., produced £3,007 against £3,581 and miscellaneous items were also smaller, the total showed a decrease of £1,484 at £15,338. Interest charges, however, were reduced by £943 to £8,604, and £230 less at £500 was written off in respect of licence surrendered, so that with £1,192 or £564 more brought in the surplus available was £330 better at £7,426. Out of this dividends aggregating 5½ per cent. are paid on the preference shares, £2,628 is put to the sinking fund and £1,045 to the general reserve compared with £1,000 to reserve and £1,192 carried forward a year ago. Changes in the balance-sheet are mostly unimportant, but it may be noted that the indebtedness to the bank has been increased by £2,362 to £4,420, and that £2,250 of the debenture stock has been purchased and cancelled. Creditors come to £6,071 or £378 less against which debtors owe £5,605, stocks are valued at £6,338 and cash amounts to no more than £742, apart from £741 held on account of sinking fund and a small sum to meet unclaimed dividends. Property account was increased by £2,310 for alterations and additions, new leases, &c., but £2,915 was written off out of compensation received, depreciation of leases, &c., leaving the item £605 down on balance at £396,435, against which mortgages stand at £176,111 or £885 less. The directors state that with the object of enabling the scheme for the reduction of debenture interest and preference dividend, &c., mentioned a year ago to be carried through it was found necessary to form a syndicate to take up the holding of dissenting debenture stockholders. Stock to the nominal value of £4,2[illegible]00 was purchased, at prices which on the average were slightly over par, and the directors, who were members of the syndicate, now ask the shareholders to indemnify them against loss by agreeing to these debentures being acquired by the company at a cost not exceeding £4,350. So sure are they of getting this plan sanctioned that they have already used £1,250 of the reserve fund to acquire and cancel a like amount of the debenture stock. In addition to being relieved of the possibility of loss over this transaction the directors ask for special remuneration for their services in connection with the scheme—a request which seems particularly cool considering the weak position of the company's finances.

INVESTMENT TRUST CORPORATION, LIMITED.

This company's resources were increased during the year ended May 1 by the instalments on the 26,000 new £10 shares issued in April, 1907, and by the subscription of £252,000 4 per cent. debenture stock, so that its paid-up share and loan capital now stands at £3,112,000. The additional funds would seem to have been invested at remunerative rates as the total income rose by £19,210 to £164,784, but debenture interest required an extra £5,974 at £55,374, and interest on prepayment of shares and dividends on instalments took £7,470. Administration charges, too, were £800 higher at £8,550, and after providing for income-tax and miscellaneous charges the nett surplus, including £15,274 or £2,709 more brought forward was £7,696 better at £105,020. Of this £4,280 more at £12,231 is transferred to reserve, and after repeating the dividend of 9 per cent. on the deferred stock the sum carried out is raised by £3,416 to £18,689. Investments show an increase of £439,966 at £3,407,6[illegible], of which £2,586,179 is in railway securities, chiefly American, and £821,469 in miscellaneous stocks, but owing to the general depreciation which has taken place the directors have had said to modify their usual statement. A year ago they per that, taking the quoted securities, representing 85 t a cent. of the total, at middle prices and the unquoted at conservative valuation, the assets, after allowing for outstanding balances, exceeded the share and debenture capital and reserve fund by more than £200,000. On this occasion, however, all that they can say is that the capital and reserve are more than intact, but even that is fully as satisfactory as could be expected, all things considered. Changes of investment yielded only a small profit, too small apparently for the amount to be mentioned, and this has been applied in reduction of securities, whereas a year ago the reserve benefited to the extent of £12,049. That fund now gets £27,769 from premiums on shares less expenses of that and the debenture issue and now reaches a total of £290,000. Apart from accrued interest on debenture stock the liabilities are very small, while debtors owe £38,123, and cash, although £13,849 down, seems fairly ample at £32,190.

BANKERS' INVESTMENT TRUST, LIMITED.

The revenue of this important trust for the year ended December 31 after applying a portion of the income received on certain wasting investments in reduction of their book value, amounted to £132,329. Management expenses absorbed £3,067, directors took £2,600 instead of the £4,000 authorised by the articles of association, and after providing for debenture interest and one or two small charges the nett profit was £92,251. Adding £995 from the previous account the amount available was £93,246, out of which £15,000 is transferred to reserve and dividends of 4½ per cent. are paid on both preferred and deferred stocks, leaving £1,296 to be carried forward. The reserve fund was further increased by £20,848 from balance of profit on realisations of investments and bonds paid off, but £33,807 was applied in writing down the securities held, so that the nett addition is only £2,040 at £72,757. With a paid-up capital of £1,800,000 and a debenture debt of £900,000 the investments stand at £2,783,140, but the directors admit that on this total there is a small percentage of depreciation at present prices which is not covered by the reserve. A full list of the securities accompanies the report, and although there appear to be a good many items in which there is no free market, the selection on the whole looks a fair one. The other assets in the balance-sheet consist of a loan of £30,000 on security and £12,607 in cash, while apart from accrued interest the liabilities are trifling.

GRESHAM LIFE ASSURANCE SOCIETY, LIMITED.

In 1907 the new premium income was £90,402 and the total premium income £1,009,973. Interest and dividends gave £337,471 in addition and the total income of the society was £1,405,950. Claims which were within actuarial anticipation came to £794,634 nett and £70,372 was disbursed on surrenders. Commission and expenses of management took about £211,000 or 20.91 per cent. of the premium income, the company doing a large foreign business costly to conduct. At the end of the year the life fund was increased by £263,828 to £8,192,362. There was also an increase of nearly £10,000 in the annuity fund of £1,402,083, and during the year £130,402 was received for annuities sold, while the interest and dividend income of that department was £55,886. A small business was also done in leasehold and other forms of insurance.

CITY OF DUBLIN STEAM PACKET COMPANY.

Receipts from steamers and dividends on investments for the six months ended February 29 were £86,384 and with £49,000 from Post Office payments and £5,779 brought in the total income was £141,163. Working expenses took £102,009, charter money to

steamship building company £7,983, interest on mortgage loan £6,125, guarantee to City of Dublin Junction Railways £1,500, and sinking fund for mortgage loan £8,000. Balance left was £15,546, and after placing £5,200 to depreciation and renewals fund, writing £625 off City of Dublin Junction Railways unguaranteed stock, and £1,000 off investments, a dividend at the rate of 2 per cent. per annum is paid, and £2,861 is carried forward. The company's fleet of trading steamers, less renewal fund, is valued at £164,196, and the mail steamers, less a sinking fund of £221,154, at £178,010, while land, buildings, and plant come to £155,800. Old steamers sold out of service, however, still figure as an asset for £89,729, and there is no indication of any provision for wiping out this item. Other assets consist of sundry debtors £42,745, cash £5,558, stocks of coal and stores £6,887, investments on account of sinking fund at cost £221,154, general investments £123,525, and the £25,000 nominal of City of Dublin Junction Railways unguaranteed stock now written down to £10,625. Against these creditors amount to £19,316, general repairs funds total £26,334, and depreciation of investments fund is £2,000. The directors' report contains a full account of the dispute between the company and the L. and N.W. Railway over the right of the latter undertaking to use the Carlisle Pier, Kingstown.

MINOR NOTICES OF COMPANY REPORTS.

Alabama Coal, Iron, Land and Colonization Company.—During the year ended December 31 the Alabama State Land Company sold 160 acres of fee simple for $2,400 and 14,135 acres of surface rights for $66,248, and its total receipts on account of these sales, note collections, and interest in respect of past sales, options, &c., amounted to $102,390. Of this $34,212 was absorbed by expenses, and $82,500 or £16,998 was remitted to this company, leaving $10,120 in hand. Of the remittances £334 was credited to profit and loss account in respect of 37 Alabama 8 per cent. gold State bonds of 1870 held, and £16,664 was put to land realisation account, making with the balance brought in a total of £17,471, out of which £11,665 is transferred to bondholders' sinking fund and income-tax took £509. After deducting the debit balance of £1,059 from profit and loss the available total was £4,238, and the directors propose to pay a dividend of 9d. per share, leaving £283 to be carried forward. The bondholders' sinking fund, with £2,238 brought in and £62 from interest, amounted to £13,965, out of which three coupons upon all the instalment certificates issued absorbed £11,076, and £2,889 is carried to the new account.

Bankers' Guarantee and Trust Fund.—The trustees of this useful institution state that the nett subscriptions and premiums in respect of current policies amounted to £148,278, of which all but £8,881 had been received before the year closed. The total of the general and reserve funds in hand at that date was £228,730, and there is also an investment reserve of £12,000. Members' subscriptions gave £4,781 and interest on investments £6,841, while about £1,373 was received from other sources, giving £12,996 as the revenue of the year, against which payments took £6,220, including £4,683 demanded by losses.

Britannia Nitrate Company.—The first annual report of this company for the period ended June 30, 1907, states that substantial progress had been made at that date with the erection of the oficina, but owing to the scarcity and high cost of labour the work of construction had taken longer than was expected. Expenditure on the maquina had also been on a larger scale than was anticipated, and the outlay on the property, including the purchase price of £75,000, amounted to £153,282. An issue of £70,000 debentures was made and 25,000 shares were allotted at 21s. per share during the year, making the share and loan capital £150,307, in addition to which £19,693 in shares and £307 in cash is due to the vendors on completion of the transfer of the property. As £5,169 has been paid to the Taltal Railway for a siding and tools, &c., and stores have cost respectively £4,233 and £10,732, while administration expenses, debenture interest and preliminary expenses amounting to £6,375, as well as debenture issue expenses of £8,363 are carried as assets, the company has had to resort to borrowing. Advances from bankers consequently come to £13,103 and £10,048 is owing to creditors against £3,331 in stocks of caliche, £2,477 due from debtors, and £2,409 in cash.

Cape Asbestos Company.—A further satisfactory increase of £2,803 at £21,857 is shown in the gross profits for 1907, but the directors were not quite so successful in keeping expenses down as they were a year ago. After providing £1,482 for depreciation and writing £750 off the goodwill of the Turin business compared with £1,620 and £500 respectively the gain in nett profits was £1,792 at £8,062, which is applied in reduction of the debit balance, leaving £3,344 still to be wiped out. Asbestos estates in South Africa has been increased by £2,234 to £28,133, plant, machinery, &c., is £2,544 up at £17,160, and holdings in associated companies, regarding the value of which the auditors do not venture to express an opinion, are a trifle up at £18,961. Part of these, as well as some portion of the estates, have been charged as security for loans, now amounting to £18,446 or £1,831 more. Creditors and bills payable are £2,707 up at £16,270, but debtors have risen by £5,379 to £18,818, and stocks are £6,214 larger at £31,246, while cash is only £630 down at £1,149.

Charrier and Marbut Carvings.—Gross trading profit for the year ended December 31 last shows an increase of £664 to £8,942, but the total income, including £29 profit on redemption, amounts to £8,983 or £342 less. Outgoings, however, were £392 less, so that the nett profit is actually £50 better at £1,138. This sum is carried forward, making with £496 brought in, a total credit to profit and loss account of £1,635. Real estate, patents, and goodwill are £135 higher at £82,646, and plant at £26,111 is on balance £14 down after the small sum of £38 has been written off loose plant. Stock is up £347 to £14,227. Debtors at £6,455 still keep the right side, being £3,116 over creditors. Cash and bills are larger by £907 at £2,597. Depreciation reserve amounts to £1,500, which covers depreciation in share holding of £500 in William Angles and Co. (Scotland), Limited, allotted for services and expenses incurred on account of that company. The fortunes of the company appear to be moving slowly, but very slowly, in the right direction.

Kacharigaon Tea Company.—A drop of nearly ½d. to 7.73d. per lb. in the price realised rubbed some of the bloom off the increase of 93,740 lbs. in the 1907 crop and gross proceeds were only £2,426 higher at £12,345. Expenses were £2,093 heavier at £10,574, and with £242 brought in and miscellaneous receipts the gain in nett profits was £399 at £1,846. The directors, however, are able after paying the preference dividend to increase the distribution on the ordinary shares from 2½ per cent. to 5, and still have £251 to carry forward. Estates stand at the old figure of £30,890 and the company, of course, has nothing in the shape of a reserve or depreciation account. Floating liabilities have risen by £1,445 to £6,397 against which tea stocks are £825 up at £5,493, debtors owe £1,586 or £810 more, and cash is £122 higher at £218.

Lascelles, Tickner and Company.—Gross trading profits made by this Guildford brewery for the year ended March 31 amounted to £37,080. Rents added £2,862, making with fees a gross income of £39,946. Against this is charged £1,586 for rebuilding and improvements in addition to repairs, and £3,663 is allowed for general depreciation and £1,400 written off improvements, so that after paying interim dividends, debenture interest for half-year, fees, &c., £6,256 remains, making with £3,237 brought in £9,493 to be dealt with. Debentures and preference shares provided for, 3 per cent. is paid on the ordinary, making 5 per cent. for the year, and £3,750 is carried forward. Property and goodwill is reduced by depreciation allowance and £4,134 compensation for leases to £222,188. Debtors less reserve are £8,722 against creditors for £4,915. Stocks are taken at cost at £8,777, and cash comes to £7,756. Floating liabilities are £14,488 due to depositors and £8,000 to mortgages purchased. Reserve, to which no fresh addition has been made, remains at £22,675.

Rangoon Electric Tramway and Supply Co., Limited.—In spite of difficulties with the machinery which caused a delay of several months, especially with the two turbines, this company managed last year to earn £7,664 nett, making with the balance brought forward £9,440, which just covered the dividend on the preference capital and left £440 to carry forward; but that is only the beginning of things, because during the year there were delays, not only from defects in the machinery, but owing to other interferences with the development of the traffic, and the supply of energy for lighting and other purposes is only in its initial stage, so that when the company is fully at work there is no reason why it should not be steadily profitable to all concerned. Its balance-sheet shows a total capital unspent at December 31 last of £433,315. Formation expenses were heavy at £27,607, but all except £2,607 of this has been written off by putting against it the premium received on the ordinary shares issued. A map is supplied with the report to show the extent of the tramway lines in operation and the area over which plant for private supply of electricity has been laid down.

South Wanarajah Tea Estates.—Including 89,694 lbs. from bought leaf, the total output for 1907 amounted to 682,357 lbs., on which a nett average price of 6.46d. per lb. was obtained. Gross proceeds were £18,355, and with £422 from miscellaneous receipts and £209 from the previous amount the total revenue was £18,986. Expenses in Ceylon and London absorbed £12,317, and after providing for debenture and other interest and preference dividend and writing off the usual £150 for depreciation, £2,000 is put to reserve and a dividend of 10 per cent. is paid on the ordinary shares, leaving £406 to be carried forward. The appropriation to reserve appears to be more than usual, and the directors explain that it has been made partly in order to meet a larger payment on Poyston Estate mortgage and partly as a reserve against coolie advances. Out of this reserve £1,400 has been paid off the Poyston Estate mortgage, reducing it to £2,800, and the total mortgage indebtedness now stands at £20,800, while the property is valued at £50,293. A sum of £4,482 is due to sundry creditors, but produce in hand is valued at £5,200, and cash, including £950 in the hands of the London agents, comes to £2,620.

Trust and Agency Company of Australasia, Limited.—For 1907 this company's profit was £71,432, including £1,070 brought forward, and of this £18,865 was charged as interest on ordinary capital paid up in advance of calls. The preference dividend took £43,750, and out of the balance the dividend on the ordinary shares has been made up to 1s. 6d. or 7½ per cent. for the year by a final payment of 1s. per share. A balance of £2,254 remained to be carried forward. Mortgage securities realised during the year showed a deficiency of £7,200 and £7,000 of that has been met by a transfer from the reserve, bringing it down to £157,000. Including property foreclosed, the total amount sunk in Australian property is £1,668,464, and the company has £225,700 invested here, cash at bankers being

£58,130 and sundry credit balances £24,010 against £10,808 of debit balances.

Sutherland Steamship Company.—The freight market has not been particularly good during the past year, but this company managed to earn a profit of £11,939 in the twelve months ended March 31, to which was added £1,020 brought forward. After providing for all charges, the ordinary shares again get 7½ per cent. and another £5,000 is put to maintenance and reserve fund, but the sum carried out is reduced to £203. The fleet has been gradually written down from £189,663 to £132,000 or only £4 12s. 6d. per ton, while the reserve shows a balance of £2,786, and the insurance fund comes to £7,074. Creditors, however, are very heavy at £23,157 against debtors £496, average accounts outstanding £1,121, unexpired insurance £6,996, and cash £154. The directors report that although the present condition of the freight market is deplorable, profitable employment for the fleet was secured some time ago.

Wm. Simons and Company.—This Renfrew business of shipbuilders and engineers earned a nett profit for the year ended March 31 of £36,992, and with £5,040 brought in had an available total of £42,032. Of this £1,000 is written off buildings, £3,113 off plant, machinery, &c., and £3,000 off investments, then £3,000 is put to special reserve and £8,500 to general reserve, and after paying preference dividend the ordinary shares get 10 per cent., leaving £4,982 to be carried forward. The item of goodwill, patent rights, drawings and working designs has been eliminated from the balance-sheet, but the sum now written off land and buildings just represents the outlay during the year, so that this item is unaltered at £47,490, while plant, machinery, &c., is £2,000 up on balance at £57,500, and a large proportion of the capital of £250,000 is represented by unspecified investments having a book value of £105,236. The reserve funds now aggregate £32,000, and are practically held in cash, which amounts to £54,611. Creditors at £20,147 exceed debtors by £930, but stock and loose plant is worth £21,173, and work in progress, less instalments on account, is down for £9,934.

BUDGET FINAL BALANCE SHEET, 1908-9.

ESTIMATED REVENUE.

	£	1908-9.
Customs	32,600,000	
Deduct—Proposed reduction of Sugar Duty	3,400,000	
		29,200,000
Excise		35,500,000
Estate, &c., Duties		19,500,000
Stamps	8,100,000	
Deduct — Proposed reduction on Marine Insurance Policies from 1st January, 1909	20,000	
		8,080,000
Land Tax		700,000
House Duty		1,900,000
Property and Income-tax		33,000,000
Total Receipts from Taxes		£127,880,000
Postal Service		18,250,000
Telegraph Service		3,000,000
Telephone Service		1,520,000
Crown Lands		530,000
Receipts from Suez Canal Shares and sundry Loans		1,170,000
Miscellaneous		2,000,000
Total Receipts from Non-Tax Revenue		£26,470,000
Total Estimated Revenue		£154,350,000
Borrowings to meet Expenditure chargeable against Capital		£2,785,000

ESTIMATED EXPENDITURE.

	£	1908-9. £
I.—Consolidated Fund Services.		
National Debt Services:		
(a) Interest and Management		18,215,000
(b) Repayment of Capital		9,785,000
		£28,000,000
Other Consolidated Fund Services		1,685,000
Payments to Local Taxation Accounts, &c.,	11,250,000	
Add—Proposed Payment for cost of collection of transferred Licences	40,000	
		11,290,000
Total Consolidated Fund Services		£40,975,000
II.—Supply Services.		
Army (including Ordnance Factories)		27,459,000
Navy		32,319,000
Civil Services	30,510,000	
Add—Proposed provision for Old Age Pensions from 1st Jan., 1909	1,200,000	
		31,710,000
Customs and Inland Revenue Departments		3,324,000
Post Office Services		18,322,000
Total Supply Services		£113,134,000
Total Estimated Expenditure		£154,109,000
Balance		241,000
Total		£154,350,000
Expenditure chargeable against Capital		£2,785,000

NEXT WEEK'S MEETINGS.

Monday, May 18.

Anglo-American Direct Tea Trading.—Glasgow, 2.30 p.m.
Bankers' Investment Trust.—Winchester House, noon.
Berry United Deep Leads.—Winchester House, noon.
Carthagena and Herrerias Steam Trams.—Salisbury House, 2.30 p.m.
Clitters United Mines.—Salisbury House, 2.30 p.m.
Consolidated Tea and Lands.—Glasgow, 11 a.m.
Land, Mortgage, Investment and Agency of America.—Bush Lane House, 2.15 p.m.
Marconi's Wireless Telegraph.—Adelphi, W.C., 3 p.m.
Montgomerie and Co.—Glasgow, 3 p.m.
River Plate Trust Loan and Agency.—52, Moorgate Street, E.C., 12.30 p.m.
Van den Berghs.—Salisbury House, 3 p.m.
William Roberts (Tipton).—Birmingham, 12.30 p.m.

Tuesday, May 19.

Amalgamated Tea Estates.—Glasgow, 11 a.m.
Cape Asbestos.—23, King Street, E.C., noon.
Cape Town Consolidated Tramways.—1, London Wall Buildings, E.C., 3 p.m.
Hyderabad (Deccan).—Winchester House, E.C., 12.30 p.m.
Imperial Tea.—Winchester House, 3 p.m.
Kanan Devan Hill Produce.—Glasgow, 2.30 p.m.
Leopoldina Railway.—River Plate House, noon,
Liverpool and London and Globe Insurance. — Liverpool, 11.30 p.m.

Wednesday, May 20.

Auckland Electric Trams.—Donington House, noon.
Broxburn Oil.—Glasgow, 1 p.m.
Costa Rica Electric Light and Traction.—Winchester House, 3 p.m.
Investment Trust.—Cannon Street Hotel, 2 p.m.
Monastry Diamond Mines.—Salisbury House, noon.
Oakbank Oil.—Glasgow, noon.
Park Gate Iron and Steel.—Sheffield, 2 p.m.

Thursday, May 21.

Anglo-Chilian Nitrate and Railway.—River Plate House, noon.
Argentine Land and Investment.—Salisbury House, 2 p.m.
Brampton Brewery.—Brampton, 12.30 p.m.
Callender's Cable and Construction.—Hamilton House, 12.30 p.m.
Charron.—Salisbury House, 11 a.m.
"E.C." Powder Co.—Winchester House, 2 p.m.
House Property and Investment.—Cannon Street Hotel, 11 a.m.
Lascelles, Tickner, and Co.—Guildford, 2.30 p.m.
Montevideo Gas.—Winchester House, 2.30 p.m.
Rock Life Assurance.—15, New Bridge-street, E.C., noon.

Friday, May 22.

Calcutta Electric Supply.—Salisbury House, 2 p.m.
Consolidated Trust.—Winchester House, noon.
Perth Electric Tramways.—Chamber of Commerce, noon.
San Lorenzo Nitrate.—Liverpool, 2 p.m.
Scottish Australian Investment.—Winchester House, noon.
Siberian Mines.—Winchester House, noon.

National Provincial Bank of England.—The statement for April 29 shows liabilities on notes or bills of £584,308, and on simple contracts of £54,912,572, against assets consisting of cash on hand and at Bank of England £8,425,368, money at call and short notice £3,248,645, British Government and other securities £14,334,166, and bills of exchange £34,838,701.

Coupons due June 1 of the Imperial Japanese Government 5 per cent. Bonds for yen 43,000,000 will be paid by the Yokohama Specie Bank.

The Crown Agents for the Colonies announce that the scrip certificates in connection with the Southern Nigeria Government 4 per cent. convertible bond loan will be ready for issue in exchange for the letters of allotment on Saturday, the 16th instant, at No. 1, Tokenhouse Buildings, E.C. Those allottees of the loan who have already deposited their letters of allotment on the occasion of the call due 12th instant will receive scrip certificates in exchange for the tickets which have been issued.

The Underground Electric Railways Company of London, Limited, notify holders of their profit-sharing secured notes, that over 90 per cent. having been deposited under the scheme, such scheme will be proceeded with. The time for depositing notes with the London and Westminster Bank under the deposit agreement is extended to the 29th instant.

The list of applications for the issue of 100,000 shares of £5 each in the Legal Insurance Co., Limited, will be closed Saturday, May 16, 1908.

Hunasgeria Tea Company.—The 1907 crop was considerably larger than those of the previous six years at 441,539 lbs., and the average price of 7.05d. was also the best of the period, while the cost of production was the lowest. Total receipts amounted to £12,942, but estate expenditure took £12,375, and after meeting administration charges nett profits were only £321. With £107 brought forward the available balance was £428, out of which the directors propose to pay one year's preference dividend on account of arrears, leaving £68 to be carried forward. Arrears still outstanding, however, amount to £2,520, so that the company is a long way from being out of the wood. Block account with £686 spent during the year stands at £28,728, or the exact amount of the share capital. Creditors and bills payable total £6,151 against £1,778 due from debtors, £2,860 in tea stocks and £1,941 in cash.

TRADE AND PRODUCE.

Wheat.—Markets all round have been duller and weaker. American advices have as a rule been unfavourable, and have had a depressing effect. Demand for spot wheat has been smaller, and except in the case of River Plate parcels, which advanced about 1d., prices have been lower. But even holders' willingness to accept less money did not bring many buyers forward. English wheat has been firmly held, because of the scarcity of offers as a rule, and farmers' deliveries, though larger than those of the previous week at 59,686 qrs., averaged 32s. 4d. against 53,080 averaging 27s. 6d. in the same week last year. Imports from abroad were 422,017 qrs. against 544,064 imported in the same week last year, and the quantities of wheat and flour at present on passage to the United Kingdom are 3,035,000 qrs. against 3,185,000 last week, the Continent receiving 2,030,000 qrs. against 2,280,000. Favourable crop news depressed American markets, particularly in respect to forward months, but Thursday's tone was steadier, and prices up a little. Visible supply shows a decrease of 2,172,000 bushels on the week.

Cotton (from our Manchester correspondent).—There has been rather more activity in our market during the past week, and although the prices secured by both spinners and manufacturers have not given much satisfaction, the amount of business which has reached the order-books is on a rather more extensive scale. American cotton in Liverpool has continued to advance in price, and buyers of yarn and cloth have been stimulated to enter the market a little more freely. Rather unfavourable reports have come through relating to the prospects for the American crop. The weather recently has not been very satisfactory, but it is generally considered that there will be an increase in the acreage under cultivation. Shippers of piece goods are not receiving advices from abroad, which stimulate them to act freely, but the total sales in orders of a sorting-up character have shown a little improvement. The buying capacity, however, will have to be considerably greater before manufacturers can hope to improve their position. Fair sales have transpired in light goods, such as mulldhooties for India, and offers for shirtings have been rather more plentiful. In addition to sales for Calcutta and Madras, more activity has shown itself on the part of Karachee. The demand for China is disappointing, and buyers seem quite content to look on and wait for more settled conditions. Now and again a fair line has been mentioned for Singapore, and the smaller markets of the Far East are not inactive. Some improvement can be recorded in the demand for our near Eastern markets, and both for the Levant and Egypt the total sales are rather larger. Considerable difficulty is experienced in arranging business. Needy sellers can still be found, and prices are fixed on a low basis. In certain directions printing cloths have been in larger inquiry, and some fair sales have transpired in both Burnley and Glossop makes. The home trade houses have experienced a little more activity, more spot parcels being sold in light fancy materials. In heavy goods fair orders have been placed for delivery in the autumn, notably in waste goods and drills. In American yarns for home consumption prices have hardened, and spinners have booked on a rather larger scale than in most recent previous weeks. The stiffer attitude of sellers now adopted is rather restricting operations. Stocks of twists are still heavy, but on the whole the position for producers is rather better. Not much has been done in export kinds, although a fair inquiry has been dealt with. Bolton spinnings are firmer, and owing to order lists having recently been fortified spinners are rather more difficult to deal with.

The American cotton markets (say Sir Jacob Behrens and Sons) have been very strong during the past week, and prices have advanced rapidly from day to day. The trade demand has assisted the advance, but an element of speculation has also crept in of late. It is reported that large sales of cotton have been made to spinners, which sellers find some difficulty in covering, and that the fear of a squeeze in July has brought out a quantity of orders. Trade reports are rather more favourable, but we may look for some reaction in the raw material after so rapid an advance. Egyptian cotton is decidedly firmer, and quotations have been raised $\frac{1}{8}$d. per lb. This advance in the raw material has compelled spinners to raise their prices, but it is easier to ask for an advance than to get it, and we fear that the volume of business has not been very large. Unfortunately margins are now so unprofitable that spinners dare not take any risks, and short time is therefore on the increase.

Wool.—London sales of colonial wool opened with a drop of from 10 to 15 per cent. for lower and medium crossbreds, merinos declining from 7½ to 10 per cent., but the next day showed an improvement, and by Thursday values for low crossbreds were quoted fully 5 to 10 per cent. above opening rates. Merinos have been in comparatively small supply, and the majority of those sold have also hardened the last day or two. Naturally this lift has brightened the views of Bradford and Leicester; even the opening prices were not as bad as were expected, about a fortnight ago, and top makers consequently are firm in their attitude, particularly towards low crossbred tops. But so far not much actual business has resulted, the situation still needs caution, and from manufacturers at least come depressing reports of the state of trade. Spinners also are having an anxious time; many, says the *Manchester Guardian*, had booked orders, and were careful to cover them in December-January. Those transactions are bad for all concerned to-day, and it is only by all parties carrying out their engagements as honourably in a falling market as in a rising market that heavy losses, not to say ruin, in some directions can be avoided. Yarn prices will need adjustment on the results of London wool values. Some spinners have overestimated the fall, and will withdraw very low speculative quotations, while some others who have been standing out on too high a level will reduce or modify their quotations.

Coal.—Exports from Hull for April show a decrease of over 98,000 tons compared with the April of 1907, and the cause of it is chiefly due to the fact that nearly all European countries have been decreasing markets. The only large increase was in South America, where 23,392 tons were sent compared with 13,483 tons in 1907. Total exports for the four months from Hull show a decrease of over 109,000 tons. Wales, Scotland and the North of England export trade keeps vigorous, and shows encouraging signs. Owners in the north are scarcely able to meet the demands upon them, and naturally have sent their prices up. Welsh prices also are hardening, and now that contracts are coming to the fore, higher figures are likely to be quoted. It needs all the export business possible, however, to sustain the trade, for home consumption is anything but good.

Iron and Steel.—Nothing has happened to relieve the monotonous depression of these trades; things seem gradually to be getting worse and worse. Hematite demand continues smaller than the output as regards West Coast metal, home consumption being less than for years, and from none of the foreign or colonial countries are any promising orders forthcoming. East Coast output has been reduced still more than West, and there are no stocks in stores with which to encourage speculation, but legitimate business is extremely small. The market for Cleveland pig-iron, says the *Engineer*, is in an altogether anomalous position. Movements of prices are quite disorganised, and prospects are rendered most uncertain by the operations of speculators. A "squeeze" is still in progress, and knowing that they have the "bears" in a corner, the holders of Cleveland warrants are making them pay heavily for not covering. Legitimate trade is therefore much hampered, and it may be some weeks before the corner ends and prices collapse. Of steel there is nothing to say except that no single department is free from depression, and there is not enough work going to keep more than a few mills open.

Copper.—Fluctuations have been narrow, but prices in the early part of the week tended downwards. They touched their lowest on Tuesday, when some aggressive offerings of forward metal coming in a reluctant market caused a drop to £56 15s. for cash and £57 10s. for two months. At these levels speculators were readier to buy, and with firm foreign advices a rally followed, but to-night's quotations were a trifle under the best at £58 for cash and £58 15s. for two months.

Tin.—An improvement caused chiefly on bear account showed in the early market, but did not last. Weakness in the East, where some selling took place at £136½ c.i.f., and vigorous attacks by bears brought values down to £132½ and £132¼ cash and three months. Yesterday prices were better again, though in the East they were down to £133½; some large buying orders caused bears to get anxious, and prices closed stronger at £135¼ and £134.

Tea.—Bidding in the salerooms has been animated for all grades, except perhaps the common leaf, according to Messrs. W. J. and H. Thompson, due probably to the knowledge that the Indian crop is being closed more rapidly than usual, and that Ceylon will scarcely be able to supply all demands during the next three months. Some 29,149 packages of Indian were brought forward, and for these last week's advance in rates was fully maintained. Assams of good quality get higher prices and more attention each week, and as already many gardens have sent their final invoices it looks as if supplies will be very short before the new crop arrives. 25,152 packages were sold on garden account, and obtained an average of 8.07d. against 26,772 packages averaging 8.08d. in 1907. Importers of Ceylon brought forward 24,773 packages, and all classes were firmly competed for, with better sorts showing an advance in some cases of ½d. per lb., the average for the week, both this year and last, coming to the same as in the Indian market. Java sales of 3,293 packages passed off without any change from last week's rates.

Sugar.—Various factors helped to discourage, at least temporarily, both speculators and traders after the first excitement over the decrease in duty had subsided; and, as a result, prices after rising several pence fell below opening rates. The reduced duty comes into force on Monday next, and Government has refused to postpone the date or give a rebate on duty-paid stocks in store. A quick resumption of business is wanted by everybody, Mr. Czarnikow considers, as trade has suffered, and delivery orders were cancelled on all sides; therefore, May figures will compare very unfavourably, but it is hoped that we shall make up for it in subsequent months. For this purpose, however, sufficient sugar has probably accumulated here in April-May, and that is one reason of the reaction, which sellers abroad could not understand. Another reason may be found in the reflection of our dull reports from America, where prices receded from 4.48 to 4.36 cents. This quotation has not been steadied by the more favourable weather in Cuba, where rains seem to have set in for good, and where the weekly receipts, instead of declining, rose to 11,000 tons. Even if this is accidental, the number of larger factories remaining at work only declined from 25 to 23, so that a shortage on the figure of 900,000 tons can hardly now be expected: in fact, some people again believe in 900,000 tons minimum. At the same time the imports into United States are very large this week, and less is heard of the wild assertions that hundreds of thousands of tons more present

crop beet will be required. But in spite of these heavy receipts, &c., quotations on American markets for granulated advanced to the late highest level, which seems to indicate that demand for refined is satisfactory. Landings in the three ports were 76 tons, meltings 41,000, raising stocks to 308,000 tons. A further reason for the quieter feeling over here, Mr. Czarnikow's circular gives, was the more seasonable weather in Europe and the factory estimates of sowings, which show no quotable reduction on last May in statistical countries, but it is said that Russia will have some falling off; in fact, two very important failures of sugar producers in that country (though their factories are kept going) are interpreted as showing the ebb tide setting in, and also as a sign of diminished holding power, which will bring full supplies to United Kingdom from old stocks, even if there is less production next season. In convention countries the crop seems to get a fair start, but it is late.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Mexican Southern.—3 per cent. on the ordinary stock for 1907, placing £5,000 to the renewal and contingency fund, and carrying £10,573 forward.

Southern Punjab.—At the rate of 6 per cent. per annum for six months ended Dec. 31, together with a bonus of 1½ per cent., making 7½ per cent. for 1907, carrying forward £74,073.

MINES.

New Heriot.—25 per cent., 5s. per share.

Tilt Cove Copper.—Final for 1907 of 2s. 3d. per share.

MISCELLANEOUS.

Castner-Kellner Alkali.—Interim at the rate of 10 per cent. per annum for six months ended March 31, payable 26th inst.

Claudius Ash, Sons, and Co. (1905).—On the ordinary shares at the rate of 10 per cent. per annum for half-year ended Dec. 31, 1907, making 8 per cent. for whole year.

Dorman, Long and Co.—For half-year ended March 31, interim at the rate of 5 per cent. per annum.

"E.C." Powder.—Final of 1s. per share and a bonus of 1s. per share, making 3s. per share for year ended March 31.

Fine Cotton Spinners and Doublers'.—Final of 4 per cent., and a bonus of 4 per cent. on the ordinary shares, making 12 per cent. for year, carrying £239,420 forward.

King Insurance.—At the rate of 5 per cent. per annum for second half of the year.

Land Bank of Egypt.—9s. per share on the ordinary shares and £3 5s. 9d. per share on the founders' shares.

Liebig's Extract of Meat.—Final on the ordinary shares for 1907 of 10 per cent., and a bonus of 2s. 6d. per share, payable June 15, making 22½ per cent. for the year.

Lisbon Electric Tramways.—5 per cent., payable May 25.

Nalder and Collyer's Brewery.—Further on the ordinary shares of 10 per cent., making 15 per cent. for the year, placing £10,000 to reserve for equalisation of dividends, and carrying forward £15,422.

New Paccha and Jazpampa Nitrate.—Balance of 20 per cent. on the ordinary shares, making 30 per cent. for 1907; also a balance of 46 per cent. on the preference shares, making 70 per cent. for 1907.

Reuter's Telegram.—4s. per share, making 5 per cent. for year, carrying £148 forward.

Salar del Carmen Nitrate.—Final of 30 per cent. making 50 per cent. for 1907.

Santa Catalina Nitrate.—Interim of 5 per cent., payable June 1.

Short's.—Final on the deferred ordinary shares of 4s. per share, making 16s. per share for the year, placing £1,000 to reserve, and carrying £1,470 forward.

MINING RETURNS.

Abbontiakoon Block 1.—Crushed 4,616 tons; fully treated 4,828 tons, yielding 1,349 ozs. from plates, and 539 ozs. from sands and slimes; total, 1,888 ozs.

Abosso.—Crushed 3,669 tons, 1,538 ozs.; tailings 2,728 tons, 229 ozs.; old tailings 1,010 tons, 145 ozs.; total, 1,912 ozs.

Akrokerri (Ashanti).—Crushed 3,300 tons, 1,006 ozs.; tailings 1,690 tons, 133 ozs.; total, 1,139 ozs.

Ashanti.—Obuasi Plant: Crushed 5,556 tons, 1,451 ozs.; tailings 72 ozs.; product from roasting plant, 1,573 ozs.; total, 3,096 ozs.

Ashanti Rivers.—Dredges 451 ozs.; value, £1,804.

Bibiani.—Crushed 4,061 tons, value £6,362; cyanide 3,000 tons, £2,161.

Brilliant Gold.—Stockholm: 851 tons, £1,825.

Brilliant Central.—Crushed 1,115 tons, value including concentrates, &c., of £3,000.

Brilliant Extended.—Crushed 3,820 tons, for £8,223.

Broken Hill Proprietary.—Refinery products (including product from ores purchased): Gold, 796 ozs.; silver, 416,136 ozs.; soft lead, 7,214 tons; antimonial lead, 49 tons; including 168,435 ozs. fine silver and 3,359 tons lead from ores purchased. Zinc concentration: 5,427 tons, containing silver, 86,921 ozs.; lead, 563 tons; zinc, 2,229 tons.

Broken Hill Proprietary Block 14.—2,036 tons carbonate ore despatched, containing 672 tons lead and 22,171 ozs. silver.

Burbank's Main Lode (1904).—Crushed 1,346 tons, 659 ozs.; 1,041 tons cyanide, 195 ozs.

Cape Copper.—O'okilp—1,255 net tons of 16 per cent. = 200 tons fine copper; Nababeep—4,583 net tons of 4 per cent. = 183 tons fine copper; total, 383 tons fine copper.

Carrington's United.—Smelted 441 tons ore; 62 tons matte; blister copper produced 21 tons; mill gold 43 ozs.

Chillagoe.—1,493 tons copper ore and 2,569 tons lead ore, producing 185 tons blister copper, 18 tons copper matte and 466 tons lead bullion, containing 184 tons copper, 466 tons lead and 48,981 ozs. silver; 483 tons fluxing ore treated produced 54 tons lead and 2,503 ozs. silver.

Chinese Engineering.—Output of coal 28,000 tons; sales 24,500 tons; consumption 1,450 tons.

City and Suburban.—Crushed 25,400 tons, 7,448 ozs.; profit £10,179.

Cobalt Townsite Silver.—Ore, dry weight, 39,816 lbs.; silver assay 431 ozs. per ton of 2,000 lbs.; total silver contents of shipment 8,489 ozs.

Consolidated of New Zealand.—Progress of N.Z.—Crushed 3,906 tons; value, £5,251.

Consolidated Main Reef.—Crushed 14,594 tons, 3,082 ozs.; sands and concentrates 14,594 tons, 2,056 ozs.; total, 5,138 ozs.; profit, £5,954.

Duff Development.—Total April, 899 ozs.

Durban Roodepoort.—12,390 tons, 2,721 ozs.; tailings, 8,500 tons, 1,051 ozs.; slimes, 3,930 tons, 251 ozs.; total, 4,023 ozs.

Eaglehawk Consolidated.—Crushed 990, 167 ozs.; cyanide, 94 ozs.

Esperanza.—Crushed 14,157 tons dry ore; concentrates shipped, 417 tons dry ore; value, $129,704; value of concentrates, $42,696.

Foldal Copper.—Ore produced, 4,615 tons; ore sorted from tonnage already published, 363 tons; ore shipped, 4,457 tons.

Gaika.—983 ozs. from 1,995 tons crushed; 368 ozs. from 2,439 tons tailings.

Great Boulder Perseverance.—Treated 16,029 tons, 5,809 ozs. gold and 810 ozs. silver.

Great Boulder Proprietary.—Sulphide mill 12,081 tons, 12,229 ozs.; tailings (old) 7,230 tons, 573 ozs.; total, 12,802 ozs.

Hainault.—Crushed 6,050 tons, 1,675 ozs.

Hannan's Reward.—Crushed 5,200 tons, 545 ozs.; royalties, £316.

Jubilee.—Crushed 4,893 tons, 1,292 ozs.; cyanide 3,439 tons, 440 ozs.

Jumpers.—Crushed 8,880 tons, 2,585 ozs.; tailings, 1,110 ozs.; current slimes, 296 ozs.; accumulated slimes, 363 ozs.; total, 4,354 ozs.; profit, £4,003.

Lancefield.—6,577 tons treated, 2,343 ozs.

Langlaagte Estate, under joint working agreement with Block B, Langlaagte Estate.—Ore crushed 45,857 tons, 9,244 ozs.; tailings 26,800 tons, 3,368 ozs.; slimes 23,032 tons, 1,838 ozs.; total, 14,450 ozs.; profit, £23,000.

Le Roi.—Shipped 6,116 tons, containing 3,250 ozs. gold, 5,000 ozs. silver, and 192,000 lb. copper.

Main Reef West.—Crushed 4,865 tons, 988 ozs.; sands and concentrates 4,865 tons, 698 ozs.; total, 1,686 ozs.; profit, £560.

Matabele Reefs.—Blanket: Crushed 2,179 tons, 577 ozs.

Montana.—Lucky Girl: Crushed 1,600 tons, producing 420 ozs. gold and 460 ozs. silver; value, $8,800.

North Broken Hill.—Treated 2,630 tons crude ore, assaying 15.9 per cent. lead and 6.8 ozs. silver per ton, producing 455 tons concentrates, containing 316 tons lead and 9,782 ozs. silver.

North Randfontein.—Crushed 17,254 tons ore, 3,851 ozs.; tailings, 11,040 tons, 1,727 ozs.; slimes, 6,384 tons, 549 ozs.; total, 6,127 ozs.; profit £8,600.

Penbalonga Proprietary.—Crushed 12,200 tons, 2,387 ozs.; profit, £4,149.

Porges Randfontein.—Crushed 15,413 tons ore, 3,653 ozs.; concentrates, 1,433 tons, 521 ozs.; tailings, 9,808 tons, 1,404 ozs.; slimes, 4,361 tons, 529 ozs.; total, 6,107 ozs.; profit, £9,600.

Prestea Block A.—Crushed 6,808 tons, 2,870 ozs.; 4,198 tons tailings, 638 ozs.; total, 3,508 ozs.

Rezende.—Crushed 3,400 tons, 988 ozs.

Rhodesia Consolidated. — Nelly: 1,560 tons, 1,219 ozs.; cyanided 715 tons, 438 ozs.; total, 1,657 ozs.

Robinson Randfontein.—Crushed 14,664 tons, 2,557 ozs.; concentrates 1,450 tons, 350 ozs.; tailings 9,000 tons, 1,314 ozs.; slimes, 4,121 tons, 381 ozs.; total, 4,602 ozs.; profit, £2,400.

South Kalgurli.—Crushed 9,030 short tons, yield 2,949 ozs.

South Randfontein.—Crushed 15,139 tons, 3,069 ozs.; concentrates 1,575 tons, 554 ozs.; tailings 8,975 tons, 1,605 ozs.; slimes 4,386 tons, 609 ozs.; total, 5,837 ozs.; profit, £5,900.

Taquah.—Crushed 5,900 tons, 4,216 ozs.; tailings 5,074 tons, 626 ozs.; total, 4,842 ozs.

Tasmanian Smelting.—Silver-lead bullion produced contained 320 tons lead, 54,000 ozs. silver, 144 ozs. gold.

Tomboy.—Crushed 8,300 tons, value $51,000; concentrates shipped 870 tons, value $28,000.

Treasury.—Crushed 9,070 tons, 1,629 ozs.; sands and concentrates, 10,089 tons, 1,289 ozs.; total, 2,918 ozs.; profit, £2,107.

Troitzk.—3,238 tons, 592 ozs.

Vogelstruis Estates.—Quartz milled 9,650 tons, 2,343 ozs.; tailings, 6,495 tons, 613 ozs.; total, 2,956 ozs.

Wanderer (Selukwe).—Cyanide, 18,228 tons, 1,780 ozs.

Wealth of Nations.—Crushed 1,184 tons: value, £2,392.

West Rand Central.—Crushed 2,592 tons, 486 ozs.; cyanided 2,000 tons, 352 ozs.; slimes 1,182 tons, 176 ozs.; total, 1,014 ozs.

Windsor.—Crushed 4,850 tons, 1,123 ozs.; cyanide 3,479 tons, 627 ozs.; total, 1,750 ozs.

Witwatersrand Deep.—Crushed 37,240 tons, 10,202 ozs.; sands and concentrates 37,353 tons, 4,995 ozs.; total, 15,197 ozs.; profit, £29,428.

Wolhuter.—Crushed 20,000 mill tons; sands and slimes 20,000 tons, mill, 3,683 ozs.; sands, 2,639 ozs.; total, 6,322 ozs.; profit, £6,516.

Worcester.—Crushed 4,400 tons, 1,138 ozs.

Zinc.—Treated 10,120 tons tailings for 3,090 tons zinc concentrates, averaging 45 per cent. zinc, 7 per cent. lead, 13 ozs. 10 dwts. silver, and 70 tons leady concentrates, averaging 57½ per cent. lead, 37 ozs. 10 dwts. silver.

COMPANY MEETINGS.

EASTERN TELEGRAPH CO. (LTD.)

The seventy-second ordinary general meeting of this company was held on Tuesday, under the presidency of Sir John Wolfe Barry, K.C.B.

The Secretary (Mr. A. R. Hardie) read the notice calling the meeting and the auditors' report.

The Chairman said: The meeting will doubtless take the report as read. In consequence of the alteration in the period covered by our financial year, to which I referred at previous meetings, we are unable to offer the customary detailed comparison of income and expenditure, as we have no accounts for the corresponding period of 1906 with which to compare those now before you. I am, however, pleased to inform you that the aggregate receipts for messages during the half-year under review compare favourably with those for the corresponding period for 1906. The receipts from messages exchanged with South Africa, however, continue to decline, there being a considerable falling off in all classes of that traffic. On the other hand, the traffic with India shows a slight improvement, and there is again a steady increase in the message receipts from traffic with South America, so that on the whole there is an increase in the message receipts of about £5,000.

As regards the expenditure side of the revenue account, it may, perhaps, be convenient, as we cannot make a comparison with the corresponding half-year in 1906, to make some comparison with the accounts for the preceding half-year to June 30, 1907, and, in doing so, I may state that the total expenses, exclusive of repairs to cables, for the half-year we are now considering show a decrease of about £3,600 as compared with the previous half-year. Some of the items of expenditure show a small increase, while others show a decrease, but in the aggregate the expenses, as I have stated, are slightly less. When, however, we turn to the abstract showing the expenses attending maintenance of cables, we find that the cost for the half-year under review is nearly £22,000 more than it was for the preceding half-year. As I have so often stated at these meetings, the expenditure under this heading is, and must be, extremely variable, being dependent upon the number of interruptions of our cables, and upon the extent of the consequent repairs, in addition to which the credit to this account in respect of charters of our repairing steamers by foreign Governments and other telegraph administrations may, of course, be more or less than that received for the corresponding period. In the present instance both of these factors tell against the present half-year, as not only have we been obliged to lay in nearly double the quantity of new cable on repairs to our own lines, but the credits in respect of charters, &c., are nearly £9,000 less than they were for the half-year to June, 1907.

When I last had the pleasure of addressing you, I pointed out that, in view of the fact that the accounts for the intermediate or June half-year included the most productive quarter's receipts, viz., those for March—we must not expect so satisfactory a balance in the final half-year's accounts. In view of the present lack of elasticity in the revenue and the continued depression in South Africa, which is adversely affecting our receipts, the directors consider it advisable to carry forward to next account a larger balance than is usual at the end of our financial year. You will see that we, therefore, decided to carry a sum of £70,000 to the general reserve fund this half-year and to carry forward to next account a balance of about £35,000.

The general reserve fund now amounts to £1,144,730. This is satisfactory as far as it goes, but we trust that the traffic will improve so as to enable us to raise our contributions to this fund while maintaining the moderate dividend and bonus which have remained so constant for so many years. With a cable system such as ours now amounting to a total length of 41,069 miles, it is absolutely necessary that our reserve fund should be sufficient to provide, not only for important renewals of the various sections as they deteriorate through age and other causes, but also to enable us to increase our carrying capacity from time to time as the traffic grows from the development of the world's commerce or other causes which stimulate the volume of telegraphic business. It is by reason of our reserve fund that we can from time to time meet all the requirements of the telegraphing public, and the best interests of the public are to be found in the financial strength of the company, because this alone has made it possible for us to adopt reductions in the tariff and to grant improved facilities to those interested. I may here mention that very important renewals have been recently completed on one of our cables in the Indian Ocean, the cost of which will be charged against our reserve fund account next half-year.

During the half-year our cable steamer "Duplex" has undergone extensive overhaul in England, and has been furnished with a new boiler, and, in accordance with our usual custom, a portion of the cost has been applied from the maintenance ships fund.

You will see from the report of the directors that the International Telegraph Conference is now sitting at Lisbon, where this company is ably represented by the managing director, Sir John Denison-Pender, Mr. F. A. Johnston, one of our directors, and some of the officials of the traffic department. As you may be aware, nearly all the countries in the world are represented at this Conference by officials appointed by the various Governments, and although delegates of the telegraph companies are invited to express the views of their companies upon the different questions under discussion, they are not permitted to vote on any subject, even though it may be one of vital interest to them. In debates on future action we have, therefore, to depend upon the justice of our case and the arguments which we are able to bring forward, combined with the submission of facts and figures which our representatives, owing to their great experience in such matters, are able to submit to the deliberations of the Conference. These, together with the support of our own Government representatives, ought, I hope, to result in solutions of questions affecting cable telegraphy in a manner fairly satisfactory to the companies, as also to the interests of the public, because, after all, the interests of the State and of the telegraphing public should be identical with those of the cable companies, and it is our constant endeavour to work with this aim in view. Although your directors have always been prepared to meet the reasonable demands of the public for reductions in tariff, it must be borne in mind that the carrying capacity of cables is limited, and that if tariffs are reduced beyond a certain point, the work not only becomes unremunerative but would actually entail a loss to the company. Therefore, in the event of future demands on us to make any further reductions of tariff, we must look to the Governments concerned to assist us, either by the extension of the standard revenue system which has been found to work satisfactorily for Indian and South African traffic, or by some other method which may be mutually beneficial. We have every confidence in our representatives at the Conference, and also in the justice of the numerous delegates from the various Governments, that nothing will be done to impair the present efficient working of our cable system, which is all important to the welfare of the world. I now move the adoption of the report and accounts and the declaration of the dividends therein set out.

The Marquess of Tweeddale, K.T., seconded the motion.

Mr. Stacey asked a question as to the staff superannuation and pension funds.

Mr. J. Newton inquired whether the telegraph companies represented at the Conference at Lisbon had not some sort of influence to prevent undue reductions in the tariff.

The Chairman: We have a considerable amount of influence, as I said in my speech, at the Conference upon all matters, because of our knowledge of the business and the support we received from the British delegates. Turning to the matter referred to by Mr. Stacey, I am sure all the directors of this company are gratified to hear the remarks which fell from the body of the room on the subject of the treatment of the retiring staff. I am bound to say that everything seems to us to be working satisfactorily. Naturally the pension fund cannot arrive at its full amount in so short a number of years, but it is approaching a capital value of £500,000, and is continually growing. The valuation of the securities and the position of the funds has to be gone into once every five years, and the next quinquennial period is this year, in the month of June. We hope that a very considerable improvement will, as in former years, then be shown in the valuation of the liabilities and assets of the pension fund. I hope that that will be satisfactory to the shareholders.

The resolution was then carried unanimously. There being no further business before the meeting, a vote of thanks was passed to the chairman, directors and staff, and the proceedings terminated.

EASTERN EXTENSION, AUSTRALASIA, AND CHINA TELEGRAPH COMPANY, LIMITED.

The 69th half-yearly ordinary general meeting of this company was held on Wednesday under the presidency of Sir John Wolfe Barry, K.C.B.

The General Manager and Secretary (Mr. F. E. Hesse) read the notice calling the meeting and the auditors' certificate.

The Chairman then said: The gross revenue for the half-year under review amounted, in round numbers, to £304,000, against £296,000 for the corresponding period of 1906, an increase of £8,000. This result may be considered satisfactory, having regard to the general depression in trade that has recently prevailed in the Far East and elsewhere, and to the keen competition that still continues between the Government Pacific cable and our system for the Australasian traffic. I am, however, happy to say that we continue to hold our own in this competition, notwithstanding the strong pressure brought to bear upon the commercial community by the local authorities to forward their telegrams by the Pacific route, and the fact that nearly all Government telegrams are sent by the latter route. I cannot but think that this is very unfair to us, and that as a great British company we are entitled to an equal share of Government business. The working expenses amounted, in round numbers, to £154,000 against £139,000 for the corresponding period of 1906, showing an increase of £15,000. Of this increase, over £13,000 is due to cable repairs having been far more numerous during the past half-year than in 1906, when they were exceptionally light, costing only £12,854, or about one-half of the normal amount. The rest of the increase is accounted for by the natural growth of salaries and wages. We have also had to spend over £1,000 in connection with a claim made upon the company by the owners of the s.s. *Agincourt* for consequential damages arising out of the loss of that steamer's anchors and chain when she fouled one of the company's cables in the Yangtsze Kiang river. The claim being a very wide one, involving far-reaching consequences, your directors had no alternative but to resist it, especially as it had been always understood that the International Convention for the Protection of Submarine Cables limited the company's liability to making compensation to the value of the material actually lost. Unfortunately this view was not accepted by the court of first instance, which held that although the claim of the plaintiffs went too far, the owners of the *Agincourt* were entitled to a larger measure of compensation than that admitted by the company. Your directors appealed

against Mr. Justice Bray's decision, and obtained a unanimous decision from the Lords Justices of Appeal altering the learned judge's order, and declaring that the liability of the company was to make compensation for the sacrifice of the anchors and chain lost, but not further to pay damages resulting from such sacrifice. The action was eventually settled on this basis. It is needless to say that any other result might have been most damaging to the interests of all those who had laid and were working telegraphic cables.

The nett profit for the half-year amounted, in round numbers, to £130,000, and after adding £75,000 brought forward from the previous half-year, there remained an available balance of £205,000. The usual quarterly interim dividends of 2s. 6d. per share were paid during the past year, and it is now proposed to distribute a final dividend for the year of like amount, making a total dividend of 5 per cent. It is also proposed to pay a bonus of 4s. per share, or 2 per cent., making a total distribution for the year 1907 of 7 per cent. The usual additions have been made during the past year to the maintenance ships insurance and depreciation funds, and after applying £50,000 of the revenue balance to the general reserve fund, £20,389 is carried forward.

During the past half-year several partial renewals of the company's cables have been carried out. The lengths of new cable inserted for these purposes have aggregated 330 nautical miles, and the cost of such renewals, amounting to £28,848, has been debited to the general reserve fund. The laying of the company's new direct cable between Java and the Cocos Islands, to which I have made reference at previous meetings, has been successfully accomplished and the line opened for traffic since the close of the year. The length of the cable is roundly 778 nautical miles, and the cost will be charged against the general reserve fund during the current half-year. This new communication will form a useful alternative route for our Far East traffic, and had it been in operation when the recent strike occurred amongst the Indian Government telegraph employees it would have assisted in relieving the congestion occasioned during the early days of the strike. The Indian Government authorities shortly after the outbreak, fortunately for the cable communications passing in transit through India, arranged with the Eastern and Eastern Extension Companies to work two of their land lines from the cable stations at Bombay and Madras, and in this manner we were able to transmit the trans-Indian traffic across India with satisfactory results to the telegraphing public and to the Indian Government. When the strike was over the land lines were again worked by the Government, but we are in communication with the Indian authorities with a view to obtaining, if satisfactory terms can be arranged, the permanent working across India of the trans-Indian traffic by the Eastern and Eastern Extension Companies, as we are convinced that such an arrangement would be for the advantage in speed and accuracy of all the countries which we serve.

Another quinquennial meeting of the International Telegraph Conference is now being held at Lisbon, and two of our directors are attending it to look after the company's interests. Judging from what appeared in the newspapers a few weeks ago, considerable misapprehension appears to have existed on the part of the Chambers of Commerce and telegraphing public generally as to the action of the Governments and cable companies at the Conference in regard to the use of artificial words in code telegrams; but the publication of the Postmaster-General's letter to the Chambers of Commerce on the subject will have made it clear that it is not proposed to withdraw the privilege, but only to endeavour to have more clearly defined the condition as to the "pronounceability" of artificial words. When the concession of admitting any pronounceable artificial words on the footing of code at ten letters to the word was granted, it was assumed that the privilege of making up codes on this basis would be used in a reasonable manner, so that the telegraph service, whether by cable or land line, might not unduly suffer, while the public would be benefited. This expectation has not been completely fulfilled. Before the new regulations came into force the British Post Office found it necessary to issue a circular to the Chambers of Commerce, as well as to the principal code makers, directing attention to the fact that codes were being compiled of artificial groups of letters which in many cases could not be regarded as "pronounceable," and that such words would be difficult to transmit and would lead to errors. In many cases code makers have recognised the importance of avoiding combinations which are of doubtful pronounceability, but in some cases an unreasonable use of the concession has been made. As an instance of this, such words as (I must spell them, for I cannot pronounce them) "bujksrocty," "bywrgrocbx," and "liqraqkpcr" may be mentioned as words which appeared in a code recently submitted. (Laughter.) It will be readily understood that a telegraphist can deal more rapidly and easily with a pronounceable word, which can be more quickly grasped and remembered while it is being transmitted, as compared with an arbitrary combination of letters requiring a separate effort of attention for each letter. Thus greater speed and accuracy, which are what the public requires, are obtained, and there is less need for repetitions and corrections. It is desirable and to be hoped that the condition as to pronounceability will at the Conference be more clearly defined, in order to put some limit for the future to this tendency, which, if unchecked, cannot fail to produce results highly injurious to the telegraph service and consequently to the public and commerce. There is, however, no intention of adopting other than a wide and even generous interpretation which would cover the great bulk of the codes at present in use.

Speaking generally of our present report, I think we may consider it as fairly satisfactory, though I wish that I could see greater signs of commercial development in the Far East, and fairer treatment of our company by the Governments concerned in the State-aided competitive cable in the Pacific. I will conclude by moving the adoption of the report and accounts, and the declaration of the dividend and bonus set out therein.

The Marquess of Tweeddale seconded the resolution.

Mr. John Newton asked if there had been any improvement in the company's social code enabling the public to telegraph at something like the moderate charges paid by people who used a code.

The Chairman: The company most cordially support coding under all reasonable conditions; 95 per cent. of all the work of this company is coded and only about 5 per cent. is uncoded. That 5 per cent. may be divided again into business messages and social messages, but even if they were all social messages, they would not amount to more than 5 per cent. Some few years ago the boards of all the companies realised that some effort should be made to put those who wished to telegraph social messages somewhat on the same basis as those mercantile firms who have codes of their own, and who are able to send their messages at a price which, if written out in longhand, would probably not amount to more than 2d. or 3d. a word. Following that idea, the "Eastern" Social Code was prepared, and is purchasable by any member of the public for 5s., and is also placed for the free use of the public at all our stations, on all the great lines of steamers, and in other places where social messages might originate. Of course, in addition to that, there are a good many other social codes, and some of them are in constant use. Then, again, we have a principle of registering, free of all fee, the name and address of anyone who likes to come and who is likely to use the cables when away from home. Therefore, with the use of the social code and with the use of free registration of addresses, social messages can be transmitted very cheaply. If the public would only take advantage of the opportunities that exist, very few social messages need come in what I may call long-hand.

The resolution was then put and carried unanimously.

The retiring directors, the Hon. Arthur G. Brodrick and Sir Albert J. Leppoc Cappel, K.C.I.E., were then re-elected, as were the retiring auditors, Messrs. Deloitte, Plender, Griffiths and Co. and Messrs. Welton, Jones and Co.

Mr. Lane suggested that in declaring the quarterly dividends the directors might be disposed to consider the distribution over the four quarters of the year of the amount now regularly paid as bonus, so that instead of receiving 2s. 6d. per share quarterly the shareholders would receive 3s. quarterly.

The Chairman said the suggestion should receive the directors' full consideration, but he could give no more precise answer at that moment.

A cordial vote of thanks to the chairman, directors and staff brought the proceedings to a close.

WESTERN TELEGRAPH.

The 69th ordinary general meeting of the Western Telegraph Company was held at Electra House on Wednesday, Sir John Wolfe Barry presiding.

The Secretary (Mr. E. Steer Hodson) read the notice convening the meeting, and other formal business having been disposed of,

The Chairman said: Although the message revenue has only increased by an amount slightly under £2,500, it must be remembered that during the period under review we have been working under normal business conditions, and that the receipts have not been inflated by exceptional circumstances such as to some extent prevailed in the latter part of the year 1906. In South America generally, political, financial and commercial matters appear to be steadily and surely advancing towards the still greater prosperity which undoubtedly awaits that great continent so richly endowed by nature and possessing statesmen eminently qualified to administer its resources. The revenue since January 1 this year is also so far satisfactory. It is with much regret we have to report the death in November last of our late colleague, Mr. John Coppen, who was a director of this and the Western and Brazilian Company for 15 years. Mr. John Gordon has been appointed to the vacancy. He was until lately a member of the important firm of Messrs. Edward Johnston and Co., of Rio de Janeiro and Santos, and is exceptionally qualified to assist in furthering the interests of the company, having resided for many years in Brazil and possessing an intimate acquaintance with that country and its requirements. Mr. Gordon is at present in Rio de Janeiro, and among other affairs necessitating his presence there, he is engaged on important business for this company. The total expenses show a decrease of £1,232 compared with the corresponding period of 1906, resulting from increases and decreases under the different headings. After providing £16,000 for debenture stock interest and £4,464 for income-tax, there remains a balance of £206,487, to which is added the sum of £6,864 brought forward from June 30 last, making a total of £213,351. First and second interim dividends, amounting to £62,379, have been paid, and after transferring £120,000 to the general reserve fund, £5,000 to the maintenance ships reserve fund, £10,000 to the marine insurance fund, and £10,000 to the land and buildings depreciation fund, there remains a balance of £5,972, which is carried forward to the next account. With regard to our reserve fund investments, the directors have decided, in view of the depreciation of our securities, to provide a sum of £100,000 on account of investment fluctuations whenever it may be found necessary to realise portions of the reserve

fund. (Hear, hear.) I conclude by moving:—"That the report of the directors and the accounts to December 31, 1907, now submitted, be approved and adopted."

Lord Balfour of Burleigh seconded the motion.

In reply to questions the Chairman said that the £100,000 which had been provided on account of investment fluctuations had been arrived at by taking the bottom prices of the day, but they did not wish to be writing up and writing down their reserve fund. They adopted a round figure, and really the reserve fund was not depreciated to that extent until they wanted to sell. As a matter of fact, they were selling very small portions, and he did not see when they would have to sell until they had to carry out some very important renewals. He could not fairly hold out the prospect to the shareholders of an increased dividend, as they saw before them very large expenditure in the way of the renewal of some of their cables. Some of these were 35 years old, and although they had been wonderfully preserved, it could not be expected that they would go on for ever. It was also necessary to bear in mind that in these days most of the telegraph cable companies were threatened with competition. With reference to wireless telegraphy and the Marconi system, he had nothing to add to what he had said on previous occasions, and nothing had since occurred to make him alter the views he had expressed. He then put the resolution, which was carried unanimously.

WARNER ESTATE.

The seventeenth ordinary general meeting of Warner Estate, Limited, was held on Wednesday at the offices of the company, 30, Norfolk Street, Strand, W.C., Mr. T. Courtenay T. Warner, M.P. (chairman), presiding.

The Secretary (Mr. E. H. Cousens) having read the notice calling the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said the shareholders might congratulate themselves on the results of the past year. The gross rental was £74,465, compared with £67,549 in the previous year, an increase of nearly £7,000, and the available balance, including the amount brought forward, was £31,246, an increase of about £2,300 over last year. They had added out of profits £6,900 to reserve, and after debiting the reserve account with £1,900, representing the depreciation of securities, this account stood at the respectable figure of £73,000. He considered this a remarkable result, and attributed it in a large measure to the fact that the majority of their tenants were artisans, the very best class of weekly tenant. There was still a prejudice in the minds of many investors against weekly property, but facts like these spoke for themselves, and he could only say that, having had experience in that office of almost every kind of town property, they placed this class very high up in the list. They proposed to pay the usual dividend on the ordinary shares—namely, 6 per cent. for the year—and to carry forward the sum of £1,708. The most unsatisfactory item in the accounts was, as usual, that relating to the rates, which were still very heavy and likely to remain heavy so long as the cost of education was to so large an extent a local and not a national burden. In addition to education there was the maintenance of paupers and the maintenance of main roads, which were also heavy items and which had now become more a national than a local expenditure, or ought to be so treated. Another direction in which they might look for improvement was in a better system of tramways. The only possible way of dealing with overcrowding was to provide increased facilities for communication with the suburbs, and it was obvious that a system which was not linked up with the London tramways was bound to be a failure. There was every reason to hope that this unsatisfactory state of things would shortly be remedied, and that the projected extension which would join the Walthamstow system to that of the North Metropolitan Tramways and the Leyton system to that of the London County Council would before long become an accomplished fact. The company's most recent development at Leyton had proved in every way satisfactory. The Lea Bridge Road, to which the new estates had an extensive frontage, was rapidly becoming an important thoroughfare. The locality was now served by an excellent line of motor-'buses, by which their tenants could travel to the Mansion House in 35 minutes, or to Oxford Circus in 50 minutes, and, at most times during the day, these vehicles were well filled. The new houses were snapped up as soon as they were built, and they had practically no empties. They believed that the Lea Bridge Road, and more especially that part of it where shops had recently been erected, was destined to become a busy market, and with this in mind they had had the shops planned on rather more ambitious lines than at present would seem to be warranted. They were not, however, taking any great risk, for on the other side of the road an estate was being laid out which would provide housing accommodation for about 1,000 families, and they were to a considerable extent independent of outside enterprise in the provision of shop customers. This would explain the step they had taken in removing their head local office from the Clock House to Leyton. With regard to the housing question, they had no reason to fear any legislation on the subject. He thought the new Bill introduced on the previous day into Parliament was likely to do good in many places, and it certainly would not hurt this company, as no local authority could compete with them in any way. It was pretty well ascertained, he thought, that a local authority had to pay 20 per cent. more for its building work than private individuals, and therefore there was not the least fear of any danger from competition of local authorities in the case of this company. There was not the least doubt that the Bill would facilitate local authorities building where necessary, and it would generally bring forward the subject and do good in many places. One thing in the Bill that would be of considerable advantage was that it would give powers to local authorities to shut up rookeries. If the Bill were passed, power would be given to a local authority to insist upon repairs being done by the landlord, and if they were not done the local authority would have power to do the work themselves and to charge the landlord with the cost—in other words, to take the rent of the houses until the proper repairs were done. This would have a great effect in doing away with some of the slums in the suburbs and in the centres of great towns. People who had read the speech of the President of the Local Government Board of the previous day might have noticed that he mentioned many of the schemes for housing the working classes, and that he mentioned a long list, all excellent housing schemes, but characterised by one fault, which this company had not got, he was proud to say. The schemes mentioned were not schemes which were made to pay in themselves. Of course they welcomed all these improvements in housing the working classes, and the directors looked around carefully to see if they could get a hint from any of them as to what could be done. They intended to go on doing a work which was really a good work in increasing the accommodation for artisans, and at the same time getting a clear 5 per cent. return on their outlay.

Mr. Arthur M. Lloyd (managing director) seconded the resolution, and it was carried unanimously.

LONDON BANK OF AUSTRALIA.

The ordinary general meeting of the London Bank of Australia, Limited, was held on Monday at Winchester House, Old Broad Street, E.C., Mr. David Finlayson (chairman) presiding.

The Manager and Secretary (Mr. W. H. Barber) having read the notice convening the meeting and the auditors' report,

The Chairman said: The balance-sheet figures again show a general expansion in the bank's business. There is a gross profit of £3,765 less than last year, but on the other side there is a less amount by £4,788 paid on the transferable deposit receipts, and, therefore, the gross profit for the year is really £1,032 more than in 1906. The net profit, however, after allowing for an increase in expenses in Australia and London of £2,300, comes out at £1,500 less than the previous year. We keep as close a hand on expenses as possible, but with an expanding business some increase cannot be avoided. We are again able to put £10,000 to the reserve fund, making it £20,000, and to increase the amount carried forward by £2,600 to £26,526; and having, we believe, fully provided for all contingencies, we feel justified in recommending to the shareholders a dividend of 3½ per cent., or 1 per cent. more than the previous year. Australian trade has continued prosperous throughout 1907, imports and exports both showing substantial increases; but towards the end of the year there came a break in the abounding prosperity which has been enjoyed for the last three or four years. Certain districts suffered from dry weather, and the exportable surplus of wheat was thereby considerably diminished, and pastoralists in some important districts have also suffered from dry conditions, but over the greater portion of the pastoral areas the weather continues favourable. What is of more importance, however, is the fall in price of wool and of metals, which has been developing during the last six months; but in regard to wool, the greater portion of the clip had been disposed of before the fall had become marked. The last few years of prosperity in Australia, however, have afforded ample resources wherewith to meet any temporary loss of income. There has probably been rather too rapid an expansion in imports, due in part to tariff changes causing a rush to get in before duties were raised, but this will adjust itself; and, as regards the position generally, there is every reason to believe that it remains perfectly sound. Since we last met I have been able to carry out a long contemplated purpose of some day revisiting Australia, where so many years of my life were spent. I covered a good deal of ground in Australia, landing in Brisbane and travelling from there to Sydney by the coast route through districts where settlement was progressing rapidly, chiefly in the direction of dairy farming. Much of this country had been until recently in the occupation of large cattle owners, but the development of the dairy industry has brought such a demand for the land that these estates have been cut up and sold to farmers, who are now rapidly developing it by fencing, clearing and sowing of good grasses. It was very interesting to see the progress of settlement going on in the shape of comfortable looking homesteads spreading over the land, till recently almost empty of population. In these districts the bank has, within the last two or three years, opened several branches, most of which are making satisfactory progress considering the short time they have been in existence.

Sir Walter Foster, M.P., seconded the adoption of the report.

The Chairman, in reply to questions, stated that the bank could pay off the transferable deposit receipts before 1917 by giving three months' notice. They had already paid off more than £4,000,000 out of the £5,000,000 odd with which they started originally, so that he thought they had done pretty well. They had still nine years in which to pay off the balance, and they were gradually working up to pay off another instalment. During the last three years they had paid off two instalments of £300,000 each. Replying to further questions, the Chairman stated that during the last two years the bank had been extending its business in various directions in New South Wales, but the directors were not prepared to cover more ground than the re-

sources of the bank would permit of with ease. At the present moment they were anxious to keep down the expenses as much as possible, but the question of extending their operations in other colonies would be kept in view.

The motion was carried unanimously.

NATIONAL ELECTRIC CONSTRUCTION.

The eleventh ordinary general meeting of the National Electric Construction Company, Limited, was held on Monday, at Winchester House, E.C., Mr. L. B. Schlesinger, (chairman) presiding.

Mr. W. B. Cownie (general manager and secretary) read the notice and also the auditors' report.

The Chairman: The past year has been one of great financial depression, and it has been practically impossible to raise capital for industrial enterprises, particularly those connected with the electrical industry. Having regard to all the circumstances, the directors do not think the results as shown by the accounts for the past year can be called unsatisfactory, notwithstanding that owing to the commitments of the company they recommend that the balance to the credit of profit be brought forward to next year's accounts. The balance is sufficient to pay a 5 per cent. dividend, and we have indicated in our report the possibility of an interim dividend being declared later on. I will now give you some information regarding the undertakings in which the company is financially interested. Last year I mentioned that at Musselburgh the year 1906 had been the wettest experienced in the district for some 30 years. I am sorry to say that last year there was no improvement; in fact, if possible, the weather was worse. Added to that, there was a strike of the company's employees, and that strike resulted in a loss of profit estimated to be £1,200. A reduction in the dividend on the preference shares from 6 per cent. to 2 per cent. was the result, although as the preference shares are cumulative the balance will ultimately come back to the shareholders. There have been negotiations in connection with the raising of the capital required to construct the extension of the tramways to Port Seton, but the financial depression, combined with the poor results of the undertaking for last year, have made it so far impossible to raise the necessary capital. I am confident, however, that when the extension is built the ordinary shares, of which we hold some 20,000, and which are not valued, should be of considerable value. The Torquay contract has now been completed, the Torbay Road line having been opened for traffic just before the Easter holidays. The receipts on the completed system have so far been excellent, averaging about 12.18d. per car mile. With regard to the Mexborough and Swinton tramways, the results to date have satisfied us that there is a large travelling population and that the investment should be a profitable one to the company. Unfortunately, however, we have had a great deal of trouble with the Dolter surface contact system, and we have decided to have the overhead installed. With regard to the Rhondda undertaking the work would have been completed some months ago had not unforeseen obstacles arisen which delayed its completion. I am glad to say, however, that a satisfactory agreement has been come to with the council, under which the whole tramway undertaking should be completed in the course of the next three months or so. I mentioned last year that the South Wales Power Company were not in a position to supply current to the tramways, owing to financial troubles, and that we should have to build a power station of our own. On further consideration, however, the directors came to the conclusion that a new company should be formed, and the Rhondda Tramways Electric Supply Company, Limited, was incorporated with a nominal share capital of £100 and a debenture capital of £44,000. Last year we were successful in securing a Bill for the electrification and extension of the tramways in Oxford. Satisfactory terms have been arranged with the horse tramway company, under which they take, in satisfaction of the purchase price, shares in a tramway syndicate which is now being formed. The construction of the tramway between Dewsbury and Ossett in Yorkshire is now in hand; the capital is being provided by the local authorities. Having dealt with the accounts in some detail, the Chairman, in conclusion, said that last year's results, with no dividend recommended, might be disappointing to the shareholders, but the company had suffered along with other electrical contractors from the financial depression, which made it impossible to raise capital for schemes which they had to a great extent to depend upon for earning a satisfactory dividend. There were signs of an improvement, although it would be, he was afraid, some time yet before capital could be raised, even for the best of schemes.

Mr. W. Herbert Fowler seconded the motion, which was carried unanimously.

LONDON AND LANCASHIRE LIFE ASSURANCE.

The forty-fifth ordinary general meeting of the London and Lancashire Life Assurance Company was held on Tuesday at the offices, 66 and 67, Cornhill, E.C., Colonel Sir Nigel Kingscote (the chairman) presiding.

The Secretary (Mr. G. W. Mannering) read the notice and the auditors' report.

The Chairman referred with great regret to the loss sustained by the company in the death of two of the directors—namely, the Right Hon. Evelyn Ashley and Sir Thomas Paine. He proceeded: First, let me take the results of the business since we last met These are highly satisfactory, and mark a considerable advance in the progress of the company. With regard to the new business, 2,195 policies for £740,579 were issued, giving a new premium income of over £30,000. The total income was £411,215, including £90,748 interest and dividends, and showing the very satisfactory increase during the quinquennium just closed of over £70,000. The funds now stand at £2,287,855, showing an increase during the quinquennial period of over half a million sterling. The claims are again a very favourable feature of the report, continuing well within the expectancy. I now come to the quinquennial valuation. It has been the policy of the directors to build up gradually the reserves and resources by from time to time adopting more stringent bases of valuation and reducing the assumed rate of interest, which is now 3½ per cent. for the whole of our business (including Canada), against an actual yield on invested and uninvested funds of £4 2s. 5d. per cent. the directors have decided that the time has now come when the expansion of our business and the growing importance of the company require that a further, and perhaps more important, step than any which has hitherto been adopted should be taken in the desired direction, the effect of which is to increase the company's reserves by no less than £105,517. We have gone very carefully into the question of depreciation and have come to the conclusion that it will be fairly met by applying the sum of £50,000 standing to the credit of investment reserve in writing down the book value of the securities. Had our present valuation proceeded on the same lines as that made at December 31, 1902, we should have shown a surplus of £156,017, an increase of £53,000 over the surplus for the last quinquennium, which I think is very satisfactory. As it is, however, we apply nearly the whole of this sum in strengthening our reserves and making provision for the depreciation in our securities. At the last valuation a surplus was shown, of which £18,127 was not then dealt with. Intermediate bonuses have been declared in the case of policies maturing during the quinquennium, which have absorbed £15,542. The surplus is not sufficient to enable us to provide for the payment of bonuses to shareholders spread over the whole quinquennial period now current at all commensurate with those which they received for the last quinquennium, and we therefore recommend that £2,000 of it should be applied in the payment of a bonus of 4s. per share for the current year, making with the usual dividend of 5 per cent. per annum a total distribution of 6s. per share for that year and leaving a balance of £1,085 to be carried forward to the shareholders' credit for the year 1909. With the exception of the annual 5 per cent. on the paid-up capital the whole of the distributions which we have made by way of bonus or dividends have been provided for out of the ascertained profits of the previous quinquennium. In view, however, of the more stringent method of valuation which we have adopted we feel justified in now departing from this course. We are therefore asking the shareholders to sanction such an alteration of our articles of association as will make it quite clear that we are entitled in the future to make such interim distributions, both to policyholders and shareholders, as in our opinion the position of the company may from time to time justify. A matter which will have an important bearing upon the future of the company is the decision of the Board to cease doing new business in India and several Continental agencies. The new business of the company will be therefore in future practically confined to this country and Canada, and although this will probably yield for a time a smaller amount of new business per annum, yet it will cause a considerable reduction in the ratio of expenditure, and have consequently a beneficial effect upon the future financial position and profits.

Mr. Vesey G. M. Holt seconded the adoption of the report which was carried unanimously and a resolution was also passed approving the alteration in the articles of association.

The daily average for the month of cash in hand and at the Bank was £6,879,729.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 542. New Series. SATURDAY, MAY 23, 1908. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

The Investors' Review.

South-Eastern and Chatham Railway Combination.

In some respects it was a master-stroke on the part of Mr. Cosmo Bonsor and his associates to bring these two miserable properties together. Had they continued to maintain a separate working existence the bankruptcy of the Chatham line must have years ago brought it into a condition of absolute impotence, and very likely into the hands of a receiver. We are not sure though that bankruptcy has been more than postponed for both companies by fusion, and assuredly stockholders in the South-Eastern have had no reason to congratulate themselves upon the result. Their revenues have not increased in consequence, for the expenses of working have not betrayed any symptoms of economy, and in passing it may be noted that the directors of the two companies seem to have made an exceedingly good thing of the combination. As members of the managing committee they receive £4,000 per annum, and their fees from the Chatham Company are £3,500 in addition, while the directors of the South-Eastern board get altogether another £3,900. This makes fees amounting to £11,409 in all, and in addition the auditors get £900. All the directors, however, do not participate in the committee's money, only six Chatham and eight South-Eastern, out of respectively seven and ten members of the two boards. This is exclusive of Sir Myles Fenton, who is described as the "consulting director" of the South-Eastern Company. Furthermore, the secretary, general manager, accountants, clerks, &c., of the managing committee cost last year about £54,575, and in addition the expenses of the separate Central Office of the Chatham Company cost about £8,078, while the similar organisation of the South-Eastern Company absorbed only some £5,000. Altogether, however, the controlling departments of these two miserable properties took £68,000 to maintain them, and we should imagine that economy might be exercised here with good effect.

Be this as it may, the state of the current accounts of the managing committee loudly call for a thorough overhaul in the methods of doing business and in the management of the finance department. Last year's combined revenue, for instance, showed a decrease of £8,192, and thus formed an exception to the experience of most of the railways within the United Kingdom. The gross total was £4,750,693, and of that £3,060,886 or 64·43 per cent., was swept away in working expenses, being £39,029 more than in 1906. Maintenance of way cost £3,762 more, locomotive power £45,166 more, repairs £7,932 more, and traffic charges £4,800 more. The company, however, economised to the extent of about £2,224 in compensation charges, which came to £10,236, and saved no less than £10,298 in rates and taxes, which still, however, absorbed nearly £277,000. For all that the nett revenue of £1,689,806 was £47,159 down, and traffic was inelastic to an unpleasant degree. It is still shrinking, so that the prospect is such as might arouse the most indifferent body of shareholders to be found in the country. These properties, however, suffer from what may be called their speculative history. Their common stocks have been the sport of gamblers almost since they came into existence, and the cautious investor has been for ever kept away from them. It follows that the class of people who play in "little Chathams," in Dover "A," or the other discredited

stocks of these companies, care only for the movements of the market, and nothing whatever for the way the business of the lines is conducted.

It is significant that in this instance, as with all the lines possessing a large suburban traffic, the passenger earnings show up worst, for it is by passenger earnings that the South-Eastern and Chatham combination lives. Its total receipts from first-class passengers last year amounted to £392,858, and that showed a decrease of £20,283 on the receipts for the previous year. From the second class the income was £466,999, which was within £467 of the previous year's figures, and was rather better. The decrease in the third-class was also comparatively small at £17,971 on a total of £1,611,174. Against these large figures merchandise and cattle gave the company an income of barely £706,000, but that was an increase of £7,116. From minerals, on the other hand, the revenue was a mere £399,217, and that was £3,345 down. Thus from all points of view the business done was a dragging one, giving no hope for the holders of the company's lower securities. Even the steamboat traffic was comparatively wretched, although it did show an increase of £7,724 at £264,334, but how small this is to what it might be if ordinary business intelligence were applied to the development of the Continental business of the company. Instead of this intelligence everything that the most perverted and undisciplined ingenuity can think of is attempted in order to put restrictions upon this traffic. Arbitrary disabilities are put in the way of travellers, fares are dodged about on any pretext or none, until they become mere traps creating what are practically fines for infringement of rules, and the short sea passage, instead of being popularised to the utmost by low charges and up-to-date facilities, is seized upon merely to mulct the passenger. An end will have to come to this sort of dog-in-the-manger mode of conducting business if the lines of this combine are ever to emerge from their present semi-insolvent or wholly insolvent condition.

Perhaps the most striking illustration of the use made of the fusion is found in the expansion of the capital account. As we have said, both the companies were to all intents bankrupt when the fusion project was started and carried through. The Chatham could not have gone on any longer, and the days of the South-Eastern were numbered as a dividend-paying concern, but fusion gave them a new start, and it is quite interesting to observe with what skill money has continued to be borrowed year after year on a variety of pretexts, very few of them in the least degree defensible. Since the fusion the committee has managed to make away with £3,025,480 of new capital, almost £201,000 having been laid out in the past year, £135,543 of it on lines open for traffic. Some of this capital is duly charged to the capital accounts of the separate companies, but it is none the less spent by the committee, and one direction in which the outlay has been startlingly lavish is new rolling stock. You see the whole of the stock of the two companies had to be repainted and relettered to begin with, and that of the Chatham Company was so dilapidated that perforce new coaches had to be built. Thus about £1,012,000 has been laid out by the committee on rolling stock alone, and the aggregate amount of capital sunk by the several companies and the committee in this one direction was on December 31 last £5,932,000. It is a tremendous figure for concerns whose combined length is only about 647 miles all told, and whose rolling stock was, and to a large extent is, in a condition of dilapidation or antiquity hardly paralleled in any other part of the three kingdoms. The expenditure on docks and steamboats has also been considerable, the total for the two companies being now £1,297,000. Of this sum the Chatham is responsible for £912,000, and the South-Eastern for £385,000. The South-Eastern has also £75,000 sunk in a Boulogne hotel, and altogether the capital commitments of these two railways footed up to almost £63,000,000 at the end of last year. Is it necessary to say anything more to emphasise their hopeless position? The two companies still appear to spend capital on their own account over and above what the committee spends for them, and last year the Chatham Company laid out over £32,000, chiefly on its portion of the new Victoria Station. For these various reasons it can consequently be no matter of surprise to find the capital account of the Chatham Company, in particular, in a miserable plight. Its floating debt is about £435,279, and an issue of 3½ per cent. debenture stock made last year to the nominal amount of £344,095 had to be disposed of at a discount of almost £37,000. The South-Eastern Company is also in debt, although it parades a reserve of £203,000 or thereby, and unless the capital account is, as a first move in the direction of reform, peremptorily closed, the prospect must be without hope. Interest charges are creeping up year by year, nett revenue is dwindling, and altogether the properties are in a bad way, but who is there that would agree to undertake the thankless task of bringing about reform? Whatever becomes of the shareholders, the two boards seem likely to pocket their £11,400 per annum for a few years longer.

Economic and Financial Notes.

The Public Burdens of France.

Official statistics relating to the French budget are always interesting were it for no other reason than that they show how severe the pressure upon the people is. In the ten years ended with 1906 the Government of the Republic collected about £1,462,000,000 and spent about £1,451,500,000. There was thus an apparent surplus of receipts over expenses for that period of about £10,418,000. Only the years 1901, 1902 and 1906 gave deficits. It is, however, doubtful if this summary exhibit is altogether accurate, because in the more detailed official display covering the same period of time we find what are called the "exceptional resources" included each year in the revenue statement, and these exceptional resources generally represent borrowed money, wholly or in part. Thus in 1900 we find upwards of £3,000,000 entered under this title, and the explanation given is that the money is a portion of the 1901 issue of 3 per cent. rente, and relates to the "regularisation of the expenses of the China expedition," the sum named being the portion included in the revenue of 1900. Then in the following year rather more than £3,000,000 is similarly entered, of which upwards of £700,000 comes from the *Caisse des dépôts et consignations*, or savings banks, and appears to represent forfeited deposits, most of the remainder being ascribable to the above-mentioned 3 per cent. rente. It is so throughout the remaining five years down to and including 1906. Every year exceptional resources gave amounts ranging from about £445,000 to about £2,700,000. In 1906, for example, £1,425,500 was received as product of that same 1901 creation of 3 per cents. or from the Chinese indemnity. Therefore, if allowance were made for this type of income, it is doubtful whether any year of the ten would show an appreciable surplus. To be sure, on the expenditure side there may be items entered which would, if strict accounting were adopted, be classed to capital, and there is always a certain amount of debt repayment going on, so that the true position of the French national finances may be quite as good as it seems, if not better.

True as this may be, the annual budget is a very formidable one. In 1906, for example, the revenue collected from all sources amounted to over £153,480,000 and the ordinary expenditure exceeded £144,000,000, these totals representing the French proportion of the budget alone. The public debt takes every year nearly £49,000,000, exclusive of what may be called the working expenditure in connection with its service, which requires over £573,000 per annum in addition. Then the expenditure of the Ministry of War amounted in the same year to £34,372,000 and the navy took nearly £12,250,000, the two together thus absorbing over £46,600,000. And in 1906 a beginning was

made in providing for old-age pensions with a sum of only £550,000 or thereby. Compared with debt and the military forces, there would seem to be no other branch of the public service that gets anything like its full share of the public revenue, for even education draws little more than £10,000,000 per annum from the Treasury, and the amount assigned to the Ministry of Agriculture is not much beyond £1,500,000 in the ordinary budget. Other branches of the public service are equally ill-provided for, but in the two years 1905 and 1906 about £20,000,000 is entered against "agriculture," though what that money represents we are not now able to determine. It is included under the fourth group of the budget outgoings, which embraces the expenses connected with the Government monopolies and the collection of the taxes, and may refer to local improvements. Beyond this, £1,700,000, or thereby, was devoted to redemption of obligations, but when all is said it remains true that the debt and the fighting services run away with fully £95,000,000 of the entire revenue. And that revenue is not particularly elastic, although each year's estimates of the ten ended with 1906 have been exceeded by the actual receipts, except in 1902, when the revenue fell short of the budget anticipations by almost £4,000,000. This must be considered satisfactory from one point of view, only the increase in the expenses beyond the estimates has proceeded at an almost equally rapid pace. Thus for the ten years the revenue in excess of anticipations amounted to £53,440,000, but the expenditure exceeded the estimates by £44,595,000, outgoings thus treading close upon the heel of national progress and keeping the taxpayer always on the stretch.

German Trade and Tariffs.

His predilections may be supposed to be in favour of Protection, but that allowed for, there is food for enjoyment in the letter of the *Times* Berlin correspondent, published in its issue of Tuesday last. The trade of Germany, he points out, has expanded at a fine pace of late years. The total for 1907 was fully £55,000,000 larger than that of two years before, and nearly £25,000,000 larger than that of 1906, notwithstanding the impetus given to imports in the beginning of that year by the rush to get goods in before the new tariff came into force, which it did on March 1. In all last year's "foreign trade" totalled £342,550,000, exclusive of precious metals. This would be equal to about 29.5 per cent. of the trade of the United Kingdom for the same year on the same basis, but by the phrase "German trade" it is to be presumed that the *Times* correspondent really means exports of German produce, although his reference to the influence of the new tariff in stimulating anticipatory imports suggests another inference. As a matter of fact, the total trade of Germany out and in for the past year, exclusive of the precious metals, was upwards of £773,317,000, according to the figures provided by our Board of Trade, and the display is most creditable to German enterprise. It is a trade carried on to a preponderating extent with the United Kingdom or with the British Empire, and here comes in the most interesting part of the letter. Recent by-elections here have led the Germans to infer that England's Free Trade days are over, the *Times* man says, and it is suggested—with great shrewdness—that the institution of old-age pensions reveals the intention of Mr. Asquith's Government to slip over to the tariffite camp. The reduction in the sugar duty hardly supports that view, but none the less is the assumption of an additional burden, like old-age pensions, the probable forerunner of a return to Protection.

Taking this view, German men of business are already "anxiously discussing" the steps to be taken to "defer or forestall the movement in favour of tariff reform on a basis of Imperial preference." In becoming anxious so soon the Germans hardly bear out their character for surefooted solidity, but it is well to take time by the forelock always, and if these good rivals of ours can step in first and effect "anticipatory agreements" with our colonies, they may, after all, come to something in Jacob's line. But how could we establish "preferences for the mother country" if Germany had cut in first and secured a special grace for its goods? The logic of the German idea looks as if it limped a bit, but that is a way the logic of tariffites has, and what interests us more than treaties—Germany is quite welcome to make them by the dozen and the score the world over so long as we come in upon the most favoured nation basis—is the admission that German trade "is more dependent upon the British market than British trade on the German market." A most pregnant admission that, and its meaning is heightened by the news that even the ex-Free Traders of Germany are abandoning their principles and joining with ardour the party that clamours for shipping subsidies with a view to the propping and expanding of Germany's foreign business. Surely all this hardly goes to signify that it is well with German oversea trade. Why does it want props and refreshers from taxation and special treaties, and all the furniture of the sickly and stimulant upheld, if it is a strong, young, vigorous, and prosperous trade? We shall get an answer, perhaps, in a few years' time or sooner. And there are dependent questions on which we in this country can afford to wait for illumination. Why is the federation of South Africa dreaded as an event which might be deadly to German trade there? And is the "straining of every nerve" in order to keep her footing in the Southern Ocean really a proof that German trade is full of sap and vigour, naturally buoyant? It would hardly seem so, for the German colonies in that part of the world "are openly described" by her colonial experts as "prestige possessions" which are useful only because they afford a pretext for the presence of the ribands and *quincaillerie* of empire there. A suggestive of irksomeness, of tiredness even, is conveyed to the slow British mind by hints, confessions, and observations such as these. The Germans are a mighty people though, and capable of one day becoming really great.

Great Cobars.

Very few mining shares have been the sport of the bears during the past week or so, but Great Cobars have had this unenviable distinction, suffering a sensational fall at the moment when practically every other share in the mining markets was just blazingly good. It is a couple of years ago since the present company was formed to take over what was declared to be the most extensive copper-producing property in Australia, besides coal and gold mines, smelters, and a refinery. The purchase price can hardly be described as modest at £1,000,000, the greater part being taken in cash, and despite the glowing accounts in the prospectus of the richness and extent of the mineralised ground acquired, the shares hung fire for some little time. They actually dipped below their par value of £5 soon after the public issue, but later came the copper boom, and when Tintos easily topped the century and other signs of madness were around, Great Cobars were naturally among those to benefit from the prevailing dementia. So in due course the shares were raised above £12 apiece, and a dividend of 15s. paid in September last was counted promising, although less than some professed to expect. When the copper boom collapsed, and the United States were experiencing one of their periodical bankruptcies, there was an all-round slump in copper shares, but quite apart from this, the market in Great Cobars has looked "dicky" for some time. Bear attacks, if not exactly frequent, occurred too often to be comfortable, and it may be that the flood of rumours let loose at the end of last week took few by surprise. Prefacing our recital with the statement that the stories have been strenuously denied by the company, it may be useful if we set down some of the extravagances current. The first report and accounts made up to December 31 last are due for immediate issue, and the bears stoutly declared that no profit would be shown, notwithstanding that

the company had been working on the rich ore known to exist in the mine—did not one of the experts, in reporting on the property, remark that it had better be bought quickly, before the former owners mined all the best stuff? We are only speaking from memory, but fancy this is so. Next came a story that all was not right with the new machinery, erected at enormous cost—much too great, it was said—and that more capital would have to be raised for the purpose of liquidating indebtedness and providing further funds.

Nor were the bears slow in pointing out that, commencing with the present year, the company has to find £100,000 per annum for the redemption of the debentures, and if profits could not be made last year, what about the position and prospects with copper at much less than £60 per ton? At this point, after the shares had fallen about 30s., the directors thought it wise to intervene, and issued a brief statement, in which they regretted to learn that various false rumours about the mine had been circulated, and desired to inform all interested in the properties that they were entirely without foundation. The accounts to December 31, 1907, were in the auditors' hand, and with the engineer's and manager's reports would shortly be issued. These, the directors felt, would be regarded by the shareholders as fully satisfactory. But this explanation still left much to be desired, and the market was impatient for the report, declaring that the accounts had been in London for more than three weeks. So, in the hope of allaying anxiety pending their issue, the directors issued, through the secretary, a further and much more complete statement as follows: "It having appeared from various Press comments that the directors' recent statement did not deal pointedly with the rumours circulated as to the redemption of debentures under the trust deed, I am instructed by the board to point out that the first sum falls to be provided out of the profits of the current year ending December 31 next. The question is, therefore, not pertinent at this early date; nevertheless, the directors are quite satisfied that the obligation will be duly met. The board further desires to state that the financial resources placed at its disposal at the formation of the company have proved ample for all requirements. I am also instructed to state that the new plant is practically completed, and when running will produce more than double the present output of copper at a greatly reduced cost, and according to our consulting engineer's measurement of ore opened up, five years' working for the plant is already provided, the gold and silver contents of which alone he estimates will practically cover the total debenture issue." This is much more reassuring and explicit than the directors' first statement, and the shares have shown a substantial recovery, but the market is fidgety and uneasy, and is anxious for the report and the annual meeting so that the directors can be interrogated and all uncertainties cleared up.

American Business Notes.

The world is always fascinated by spectacular displays, it is therefore no wonder that all eyes have again turned towards New York. It is giving an exhibition of financial pyrotechnics that beats anything we can do on this humdrum side of the Atlantic, and the play is attaining greater breadth and magnitude than on previous occasions when the same set-piece has been put before the gamblers of the world. We never remember a time when the Yankee market did not rally without apparent reason after having received a knock-down blow. Prices always began to go up in defiance of facts, and often went on going up until facts were created to give solidity to the advance, or until the public had been duped to part with its savings. Is the same thing going to happen now? It is quite possible, provided the world and his wife can be induced to join the gamble. It all depends on that. Parade is made of bumper harvests, although the seed grain is hardly yet in the ground, in North-West Canada not all in the ground. But that kind of thing is only the gag of the professional market operator, and it is not harvest prospects, or revival of industries, or easy money which really gives the impetus now driving Wall Street prices upward with staggers, and sending a sort of thrill of exhilaration over all the markets of the world. It is hope of gain, or of successful manipulation of prices so as to empty the pockets of the speculators for the fall. And in proportion to the magnitude of the account open for the fall is the success with which the campaign can be wound up, or rather if the slaughter of the bears can be continued until the multitude possessed of money, which it is always ready to lose, can be tempted to buy the stocks from the bull manipulators at the advancing prices, then the boom will endure until a transfer of cash satisfactory to the master gamesters has been effected, and the collapse may not come again for months. On the other hand, should the outside people who play have learned wisdom enough to impel them to stand off and keep their hands in their pockets and their tongues within their teeth, the triumph of the bull over the bear will bring tumbling markets in all probability just when the next harvest has been reaped and all trade and industrial circumstances point to widening business.

In other words, the display now made is pyrotechnic. That is the best description we can give—all fireworks, let off with the definite object of getting hold of your money, anybody's money. There is neither morality nor business in sight or astuteness in the display, it is brazen indifference to every consideration of prudence, every business calculation, every interest except that of No. 1. Being so, we are in no position to forecast in the slightest degree the course of the market or to point to the day when those now apparently loading up to an unstinted extent will find themselves over-weighted. Where you cannot see the way do not adventure.

As yet the figures of the banks, trust companies and other credit gasometers in New York do not reflect to the extent we might have anticipated the consequences to credit jobbers of the advance in prices already secured. Still the Associated Banks last week showed an increase in their loan and discount averages of £956,000, and as the specie average rose by £135,200 and the greenbacks' average by £304,400, or about £440,000 in all, the nett deposits were £1,179,000 higher, the surplus reserve average was up by about £145,000 to £12,922,000 against £2,295,000. The odd thing is that the banks are gaining in cash, on their average exhibit at least, in spite of the heavy and continuous withdrawals of gold. These had amounted to about £3,000,000 up to the beginning of this week, and they are going on, so that by the middle of this week the aggregate shipped or engaged rose to £5,730,000, and yet money in New York is often hardly lendable at 1 per cent., and nobody pays the slightest attention to the disappearance of the metal. This also is usual, quite in the order of things, because the more credit is created, no matter on what, the cheaper it tends to become. It is only when a mass of it disappears altogether that it becomes dear and the gold hunt grows an agony.

Equally indifferent is the managed market to the state of business. Railroad traffic receipts continue bad enough almost to foment the Irish wake-like howls of the New York *Chronicle*—and prices go up. The Baltimore company's return for April is said to be the worst in its chequered history—a decrease of £1,643,600 or 30 per cent. in the gross, and of £1,087,200 or 63 per cent. in the nett, but what of it? The company can pawn something, or profess to, leave its lines and equipment to dilapidate and so bring back prosperity.

Last week the Associated Banks would seem to have done their fair share of supplying the market with credit gas. For all that the outside banks and trusts increased their loans and investments by

£1,741,000 to a total of £172,311,200, and their specie rose by little more than £230,000 to £9,832,000 while the greenbacks actually fell off about £35,000 to £2,380,000. Deposits were none the less up £2,502,000 at £142,265,000, and the official average of reserves to deposit liabilities was given as 32.3 against 32.5 the week before. We make it to be about 8.6, but perhaps the new banking law coming into force in the State of New York will enable us to understand better how these averages are made up. As it is, additional credit to the amount of nearly £2,700,000 was put upon the New York market last week simultaneously with a reduction of more than £2,000,000 in the stock of gold.

New York financiers do not even bother themselves with some of the unpleasant consequences of their campaigning. That McIntyre failure on the New York Stock Exchange, for instance, has led to some very unpleasant discoveries, as we mentioned some weeks ago. The firm used the securities left with it by its clients to raise money for its own purposes, and when this was discovered one of the partners said that the practice was usual. He has been arrested, having lost £200,000, it is said; but from comments in the papers we fear his assertion is not so far from the truth as it ought to be. At any rate, another firm that failed earlier, and one of whose members committed suicide, seems to have been doing the same kind of thing, and in another fashion a prominent bank official named Montgomery has been using property not his own, the securities or cash of the Allegheny Bank in Pittsburg. This was a political bank; at any rate, the late Senator Quay of Pennsylvania made it his headquarters, and through that fact the defaulting cashier seems to have attained considerable prominence in the locality. His borrowings are said to amount to more than £400,000. He was in Schwab's Tonopah Extension gamble, and had he got out at the top of the blister might have been many times a millionaire, the *New York Herald* alleges. He didn't, and since his arrest as a first-class defaulter "many little politicians in Pittsburg are shivering in their boots." No wonder Schwab is unpopular. It is all wrong, but in the way of business, as the *Evening Post* says.

Mark Twain's great friend, Mr. H. H. Rogers, the forsaken of Rockefeller, is reported to have succeeded in selling £3,400,000 6 per cent. five-year notes in order to finance his tide-water railway. That is a striking proof that Mr. Rogers is not yet dead.

But his performance is small beside the Harriman feat. That Standard Oil autocrat is going to issue £8,000,000 of his Union Pacific first mortgage bonds after all. The delay has been caused entirely by the difference between him and the great issuing houses as to price. He wants to outshine the Pennsylvania, which only got 93 for its brilliantly successful issue, and Harriman wants to nett about 96 for his parcel. On the same scale of profit, as in the Pennsylvania operation, this would mean 99 to the public, and Harriman thinks he can get 98. Well, the Rothschilds and the Barings are to have a try. So says the New York correspondent of "the great city daily." Mr. Jacob Schiff has seen to that, and Harriman has effectually boomed the market to create the proper sentiment.

Will our Protectionist friends here explain how it comes that Mr. Gompers, the president of the American Federation of Labour, was able to tell the Committee of the Senate at Washington that there were 2,000,000 unemployed working men then existing in the United States who had been out of work for 175 days? Estimating their average earnings at 10s. a day, this represented a loss of £175,000,000 in wages. We thought there was no such thing as labour distress in a properly regulated Protectionist country, and must insist on having some light from the authorised exponents of reaction upon this apparent anomaly. There was worse to follow, for Mr. Gompers went on to say that unless Congress passed the legislation demanded by labour the working men would secretly organise. This was not a threat, he explained, but a prediction. "If," he declared, "the workmen are not going to surrender their rights of association, if they are not permitted to reveal things openly in full public view, then, I imagine and predict, that they will do the next best thing, organise secretly." A thorough organisation of the working classes throughout the American Republic, were it loyally entered into and carefully arranged, would change many things there, and capitalists must never lose sight of this, from their point of view, threatening danger.

Passing Events.

A valuable summary of the position of London in regard to debt has been published by the Statistical Officer of the County Council. It brings the figures up to the end of March, 1907, and the display is, on the whole, reassuring, especially the statement that it does not appear to the Finance Committee of the Council that the aggregate nett debt of London chargeable upon rates is likely to show a material increase in the near future, unless further large schemes of capital outlay are undertaken. Most of the great undertakings in hand are approaching completion, and the largest visible new demands on capital account relate to education and the new County Hall. Debts are being reduced in some directions, and the obligations connected with the Metropolitan Asylums Board, now amounting to £2,941,536, will be paid off within 14 years. The board does not contemplate any further borrowings in the near future. Also the debt of the boards of guardians, £4,209,427, shows a tendency to decrease, and the small obligation connected with the Metropolitan Police service amounting to £241,408 on March 31, 1907, is rapidly disappearing. None the less did the total nett debt of London stand at £108,563,194 on March 31, 1907, an increase of almost £3,000,000 on the year and of about £5,300,000 compared with March 31, 1905. Only a comparatively small portion of this debt, however, is directly a burden upon the rates. London's proportion of the Metropolitan Water Board, which is £38,443,351, involves no charge on the general rates whatever, and the tramways debt is also taken care of by the income of that undertaking. The two most important revenue-producing undertakings, water and tramways, says the Council's official, have not necessitated a charge on the rates, and the other undertakings involved in 1906-7 a total charge of only £50,597, of which £22,104 related to the Council's steamboats. Seeing that the total charge in respect of the debt incurred for revenue-producing services and the works department was £1,928,078 at March 31 last year, this is surely a consoling fact.

It is proper, we suppose, to feel true blue funk alarm regarding such statements as that made by the Berlin correspondent of the *Westminster Gazette* in the beginning of this week. He was dealing with the success of the German Navy League in stimulating the Government to build ships of war, and the kernel of his interesting letter may be stated in a few words. By the end of February, 1912, if we British go on building as we are now doing, we will have 11 *Dreadnought*-type ships—viz., eight *Dreadnoughts* and three *Dreadnought*-type cruisers, and by March of the same year Germany will have 10 *Dreadnoughts* and three *Dreadnought*-type cruisers, or 13 ships in all; so that Germany will be two ahead of us in that, at the present moment, latest patent style of wealth destroyer. But what will the position be of the finances of the two countries at that date? Conceivably, unless our credit machinery breaks down through the exhaustion of some portion of the Empire or the wearing out of some prop, this country will still be paying its way in 1912, and will have all its *Dreadnoughts* and other instruments of destruction unpledged. Will Germany be in the same position? And what do either of us want all these ships for if there is to be no aggression on either side? The German people have resolved to build big battleships in imitation of us, and we are determined to build them in rivalry of Germany in

order to maintain our theoretical supremacy on the sea, and at the end of the business there will be a great deal of scrap iron on offer for which the market is certain to be poor. Germany's shipbuilding armament vote for the current year involves an increase of £8,358,000, and each year the total is likely to mount for the simple reason that the more ships there are the more men and provender there must be, clothing, ammunition, paint, bunting and so on.

We are, therefore, glad to see that Sir Samuel Evans, the new Solicitor-General, has been speaking straight words to the men assembled last Sunday afternoon in Whitefield's Tabernacle. "I hope," he is reported to have said, "that the working men of this country will see that the Imperialist policy, or whatever it is—undue interference with matters in different parts of the globe—will not be persevered in." Sir Samuel went on to enforce this advice by producing some statistics illustrative of what Imperialism means. Every citizen of the United Kingdom is born in debt, and even now, after the considerable and praiseworthy reduction which the Liberal Government has made in the public obligations of the State, over every man, woman and child in the country there hangs a State debt of £17 per head. Well might the Solicitor-General hope that before long a considerable reduction would become possible in the non-productive heads of expenditure, for between debt and fighting services something like £88,000,000 of our entire income is annually swallowed up. "Prosperity" thus induced resembles drinking one's own blood in order to keep from dying of starvation.

Revenue is coming in fairly well and £2,258,000 was received in the past week, of which, however, only £82,000 came from income-tax, and it is upon the yield of that tax for some little time that attention must be principally concentrated, not only because we believe the tax to have been very fully swept up within the past fiscal year, but because the state of the trade throughout the kingdom leads to the inference that its yield will be diminished. Customs gave £609,000, Excise £490,000, and estate duties £314,000, but stamps only £63,000. Payments on account of supply and other fixed sources of outlay amounted to £1,839,000 and £235,000 was handed out to the Naval Works Department. Even so, the balance of the Government in the banks was increased by £186,000.

A slight decline took place last week in the numbers of people fed by the Simla Government, the total being on May 19 last, when the Viceroy telegraphed, 1,393,000, of which 1,170,000 were in the United Provinces. Some rain fell during the week in every province, Lord Minto says, and it was moderately heavy in parts of northern and north-eastern India. Standing crops have, therefore, benefited, and the preparation of lands for the autumn crops has been facilitated. This is good news, and we hope the rains will continue until the soil is restored everywhere to fertility and a little heart put into the cultivators, but the famine must prolong its ravages for months yet. And the worst of it is that hunger is always familiar to many millions of the Indian people.

Last year seems to have been a good one for the railways of India, according to the Allahabad *Pioneer*. Their gross earnings amounted to £31,000,000 against £29,886,000 in 1906-7, the year always ending at March 31. In spite of the strike of last November the East Indian increased its gross receipts by £132,000, and the Burma lines showed an advance of £124,000, those of Oudh and Rohilkund being also nearly £100,000 better, but the Great Indian Peninsula fell behind by about £86,000 on the working of its main line and the Agra-Delhi branch, but it gained £37,000 to set against this on the Indian Midland property lately taken over by it. There was also a decrease of £46,000 in the Rajputana-Malwa lines worked by the Bombay and Baroda Company, and in other directions the elasticity of some of the lines first mentioned was not maintained, but the North-Western State lines led the way over them all with an improvement of £318,000, and no doubt in some ways the occurrence of a famine is temporarily good for the railway system of India, whatever it may be for the ultimate fate of our Indian investments.

It seems again advisable to deprecate too much excitement about events, or alleged events, of an anarchist type, cabled to us from Calcutta or Simla. A Press manufactory of horrors seems to be in full swing over there, and bombs are exploding in the suburbs of Calcutta or elsewhere after a style which leads us to suspect that they are very likely manufactured for the purpose of raising the wind for some poor journalists. Discontent there is in India, a great deal of it, but it is not going to break out in this fashion to any alarming extent unless white or Eurasian agitators prompt the natives to take action. And there is no discontent as yet which might not be remedied by the exercise of a little judgment and human kindness, by concessions here and there, and above all by an easing of the strain the people have to bear. What possible gain can the people of India receive from the routing of the Mohmands on the North-West frontier? What do we gain by magnifying every hostile incident into "disloyalty," and flying to repressive measures. What can the words "loyal," "disloyal," mean to a native of India? Are we "loyal" to India's interests or only to what we deem to be our own?

A return of the trade of India for the twelve months ended March 31 shows an excess of imports over exports amounting to about £1,810,000, taking the rupee at 15 to the £. This looks bad, and is really much worse than it seems, the debtor condition of India taken into account. Imports of merchandise amounted to only £86,566,000, whereas the exports of merchandise attained the impressive total of £118,102,000. There was thus an excess of exports of merchandise over imports amounting to £31,536,000, and that would have been healthy in a sense, healthy for us at least in view of the enormous charges payable in London by the Indian Government on account of interest, pensions, allowances, &c., and of the profits and savings remitted from that country here. This balance, however, was completely obliterated by the purchases of treasure, as it is called, which amounted to £21,872,000, and by the drafts on India by the Council here, which devoured another £15,105,000. Therefore, in spite of exports of treasure to the amount of £3,631,000, the adverse balance is as stated, and the figures altogether present a degree of artificiality suggestive of no small disquietude about the future. How long can India stand capital doses and drainings on the present scale?

Is there any country in the world professing to be civilised, at any rate any Protectionist country, that can show the same freedom from the burden of the workless that ours does? Trade has been declining for months past, and is probably not yet at its worst in some branches of industry, yet Mr. Churchill was able, in answer to Mr. Fell, to give some figures of a kind less alarming than the croakers have bidden us expect. Trade union returns made to the Board of Trade giving the number of unemployed last March, when contrasted with the same month of the previous year, show a lamentable increase in the number of the workless, but the proportion of the idle was only 6.9 per cent. last March, and in April had risen to no more than 7.5 per cent. To be sure, March, 1906, showed an unemployed percentage of merely 3.9 per cent., and April of that year one of 3.7 per cent., but it must not be forgotten that the numbers of the idle have been materially increased this year by the disputes in the engineering and shipbuilding trades. These disputes have not only thrown a number of men in these particular trades out of employment, but have forced large numbers of others not connected with these trades to go idle.

The new Portuguese Ministry has brought in a budget which shows a deficit of barely £302,000. This

is for the financial year 1908-9, and is a remarkable feat. Revenue is estimated to yield £15,855,259, but the expenditure is put at £16,157,011, so that the deficit is as stated. This deficit, however, is nearly £61,000 less than that estimated for the current year, and if the Minister of Finance is able to make good his forecast, Portugal may yet find London and Paris willing to provide it with a new loan. But can the people of Portugal really provide a revenue of nearly £16,000,000? We have not faith enough to believe it.

It is curious to observe that of the five countries whose trade statistics the Board of Trade is able to compare for the first quarter of the current year, German figures alone show increases on both the export and import sides of the account compared with the same period of 1907. Belgium has almost maintained its last year's level with exports, but the imports have fallen off by nearly £2,800,000, and the shrinkage of French imports was £1,348,000, our own having fallen off by just over £4,000,000. The United States naturally comes worst with a decline of over £5,800,000. In the exports the exhibit is also unfavourable, especially for France, where the decline is £3,757,000 on the quarter. That is more than our own decline of over £2,600,000, and our figure for the quarter is more than £8,000,000 higher than for the first quarter of 1906. The United States also keeps up, comparing this year with last, in fact that country's exports are £870,000 higher in the March quarter of this year than in the same period of 1907, but Germany, as we say, has done a larger trade on both sides of the account, the increase in imports having been over £1,500,000, and in exports over £900,000. How long will this apparent elasticity continue, and to what is it due?

Continental Memoranda.

No Continental market has given way to the blandishments of New York. Prices have been tolerably good most days since we last wrote, but the public appears to be just as reluctant to join in the play on the Continent as here. Nowhere, in short, have the bitter lessons of the South African madness been quite forgotten. Essentially the game being played in and from New York is of a like character with the South African manipulation of markets in 1905 and subsequent years. Facts are disregarded, probabilities left out of sight, and the public is asked to look to the future, the coming harvest, abundance of gold, cheap money and the rest of it. As long, however, as the public remains apathetic and refuses to be tempted to engage in the game, there is not much object in following its changes, and there is really very little news of an interesting kind coming over from France or Berlin. Paris still plays with copper shares to a certain extent, and speculators there continue to be much exercised about diamonds. An effort was made to patch up some kind of an agreement between the Premier and De Beers companies, but it aborted, and we cannot see where relief is to come to the diamond trade. Even if the leaders of the bull campaign are successful the shipment of precious stones to New York is not likely to be much stimulated by their purchases.

A squabble, as it may be called, has arisen in France over the proposal to be laid before the Senate having for object the prohibition of the manufacture of absinthe. The same fight has arisen there as here over the Licensing Bill, and those who defend the manufacturers and distributors of this poison are pointing to the futility of the stamping out experiment in the United States. A writer in the *Siècle*, for instance, who says he is extremely anxious that drunkenness should disappear from France, insists that the measure proposed by Messrs. Berenger and de Lamarzelle would only end in hypocrisy. He instances what happens in Maine, where alcoholic drinks cannot be obtained without a doctor's prescription. This law, he says, has done nothing but make fortunes for the happy doctors of that State. One drinks as much as ever, only one has to pay a dollar to the doctor for liberty to do so. The Swiss, who have recently adopted prohibitive measures, are finding their law circumvented in another way. It is a punishable offence to sell absinthe in the cafés, so the poison is given away, not sold. There is a barber's room attached to each Swiss café; you get change and the barber then makes a present of a glass of absinthe to his customer, the price of which is included in the shave. It is much the same in Norway.

For 1909 the expenditure of the French Republic is estimated at £158,920,000 and the revenue at £157,160,000, so that the anticipated deficit is £1,760,000. With that in prospect the price of Rentes is not likely to be irrepressibly strong, apart altogether from the effects of the fears excited by the income-tax. "That is hated, tax anything but incomes," the Press, and, presumably, the people, cry.

Brazilian paper money has been reduced in volume by about 20 per cent. in the last ten years.

More than a third of the Uruguay wool crop is said to be held back in hope of a recovery in prices. That is the kind of hope that always aggravates a depression, and the formation of a trust to control the Uruguay market and swallow up small dealers bodes no good to anybody. But the removal of the export duty would do good. What is the fate of the cotton holding device in the United States? About 3,000,000 bales on hand unsold, prices depressed, a rotten market.

It has been frequently stated that the gold being shipped in such handsome quantities from New York to Paris is really going to Germany, but this statement cannot be true, the German newspapers point out, as the exchange between France and Germany would not admit of this arbitrage transaction. Germany, however, has engaged about £1,000,000 in Australian gold, and a steamer from Melbourne is expected to arrive immediately with £700,000 of this amount. Gold, moreover, is beginning to go direct from New York to Berlin, and if the Reichsbank keeps its rate well above the rest of the world gold is sure to be gradually drawn in. That the Reichsbank needs gold is illustrated by the fact that its proportion of the metal to its note circulation has been steadily slipping back for many months, at any rate until quite recently.

New capital issues for industrial companies have been smaller in Germany this year than last, as might be supposed. For the first four months of 1908 the total is put at £17,170,000, a decrease of £8,791,000 on the total of the first four months of last year, or more than one-third. What the industrial companies, however, are failing to accomplish the Imperial and Prussian Governments, the various States and the Federation and the municipalities are doing their very best to make good. Meanwhile, the traffic receipts on German railways are at last beginning to decline, and we fear the decrease is likely to become more emphatic as the time goes on.

Apparently the iron and steel industries of the empire are getting into a more or less embarrassed position, and anxiety is expressed lest the movement to cut prices in the United States should have a disastrous reflex influence. Perhaps this anxiety is founded upon the efforts German manufacturers are engaged in to find markets abroad for what home consumers will not take. In the first quarter of this year the exports of German half-manufactured steel rose by 26,000 tons or 42 per cent. compared with the same quarter of last year. Steel shares, however, have been flat on German bourses, and as an aggravation of the pessimistic mood now prevalent it is asserted that the great Phœnix Company is in want of more capital, and the prophecy is that its dividend will be very disappointing.

An interesting estimate has been published in the *Berliner Tageblatt* dealing with the remittances of emigrants to the countries of their origin. It points out that the peasants and working classes generally seem to have more ready money and to have more deposited in the savings banks now than before the return flow of emigrants set in from America, and adds that

the amount of money sent home to the old country, wherever that may be, differs very much according to the race. Germans and Englishmen acclimatise themselves most quickly to America, and lose their feeling for their mother country sooner than people from the poorer nations. Germans on the average sent only about £800,000 home; the English people, or rather the Irish, about £1,500,000; the Russians, who are almost entirely Jews, about £3,000,000; and the Scandinavians the same amount; while the Hungarians are estimated to send back £5,750,000, the Italians £6,100,000, and the Greeks about £10,000,000. The writer estimates that about 500,000,000 lire annually flows into Italy from North and South America, and thinks this shows the love of the poorest nationalities for their mother country. That depends; but if these estimates accord with facts, the movements and earnings of a migratory population have much more influence upon the well-being of the countries of their origin than might have been supposed, and certainly the remittances of Irish emigrants home have done much to prevent the collapse of Ireland under its excessive burdens.

A telegram from Mukden states that a loan for 20,000,000 taels is shortly to be issued in England for the Japanese railways of Manchuria, the money being destined to reorganise the administration of that province. This is the £2,000,000 loan now announced here. It takes the form of three-year 5 per cent. notes, and will be offered at 98.

Notes on Books

Japan: Its Commercial Development and Prospects. By Takashi Masuda. (London: Sisley's, Limited.) Price, 2s. 6d. nett.

Who is Mr. Masuda? That is what people who see this little book advertised may ask, and they should just buy it in order to read the satisfactory answer furnished by Messrs. Shand and Lynch in the preface. According to these gentlemen, who know Japan well, Mr. Masuda is the managing director of the firm of Mitsui and Co., of Japan, one of the oldest and greatest commercial houses in that busy country. The business is a family one, carried on under rules drawn up nearly two centuries ago, and the members of the firm are bankers, steamship owners, merchants, miners, and brokers, all on a great scale. The author of this book has consequently had a most varied experience of Japanese business, and his little work is not only well-informed, but ably and modestly written. The story of new Japan is the greatest romance of our time, and gives abundant scope for what may be called fine writing, but there is nothing of that here. Instead we get a simple, modest, plain story dealing with the facts of Japanese progress since the country first opened its ports under the guidance of the United States, and a lucid statement of the aims governing those who control its destinies to-day. These aims so far as business is concerned may be summed up in a sentence. "The foreign trade of Japan tends to increase in raw materials for import, and in finished materials for export, and such tendency is in accordance with the fundamental principle of the progress of trade." The determination of Japan, in other words, is to be a great manufacturing and distributing country, and her purpose in this respect is being worked out with a thoroughness, a systematic co-ordination of forces, exhibited nowhere else in the world with the same completeness. Mr. Masuda's little book ought, therefore, to be studied by all interested in our own trade, as well as in the development of Japan. It will do much to convince the doubter that Japan is in no sense a disturber of the peace among nations, but a formidable rival in trade and industry.

Messrs. J. Henry Schröder & Co have received a cable from their Santos agents advising them that they have further encashed £11,500 in respect of the surtax collected weekly for the service of the State of San Paulo 5 per cent. Exchequer Bonds, making a total of £780,150 encashed since the 1st August.

Critical Index to New Investments.

Southern Punjab Railway Co., Limited.

An issue of 100,000 4 per cent. cumulative preference shares of £10 each is offered by this company to provide funds for the construction of a railway which has been sanctioned by the Secretary of State for India in Council. The line will be about 210 miles long, running from Kasur, through Kanganpur, Pak-Paltan and Mailsi to Lodhran, and with interest during construction and preliminary expenses is estimated to cost £1,100,000. During the past three years the balance of nett earnings, after deducting debenture interest, Indian income-tax, and all other liabilities, including the Secretary of State's proportion of surplus profits, were £66,680, £86,403 and £112,847 respectively, or an average of £88,643, to which will be added £47,000 per annum for nett return on the cost of the new line on the agreed rebate terms. Under the present contracts the Secretary of State has the option of acquiring the existing lines of the company in 1923 and at subsequent intervals of ten years, but under the new agreement the dates for purchase will be extended, and the Secretary of State will have the option of acquiring all the lines, including the intended railway in 1929, 1934, and every tenth year thereafter. The existing preference stock is quoted under par, and in order to get round the difficulty of issuing shares at a discount, subscribers will be credited with a "commission" of 7s. per share on the final instalment, which is due on December 29.

Republic of Colombia Customs Guaranteed Bonds.

Messrs. Steer, Lawford and Co. are authorised by the owners to offer for sale £350,000 6 per cent. Customs guaranteed bonds of the Colombian National Railway at the price of 81 per cent. These bonds form part of a total of £430,000 guaranteed by the Colombian Government, which has appropriated 3 per cent. of its Customs revenue as security for the interest and has undertaken to make good any deficiency from its general revenue. For 1906 the Customs revenue amounted to £1,515,000, and it is believed that the 1907 receipts will exceed this figure by about £200,000, while the interest on the whole £430,000 only requires £25,800. In addition the bonds are secured by a charge, subject to the £600,000 6 per cent. debentures already issued on the railway of about 84 miles between Girardot on the River Magdalena and Fagatativa, where it joins the Sabana Railway. The line is expected to be open for working by August next, and it is anticipated that when traffic is developed a nett profit of £145,000 should be earned. At the price asked the bonds look cheap, but Colombia's conversion to national honesty in financial matters is of so recent a date that a purchase must be considered purely as a speculation.

Southern Railway Company 6 per cent. Gold Notes.

An issue of $15,000,000 or £3,000,000 is announced for this company by Messrs. J. P. Morgan and Co., managers of the syndicate by whom the notes were acquired. The price they are offered at is 99 per cent. in dollars. This, however, includes ½ per cent. of accrued interest, so that the nett price is 98½, and if the security is good the notes ought to be worth picking up, especially as favourable terms of conversion are offered, as will be seen by the prospectus. Altogether $24,500,000 of various securities are pledged against this issue, and the notes are convertible at par at any time upon five days' notice into the pledged Southern Railway Development and General Mortgage 4 per cent. gold bonds, series "A," which will be handed over at 80 per cent. up to May 1, 1909, at 82 per cent. for the succeeding year and 85 per cent. in the year ended May 1, 1911. The Southern Railway ought to have a great future, and probably will one day be much more prosperous than it has lately been, so people must just weigh the probabilities and make up their minds.

Union Cold Storage Co., Limited.

Established in 1897 to carry on a business of storing goods for customers, this company has large establishments in London, Liverpool, Manchester, Hull, Riga, Glasgow, and Kosloff, the two last-named being recent additions. Its authorised capital is £450,000, divided into 200,000 6 per cent. cumulative preference shares and 250,000 ordinary shares of £1 each, of which 32,500 preference and 197,500 ordinary shares have been issued, while there is £180,114 in 4½ per cent. first mortgage debenture stock outstanding out of an original issue of £225,000. In order to provide for the new premises and for extensions at Liverpool and Riga, the directors this week offered £100,000 4½ per cent. first mortgage debenture stock at 93½ per cent. and 100,000 6 per cent. cumulative preference shares at par, all of which were underwritten by the managing directors for a commission of 4½ per cent. on the debenture stock and 5 per cent. on the preference shares. The company would appear to have been fairly successful in pleasing its customers, the profits, before allowing for directors' remuneration, interest on borrowed money, depreciation of plant, machinery, and leaseholds, having increased from £51,131 for the fifteen months ended December 31, 1904, to £60,948 for the year ended December 31, 1906. What last year's results were we are not told, as the accounts cannot be fully completed until July, but the directors state that the continuously progressive character of the business since its formation has been fully maintained, and that the profits will be considerably in excess of those of any previous year. Including the present issues, the amount required for debenture interest and preference dividend will be £20,555 per annum, so that on the basis of the 1906 figures there is ample margin, while the principal should be well secured. The original properties held are valued at £365,020, and the extensions and additions now being made at £222,593, while the surplus of liquid assets over floating liabilities is £30,512, making a total of £618,125, or an excess of £205,511 over the debenture and preference capital.

Willer and Riley, Limited.

This company was formed in May, 1901, to take over from a company of the same name a business of wholesale butter, margarine, and general provisions and produce merchants, having warehouses in various large provincial towns as well as in Montreal and Melbourne. During the last six months it has secured valuable agencies for Australian, New Zealand, and Argentine produce, as well as the sole agency in England for the Siberian Butter Union, of Kourgan, Siberia. In order to meet the requirements of these new agencies and the increasing business of the company the capital has been increased by 75,000 6 per cent. cumulative preference and 50,000 ordinary shares of £1 each, all of which were offered for subscription, 55,000 of the preference shares having been underwritten for a commission of 4 per cent., and an overriding commission of 1 per cent. The assets on September 7, 1907, were valued at £335,431, of which £151,438 was represented by book debts, advances on consignments, and bills receivable, and £150,237 by stocks taken at the wholesale selling market price of the day. Deducting sundry creditors and bills payable and the dividend on the ordinary shares the nett value was £146,313, exclusive of goodwill, which stands at £112,906. Profits have risen steadily from £12,291 for the year ended September 10, 1904, to £19,736 for 1906-7, but the directors estimate that with the additional business to be derived from the new agencies the profits for the current twelve months should be about £28,000 without the aid of the new capital. It seems a big jump all at once, and while the preference shares may be fair investments, we fear the ordinary can only be regarded as speculative.

Anglo-Portuguese Petroleum Co., Limited.

This high-sounding title covers a little undertaking which has been formed with a capital of £25,000 in 100,000 4s. ordinary shares and a like number of 1s. deferred shares to acquire 8 claims of 100 hectares, each in the municipality of Torres Vedras, Portugal. For these it pays a trifle of £300 in cash to the Petroleum Development Company, but it is intended to form a larger company or companies to work the claims provided prospecting work justifies that course, and in that event it is stipulated that a further £5,600 in cash and 16 per cent. in shares of its or their capital shall be paid to the grantor of the concessions and 6 per cent. in fully paid shares to the vendor. The Petroleum Mining and General Investment Corporation, Limited, has agreed to advance the preliminary expenses, and the cost of the work now proceeding, and also to guarantee the subscription of 15,000 ordinary shares in return for the allotment to it of the deferred shares, but reserves the right to transfer or cause to be allotted to subscribers for ordinary shares, one deferred share for every ordinary share subscribed for. It is a curious little venture altogether, and as the various experts who have examined the property do not seem particularly enthusiastic over it the shares may well be left alone.

Harrisons and Crosfield, Limited.

This company takes over a business of importers, blenders and distributors of tea, dealers in foreign and colonial produce, and agents for the development and disposal of tea, rubber, and other produce estates founded in 1844, and carried on under various names, together with allied concerns in the United States, Canada, India, Ceylon, and the Malay States. The object of the conversion is to facilitate the future management of the businesses, and to provide for their continuity in the event of the death or retirement of any of the present partners. Without taking into consideration anything for goodwill, the assets amount to £495,115, made up of buildings, plant, &c., £11,300, stocks £205,679, advances to and expenditure on estates £108,294, trade debtors, &c., £163,980, and cash and bills £5,862. Deducting £221,169 for trade creditors and outstandings the nett value is £273,946, and the vendors ask £150,000 in preferred ordinary shares and £123,946 in cash, out of which they will repay moneys deposited with the firm by employees and others, including balances due to the respective partners on their capital accounts. Profits are set out for the six years ended December 31, 1907, and although these fluctuated considerably they have been fairly substantial except in 1904, when a loss of £9,540 was realised, owing to an exceptional fall in the price of tea caused by the advance of the tea duty to 8d., and to the Russo-Japanese war. For 1902 the profits were £32,974, but in the following year they dropped to £20,630, and for the last three years the figures were £35,842, £27,138, and £32,765. These are exclusive of cash profits from the sale of portions of the firms' interests in companies owning estates in the East, which amounted to £5,267 in 1905, £11,083 in 1906, and £19,449 in 1907, the combined profits for the six years being equal to an annual average of £29,268. The total capital is £307,500, divided into 150,000 5½ per cent. cumulative preference shares and 150,000 preferred ordinary shares, both of £1 each, and 150,000 management shares of 1s. each, of which the preferred ordinary shares are taken by the vendors, and the management shares will be subscribed for by the directors. Subscriptions were invited for the preference shares, and it was stated that friends, customers, and employees of the firms had intimated their intention of applying for approximately 100,000 of them. The remainder should be placed without difficulty as they appear to be a good industrial security.

Rosario Electric Co., Limited.

Having built up a very comfortable business since its incorporation in April, 1902, this company wants capital for further extensions, and offers for subscription 5,000 6 per cent. cumulative second preference shares of £5 each, carrying the right of conversion into ordinary shares at any time prior to January 1, 1917, on one

month's notice being given. The company has the right of supplying current for private lighting and power in the city of Rosario, Argentina, for 50 years from April, 1902, but without monopoly, and has erected a power station with a capacity of 3,660 kilowatts in the centre of the city. From a total of 544 consumers with 19,253 8 c.p. lamps on June, 1903, the customers had increased by December 31 last to 3,244 with 133,110 lamps, while the gross profits rose from £21,205 to £64,707, and the nett from £3,638 to £31,837. For the six months to December 31 the gross and nett receipts were approximately £36,000 and £17,000 respectively, so the business would appear to be steadily progressing, and as a speculative investment the shares might be worth picking up.

The Week in Mines.

Kaffir Shares.

It would be idle to deny that the Kaffir Circus leaders have given another brilliant performance this week, and we are assured by those who should know that the play is to be carried on for some little time yet. The movement has been very skilfully engineered, and the success which has attended it must have surpassed the most sanguine expectations. We may be sure that the most is being made of the steady and undoubtedly satisfactory reduction in the Rand working costs, and we shall not be surprised if a good many of next months' dividends show an increase over those paid in June, 1907. It is a highly significant fact that the Rand has made more genuine progress in the year that the Transvaal has enjoyed responsible government than at any time in its history, and do not forget that this has coincided with the departure of 50 per cent. of the Chinese labourers who were declared to be absolutely essential if the industry was not to go to complete and immediate ruin. For this reason some may think that Rand gold mining shares can yet provide a field for profitable investment, but unhappily efficient government and a wholesome well-regulated labour supply will not prolong the lives of the mines or render the magnates less unscrupulous, and although prices have not been carried up so far as people tell us they are going to be, very few would stand the test of strict actuarial valuation. The present, therefore, seems a good opportunity to reduce losses on what may be called permanent holdings, because it may be some time before another chance comes. The Continent has given fairly liberal support to its usual favourites, and Germany was said to be chiefly responsible for the big rise in Modders. It is probable, too, that the general public has been nibbling, and in the middle of the week more general business was transacted than for many a long day. But there has been a conspicuous absence of excitement on the part of the investor, and those who talk about another old-fashioned Kaffir boom have badly misjudged the temper and attitude of the public in regard to South African mining shares. A few, even a fair number, may be tempted to have another dabble, but another outbreak of Kaffir madness will not come in this generation. Of course, the run-up in prices did not proceed entirely without interruption, bouts of profit-taking causing periodical reactions, but this is all to the good, and it was noticed that prices recovered quickly and well after each set-back. Things slowed down a bit towards the end of the week because Tuesday is carry-over day, but the market is very well held, and it seems quite certain that the game is not yet finished. Do not, however, tempt Providence too far. When the time comes for the shops to "distribute their holdings," as they say in America, prices may go back with a startling rush.

Land, Rhodesians and Diamonds.

The majority of things in the Land and Finance group have reached such low prices that very little effort was needed to give them a twist up. Quite a lot of attention was paid to these, and the move was clever, as much can be done with a share standing at 10s. or 15s. at comparatively little risk. In this way a good impression is created, and the public may be tempted to come in. Shares of the controlling groups lent themselves readily to this sort of inexpensive display, and the bigger things like Central Minings and Gold Fields went step by step with the issues in which they are interested. Rhodesians, too, were driven ahead, but whatever happens, do not be caught with any of this rubbish. Tanganyikas were dashed above 3, and may go higher, but anyone who buys now deserves to lose his money. Zambesias went up with the other, and Chartered at 14s. 9d. shows that the manipulation has not been in vain. Diamond shares have been erratic. The market was quite excited one day over a statement in the Paris *Temps* that agreement negotiations had been revived, but this French journal was only about a fortnight late with its news. We announced the fact in our issue of May 9, and it is a little singular that on the very day that the *Temps* made its announcement the well-informed City Editor of the *Morning Post* told us that the renewed attempts to arrive at an understanding had definitely broken down. This has been subsequently confirmed, but, of course, not officially. Nor is it official that the preference dividend will be paid by the De Beers Company next month. That, however, is probable, indeed certain, if it be also true, as we suspect, that the necessary money has been raised in London on the security of a parcel of stones. New Vaals were manipulated from 10s. to 30s., but no one was quite sure what had really happened to allow the drive up.

Australasian and West African.

Broken Hills received a fair amount of support from the Continent, and provincial operators also took a hand; but there was too much excitement elsewhere for business to develop at all actively. Prices, however, kept up moderately well, although dulness was noticeable on occasion, owing to the weakness of zinc. In the West Australian list Horseshoes were sold from Paris, but the shares were readily taken, and Associated, Lake Views, Oroyas, and Fingalls all showed firmness at the start. Later the tendency became dull again on renewed sales of Horseshoes from the Continent and a slower colonial inquiry. West Africans were a little more animated, and it was said that the Gold Coast Agency had good news to impart concerning the resumption of operations on the Cinnamon Bippo.

Copper, Tin and Miscellaneous.

Despite a further substantial increase in the visible supply, as shown by the fortnightly statistics, copper metal had a firm opening, partly due to the wonderful buoyancy of the Yankee market. Copper shares also had a fine time, especially Tintos, which were rushed over 65. Amalgamated also went ahead at a great rate, but the pace was much too hot to last, and when the Yankee boom showed signs of exhaustion, and the miserable Anaconda annual statement was issued, prices broke smartly. We deal in a separate note with the Great Cobar situation, and need only mention here that the lowest the shares have recently touched is $4\frac{7}{16}$, from which there has been a substantial but not very reliable recovery. Tin shares recovered from pronounced flatness, and in the Miscellaneous list the Mexican shares were in some request, especially Mexico El Oros, in anticipation of the early declaration of a good first dividend. Indians were steady to firm as a rule, but Siberians were inclined to be flat. Waihis were weak in the New Zealand division. The Stratton's Independence appeal for £50,000 on debentures has brought applications for £20,000, and the lists are open until to-day.

BOOKS RECEIVED.

The Nationalization of Railways. By A. Emil Davies. (London: A. and C. Black, Soho Square, W.) 1s. nett.

The business of the Tottenham Court Road Branch of the London and Westminster Bank, carried on at 44 and 46, Hampstead Road, will be transferred to new premises, No. 2, Hampstead Road, on the 25th instant.

Rhodesian Mine Crushings.—The following table gives the total monthly returns for 1908, and the previous four years:—

	1904. ozs.	1905. ozs.	1906. ozs.	1907. ozs.	1908. ozs.
January	19,359	32,531	42,950	47,048	50,521
February	18,073	30,131	38,037	40,482	47,685
March	17,756	34,927	44,574	46,887	48,973
April	17,862	33,268	42,423	49,772	50,718
May	19,424	31,332	46,729	52,668	
June	20,402	35,256	47,664	54,918	
July	24,339	34,693	48,485	54,271	
August	24,669	35,765	50,127	54,558	
September	26,029	35,785	48,410	53,022	
October	24,919	33,383	45,644	53,823	
November	26,183	32,801	48,503	50,891	
December	28,100	37,116	48,329	53,113	
Total	267,715	407,048	551,875	612,053	197,895

Transvaal Consolidated Land and Exploration.—This company has got a long row to hoe, and we should not care to give nearly 100 per cent. premium for the shares, but some evidently have great faith, and we hope dividends will come sooner than at present looks likely. The company's interests are many and varied, and its future is not bound up with mining propositions alone. Naturally the directors set much store by these, as, if fabulous wealth is to be gathered, it must come from some lucky find of precious stones or metals. But there is no actual dependence on this kind of thing, and just at present much attention is being given to the real estate, agricultural and pastoral departments of the business. Some progress can be reported all round, although one or two foreclosures are not a matter of surprise, and there is something encouraging to say about the company's investments. Chief among these is the Braamfontein Company, whose entire share capital this company owns, the exchange being four T.C.L. shares for each Braamfontein share. Efforts have been chiefly devoted to the township of Parkview, and the township of Parkwood is being offered for sale with prospects of success. The Groenfontein Tin Mine seems a promising proposition, and for the moment any success seems likely to proceed from the base metals rather than precious. It has been considered wise to draw rein a little in the matter of advances on mortgage, and these have been reduced from £290,979 to £265,902. Revenue for the twelve months was £34,993 and the undivided balance brought forward came to £146,130, making £181,123 in all. Sundry expenses took £14,784, and the directors have deemed it wise to reserve a further amount of £66,255 against possible losses, leaving £100,003 to be carried forward. Company's property account has a balance-sheet value of £699,381, and there are plenty of free funds; but issued capital is £971,214, 10 per cent. on which would need almost £100,000 a year, and the £1 shares stand at almost £2 apiece in the market.

Dunraven Gold Mining.—So this miserable Willoughby offshoot is to commit the happy despatch. It ought to have taken that step long ago, but things have been dragging on while the directors looked round to see if they could secure an interest upon favourable terms in another property. Of course, they could not, and along with the report, covering a couple of years to December, comes a proposal for voluntary liquidation. The company had a bit of bad luck in 1903, the mill being practically destroyed by fire, but this has not really made any difference. In accordance with the decision at the last general meeting, 45 claims have been abandoned, leaving 30 claims and one site of three acres covering the mine battery, &c., but this again hardly matters. Happily, the company is free from important debts, little being owing beyond £3,000 to the directors, and there is enough cash and investments to provide a decent funeral turn-out. There is no proposal for liquidation, but then Willoughby's Consolidated are, or were, the chief shareholders and that concern has no money for assessments.

Matabele Central Estates.—During the year to June 30 this company only made a loss of £8,961, including £5,730 written off investments in the Rhodesia Goldfields and Salisbury Consolidated Estates and £340 loss on sale of sundry live stock. In the circumstances it was most sacrificing on the part of the directors to put the live stock in the balance-sheet at £12,396, when the managers declared it was worth £15,337. We may note, though, that the cost of maintenance and supervision has been included in the valuation. Times have been much too depressed for placing capital, but it was considered vitally necessary to increase the number of breeding cattle, and a loan of £7,000 was raised in July for this purpose. During February 111 head of cattle were disposed of for £1,900, or nearly, and at the end of the month the company owned 2,110, all in prime condition. At the end of last June the tobacco on hand amounted to 11,000 lbs., of an estimated value of £1,100 or 2s. a lb., so the brand is evidently not of the choicest. One hundred acres will be under cultivation in the present year, and efforts have been completed for extending the sale of Rhodesian tobacco. The construction of the railway from Gwelo to Blinkwater is to be commenced this month, and the directors think it will help to attract farmers willing to settle in Rhodesia. Total debit to profit and loss is now £21,047 and outlay of £4,728 up to the end of 1900 remains to be liquidated. The company is in debt to the amount of £24,387, and cash is a minus quantity. Property is put in at £80,774, which includes abandoned claims.

Oceana Development Company.—Up to date this company has managed to pile up a revenue deficiency of £40,714 including £645 added on account of the year to December 31 last, and so far as can be seen debts must go on accumulating. Three farms have been relet for periods of five years from July and October last, but offers for other farms were too low for serious consideration and the sub-lessees who were working the Saltpan at Zevenfontein were permitted to retire, showing that the directors have kind hearts which the shareholders will much appreciate. Especially those who have paid up their calls and are now asked to come along with another shilling per share because a section of the proprietors did not respond to the original demand. Roughly speaking, one-third of the capital has disappeared, and it would be nice to know the present value of investments at cost, £24,800, and what the lands purchased, £60,296, are really worth. The directors regret to inform shareholders that Mr. Pasteur retired from the board during the year, but will it not save something in fees?

Great Boulder No. 1.—There is nothing in this company's report for the past year likely to make shareholders jump for joy, but the twelve months wound up with a balance on the right side of £1,618 derived from royalties of the tributors and treatment of the residues. There was no demand for the use of the battery. The party of tributors who have been at work below the 166 ft. level, Albert shaft, opened up a good body of ore, but its continuance as a lode which may prove of sufficient dimensions and value giving a basis for future work by the company on its own account has not yet been determined. The contract with these tributors expires in June next, and since the commencement of the present year a party of tributors has applied for an agreement to prospect at the 200 ft. level in York shaft, which seems to indicate that there are prospects of the continuance of the ore body from Albert shaft. The company has purchased the St. George mine for £10,000, and £10,582 has been spent upon development and equipment to December 31. The manager says the mine has been excellently equipped, and the directors were advised that crushing would be commenced about the third week of May.

Broken Hill Proprietary Block 14.—According to cable advices from the colony, this company's profits for the half-year ended March 31 were only £7,371. No wonder the directors announced two or three weeks ago that dividends would have to cease for the time being. One was paid during the six months amounting to £35,000, and after providing this, mainly from the accumulated balance, there remains a credit of £82,000 at profit and loss. Liquid assets in excess of liabilities are £58,000. Copies of the report and accounts should be in the hands of the London register shareholders towards the end of the next month, and they will be awaited with no little anxiety, because the outlook as yet shows no sign of improvement.

Siberian Mines.—This company's experience has been an unfortunate one, and a little luck might have made it a profitable venture, but the Fates were unkind, and the directors are unquestionably taking the right course in recommending liquidation. It was intended that the company should be simply a selling and promoting enterprise, not an active mining concern, and a comparatively small sum was raised in cash. Prospects of a successful first deal with a property known as the Nenastry (Savunduk) were distinctly bright when came the violent collapse in the shares of almost all Siberian companies, and business came to a dead stop. So far as the company's limited means would admit everything possible was done to prospect and open up the Nenastry mine, and negotiations are in progress in different quarters for the sale of the property, the result of which, if successfully carried out, will, it is hoped, be satisfactory to the shareholders. But the funds are exhausted, and as there is no prospect that fresh capital can be raised for the purposes of a new company winding up is clearly the best course, especially as the liquidation will be conducted in such a way that the Nenastry business will be properly looked after.

English and Australian Copper.—While the price of copper was high last year this company got a larger supply of ore than the works were capable of treating promptly, and purchases had therefore to be restricted, but later on the supply diminished rapidly *pari passu* with the falling markets. It is good to note that the whole of the company's forward contracts were fulfilled by buyers without a hitch. Considerable repairs, renewals, and reinstatements to the wharf works and plant have been made during the year, and the company is now in a position to treat larger supplies of ore more readily and more economically than heretofore. After paying debenture interest £1,831 the nett profit for 1907 was £4,055, and £4,551 was brought forward, making £8,606. It is proposed to pay a dividend of 1s. per share and to carry forward £5,173. There was some trouble with the workmen after the new manager took office, but matters now appear to be proceeding smoothly.

Syndicat du Yunnan.—This syndicate has formed and transferred its rights in the *département* of Ling-Ngar to the Société d'Exploitation de Ling-Ngar, the consideration being £27,000, payable as to £6,000 in cash and £21,000 in shares. The capital of the new concern is £25,000 and 2,250 parts de Fondateur have also been created, while working capital to the amount of £10,000 has been subscribed. The construction of the Tonkin-Yunnan-Fou Railway has been actively pushed forward, and it is stated will be opened for traffic as far as Mongtze, in the *département* of Ling-Ngar, the centre of the tin mining industry, in October, 1908.

PUBLIC INCOME AND EXPENDITURE.

Treasury, May 16, 1908.

JAPANESE FINANCE.

The following is an authoritative analysis of Japan's present financial position:—

In framing the budget for 1908-9 the Japanese Government outlined a plan by which the balance between the revenue and the expenditure would be assured, not only for that year, but also for a series of years to come. With this object in view a reduction of expenditure, on the one hand, was effected by postponing for a number of years about 113,000,000 yen in the military expenditure and 12,000,000 yen in other items of expenditure, and, on the other hand, an increase of permanent revenue was arrived at by increasing some Excise duties and also by raising the price of tobacco, which is a Government monopoly.

The figures of the budget for 1908-9 are as follows:—

	Revenue. Yen.	Expenditure. Yen.
Ordinary	475,500,000	426,910,000
Extraordinary	140,450,000	189,040,000
Total	615,950,000	615,950,000

The ordinary revenue above given includes 4,910,000 yen which is to be obtained by an increase on taxation. This is the increase of revenue estimated for the first year, but it is confidently expected that in a few years the augmented taxation will give an increase of 20,000,000 yen.

The extraordinary revenue includes 39,070,000 to be raised by a loan, and also 72,220,000 yen which represents a surplus from previous years.

This amount of 39,070,000 yen to be raised by a loan estimated in the budget for 1908-9 was appropriated to remunerative enterprises, such as the construction and improvement of railways, telephone and iron works.

The budget for 1907-8 also provided for an amount of 32,140,000 yen to be raised by a loan for similar remunerative purposes.

The Government, however, have not so far had recourse to these two loans, owing to the fact that, as will be shown below, a large surplus was caused by an excess of the actual revenue over the estimates and by some items of expenditure having turned out to be unnecessary.

The surplus for 1906-7 up to the present has been as follows:—

	Yen.
Surplus from the year 1906-7	65,980,000
Surplus from the extraordinary war expenditure fund	149,180,000
Receipts as reimbursement for expenses of maintaining prisoners of war	47,450,000
Surplus from the year 1907-8	80,000,000
Total amount of surplus	Yen 342,610,000

The surplus has been appropriated as follows:—

	Yen.
Towards the revenue for 1907-8	135,210,000
Towards the unexpected expenditure not provided for in the budget 1907-8	6,970,000
Towards the revenue for 1908-9	72,220,000
Towards the revenue for supplementary budgets for 1907-8 and 1908-9	15,000,000
Total amount appropriated	Yen 229,400,000

A balance of 113,210,000 yen out of the aggregate surplus still remains unappropriated. It is intended by the Treasury to appropriate this as follows:—

	Yen.
Towards the revenue for 1909-10	33,200,000
Towards the National Loan Consolidation Fund (of which 70,000,000 yen are at present held in cash for the redemption of the first series of Exchequer bonds, 97,000,000 yen)	27,000,000
Total probable appropriation	Yen 60,200,000

After allowing for the above appropriations in the future the Exchequer still holds a free balance of 53,010,000 yen.

May, 1908.

TRINIDAD DOCK AND ENGINEERING COMPANY.—This company was formed in August, 1906, to take over a foundry and workshops at Port of Spain, and to establish a floating dock at that port, and the report just issued covers the period from August 20, 1906, to December 31, 1907. The foundry was taken over in September, 1906, but the dock was only moored on August 15, 1907, so that the claim upon the Government for subsidy in connection therewith is only for four and a-half months, and the debenture interest prior to that date was advanced by the Railway and Works Company under its contract. During the early months Port of Spain was under quarantine owing to the prevalence of yellow fever, and the company of course was without the use of the dock, while expenses were heavy owing to the preparations being made in Trinidad. Profits therefore were small at £533, and with the subsidy of £1,125 and a few pounds from exchange and transfer fees the total income was only £1,666. Administration charges, travelling expenses, &c., took £2,051 and debenture interest required £4,167, leaving a loss of £4,552 to be carried forward. Cost of floating dock and equipment appears in the balance-sheet at £55,232, land and buildings at £14,060, machinery at £13,011, and steam launch, &c., at £1,876. Creditors at £8,132 exceed sundry debtors by £6,526, but stocks are valued at £5,032, subsidy due comes to £1,125, and cash amounts to £494. Preliminary expenses figure as an asset for £8,854, which seems heavy for a company with a share capital of no more than £25,000 and a debenture debt of £75,000.

FINE ART AND GENERAL INSURANCE CO., LIMITED.—In 1907 the nett premium income was 161,932 compared with £106,211 in 1906. This is ascribed chiefly to the extended operation of the Workmen's Compensation Act. A nett balance of £59,167 came out at the end of the year, to which £27,345 brought forward is added, making £86,512 to be dealt with. Out of this the board makes up the dividend to 12 per cent. for the year and grants £2,500 to the staff provident fund, leaving £70,572 to be carried forward. This, however, includes provision for outstanding risks.

"SANITAS" COMPANY.—Including the balance brought forward, the profits for the year ended March 31 were £15,550, and after providing for debenture interest, directors' fees and income-tax £13,351 was left. Out of this dividends aggregating 6¼ per cent. are paid, £2,000 is put to reserve, and £2,563 is carried forward. Patents, goodwill, plant, &c., are slightly up on the year at £129,332, and freehold land and buildings are valued at £26,049, and against these the reserve now amounts to £15,273, of which only £2,319 is invested outside the business. Creditors are light at £3,806, while stocks stand at £9,934, debtors owe £10,823 and cash is fair at £5,457.

NEXT WEEK'S MEETINGS.

MONDAY, MAY 25.

Dunraven Gold Mining.—Salisbury House, 2 p.m.
Land Mortgage Bank of Texas.—Bradford, 2 p m.
Land Securities Assets.—Winchester House, 11.30 p.m.
Matabele Central Estates.—Salisbury House, 3 p.m.
Mexican Southern Railway.—Winchester House, 12.30 p.m.
New Paccha and Jazpampa Nitrate.—Winchester House, noon.
Nile Valley (New).—Winchester House, noon.
Pacific Steam Navigation.—Liverpool, noon.
Redfern, Limited.—Regent House, W., 11 a.m.
Salar del Carmen Nitrate.—Winchester Hou e, 2 p.m.
Transvaal Gold Fields.—Cannon Street Hotel, noon.

TUESDAY, MAY 26.

Barrett Gold Mining.—Winchester House, noon.
Bengal and North-Western Railway.—Gresham House, noon.
Buenos Ayres New Trams.—Winchester House, noon.
British Indian Tea.—14, St. Mary Axe, E.C., 3 p.m.
Bute Shipbuilding, Engineering, asd Dry Dock.—Cardiff, noon.
Darjeeling Consolidated Tea.—93, Cannon Street, E.C., 3 p.m
Fine Cotton Spinners' and Doublers'.—Manchester, noon.
Friends' Provident Institution.—Birmingham, 12.30 p.m.
John Lysaght.—Bristol, 2 p.m.
Lunuva (Ceylon) Tea and Rubber.—London Chamber of Commerce, noon.
Meters.—Manchester, noon.
Mexican Agency.—Salisbury House, 2 p.m.
Syndicat du Yunnan.—Salisbury House, 2.20 p.m.
Van Dieman's Land.—Blomfield House, noon.

WEDNESDAY, MAY 27.

British Cotton and Wool Dyers,—Manchester, noon.
General Life Assurance.—103, Cannon Street, E.C., 1 p.m.
India General Navigation and Railway.—Winchester House, noon.
London Grain Elevator.—24, St. Mary Axe, E.C., 2.30 p.m.
Oceana Development.—Salisbury House, noon.
Reuters Telegram.—24, Old Jewry, E.C., noon.
Royal Mail Steam Packet.—Cannon Street Hotel, 12.30 p.m.
"Sanitas."—Limehouse, E., 12.45 p.m.

THURSDAY, MAY 28.

Alianza Nitrate.—Winchester House, 12,30 p.m.
Angela Nitrate.—Winchester House, 2 p.m.
English and Australian Copper.—Salisbury House, 2 p.m.
Marston, Thompson and Evershed.—Burton-on-Trent, 3 p.m.
Midland Railway of Western Australia.—Winchester House, 2.30 p.m.
Neuchatel Asphalte.—Cannon Street Hotel, 1 p.m.
Nitrate Producers' Steamship.—20, Billiter Buildings, E.C., 11.30 a.m.
North Mount Boppy.—Salisbury House, 11.30.
Siberian Proprietary Mines.—Winchester House, noon.
South African Lighting.—90, Cannon Street, E C., noon.
Sungli Choh Rubber Estates.—24, Great Tower Street, E.C., noon.
Trust and Loan of Canada.—7, Great Winchester Street, E.C., 2 p.m.
Union-Castle Mail Steamship.—Cannon Street Hotel, noon.

FRIDAY, MAY 29.

Alliance Assurance.—Bartholomew Lane, E.C., noon.
Buluwayo Waterworks.—Salisbury House, noon.
Claudius Ash, Sons, and Co.—Cannon Street, Hotel.
Greenwich Inlaid Linoleum.—Winchester House, 2 p.m.
Guardian Assurance.—11, Lombard Street, E.C., 1 p.m.

MINING RETURNS.

Alaska Mexican.—Crushed 21,673 tons, value $25,929; saved 355 tons sulphurettes, value $19,625.

Alaska Treadwell.—Crushed 32,074 tons ore, value $43,722; saved 511 tons sulphurettes, value $24,788.

Battlefields (Rhodesia).—Crushed 1,735 tons, 660 ozs.; cyanide, 1,370 tons, 423 ozs.; slimes 364 tons, 54 ozs. gold.

Broken Hill Proprietary.—Output crude ore 40,652 tons, 39,004 tons of ore treated by ore dressing mills, producing 6,617 tons leady concentrates and 5,020 tons smelter slimes. At re-treatment plant 5,187 nett tons dump tailings dealt with, producing 417 tons leady concentrates and 305 tons slimes. Re-grinding plant treated 7,870 tons tailings, producing 195 tons leady concentrates.

Broken Hill Proprietary Block 10.—Treated 11,376 tons crude ore, producing 1,812 tons of concentrates, containing 1,069 tons lead and 57,984 ozs. silver.

De Lamar.—Crushed 2,550 dry tons, yielding $34,500; surplus $1,500; total, $36,000; profit, $9,500.

Duff Development.—Recovered 165 ozs.

East Gwanda.—Crushed 7,400 tons, 1,085 ozs.; cyanide 4,200 tons, 403 ozs.; smelter 38 tons of matte produced containing 854 ozs. fine gold and nine tons metallic copper; total, 2,342 ozs.

El Oro.—Crushed 23,636 tons ore, producing U.S. $207,401.

Indarama Co.—Butterfly: Milled 1,400 tons, 550 ozs.; cyanided 960 tons, 163 ozs.; total, 713 ozs.

Jumbo.—Crushed 2,454 tons, 1,080 ozs.; concentrates 1,430 tons, 314 ozs.; slimes 974 tons, 104 ozs.; total, 1,498 ozs.; profit, £2,900.

Kluchi.—Crushed 1,639 tons, 327 ozs.; tailings 1,334 tons, worth 32s. per ton.

Mexico of El Oro.—Crushed 7,807 tons; value, U.S. $117,670; 131 tons high-grade ore shipped; net proceeds, $6,191.

New Ravenswood.—Crushed 1,638 tons; value, £3,806; concentrates 137 tons; value, £1,410; tailings treatment plant 78 tons concentrates; value, £1,198.

North Broken Hill.—2,640 tons crude ore, assaying 15·9 per cent. lead and 6.9 ozs. silver per ton, producing 457 tons concentrates, containing 318 tons 15 cwts. lead and 10,054 ozs. silver.

O.K. Copper.—Treated 736 tons crude ore for 53 tons fine copper.

Ouro Preto.—6,390 tons, 2,045 ozs.

Palmarejo and Mexican.—Crushed 3,040 tons; treated 2,850 tons, producing $52 450.

Salisbury.—Crushed 5,050 tons, 1,835 ozs.; profit, £2,650.

Troitzk Goldfields.—Total output, 543 ozs.; value, £2,026.

United Rhodesia.—Jumbo: 2.454 tons, 1,498 ozs. Inez: 1,234 tons, 469 ozs. Properties on tribute: 3,525 tons, 1,372 ozs. Total, 7,213 tons, 3,339 ozs.

Westralia Mount Morgans.—Crushed 5,050 tons, 662 ozs.; cyanided 3,950 tons, 532 ozs.; slimes, 2,225 tons, 450 ozs.

Whim Well Copper.—Shipped, 75 tons copper ore, 23 per cent; shipment No. 25, consisting of 89 tons copper ore, sold £1,069. Total, £37 824.

Willoughby's Consolidated.—Queens: 450 ozs. from 1,383 tons. Eiffel: 571 ozs. from 658 tons. Danga: 77 ozs. from 283 tons. Queen's West: 283 ozs. from 473 tons. Off Chance and Queen Adelaide: 55 ozs. from 180 tons; total, 1,441 ozs. from 2,977 tons. Bonsor: 194 ozs. from 1,314 tons. North Bonsor 338 ozs. from 1,061 tons.

Baku Russian Petroleum.—Production of crude oil for week ending May 16, 157,000 poods, equals 2,551 tons.

Russian Petroleum and Liquid Fuel.—Production of crude oil for 6 days ending May 16, 186,000 poods, equals 2,999 tons.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for the 7 days ended May 14, $3,637, increase $197; aggregate from July 1, $202,295, increase $37,953.

Argentine North Eastern.—Traffic receipts for week ended May 15, £4,997, increase £286; aggregate from July 1, £147,405, decrease £7,713.

Assam Bengal.—Traffic receipts for 7 days ended April 18, Rs. 81,000, decrease Rs. 30; aggregate from Jan. 1, Rs. 14,20,039, decrease Rs. 39,084.

Bilbao River and Cantabrian. — Traffic returns for April £8,016, decrease £1,062; aggregate from January 1, £32,599, decrease £5,081.

Buenos Ayres Central. — Gross receipts for April £13,182, increase £1,571; aggregate from Jan. 1, £106,595, decrease £2,092.

Canadian Northern Railway.—Traffic receipts for 7 days ended May 14, $150,200, decrease $28,700; total from July 1, $7,990,000, increase $1,980,300.

Egyptian Delta. — Traffic receipts for week ended May 2, £4,526, decrease £1,021; aggregate from April 1, £21,116, decrease £3,346.

Lucknow Bareilly Railway.—Traffic receipts for 7 days ended April 18, Rs. 32,845, increase Rs. 2,698; aggregate from January 1, Rs. 5,58,760, decrease Rs. 39,439.

Midland Uruguay.—Receipts for month of April, £6,277, decrease £898; aggregate from July 1, £57,177, decrease, £5,044.

North Western of Uruguay.—Traffic receipts for April, $22,100, decrease $1,617; aggregate from July 1, $198,953, decrease $12,118.

The Investors' Review.

The Week's Money Market.

Bank Rate 3 per cent. (Reduced from 3½ per cent. on Thursday, March 19.)

Norfolk House, Friday Evening.

Apparently a few people still expected the Bank rate to come down this week. They based their view upon the fact that the open market is now a good 1 per cent. below the 3 per cent. Bank rate; in fact, three months' Bank bills have been discounted at 1⅞ per cent. It was only the finest class of paper which went off at that minute figure, but the competition for first-class bills of all kinds grows keener as the supply diminishes, and when the market at the same time finds demands for its available credit diminishing in other directions it naturally wishes the Bank to come down closer to its working rates. The contention is a sound one. No benefit usually arises from such a divergency as we now see between Bank rate and market rate, and as the daily requirements for currency are shrinking all over the country in consonance with the diminution in business, the supply of available credit tends to look more excessive than it is. The Scotch banks, for instance, have taken away much less gold this year than usual, and one of them for the first time in its history has not sent a sovereign north to cover the usual May term expansion in its note circulation.

Such being the position, why does the Bank keep at 3 per cent.? It probably does so for the reason given last week. Gold still leaves the country on balance. The Bank Court sat a long time yesterday, and had obviously some difficulty in coming to a decision, but in the circumstances it was not an unwise decision to sit still. While both the French and German exchanges enable these countries to buy all the available gold that comes into the open market, as Paris did last Monday at the enhanced price of 77s. 10½d. per oz., it would be an aggravation of the visible danger to lower the rate to 2 per cent., and it would be useless to take a half step in present circumstances. For all that, it seems likely that the Bank will have to come down soon, because its reserve is now comfortably large, and at £27,710,000 is £3,030,000 more than it was this time last year, and because the supply of new gold must overcome any effort to sustain rates. Nothing but an unexpected smash somewhere, which would reveal a disappearance of assets to an alarming extent, would brace markets up anywhere. Look how New York stands the exports of gold without betraying the slightest symptom of distress. The same reduction in the demand for currency is operating there to keep the Wall Street market full of available credit, no matter what happens to the stock of bullion. In proportion, too, as the Americans are able to raise fresh money in Europe their credit position will be fortified and the necessity to export gold diminish. Therefore, a 2 per cent. rate does not seem to be far off, and the market goes on as if it were here, in spite of the fact that its resources are not really so burdensome. Other deposits are only £43,044,000 and have diminished £390,000 on the week. No doubt this figure is £1,361,000 higher than that of a year ago, and the small diminution of the past week is due to the increase in the Government balances or public deposits, which has been £1,036,000, all the coin and notes that have flowed in together with the just mentioned portion of the other deposits having gone to swell the Treasury balances. The other deposits, however, are more than sufficient for current wants, as the short loan rates prove. Day-to-day money has been procurable all the week, sometimes at 1, often at 1¼, and never much more than 1⅝ per cent. Seven-day money is also abundant at 1½, and we see no probability of an early change towards higher quotations. New issues, indeed, are pouring upon the market at an uncomfortable speed, and often in awkward amounts, but the effect of these is not necessarily to harden rates for floating credits in the Money market. New loans generate credit quite as much as, if not more than, they absorb it. An underwriting syndicate, let us suppose, has had to take up £1,000,000 of a new loan, and does so by raising the money at its bankers, thereby increasing the supply of floating credit on the market. It is only when the loans or new capital emissions enable foreigners to draw away this credit in the form of gold that our market becomes threatened with embarrassment.

True as this may be, we think the rate must come down soon, the situation in Germany, indeed, alone appears to dictate adherence to 3 per cent. But bad as the credit mess may be in Germany, it is not getting worse so far as visible indications enable us to estimate. On the contrary, the Reichsbank has become stronger to a most reassuring extent during the last ten days, and its return, dated May 15, shows that the note circulation has fallen £7,030,000 below the legal tax-free maximum, gold having been drawn in to the amount of £1,908,000 during the week simultaneously with a decrease of £3,009,000 in the active note circulation. As business contracts throughout the Empire the strength of the Bank must increase, and if a few millions in gold are drawn in from New York and London another reduction in the Reichsbank rate ought to be not only possible, but inevitable. In like manner the Bank of France is increasing its strength, and last week added over £1,404,000 to its gold in hand, while the note circulation was reduced by £2,321,000. Thus the proportion between bullion and circulation has risen to 81.92 per cent., and whatever the ambition of the Bank may be in the matter of piling up gold until it again possesses £120,000,000, this process cannot go on much longer without reducing the French pressure upon our bullion market. All round, therefore, the known symptoms point to greater ease in Money markets, and dictate a further reduction in the Bank of England rate.

During the coming week calls on new issues will be about £1,735,597. On Tuesday £560,868 is due on the City of Moscow loan, which keeps a firm market. On Thursday the heaviest amount of the week, £750,000, must be found for the Canada 3½ per cent. stock. Saturday's calls are spread over a number of concerns, and total £418,729, the largest being £200,000 for the Bahia-Blanca 4 per cent. debentures; the balance is spread over half-a-dozen concerns, including the Bengal North-Western Railway ordinary issue.

Silver.

The news that a law had been passed in Germany to increase the silver currency from 15 to 20 marks per head caused a good deal of covering by the "bears" this week. Orders from the bazaars have also been on a fair scale, and as available supplies were barely sufficient to meet this double demand prices have risen steadily day by day until they are now 5/8d. and 11/16d. per oz. respectively above last Friday's figures at 24 13/16d. per oz. for cash and 24 7/8d. per oz. for delivery two months forward. In their weekly circular Messrs.

Samuel Montagu and Co. say: "It is evident that a permanent rise in price must be independent of the operations of the Indian Government, for at the present time there are 6½ crores more silver rupees in the Indian Treasury than at the same period last year, and in the gold reserve 9 crores rupees, against 6 last year, notwithstanding that for eight months no silver has been bought by the Indian Government. This difference represents in all over 30 million ounces of silver. We understand the lower prices now ruling are not likely to increase the trade consumption; last year's manufactured stocks being still on the shelves, and business exceptionally lifeless." Applications for the Rs. 10,00,000 of Council drafts on India amounted to Rs. 55,265 in bills, all of which were allotted, tenders at 1s. 3 29-32d. per rupee receiving in full. Next Wednesday another Rs. 10,00,000 will be offered. The India Council on Thursday sold £475,000 demand drafts on London out of the usual £500,000 per week offered in Calcutta, making a total to date of £2,476,000.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict. cap. 32, for the Week ending on Wednesday, May 20, 1908.

The Stock Markets.

Markets are broadening out, and this has been a better week for business on the Stock Exchange than any other so far of this year. The business comes in gusts and eddies, but rising prices and cheap money are producing their usual consequences, and if the Standard Oil magicians can keep the play up in New York we may be sure that dealings here, and all over Europe, will expand in many directions. It is therefore necessary again to caution the public to beware of buying unsubstantial securities on a rising market. Wherever we dip beneath the surface we find reason for this caution. Business is shrinking the world over, and credit is being tried much more severely than it was during the acute period of the recent crisis. Therefore, except in the hope to snatch profits on the rise, it is unwise to be in a hurry to come into markets to buy. Nothing in the present movement can be said to guarantee the public against a severe reaction later in the year when the present cheapness of credit everywhere outside Germany may again give place to stringency in spite of the abundant supplies of new capital, and when the results of diminished business become visible in reduced profits and dividends. Our banks, for example, must all be earning less money than they were a year ago, or than they have done in recent years. The supply of commercial bills is shrinking week by week. That partly explains the ease of our money market and it is difficult in many industries to earn profits. In the cotton industry, for instance, the gains must now be on an average less than half what they were last year, and the cheapness of raw material both in cotton and woollen industries has not yet benefited the manufacturer to a degree that compensates him for the reduction in the overturn.

Worst of all every country is living on credit. We do not mean as a state, but industries and enterprises of every kind throughout the world are hunting after assistance from the usurer. This is especially the case with Protectionist countries, as may be noted, and it is a pity that those who are using every means, legitimate or the reverse, to try and put back the clock here do not give weight to the fact that outside France there is not a single Protectionist country in the world able at the present time to maintain its tariff system out of its own resources, not even Germany, for Germany comes abroad for money with increasing persistence. The United States tariff would have gone by the board many years ago but for the continual support afforded by drafts upon the savings of old Europe, and Canadian Protectionism would be impossible without our money. This is an aspect of the tariff wrangle well worth study, and meanwhile the one fact that credit is being created

in order to sustain the present inflation on stock markets ought to be sufficient to warn every prudent individual to take care that his money is not filched from him.

Trustee Securities.

A hesitancy has affected the Consol market, and prevented prices from rising with any vigour owing to talk about that Transvaal loan. Many people told us yesterday that it was coming immediately, but others who profess to be well informed say that it has been indefinitely postponed, and some go so far as to assert that the issue of the loan may be altogether averted. None the less has Transvaal stock been weak throughout, and last night it left off quite flat, so that Consols have been little more than maintained at the price of a week ago, and sometimes the market has gone back. India stocks, too, are far from comfortably firm and Local Loans stock has been sold with sufficient frequency to send the price down. Home Municipal securities, however, have been firm though lamentably neglected, the only gains on the week being in County Council 3 per cents., and in some Cardiff and Sheffield issues. The truth is many of our municipalities are waiting the favourable moment to come upon the market for more money. Some of the biggest of them have been keeping themselves going by borrowing at 4 per cent., and we doubt whether many public issues could be made even by the strongest of these corporations on much better terms. Colonial securities keep steady and prices for them might improve in these times of easy money if they also do not spoil the market by fresh demands.

The tendency has likewise been upward amongst Foreign and Colonial Corporation stocks, but in none of these groups has business been vigorous, and in the majority of them it cannot be said to exist. In this department likewise new issues are at hand. The *Times* says that the port of Calcutta and the port of Rangoon each want £500,000, and that arrangements were made yesterday for the Calcutta loan to be issued forthwith.

Foreign Government Stocks.

Towards the end of the week a little flinching was visible in Japanese bonds, dealings being affected by the sale of another £2,000,000 of South Manchurian Railway notes; but all the issues have risen on the week, and the first issue of 4½ per cents. continues popular with investors. Russian bonds have also been moving upwards, and if caution in borrowing abroad is maintained, the market seems likely to improve yet further. We hope, therefore, that the Government will take M. de Witte's good advice and refrain from pushing on with that Amur Railway at a speed which would involve large demands upon the Western money markets. Incidentally, a suggestive light was thrown on Russian finance by this ex-minister's compliment to Mr. Kokovtsoff for having maintained the Russian gold reserve by borrowing £115,000,000 abroad during the last two years. Russian finance cannot be made stable or healthy by such a process. Argentine bonds have improved, Brazilian are steady on the Budget statement, Chinese issues have either stood still or improved a little, and no material weakness has developed at any point. Even German and Prussian stocks have rallied on the hopes of German bourses that the inflowing gold will soon make money cheaper throughout the empire.

Home and Other Railway Stocks.

The market has not been good for Home Railways and could hardly be expected to harden in face of the depressing traffic receipts. These, according to the *Railway News*, show a decrease of £245,812 for the past week. That might not matter so much because comparison is made with the first portion of the Whitsuntide traffic last year, but it none the less brings the decrease to date up to about £1,012,000, and no economies conceivable under existing habits of management can prevent this loss in gross revenue from adversely affecting dividends. Therefore, had it not been for the sudden flare up in Central London ordinary and deferred stocks, which have been sent skywise on Anglo-French Exhibition traffic hopes, hopes not likely to be fulfilled unless the show is opened on Sundays, the exhibit would have been uniformly depressing, and the decline in Brighton, Great Northern, Midland, and North Western stocks has been from ½ to 1 on the week. District stock though has risen a little for the same reason that sent up Central London, and a little better feeling has been noticeable in debenture, guaranteed, and preference divisions of the market, although Chatham arbitration preference has gone down on the new issue. Nobody knew yesterday that the Lancashire and Yorkshire company was putting out £1,000,000 in 4 per cent. 1908 preference stocks, offered at 104, else the market would have been weaker still.

Indian Railways have also been depressed where moved at all, people being frightened by those sensational and probably "got-up" bomb exploding feats, and by the extension of the war against the hill tribes. Canadian Railway stocks, however, keep up wonderfully well, thanks mainly to the assiduity of Lord Strathcona and his friends in Canada in publishing bombastic telegrams about the good harvest before the seed is all in the ground, immigration, phenomenal prosperity, and the rest of it—all meaning, "hand over more of your money, please." A slight recoil has occurred in Canadian Pacific shares on the week, but the bear account there keeps the market elastic, and Grand Trunks stocks have not gone back much, indeed the second preference is alone sensibly down on the week.

As for the Yankee market, in spite of the warning given by the mid-week slump, it continues its upward course like a kite in a strong wind, and often the greater the rubbish the greater the rise. We do not class Milwaukee shares amongst the rubbish, but none the less an advance in their price of nearly $4 on the week in the face of the enormous expenditure this company is committed to on its Pacific extension is worth noting as a symptom. In the same way the jump in Illinois Central just when an issue of nearly £6,000,000 of new stock has been sanctioned, hardly argues a healthy market any more than the rise of $6 in Union Pacific shares as preliminary to the issue of an £8,000,000 loan for that company. Scarcely anything has gone down and Erie shares of all kinds are quite vigorously in the fashion. All the effect produced by the shocking display of the Baltimore and Ohio Company for April has been a dip of 2 in the price of the shares. Bonds are also better, although the public here is obviously letting the market for them alone, and is, on the whole, right in doing so.

A slowing down has also occurred in the Argentine Railway market and buying has been much less well spread this week than last. Prices have not receded, however, they have only paused towards the end of the week, and compared with our prices of last week most stocks still show a rise, especially Buenos Ayres Western ordinary. A sudden revival of interest has also occurred in Antofagasta stocks and the stampede after the deferred became vigorous towards the end of the week, so that the price yesterday rose to about 125. Mexican Railway stocks, on the other hand, have been dull with little going on, but United of the Havana are 5 better on the week in spite of a little set-back yesterday, and Brazilian Railway stocks are firm, San Paulo especially showing an advance of 3½.

Banks, Breweries and Industrial Securities.

The changes amongst Bank shares are favourable with hardly an exception, and some of them like Hongkong and Shanghai and Chartered of India have risen 2 or more on the week. The shares of our own leading banks are also firm and many of them higher on the week, but the shares of discount houses have not been so well supported. The changes amongst Brewery securities are as usual to the bad, and business is difficult to do on any terms in many of the items in that part of the Stock Exchange list. Nothing has happened amongst Dock securities and the market for Commercial and Industrial shares and debentures is

still unaffected by the stir amongst the inter-Bourse groups. Changes, indeed, are too often still adverse and affect debentures as well as shares. The ordinary stock of the Artisans' Dwellings Company, for instance, was sold yesterday at 80½. The securities of motor companies, though, have been a little firmer, and English Sewing Cotton shares have gone up on the favourable report, as well as those of the Fine Cotton Spinners Company. Gordon Hotels shares, too, have rallied, as well as those of the Mazawattee Tea Company, and there is a little improvement to note in the Nitrate group, the further restriction of output being apparently welcomed by the market. For all that the majority of changes are adverse, although a welcome recovery of 2 has occurred in Underground Electric notes. Waring and Gillows debenture stock, on the other hand, has been dealt in as low as 76, and fluctuates between that and 79. Thos. Tilling's debentures, however, have recovered 2, as well as the debentures of the Valparaiso Drainage Company. And business of a sort dribbles in.

Electric, Financial, Gas and Other Securities.

Fluctuations have been more numerous in the Electric group than in recent weeks, but they have not been uniformly encouraging, although Edmundson's Electricity debenture stock has been lifted 14½. Declines, however, have rarely been serious, limited to ½ or so, and the only serious relapse has been in the debenture stock of the Madras Electric Supply Corporation, which is 8 lower on the week. Shawinigan stock has risen.

The greatest sensation of the week in the Financial Land and Investment division has been a rise of 4 in Hudson's Bay shares, which have been driven up to 89. The buying has been quite energetic, and as the bear account is heavy it has been easy to lift the price. Peruvian Corporation things have also come into demand towards the end of the week, and the preference stock is nearly 30s. better than it was a week ago.

The aspect of the Financial Trust group is also less uninviting in spite of some few declines, the majority of the changes being favourable, and Investment Trust deferred is as much as 3½ higher. No important move has occurred either in Gas or Insurance securities, and business has been absent from both these groups.

It is still more absent from the Iron, Coal, and Steel market, where, however, prices have shown a firmer tendency leading to gains occasionally in the price of shares, and to a rise of 4½ in Beardmore debentures. That is also the extent of the jump in Lehigh Valley Coal bonds, but Thornycroft's second debentures and the debentures of the United Collieries are both 5 down.

Shipping shares are firm, with a notable rise of 3 in Royal Mail ordinary stock on the favourable report noticed elsewhere. Most of the few changes under Tea, Coffee, and Rubber are also favourable, and both the ordinary and preferred shares of the Consolidated Tea and Lands Company have gained ½. Lebong Tea shares, on the other hand, have been dealt in at par, and are 25s. down on the week. Telegraph securities are firm, with no notable exception, and movements have also been favourable in the Tramway and Omnibus section, especially for the stocks of the British Columbia Electric Company and Mexico Tramways ordinary.

Friday Evening.

Markets generally have sustained the buoyant tone of the week after an undecided opening, but advantage was taken of awakening interest to rush prices in several directions in which the market is narrow or under control. Hudson's Bays were put up from 90 to 94 on a short supply of stock, and close a little under the best at 93. Canadian issues all closed at an advance, while Americans were steady without marked change. Home Rails were slightly lower. Kaffirs slackened their pace somewhat on profit-taking, but Rhodesians were quite lively, with an increased gold output, and the new railway extension financed without Chartered money. Willoughby's rose to 8s. 6d. bid, probably in sympathy with the diamond syndicate, which changed hands at 6½, having made up last contango day at 3. Chartered shares were active, about 15s. 6d.

New issue prices form quite a long list, and in most cases reflect the reception which was accorded them by the public, an exception being Peru Corporation debentures, which, despite the allotment to underwriters of 93 per cent., are quoted at 1 premium. The East Indian Railway underwriters, by the bye, had to take 83 per cent., and the Chatham Railway debenture stock people 50 per cent. Among other issues standing at a premium to-night are:—L.C.C., 3½ per cents., 1½-¾; Metropolitan Water Board, 1-1¼; Moscow 5 per cents., 3-3¼; Pennsylvania 4 per cents, 3¼-½; and Legal Insurance, 1/16-⅛ premium, while discounts run thus:—East Indian 3½ per cent. debentures, ¼ div.-par; Trunk guaranteed, 1; Trunk Pacific, 2; Canadian Northern 4 per cent., 2¼; and Salvador 6 per cents, 8½. Southern Nigeria and Montreal City 4 per cents. remain at the issue price.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Fall: Local Lns. Acct. ¼, to 98¼-⅜, Transvaal Govt. Acct. ⅜, to 97½-⅝, India 1948 Acct. ½, to 89-½.

CORPORATION AND COUNTY STOCKS.—Rise: L.C.C. 3 p.c. Acct. ½, to 90½-1½, Cardiff 3½ p.c. Red. and 1925-65 both 1, to 100-2, Richmond (Surrey) 1, to 84-6, Sheffield 3 p.c. Red. 1, to 89-91. **Fall:** Birmingham 3½ p.c. 1, to 101-3.

COLONIAL AND PROVINCIAL GOVERNMENT SECURITIES.—Rise: Canada (Dom.) 1908 ½, to 100-1, do. 1912 Dbs. ½, to 102-3, Quebec (Prov.) Oblig. 1, to 102-4, Canada (Dom.) 4 p.c. ½, to 100-1, do. 2½ p.c. Ins. 1, to 80-2, N.S.W. 3½ p.c. 1924 ½, to 99½-100½, Straits Settlmts. 1, to 96-8, Victoria 1885 ½, to 104½-5½, W. Australia 1915-35 ½, to 98-9, do. 3 p.c 1927 ½, to 89½-90½.

COLONIAL AND FOREIGN CORPORATION STOCKS.—Rise Bello Horizonte 1, to 93-6, Durban 1944 1, to 96-8, do. 1951-3 and 1953-7 both 1, to 96-8, Johannesburg 1, to 87-9, Montevideo 1, to 91-3, Napier Harbr. 1920 and 1928 both 1, to 106-8, Osaka 1, to 102-4, Rand Water 1, to 94-5, Rio de Jan. (Fed.) 1, to 88-90, Sao Paulo ½, to 63-4, Sydney Dbs. and 1894 both 1, to 101-3, Tokyo ½, to 95-7. **Fall:** Rosario "A, B, C, D, and E," all 1, to 51-3.

FOREIGN STOCKS, BONDS, &c.—Rise: Argentine 1887 N. Cent. Rly. and 1890 Rly. Bds. both ½, to 101-2, Argentine Intern. Gd. and 1888 Stlg. both 1, to 94-6, do. 1889 Extern. 1, to 74½-5½, do. 4 p.c. of 1897-8-9-1900 and Laws all ½, to 86½-7, do. 1907 Ln. ½, to 99½-100½, Brazilian 1883 1, to 88 90 do, 1879, 1, to 89-90, do. 1889 ½, to 84-½, do. W. of M. Rly. ½, to 95-6, do. 1903 Ln. ½, to 95½-6½, do. 1907 Scrip. ½, to 94-½, do. Comp. Lloyd ½, to 99½-100½, B. Aires ½, to 62½-3, Bulgarian 1892 ½, to 103 4, Chinese Silver Ln. 1½, to 94½-5½, do. 5 p.c. Reg. 1, to 102-4, do. Imp. Rly. Bds. ½, to 101½-2½, do. Nanking ½, to 102½-3½, do. Kowloon ½, to 102-3, Cordoba 1, to 35-7, Dutch 1896-1905 all 1, to 90-2, Greek 1881 ½, to 49½-50½, do. 1884 ½, to 49 50, do. Mon. 1887 ½, to 50-1, do. 1889 Rnts. 1, to 38-9, do. P. L. Rly. 1, to 48-9, do. Fndg. Ln. ½, to 46½-7½, Guatemala 1, to 26-8, Honduras 1867-70 ¾, to 8½-9, Japan 1895-6, ½, to 98½-9¾, do. Stlg. ¼, to 82-½, do. 4½ p.c. Bds. 1, to 91-½, do. 1907 Stlg. ¼, to 97½-8, Mexican 1904 1, to 93-5, Russian 1822 1, to 101-5, do. 1859 1, to 64-6, do. Transcau. Rly. 1, to 67-70, do. Ser. I. 1½, to 85-6, do. III. 1, to 81-5, do. 1894 1, to 75-9, do. 4 p.c. Ln. 1, to 81-3, do. 5 p.c. 1906 1½, to 95½-⅞, San Paulo Exchequr. Bds. ⅜, to 99-½, Sao Paulo 2, to 88-90, Siamese Stlg. ½, to 94½-5½, do. 1907 ½, to 94-5, Venezuela ½, to 46½-7½, German Loan ½, to 81-2, Prussian Cons. 1, to 91-3, do. 3 p.c. Ste. Ln. 1, to 81-3. **Fall:** Bahia ½, to 91-4, Colombian Con. ½, to 43½-⅝, Danish 1894 2, to 85-8, Egyptian Pf. Redc. ½, to 95-7, do. 1890 Ins. Stk. ½, to 92-5.

HOME RAILWAYS.—Rise: Centl. Lon. Pfd. 2, to 89-91, Glas. and S.W. Pfd. Ord. 1, to 57-9, Taff Vale 1, to 77½-8½. **Fall:** Barry Dfd. 1, to 73-6, Caledonian Pfd. ½, to 62-3, Gt. N. of Scot. Pfd. Ord. 1, to 59-62, do. Dfd. 1, to 16-8, Gt. Nthrn. "A" 1, to 37½-8½, Highland 1, to 35-8, Tilbury 1, to 111-5, N. Lon. 2, to 71-6, S. Estrn. Prfd. 2, to 98-100.

Debenture.—Rise: Gt. Wstrn. 4 p.c. ½, to 116-8, District 6 p.c. 5, to 110-5, N. Brit. 1, to 86-8xd. **Fall:** Cambrian "B" 2, to 85-8, do. "D" 3, to 42-7.

Guaranteed.—Rise: N. Wstrn. ½, to 113-5, S. Wstrn. ½, to 112-4, Midland 1, to 70-2, N. Brit. No. 1 1, to 109-11, N. Eastern ½, to 112-4,

Preference.—Rise: Caledonian 1904 and 1906 both ½, to 104-7, Furness Cons. 1, to 97-100, Gt. Centl. 1891 2, to 50-5, do. 1894 1, to 41-6. **Fall:** Alexandra 2nd 1, to 86-9, Chatham Arbtn. 3, to 68-70.

INDIAN RAILWAYS.—Fall: E. Indian "B" ¼, to 23½-4½, do. 3 p.c. New Deb. 1, to 82-5, do. 3½ p.c. 1, to 95-7, E. Bengal "B" ¼, to 23¼-4¼ Madras and S. Mahratta 4 p.c. 1, to 103-6, Scinde Punjaub "B" ¼, to 23¼-4¼, S. Punjab Ord. 1, to 133-6.

Ecclefechan.—You cannot lose much by doing so as the assessment is small, and there is just a chance.

Notrits.—We hardly think you should sell just when the metal markets are about their worst. There is still value in the shares.

D. H. C.—(1) We do not think there is any cause for alarm, but dividends may have to be reduced. The central authority is not likely to allow the local powers to damage credit. (2) Prospects are good, and the bonds are a fair investment of their class. (3) These depend on No. 2, and are a little cheaper, but they are not quite so marketable.

H. D. R.—(1) This is a speculative purchase, but it certainly has chances. (2) The rise has been very sudden, and it is possible there may be some reaction. Prospects, however, seem to be brighter. (3) We think you should accept the new shares. (4) We think so. The prejudice has no foundation, as the company named has nothing to do with the stock.

J. D. S.—(1) There is a prior lien ahead of this "first" bond, and you should not touch it. (2) The best of the three, and a security of a good class; cheaper, too, than it has been. Might be bought. (3) This also should be safe as to interest, but the company has its troubles to meet yet, and we do not advise buying now.

R. L. D. E. B.—Yes. We are quite of your opinion.

W. P.—(1) This security should be all right, although the company has overloaded itself. (2) This also may be all right in spite of the bad state of business out there, but we think that it will be cheaper by and bye for that reason. (3) Quite the best of the four, and an excellent security. (4) This, too, is good, and might improve by and bye. We place the stocks in this order—3, 4, 1, and 2.

Banking.—We do not think you should average. As far as we can learn the thing has done no good.

Moor Tarn.—(1) If this refers to the new issue it is a good security, but has been pushed too high. (2) We based the opinion that you should hold these on the increasing business and the possibility of a combination amongst all the manufacturers of this commodity. The fall must be due to private distress somewhere. (3) We can get no report, but the latest information does not indicate that the speculation would be profitable, as the costs of production about equal the value of the ore. (4) We hardly think the time has come to average here in the present state of the industry. (5) Property considered fair but over-capitalised. We should say, do not touch rubber things just now. (6) A very good company indeed. You have also enclosed a prospectus, but have made no reference to it. Do you wish to inquire about it?

H. B.—(1) The company may get into a rather better position with time, and we do not think you should sell just now. (2) You should hold on for the present, although it is a Yankee affair.

Vox.—(1) No more can we understand it, but it seems likely to go on for some time yet. Note the proposed increase in rates and fares. We think might try 65 as a limit. About July should see the gas escaping. (2) Hold on for a little. The public isagain buying, and prospects good. Too rapid issues of capital and apathy caused the fall. (3) Prospects purely speculative. We think the rise may go on for weeks yet, perhaps months, but, knowing the facts, have not enough faith to recommend an option. (4) Prospects appear to be better. If your purchase price is not much above present quotation there is not much to be gained by averaging. (5) A pure gamble. We should sell on a profit. (6) Both, we believe. The outlook is not encouraging, and we should not be surprised to see lower prices. This leaves you 3s. in our debt.

M. D.—We do not think you should sell now. Traffics are good, and will help the market in time. New issues have been a little too weighty, but will be gradually absorbed.

J. H. A.—No; the leasing company does not "guarantee" the stock. Its lease has about 12 years to run, and it merely hands over to the lessor company a fixed proportion of the receipts. Still the venture is a fair one.

B. W. J.—If the dividend were cut down to 4 per cent. and kept there for, say, the next 10 years, we should think better of the company's future. It has paid too much for years, and neglected reserves. For all that, it would be a pity to sell now, because the property is intrinsically excellent.

E. Porter.—Not at once perhaps. All depends on market moods. But the ore is getting poorer, and the profits therefore less and less certain. If you see a profit, take it soon.

F. E. D.—Not at all a bad exchange. These new bonds are amply provided for. This leaves 5s. to your credit.

Delta.—Do not touch these shares at present.

TRADE AND PRODUCE.

Wheat.—Only a moderate business has been done at most exchanges, but the position is generally firmer. Holders of River Plate spot parcels are asking ½d. per cental over last week's prices, and pretty well all exporting countries demanded full rates. English wheat has been in better request and firmly held as a rule, though occasionally holders accepted a reduction of 6d. per quarter. Farmers' deliveries for the week came to 64,434 qrs. averaging 33s. 1d. against 41,991 qrs. averaging 28s. 4d. in the same week of last year and imports from abroad were 280,256 qrs. against 447,697 last year. The estimate of quantities of wheat and flour on passage again shows a reduction from last week, 2,880,000 qrs. coming to the United Kingdom against 3,035,000 and 2,020,000 qrs. to the Continent against 2,030,000. American markets fluctuated under the influence of crop news, but grew steadier towards the end of the week. The visible supply shows a decrease of 1,559,000 bushels on the week.

Cotton (from our Manchester correspondent).—The reaction in the course of prices in American cotton has resulted in less buying in yarn and cloth than in the previous week, and buyers in numerous directions have adopted a waiting policy. The outlook is uncertain and a rather unsettled feeling has prevailed in most quarters. Various opinions are expressed as to the course of cotton prices in the near future, but there does not seem to be much probability of any decided decline. The statistical position is too strong on the side of the "bulls" for much weakness to show itself. A fair amount of business has again been done in the raw material on the spot. There has not been any free buying in piece goods for any market, but Calcutta has been in need of fine goods, such as mull-dhooties. Makers have recently fortified their position, and prices rather go against buyers. Best shirtings have also been in request for India, but few sales of weight have occurred. A little more inquiry has come through for China, and now and again a fair sale is mentioned, but numerous offers cannot be entertained. For the Levant and Egypt there has only been a retail business done in goods of a miscellaneous character. Advices generally from the other side do not stimulate free buying from manufacturers. In home trade cloths the advices are poor, and buyers adopt a hand-to-mouth policy in purchasing. Heavy goods have again been dull, and much short time is being worked in the Whitworth and Rossendale Valleys. Burnley manufacturers have not participated in the increased business during the last few weeks, and it is proposed to stop for the whole of Whit Week. Coloured woven goods and sateens have been in fair request, chiefly for home trade use. In American yarns for home consumption a fair inquiry has been dealt with, but prices are irregular when tested. Now and again a substantial line is mentioned, and no difficulty is experienced in getting deliveries, twists being plentiful, especially in medium numbers. To buy cotton to-day and produce yarn means a loss on every pound produced. In export kinds there has not been much buying for any market. Two-folds have been in moderate request for our Eastern outlets. Many complaints are coming through from doublers. Bolton spinnings have been more firmly held, with a fairly healthy demand. Order lists on the whole show some improvement.

Sir Jacob Behrens and Sons in their report consider that sharp fluctuations may be expected during the next few weeks, as the market will be chiefly under the influence of weather reports. The highest point in American cotton of the present advance was reached last Tuesday, when May futures were quoted at 5.84½ in the Liverpool market.

Wool.—London colonial wool sales are still progressing, and up to the present show a steady improvement. Messrs. Jacomb, Son, and Co., reporting on the position, declare that the sudden change from the depression prevalent at the opening of the sales to the spirit of animation which at present exists has been most marked, and especially has this been the case in the support given to coarse crossbred wools, which are now selling at fully 1d. per lb. higher prices than on the opening day, and, in fact, are in many cases dearer than at the close of the last auctions. It has evidently been felt that the low values were not entirely justified, and that opportunity should be taken for laying in cheap stock. Experienced traders have for the past fortnight been buying heavy weights of 40's tops at about 8d., and have little reason to regret doing so, as they now cannot be obtained under 10d. Large quantities of the wool are to be held over till the July sales, and already some reports of further increases in supplies from Australia, so that it is not likely that the total then available will be brought forward, and it is evidently the intention of the importers, Messrs. Jacomb, Son and Co. continue, to spread the wools as evenly as possible for the next few months, so as not to overload the trade during the period of quiet business which is at present observable in manufacturing quarters. There is a much better tone in all the markets for raw wools, home and Continental, but actual business has not greatly increased. There are doubts as to the permanency of the improvement, which as yet has not reached to either the yarn or piece ends of the trade.

Coal.—As regards the shipping part, the trade shows signs of improvement rather than otherwise. Baltic ports now being open, an advance in the returns from the English ports trading there is very noticeable, and to other parts of the world heavy cargoes are being sent from English, Welsh, and Scottish counties. North of England demand is said to be in excess of supply, coal for prompt delivery getting scarce, and at Cardiff unusually heavy cargoes have had to be dealt with. But it is otherwise with home consumption. House coals are now naturally in [illegible] request, and in Scotland one or two pits have already been closed, and manufacturing coals are in poor request in most districts. So far prices are keeping up, and even in house coals there will not be any [illegible] probably before June, though supplies here and there have already been given on easier terms.

Iron and Steel.—Worse than ever is all that can be said of these industries, and there are no signs of improvement in the near future. Users of hematite have no need for the iron at the present moment, and do not feel inclined to anticipate forward business when prices in all probability will go lower yet, though until raw materials become cheaper [illegible] declare that they cannot get a profit on the present selling price of the crude iron. The corner in the Cleveland warrant market has at last come to an end, says the *Engineer*, and the bears must have lost very heavily; but so far the [illegible] which was expected to follow immediately legitimate [illegible] was possible has not yet put in an appearance. Warrant prices have fallen as low as 49s. 10½d., but consumers still think it wise to wait at any rate until the month is out. There is nothing really to stimulate them to do business. Not only is home trade slack, but foreign orders have fallen off of late, and in the finished iron and steel trades the position is said to be worse than it has been for a quarter of a century. The only department that can be considered fully occupied is the rail trade; all mills making these are in full swing.

Copper.—Dealings have been on a heavy scale, but were mostly of a speculative order and generally connected with share transactions, consumers remaining rather reserved in view of the large stocks available. Prices went up at first £58, being paid for three months' metal, but the market later showed considerable weakness, and the break in the American share market with some bear selling sent them on Thursday down to £57¾ cash and £58⅜ three months. Friday's prices were: cash 57½, three months 58¼. Messrs. Henry R. Merton and Co., Ltd., give the visible supply as 28,126 tons, as compared with 26,643 tons at the end of April. The aggregate supplies for the first half of the month are 19,723 tons and the deliveries 18,240 tons, which accounts for an increase in the stocks in England and France of 1,883 tons. Chili charters amount to 2,000 tons.

Tin.—Larger buying in leading bull interests and strong advices from New York and the East sent prices up to £137½ cash and £135¾ three months by Tuesday afternoon, but after that the market became more irregular, selling orders set in, the weakness in copper had an adverse effect, Eastern advices were poorer, and though yesterday's final tone was an improvement over the worst, prices were down again to £133½ and £131⅞ for prompt and three months respectively. This afternoon the closing figures are: cash £135½, three months £132¼.

Tea.—Sales in the Indian market passed off on much the same lines as last week. A fairly large number of final invoices were on offer, and some, particularly Dooars, were well competed for, with occasionally dearer rates, but where they showed indifferent quality bidding was restricted, and some parcels were withdrawn. 24,735 packages were sold on garden account out of 29,154 packages brought forward, and averaged 7.99d. per lb. The Ceylon auction was quieter, more especially where consumers of medium kinds were concerned. These were in large supply, and ruled irregular and occasionally easier, but fine and finest were in strong demand at firm prices, the average for the week coming to 7.94d. As we are now approaching a period of the year when the quality shows a distinct falling off, say Messrs. Gow, Wilson, and Stanton, Limited, buyers are evidently realising that the supply of good liquoring teas will be on a more restricted scale in the near future. Of Javas, 2,586 packages were offered, but buying was less general than last week.

Sugar.—Trade has been rather disappointing to holders, what with finer weather on the Continent, lower American prices, and slow demand, and heavy realisations have taken place with a consequent fall in prices. Cables of last week, says Mr Czarnikow, announced that the States would require 50,000 tons more old beet and 150,000 tons new crop from Europe, which, with anticipations of a large consumers' demand here for Monday (when reduced duties came into force), caused some speculative demand up to 11s. 6d. August. But when consumers merely took delivery of previous purchases without buying further important quantities, holders began to sell in presence of fair Cuban receipts, of heavy imports into America, and of a decline in New York of 7d., with the result that prices for August fell to 11 2½d., October to [illegible] 4d., July-August granulated to 13s. The activity expected in the United Kingdom upon the reduction of duties coming into force on the 18th inst. has so far not been realised, as the decline in beet had a chilling effect upon the trade generally, and users of cane sugar have shown no desire to operate to any extent, notwithstanding that they are able to secure the full advantage of the lower duties. The quantities of cane sugar coming are only moderate, and with the probability of an increased demand, not only on account of the consumer obtaining cheaper sugar, but also on the chances of better weather than was experienced last summer. Grocery crystallised is slow of sale, and buyers not only benefited by the full reduction of duty but to a slightly greater extent. Advices from cane-growing countries, continues Mr Czarnikow's circular, are only interesting so far as concerns Java, where heavy rains have set in, interfering with grinding, which may place difficulties in the way of those shippers who are under contract for early cargoes. In Cuba better weather conditions pre-

vail, and it is hoped that the growing crop will benefit from the rains which have set in, though these are not as yet sufficiently heavy. The American market has been under the influence of further heavy arrivals, as well as of the reports of favourable weather in Europe, and also in Cuba, from which the growing crops are expected to benefit. In consequence the price for 96 per cent. centrifugals on the spot declined to 4.24 cents. Of course, favourable atmospheric conditions now in Cuba and in Europe can only affect supplies after next October, and cannot reduce the great shortage which justified the higher level of values. The general opinion in the United States is that the recent depression is only temporary (provided that the European beet sowings have been correctly tabulated), and that a revival of demand may be expected ere long. The landings in the three ports for the week were 63,000 tons, and meltings 41,000 tons, raising stocks to 330,000 tons.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

BENGAL AND NORTH-WESTERN RAILWAY CO., LIMITED.

During the half-year ended December 31 some 164 miles were added to the joint system controlled by this company, mainly through extensions of the Tirhut State Railway, with considerable benefit to the revenue. Passenger traffic both on the company's own lines and on the Tirhut Railway improved substantially, and earnings from this source were Rs. 2,92,707 higher at Rs. 32,97,324. The Tirhut line also did well in goods owing to a brisk traffic in food grains, which this time was from Tirhut to the districts in the United Provinces, whereas a year ago the traffic was in exactly the opposite direction. On the company's lines, however, there was a falling off due to the deficient rainfall and consequent partial failure of the crops and earnings of the whole system were only Rs. 93,011 better at Rs. 34,11,495. Details of the different commodities carried show that while seeds, sugar, salt and tobacco were both up in quantities and revenue, grain and pulses, wheat and manufactured cotton fell off, rice was smaller in quantity but yielded more, and coal and coke gave less in spite of an increase in bulk. With moderate gains in steamboat and miscellaneous earnings the total income amounted to Rs. 72,72,385 or an improvement of Rs. 4,05,023, of which working expenses took Rs. 1,95,970 more at Rs. 35,47,738, the percentage to earnings being slightly less at 48.78 compared with 48.81. The increase was spread over all departments except maintenance of way, and was due to the greater length of line, to the cost of coal and to famine allowances being paid to some of the employees owing to the scarcity prevailing in certain of the districts. Nett revenue was Rs. 2,09,053 up at Rs. 37,27,647, of which the company's share amounted to Rs. 22,09,735 or Rs. 2,23,368 more and converted into sterling gave £144,016 against £130,717. Adding £54,495 brought forward and £1,973 from sundry receipts the available total was £19,247 better at £200,484 and after providing for general charges, debenture interest and preference dividend £160,800 was left against £143,908. Out of this the directors raise the dividend by ½ per cent. to 3½ for the half-year and reduce the bonus from £1 to 10s. after which they transfer £5,000 less at £15,000 to reserve, but set aside £20,000 for revenue renewals leaving £1,900 more at £21,300 to be carried forward. Capital expenditure for the six months was £89,181 on the main lines and £26,251 on the Doab lines making the total to date £5,124,202, but as the company has placed 25,000 new ordinary shares of £10 each at a premium of £4 per share the capital account shows a credit balance of £247,066, this figure including £128,132 for stores in hand.

SOUTHERN PUNJAB RAILWAY.

On the main line the gross receipts for the second half of 1907 showed an increase of Rs. 9,15,944 at Rs. 28,41,778, passengers having given Rs. 1,73,426 and goods Rs. 6,39,672 more, there being also an increase of Rs. 1,01,847 in various "adjustment" items. Working expenses rose by Rs. 4,76,291 to Rs. 14,77,725, so that the nett income was just Rs. 4,39,653 up at Rs. 13,64,053. On the Ludhiana extension the earnings improved by Rs. 1,36,585 to Rs. 4,95,912, and the expenses were greater by Rs. 71,024 at Rs. 2,57,874, leaving the nett receipts Rs. 65,561 better at Rs. 2,38,038. It results that the combined nett income was £107,564 at Rs. 15 to the £, and after meeting current charges in England, debenture stock interest and Indian and British income-taxes, the distributable balance was £92,752 or £28,770 more. After reserving £30,787 of this, being the Secretary of State's share of the surplus profits on the main line, and £1,010, his similar portion on the Ludhiana branch, the directors have £60,955 left, which, added to the £68,118 brought forward, puts altogether £129,074 at their disposal. A dividend at the rate of 6 per cent. per annum, with a bonus of 1¼ per cent., making 7¼ per cent. for the year 1907, can accordingly be paid, and still leave £74,074 to go to the new half-year. Up to the end of December the total expenditure on capital account for the main line and Kaithal branch was £1,409,135 and on the Ludhiana branch £557,183, the two together being £318 in excess of the capital at that date raised. Within the six months £2,005 in capital was laid out on the main line and Kaithal branch, and £10,344 on the extension.

ROYAL MAIL STEAM PACKET COMPANY.

In its way the report of this company is a model one. It enters into particulars about the business done, and gives information on many points after a fashion that we commend to the imitation of gentlemen like Sir Donald Currie. Its accounts cover the calendar year 1907, and reveal progress that must be considered on the whole satisfactory in view of the drawbacks experienced. In the second half of the year, for instance, the steerage passenger business between Spanish and Portuguese ports and South America was injured by competition which reduced the third-class fares. This competition has continued, but there are indications now that both the British and foreign lines engaged in the trade are desirous of arriving at a basis of settlement. Disappointment has also arisen in connection with the Australian mail new contract, in which the Royal Mail Company will have no share, it having severed its partnership therein with the Orient Steam Navigation Company. The Australian trade, however, is not to be neglected, and the company's fine new steamer *Asturias* made a maiden voyage to Australia with marked success, bringing to England a record number of saloon passengers from the Commonwealth. That steamer has now taken up her position in the South American mail service. An arrangement, we presume satisfactory to the company, has also been effected with the Government for the West Indian Inter-Colonial Mail service, and the company is getting a subsidy of £25,000 per annum instead of £17,500 for its improved service in that quarter. A freight war seems to have existed in the Brazil trade between a British line and its German competitors. To this war the Royal Mail has been no party, but it diminished homeward freight earnings, and although the fight is now over this branch of the company's business will continue to be adversely affected during some months of the current year. The management, however, is vigilant in seizing every new opening, and the report says that the court of directors, recognising the growing importance of the Argentine port of Bahia Blanca, has augmented the number of direct sailings thither during the past year with improved results. The directors have also acquired an interest in the Shire Line of steamers trading to China and the Far East, and purchased three steamers which have proved valuable additions to the fleet. Altogether the company now possesses 46 steamers of an aggregate capacity of nearly 200,000 tons, or including steam launches, of 200,077 tons. This is an increase of nearly 100,000 tons within the space of five years, and naturally that expansion could not take place without some addition to the capital. Hence an issue of £700,000 of 4½ per cent. debenture stock was made last November, and of that amount £373,401 was paid up by the end of the year. As the rest of the money comes in some of the items in the balance-sheet will no doubt show considerable reductions. Bills payable, for instance, are £231,994 up at £603,254. On the other hand, cash on deposit, bills receivable, cash balances, balances due by agents, taken together, show an increase of £249,685 at £358,551. Receipts on account of current voyages are £108,312 up at £256,674, and creditors and sundry balances against the company show an increase of £73,368 at £452,088. The insurance fund remains at practically last year's figure, £255,081, although the directors have added £52,000 to it out of the year's income. The reduced book value of the fleet, including payments on account of new steamers building, amounted to £3,096,246 at the end of the year, an increase of £451,333. Freights, mail money, &c., under collection is an item showing an increase of £19,326 at £116,697, and disbursements on account of current voyages are £13,567 up at £207,823. The profit for the year after providing £185,890 or £16,900 more for depreciation amounted to £147,245, and after allowing for £5,000 more transferred to the insurance fund and £3,973 more at £7,995 set aside for depreciation of property and plant, as well as for debenture interest and all other charges, the nett profit was £28,742 up at £68,897. This includes £16,340 or £8,263 more brought in. The directors are accordingly able to pay the full dividend on the preference stock and to give the ordinary stock 2½ per cent. for the year. As showing the keenness of the company to extend business the report mentions that the *Amazon*, one of the most popular of the new "A" steamers, will be dispatched from Southampton in the end of July on a Norwegian cruise, and it is a fact worth noticing that the company's business has been conducted throughout the year with perfect regularity and with a punctuality rarely excelled by the best express train service in the world, without accident or hitch of any kind. We should like to see a *Dreadnought* put to a similar test for, say, six winter months.

UNION CASTLE MAIL STEAMSHIP CO., LIMITED.

The council or board of this company again laments the continued severe depression in South African trade. Thanks to this the number of passengers has fallen off and the company's mail and intermediate steamers have had to sail with considerable cargo space unoccupied. While receipts have gone down expenses have gone up, and the consequence is that the shareholders get only their 5 per cent. dividend for the year, or 10s. per share, whereas a year ago a bonus equal to an additional 1¼ per cent. was distributed. Also the transfer to the reserve and contingency fund is only £17,500, and the benevolent fund again gets only £5,000, as last year, while the repairs and renewal fund is credited with £4,508 compared with £23,736 last year. Nett profits amounted to £57,921 and £20,867 was brought forward, making a total of £78,783. The balance to

be carried out after paying the dividend and making these assignments is down to £15,369. After debiting the repairs and renewal fund with £4,508 for charges incurred last year it remains at £200,000, that amount having been taken from the revenue as just mentioned. As for the insurance fund it stands at £1,235,116, the nett premiums credited on the risks taken by the company, after deducting claims, amounting to £60,796, having been added to it. In order to encourage agriculture in South Africa, the company has arranged with the Governments there to carry grain at specially low rates. Altogether the fleet numbers 43 vessels, including tugs and a launch, of an aggregate capacity of 254,411 tons, and this fleet is valued in the balance-sheet, after deducting depreciation for the past year, at £2,528,224 or nearly £9 19s. per ton. The company has large possessions in other directions, including £1,298,698 invested in trustee securities and Treasury and Corporation bills. British Government securities are entered at, or under, cost, but no mention is made of depreciation. These investments doubtless represent the insurance fund.

FINE COTTON SPINNERS' AND DOUBLERS' ASSOCIATION.

An excellent business was done by this powerful combination in its year ended March 31 last. Profits, after charging £140,000 to depreciation, the same as a year ago, providing bonuses to the management and paying the auditors, came to £800,076 or £116,239 more than in the previous year. The balance of £114,344 brought forward was also £98,837 higher, so that the entire free revenue was £215,076 better at £914,420, and after paying debenture stock interest there was £804,420 left, out of which the directors place £200,000 to the reserve fund or £50,000 more than a year back, making it, including the premiums on shares issued, £1,050,459. The final dividend on the ordinary shares is only 4 per cent. against 6 per cent. a year ago, but the bonus of 4 per cent. more than makes this good, so that dividend and bonus together amount to 12 per cent. for the year, an increase of 2 per cent. Even then £239,420 remains to be carried forward or £125,076 more than was brought in. And the balance-sheet is wonderfully satisfactory likewise, as far as we can read it. Loans due by the company show a reduction of £4,922 at £78,138, and it owes sundry creditors £64,916 less at £566,533. Additions to properties, however, less realisations, an unsatisfactory form of entry, amounted to £37,173, and brought the total up to £5,325,544, and after making adjustments in connection with the depreciation fund by allowing for the £140,000 set aside as usual, and adding £160,031 cost of outlay on renewals over and above the ordinary repairs charged against profits, the nett value of the properties, lands, mills, goodwill, &c., is up £58,104 to £5,005,823. Sundry investments, less arrears and undistributed profits in subsidiary companies, would also seem to be £144,314 higher at £1,861,764. A year ago, however, this item excluded profits not yet distributed and then entered separately, the amount being £140,749. No corresponding entry appears this year. Stock-in-trade shows an increase of £138,134 at £1,648,263, and trade debtors, including rents, rates, &c., paid in advance, make an entry of £32,103 lower at £655,542, but there is nothing in all this beyond the usual fluctuations, and cash shows the satisfactory increase of £120,766 at £291,139, the total of the balance-sheet being £9,466,603.

BRITISH COTTON AND WOOL DYERS' ASSOCIATION, LIMITED.

It would almost seem as if the representative board of this industrial combination had been stung by the light mockery of a year back in these columns, for they again, or once more, venture upon a dividend. It is only 2 per cent. for the year ended March 31 last, but it requires £25,434, and the nett profit of the past year, after placing £25,000 to depreciation fund, paying administrative expenses, and the interest on the debenture and other debts, was only £16,798. This hardly seems wise generosity, but the balance brought forward was £49,119, of which £33,468 came from the year before, so that there is actually £33,915 left after paying this modest dividend and putting £6,568 to the reserve fund to replace the loss on the American business sold. And at the end the balance forward is only £15,204 less than was brought in, and the company, if it does no worse, may manage to pay another microscopic dividend next year, before taking one more long rest. We must never be too sure. The changes in the balance-sheet are not of very great importance. It totals up to £2,307,715, and the trading profit of the year was just £81,479, after charging £1,831 for specific depreciation and £25,336 for repairs and renewals. Including interest on investments and transfer fees, the entire income was only £86,084. The depreciation fund now stands at £202,660, but against that about £161,316, representing the cost of works closed, must be set. Sundry creditors, including £68,500 due on special loans, amount to £123,021, which is £13,514 less than a year back, the special loans having fallen by £4,000 to £68,500. Property, including goodwill £905,000, has been increased by £17,881 nett to a total of £2,003,536, and only £1,821 has been deducted from this as depreciation, making the mass figure still in the balance-sheet at £2,051,200. Sundry debtors owe £154,001, stock-in-trade is entered at £134,295, and cash and bills, etc., amount to £57,124. The company also possesses investments entered at cost £40,000. In their certificate, the auditors state that the American branch of the business was closed at a loss of £9,568, and they further explain that the decrease in the investments is due to the sale of the assets of this American branch. A year ago the investment entry was £64,417, additional works valued at £11,967 having been closed during the year.

JOHN LYSAGHT, LIMITED.

No check has yet been experienced by this company in its steady expansion, and although the improvement in profits for the year ended December 31 was not so exceptionally good as that for the previous 12 months it was still decidedly satisfactory. After providing for depreciation and bad debts, the profits of the home business and of the 33 manufacturing and distributing branches in the Colonies and elsewhere amounted to £266,044 or an increase of £21,097. A year ago the gain was £35,344, while in 1905 it was £20,857, and the record is one with which the directors may well feel satisfied. Adding £30,279 more at £117,343 brought forward and deducting debenture interest and trustees' fees, the surplus available was £51,376 up at £309,677, and after paying the usual dividend of 10 per cent. the directors again increase the bonus by 2½ per cent. to 7½. Then last year's appropriations of £50,000 to reserve and £2,000 to workmen's provident fund are repeated, and £169,077 or £41,376 more is carried forward subject to income tax and directors' fees to be voted at the annual meeting. Freehold and leasehold properties and plant have only been reduced by £7,171 to £464,176, and goodwill is unaltered at £134,612, but the reserve fund now reaches a total of £310,000, so that ample provision is being made for contingencies. Most of it is employed in the business, as the company seemingly requires to carry large stocks, this item being £57,218 up at £473,732, and only £10,360 is separately invested. Sundry creditors have been reduced by £8,230 to £121,330, while, on the other hand, debtors have risen by £2,379 to £331,620, and cash and bills come to £40,719 more at £258,506.

PARK GATE IRON AND STEEL CO., LIMITED.

The alterations and additions to the blast-furnaces, plate mills, &c., mentioned in recent reports have now been completed, and the new sheet mill is also expected to be ready at an early date. During the year ended March 31 the works were well employed, and the production was about the same as in the previous twelve months, but the margin appears to have been very much narrower, as gross profits fell by no less than £21,409 to £51,774. With £5,327 brought forward the disposable balance was £20,851 down at £57,101, but the directors nevertheless again write off £12,000 for depreciation, and after meeting debenture interest they repeat the dividend of 2s. per share. In view, however, of the poor prospects for the current year, owing to the decreased demand for finished material and pig-iron and the reduced prices at which orders have to be taken, they evidently deem it inadvisable to add the bonus of 1s. 8d. paid a year ago, and prefer to increase the sum carried out by £4,149 to £9,476. In this they are no doubt wise, as the company has no reserves to fall back on, and hard times will hit it severely. Outlay on capital account exceeded the depreciation allowance by £36,076, making a total of £368,750, and cash has been correspondingly reduced by £35,949 to £36,050. Creditors are £11,679 lower at £79,806 against a decrease of £10,053 to £72,777, but stocks have risen by £4,799 to £64,204.

DIESEL ENGINE CO., LIMITED.

Since it was reorganised and its ornamental capital cut off, this company has made steady progress, and the business done for the year ended March 31 last shows a credit balance on profit and loss of £20,721, making with the £3,489 brought forward £24,210 to handle. The profit, however, is up only £608 on the figure of the previous year, but for 1904-5 the total was only £7,405, so that the directors are able to increase the dividend on the ordinary shares to 10 per cent as against 5 per cent and place £7,000 to the general reserve as compared with £3,000, making it £10,000. This will leave £7,210 to be carried forward or £3,780 more than was brought in. The directors say that the number of orders has been well maintained, many being repeat orders. The value of the orders carried over on March 31 last was considerably greater than at the corresponding date a year ago, and the business done shows a profit. Little calls for notice in the balance-sheet, which is now clean enough and shows a handsome balance of cash amounting to £26,361. Sundry debtors and trade accounts stand at £50,242, exclusive of the balance of suspense account £1,192 and £155 spent on patent fees paid in advance.

METROPOLITAN AMALGAMATED RAILWAY CARRIAGE AND WAGON CO., LIMITED.

Following their usual practice, the directors of this company have made provision for contingencies and internal reserves before declaring the profits for the twelve months ended March 31, and the real position is to this extent hidden. The results disclosed, however, are exceedingly satisfactory, and it is evident that the purchase of the varnish-making business of Docker Bros. a year ago has turned out well. Including £3,202 or £7,101 more brought forward, the profits show an increase of £30,810 over the previous year at £130,788, and although more capital now ranks for dividend, the directors are able to pay a bonus of 1s. per share or 5 per cent in addition to the usual regular dividend of 10 per cent. After this £10,000 is again transferred to reserve, but the balance carried forward is increased by £11,150 to £72,130. In connection with the aforementioned purchase, the capital was increased by £298,581 to £772,208, but only £69,720 has so far been spent on the extensions, making it £772,208, and £174,527 has been added to the investments, bringing them up to £530,207 against a reserve fund of £35,000.

Debtors at £233,737 exceed creditors by £76,193, and while stocks and work in progress show a drop of £42,305 at £189,253 cash has risen by no less than £204,085, and now amounts to the very comfortable figure of £406,659.

NORTH BRITISH AND MERCANTILE INSURANCE CO.

In the fire department this company collected during 1907 nett premiums to the amount of £2,157,534 or £93,987 more than in 1906. Losses absorbed £1,112,561 nett or about 51.57 per cent. of this premium income, and commission and expenses took together about £719,000 or another 33.31 per cent. This left £288,739 to be carried to profit and loss as the gain of the year, after increasing the premium reserve by £37,594 to £863,013. In the life department the new business yielded £135,138 nett in new premiums, and the total premium income was £1,068,988, in addition to which £445,757 was received as interest and £364 as fees. Claims took £819,172 and £51,968 was paid under surrenders. Commission and expenses worked out at about 13.56 per cent. of the premium income. At the close of the year the life fund was increased by £225,638 to £11,335,667. A moderate business was also done in annuities, and the company possess an annuity fund of £2,980,176, after meeting all charges and placing £60,000 to investment depreciation account. The directors state in their report that owing to the universal shrinkage in the value of securities they have written £150,000 off the value of the fire investments out of the profits of the year, and in the life account there is also £250,000 set against depreciation, so that altogether £460,000 would seem to have been thus put aside in the past year without being felt in the slightest, for the total assets of the company in all departments amounted to £19,298,197 at December 31 last, and the directors are able to pay the usual dividend of £1 per share, together with a bonus of 10s. per share and an additional bonus of 5s. 6d. per share, which comes out of the shareholders' portion of the life and annuity profits. Altogether £598,265 was available for distribution, and after these payments £403,015 remains to be carried forward against £467,176 brought in.

COMMERCIAL UNION ASSURANCE COMPANY.

In 1907 this company's fire business gave a nett premium revenue of £2,882,362 or £521,311 more than in 1906. Losses took £1,420,001 or 49.2 per cent. of the premium income, and expenses, commissions, and brokerage absorbed another £1,049,000 or thereby, being about 36.39 per cent. of the premium income. In the previous year the loss ratio was 78.88 per cent., but the company then suffered cruelly from the claims created by the San Francisco fire. In consequence of those losses the fire fund was reduced by £248,219 to £2,000,461 at the end of 1906. The past year's business has brought an increase of this fund of £195,658 and it now amounts to £2,196,119, while £185,000 is carried to profit and loss as the profit for the year. In the marine department the business yielded £247,471 in premiums, losses took £140,451, and £35,000 was carried to the credit of profit and loss from this department, leaving the marine fund at £623,360, which was nearly £23,000 up. In the accident department the nett premium income was £493,179 and the losses took £256,119. After a liberal provision for outstanding losses there was a surplus of £69,374, which was added to the accident fund, raising it to £199,271. In the life branch the new business yielded £72,371 in premiums and the total premium income amounted to £366,852, an increase of £45,553 on the previous year. Expenses and commissions took about 13.62 per cent. of the premium income, and the life fund amounted at the end of the year to £3,424,063, after paying £190,869 in claims and nearly £33,000 on account of endowment insurances matured and surrenders, but the nett capital received for annuities sold was £36,587, and interest and dividends yielded £135,392. In regard to this the company's own life department, the directors state that as a result of the quinquennial valuation just made and after making provision in cases where the market value of securities was less than the book value, they are in a position to report the aggregate market value of the whole of the securities comprised in the fund at December 31 to be in excess of the total amount shown in the balance-sheet. Some of the other funds now embraced in this great company's many properties have had to be dealt with in the same way, and £26,615 has been written off the value of the securities of the West of England life fund on the quinquennial revaluation and £178,871 off the value of the Union Assurance Company's life fund, besides the £21,514 deducted from the valuation of the Commercial Union Company's own life funds to bring them up presumably to the standard mentioned in the just quoted directors' report. Altogether, therefore, the writings down amounted to £227,000. The Hand-in-Hand fund shows an investment reserve of £9,151. Adding in the whole of the funds and the various acquisitions of the Commercial Union, as well as its own important accumulations, the total of its balance-sheet now amounts to £17,420,301. The profit and loss credit balance at the year's end was £164,045 or £5,228 up, and out of this the directors recommend a dividend of 6s. per share, making 12s. for the year 1907. This account shows that £279,228 was paid last year for businesses acquired, and in order to meet this large disbursement £200,000 was withdrawn from the general reserve fund. The quinquennial valuation shows a profit of £441,528, including interim bonuses already paid, and of this the directors have decided to divide £379,382, of which £301,159 remains to be paid to the policyholders, while £78,223 goes to the shareholders as their proportion compared with £64,444 five years before. The undivided balance then remaining will be £62,146.

LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY.

In its fire department this company collected a nett premium income of £2,635,288, of which losses swept away £1,334,255 or 50.6 per cent. Expenses took another £875,000 or thereby, being 32.20 per cent. of the premium income. Even so the surplus was £425,853, of which £84,794 was left in the fire account to increase the reserve for unexpired risks, so that only £341,061 was carried to the credit of profit and loss. In the life department the nett new premium income was just over £20,000 and the total premium income £243,966. Claims took almost £289,000, and expenses and commission absorbed £24,183 or just 10 per cent. of the premium income. At the end of the year the life fund was raised by £54,195 to a total of £3,837,502. This is exclusive of the Globe fund, which amounted to £108,284, exclusive also of the annuity fund, whose total was reduced at the end of the year by almost £93,000 to £1,410,466. The new capital received for annuities sold amounted to £51,770, but the annuities paid absorbed £191,568, and commissions and expenses took nearly £5,000 in addition, while the total on capital account and as interest amounted to barely £103,000. The accident department gave a nett premium income of £65,277, and claims took £11,643 or 17.8 per cent. of the income, so that the year ended with a surplus of £23,758, to which the directors have added £6,242 from profit and loss to make an accident reserve fund of £30,000. Altogether the revenue of the year from the various sources indicated and from interest and dividends not carried to other accounts was £551,140 and of this £221,076 was absorbed in paying a dividend of 33s. per share on the £2 of stock out of the fire fund and 3s. per share out of the proprietors' portion of the life profits. Then £123,152 was required to pay for the business of the Central Insurance Company, now absorbed in the Liverpool and London Company's business, and £50,000 was carried to a suspense account. After paying the final dividend of £135,102, the balance left to carry forward will be £620,797 as compared with £659,201 brought in. The balance dividend of 22s. is payable on the 22nd inst.

SUN INSURANCE OFFICE.

In 1907 the fire premium income was £6,029 up at £1,477,643. Losses took £722,115 or 48.87 per cent. of this income, and expenses and commission £531,181 or 35.95 per cent. After putting aside 40 per cent. of the premiums to cover unexpired risks, the profit was £317,983, but on the accident and general business of the year there was a loss of £2,018. Altogether, however, the divisible balance, after carrying £5,000 to the pension fund and £90,000 to the general reserve, was £258,574, out of which two dividends of 5s. per share each, making 100 per cent. per annum, have been provided, leaving £138,574 to be carried forward as against £160,254 brought in. The income from investments was £97,271, and the total funds of the company amount to £2,644,235. This includes a general reserve of £1,500,000, £591,057 held against unexpired risks, an investment reserve of £36,208, a pension fund of £52,974, and a dividend reserve of £120,000.

LIEBIG'S EXTRACT OF MEAT CO., LIMITED.

Considering that the company had the full benefit of the new capital raised in 1906, the results ended September 30 in South America and March 31 in London showed a much smaller improvement than might have been expected. This, however, was due mainly to the high prices ruling for cattle, and to some extent also to the drop in the value of hides, and taken as a whole the outcome was satisfactory enough. Sales of produce, after deducting appropriation in accordance with the articles of association, amounted to £472,912 or £19,994 more, but expenses increased by £18,798 to £281,686, so that the gain in nett profits was only £1,196. With £28,915 brought forward the total to be dealt with was £5,723 larger at £220,141, but more is required this time to maintain the dividend and bonus at the very comfortable figure of 22½ per cent., so the appropriation to reserve is reduced by £10,000 to £20,000, and after putting another £2,000 to employees' provident fund and paying £16,123 for directors' percentages £22,018 or £6,897 less is carried to the new account. The purchase of the land in South Paraguay referred to in the previous report has been completed, and no doubt accounts for the increase of £42,640 to £164,507 in the value of land, buildings, &c. Two other estancias conveniently situated in the South of Paraquay have been rented, and the directors have also arranged to acquire a controlling interest in a land and cattle company in South West Africa. Including the £300,000 received from premiums and put to a special reserve, the total accumulated funds will now stand at £641,500 and show a substantial margin over the book value of the property. Creditors and bills payable are £74,705 down at £390,690 against a decrease of £96,884 to £348,260 due from the South American establishments for specie shipped, drafts issued, &c., since September 30. Cash and bills receivable, too, are £18,138 lower at £23,022, but sundry debtors have risen by £42,764 to £201,527, and stocks in South America and Europe are £213,203 larger at £1,076,629.

HOVIS-BREAD FLOUR CO., LIMITED.

While this company's sales for the year ended March 31 were again on a larger scale, profits were adversely affected by the rise in the price of wheat, especially as the directors decided not to make any corresponding advance in the price of flour to their agents. This decision will no doubt help the company eventually, but in the meantime it has caused a reduction of

£3,670 to £32,410 in the nett trading profits. A larger balance of £898 was brought forward, but miscellaneous receipts were £356 down at £50, and after providing for management expenses and writing off £10,287 or £237 more for depreciation, the nett surplus amounted to £21,296 compared with £25,010. In view of the exceptional circumstances, the directors would have recommended drawing on the reserve to an extent sufficient to maintain the dividend on the ordinary shares, but that the mill in Millbank Street is being acquired by the London County Council in connection with the Westminster improvement scheme. Interest on debentures and loans required £2,911, while £524 was set aside for dividend accrued on the new ordinary and preference shares issued in January, and after transferring £2,269 less at £1,731 to reserve, the ordinary shares receive a distribution of 8 per cent. against the 10 per cent. paid for each of the previous six years, and £379 is carried forward. Expenditure on the property for the year exceeded the allowance for depreciation by £7,991, making the total of £264,844, against which the reserve, including £3,102 for balance of premium on ordinary shares, now comes to £30,000. The new capital raised has enabled the company not only to pay off the bank loan, which a year ago amounted to £19,421, but to add £10,794 at £40,652 to its stocks on hand at the cost of an increase of £3,139 to £12,707 in sundry creditors. Book debts are also £9,648 larger at £40,646, but cash is only £914 up at £1,257.

VAN DEN BERGHS, LIMITED.

The high cost of raw materials about which the directors complained a year ago would seem to have continued in a still greater degree during the twelve months ended December 31 as in some cases, they say, there was an increase of as much as 75 per cent. Under these conditions a further shrinkage in profits was inevitable, and a very serious shrinkage it proves to be. Trading profits and income on investments amounted to £92,282 or a decrease of £106,430, but the balance brought forward was £25,604 larger at £226,971, giving a total of £319,253 against £400,079. Directors' fees absorbed £6,200 and £18,562 or £1,921 more was written off for depreciation, but £2,912 less at £12,803 was applied towards cost of advertising and expenditure on new departments, and after providing £3,710 for interest on reserve fund the available surplus was £85,727 down at £271,977. Of this £5,000 is put to reserve and £10,000 to a contingency fund against £11,734 to the first-named account, and £3,675 has to be found for interest on instalments on the new ordinary shares, after which the dividend on the ordinary shares is cut down from 16 per cent. to 8 and £174,303 or £52,667 less is carried forward. The reserve fund was further credited with £82,411 from premiums on the new shares, but £3,017 was written off for depreciation on investments, so that it now stands at £211,695 against a goodwill account of £656,463. Land, buildings, plant, horses, &c., less depreciation, aggregate £385,678, and trade and other investments are valued at £123,009 or an increase of £8,463, while reserve fund investments have risen by £10,579 to £113,272. Stocks, possibly because of the heavier cost of materials, are £91,996 higher at £386,548, sundry debtors owe £676,126 or £40,193 more, and bills receivable have increased by £23,141 to £41,668 against a drop of £17,868 to £78,536 in cash. On the other hand, however, advances of £99,820 to £295,403 in bills payable and £19,969 to £206,215 in sundry creditors are largely neutralised by a reduction of £73,417 to £306,943 in loans, which was probably brought about by the additional capital brought into the business.

BENGER'S FOOD, LIMITED.

No very remarkable growth took place in this company's business during the twelve months ended March 31 and gross profits were only £347 higher at £53,208, but interest, rents, &c., yielded more and the total income amounted to £55,831 or an increase of £715. On the other hand, managing director's and directors' fees came to £250 less at £1,750, and the nett profits, after writing off £258 for depreciation, were £969 up at £51,686, but against this the sum brought forward was £3,630 compared with £12,413, and the available surplus was actually £7,814 smaller at £55,316. In order, therefore, to repeat the distribution of 10 per cent. on the ordinary shares it has been necessary to cut the appropriation to reserve in half at £10,000, but after transferring £5,000 or £500 less to advertising and extension of business account £2,686 more at £6,316 is carried forward. Of the total capital of £400,000 no less than £377,630 is represented by goodwill, while the item of £6,655 for land, buildings, &c., includes a further undisclosed amount for trade marks. This means that practically the whole of the capital is represented by intangible assets, whose break-up value would be next to nothing, and under these circumstances it is unfortunate, to say the least, that the directors have chosen to maintain a high rate of dividend at the expense of the reserve. That fund with the present addition only reaches £50,000, but one good point is that it is not employed in the business, loans to corporations and other securities having been increased by £18,000 to £67,985. Stocks have risen by £1,164 but are still very small for a company of this size at £3,377, debtors owe £10,280 against liabilities of £7,095, but cash has dropped by £6,208 to £23,209. Advertising and extension of business account is £686 down on balance at £5,553.

ANGLO-CHILIAN NITRATE AND RAILWAY CO., LIMITED.

As the directors anticipated, the traffic on this company's railway during the year ended December 31 showed a small falling off, but the decrease in this direction would appear to have been amply compensated for by an increase of 156,500 quintals to 879,000 quintals in the nitrate produced by its two oficinas. That at least is the only explanation we can imagine for the improvement of £43,085 shown in the trading profits and other income at £172,347. Administration expenses and other charges, including interest and sinking fund on the 4½ per cent. consolidated mortgage bonds, only rose by £221 to £44,363, so that nett profits were £42,864 up at £127,484. Out of this £25,000 or £10,000 more is put to reserve and £1,850 is written off investments against £10,000 added to renewals account a year ago, but the insurance fund, which also received £10,000 at that time, is now passed by. After deducting £1,663 for directors' percentage of profits the available surplus, including £10,370 brought in, was £100,391 compared with £74,379, and the directors feel justified in raising the dividends on both preference and ordinary shares from 10 to 15 per cent., which will leave £25,391 or £15,021 more to be carried to the new account. Liabilities to sundry creditors and on bills payable are £44,932 higher at £166,286, but, on the other hand, while debtors have dropped by £4,701 to £57,920 and trading stocks are £3,575 lower at £55,404, cash has risen by no less than £52,215 to £64,572, bills receivable come to £26,725 more at £131,785. Capital account has been reduced by £22,597 through the depreciation allowance, and sinking fund now stands at £798,525, while working stocks are valued at £80,025, and against these the various reserves aggregate £187,543.

ALIANZA CO., LIMITED.

The lawsuit over the Novoa property, which hung round this company's neck like a millstone for so long, was finally settled last year, and the settlement has set free the accumulations of profit which had been piled up. A large proportion of it has wisely been used to strengthen the reserve, but even then sufficient was left to enable the directors to make a substantial addition to the dividend. Actual results for the twelve months ended December 31 were less favourable than for the preceding year, profits being taken on 1,101,187 quintals of nitrate against 1,494,101 quintals, and the total income was £14,304 down at £173,784. The depreciation allowance was reduced by £7,098 to £27,120 and London office and other charges took rather less, so that the decrease in the nett surplus was only £3,479 at £119,702, and as £53,182 more at £198,177 was brought forward the amount available came to £317,879 compared with £268,176. Of this £48,829 was deducted for cost of settlement of the Novoa lawsuit, after which the directors pay a dividend of 15 per cent. against 6 for the previous year and then transfer £180,000 or £140,000 more to reserve, leaving the considerably reduced balance of £14,050 to be carried forward. Another £22,612 was written off the original property account for exhaustion, reducing the item to £666,457, and buildings, plant, etc., are £1,509 down at £132,820, but the Oficina Slavonia is left at last year's figure of £10,000, making the total capital outlay £809,277 against which the reserve will now stand at £250,000. The position was further improved by the redemption of no less than £238,000 of the debentures, leaving £148,900 outstanding, and as at the same time floating liabilities were reduced by £31,936 to £188,286 it follows that changes amongst the assets are on a large scale. Debtors are £186,728 down at £40,440, stocks and stores are valued at £86,955 or £19,070 less, and investments show a drop of £49,094 at £97,260, but bills receivable have risen by £62,145 to £107,026. Cash however is small at £3,620.

SALAR DEL CARMEN NITRATE SYNDICATE, LIMITED.

Notwithstanding labour troubles and frequent shortage of workmen, this company managed to increase its gross profits for 1907 by £2,497 to £68,612, and as small savings were effected in outgoings, the nett surplus, after writing off another £3,000 for depreciation, was £3,259 up at £61,376. The reserve fund already exceeds the value of the property by a substantial amount, and the directors very justifiably think that they can now make a further reduction in the appropriation to that fund. So they transfer only £6,000 against £10,000 a year ago and £16,000 in 1905, and utilise the extra money at their disposal to increase the dividend from 45 to 50 per cent., leaving £1,488 to be carried forward against £862 brought in. Property account now stands at £65,241, while the reserve with the present addition will reach £80,000, and is invested in securities worth at market values £87,810. Stocks of nitrate, &c., although £11,235 less than a year ago, are large at £71,912, with the result that liabilities to creditors on bills payable exceed sundry debtors and bills receivable by a considerable sum, the figures being £34,249 against £11,809; but cash is £5,896 up at £19,855, and the position generally looks exceedingly comfortable.

ANGELA NITRATE CO., LIMITED.

In common with most nitrate undertakings this company shows a diminution in its profits for the year ended December 31 of £8,732 at £25,045, but a little more at £2,150 was brought forward and after meeting London office charges, debenture interest, &c., the nett surplus was £8,473 down at £23,486. The usual £6,300 is provided for debenture redemption, but in order that the dividend may be maintained at 15 per cent. only £3,000 is written off plant and machinery against £10,000 and £2,000 or £1,000 less is added to reserve leaving £1,080 to be carried out. Property account, including buildings, plant, &c., has been reduced by the substantial sum of £15,564 to £88,572 while the reserve will now come to £10,000, and in other ways the position shows some improvement. The overdraft at the bank is £10,500 down at £2,701 and sundry creditors come to £4,173 or £4,044 less. Against these nitrate sold but not shipped amounts to £20,032 or a decrease of £25,085, but payments received on account are smaller leaving the item only

£13,606 lower on balance at £12,386. Other stocks and stores are also £7,691 lower at £6,529, but debtors and bills receivable have risen by £496 to £7,729 and cash is £10,701 up at £11,939.

PERTH ELECTRIC TRAMWAYS, LIMITED (WESTERN AUSTRALIA).

Business in the town served by this company suffered to some extent from the universal complaint of depression during the year ended December 31, and there was no exhibition to help to swell the earnings. Owing to these causes an increase of 10,953 in the car miles run was accompanied by reductions of 292,381 in the number of passengers carried and 0.80d. in the receipts per car mile. Total receipts were therefore £3,501 lower at £75,042, while expenses rose by £370 to £41,012, the proportion being 54.70 per cent. against 51.94, and after providing for London office charges, taxes, etc., the nett surplus amounted to £31,177 or £4,084 less. The balance brought in too, was considerably smaller at £790, giving a total of £14,446 compared with £20,415, but no charge is made to correspond to the £6,125 provided for extensions a year ago. So the directors, after putting £1,500 to reserve and £1,000 to cash reserve, against £2,500 to the latter fund, are able to repeat the dividend of 5 per cent. and to raise the sum carried out by £156 to £946. Expenditure on the undertaking was small at £1,506, while £5,341 was deducted for sinking fund appropriations, leaving the total £3,835 down at £441,266 against which the reserves now stand at £27,339 and £14,859 of the debentures had been redeemed by the close of the year. A contract has been entered into to operate a tramway now being built on the Nedlands Park estate, at an agreed rate per mile, and one of the conditions is that this company will participate in the profits of the land scheme if that proves to be a success.

SOUTH STAFFORDSHIRE TRAMWAYS (LESSEE) CO.

The total revenue for 1907, including £1,907 from dividend on South Staffordshire Preference shares, amounted to £49,787 or an increase of £6,046. Expenditure took £45,563, and with £612 brought in, the nett profits were £4,836, of which debenture interest took £1,669 and £500 was put to renewals account. Of the £2,667 remaining £700 is transferred to sinking fund, and £1,500 is absorbed by the payment of a dividend at the rate of 6 per cent. per annum on the preference shares for the six months ended January 15, 1905, leaving £467 to be carried forward. Expenditure on the reconstruction of the tramways in Tipton, Darlaston, and Wednesbury was £34,089, of which £18,392 has been recovered from the South Staffordshire Tramways Company, in accordance with the agreement. The Birmingham and Midland Tramways, Limited, advanced on loan against security from time to time during the year a total amount of £32,000, which was expended in payment of the balance on reconstruction, in repaying the loan of £9,000 to the South Staffordshire Company, and reducing the bank overdraft and sundry creditors by £11,345. Capital outlay, less £20,000 repayable by the South Staffordshire Company, now amounts to £161,919 and £81,647 has been paid for preference shares and ordinary stock of the South Staffordshire Company, and against these the renewals fund of £3,887 and depreciation account of £3,387 look insignificant. As the issued share and debenture capital is only £178,537, the company is relying pretty heavily on credit, and owes £55,450 to the Birmingham and Midland Tramways, while sundry creditors come to £8,380 against £4,659 due by debtors. Of cash in hand it does not possess a penny piece.

CAPE TOWN CONSOLIDATED TRAMWAYS AND LAND COMPANY.

This forlorn concern still has a certain amount of assets left in bankers' acceptances £36,914, but beyond that and the paltry cash balance of £178 there is practically nothing. The profit and loss account for the year and a-half ending December 31, 1907, consists of interest £1,359 and transfer fees £53, making £1,412 in receipts, and an expenditure of £2,123, showing a loss of £712, or £73 less than the directors' fees. At this rate, of course, that is, as the report states, by conserving the estates at the lowest possible expenditure, the directors will be able to draw fees for some years to come. Meanwhile the prospects of the development of the estates and traffic on the tramways grow more exceedingly remote as Cape Town ceases to be the door to industrial South Africa. The paper asset of £727,299 representing the cost with advances of the whole share capitals of the outrageous Camps Bay Tramway, the Cape Marine Suburbs and the Oranjesicht Estate is probably mortgaged to its utmost value in £450,000 first charge mortgage debentures. So that when after 1910, up till which date the interest is payable out of profits, the mortgagees become owners, there will not be much to divide unless another reconstruction can be bluffed through. Floating liabilities amount to £16,419, of which £15,345 is owing to the Oranjesicht Estates. The report ingenuously states that the Estate companies and Camps Bay Tramway have declared no dividends since the reconstruction of this company.

CALCUTTA ELECTRIC SUPPLY CO., LIMITED.

The work of extending this company's operations goes steadily on, and during the year ended December 31 another 661 houses were added to its system, with the result that sales increased by 909,503 units to 5,487,883 units. Receipts from all sources amounted to £103,360 or £14,118 more, while expenses, including £1,198 in connection with the transfer of the management in Calcutta from the managing agents to the company's own staff, rose by £7,019 to £46,085. Nett profits were consequently £7,099 better at £57,275, and with £4,230 brought forward gave a disposable surplus of £61,506 compared with £54,535, out of which the directors transfer an extra £5,000 at £17,000 to depreciation and renewals account, and in order to do so they cut down the dividend by ½ to 8 per cent., leaving £5,305 to be carried to the new account. The larger contribution to depreciation fund was rendered necessary because the company is engaged in the renewal of its mains, having spent £19,016 last year on this work, and the fund, after adding £1,371 for interest, will now stand at £44,602, of which £35,147 is represented by investments. At the same time the company is spending pretty freely on capital account, the outlay for the twelve months amounting to £59,994, of which £30,804 was on mains and £18,568 on machinery and tools. The total expenditure to date therefore is £604,348, and even after taking into account the £84,592 from balance of share premiums there is a debit of £19,756, exclusive of the £31,138 for stores on hand. Part of this has been met by a loan of £11,590 from the bankers, but sundry creditors are heavy at £22,291 against £12,132 to come in from debtors, and cash at £8,997 is far from sufficient to pay the final dividend now declared. Since the closing of the books, however, the company has issued 20,000 5 per cent. preference shares of £5 each, and the help thus obtained will have put its finances straight and given it ample funds for further expansion.

CITY OF LONDON REAL PROPERTY CO., LIMITED.

Nett receipts from rents, etc., for the 12 months ended April 13 amounted to £142,849 or an increase of £2,128, but debenture and mortgage interest required £1,950 more at £37,397, and interest on reserve fund rose by £600, and after providing £7,558 for sinking fund and paying directors' and auditors' fees, the surplus was £405 down at £83,239. Of this only £1,800 or £5,600 less is transferred to reserve, but an extra £10,000 at £15,000 is put to suspense account for improvements on certain of the properties and £415 is added to insurance reserve. Then the shareholders again receive dividends aggregating 10 per cent. for the year, leaving £380 less at £29,475 to be carried forward. Additions to property amounted to £118,769, the directors having purchased the freeholds of Nos. 103 and 104, Fenchurch Street and of the portion of Dashwood House formerly held on lease from the Metropolitan Railway Surplus Lands Committee, as well as Nos. 84 to 87, Gracechurch Street, which are part freehold and part leasehold. Deducting £3,566 transferred from sinking fund on account of Dashwood House and £700 received for damage to lights, New Broad Street, the property stands in the balance-sheet at £2,416,583 or £114,503 more against which the reserve comes to £455,000, the sinking fund to £93,482, and the insurance fund to £4,500. Altogether these accumulations represent nearly 23 per cent. of the capital outlay, while the company also has £11,968 of the suspense account provided out of revenue for improvements still in hand, so that the position is really sound. Mortgages have been reduced by £5,000 to £457,100, but the purchase of the properties noted above has evidently been financed by the company's bankers, as deposits and loans are up to £114,617. A scheme for a rearrangement of the capital however has been approved by the shareholders, but has not yet been sanctioned, as the directors, acting upon the advice of counsel, have decided to avail themselves of the provisions of the new Companies Act which comes into operation on July 1. Under the scheme a call will be made some time early in August, and this should put the company's affairs in good order. Sundry creditors are slightly down at £8,199, while debtors have been reduced by £5,224 to £18,260, and cash has dropped by £3,579 to £12,830, but there is £27,000 out on loan.

TRUST AND LOAN COMPANY OF CANADA.

Business with this old and well-managed company was better than ever during the half-year ended March 31, and the revenue from interest, &c., improved by no less than £16,853 to £68,149 compared with gains of £5,328 and £5,548 in the corresponding periods of the two previous years. Against this debenture interest rose by £7,557 to £29,943 and other outgoings were a trifle heavier, but the nett balance was still £8,963 up at £26,444 and with £24,971 brought forward gave a total to be dealt with of £51,415 or £10,070 more. A dividend at the rate of 6 per cent. per annum having been paid, an extra £4,482 at £7,972 representing half the excess profits is put to reserve in accordance with the company's charter, and the directors evidently fear that the present prosperity cannot continue as they set aside £20,000 to form a special reserve. This done the bonus of 1 per cent. for the six months is repeated making a total distribution for the year of 8 per cent. and £9,443 or £14,412 less is carried forward. During the half-year the reserve fund was credited with £2,778 for nett increase in the value of investments held in England and £89 was charged against it for loss on securities realised in Canada. The total fund now stands at £218,763 or an increase of £20,008 compared with a year ago, while the special securities in which most of it is invested have risen by £12,467 to £169,950. Investments in Canada, including $48,806 more at $263,336 due from sundry debtors are £334,426 up at £1,955,070, but cash has been reduced by £56,683 to £32,189. Liabilities to sundry creditors are insignificant at £7,235.

ARGENTINE LAND AND INVESTMENT CO., LIMITED.

Receipts from land sales during the year ended December 31, after deducting £8,696 credited to capital, were £2,347 down at £19,357, the decrease being ascribed to the comparative failure of the 1906-7 harvest and consequent deficiency in available funds. Including instalments matured the income under this head was only £28 smaller at £25,912, while rents gave

£2,356 more, owing chiefly to the larger collections in kind from the colonists at Las Varas and Zuviria Colony, and colonists' interest increased by £554. Nothing however was received from sales of foreclosed property compared with £5,312 a year ago, and the income from all sources was consequently £99 down at £45,912. Expenses at the same time were £1,860 heavier at £16,108, leaving a nett income of £29,804 compared with £31,763. With £1,253 brought forward and £77 from dividend on income debenture stock purchased the disposable surplus amounted to £31,135, and after providing for debenture interest, preference dividend, and interest on the income stock, the ordinary shareholders again receive a dividend of 5 per cent. A year ago £1,500 was appropriated to redeem income stock, of which £2,042 was purchased, but there is nothing to spare for that purpose on the present occasion and the balance carried out is reduced by £196 to £1,057. During the year nine new mortgage loans were placed against one paid-off, and the amount outstanding for principal has increased by £49,226 to £133,767, represented by 24 loans. Unsold lands of the original concession are valued at £167,000, land instalments unmatured at £67,850, foreclosed mortgage properties at £9,068 and the two estancias at £17,645. Other assets consist of colonists' balances outstanding £23,454, sundry debtors £5,814, investments £9,904, bills receivable £7,994, and cash £10,165 against which there are liabilities of instalments on land sales unmatured £40,780, and creditors and bills payable £5,811.

INDIA GENERAL NAVIGATION AND RAILWAY CO., LIMITED.

The past year opened well for the usual trade and there was also a heavy upward traffic in foodstuffs for Eastern Bengal, so that by the end of October the earnings were well ahead of the previous year. Unfortunately most of the increase in receipts was lost during the last two months owing to a serious falling off in jute shipments, but in spite of that the nett income from all sources was Rs. 1,48,980 better at Rs. 20,52,791. Converted into sterling this gave £136,853 or £9,932 more, of which £2,158 was due to the nett earnings of the Mymensingh-Jagannathganj Railway, and after providing for home charges an extra £3,445 at £65,933 for depreciation, the nett profit amounted to £60,909 compared with £58,205. Adding £10,828 brought forward the disposable total was £71,737 or an improvement of £6,123, out of which the directors again pay a dividend of 5 per cent. on the ordinary shares and transfer £15,000 to reserve against £10,000 to that fund and £8,000 written off goodwill a year ago. The sum carried out is then increased by £9,124 to £19,952, apparently because the directors fear that the current year's working may be adversely affected by the unfavourable climatic conditions, dull trade generally, and the enhanced price of coal.

BRAMPTON BREWERY CO., LIMITED.

The expansion of this company's business during the twelve months ended March 31 did not proceed at quite such a rapid rate as in the previous year, but the improvement in profits was nevertheless the fairly satisfactory one of £1,700 at £39,914. Outgoings were only a trifle heavier, and with £7,801 or £150 more brought forward the nett profits were £1,664 up at £36,554, out of which the directors again pay a dividend of 12½ per cent. and transfer another £7,500 to reserve. Directors' additional remuneration then takes £674, but nothing is written off this time compared with £1,000 allowed for the extension of the bottling department a year ago, so the sum carried out is raised by £2,579 to £10,380. A further £3,719 was spent on freehold and copyhold properties, making the total under this head £424,858, while leasehold properties stand at £16,265 and plant and machinery at £10,209. Against this the share and debenture capital all told only comes to £350,000, and in addition to £24,533 due on mortgage the company owes £3,659 for balance of purchase price of the new properties, so that the reserve even yet requires a good deal of strengthening before the position can be regarded as fairly sound. Sundry creditors and bills payable amount to £18,450 against £14,555 to come in from debtors, and rents and stocks are small at £9,938, while the cash balance of £7,178 is barely sufficient to meet the final dividend just declared on the ordinary shares.

BROXBURN OIL CO., LIMITED.

Manufacturing costs, the directors say, were seriously increased by the rises in wages given to the miners and by the enhanced price of coals, but the additional expenditure was to a large extent balanced by better prices secured for some of the refined products. Nett profits for the year ended April 1 rose by about £1,100 to £77,171, to which was added £2,505 brought forward, giving an available total of £79,676, and the directors consider the result sufficiently good to justify them in raising the dividend from 15 to 17½ per cent. This policy, however, seems somewhat short-sighted, as it means that after writing off £13,643 or 5 per cent. on the nett balance of capital expenditure as at April 3, 1907, they are only able to put £10,718 to credit of retort account and £10,000 to reserve against over £22,000 written off retorts and £3,200 off Consols held a year ago, with a slight increase to £2,611 in the sum carried forward. Retort account has now been wiped out, but capital expenditure exceeded the depreciation allowance by £3,159, leaving the total at £276,020, and a considerable further outlay will be required in connection with a new bench of retorts and the extension of the electrical plant at Roman Camp works. Reserve now totals £60,430, of which £46,650 is invested in Consols, but the company has had to resort to borrowing, and has raised £10,000 on loans. Creditors, too, are heavy at £8,128 against £48,134 to come in from debtors; stocks are valued at £73,438, and cash and bills amount to £29,381, but £40,956 is required for the preference and ordinary dividends now declared, and it looks as if the outlay foreshadowed in the report means an increase in the capital in the near future.

IMPERIAL TEA CO., LIMITED.

Although the crop from this company's estates for the year ended December 31 fell short of the previous season's by 179,640 lbs. at 4,090,605 lbs., some compensation was found in the improved prices obtained of 6.56 annas in Calcutta and 7.77d. in London. After providing £2,091 for managers' commission the nett profits, including £3,177 brought in, were £6,762 up at £46,046, of which an extra £1,000 at £2,000 is written off debenture issue expenses, and another £2,000 is applied to depreciation. Preference dividend then takes £6,000 and the dividend of 6 per cent. on the ordinary shares is repeated, leaving £7,560 or £4,309 more to be carried forward. Considering that the estates are valued at £596,447 and that the company in the eleven years of its existence has not managed to accumulate a reserve of any kind, the depreciation allowance of £2,000 seems totally inadequate. The debenture debt has been increased by £5,500 to £93,500, but liabilities on bills payable against the security of £22,800 debentures are £6,300 down at £19,000. Bills payable against crop are also lower at £15,250, and sundry creditors have been reduced by £3,124 to £12,750, but the overdraft at the bankers is £3,789 up at £9,000. On the other hand, stocks are £2,040 smaller at £58,677, and cash has dropped a trifle to £5,552. Payments on account of the current season come to £7,813, and advances at gardens, less reserve, seem heavy at £3,486.

FULLER'S EARTH UNION, LIMITED.

The growth in this company's business was brought to an end in September last and since then sales have fallen off to an extent which resulted in the nett profits for the twelve months ended March 31 showing a decrease of £1,670 at £7,433. Balance brought in was also smaller at £264, making a total of £7,697 against £9,680, so the dividend on the ordinary shares is reduced by 1 per cent. to 10, and after paying directors' fees of £1,000 the balance remaining is only £190. A year ago £1,000 was put to reserve and £500 was divided between the ordinary and founders' shares, giving the latter a dividend of 200 per cent., but there is no such good fortune for them on this occasion. Property account has been reduced by the usual £1,000 for depreciation, and £194 for two acres of land sold to the Great Western Railway, leaving the item at £89,690. Investments in Consols remain at £6,996, but land has been increased on balance by £5,373 through purchases which have been financed partly by a mortgage for £2,798, partly by a bank loan of £2,000, and partly by a reduction of £1,840 to £1,100 in cash balances. Copyhold extension works now stand at £4,241 or £2,082 more, while the rest of the kiln alterations at these works has been met out of reserve, reducing that fund to £3,042. Creditors come to £1,272 or £471 less, while debtors are £1,365 down at £3,733.

MINOR NOTICES OF COMPANY REPORTS.

Bloch and Behr.—This company carries on a wholesale clothing business in Paris and last year earned a gross profit of £11,351. Deducting London office expenses, administration charges, and adding £2,153 brought forward, the nett balance was £10,244, and after meeting preference dividend the ordinary shares get 5 per cent., leaving £3,156 to be carried to the new account. Share capital is £128,608, of which £76,790 was paid for purchase of business, leases and goodwill, trade fixtures are valued at £3,392 and stock at £42,246, while £1,772 has been paid on account of land bought for new premises. Debtors at £25,509 exceed creditors by £9,562, but cash is poor at £1,450.

Britannic Assurance Co., Limited.—This was formerly known as the British Workmen's and General. Last year its total income was £1,157,336 and its total payments £940,980. This left a surplus of £216,356, out of which £1,631 was written off leaseholds, furniture, &c., and the balance of £214,725 added to the reserve fund. The business of the ordinary life branch was conducted at a cost of 15.3 per cent. of the premium income and that of the industrial branch at a cost of 41.17 per cent. The premium income of the ordinary branch was £191,070 and that of the industrial branch £883,919.

Catalinas Warehouse and Mole Company.—Gross receipts for the year ended December 31 rose by £12,235 to £103,040, but the company, in common with other Argentine undertakings, had to meet an increase in wages, and was also handicapped by the condition of its permanent way and rolling-stock. Working expenses were therefore £18,350 heavier at £81,708, leaving the nett revenue £6,115 down at £53,868. Against this £9,000 or £938 less is charged for partial replacement of wagons, and after providing for interest and sinking fund on debentures and income-tax £20,234 or £3,323 less was left. Interest receipts, however, were larger, and with £1,562 brought forward the available total came to £20,005 or only £414 below last year's figure, and the directors are consequently able to repeat the dividend of 4 per cent. on the preference shares, carrying forward £1,438. Sales of surplus lands during the year were small, and produced no more than £1,638 compared with £13,680 in 1906. An agreement on satisfactory terms has been entered into with the Buenos Ayres Great Southern Railway for the transit of its trains through this company's property, and that company has undertaken for its own account to relay the line to be used for this purpose with heavier rails.

Confederation Life Association.—This is a Canadian company whose head office is at Toronto and a recent arrival here

Its premium income in 1907 was £324,247 and its interest income £126,273. Claims absorbed £182,899, including £15,863 of cash profits distributed to policy-holders, and commission and expenses took together about £95,000 or 29.32 per cent. of the premium income. Claims, it may be added, represented 56.48 per cent. of the premium income.

Consolidated Trust, Limited.—This company's financial year ends on April 15, and the accounts for the past year show a gross income of £57,859. After adding £3,809 brought forward, £35,253 is left when the debenture stock interest and all expenses have been met. The board therefore pays the full dividends on the first and second preferred stocks and gives 5 per cent. to the deferred stock for the year, besides transferring £5,000 to depreciation, leaving £4,318 to go to the new year. In February last £145,000 in 4½ per cent. debenture stock was issued, of which £100,000 was subscribed before the accounts were closed, and the balance has since been disposed of at par. The gross nett income by interest seems to have been £1,944 up at £52,931, and the trust earned £4,890 as commission and trustee fees, the gross revenue being altogether £6,872 higher. On the other hand, interest charges rose by £1,757 and various other items showed increase, so that the gain in the free revenue was only £1,296.

D. Watney and Son, Limited.—In its year to March 31 last this company gathered nett profit of £5,774, made up to £7,198 by £1,424 brought forward. The ordinary shares get their dividend made up to 4 per cent. for the year and £800 is placed to reserve, leaving £1,448 to go forward. The gross income from all sources was £31,861. The company owes £16,747 to creditors, and debtors of various kinds owe it £10,130.

Garland and Roger.—A minimum of information is given in this company's balance-sheet for the year ended March 31, which contains as one item book debts, cash, buildings, machinery, horses, working plant, office furniture, &c., valued at £29,425. Other assets consist of stocks £79,689 and goodwill £19,177, while on the other hand the liabilities are capital £80,000, reserve against preference dividend £3,000, and sundry creditors £44,093. Profits amounted to £4,123 and £137 was brought in, making a total of £4,260, of which managing director's and secretary's salaries took £1,050—surely a heavy proportion. Preference dividend then absorbs £2,000, and the ordinary shares receive 2½ per cent. for the year, leaving £210 to be carried forward.

Gartsides (Brookside Brewery), Limited.—This company's board distributes a dividend at the rate of 6 per cent. per annum for the second half of its year ended December 31 last, and professes to have little fear of the Licensing Bill. It may never become law, they hint. Profits were £64,650, and out of this £4,340 was put aside to depreciation and £2,312 paid as licence compensation charge for the year. After meeting the debenture interest and the preference and ordinary dividends, £1,254 will be left to carry forward, but then £3,500 has been written off the expenses of issuing the 1900 debenture stock, and £8,000 carried to the reserve fund. Altogether the company's debts amount to about £625,000 against a share capital of £325,000 paid up, and the property is valued at £902,578, against which £2,067 was last year written off by way of depreciation. The cash amounted to barely £137, and there is still £3,500 due on account of the 1900 debenture issue—not too cheerful.

Gordon and Blair.—This Glasgow business of brewers and wine merchants made a profit for the year ended March 31 of £9,267, which was increased to £10,959 by the balance brought in. Managing directors' salaries took £1,050, and after meeting preference dividend and paying income-tax, the surplus was £5,923, of which £750 is written off for depreciation, another £750 goes to special reserve and the ordinary shares receive 4 per cent., leaving £1,573 to be carried forward. Against property valued at £51,546 the reserve will now amount to £7,500, but only £2,354 is separately invested. Stocks seem very heavy for the business done at £99,033, creditors at £55,297 exceed debtors by £458, and cash amounts to £1,554.

Jalinga Tea Company.—For the third year in succession this company's crop has fallen considerably not only below the estimated quantity, but also below the yield of the preceding season. The decrease in 1907 amounted to 54,885 lbs. at 372,918 lbs., but the average price was 1.12d. better and gross profits improved by £297 to £9,992. Including £172 or £135 less brought in and £5 from difference in exchange the available total was £153 up at £4,185, and after repeating the dividend of 10 per cent. the sum carried out is raised to £1,817. A reduction of £1,088 to £2,497 in sundry creditors is accompanied by decreases of £762 to £4,880 in stocks and £246 to £347 in cash, while debtors are slightly higher at £1,688. Estates account stand at the old figure of £21,786, and depreciation and reserve funds are conspicuous by their absence.

James Hinks and Son.—Nett profits of this lamp manufacturing business for the twelve months ended March 31 amounted to £5,568, and with £3,876 brought in gave a disposable total of £9,444, out of which £500 is put to the sinking fund for redemption of buildings and plant, &c., and a dividend of 10 per cent. is paid, leaving £3,866 to be carried forward. Goodwill and patents account was written off in 1903, when a return of 5s. per share was made to the shareholders, while a sinking fund of £16,935 has been accumulated against the item of capital outlay and stock-in-trade of £52,126, in addition to a general and bad debt reserve of £7,250. The company's position appears to be a very comfortable one, as creditors are light at £3,095 against £8,873 due by sundry debtors; cash and bills amount to £8,068, and investments are valued at £15,507.

Lunuva Ceylon and Rubber Estates.—The output of tea for the year ended December 31 was 1,265,398 lbs., on which the nett profits, including £128 from interest, amounted to £13,253. London office expenses and other charges left £11,154, of which £1,306 is paid as interest on purchase money, £700 is put to debenture redemption reserve, and £654 is written off preliminary expenses, these three items together representing the estimated profit from January 1 to the date of incorporation of the company, and out of the balance a dividend of 9 per cent. is paid. Capital expenditure amounted to £4,094 on new lands, clearings, &c., and £6,789 on buildings, plant, and machinery, making these items £92,932 and £28,636 respectively, while discount on the debenture issue still figures as an asset to the extent of £1,818. Creditors at £5,906 exceed debtors by £5,179, while stocks amount to no more than £2,785, and cash at £2,164 is poor, considering that £4,463 is required for the final instalment of the dividend.

Mayfield (Dimbula) Tea Company of Ceylon.—The yield of tea for 1907 amounted to 597,709 lbs. or an increase of 119,355 lbs., and the average price improved by 0.28d. to 7.74d., but the cardamom crop was 2,328 lbs. smaller at 5,236 lbs., while the price dropped by 2d. to 1s. 4d. Receipts from all sources were £17,253, of which £4,383 remained as nett profit, and with £702 brought forward gave a total of £5,085. Preference dividends having been paid, £500 is put to the extension reserve and the ordinary shares receive 6 per cent., leaving £766 to be carried out. Block account stands at £63,418 or about £51 per acre, and against this the only reserve consists of the £500 now set aside for extensions, although the company has been in existence for eleven years. Sundry creditors and bills payable come to £6,771 against stocks £4,538 and debtors £724. Cash totals £3,239, but of this £1,839 is required for the dividend, so that unless we count the coast advances of £1,608 as a readily realisable asset the margin is nothing to boast of.

Meters.—A considerable shrinkage of £5,628 to £25,920 is shown in the gross profits for the year ended March 31, and nett profits, including £2,884 or £486 more brought forward were £4,740 down at £17,987. The directors consequently add nothing to reserve compared with £3,000 put to that fund a year ago, and even then have to reduce the dividend from 6 per cent. to 5 per cent. leaving a slightly smaller balance of £3,059 to be carried forward. Nothing has yet been written off patents and goodwill, but property account is £2,033 down at £400,956 and the reserve is fairly good at £55,000, especially as it is invested in good-class securities, having a book value of £55,558 and a market value of £54,447. Stocks have been increased by £5,407 and seem heavy at £49,308, sundry debtors owe £22,938 or £754 less and cash is £252 up at £10,342, while liabilities to sundry creditors are moderate enough at £5,828.

Montgomerie and Company.—Gross profits for the year ended April 30 amounted to £20,026, and after meeting all charges, including expenses in connection with the company's action against the Haddington Town Council for damage to the Bermaline Mills property, the nett profits were £7,709. Adding £2,177 brought forward the disposable total was £9,886, out of which £548 is written off for depreciation, £871 is transferred to reserve, being a half-year's premium on a policy for £30,000 on the life of the managing director, and £1,200 is set aside to meet the Haddington Council's costs in the action. Debenture interest and preference dividend having been met, a distribution of 6 per cent. is made on the ordinary shares and £2,465 is carried forward. Goodwill, trade marks, property, &c., given as one item, are valued at £69,213, and against this the reserve will now stand at £6,871, but the company is steadily redeeming its debentures and paid off £2,000 last year, leaving £1,000 outstanding. Trading balances are very largely in favour of the company, only £2,087 being due to creditors, while debtors owe £19,419; stocks stand at £11,508, and cash is fairly good at £3,499.

New Zealand Insurance Co., Limited.—For the year ended November 30, 1907, this company's premium income was £616,417, and it paid £406,578 in fire, marine, and accident losses, while commissions and expenses took £133,830. Dividends amounting to 4s. per share have been paid for the year, and the balance left to carry forward is £21,674.

Ouvah Ceylon Estates.—A considerable increase in the yield of tea per acre brought the crop for 1907 up to 1,408,456 lbs. or 115,436 lbs. more, and although the price dropped slightly to 8.02d. the cost was also reduced at 27.16 cents. Produce sold and stocks on hand yielded £50,541, and after meeting all charges the nett profits, including £332 brought in, were £12,464. Out of this £1,608 is written off cost of the Ravenswood Estate, purchased during the year, and a dividend of 10 per cent. per annum is paid both on the old shares and on the new issue, leaving £530 to be carried forward. The capital of the company was increased by the creation of 2,500 £10 shares, of which 1,500 have been issued and £5 paid up thereon. Block account, including £2,000 for the new estate and £8,197 for the Talpitigalla Estate stands at £110,197, and against this the reserve only comes to £4,000. Creditors and bills payable amount to £15,623, while debtors owe £3,41, produce on hand is valued at £11,692, and cash, including £9,000 on deposit, is £10,150.

Ragalla Tea Estates.—Not only was the crop for 1907 30,924 lbs. larger at 830,821 lbs., but the nett average price realised rose by 0.39d. to 7.33d. per lb. The total revenue from all sources came to £25,733, and after meeting all charges, transferring £1,000 to reserve and writing off £400 for depreciation, £5,529 was left. Adding £170 brought in the disposable total was £5,699, out of which a dividend of 8 per cent. is paid

on the ordinary shares and £470 is carried forward. The depreciation allowance seems somewhat derisory seeing that it goes against a capital outlay of £108,899, and the reserve fund of £3,000, even if it were separately invested, would be far from adequate. Creditors amount to £5,479 and interest and dividends accrued to £2,909 against stocks £4,336, and cash, including £1,516 in the hands of the London agents, £4,712.

Retter's Telegram Company.—Including £108 or £27 more brought forward, the revenue for 1907 was £15,187 up at £205,572, but telegrams and agencies cost £6,541 more at £138,763 and current expenses took an extra £1,302 at £47,566. Of the balance £5,000 was put to reserve and £6,000 to telegraphic remittance reserve against £2,000 to each account a year ago, and after transferring £2,559 to officers' life insurance and superannuation fund and £800 to pensions reserve the usual dividend of 5 per cent. is paid and £148 or £40 more is carried forward. The general reserve now stands at £50,000 against goodwill £65,000, and there is in addition a rebuilding reserve of £10,103 to go against freeholds valued at £45,899, while the telegraphic remittance reserve and pensions fund come to £23,000 and £10,050 respectively. Creditors have risen by £10,501 to £66,433, while debtors are £1,648 down at £27,690, but cash is £24,448 higher at £107,432.

S. Bottomley and Bros.—Trading profits of this Bradford milling business amounted to £9,601 for the year ended March 31, giving with £4,145 brought in a gross credit of £13,747. After providing for debenture interest and preference dividend, £2,500 is applied to depreciation and 3 per cent. is paid on the ordinary shares compared with 5 per cent. for 1906, leaving only £897 to go forward. Property, goodwill included, is valued at £166,421. Stock is heavy considering the profits at £97,981 and cash comes to £5,124. Trade balances are slightly adverse, £19,574 against £22,616. There is a reserve fund of £30,000 sunk in the business.

Scottish Australian Investment Co., Limited.—The half-year ended 1907 was not so prosperous for this old company as it might have been, the season having been capricious, with a good deal of drought, which led to the loss of sheep, lambs and dairy stock, while the cost of management was also increased. However, profits amounted to £25,844, made up to £36,504 by the balance of £10,660 brought forward, and out of this the interest on the 6 per cent. guaranteed preference stock has been met, while on July 1 next the arrears of interest on the 5 per cent. guaranteed preference stock for one year to June 30, 1904, will be paid, leaving £4,106 to go forward. The manager writes that he anticipates with some confidence a better exhibition at June 30 next, only the season continues very dry on the company's Riverina properties.

Sharpness New Docks and Gloucester and Birmingham Navigation Co.—Revenue for the half-year ended March 25 showed a decrease of £1,443, increases in grain imports, wood goods, and sundries being offset by a decrease in tonnage receipts of £1,464. There was a saving in expenditure of £353, but increases in taxes and rentcharges and workmen's insurance took £300, while debenture interest required £133 more, so that £185 as against £1,537 is carried to balance-sheet, and the directors regret in consequence that they cannot pay the half-year's dividend on preference stock A. On capital account £1,341 has been expended, raising the debit to £5,013. Contracts for £6,316 have been entered into for renewing the coal tip at Sharpness, and the work should be completed in July.

South African Lighting Association.—The directors state that the depression in trade and competition by electric light referred to in their last two reports continued throughout 1907, but that as a set off there was a satisfactory increase in the number of new consumers. Profits for the year were £9,325 and with £2,613 brought forward gave £11,938 to be dealt with, of which £1,420 was absorbed by debenture interest. Income-tax, bank discount, &c., took another £757, and after paying dividends aggregating 10 per cent. £1,761 is carried forward. Capital expenditure during the year amounted to £6,005, making a total of £112,823, while meters, stoves, &c., on hire stand at £17,970, stocks at £13,888, and new services at Port Elizabeth come to £787. Against these there are a reserve of £28,689, partly invested in good-class securities valued at £11,000, a coal reserve suspense account of £1,500, and a share premium account of £8,138. Floating liabilities, including a bank loan of £2,500, come to £8,169, while debtors owe £5,103 and bills receivable and cash come to £1,968. The company is therefore rather short of liquid assets, but steps have been taken to remedy this state of affairs, and a further 1,000 £10 shares were offered to the proprietors in February last to provide for extensions of mains and new plant, the acquisition of some further land, and for further working capital.

South African Territories, Limited.—Owing to the cessation of hostilities—officially so declared at any rate—the accounts which deal with the year up to June 30, 1907, show a diminution in trading, and purchases declined by £67,664 to £89,002, after allowing for stock, which shows an increase of £1,795. Sundry receipts, however, showed a small increase of £137 at £909, so that the nett profit is £12,123 or £8,971 less. Of this, £2,721 is the share of the South-West Africa Company under the joint arrangement, which, owing to the improved financial position, is now amicably terminated. The sum of £9,403 as against £12,128 is carried to the balance-sheet, converting the debit of £3,401 into a credit of £6,002. The actual profit on trading amounted to £24,700 against £32,996, and expenses were £700 higher at £13,487, consequent on the expense of visits of a director to Africa. The balance-sheet shows further improvement in nearly every item. Property account is reduced by £8,260 for farms sold to £431,155. Cash is no less than £11,521 better at £28,369. Debtors are reduced by £26,950 to £10,552, while creditors have been paid off £24,257 to £9,993. Instalments of purchase money of farms sold is £4,105 higher at £5,571 and buildings, stock and stores are valued at £12,350. The company owns in all about 2,700,000 acres of freehold land, out of which some 500,000 acres have been sold and negotiations are in progress for further sales.

Southampton Gas Light and Coke Co.—Revenue account for the half-year ended December 31 shows receipts from all sources £68,034, and expenditure £51,991, leaving a profit of £16,043. Deducting £2,304 debenture interest and adding £3,175 brought in, £16,071 is available. The maximum dividends of 5 per cent. are again paid and £3,918 is carried forward. Coals, oil, coke, tar, &c., in stock total £13,705 and £33,160 is due to the company for gas and meter rentals, while £13,395 is owing to sundry creditors and £2,051 to bankers. Reserve aggregates £48,841. Capital expenditure amounted to £7,176, leaving a credit to capital account of £6,607. Consumption increased 23¾ million cubic feet compared with the corresponding period in 1906, and the demand for gas appliances generally showed considerable improvement.

Spring Valley Ceylon Estates.—The 1907 crop of tea was only some 434 lbs. larger than that of the previous year at 986,632, and the cost was 0.61 cents higher at 26.31 cents, while the average price rose by 0.12d. to 8.21d. Gross receipts, including value of stock on hand on December 31, were £34,120, of which £8,095 was retained as nett profit, and with £60 brought in gave a total of £8,155 to be dealt with. The directors are anxious to maintain the dividend on the ordinary shares at 8 per cent., so all they can spare for the reserve is a paltry £500, but they carry forward a much larger balance of £355. Reserve now amounts to no more than £2,500 against a block account of £95,000, but it is apparently held in cash. Floating liabilities total £9,078, while debtors owe £1,990, but produce on hand is valued at £7,683, and cash is good at £6,645.

Sungei Choh Rubber Company.—Expenditure on the development of the property for the five months ended December 31 amounted to £3,079, for which sum the planted area was brought up to 828 acres and a commencement was made with clearing a further 169 acres to be planted during the current year. Development has been less rapid than was anticipated, partly because the weeding of some portions of the land proved troublesome, and partly because of sickness amongst the coolies, but the directors hope to be able to clear another 200 to 250 acres in the present season. The total outlay on the property, after deducting interest and transfer fees received, amounts to £28,660 and, of course, no revenue has yet been received from rubber, but 2,000 trees are now being tapped. Other assets consist of coolie advances £386 and cash £4,891, against which £1,212 is due to sundry creditors.

Tara Tea Company.—The crop for 1907 was 336,421 lbs. or 16,219 lbs. more than for the previous season, but the average price dropped from 1s. 1⅜d. to 11⅞d. and the total revenue was £837 down at £16,759. At the same time expenses were £1,123 heavier at £14,490, the loss on rice having increased by Rs. 8,034 to Rs. 21,198, while new cultivation charged to revenue took Rs. 7,561 or Rs. 1,415 more, and the nett profits were consequently £1,960 smaller at £2,269. Balance brought forward, however, was £3,886 against £1,757, making the disposable total £168 up at £6,154, and the directors repeat the dividend of 7½ per cent. carrying £3,904 to the new account. Estates account was increased by £1,877 to £34,682, and although this is the twelfth year of the company, no attempt has yet been made to accumulate a reserve. Floating liabilities are £1,129 lower at £7,500, but, on the other hand, an increase of £2,094 to £8,452 in sundry debtors is accompanied by a drop of £3,794 to £730 in cash. We are glad, however, to note that recruiting advances have been substantially reduced at £907.

Wm. Roberts (Tipton), Limited.—Trading profits on the iron smelting business for the year ended March 31 maintained the previous year's advance, and amounted to £19,283, making with £2,421 brought in a total revenue credit of £21,705. Out of this, after providing for debenture interest, preference dividends, &c., £5,000 is placed to reserve, £2,500 written off goodwill, and a dividend of 10 per cent. and bonus of like amount paid on the ordinary shares, equivalent to last year's distribution, leaving the carry forward increased to £3,752. The balance-sheet, which is in every way exemplary, shows property at £64,368, and the amount is reported, after independent examination, to be fully represented. Plant and stores figure at £6,707 and stock of minerals and pig iron at £6,599. Debtors are £14,416 against creditors £11,022. Cash at bankers at £26,044. Goodwill, which has been systematically written down from £13,233, with the year's deduction will be no more than £2,500 and £6,375 is invested in Consols under market value. Reserve is now raised from £12,000 to £17,000, while the debenture debt has been reduced from £20,000 to £10,700. A spare furnace has been newly relined during the year, and is ready for blowing in. The vendor has vested in trustees 5,000 fully-paid ordinary shares for the benefit of the company.

Mexican Light and Power Company.—Gross earnings for April $476,886, increase $109,064; net earnings $342,415, increase $24,526, surplus $46,585, decrease $21,334. Ratio of expenses to receipts, 49¾ per cent. against 40¾.

COMPANY MEETINGS.

CALLENDER'S CABLE AND CONSTRUCTION.

The twelfth annual general meeting of Callender's Cable and Construction Company, Limited, was held on Thursday at Hamilton House, Thames Embankment, E.C., Mr. Henry Drake (the Chairman) presiding.

The Secretary (Mr. H. E. Harrison) having read the notice convening the meeting and the report of the auditors,

The Chairman said he regretted very much that the business of the company during the past year had again been prejudicially affected by the state of the metal market. Various causes, such as the prohibitive price of metal and the stringency of the Money Market, had rendered the operations of the company difficult and less remunerative than in previous years. The most pronounced factor in restricting business in heavy mains had been the abnormal price of copper which prevailed in the first eight months of last year, leading to the temporary abandonment of nearly all new enterprise in electrical supply, and to the curtailment of extensions of existing networks in every direction. This was not confined to the home trade, as diminished orders were observed in almost every area throughout the world in which the company carried on its business. The continuing downward trend of the market offered no inducement to consumers to undertake new work or to fill up their deplenished cable stocks. The recent return of copper to its average price came after the season was at an end, and it might, therefore, be said that practically the whole of the company's business during the past year consisted of extensions which were absolutely necessary in connection with electrical supply stations already in existence. The subsequent stringency in the Money Market had delayed that improvement in business which might otherwise have been expected, and had caused difficulties in other directions; one large firm with which the company had had dealings for some years past had been forced into liquidation. That business was in course of reorganisation, but, in order to provide against any possible loss, the directors had placed a sum of £10,000 to suspense account. This company's own business in Germany had been consolidated, and their own company had been registered under German laws, with its headquarters in Hamburg, and excellent results had already attended this step. During the year he regretted to say that the company had lost two members of the board—namely, Sir David Evans and Mr. W. O. Callender. The latter gentleman was the founder of the business and the originator of the process which had brought success and fortune to the company. By his passing away this country had lost one of the pioneers of the electrical lighting industry. The directors desired to put on record their appreciation of the great and invaluable services which he rendered to the cable-making industry, as well as to the company ever since its formation. Having dealt in detail with the various items in the balance-sheet, the Chairman pointed out that the available balance for distribution was £81,357, out of which the directors recommended the payment of a dividend at the rate of 10 per cent. per annum and a bonus of 5s. per share, and after placing £10,000 to suspense account they carried forward a balance of £45,107. He concluded by moving the adoption of the report and accounts.

Mr. John Varley seconded the motion.

Mr. T. O. Callender (managing director) then addressed the meeting. He said that the past year had been a good deal less satisfactory than had the two previous years. The most important reason for the falling off was the uncertainty which was felt in regard to the price of copper. As the shareholders were aware, in the early part of last year copper rose to £122 per ton, and seeing that the price was now something below £60, it would readily be seen that there had been plenty of opportunities for making losses by those who speculated in copper or in copper cables. So far as this company was concerned they had been exceedingly fortunate, but, on the other hand, the directors had been singularly careful. They had followed the market down, and when some little time ago they cleared the books in order to see how they stood after the fall, they found that they were only 6 tons short. Seeing that the company's transactions ran into thousands of tons, it was exceedingly satisfactory to find that in such a difficult and uncertain market they had come off so well. The result of this uncertainty as to the price of copper had led to the abandonment of all work that was not of the most pressing description. Whatever views the directors had, there was no doubt that there still prevailed a feeling of uncertainty among consumers of copper, with the result that they were not particularly anxious to cover themselves even at the low price of under £60 per ton. So long as they covered themselves it would not much matter to this company what the price of copper was, but the difficulty had been that the financial troubles which began in America had extended to other parts of the world, thereby rendering it almost impossible for their customers to obtain money to develop stations or start new enterprises. Knowing, however, as they did, what the requirements of the world were, and that the future of electric driving and lighting was assured, the board were not unduly worried as to the delay which had taken place in the placing of orders which they anticipated and which they still felt certain would come to them. The slackness had given them the opportunity of overhauling the machinery and in putting everything in first-class order so as to be ready to take advantage of the big demand which would shortly come. As to the future, he said that at the moment the outlook was somewhat as it was last year. No large contracts were being placed. Prices of necessity were lower owing to the lessened cost of metals, but in spite of that they were doing a fair business, their works being occupied to a very considerable extent. Although they were not so busy as they should like, still they were getting a fair share of all the business that was going. The directors did not anticipate that there would be any material improvement in trade this year. It was too much to hope that the conditions that had prevailed so long would suddenly alter, but he felt sure that it would not be long before the improvement which they looked for would come about and that the work waiting for execution, and which was at present hung up, would, to a very large extent, be placed in the hands of this company.

The motion was carried unanimously.

VAN DEN BERGHS.

The thirteenth ordinary general meeting of the preference and ordinary shareholders of Van den Berghs, Limited, was held on Monday at Salisbury House, London Wall, E.C., Lord Ebury (chairman) presiding.

The secretary (Mr. John Martin) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Anyone who has perused our report and the accounts for 1907 will have arrived at the conclusion, without my assistance, that the company has had a very disappointing year. Incidentally I may remark that, although from its commencement the prevailing features were not such as to afford the prospect of any brilliant results, fully half of it had expired before the markets took the calamitous turn which rendered the business of the company practically profitless, and the cup of misfortune was filled to the brim when to abnormally dear material abnormally dear money was added, and both were supplemented by the occurrence of an unfavourable rate of exchange, especially with the Continent, costing the company thousands of pounds in a direction which, as an almost invariable rule, has been a source of profit. Hence the figure at the top of the column on the face of the report denoting profit, before certain necessary deductions, which in 1904 was £247,000, in 1905 £219,000, and in 1906 £198,000, was for the past year no more than £92,000. For the first of the abovementioned years the dividend was 12 per cent., for the other two it was 16 per cent., and in each case a handsome balance out of the earnings of the individual year was carried forward, whereas now, with the object of paying a dividend of 8 per cent., we are reduced to the melancholy alternative of drawing heavily upon the surplus profits of previous years and consequently diminishing the company's by no means extravagant floating reserve. On the other hand, the company's resources have been strengthened by adding to its standing reserve £82,000 received as premium after payment of expenses upon the issue of 125,000 ordinary shares of £1 each, and as the authority you gave us to make that issue was the most important event in the annals of the company during the past year, I may perhaps be permitted to add something to the remarks which I offered when we were seeking that authority. Our managing directors made a courageous endeavour to carry on a business increased in volume by 50 per cent. since the year 1902 with no further addition to working capital than the paltry sum of £50,000, the balance of an issue of "B" preference shares authorised 10 years ago, since which the business has been quadrupled. No doubt they hoped that the advantageous market conditions which set in at the beginning of 1904, and were of long duration, would continue until the necessary capital could be provided out of undistributed profits. Unfortunately, their optimism was doomed to discomfiture; the price of raw material, which had begun to harden in 1906, went on rising in 1907, and it became a question between sacrificing some of that trade obtained at the price of so much contrivance and so much industry, or the acquisition of further resources to keep it intact and, at the same time, to maintain the company's products at the high level of excellence which has earned for them so wide a celebrity. Between two such alternatives there could be but one choice, and it is satisfactory to be able to add that the step which we took fully answered its purpose, for, although during the past year there was some retrocession from the high-water mark of general trade prosperity, the company's turnover all but equalled that of its immediate predecessor, which easily broke all previous records, but the result of postponing that step much beyond the moment when it might properly have been adopted was that the capital had to be obtained when very unfavourable conditions prevailed in the money market, and that we had to submit to somewhat onerous terms in order to place the success of the issue beyond question. We had, moreover, to make the issue under circumstances which, failing a change for the better, in the raw material market, rendered some initial disappointment probable on the part of those who took up the shares, and there was a change, but, as you will have gathered from what I have previously said, it was a change altogether in the wrong direction. Now, although I regret, from those points of view, that the step to which I have been referring was not taken earlier, there is a reverse side to the picture. If the fresh capital had been issued, say, in the summer of 1906, when our prosperity was very abundant and when it could have been much more easily obtained, the premium upon the issue would have been much higher and the disappointment when markets turned against us would have been correspondingly keener. That, notwithstanding the incidental drawbacks, it was wise and proper to make the issue when we

did I have not a shadow of doubt. As a director elected by preference shareholders, with a special mandate to safeguard their interests, it seems to me clear that the employment of this additional sum of money in fortifying their position must necessarily be conducive to those interests, but, as chairman and official representative of the company, that consideration alone would not have sufficed. My information led me to the conclusion that the increase of capital was essential in the interest of all classes, and I am glad to be able to add that there seems to be no present reason why the holders of it should have occasion to repent their bargain. Turning now to the debtor side of the balance-sheet, the nominal capital shows an increase of £125,000, while the issued capital falls short of the preceding total by £29,000, being the amount unpaid on the new issue on December 31—a very small sum, having regard to the fact that the final instalment of 10s. per share was not due until that day. The three items of bills payable, sundry creditors and loans, taken together, show an increase, roughly speaking, of £50,000; but there is a large reduction, amounting to £160,000, in contingent liability upon bills discounted, an item which, although it forms no part of the accounts, is annually given by direction of the auditors for the information of the shareholders. On the credit side the heading of sundry debtors shows an increase of £40,000 and trade investments of £8,000, while the stocks in hand show an increase of £92,000. The only other items which it occurs to me to notice are the cash at bankers and bills receivable, which, put together and compared with the previous year, show a credit balance of about £5,000.

Mr. Henry Van den Bergh seconded the motion, which was carried unanimously without discussion.

PERTH ELECTRIC TRAMWAYS.

The ninth ordinary general meeting of the Perth Electric Tramways, Limited, was held yesterday at the Chamber of Commerce, Oxford Court, E.C., Mr. Allen H. P. Stoneham, the chairman, presiding.

The Secretary (Mr. Frank A. Holyfield) having read the notice convening the meeting and the report of the auditors,

The Chairman said that the report and accounts spoke for themselves, and it was not necessary for him to say very much in reference to them, but he wished to call their attention to one or two of the prominent features. In the accounts they would see that they had expended since the company was formed no less than £23,625 of undivided profits on extensions on capital account. They had repaid £18,989 of debentures, and had invested £6,210 of the cash reserve fund, making a total of £48,824, which they had put aside out of profits in addition to paying dividends on the preference and ordinary shares. The results of the year under review were perhaps not quite as good as those of the previous year, which was a boom year in Perth owing to the exhibition, but the accounts they were receiving every week were to the effect that the traffic was increasing and that the results of 1906 would probably very soon be equalled. They had heard a good deal from time to time about Western Australia being under a cloud of depression, but he was inclined to think that, if Australia was under any cloud, the cloud was of the people's own making, and they were quite able to lift it whenever they wished. The only cloud that he could see in Australia was the fact that so much capital was not coming into the country as was the case a few years ago. However, no political party—Labour, Socialist, Free Trade, or anything else—could keep Australia back. The country had so many natural advantages that the Australians themselves were awaking to the fact that they must encourage both capital and population unless they wished to be ever eclipsed by Canada, and he might also say Japan, for Japan was going to be a great factor in the Pacific. At present it was a customer for England and also for Australia—England for cotton goods and Australia for wool. Very soon, however, Japan would be making its own cotton goods, and then would have no more use for England except to borrow money from. It was always a mystery to him why England should lend money for other countries to start in business in opposition to England by erecting mills and factories of all kinds with money borrowed from England. The Japanese were wise enough to take the capital we lend them. In Australia there had recently been a law passed by which non-residents had to pay an extra tax above that paid by those living in the country. That seemed to be a very foolish thing, as he thought they ought to encourage anyone who could bring capital whether they lived in the country or out of it. On that point he had written to the Agent-General and former Premier of Western Australia, because he had had many questions addressed to him on that subject, and he was glad to be able to inform the shareholders that he had received a letter in reply, in which it was stated that the Perth Company would not be adversely affected, as incorporated companies paying dividend duty, as this company did, were not called upon to pay income-tax in addition. The letter ended by saying that the writer could only say that the desire of his Government was to establish and maintain a feeling of confidence among investors of capital. He was very glad to receive that letter, because it had seemed to him that the Government was going out of its way to drive away capital, and he had been very glad to find that more prudent counsels were prevailing in the State. (Hear, hear.) When all had been said, the fact remained that Australia was going ahead at a very rapid pace, and this was particularly the case with the city of Perth. The Australians were fully alive to the necessity for national defence, and the first thing to be done in this connection was to build the trans-continental railway, in order to facilitate the transportation of troops, &c. A Bill for the survey of this work had already been passed. In conclusion, he said that Perth was the Western gate of Australia, and he did not think that anyone need fear to invest in the Perth Tramways Company. They expected to benefit greatly from the extensions which were being built. He concluded by moving the adoption of the report and accounts.

Mr. Oliver Wethered seconded the motion, and it was carried unanimously.

The retiring director, Mr. A. H. P. Stoneham, and the auditor, Mr. Andrew Wood, F.C.A., having been reappointed, a vote of thanks to the chairman concluded the proceedings.

AUCKLAND ELECTRIC TRAMWAYS.

The tenth ordinary general meeting of shareholders of the Auckland Electric Tramways Co., Limited, was held on Wednesday, at Donington House, Norfolk Street, Strand, Mr. C. G. Tegetmeier (chairman) presiding.

The Secretary (Mr. W. F. Herring) read the notice convening the meeting and the auditors' certificate.

The Chairman, in moving the adoption of the report, said the issued share capital stood at £350,000, the amount having been increased early in the year by the issue of £50,000 in 6 per cent. preference shares. Nearly the whole of these shares were taken up in Auckland, and it was satisfactory to note the increasing extent to which the capital of the company was being acquired by local investors. At the present time about £154,000 of the capital was held in New Zealand by about 400 shareholders. In regarding their increase in capital expenditure, it had to be remembered that when the company was formed it was not, and could not have been, anticipated that the traffic would develop to such a remarkable extent as it had. To carry, as they did last year, passengers equal in number to 300 times the whole of the population of the district, and on several special occasions, with a population of 75,000, to carry over 110,000 in one day, was, he thought, quite exceptional in the record of tramway undertakings. The estimates upon which the undertaking was based, had been largely exceeded, and the question of the provision of a larger margin of power and plant over actual and probable future requirements was specially under the consideration of their general manager, Mr. Walklale, and his assistant engineer, Mr. Wilkes, when they took up their duties in Auckland in May of last year. In the profit and loss account it would be seen that their total traffic receipts amounted to £137,718, an increase of £7,382 over the previous year, and equal to an average of approximately £7,200 per route mile. They carried nearly 22½ millions of passengers, an increase of over 1,300,000 upon the number carried in 1906. After payment of £14,255 for debenture interest and providing £3,567, being the amount payable to the Auckland City Council for rental and percentage of profits, and after setting aside £10,000 to meet depreciation, they had a surplus of £29,722, making with the amount brought brought forward an available balance of £32,823. The payment of the preference dividend to the end of the year would require £2,658, and they proposed to place £10,000 to the general reserve fund and to pay a dividend on the ordinary shares at the rate of 6 per cent. per annum, which would leave £2,165 to be carried forward. There was one matter he should refer to, and that was the suggestion that had been submitted to them by the Mayor of Auckland that they should enter into negotiations for the sale of the company's undertaking to a local tramways board, who would obtain legislative authority to acquire and work the concern on behalf of and for the benefit of the various local bodies interested. In their reply they had pointed out that the local authorities originally had the opportunity of taking up the tramways undertaking, but they decided to leave the risk of investing the very considerable capital involved to others, and that, having taken that risk and succeeded in establishing a successful undertaking, the principal shareholders in this country, whom they had consulted on the matter, did not favour the proposal that they should now sell out before they had sufficient time to reap the fair reward of their enterprise, and would much prefer that the company should continue to work the tramways for the period of the concession. After very full consideration, and with the concurrence of the principal shareholders, they had informed the mayor that if it was the desire of the citizens of Auckland that the tramways should be owned and worked by or on behalf of the various local bodies interested, the directors would be prepared to negotiate for the disposal of the rights and property of the company on an equitable basis.

Mr. R. P. Simpson seconded the adoption of the report, which was agreed to without discussion.

Craig and Rose.—The directors of this Edinburgh business of paint, colour and varnish manufacturers evidently have a very accommodating or a very apathetic body of shareholders to deal with, as they do not trouble to issue a full profit and loss account, let alone a balance-sheet. In the so-called report just sent out they state that the profits for the year to March 31, including £730 brought forward amounted to £12,213, of which £615 was written off for depreciation, directors' and auditors' fees took £702 and income-tax £140. Preference dividend having been paid, £600 is put to special reserve for preference dividend, making it £5,100, after which the ordinary shares receive 4¾ per cent. and £656 is carried forward.

BOOK-BUYERS, READERS, AND WRITERS.

This is **A MAGAZINE *DE LUXE,*** a most tasteful and dainty sample of the typographer's skill, and at the same time one of the most painstaking and useful serials of the kind ever published. Its **ILLUSTRATED ARTICLE** is always packed with interesting Notes and Pictures, its **GENERAL ARTICLES** are both Useful and Entertaining, and its **LIST OF BOOKS ABOUT TO APPEAR** and of **BOOKS THAT HAVE APPEARED** are month by month Complete and Valuable as a **GUIDE** to the Bookbuyer and for **REFERENCE.**

The price is only

SIXPENCE NETT PER MONTH,

or Eightpence post free, or 6s. and 8s. per annum, post free, and its publishers are

SIMPKIN, MARSHALL, HAMILTON, KENT & CO., LIMITED.

**** *Kindly order it of your bookseller, and judge for yourself.*

SIR HUBERT VON HERKOMER

AND

PUBLIC OPINION.

Sir Hubert Herkomer, the distinguished artist, writing from Bushey to the Editor of PUBLIC OPINION, says, on February 11, 1908:—

"Dear Sir,—It gives me great pleasure to tell you how your paper, PUBLIC OPINION, answers a purpose in my life. Although I read a great deal, I find it impossible to keep abreast of the trend of higher thoughts that is going on around me, which can only be gathered from various articles and letters in newspapers, and articles in magazines. But your paper gives me the assurance that I miss nothing which would be of use to me in the train of thought upon which I may be engaged, and seldom does a weekly issue of PUBLIC OPINION appear from which I cannot cull some useful suggestion. As a leeturer of art, I need all the suggestions on life that I can get into my hands, for I treat art in all its phases popularly. From PUBLIC OPINION I get to know certain modern authors with whose methods of thinking I am in sympathy, and those I follow up further. Your paper does me the service to point to them.

Your selection of current thought is worthy of all praise, for it gives one the wholesome feeling that the world is, after all, not going to the devil, but contains thinkers and good men and women.

I wish you with all my heart continuous success with your paper. Yours very truly,

(Sgd.) HUBERT VON HERKOMER.

Percy L. Parker, Esq.

PUBLIC OPINION.

A weekly Review of Current Thought and Activity.

EVERY FRIDAY. TWO-PENCE.

Edited by Percy L. Parker.

The purpose of PUBLIC OPINION is to provide information by means of a weekly review of current thought and activity as they are expressed in the world's newspapers, magazines and books, and to put on record the ideas and activities which make for religious, political and social progress.

PUBLIC OPINION can be obtained from any Newsagent or Bookstall, or will be sent Post Free for one year to any address in the United Kingdom for 10s. 10d.; and to any place abroad for 13s. per annum. Orders should be addressed to—

PUBLIC OPINION, 30 & 31, Temple House, Tallis Street, London, E.C.

SPECIMENS FREE ON APPLICATION.

Printed for the Proprietors by St. Clements Press, Limited, Newspaper Buildings, Portugal Street, Kingsway, London, W.C., and Published by Clement Wilson at Norfolk House, Norfolk Street, Strand, W.C.—May 23, 1908.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 543. New Series. SATURDAY, MAY 30, 1908. (Registered as a newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Budget Debate.

It was hardly a debate, it was a talk hampered in its frankness by sentimentality on both sides. This was inevitable because neither the Ministerialists nor the Opposition could afford to deal frankly with such questions as Old Age Pensions or with extravagance in any department of the national expenditure. All the House is committed to a policy of extravagance and criticisms in detail cannot get over that masterful fact. It is the only point upon which there is perfect harmony among all sections of representative opinion. Each section has its own special fads demanding the outlay of more money; that is the only difference. The Socialists would take the money they seek to have spent from those whom they describe as "the rich," and the empire-glorifiers would take what they demand, and get, for the army and the navy from the poor. But they all alike want more money, and in this mood of waste lies the root of these complications and afflictions which will one of these days make the British Empire a glory gone by for ever. Our great empire thus follows the course taken by all the empires the world has ever seen and suffered by. Some empires live longer than others but they all sooner or later perish of the wealth they suck out of their subject peoples. Ours seems likely to perish of over indulgence in usury.

Where Mr. Austen Chamberlain got his figures we do not quite know, but we think he must be surely wrong about that addition of £4,000,000 to next year's charges for the navy, and his £1,500,000 set down as addition then to the cost of education must be a guess in the dark, but there can be no doubt about old age pensions. Within a very few years their cost will exceed £6,000,000 per annum irrespective of administration charges, sure to be heavy enough after a little time. Failing indeed all other causes of decay we shall be consumed by our bureaucracy even as was the Roman empire of the east, and here again there is harmony not only between past and present experience, but between the various parties that go to make up the House of Commons. They all want more officials, to throw upon salaried and pensioned functionaries new duties, duties which should be performed by public spirited citizens, duties created by the multiplying demands of a civilisation that grows exacting as it grows old. Soon, therefore, if not next year, Mr. Austen Chamberlain's estimate of £10,300,000 additional expenditure will be reached and passed and our capacity to stand up under the ever swelling total of the Treasury depends not upon our own energies in making and selling half so much as on the ability of the debt-smothered populations embraced within our empire to pay the interest on their mortgages. The Chancellor of the Exchequer made great, if not quite discreet play with the finances of the German Empire, and they afford a sorry enough spectacle there is no doubt. But as he gains experience in his new office Mr. Lloyd George may come to understand that all is not as it seems even in this most solvent looking empire of ours. Let him try to realise what would happen to his old age pensions project, and to Mr. Haldane's wonderful army of unconscripted conscripts were any one of our greater colonies to make default in its interest payments to us, or were India to collapse altogether as a consequence of our unmeasured demands upon the slender and diminishing resources of its native

population. Verily the presence of chronic famine and plague in that unhappy, usurer-ridden country might inculcate caution upon our Government. Ah! we are past hope of that, and the vision of our political leaders is too circumscribed to warrant us in expecting great feats of statesmanship at their hands. They enjoy the wealth of the day and spend it without inquiring too closely whence it comes. None the less true—nay, all more true—is it that by capital expenditure alone is the just indicated catastrophe kept off.

Would the opposition do better were it returned to power? No, the nation must "dree its weird." It gives no intelligentor consistent support to measures of genuine reform, cares naught for well ordered and prescient economy, and is as much at sea in finance as its government. Mr. Austen Chamberlain declared that the budget was not one he envied, or would have cared to produce; but what would his have been? Old age pensions on probably enough a more ambitious scale than Mr. Asquith's, still heavier demands on the tax payer for the army and navy, with possibly enough parings on education and in directions less under the influence of immediate public clamour, the whole supported and seasoned by increased indirect taxation, the beginning of that new protectionist tariff of which his party dreams, and which would soon make an end of our industrial and mercantile supremacy, drive us to borrow abroad probably enough in order to keep up appearances, just as all our protection-stricken dependencies do now of us. As we said last week Protection in every colony we possess is maintained by help of British capital. Take away that help, leave the colonies to reap the rewards and fruits of the cruel fraud out of their own resources, and their pretentiousness would be manifest to all the world before many years had gone by. It is British capital that keeps the whole exhibition open — prosperity, swelling imports and exports, especially imports, flush revenues and all. Upon such a foundation our imperial grandeur rests far more than on the extent and profitableness of our commerce, unrivalled though they are! But the Government must not pause to reflect, it has to uphold Free Trade doctrines and gather in the taxes and with them gratify the aspirations of its supporters. And fantastic as arithmetic like Mr. Snowdon's looks it may any day be brought "within the range of practical politics," for the working man "is the master of us all." Let us grant that he deserves to be and the prospect for the humble multitude of those who abstain from asserting claims of this sort or that, to be met from the public purse, looks none the more reassuring. Happily the world never quite runs the course we map out for it.

Canadian Progress.

At the end of the official report of Mr. Fielding's budget speech, delivered in the Canadian House of Commons on March 17 last, will be found a number of diagrams illustrative of the growth of the Canadian Dominion during the last forty years. It has unquestionably been a remarkable growth, exceeded by no other portion of the British Empire, and therefore some notes founded upon the exhibits may be worth giving. To begin with, Canadian imports have risen from about £15,000,000 in 1870, or £14,700,000 in 1868, to about £72,000,000 in 1907. The progress in this and other instances has not been uniform, but the total imports never dipped much below £16,500,000 after 1870, and for the last ten years have not gone below £28,000,000, the figures in all instances being approximate, that is to say, we convert the dollar at five to the £, so that the sterling usually rather understates the actual figures. Exports have also developed in a remarkable way, but not to the extent the expansion in imports would have led us to expect. In 1868, for instance, the total value of the exports was little more than £11,500,000, rising to nearly £15,000,000 in 1870, and progressing then to almost £18,000,000 in 1873, only to dip back to about £14,300,000 in 1879. Between 1875 and 1879 the country went through a period of depression, as is illustrated by the fact that during the five years ended with 1879, the business failures within the Dominion ranged annually from about £4,800,000, the lowest figure, in 1878, to £5,870,000 in 1879. For these five years, in short, the aggregate of the recorded failures amounted to about £25,000,000, and in no single year, or group of years, since that disastrous period have the total liabilities of bankrupts reached any such figures. In 1894, however, the failures rose to about £4,800,000, but for the last five years the aggregate has been little more than £9,000,000.

What, however, is most interesting about the exhibit of imports and exports, apart from the fluctuations suggestive of occasional forcing, is the fact that import values almost invariably exceeded export values. In 1870 the imports were only a few hundred thousand pounds higher in value than the exports, but since then almost without exception the value of imported goods has exceeded that of exports by a more or less striking amount. For example, in the five years ended with 1875 and immediately preceding the long-drawn-out recoil, the value of the imports amounted to about £170,000,000, whereas the export values amounted to barely £83,000,000, and in the past five years ended with 1907 the contrast is even more striking, imports having in that time attained a total of about £284,000,000, whereas the value of the exports was barely £232,000,000. Thus in the five years ended December 31 last, Canada imported quite £52,000,000 more in commodities than it exported.

How is the country able to do this? Canada is a debtor country. Not only does the Dominion Government itself owe large sums to the mother country, but every state and municipality is also in debt to us, and most of the capital with which the joint-stock mortgage companies carry on their lending business as well as some part of the capital locked up in joint-stock banking, together with almost the whole of the railway capital, and no small portion of the industrial, has all been furnished from this country. It follows that the charges for debt interest and the obligation to remit profits to this country involve the annual transmission of many millions of dollars, how many it is impossible to say. Put the total drain, however, at £10,000,000 per annum, and we believe that to be a moderate estimate, and it follows that the exports of the country, the commodities it sends abroad, must provide this sum, or whatever sum is required, before anything remains with which to purchase goods in return. In the natural order of business events it should therefore follow that export values must one year with another exceed import values, and if we find the contrary the fact over a long period of time, we may be perfectly sure that the debtor country is drawing upon foreign capital in order to keep its enterprises active. This is undoubtedly what has taken place with Canada, and its commercial history, even as outlined in these interesting diagrams, shows the observer that a succession of mounting waves of borrowing or of absorptions of foreign capital in some form have been followed by pauses, periods of reaction and distress. Is there any reason to suppose that an identical sequence of events will not again happen? We see none, and it is because the progress of Canada, great though it undoubtedly is, durable though much of it must be, has been so largely the outcome of deluges of foreign capital used as fertiliser, that we cannot escape from the fear lest when the stream of foreign money diminishes or dries up, the recoil may not again be painful and temporarily disastrous.

In other directions the exhibit of Canadian progress is not quite so reassuring as we should like it to be. Before discussing the facts relating to this point, however, it may be well to say a word about the development of the Dominion's trade with the United Kingdom. That has not been anything like so great as the amount of British capital sunk in Canadian undertakings might have led us to suppose. In 1870, for example, the total value of the imports from Great

Britain for home consumption, always excluding the coin and bullion, was little more than £7,500,000, and it was barely £6,200,000 in 1879. Even as late as 1895 the total had again dropped to about £6,200,000, and only in the last eight years has the annual value of British goods imported always exceeded £8,000,000. It was £8,856,000 in 1900, but dipped in the succeeding year to £8,564,000, and last year the figure was almost £18,000,000 as against £24,000,000 of Canadian produce sent here. We have almost invariably bought more from Canada than Canada has bought from us, at any rate during the last quarter of a century. There are exceptions, due doubtless to the stimulus of British capital, but the tendency has been, especially since Canada raised her tariff, to restrict imports of British goods, while we have gone on buying with that perfect indifference to the treatment we receive, which is the noblest and strongest attribute of our Free Trade policy. So recent trade figures emphasise the effect of the high tariff against British goods, and illustrate in a remarkable way the true significance of those professions of loyalty to the mother country and ardent imperial patriotism to which we are continually treated. It is pocket patriotism we fear, altogether selfish. "There has never been so little feeling in favour of independence in this country as there is at present," the Toronto correspondent of the *Morning Post* cabled the other day, *à propos* of the speech of the Nova Scotian Judge Longley at a New York banquet, and this may be true enough at the moment; but would it be true for a week if the supply of British capital to Canadian enterprises of all descriptions were to be restricted or to stop? We think not.

Passing by the shipping statistics, which, as summarised in these diagrams, tell us nothing distinct as to the growth of a Canadian mercantile marine, we come to railway development in the Dominion, and in connection therewith find remarkable progress. As recently as 1888 the total length of the railways in Canada was only 12,585 miles. At the close of last year it was 22,452 miles. Going back to 1868, forty years ago, we find the total only 2,270 miles, and by 1878 it had only reached 6,226 miles. Within the last twenty years, however, the development has been most striking, and one may say that never a year has passed without some increase in the mileage. Last year the increase was 1,100 miles, and within the last five years nearly 4,000 miles have been added to the railway system. The additions, moreover, would appear to be justified, for the goods traffic expands in a manner quite as remarkable as the mileage. No returns of the tonnage of goods carried exist for a date earlier than 1870. In that year the weight carried was about 6,332,000 tons. By 1886 the figure had risen to 16,356,000 tons, and by 1896 to 24,267,000 tons. But last year the figure exceeded 63,866,000 tons, and compared with 1889 the increase is about 272 per cent. From this the fair inference is that Canada was worth opening up by railways, and if business can go on expanding in this fashon we may hope to see the country surmount the difficulties it is now piling up for itself by the over-spending of borrowed capital. On the other hand, we are not sure that the people have been growing appreciably wealthier through all this fever of development. At any rate, the deposits in Canadian savings banks have not expanded of late years with that rapidity we should have expected, in view of the great expansion in the business done. The total was little more than £18,000,000 at the end of last year, which is only £8,000,000 more than in 1891, and barely £10,000,000 more than in 1885. Moreover, the deposits of the ordinary business or chartered banks of the Dominion have not grown with much more rapidity, especially in view of the extraordinary development of business and the incalculable amount of money drawn into the country, not merely by foreign credit operations, but by immigration. The total of these deposits at the end of last year was about £118,000,000. Three years before it was under £85,000,000, and ten years before little more than £40,000,000. This shows undoubtedly great progress, but it corresponds mostly to increases in that portion of the floating debt of the people represented by discounts. In other words the deposits are as usual the product of debt much more than of savings. Thus at the end of 1907 the discounts of the Canadian banks amounted to £128,000,000. Three years before the total was under £90,500,000, and ten years before it was barely £50,000,000. Debt and deposits thus in a manner counterbalance each other, and the deposits are less indicative of wealth than we should have expected. To be sure, the amount of bill discounting done is not by any means a gauge of the indebtedness of a community, but it does give some indication of the drift of events, and if Mr. Fielding had added a further table, or group of tables, to illustrate the expansion in the loans of the banks, the increase in their fixed investments, and in their capital and reserves, while giving at the same time a diagrammatic exhibit of the growth of population and of the state and municipal debts, as well as of railway capital, whether belonging to the joint-stock companies or provided by the Government, he would have put the critic in a much better position to sum up the actual position of the young country.

We have no space left in which to deal with Mr. Fielding's speech, but there are points in it that will keep, and that may require discussion at another time. For the present we can only mention that in explaining why the Government came to the help of the banks in moving the crop of the North-West last autumn, he gives the first authoritative admission we have had of the failure of the harvest. "We were informed," he says, "that the ordinary lines of credit granted by the banks had either been exhausted or were too limited to meet the emergency. The condition of the crop was another feature to which our attention was called. Unfortunately a considerable portion of the crop of last season was touched by frost, and its condition, we were advised, was such that it could hardly be carried over the winter with safety. For that and various reasons it seemed to be important that the crop should be moved, and we were asked to devise some means of granting aid." In view of a fact like this, is it not somewhat premature for Lord Strathcona and his friends to be publishing extravagant anticipations every week of a bumper harvest in the coming autumn? Such touting is not merely premature, but disquieting. What are they propping up out West?

Possible Economies in Railway Expenditure.

Rumours come to the surface from time to time pointing to some scheme of railway nationalisation. One statement we have seen went so far as to hint at something like an outline of Mr. Lloyd George's plan for nationalising our railways. That gentleman has now gone to the Exchequer, and will have many other subjects to occupy his great abilities with, among them—who knows?—a thorough revision of the system of direct taxation throughout the kingdom. His successor at the Board of Trade is, however, quite as ambitious to distinguish himself, and if any project of the kind has really been under consideration, we may be certain that Mr. Winston Churchill will not allow it to lie hidden. And possibly a spur to act in this direction may be given to him by the news from Berlin to the effect that negotiations are now in progress between the Prussian State railways and the State railways of Bavaria, Saxony, Wurtemburg, and Baden, with a view to securing the free and unrestricted interchange of rolling stock. That is but a first step, in itself a small thing, but yet a step calculated to effect much saving of expense, and the *Times* correspondent hints that it may even lead to the gradual unification of the German railway system under imperial control. Popular sentiment favours a step of that kind in Germany; at least we should judge so, and the time is really not distant when the senti-

ment at least of railway shareholders may likely enough take the same bent here. There is no salvation for them that they can see except through some form of State acquisition of the existing railway companies. Thorough-going economies seem hopeless at the hands of boards of directors, and anything like harmonised working is unattainable while each board magnifies its office. Notwithstanding all this, we deprecate the out and out acquisition of these highways by the State, except as a last necessity. Conceivably we may be able to avert disaster to hundreds of millions of railway capital by this method alone, but before it is tried we ought to have recourse to less extreme measures, to see what supervision may do.

Would it not be possible, without raising the question of purchase at all, to consolidate the working of the railways under a public department controlled, or at any rate systematically spied into and cross-questioned, by Parliament, without entering into any dealings with or about capital whatsoever? Noticing in dealing with last year's accounts of the railway companies the capricious manner in which general charges and directors' fees varied and were frequently in amounts apparently out of proportion to the importance of the railway or the business done, we took the trouble to add up one or two items in their accounts, such as directors' and auditors' fees, and head office expenses. Altogether the figures of 17 of our railways were gone over to find out what the charges in these directions amounted to in the past year, and we find they came to about £915,000. That is to say, the boards alone of these companies were paid over £105,000 in fees last year, the auditors absorbed another £11,384, and the office expenses of general managers and their staffs took nearly £720,000. No railway company except the North-Western paid so much in directors' fees as the South-Eastern and Chatham companies did, adding in their "joint committee." The board of the North-Western cost £12,000 and its general manager's office expenses nearly £129,000, while £1,910 was paid in fees to its auditors. The Midland board got only £9,000 and the expenses of its general manager's office were but £97,420, while the Great Western board got £10,000 and its general manager's department took over £100,000. The South-Eastern and Chatham central offices ran away with about £68,000, the Brighton with about £31,000, and the Great Eastern with £71,000. It is unnecessary to go through all the companies to note the contrasts between the various items, because the precept we wish to enforce is—concentration and unification of management without State purchase, and only indirect or supervisory State control. We feel certain this at least should be the first step taken, and it is to be hoped that the investigations now being made will lead to the discovery of some simple method by which economy in these and other directions can be carried into effect. How much the nett revenues of our railways would gain by the elimination of most of the boards of directors, and most of the general managers with their formidable array of clerks and sub-departmental staffs it is impossible to estimate, but we should be surprised if, along with other economies, especially in handling traffic, it meant less than a saving of from £3,000,000 to £4,000,000 per annum. At present there is a persistent and ever present tendency to leakage in every section of railway business. Confusion reigns and confusion invariably means waste. It could be all remedied and everybody benefited by intelligent concentration and supervision. Here is another fine chance for Mr. Churchill.

France and England.

In all respects the visit of M. Fallières to England has been a success. Even the sun shone enough to show the President of the Republic that we do not always live in gloom. From the crowds in the streets the welcome was cordial, and our most democratic Sovereign played the part of host to perfection as usual. This country never had a monarch so well fitted for the social and ceremonial functions of his rank as "Edward R. and I." He is the most cosmopolitan of kings, and admirable always in his readiness to meet popular expectations. Therefore, everything passed off with brilliance, and we cannot but hope that the consequences will be good both for France and England. Well might Sir F. C. Gould depict the shade of Napoleon standing on the heights of Boulogne and musing on the change that has come over the spirit of the two peoples since the day when he gathered his hosts and his transports at that place in the hope of being able to repeat the doughty conquest of William of Normandy. But the change has come about within a very few years. So sudden has it been that one dreads it may not be lasting. There is behind it all, too, that dread of Germany, or rather of the impulsive Kaiser, the man of wild whirling words, whose motives are suspected because so inscrutable in their apparent whimsicality. It is because this dread hangs over France, and to some extent over England too, that the suggestion is always put forward by the French Press of an alliance between France, England, and Russia. The Press is busy now advocating a step of this dangerous kind, as the one peace insuring event they hope to see spring from all the feasting and visiting, all these exchanges of courtesies. It is but the expression of the dread Germany's ruler inspires, a sort of nightmare extravaganza of hope impossible of realisation. We look to see a better guarantee for peace than any formal alliance springing up as a result of the better acquaintance near neighbours are now cultivating with each other, and it is in this direction that visits like M. Fallières' to the Anglo-French Exhibition, and the entertaining they give rise to are all clear gain. By the growth of mutual knowledge and by the development of business relations between nation and nation, and by these alone will wars become impossible among civilised peoples. Treaties of alliance are snares, and often the origin of bloody strife. From a peace point of view Mr. Lloyd George's promise that a fund for international hospitality will be set aside out of the Government revenue is worth a hundred treaties of amity and alliance. We want to be friendly with all nations, or the democracies thereof, and were just as hearty in our welcome of the German Burgomasters as of the French President and his suite. All are welcome who invade us as friends, and henceforth all who come to us from abroad as representatives or ambassadors of the people and their institutions will be worthily entertained.

"Old Age Pensions" in the States.

We find some apposite remarks in the New York *Commercial Chronicle* upon Mr. Asquith's old age pensions scheme. They are worthy of the attention of the Prime Minister and his colleagues. Our own war pensions, says this eminent United States organ of finance, amounted as far back as 1872 to something like £5,000,000 per annum, and at that time General Garfield made the following declaration in the House of Representatives: "We may reasonably expect that the expenses for pensions will hereafter steadily decrease unless our legislation should be unwarrantably extravagant." The contrary was the fact, this prediction being so completely falsified that by 1893 the total pensions charge borne by the revenue of the Washington Government had risen to £31,800,000. From this stupendous figure it was brought down to only £27,800,000 in 1907, and the total for the current year is, if we mistake not, again a good round £30,000,000. What is the reason for this

astounding expansion—this ghastly total? "It was a partisan bid for votes," the *Chronicle* says, and that is the truth. This reason, it adds, is precisely the one likely to prevail in the case of British old age pensions. Yet even in the American pension legislation there were considerations which do not at all apply in the case of the British Government. "The extravagant increases in the pensions accorded by the Congress at Washington were adopted at times when sudden and enormous expansions of population and prosperity had so greatly increased the annual expenditure of the Federal Government as not only to provide facilities for larger appropriations but to embarrass the Money market and general trade through the accumulation of actual cash in the vaults of the Treasury." And the writer justly points out that England has no such prospect. We here cannot rely upon any automatically expanding revenue but very much the reverse, for if the drink legislation alone is carried through and fulfils the predictions of those who have furthered it, our revenue will diminish, and there are other influences which must tend to keep it stagnant, the most prominent being a steady pressure to reduce the income tax and other irksome impositions. We therefore enter upon a career of extravagance in pensioning a large class of the community without having the means wherewith to indulge in such state altruism. And note how a large pension vote brought with it in the States both the excuse and the necessity for a high tariff. Will not the same experience follow here? We have always thought so and have therefore ceased to attach importance to free trade eloquence, Ministerial or other. We vote the money and it must be found, and soon in a tariff alone will it be found.

Siberian Proprietary Mines.

Exactly who was responsible for the market rig which took the shares of this notorious venture to over £15 each it would be a little difficult to say, and it may be that the directors of the company were as much displeased as anyone when the inflation was going on. But there is no getting away from the fact that they took advantage of the rise to put out 16,000 shares at a premium of £11 10s. each, representing a sum of £184,000, and we fear the poor wretches who subscribed for them on such terms must regard the greater part of the money as irretrievably lost. This issue took place very soon after the publication of the company's first annual report towards the end of 1906, in which a sensational paper profit of something over £400,000 had been flashed before the eyes of deluded shareholders. It consisted of vendors' scrip on the promotion of those two equally notorious enterprises the Orsk Goldfields and the Troitzk Goldfields, and we need hardly relate how those profits vanished into thin air when the true nature of the properties taken over came to light, to be followed eventually by a violent collapse in the price of the company's shares, the parent as well as the subsidiaries. The directors still foster hopes that the Troitzk will yet do something to retrieve shattered fortunes, and tell us that the latest advices are of an encouraging nature. The purchase of the property has been completed, and the mine is reported to be opening up well. Development work is proceeding on vigorous lines, and it is anticipated that within a few months a large quantity of ore reserves will be established. A new reduction plant capable of treating about 5,000 tons per month is to be erected with the least possible delay, and the estimate is made that when this new plant is running a yield of 4 dwts. of fine gold per ton of 2,000 lbs. will cover all revenue and development expenditure at the mine. This should leave a very substantial margin of profit, so say the directors. We are delighted to learn all this, and would not dream of omitting any part of it, because it shows that something like a miracle must have been performed during the past year. Just call to mind the report on the property by the consulting engineers, Messrs. Hooper and Speak, and think of the shocking muddle the mine was in when they inspected it. But the Orsk is evidently a hopeless failure, and it seems more than likely that when the lease and option expire in March next, the property will be given up. However, for book purposes Orsk and Troitzk shares have each been taken at 5s., the figure ruling at January 13, 1908, when the accounts were made up, and this, compared with the former valuation, means a loss of £376,500. Expenses in Russia came to the nice little fortune of £42,830, which includes £42,395 spent on sundry investigations; London expenses took £10,054 (the period covered is rather more than two years), and £105 was written off office furniture, making total debits of £429,489. Against this interest and transfer fees produced £8,404, so that the actual deficiency to be dealt with is £421,085. Balance of profit brought forward from the previous account was £401,872, after deducting directors' extra remuneration £5,000, and income-tax £10,225, and the debit to be carried out is £19,214.

Orsk and Troitzk shares are now entered at £125,500, that is 5s. each, against £502,000, or £1 each in the former balance-sheet, but it may be well to note that the current price of Orsks is not better than half a-crown. The company has a good cash balance, £184,156, but when shareholders look on the other side and see premiums on shares £223,523 they must be inclined to swear. Lots of mining properties have been vigorously prospected, hence the heavy Russian expenditure already mentioned, but with the single exception of the Pavlodar property, which is held to be promising, none were reported upon with favour, and the directors decided to stop all expenditure and abandon the options to purchase. Mining having proved a bit of a failure the directors tried their hands at something else, and were interested in the Moscow Tramways business of which we heard so much up till quite lately. They were anxious to secure the contract for a British company, Bruce Peebles we think it was, and advanced to the contractors 100,000 roubles, being the deposit required by the Moscow Municipality as a preliminary guarantee. It was anticipated that a nice profit would be netted, to come out of the pockets of the hard-pressed Russian taxpayer presumably, but the business has not progressed on the anticipated lines, and the Municipality has apparently decided to carry out the work for itself. It looks as though money would be saved by so doing. A word about the directors, and we are finished. We fancy shareholders will read with no little disgust that the Hon. Arthur Stanley, M.P., Lord Knollys, and Lord Stanley have all resigned from the board, and we cannot help thinking that these men, who probably know as much about Siberian gold mining as a turnip, have no right to first decorate a board and then quietly slip out when things begin to go wrong. Depend upon it, all would still be on the directorate if fortune had smiled upon the undertaking. The nature of Mr. Heyman Orkin's appointment has been varied in a way favourable to the company, and the directors' own proposal to reduce their fees is welcome.

American Business Notes.

Evidence that the credit requirements arising out of the New York stock gamble are beginning to be pronounced is to be found in the return of the New York Associated Banks for the past week, which shows an increase of £3,586,000 in the loan and discount averages. This is all attributable either to syndicate operations or to the bull campaign in stocks, and the increase is accompnied by declines in the specie and greenback reserve, aggregating £589,400, specie having fallen off by £385,200 and greenbacks by £204,200. But deposits have risen by £4,140,400, so that the decrease in the surplus reserve is emphasised and amounts to £1,624,400. This brings the total down to £11,207,000 as against £13,138,000 twelve months back, and we fear it will now tend to dwindle until refreshed by the new "emergency" paper money to be provided by Congress.

Apparently the brunt of the task of sustaining the bull raid upon stock markets fell upon the Associated Banks last week, for the loans and investments of the

non-Associated Banks and trusts were about £340,200 less than the week before at £172,277,000. These concerns, moreover, gathered in a little cash, specie being up nearly £112,000 and greenbacks £21,000 compared with the previous week, the one at £9,944,000 and the other at £2,401,000. That increase sent up deposits by £564,000 to £142,829,000, and officially, as usual, the proportion of reserve to deposit liabilities is given as better at 32.8 per cent. against 32.5. Measured, however, by the same standard as that used for the Associated Banks, it is less than 8.7 per cent.

Nothing in these average displays points to an early return of high rates for money in New York, yet the tendency should be that way, because not only is speculation again making heavy demands upon the capacity of the banks and other credit generators to distil sufficient gas to keep the market inflated, but new issues are continually coming upon the market in all amounts from £1,000,000 up to many millions, and gold is still leaving for Europe in formidable amounts, no less than £6,400,000 having been engaged for export up to the middle of this week. Not only so, but it is said that Mr. Cortelyou will take another £10,000,000 in Government deposits away from the banks to help him to cover the Treasury deficit of £12,000,000. These movements cannot go on without bringing down the resources of the banks to an inconvenient extent, but up to the present the market has not paid the slightest attention to the threatening dangers. And yet stock speculation is not comfortable on Wall Street. After every hoist there comes a flurry, great nervousness develops, the Standard Oil group, or some other such Ali Baba troupe, endeavours to unload so that it may rake in as much as it can of the imprudent gambler's dollars, and after a few hours or a day or two of this kind of recoil the gas is again turned on, making prices once more advance. But the pressure is very high, and explosions may be looked for. Throughout the country, too, failures are still occurring among credit companies, and this part of the world is not at present a place either to invest or to play in. As we write the difficulties of the Gould roads seem to be coming to a crisis.

The most remarkable preparation for great loan-raising feats is that made by the stockholders of the Chicago, Burlington and Quincy Railroad, who have authorised the creation of £60,000,000 in general mortgage 50-year 4 per cent. gold bonds. For the present, however, £3,200,000 has been offered through Messrs. J. P. Morgan and Co. The price asked is 95½, and respectable though the history of the Quincy road is, we are doubtful whether that price will attract buyers here. But in New York the amount was offered three times over. No American railroad ought to get its requirements met on this side at present on finer terms than 5 per cent. All this mighty sum of £60,000,000, however, is not to be utilised for extensions, to feed gross traffic receipts, or keep down working expenses, much of it being applicable to refunding purposes. As old bonds fall in they will be converted into this new security, which is all right and in accordance with usage, only how many millions does the board really intend to use as new money? San Francisco is another borrower, but it wants only £3,640,000, and may not come to Europe for any of that money. We have not heard that Chicago is also seeking to raise further loans, but evidently the Germans consider its population sufficiently wealthy, at any rate the Teutonic portion thereof, for some German bankers there have been offering it the new German and Prussian loans for subscription.

Less encouraging has been the reception given to the £3,000,000 in 6 per cent. notes offered on behalf of the Southern Railway. London is not keen after the paper, fearing an ultimate receivership. The Tide Water and Western Railroad, though, is said to have had its £3,400,000 of 6 per cent. notes "heavily oversubscribed," and perhaps "John D." took a hand in their disposal. That it was a fake we may be sure, from the character and reputation of the men behind the show.

Harriman is said to have been selling the shares in the Great Northern and Northern Pacific companies held by the Standard Oil or Union Pacific "system" since the engineers thereof made that Northern Pacific "corner." It is further alleged that the same group has parted with £8,000,000 worth of Atchisons. No wonder the market "slumped" often, but Harriman and Co. may thus avoid any immediate issue of Union Pacific bonds.

Business is said to be getting better in the United States, but only in a sentimental way. Perhaps those associations for the creation of "cheerfulness" have been producing some effect, although to us they seem to be a species of dementia. People meet and assure each other that all is well, and apparently, although they may be starving, the hearts of all are immediately merry. Actually, however, there must be some little change for the better in business, because the number of freight cars standing idle is less by 9,000 than it was a fortnight ago. Still, the total is 405,000, but it is something to see a reduction. Bank clearings are also less suggestive of diminishing business, the decrease compared with the same week of last year being little more than 4 per cent. The number of failures within the week, however, was 336 compared with 386 in the previous week and 191 in the same week of last year. Railroad earnings, moreover, show a decrease of 13.2 per cent. for the month of March in gross and of 14.4 per cent. in nett compared with March last year, and for the second week in May the total gross income of the principal lines is said to show a decrease of nearly 21 per cent. It is on the top of depressing facts of this description that the boom in stocks and shares is being worked. The president of the Atchison road is credited with the assertion that the worst of the traffic receipts will not be seen for two months yet, and he is probably about right, so far as his own line is concerned.

Were no other adverse influence at work, politics alone will prevent any development of solid strength in stock markets this year. Congress has been kept together to its disgust by Speaker Cannon, who has set himself to force through some currency "reform" legislation. It is not currency reform that is wanted or aimed at, but currency inflation, and it would doubtless be extremely valuable to the Republican party during the Presidential contest, which will become hotter and hotter from next month onwards until the beginning of November, if the printing press could turn out unlimited quantities of paper money to be used for bribery and other purposes. Congress, however, was reluctant, especially the Senate, and Speaker Cannon must have had an awful job of it. But he got a patch up at last, in virtue of which emergency notes may be issued by the banks to a maximum of £100,000,000, secured on State, county or municipal bonds taken at 90 per cent. of their market value, and on other bonds or commercial bills at 75 per cent. of their market value. The law is to last for six years, and should thus be good for two Presidential elections. It may help Harriman and his kind, too, to get the money they want.

We note the move only as an illustration of the current notions about currency and credit in the States and of the expedients to which the American politicians who rule the country are driven in order to try and maintain their hold upon it. At the same time President Roosevelt and his Cabinet seem to be determined to revive the "purity of corporations" farce, for it has been little else. A suit has, therefore, been entered against the Newhaven and Hartford Railroad to compel it to give up control of the absorbed Boston and Maine road, and to sever itself from the numerous local tramways which it has bought up and linked together, so as to make the New England railroad system as much as possible a complete monopoly. Many people in the street seem to scoff at the motive behind this latest move, and some dwell upon the fact that

the excellent Mr. Mellin is a great friend of President Roosevelt's, and that the suit must consequently be a friendly comedy got up for election purposes. As to that we cannot say, but for one reason or another nothing can be more certain than that there will be no peace on Wall Street for months to come.

An interesting question has arisen in the United States with reference to the payment of insurance policies effected by people who kill themselves. A New York life company, it seems, undertook some time ago to pay, whatever the cause of death, and we rather fancy that was the practice in the United States. Now, however, this company is said to have notified that it will not pay the claim arising through suicide if the policy exceeds £20,000. It seems that the late Mr. Chas. Coster shot himself within two months of taking out a policy for that amount, and a French writer on the subject says that no doubt the certainty that his family would not be left in want was one of the reasons that tempted him to take away his life. The feeling seems to be strong in France that policies becoming claims through this cause ought not to be paid under any circumstances, but we doubt whether that drastic course is possible.

Passing Events.

It was welcome news that the shipyard dispute had been settled. A poll was taken, which gave a majority of a little more than 2,000 on a vote of 46,000 in favour of the terms arranged, or suggested, by Mr Winston Churchill, the President of the Board of Trade. It is curious that so few of the men voted, but the result is the same as if they all had done so and given an overwhelming majority in favour of coming to terms. Peace should now ensue on the north-east coast, and we hope the end of the dispute will be a durable, better understanding between masters and men. It is lamentable that with all our education and facilities for getting at facts workmen should be so ready to resort to strikes when they cannot get their own way, and when times are so much against them as to make it impossible to gratify their demands. To strike when trade is expanding may sometimes be a step to victory for the workmen, but to do so when it is shrinking fast is only to waste money, bring incalculable misery into tens of thousands of households, and to ensure defeat. Everybody will cordially join in the praise given by the *Times* to Mr. Churchill for his judicious management of this ticklish quarrel. It proves him to be a worthy successor to Mr. Lloyd George.

Last week's Exchequer receipts amounted to £2,734,000, which was about £776,000 more than the receipts of the corresponding week of last year, and as the outgoings were comparatively small—only £910,000 as against £1,050,000 a year ago, with in addition £40,000 paid out on account of the cost of public buildings, making £950,000 in all—it follows that the Exchequer balances were increased by £1,784,000 to a total of £8,407,000, which was £664,000 more than the balance on May 25, 1907. It does not matter much at present how big the Treasury balances are, since the demand for money is so insignificant in the open market, but were any change towards stringency to take place there the inconvenience of large Treasury accumulations would at once make itself felt.

As we have all along feared, famine does not diminish in India. On the contrary, the numbers in receipt of relief appear to be creeping up again, in spite of a reduction of more than £50,000 in the total for the United Provinces during the week ended May 25. Altogether 1,354,000 were being cared for by the State at the date of the Governor-General's last telegram. Useful rain is reported to have fallen again in Northern India, but in Bengal the distressed area is extending and relief is now given in nine districts there. Elsewhere conditions are practically unchanged, except that in the Central Provinces the demand for relief among the weaver class is rapidly increasing. In the United Provinces the substitution of small village works for large public works is now in progress everywhere, and that seems to be in the nature of a humane reform. Those village works presumably take the form of tank constructing and other operations designed to mitigate in years to come the disastrous effects of drought.

Much interesting reading will be found in the report of the committee appointed by the Board of Trade to inquire into the working of our English bankruptcy laws. There will, however, be no Bankruptcy Amendment Act introduced this year, and very likely none during the course of this Parliament, so that any discussion of the question is more or less academic. In a sense the appointment of this committee emphasises the unsatisfactory working of the Act of 1883. It has never worked well, and we never believed in it, any more than the City, but then would any Bankruptcy Act work well in the present temper of the commercial classes? If a trader makes a bad debt now, unless it is very important, he prefers to avoid all trouble by taking whatever composition is offered, or he writes off the loss. Creditors will not take trouble to pursue their debtor, and although they grumble at what they describe as the inefficiency of the Government officials and at the frightful expense of liquidation they never take up the work and do it themselves. The existing law has driven bankruptcy into the system as it were, hid it away, and made trading something of a gamble, and is therefore in many ways mischievous. All the same we hope there will be no increase in the number of criminal offences brought into existence by any new law that may be passed. We doubt, indeed, whether imprisonment for debt ought to be allowable in any circumstances except when a breach of the criminal law has taken place, and as to many of the small debts, such as those incurred to the sweating money-lender, we believe the simplest remedy would be to make them completely irrecoverable. It ought to be impossible for the sweating money-lender to sue for recovery of his debt. Such inability would not once in ten thousand times do any substantial injustice.

New Zealand trade for the year ended March 31, 1908, looks flourishing from some points of view, although the exports fell off by over £1,600,000 compared with 1906-7 to a total of £17,869,354. The great decrease was in wool and sheepskins, the value of which in the past year was £6,791,393 as compared with £8,289,302 in the previous year, and wool, we fear, is not going to be a particularly resourceful and profitable article of trade for some little time to come. The falling off in the exports, though, did not at all damp the ardour of the New Zealanders in buying, for the imports of the colony amounted to £17,113,608 or within about £750,000 of the value of the exports. This figure was upwards of £2,600,000 higher than that for the year ended March 31, 1907, and we should have thought better of immediate prospects out there had there been greater disparity. That is to say, New Zealand being a debtor country under an obligation to transmit abroad interest and profits to an amount approaching, if not exceeding, £3,000,000 per annum, ought always to export goods to at least this amount higher in value than it imports. When, therefore, the two sides of the account approximate we may be sure that a sensible part of the imports is not being paid for by the commodities exported. If, therefore, New Zealand continues in the present year to buy almost as much as she sells we may look for a disturbance in the financial equilibrium, or increased zeal in raising loans in London.

This week's "Engineering Supplement" of the *Times* contains an interesting description of the Panama Canal from a correspondent, and one or two of his facts are worth repeating. Altogether the canal will when completed, with its locks and its great upper lake to be formed by the waters of the troublesome and capricious Chagres River, be 49 miles in length. Of this mileage 39 will be through hilly country involving work of a difficult nature from Bohio to Pedro Miguel. The

maximum depth will be 127 feet, and this central portion has still to be executed, but it is calculated by the American engineers that the whole work will be finished by 1915, including locks and every accessory. Most of the easier portion of the digging was done by the French companies, their excavations having extended over 36 miles, and the correspondent says that the commissioners and engineers now in charge of the work are full of admiration for the great ability shown by the French engineers in the location of the canal. Warm also was their praise for the amount of work done by the French companies under the greatest difficulties and when the science of sanitation and mechanical art had not arrived at the high plane on which they now stand. Several ingenious inventions are mentioned calculated to help forward the work, but perhaps the most remarkable feat of all is the construction of that enormous upper lake 31 miles in length, which will be reached from the Atlantic by three sets of twin locks, each having a lift of 28·3 ft. Each lock will be 1,000 ft. long by 100 ft. broad, and with a minimum depth of water of 45 ft. Similar locks will permit the ships to drop back into the Pacific Ocean level channel. It is reckoned that the time required to pass a ship through each lock will be 40 to 50 minutes, and the estimate is that a vessel will get through the entire 49 miles of canal in not more than 12 hours, and probably less.

At last the Powers seem to have come to an agreement about that Danube-Adriatic Railway, the construction of which they have agreed to permit. Apparently the money is to be found by France, Italy, Bulgaria, and Servia, France contributing £1,800,000, Italy £1,600,000, and Bulgaria and Servia £600,000 between them. We are glad that the way has been opened for this undertaking, because the more South-Eastern Europe is penetrated by civilising highways, the better it will be, not only for the populations therein but for the peace of Europe. The same remark applies to the Bagdad Railway, which we are glad to see the Germans have been permitted by the Sultan to go on with. Asia Minor is full of undeveloped wealth, and might contain a population of 50,000,000 or 60,000,000 were it only opened up and subjected to well-ordered government.

The nationalisation of railways question is being thrust forward into the political arena by the disappointing position of our railway companies, and may soon become quite as much a subject of wordy warfare as beer or pensions for the aged. This being so, the publication at 1s. of a little work on the subject, from the pen of Mr. A. Emil Davies, by Messrs. Adam and Charles Black, is welcome. Mr. Davies is a convinced advocate of this measure, and his proposal is that the Government should buy out the railways on the basis of so many years' purchase for their nett receipts. The Government has power to buy them out at 25 years' purchase, calculated on the average profit of the three years preceding the transfer. For the three years ended with 1906 the average nett working profits of the railways of the United Kingdom amounted to £43,500,000. This would give, on the 25 years' basis, £1,087,000,000 as the price to be paid, with, say, 3 per cent. stock, and that price stands against about £1,287,000,000 as the total nominal paid-up capital of the railways. More than £195,000,000 of this capital, however, is pure ornament, or "water," and an investigation into the accounts must precede any proposal to take them over, in order to discover whether, and to what extent they may have been helping revenue by drafts upon capital. Mr. Davies's book, however, is opportune.

An unfortunate and regrettable mistake occurred in the article on the Great Eastern Railway, published in our issue of the 16th inst. It was there stated that the company's stock of locomotives was 670, and that this worked out at an average of £1,476 per engine, whereas the real figures are 1,085 engines of an average value of £911 per engine, which is moderate. This was a blunder easily explained, but none the less reprehensible for that. The figures relating to tenders were taken instead of those relating to engines, and the blunder slipped through, as blunders always do, on press day. We are very sorry.

Continental Memoranda.

It is amusing to observe how the fate of Continental markets seems to hang on the decision of the Bank of England as to its rate of discount. For several weeks back the German bourses in particular, and the French to a lesser extent, have been counting on a reduction in the Bank of England rate to 2½ or even 2 per cent., and the failure of this hope to realise has sensibly limited, or is at least alleged to have limited, speculation. When all is said, however, there is not much to be done, and until the great stores of undesirable securities, mining, Yankee and other, have been cleared off by their present holders we do not believe that any market, at home or abroad, is likely to display trustworthy firmness. The French market, moreover, continues disturbed by the wrangle over the income tax which the Government is determined to impose no matter what the opposition may be.

Amongst items of fact recorded since we last wrote is an issue of £1,000,000 in 4 per cent. obligations by the Franco-Argentine Mortgage Bank, that is to say 45,000 obligations of 500 frs. each are to be put out at the fixed price of 450 frs. per bond, various French banks joining in the work.

A rather pungent article upon the delayed French budget for 1909 which should have been out in February and is only visible now comes from the pen of M. Armand Milly. It would be worth a full summary if people here took enough interest in the financial position of their neighbours. Briefly, however, the budget points to a deficit of 44,000,000 frs., or £1,760,000, and the Finance Minister, M. Caillaux, is going to bridge this deficit by trying to enforce a more honest payment of legacy duties. He thinks if he can stop evasions he will get £1,240,000 from that source, and he counts on an increase of £400,000 by doubling the licence duty paid by sellers of absinthe. An advance of 1.75 frs. per 100 kilograms in the tax on the manufacture of mineral oils would bring in another £40,000, and various other small additions are looked for, but it is rather a shaving-the-bald-pate kind of job at best.

Apparently the Edison Continental Company has done remarkably well, quite differently from most of the electric concerns in existence. It is claimed that its present solid position is due to the care with which resources have been husbanded in the past when the greater part of the profits were applied in wiping off all burdens so that there would be no risks to run at the end of the concession. The nett profit for the company's past business year came to 3,363,000 frs., of which 2,000,000 frs. will be absorbed by the dividend on the ordinary shares, 982,000 frs. by the dividend on the founders' shares, and a small sum of 168,000 frs. assigned to the reserve. Then the administrative council gets 420,000 frs., or 15 per cent. of the profits, and 48,000 frs. remain to be carried forward.

Owing to the American crisis it is said that the shops and stores in Yokohama are piled up to the ceiling with bales of silk which under normal conditions would long ago have been on their way to the United States. The capital wrapped up in this unsold stock is declared by French authorities to amount to £7,240,000. We fancy that is a considerable exaggeration.

From French sources we learn that something like a sensation has been exicted by the news that the Brazilian Government is selling this week 50,000 sacks of coffee in Hamburg, and that similar sales are to take place both in Rotterdam and Antwerp. This news is all the more startling because only a short time ago the Brazilian Government formally denied the rumour that sales of coffee were about to be undertaken.

Besides the loan of £1,500,000 issued here by the Bank of England for the Agricultural Bank of Egypt, money has been flowing into that country from France as well, £4,000,000 in 500 fr. obligations having been

issued in Paris by the Egyptian Crédit Foncier through the agency of the Banque de Paris and its neighbours. Arrangements are also said to be in a very advanced state for what is called an obligatory loan of £1,000,000, apparently on behalf of the French banks operating in Egypt, so that altogether, what with the English loan and these various issues, it is reckoned that about £7,000,000 of new money will within a few months "be flowing through Egypt like an oil stream, wiping off debts, strengthening shaky positions, providing for all industries, and giving life to commerce." All at a price, of course.

German markets are waiting for that reduction in the Reichsbank rate they have been praying for these many weeks past. Meanwhile the joint-stock banks have reduced their rate on deposits to 3 per cent., one of them having gone as low as 2½ per cent., and probably the Reichsbank will have to come down, for it is getting considerably stronger, although not perhaps quite up to the condition that would guarantee the stability of markets throughout the year.

From German sources this time unpleasant news comes about Japan, a German Yokohama correspondent having drawn a dark picture of the state of affairs in that empire. Each day, he says, brings an increase of despondency. No fewer than 39 bank failures occurred last year, with total capital amounting to £7,600,000, and the first quarter of this year has been worse, no less than 23 more banks with a share capital of about £1,300,000 and deposits amounting to about £4,900,000 having stopped payment. The difficulty of the banks is added to by the withdrawal of deposits, the money being placed in the savings banks, and depositors are said to be pretty well always in a state of panic. The metal, mines, tea, soap, textile and paper trades are said to be all more or less in a bad condition. But the blackest features of this picture should by now have begun to pass away.

German raw cotton imports for April were almost 27 per cent. behind those for March and 14 per cent. behind April, 1907, and this although the German colonies sent in more than they ever did before. Imports of cotton yarn and piece goods have also fallen off considerably since January, and the same decrease is visible almost throughout the list. For the first four months of the year the imports of gold exceeded the exports by about £10,730,000 against an excess of £7,824,000 last year.

Germans are waiting to sell their South African shares, of which they possess a good many cartloads, speaking summarily, and that fact should be taken note of by operators here, especially the sanguine gentlemen inside the Stock Exchange who think because a few manipulative buying orders have come in from the Continent that, in the vulgarism of the street, "the foreigner is once more on the feed." Should prices be twisted up much further here, we may be certain that the market will be swamped by the inpouring of shares from all parts of Europe.

A new Russian bank, of which mutterings have been heard, is stated to be in active preparation under the guidance of Count Witte. It is to be a great national credit-generating bank, whose principal business, it seems, will consist in providing loans for the Government. The money is to be raised at home, it would seem, or this bank will grant the advance and try to rake the money in from abroad. It will also devote its energies to maintaining the prices of Russian securities on the principal money markets and perform other good and necessary works. The capital is to be 1,000,000,000 roubles, or £100,000,000 roughly, and £60,000,000 has already been subscribed by the Merchant Association of Petersburg and Moscow, and people interested in the petroleum and sugar refining trades. The bank is to be opened in autumn, and then doubtless we shall see many wonders. Meanwhile the Government is finding difficulty in filling that internal loan so much talked of, and much opposition is shown to the Amur and other railway extension and duplication projects on account of their enormous cost.

A Spanish loan of about £6,400,000 in 4 per cent. bonds is receiving scant courtesy in Madrid. Much of the money is to be used in paying off expiring short-term 5 per cent. obligations, and the holders naturally want 5 per cent. again, so the loan has been a dead frost, little more than £1,000,000 having so far been subscribed. Some of the papers write that the Finance Minister will probably have to resign because of this failure.

Spain is still suffering from the effects of the Barcelona crisis, and its import trade has again contracted to a sensible extent in March compared with the figures of either of the two previous years, but the exports are swelling, and that is a good sign.

The Week in Mines.

The Carry Over.

The mining settlement which commenced on Tuesday with the arrangement of contangoes was a more important affair than anything experienced these many months past, owing, of course to remarkable activity, relatively speaking, witnessed during the account. But bankers' money was cheap, and rates, although slightly higher than on the previous occasion were never allowed to become onerous. The shops and finance houses have not yet completed the upward drive, and until some progress has been made with the distribution of the bales of shares so carefully nursed during several weary years we may be sure that nothing will be done to discourage the Bull movement. Later on when the market players have carried the game as far as they think it will go the ragged brigade will probably be mulcted in pretty stiff charges, but just now anything of the kind would be a tactical blunder. So as a rule Kaffir shares of all sorts could be borrowed on at 5½-6½ per cent., Randfonteins alone paying more, while East Rands were continued at 4½-5½ per cent., and Johnnies at 5-6 per cent. Among Diamond shares the charge on De Beers was 2½-3½ per cent., Jagers were taken in at 4½-5½ per cent., Premiers at 3-4 per cent., and New Vaals at 5½-6½ per cent. One or two Rhodesian rates were stiff, 7½-8½ per cent. being exacted on Tanganyikas, and ¾d.-1d. on Chartered. Zambesias were continued at 5½-6½ per cent., and the general rate was 5-7 per cent. This was also the charge on West Africans, West Australians, and Broken Hills, but Siberians cost 6-8 per cent., and the American gold shares 6½-7½ per cent. Bulls feasted their eyes on the making-up list, and were in great good spirits. De Beers took the lead, the preferred being 1⅜ and the deferred 1 5/16 better, while gains of over £1 were seen in Central Minings, Modders, and Tanganyikas. H. F. put on ⅞, Apex 1⅛, Rand Mines and Premiers deferred ⅝, Gold Fields, East Rands, Angelos and Casons 9/16, New Vaals ⅞, Welgedachts ½, and any number of others smaller fractions. In the West African list Ashanti Goldfields were 4s. 9d. up, and West Australians provided rises of ¼ in Horse Shoes, and ⅛ in Ivanhoes. Copper shares were irregular, the principal movements being gains of 2⅜ in Rio Tintos, and ½ in Utahs, and a drop of ⅞ in Great Cobars. Tin shares were lower, South Croftys being down ⅜, and in the miscellaneous list Mexico El Oros put on ⅝, and Santa Isabels were ½ lower. Talismans showed a drop of ¼.

Kaffir Shares.

The wonderful blaze up in the Kaffir Circus has taken everyone by surprise. After such a long process of exhaustion and falling prices, coupled with numerous other troubles, few indeed thought the big houses had either the pluck or the means to engineer a movement on such a gorgeous scale. They are probably playing their last cards, and if the public does not come along this time and relieve them, a really desperate situation will be opened up. It must have been a tremendously expensive business to bring about the recent rise, and no doubt a good many holders have taken advantage of it to reduce losses on shares bought much higher up at times

when the public was more easily deluded than it is now. No doubt a certain amount of genuine business has been going on, although we look with suspicion on the large German buying daily reported, and half suspect that London is the real source of most of the orders which apparently come through one or two of the big German banks. Paris has been a buyer, but only a modest one, and the shops have had to exert themselves to a high degree to keep things well on the move. Still, all said, the market has displayed a quite remarkable buoyancy, and has faced important bouts of profit taking without flinching. The big people took the shares with apparent relish, just as though they had tumbled on some undiscovered bargains. Monday was option day, and a good many shares were called, but the givers did not frantically bid for shares as some had expected, and probably the majority had fully covered themselves lower down. Active and excited street markets have existed every night this week, hardly recalling the palmy days of Kaffir booms perhaps, but rendering progress through Throgmorton Street very slow and uncomfortable. More attention has been given to the rank and file than to the regular market leaders, although the latter have kept pretty well to the front, and shares of every kind —including the rubbish, of course—have been taken in hand and driven forward. Close observers say that the play is not nearly finished yet, and much higher prices will be witnessed; but the wise will set about taking any profits that exist, because when the market boils over the slump may be quicker than the run up. Fears are expressed that advantage will be taken of the present recovery to bring forward some of the numerous finance schemes that have been kept back pending a favourable opportunity. It may be so, but we doubt if this is part of the game for the immediate future; and certainly the magnates would be well advised not to run risks just yet. The public may be showing a greater willingness to lose money through ordinary speculations, but putting up fresh cash for doubtful and speculative propositions is another matter.

Rhodesian Land and Finance.

Although gold shares have performed nobly the Rhodesian section really takes the palm this week. It has accomplished prodigious feats, and arguments for rushing prices up have been as plentiful as strawberries in July. We could easily fill a column with Chartereds and Tanganyika "bull points," but have no space to waste. Somebody is said to have sprung the balance of the Chartered debenture issue recently offered, thus giving the company a million to play with, but we should doubt that. The railway though is to be rushed north from Broken Hill to the Tanganyika copper deposits and the metal is to be put down in London at £25 per ton. Just think of that, and the Lobito Bay railway will only cost about nine millions to build, the distance being the trifle of 2,000 miles, including some terrific gradients, so we are told. But the Rhodesia and Beira railways will provide an alternative route, the distance in this case being only 1,400 miles to the coast, and we know how low freight rates are in South Africa. The whole affair is more like a nightmare than a serious business proposition and anyone who buys any of this Rhodesian rubbish will certainly lose his money and deserve to. But the public is to be drawn in if the trick can be managed and already money is being expended on articles in the newspapers. Great play has been made with the old favourites in the Land and Finance section and Diamond shares have also caught the infection. The actual trade position has not changed to any great extent, although it is said that Hatton Garden has managed to sell a few stones, but the market sticks to the belief that arrangements have been made for the payment of the De Beers preference dividend next month, and the bears have been getting a bit fidgety. New Vaals soon collapsed after the directors issued a statement to the effect that there was no important news to be communicated to shareholders, but the shares of Willoughby's South African Option Syndicate were dashed up a couple of pounds on reports of great discoveries.

West African and Australasian.

Favourable development news was helpful to Ashanti Goldfields, but the West African market as a whole was very quiet. Among West Australians Horse Shoes continued to be sold from Paris, but Ivanhoes were in small request, and the rest remained fairly steady. New Zealands kept up well especially Waihi Grand Junctions on cable advices that another reef has been struck. Broken Hills were quiet and prices showed dulness owing to the reactionary tendency of metals, and the Block 10 Company has joined the list of non-dividend payers on account of the current quarter. A rather important amalgamation has been discussed involving the North, South and Proprietary companies, but the directors of the first named company which sent the news is doubtful if terms satisfactory to them could be arranged. However, negotiations have not been broken off and we may hear something further presently.

Copper, Tin and Miscellaneous.

The copper share market has been somewhat overshadowed by the excitement elsewhere, and prices have been dull and heavy. The Yankee collapse had a good deal of influence, and the market is taking a decidedly pessimistic view of the outlook for the metal. The same applies to tin, but tin shares have not moved to any extent. In the miscellaneous groups the American shares have encountered small buying, and some fluctuation has been seen in Mexico El Oros. The Siberian things were miserable, and Indians were inclined to be dull.

MINING NEWS.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Windsor Gold Mines.—This company's operations for the year to December 31 last turned out poorly, and while prospects now seem better, the outlook does not appear altogether encouraging. Tonnage crushed was 60,607, yielding £70,938 or 23s. 5d. per ton, but the working costs came to £73,631 or 24s. 3d. per ton, meaning a loss on working of £2,693. Sundry items brought in £304, but interest came to £2,767 and £5,547 was allowed for depreciation, so that the debit to profit and loss was increased from £83,247 to £93,960. Payable ore reserves at the end of the year were 101,000 tons of south reef, averaging 10 dwts. and 55,000 tons of main reef of an assay value of 6.4 dwts., and it appears that by changing the system of mining a large quantity of developed ore previously regarded as unpayable has now been included in the payable reserves. There are also 280,000 tons of main reef of an assay value of 4.9 dwts. considered unpayable at present, but portions of this will be brought into the payable working limit as soon as the miners become more expert in the "resueing" method which has been adopted in respect of the narrow reefs upon the property. Mine development has been continued, and a change for the better in the lowest levels opened up can be recorded. The values disclosed in both the south and main reefs encourage the hope that in the near future the mine will yield better returns than it has done since 1899. It is expected that a suitable plant of modern type for treating accumulated and current slimes will be erected at no distant date. The company is in debt to the amount of £38,405 nett, but the directors are sanguine that an appreciable reduction will be effected during the current year.

Barrett Gold Mining.—Operations for the year to February 29 did not turn out very successfully, but this was largely due to the serious effects of the rains and floods referred to in the previous report, which continued for several months into the period now being reviewed. Considerable damage and delay resulted, and, owing to further extensive subsidences taking place, many of the faces in the open cast working were demolished and certain of the adit levels caved in. Throughout this time, which extended for six months, the chief source of supply was from the places where the falls had occurred, and, owing to the ore becoming mixed with the non-productive overburden, a considerable reduction in the values resulted, rendering the company's operations most unremunerative. Happily, by the end of August most of the damage had been repaired and the mines reorganised, and with a general improvement in the grade of the ore, profits were earned during the remainder of the year which proved sufficient to counterbalance the previous heavy losses. Value of the gold produced was £13,430, licences gave £12, and the directors credit £100 for appreciation in value of tree plantations, which is not very sound finance. After meeting all expenses at the mine, there is a balance at profit amounting to £623, which is raised to £1,212 by interest, dividends, rents, &c. On the other hand, expenses in London, &c., and £342 allowed for depreciation of investments amount to-

gether to £1,325, so that a deficiency of £113 is brought out to be added to that already existing, making £1,640 in all. Working costs were reduced to 7s. 4.2d. per ton, and a very small increase in the grade of ore would make a very big difference in the results achieved. Developments appear to be promising.

Gold Coast Amalgamated Mines.—We are always amused when we pick up a mining report and find directors lamenting that increased gold production has not brought booming prices and fabulous profits for the companies digging out the metal. This is a rather common failing among directors of Rhodesian and West African mining companies. Output for several years is carefully tabulated and for the life of them the directors cannot understand why markets do not respond to such overwhelming evidence of growing prosperity. The fact that a sovereign's worth of gold has in all probability cost 25s. to win and that perhaps six companies out of several dozens at work manage to squeeze out profits and dividends would not be taken into account. The board of this concern are sorry that a steadily increasing gold production in West Africa has had an opposite effect upon the value of mining shares, but probably they are not surprised. In this case no exploration or development on its own account has been done by the concern during the past year, but most careful attention has been given to the affairs of the three producing mines belonging to separate companies in which the Amalgamated has large interests. These are the Abontiakoon Block 1, Prestea Block A and the Wassau (Gold Coast) mining. We deal with the report of the last-named in these columns, and should not make further reference to its affairs except for one very important point. The directors tell us that the average value of gold produced per ton of ore treated on the Tarkwa Banket Range during 1907 was 45s. 9d. and on the quartz properties in the colony 48s. 2d., and then by way of illustration point out that the working costs, exclusive of development and London expenses of the Wassau company have been pulled down from 48s. 5d. in 1906 to 22s. 4d. for 1907, while for the four months to the end of April the figure was 20s. 3d. But the said development and London expenditure including debenture interest added just 10s. per ton to the 1907 costs (which were 22s. 5d. not 22s. 4d.), and depreciation in plant, &c., was over 3s. 5d. per ton, so that we get a total of 35s. 10d., a very different matter. Moreover, we may be sure that this illustration is not the least favourable the directors could have discovered and the Wassau value per ton was just under 43s. It is a pity not to state all facts quite clearly, and we note that owing to unfortunate incidents the working costs of the Abontiakoon Block 1 will be higher than in 1906. The report is not issued yet and the directors cannot give the figures, but they might have mentioned that in the 16 months to the end of 1906 the costs were 37s. 7.17d. per ton against a gold yield of 39s. 8.26d., and this without allowing a farthing against development. We could say much more, but the above will suffice for the moment. The Prestea Block A is perhaps the most promising undertaking, but here again it has to be admitted that working costs are high although material reductions are expected when the railway from Tarkwa to the mine is completed. Altogether the Amalgamated company has investments in 15 different companies which are entered in the balance-sheet at £133,043, while vendors' shares in various companies of the nominal amount of £341,953 are taken as nil. Cash is near the vanishing point, but there is a little bit of Consols, and if loans to the Stock Exchange for £988 were called in, settelment machinery would not be thrown completely out of gear.

New Rhodesian District Development.—This company is interested in lots of other undertakings and puts down its various holdings at cost price, namely, £120,677, but the directors are careful to tell us that the present value is below this figure. We should like to know how much below, and the auditors would hardly have gone beyond their province by giving the information. The latest accounts cover the brief period of three years to the end of 1907, and in the time the general expenditure in London and Rhodesia was about £22,000 against receipts of rather more than £9,000, so that the deficiency is increased from £10,465 to £23,105. On December 31 last the cash balances in London and South Africa were £39, but there were loans of £23,681 which in some miraculous manner have since been reduced to £15,202. It has not been possible to form any company to work the Kimberley property, but the owners have leased the claims to tributors under an arrangement by which this company will receive an interest in the claims equal to the amount under the original option agreement. The information set forth concerning the property points to fairly good prospects, and the Battlefields (Rhodesia) is also a promising concern. Other investments are in the Rhodesia Copper Company, United Excelsior Mines, Mashonaland Consolidated, and Umniati Development.

Wassau (Gold Coast) Mining.—The report of this well-known West African Company does not impress us very greatly, although some progress towards a better order of things was made during the year to December 31, 1907. Crushing at the Adjah Bippo mine proceeded steadily throughout the period, the quantity dealt with being 50,210 tons, which realised 25,332 ozs., worth £107,641 or an average of 42s. 10.51d. per ton. Mine working expenses were £56,267 or 22s. 4.05d. per ton, which shows a slight diminution compared with the previous few months. Cost of development, in addition to mine working expenses, is about 7s. 6d. per ton of payable ore, and London expenditure, including debenture interest, is round 2s. 6d. per ton, making the real working costs 32s. 5d. After crediting sundry items, paying debenture and other interest and London charges, the balance of profit is £46,457, and of this £22,264 is allowed for depreciation, £13,662 being applicable to loan account, and the balance of £24,192 is written off development account. Development operations for the year have about compensated for the tonnage crushed, but it appears that in the southern workings the distance separating the two reefs has proved greater than could have been ascertained when the estimates at April 30, 1907, were made, and this extra width, being waste rock, has considerably diminished the average value of the ore reserves. These are estimated at 101,478 tons of an average value of 9.9 dwts. per ton. The plant and machinery has on the whole been maintained in good condition, but the battery foundations are in need of renewal. The directors have therefore purchased and shipped 10 additional stamps, so that when these are erected the foundations of the existing 30 stamps can be renewed 10 at a time and the present number still kept in operation. Later it is hoped to keep the whole 40 running. Arrangements have been made for the provision of funds necessary for the development of the Cinnamon Bippo Company and the money will be spent in sinking and driving, and opening-up as large an ore body as possible. This company did not contribute to the £56,000 provided, but agreed to relinquish to those who found the cash a portion of its holding in the Cinnamon Bippo, believing the policy to be a wise one for several reasons.

Associated Queensland Mines.—This company is interested in 22 mines, and some of these must surely turn up trumps. This is the directors' view, the opinion being held that numbers give strength. The shares possessed in each venture must be few, as the entire holdings are entered at £5,944, but somehow a goodwill of £1,250 has been tacked on. Revenue for the financial period to December 31 last was £100, and £258 was transferred from depreciation reserve, but nett loss on investments sold and liquidations was £1,084, so that the deficiency was £810, despite a credit of £285 from previous account.

Brilliant and St. George United Gold.—This company's operations have been steadily diminishing for some time, and on account of the past six months no dividend can be provided. This seems to be the first occasion that shareholders have been sent empty away and we note that during its career the mine has returned £791,000 to the shareholders. Revenue for the period to February 14 was only £20,805 against an expenditure of £22,067, so that a debit of £1,262 resulted, but as the company has an accumulated credit of £43,525 there is no immediate cause for despondency. However, the development operations of the half-year revealed nothing very striking, and the future of the concern is somewhat problematical.

Golden Pole Gold Mines.—This company's output for the half-year ended January 31 was 4,887 ozs., valued at £20,704, and after providing working and general charges the balance over was £7,397. But depreciation and mine development accounted for £6,654, and the credit to profit and loss is increased from £22,811 to £23,554. Ore reserves are given at 8,262 tons of an average assay value of 9 dwts. per ton as compared with 8,727 tons averaging 12 dwts. at the end of the previous six months, and in the hope of improving the company's fortunes an option has been taken over the property of the Kohinoor South Gold Mining Company.

Pena Copper Mines.—During the year ended December 31 the output from the mine was 186,758 tons, an increase of 13,349 tons over the preceding twelve months, and of this 167,236 tons were added to the heaps for leaching, and 19,522 tons set aside for export. At the end of the year the quantity of ore under treatment on heaps was 536,476 tons, as compared with 482,844 tons, the copper contents of which were 4,918 tons and 4,119 tons respectively. The ore ready for export at the mine and Huelva depôt was 23,212 tons. Production of copper precipitate was retarded somewhat by a deficient rainfall, the prolonged drought not breaking up until towards the end of September, 1907, and work was continued under most disadvantageous circumstances. Output was 170 tons less at 909 tons, and it was certainly unfortunate that the reduced water supply prevented the company from obtaining the full benefit from the high prices of copper ruling during the earlier months of the year. With the exception of cupreous pyrites, ore shipments were a good deal reduced in consequence of more metal being retained for leaching. After charging £5,595 for depreciation, profit on sales of produce, &c., was £41,303, reduced to £19,522 by debenture charges and London administration. With £5,382 brought forward, the sum for disposal is £24,904, from which £5,000 goes to reserve and £12,000 to a special account for investigation, development, and similar work, leaving £7,904 to be carried forward. In December last £9,400 debentures were drawn for redemption.

San Miguel Copper Mines.—There seems to have been some little trouble in connection with this company's financial affairs. It was discovered, so the directors say, that the interim dividend declared on October 20, 1906, was based on an inaccurate profit statement, the amount returned as nett revenue being £19,214, whereas the proper amount should have been £8,704. There is a prospect of legal proceedings against those of the former directors responsible for the dividend distribution, and the best legal advice will be taken. In the circumstances the balance-sheet at December 31, 1906, has been overhauled, and the directors recommend the provision of £15,055 to write down certain items which will involve the withdrawal of £10,522 from the reserve, reducing it to £49,477. Operations during 1907 were by no means satisfactory, thanks to a variety of

adverse circumstances, including the accident in 1906, absence of rain, a fall in value of the ore mined, and the collapse in the price of copper. The operations resulted in a profit of £2,153 only after providing depreciation, and it is proposed to write this sum off development account. The present policy of the board is to leach on a much larger scale than formerly instead of exporting the copper ore. At present copper prices leaching is more advantageous than exporting, especially as the water supply at the mine has considerably improved. But it must be noted that the policy is delaying the realisation of profits, which can only be gathered as the copper is extracted from the ore.

Tilt Cove Copper.—This company's property is leased to the Cape Copper on the basis of equal division of profits, the latter also paying a rent of £4,400 per annum. Revenue accruing to the Tilt Cove for the twelve months to December 31 was £30,017, and after providing debenture interest and all other charges the balance remaining is £23,588. To it is added £3,510 brought forward, making £27,098, and the dividends provided from this sum aggregate 5s. per share or 12½ per cent., leaving £3,474 to be carried forward. The company has general reserve and depreciation funds to the amount of £20,105 and the agreement seems a good one for all parties.

Van Diemen's Land Company.—This is a chartered company, having a governor and four directors, and the operations for the year 1907 were tolerably successful. They bring to the shareholders a dividend of 17s. 6d. per share, the nett profit being £8,409 out of a total gross income of £15,449, including £359 brought forward. There was a substantial increase in the rent roll, and while live stock farming yielded less, this was due to the prudence of the manager in holding back while prices were low. Land sales were just over 1,306 acres, which, being forest land unimproved, means no loss of revenue. Surveying has been almost completely confined to the Emu Bay Estate, and an efficient prospecting party has gone out to look for minerals. By the successful formation of the Burnie (Tasmania) Timber and Brick Company the estates of this undertaking will after July 31 next be entirely free of debenture debt, each £25 share representing over 34 acres of freehold land, besides an interest in the other assets. During the year debentures to the amount of £21,700 were redeemed.

Mexican Agency.—This company was formed to acquire the mining and other interests of the Compania Minera de Mexico properties at Guanaceri and to undertake general business in Mexico. The report now submitted covers the period from May 1, 1906, to June 30, 1907, and of the capital of £350,000 shares to the amount of 86,100 were issued to the first-named concern and 191,250 to the Guanaceri company in exchange for the same number of shares in that undertaking leaving a balance of 72,650 in reserve for the purpose of providing working capital; but owing to the general condition of the market it has not yet been found possible to issue these shares. Two of the directors went to Mexico early this year and obtained some good business on favourable terms, but unsatisfactory financial conditions prevented a good result. An inspection of the Tetela mines led to discouraging conclusions, and Mr John B. Farish was requested to make an examination of the property. This gentleman recommends a further expenditure of £5,000 to develop new ore bodies and a remodelling of the mill. The Guanaceri company started milling at the beginning of the year, and the consulting engineer, Mr. L. Chevrillon, advises that a satisfactory extraction of the values has been obtained, but the quantity of ore that can be treated by the present mill is too small to allow substantial profits. The directors of that company are therefore considering the advisability of raising further capital for the purpose of increasing the plant and developing the various mines.

MINOR NOTICES OF COMPANY REPORTS

Bengal Dooars Railway Co., Limited.—In the second half of 1907 this company's gross receipts rose by Rs. 12,281 to Rs. 5,54,124. Working expenses also went up, partly because of the heavy expenditure caused by floods, the total revenue charge on this account up to the end of 1907 having been Rs. 1,68,365. After deducting the year's charges on this account the nett revenue in sterling amounted to £34,803 for the half-year, out of which the ordinary stock gets its dividend made up to 4 per cent. for the year, leaving £17,709 to be carried forward against £19,649 at the end of 1906.

British Indian Tea Company.—A small decrease of 7,306 lbs. at 1,074,465 lbs. in the 1907 crop was more than offset by an improvement of 0.91d. to 7.39d. in the average price, and nett profits after paying managers' commission were £2,298 up at £5,850. Adding £1,177 brought forward and £352 from interest, &c., and deducting £456 for depreciation on investments, income-tax, &c., the available surplus was £6,922 compared with £4,434. The directors, as usual, proceed to distribute practically the whole of this, and after raising the dividend from 4 per cent. to 8, increase the sum carried out by a mere £54 to £1,231. Reserves are still unknown, and, what is still more important, no steps have yet been taken to write off the loss on the area abandoned in 1906, so that the block account remains at £60,967 or well over £31 10s. per cultivated acre. Floating liabilities are £2,003 up at £7,430, and against this debtors owe £3,553 or £538 less; but cash has risen by £2,273 to £10,411, of which, however, £4,866 will be required for the dividend. Investments have been written down by £248 to £2,225 and advances on account of the current season are £3,141 higher at £13,833.

Brownlee and Co.—With £2,613 brought in the sum to be dealt with after payment of all proper costs and charges amounts to £30,660. Debenture interest and preference dividend provided for £5,000 is put to reserve and 10 per cent. is again paid on the ordinary shares leaving the carry forward slightly reduced at £2,110. Ground buildings and machinery of sawmills at Glasgow and Kilmarnock figure at £103,000 or £1,000 down after allowing for additions and £1,339 depreciation. Sawmills, &c., at Grangemouth are likewise £1,000 lower at £31,000, additions amounting to £194 and depreciation to £1,194. Leasehold property, plant, &c., are unchanged at £2,000. Stocks of timber are valued at £125,066 and cash comes to £88,500. Debtors at £108,192 far exceed creditors for £39,333. Reserve with the year's contribution totals £47,500 and is employed in the business, but taking it all round the position appears healthy.

Bulawayo Waterworks Company.—Profits for the year ended December 31 show a falling off of £562 to £7,123, of which sale of water produced £2,475, a shrinkage of £395, and electric current at £4,648 accounting for the balance. Sales of water fell rather over 1¼ million gallons, although the average number of consumers was a little higher, a state of things due to a copious supply gratuitously provided by Jupiter Pluvius. On the other hand, both supply and consumers of electric current increased, loss notwithstanding. Total revenue amounted to £9,015, absorbed as to £3,600 in debenture interest, £4,242 in depreciation, £1,537 written off cost of debenture issue and £159 in law costs in a successful action against the municipality, leaving £2,503 to be added to the existing debt of £2,614. Property with additions of £498 during the year and less £32,356 depreciation now figures at £117,208. Investments taken into account at £27,030 were worth at December 31 less accrued interest £25,697. Trade balances show £2,585 to come in against £1,416 owing by the company. Cash, including £800 in transit, totals £4,822, out of which £1,710 is due in debenture interest, and the cost of debenture issue of £60,000 is now reduced to £5,455.

Colonial Bank of Australasia, Limited.—Profits for the half-year ended March 31 last were about £1,382 more at £24,064, including £858 brought forward. The directors accordingly add the same amount of £5,000 to the reserve fund, making it £120,000, and pay the usual dividends of 6 per cent. on both the preference and ordinary shares, leaving £5,885 more to carry forward, or just the amount of the extra profit more than a year back. Very little change has occurred in the accounts, but the liability on deposits of all kinds is about £1,225 up at £3,113,711, of which £1,585,165 consists of private deposits bearing interest. Another £284,278 of Government money also bears interest. Cash in hand amounts to £634,085.

"E.C." Powder Co., Limited.—Gross receipts from all sources for the year ended March 31 showed a decrease of £1,157 at £15,816, but the directors can find nothing more to tell their shareholders than that "sales of powder are most satisfactory." Including £3,897 brought forward the nett profits were £1,005 down at £12,992, out of which £500 less at £1,000 is written off freehold lands, together with £1,000 off machinery and plant, against a similar sum off patents a year ago, and £500 is put to an investment reserve or half last year's appropriation to reserve. During the year the £3 shares have been divided into £1 shares, and the reductions just noted enable the directors to pay a dividend and bonus aggregating 3s. per £1 share compared with 8s. per £3 share, with a decrease of £830 to £3,067 in the balance carried forward. In addition to the £1,000 now written off buildings, &c., £971 was provided out of revenue for depreciation, and as expenditure was only £380 the nett reduction is £1,591 at £11,817. Patents still stand at the nominal figure of £1,000 and freehold land is down to £2,543, against which the reserves amount to £14,000. Debtors and bills receivable at £9,771 exceed creditors by £8,326, stocks are slightly higher at £9,465, and although cash has dropped by £3,577 to £6,369 investments come to £5,620 more at £29,506.

John Shields and Co.—Profits for the year ended February 29 are declared without exhibition of accounts at £6,266 making with £20 brought forward a disposable sum of £6,286. Out of this is paid the preference dividend and £500 placed to reserve leaving £786 to go forward. For 1906-7 the "A" ordinary shares go 12½ per cent. The directors regret a disappointing result due to the American financial crisis, when they had been anticipating a record year of trading and profit. Property, machinery and goodwill figure at £140,765 in which buildings and machinery have been revalued at the end of 1907 at £11,038 over the book cost. Stocks of cloth and yarn have been valued at the reduced prices of the day at £103,662 making thereby a vital difference to the profit of the year. Cash is £4,797 and debtors only amount to £9,231 against £49,669 owing by the company, including drawings against U.S.A. sales. Reserve with the year's contribution only amounts to £5,500.

King's Norton Metal Co., Limited.—Heavy blows at the prosperity of this company were inflicted in its year ended March 31 last by the depreciation of about £50 per ton in the value of copper, the increased price of coal and of stores, &c. No wonder, therefore, that the directors have been obliged to transfer £35,000 from general purposes reserve to add to the balance of £907 brought forward for the loss on the year's trading amounted to £26,767, including £6,500 applied in reduction of the value of the normal stock of copper to a basis of £41 per ton and £6,631 written off the cost of experimental work. The unappropriated balance is £2,509, out of which the directors have put £2,000 to depreciation, leaving £509 to

be carried to the new year. The debts due by the company, including loans from its bankers, amount to £70,068, and the debts due to it to £47,437. Cash stands at £106 and stocks on hand and work in progress at £46,154.

London Central Markets Cold Storage Company.—Very little progress was made during the year ended March 31, and the directors say that the period may be considered slightly below the average for cold storage, Australian supplies having been partially diverted to the Eastern and African markets, and the Argentine consignments restricted by high prices in Argentine and low values here. Gross profits consequently were only £850 up at £17,481 compared with an increase in the preceding 12 months of £2,949, and as general charges were £373 heavier at £7,552 and leasehold insurance premiums, depreciation and other charges took £3,220 or £225 more, the gain in nett income was no more than £249 at £6,711. A smaller balance of £417 brought forward left the disposable surplus at £7,128 against £6,972, and after providing for debenture interest and redemption the dividend of 5 per cent. is repeated and £573 is carried forward. Premiums paid on the leasehold redemption policies to cover the return of the share capital now amount to £11,486, while the debenture reserve has been increased by £621 to £4,091, and the investments representing it are £903 higher at £3,592. Liabilities to creditors are £1,773 down at £6,485, against which debtors have been reduced by £787 to £9,719 and cash is £642 smaller at £2,525.

Marston, Thompson and Evershed, Limited.—This Burton-on-Trent brewery company's trading profit in the year ended March 31 last was £52,961, made up to £63,581 by £10,260 brought forward. After meeting directors' fees and other charges as well as £2,785 set aside for compensation under the Act of 1904, the directors reduce the dividend from 8 per cent. to 6 per cent. for the year. Two years ago the distribution was 10 per cent. They then again carry £4,000 to the special contingencies fund and add £4,160 to reserve, leaving £10,443 to be carried forward. A larger dividend could have been paid, but the directors have thought it prudent to make the smaller distribution because of the new Licensing Bill, which they warn their shareholders to regard as a menace to their interests. Properties are valued at £1,019,314 or £10,025 less, but stocks on hand are £8,504 more at £78,918, and casks, plant, horses, &c., show an increase of £4,320 at, together, £52,401. Trade creditors, mortgages, loans, &c., entered at £297,943 show a decrease of £7,634, and on the assets side of the account mortgages, loans, investments and cash are down £3,741 at £86,725. The commission of £4,160 paid on the issue of preference shares was drawn from the reserve, but that has been replaced out of profits, leaving the reserve at £130,000 as before.

Midland Railway Company of Western Australia.—This unhappy and much over-capitalised concern is pulling round somewhat, partly through the sale of its lands and also through the increase in the railway earnings. In the year ended June 30, 1907, nett earnings came to £37,993, and after meeting the guaranteed and prior lien debenture interest £16,285 was left, made up to £45,970 by £29,685 brought forward. Of this sum £25,000 has been assigned to renewal and contingency account, leaving £20,970 available towards interest on the 5 per cent. cumulative income debenture stock. There are two such stocks, a 5 per cent. and a 6 per cent., the latter amounting to £1,000,000, and neither of them has ever received any dividend. The Local Lands Committee was appointed in 1905, and since it began work upwards of 450,000 acres of land have been sold for about £265,000. The first drawing of £20,000 of the £500,000 in 4 per cent. bonds guaranteed by the Western Australian Government took place in 1904, and similar drawings were also made in each of the three succeeding years, besides which a first voluntary drawing of £20,000 was made, so that altogether the Government guaranteed debt of the company had been reduced at July 1 last by £100,000 to £400,000, and since then the company has notified its intention to make two further voluntary drawings of £20,000 each for repayment at July 1 next. This will reduce that particular debt to £360,000.

Missouri Land and Live Stock Co., Limited.—All the remaining lands and land contracts in Missouri belonging to this company have been sold, and it is accordingly to be wound up. The accounts for the year ended April 30 last show a credit balance of £8,387 after paying an interim dividend of 4s. per share, which took £6,000. A further dividend is recommended of 5s. per share, which will take £7,500. The remaining assets will be dealt with in the liquidation, and the directors hope that the liquidator may be able to dispose of all claims satisfactorily, so that the balance of the assets may be divided at no distant date.

Neuchatel Asphalte Co., Limited.—Nett profits of this undertaking for 1907 fell off by £3,361 to £40,598, but £34,501 or £5,067 more was brought forward, and the available total was therefore £1,706 better at £75,099. Apparently, however, the directors are not very sanguine about the future, as after transferring another £2,000 to reserve and repeating last year's dividend of 10s. per share they pay a bonus of only 1s. compared with 4s. and raise the sum carried out by £8,005 to £42,506. With the present addition the reserve will amount to £65,127 against a capital expenditure of £415,155, not a very lavish proportion considering the wasting nature of a good deal of the property. Sundry creditors come to £107,853 and the loan from bankers has been increased by £2,000 to £14,000, while on the other hand sundry debtors are £12,907 up at £283,769, caution money deposited comes to £7,855 more at £95,257, and investments at cost are £856 higher at £74,682, but cash has dropped by £10,912 to £24,211 and bills receivable, &c., are £7,848 down at £4,318.

New Paccha and Jazpampa Nitrate Co., Limited.—Notwithstanding the unfavourable conditions which prevailed in the nitrate industry during 1907 this company managed to increase its trading profits by £5,437 to £29,439. A good part of this improvement, however, disappeared owing to a loss of £2,994 on exchange, but £5,305 or £1,668 more was brought forward and slight savings were effected in London office charges, debenture service, &c. The disposable total therefore amounted to £25,446 compared with £21,105, out of which the directors again pay dividends of 30 per cent. on the ordinary and 70 per cent. on the preference shares, and after setting aside £2,500 to form an exchange reserve the sum carried out is increased by £1,841 to £7,146. Another £2,797 was spent on the railway to the new grounds and works extension, making the total outlay on the property £74,234, against which the reserve remains at £17,500. Redemption of the debentures, however, is proceeding steadily, £3,650 having been paid off during the year, and the amount outstanding is now only £7,650. Floating liabilities are £11,036 down at £14,394, while debtors show a decrease of £22,796 at £10,627, but stocks and stores come to £15,704 more at £19,943, and cash and bills have risen by £9,432 to £15,186.

Pumpherston Oil Company.—Including £6,180 brought forward the nett profits for the year ended April 30 amounted to £130,123, and the directors are in the happy position of being able to pay a dividend of 50 per cent. on the ordinary shares. This distribution is not made at the expense of proper provision being made for the future, as in addition to providing £10,000 for depreciation £17,285 for expenditure on improved plant is written off. Reserve then gets £20,000, making it £100,000, and another £5,000 is put to fire insurance fund, leaving a considerably larger balance of £16,588 to be carried forward. Capital expenditure for the year was £24,339, mainly in the erection of additional workmen's houses, but after making the proposed appropriation this item will stand at £233,525, against which the reserve and insurance funds total £110,000. Debtors owe £62,083 against £29,873 due to creditors, stocks are valued at £40,361, and in addition to £52,242 in cash the company has £40,000 out on loan.

Wickens, Pease and Co., Limited.—This firm of bone boilers and tallow melters made a profit of £651 in its year closed March 31 last. Added to the £3,023 brought forward this gives an available balance of £3,674, out of which £1,000 is placed to the reserve for depreciation of leases, &c., and the remaining £2,674 is carried forward. Markets have been against the company all the year, the directors say, and it has been impossible to purchase raw material at a reasonably remunerative price consistent with the fall in the market for the company's productions. Nevertheless £1,758 was spent on capital account during the year. The company, however, has available cash to the amount of £6,864, and only owes £2,906 to sundry creditors, so that the business may soon recover.

A notice has been issued by the 4 per cent. Debentue Stock holders' Committee of the Chicago Great Western Railway Company announcing that Mr. H. G. Burt, of Chicago, formerly a vice-president of the Chicago and North-Western Railway, and from 1898 to 1904 president of the Union Pacific, has commenced his inspection of the property on the stockholders' behalf. His report will form the starting point for reorganisation. Meanwhile the stockholders are invited to send their certificates to Messrs. Robert Benson and Co., to be exchanged for the committee's own certificates. This should be done at once, because in this way alone can the committee become an irresistible representation of the stockholders in the United States.

We understand that an agreement has been entered into between the Swiss Government Post Office authorities and the London office of the Swiss Bankverein, with the object of applying to intercourse between Switzerland and London the system of postal cheques already in vogue in Switzerland. Full particulars relating to this arrangement, which will take effect as from June 1 next, can be obtained on application at the Swiss Bankverein, 43, Lothbury, E.C.

New South Wales Goverrment Railways and Tramways.—The Chief Commissioner (Mr. T. R. Johnson) reports that the revenue received during the quarter was £1,181,229, a decrease of £31,727 on the corresponding period; the decrease was due to the falling off in the grain traffic, consequent on the small yield of wheat as compared with previous years, and would have been more pronounced but for the buoyancy of the coaching and goods traffic generally. Mining, particularly coal, assisted in keeping up the revenue. The Government tramways gave a revenue for the quarter of £264,318, an increase of £29,180; expenditure, £190,256, also increased £28,449.

A very large majority of the securities called for deposit under the plan and agreement of readjustment and union between the Mexican Central Railway Company, Limited, and the National Railroad Company of Mexico, dated April 6 last, having been deposited, the readjustment managers have now declared the plan operative. Holders of securities who have not yet deposited are offered the opportunity of doing so on or before June 6 with Messrs. J. Henry Schröder and Co., Messrs. Glyn, Mills, Currie, and Co., Messrs. Speyer Brothers, or the Swiss Bankverein, after which date no deposits will be received, except in the discretion of the readjustment managers and on such terms as they may drescribe.

Deposits against future queries may be lodged with the Publisher.

F. J.—(a) These are very speculative, the company appears to have prospects, and there ought to be chances for it. (b) One of its properties seems to be promising, others may be found that will yield a profit, so you might hold on. (c) A respectable concern, and carefully managed, but prospects of expansion are not great. The shares give a fair yield, but are not particularly cheap. (d) We cannot describe these as "safe;" at present the outlook is fair, but the country has a long way to go before it can be considered a safe region for permanent investment.

Pen.—We are afraid the outlook for this company is not good, and doubt very much if you could sell your shares at present. There is a chance that better weather would improve the position, but financially the situation is a weak one.

Banking.—It is a good company, but the shares stand at a very high figure already. As a speculative investment you might see a profit, as it is the companies of this class that will do best with their additional product.

Incognito.—(1) Prospects are not brilliant, but we do not think that you should be frightened out of your stock. Cheaper money will help the market. If recover to about 70 might be worth while considering a sale. (2) A carefully managed concern and a good industrial investment. Profits naturally fluctuate, and its particular business is liable to sharp changes. (3) These seem quite high enough, although we understand this company has not suffered at all from the reaction. (4) In time the road should do well, but there is always the danger of political disturbance. (5) One of the best companies in that trade and carefully managed, but ordinary shares should yield at least 6 per cent. (6) Has done very well, but we do not like the recent inflation of capital. The preference should be safe, but are not particularly cheap. (7) 2, 5, and perhaps 4 seem the most attractive on your list. (8) Chinese Imperial railways.

H. J. G.—We do not think it can last. It is all inside manipulation, but the market is so narrow that the price might go higher. We should not care to sell just yet.

J. A. L.—Then do not buy these shares now. They are not "a safe investment" of any permanency, and must be subject to constant and severe fluctuations.

J. D. S.—(1) Not just at present. Although the stock should be quite good the probability is that it will be cheaper by and by. (2) This should be a safe 6 per cent. stock in present circumstances, and worth buying.

A. C.—(1) Yes, the company has done better, but we do not think you should increase your risk in it by averaging. The stock is not strikingly cheap compared with other investments. (2) A report is due shortly. It is not expected to be quite so good as a year ago, but it should show fair results. There has been a little demand for the stock lately, and we doubt if you could purchase sufficiently below your original price to make it worth while adding to your holding. (3) We dealt with this company's report on April 25. There are one or two points about the balance-sheet that might be improved. The company does a large business, and its preference should be safe if you can get the new issue at a small premium, say, 1s. (4) This report is not yet published. Unless it has had misfortunes of its own the year should have been a good one, judging from the results of other similar concerns.

O. E. G.—Traffics continue good, but market may not advance at present as there has been a considerable amount of new capital issued recently. We see no reason to anticipate any shrinkage in yield.

Notrits.—It is energetically managed, and should continue to be successful. Its risks are many and varied, but if they are carefully spread there should be little danger. In buying for investment, the liability must be borne in mind.

Tonk.—It is impossible to give you precise figures. On Chinese 3 per cent. to 4 per cent., and Rails 4 to 4½, plus the usual commission. A loan on margin would be on different terms, but stamp duties would then have to be considered.

J. I.—(1) Quite good, but is redeemable at price asked. Why not take the new issue of guaranteeing company? (2) Also good, but it is possible a further issue may have to be made before long, as there is a large amount of short term notes falling due in a little over 18 months' time.

DIVIDENDS ANNOUNCED.

BANKS.

Bank of British West Africa.—For half-year to March 31 at the rate of 12 per cent., making 10 per cent. for year ended March 31.

Bank of New South Wales.—On the capital stock at the rate of 10 per cent. per annum for half-year ended March 31, placing £30,000 to reserve, and carrying £33,988 forward.

Imperial of Persia.—Interim for half-year ended March 20 of 3s. per share.

MINES.

Cape Copper.—Interim of 2s. 6d. per share on the preference and ordinary shares, payable July 1.

Day Dawn Block and Wyndham.—Interim of 3d. per share on account of the current year, payable June 24.

Great Boulder Proprietary.—Interim of 9d. per share on account of the current year.

Perlonga Proprietary.—Balance of 3½ per cent., making 6 per cent. 1907.

MISCELLANEOUS.

Amazon Steam Navigation.—7s. 6d. per share for the second half of 1907 making 5 per cent. for the year.

Broken Hill Water Supply.—4½d. per share, payable July 1.

Calgary and Edmonton Land.—Second interim for 1908 of 2s. 6d. per share, payable July 1.

Continental Union Gas.—Interim on the ordinary stock of 3 per cent. for half-year.

Dumont Coffee.—5½ per cent. on account of arrears on the preference shares, payable July.

Edward and John Burke.—Final on the ordinary shares at the rate of 10 per cent. per annum, placing £14,000 to reserve and carrying forward £12,864.

Globe Telegraph.—Final of 5s. 1½ per share on the ordinary shares.

J. and P. Coats.—Quarterly of 1s. 6d. per share on the ordinary shares.

James McEwan and Co.—Further distribution of capital amounting to 5 per cent. of the debentures, making a total of 70 per cent. repaid.

Lipton.—Final at the rate of 10 per cent. per annum on the ordinary shares, making 8 per cent. for the year, placing £15,000 to reserve, and carrying £20,264 forward.

Norwich Union Fire Insurance.—For past year of £1 per share and a bonus of £1 per share.

Pearks.—At the rate of 3 per cent. per annum on the ordinary shares for six months ended April 18, carrying forward £980.

Spies Petroleum.—9d. per share for 1907, 0.s.

The Mint (Birmingham).—For half-year ending March 31 of 6s. 3d. per share, making for the year 10 per cent. and a bonus of 5s. per share for the year.

Western Telegraph.—Third quarterly interim of 3s. per share for year ending June 30, 1908, being at the rate of 6 per cent. per annum.

Wm. Cory and Son.—Final of 6s. per share, making 10 per cent. for year ended March 31.

Wm. Fison and Co.—Interim at the rate of 5½ per cent. per annum on the preference shares for half-year ended April 30.

MINING RETURNS.

Alaska United.—Crushed 22,748 tons, value, $28,007; saved 481 tons sulphurets, value $18,401.

Antenior (Matabele).—Crushed 613 tons, 149 ozs.; cyanide 400 tons, 33 ozs.

Brilliant Extended.—Crushed 2,184 tons for £4,375.

Broken Hill South Silver.—13,335 tons crude ore produced 2,045 tons concentrates, containing 36,810 ozs. silver and 1,472 tons lead.

Carrington's United.—Smelted 237 tons for 11 tons copper; 150 tons crushed, 216 ozs.; concentrates 35 tons.

Chinese Engineering.—Output 25,500 tons; sales 24,000 tons; consumption, 1,250 tons.

Day Dawn P.C.—Crushed 170 tons, 144 ozs.; concentrates and residues, £285.

Forbes Rhodesia.—Veracity: Crushed 473 tons, 363 ozs.; cyanide 325 tons, 40 ozs.; Dumbleton: crushed 264 tons, 56 ozs.; cyanide 230 tons, 10 ozs.; Electric Reef: crushed 1,050 tons, 155 ozs.

Hyderabad (Deccan).—Output of coal 38,727 tons.

Kelly's Queen Block.—Quartz 452 tons for £1,044.

Komata Reefs.—Crushed 2,300 tons; bullion £3,600.

Mount Lyell.—Treated 29,156 tons of ore; in addition 201 tons purchased ore, and metal bearing fluxes, converters produced 638 tons blister copper, containing:—Copper, 630 tons; silver, 47,619 ozs.; gold, 1,225 ozs.

North Broken Hill.—Crude ore 2,640 tons, assaying 16 per cent. lead and 6·4 ozs. silver per ton, producing 450 tons concentrates, containing 315 tons 4 cwts. lead and 9,630 ozs. silver.

Orsk Goldfields.—Output: Ore milled 3,548 tons, 1,474 ozs.

Raub.—Crushed 5,819 tons, 1,065 ozs.

Rhodesia Matabeleland Development.—Crushed 506 tons, 155 ozs.; tailings 668 tons, 34 ozs.

Spassky.—Production bar copper 4,250 poods, equals 68.3 tons.

Sulphide.—Milled 16,245 tons, producing 2,932 tons lead concentrates, which assayed 34 ozs. silver and 61 per cent. lead per ton, together with 5,026 tons zinc concentrates, assaying 19 ozs. silver, 12 per cent. lead, and 41 per cent. zinc per ton; dump tailings treated 5,406 tons, producing 2,000 tons zinc concentrates assaying 15 ozs. silver, 11 per cent. lead, and 44 per cent. zinc per ton; 1,627 tons leady concentrates and 2,668 tont purchased ores smelted, producing 1,461 tons lead bullion, containing 160,710 ozs. silver and 6,282 ozs. gold; also treated 334 tons zinc concentrates, producing 99 tons spelter.

Waihi Grand Junction.—Crushed 4,146 tons, £6,880.

Zinc.—Treated 7,730 tons zinc concentrates, containing 1,132 tons zn., 198 tons pb., 34.917 ozs. ag.; 58 tons leady concentrates, containing 32 tons lead and 2,138 ozs silver.

A. C. D. GAIRDNER, Manager.

London Office, 62, Cornhill, E.C.,
28th May, 1908.

CROYDON CONSOLS.—This company's accounts run from the date of inception to December 31, 1907, a period of 14½ months, and during the first part of the term the policy of having the mine prospected on the tribute system was adopted; but latterly the company has resumed possession of the whole of the mine, conducting operations on the wages system. The work accomplished is said to have brought the mine to a most interesting stage, and further operations are fraught with large possibilities." The present vertical depth corresponds with the depth at which nearly all the rich runs of ore have been cut on the Golden Gate line of reef. Since the closing of the books exceptionally heavy tropical rains have for the time being interfered with the sinking of the shaft, but the pumping operations at the No. 3 shaft, which have been doubled for the time being, will drain these workings shortly. Profit and loss account shows a debit of £1,936, but the company has considerable liquid resources.

Clerical, Medical & General
Life Assurance Society.
Chief Office:

The Investors' Review.

The Week's Money Market.

Bank Rate 2½ per cent. (Reduced from 3 per cent. on Thursday, May 28.

Norfolk House, Friday Evening.

So little change is shown in the figures of the Bank's weekly account that it might just as well have lowered its rate a week ago. So says the market, and really it would not have mattered much only that last week the Paris cheque was still low enough to excite some fear lest gold should be taken from the Bank for France if our rate went down. The exchange is not much better now, but Paris got all the available gold in the open market last Monday, amounting to about £800,000 at 77s. 10¼d., a fall of a farthing. Since then the cheque has been tending to improve so that the Bank of England could very well risk a reduction in its rate. It might even have been put down to 2 per cent. for all the appreciable difference it makes to the Bank's power over the open market, for discount rates, which had before been about 1¾-⅞ per cent. for all usances in bank bills up to and including four months, have barely gone back ⅛. Some houses yesterday called their three months' rate 1 11/16 per cent., and there is no 1¾ per cent. in it at present. Very fine three months' paper was taken in the morning at 1 9/16 per cent., but the rate stiffened in the afternoon because the supply of bills increased. All day to-day, however, the three months' rate has been steady at 1 9/16 per cent. as a minimum. Banks were buying short bills, or bills up to August usances, from the brokers at 1½ per cent. On sixes the fine rate has come down to 2 per cent., and quotations like these cannot prevail long without pulling the Bank rate down to 2 per cent.

Naturally money rates went back with the lower Bank rate, but not much. Borrowers were paying 1 to 1½ per cent. for call loans up to yesterday morning, 1½ to 1¾ per cent. for seven-day money, and yesterday afternoon the rates tumbled back to 1 to 1¼ and 1½ per cent. respectively, with a struggle to get seven-day money down to 1¼ per cent. Bankers put down their deposit rates from 1½ to 1 per cent., but discount houses reduced their rates by ¼ per cent. only, having made a reduction of ¼ per cent. a fortnight ago on their own responsibility. Therefore they now give 1 per cent. for call and 1¼ per cent. for notice money.

A sharp tussle for the supply of available credit happened this morning, the payments of the Stock Exchange settlement and the end-of-the-month demands together having caused an extra demand. Our Stock Exchange found it required more money than it had reckoned on, but the increased demand did not put our night loans above 2½ per cent. at any time, and the bulk of the money was lent at 1¼ to 1½ per cent. Only Stock Exchange borrowers paid more than 1½ per cent.

Changes in the Bank of England return are the smallest seen for many a week. Other deposits are down by £232,000 to £42,811,000, because another £167,000 has come off other securities at the same time that the note circulation has expanded by £151,000. Public deposits have risen by no more than £12,260, so that altogether the movements are scarcely worth mentioning.

Owing to yesterday being Ascension Day Bourses on the Continent were for the most part closed. We therefore have not received the weekly return of the Bank of France in time to analyse it in this column. The news, however, comes that it has reduced its rate for advances from 4 per cent. to 3½ per cent., but leaves its discount rate unaltered at 3 per cent. It now possesses gold to the amount of £121,700,000, and all our market's debt to it has been liquidated.

It is fully expected that the Reichsbank will now see its way to reduce its rate below the high pressure looking figure of 5 per cent., and its latest return seems to indicate that it might do this with safety, for thanks to the further increase of £1,431,000 in the cash in hand and another decrease of £2,714,000 in the note circulation, that circulation is now £11,435,450 below the legal minimum free of taxation. Sensible though this improvement is the Bank is not yet in so strong a position as it was this time last year, and as business interests continue embarrassed in Germany, the reluctance of the State Bank to lower its rate is reasonable enough. At the same time were it to keep its rate high above the market for a few weeks longer the result would probably be increased dread, and the generation of all manner of disturbing reports.

Silver.

The prices quoted for bars last Friday brought out the metal more freely than the market could dispose of it, China, it was said, being the principal seller, and a sharp relapse of ⅜d. per oz. for cash and 7/16d. per oz. for future delivery followed. A considerable amount of support has since come from the Indian bazaars, and to-day's P. & O. steamer is carrying over £300,000 for delivery in Bombay at the June settlement. China, too, was buying, and the combined demand was sufficient to cause a recovery of ¼d. to 24 11/16d. per oz. for both positions. Wednesday, however, being the last day for purchases for immediate shipment, the inquiry immediately slackened off and quotations dropped to 24⅜d. per oz. To-day the market hardened a little, but the improvement was only 1/16d., and final values still show losses of ⅜d. and 7/16d. on the week. Applications for Council drafts on India continue on

a small scale, and for the Rs. 10,00,000 offered on Wednesday amounted to no more than Rs. 60,265 in bills, all of which were allotted in full. On the other hand, the demand for drafts on London is increasing, and as tenders for the £500,000 offered reached a total of £740,000 applicants received about 65 per cent.

BANK OF ENGLAND.

" for call loans	1½—1½

The Stock Markets.

With money cheap and the atmosphere of markets gradually clearing, it was to be expected that business would improve. It has improved to some extent, the public having begun to buy, and still more to inquire after stocks suitable for investment. The "tip" has even gone round to buy Consols, and it is not a bad tip for a temporary operation, although we do not think the stock attractive as a permanent investment even at current figures. It is too much at the mercy of political changes, and, moreover, the prospect ahead is that the sinking fund purchases will have to be sensibly reduced when the old-age pension scheme is in full operation. Meantime, however, the stock is likely to go up along with other trustee securities, and therefore the immediate prospect is favourable to the bulls. Are we quite out of the wood, then? By no means. Disquieting symptoms are visible in more than one direction, but the world would never do anything at all if it was stopped by dangers ahead. It may be that Germany will surmount its financial difficulties, and if crop reports do not become disquieting it is probable enough that markets in the United States will show considerable spasmodic strength during the next two or three months. They will assuredly do so if abundance of new capital can be supplied. There is, however, no reliable improvement to be expected in that quarter as the daily movements on Wall Street indicate, and the position there is one so entirely created by professional manipulation as to warn sensible people to avoid the shares set before them. Meanwhile, however, we have cheap money, and cheap money always generates speculation for the rise. It may begin in unexpected quarters, but it is certain to start somewhere and to spread. It is spreading in the Circus even now.

The only influential damper at present is the new issues which keep pouring out at an alarming speed. If our own municipalities do not wake up they may find the market completely gorged with new Colonial and Foreign securities. For the time being, however, these fresh creations do not much influence the price of short loans in the open market; in fact, their first effect may be to cheapen money, because credit is drawn to London from all parts of the kingdom or empire, and therefore the stock market is crippled only through having its resources locked up when securities do not go straight into the hands of investors. There is much of this lock-up at present, but it does not excite any particular apprehension, because our joint-stock banks are all seeking business, and in proportion as commercial demands diminish they are ready to grant advances to underwriters and other holders of new securities. The prospect accordingly is that market will tend to broaden for at least some weeks to come, and if nothing unforeseen happens to disturb men's minds we may have stirring business later in the year.

Trustee Securities.

Consols have risen 15s. on the week, and almost all other securities of this class have been lifted with them, the improvement in Transvaal guaranteed stock and in the stocks of the Indian Government, as well as in County Council and Water Board stocks, being quite important. The Transvaal loan has rallied on the announcement that the expected £5,000,000 of new stock will not be put out just now. The Transvaal does not want the money, and what it does require will be found by a further issue of six months' bills to the amount of £500,000. Further loans are coming from India, but the only amount this week mentioned is £500,000

for the city of Rangoon, and a trivial-looking amount like that has no influence whatever upon the price of Indian Government stocks. Home Municipal securities have gone up where any movement has taken place, but the market for them is very inert, and really wants a few new emissions to stir it up. Colonial inscribed stocks are also firm, especially those of New South Wales, but business has been small.

Contangoes.

Money was naturally quite cheap for the settlement which began on Tuesday, although loans for the mid-June account had to be arranged before the Bank rate came down. So easy, however, were current rates in the open market that most of the money required was obtained at from 2¼ to 2½ per cent. There was a lot of foreign money in the market, it seems, which was lent at the finer rate, and our bankers did not always succeed in getting 2½ per cent. Contango rates inside markets, however, were occasionally rather heavier, especially on South African shares, in which there has lately been almost no account to carry. Bull speculation, in other words, has begun to tell, but as a rule the easier money had the effect of keeping rates much where they were in the middle of the month, and 4 per cent. was a fairly outside figure on most foreign securities, while on Home Railways 4 to 4½ per cent. were quoted. On things like Rio Tinto and Hudson's Bay shares rates were either unchanged or slightly easier, and on United States Railways money was about ½ per cent. cheaper, seldom costing more than 3 per cent., while on Argentine Railways it was down about ¼ per cent. to 4 per cent. as a maximum.

Foreign Government Bonds.

A noticeable improvement has occurred this week in Russian bonds, and the whole market has been steady, with an upward tendency, although no further rise of any consequence has taken place in Japanese issues, which are still out of favour on Continental markets. Brazilian bonds have also been heavy, as an exception to the general tendency, but although business has been somewhat more extensive, this market is really a very poor one so far, and foreigners more disposed to sell than to buy.

Home and Other Railway Stocks.

Home Railway stocks have profited a little by the improved outlook and mood of the market, and some of them, like Great Western, Leeds, Midland, North-Eastern, North British, and above all North-Western, have gained from 1 to 2 during the week. Brighton, Caledonian and Great Central preferred also show an advance, but the Underground stocks are still out of favour and the market has not broadened much. Nor is there anything particular doing in the secured classes of stocks, although a comforting rally of from 3 to 5 has occurred in the debenture stocks of the District Company. Its 3 per cent. rent charge, on the other hand, has slipped back. Last week's traffic receipts show a decrease of only £77,437, but that does not indicate better times at hand, because Whit week last year blurs the comparison, and the aggregate falling off to date is over £1,089,000.

Indian Railways have been firmer as a rule, in sympathy with Government issues, and the recoil in Canadian Railway securities has not amounted to much, although on the week both Canadian Pacific shares and Grand Trunk ordinary and third preference stocks have given way. But there was a rally yesterday. Traffic receipts are still bad, and will continue bad probably up to the eve of the coming harvest, but the puffery of that harvest, the seed of which is hardly yet sprouting in the ground, and the extent of the bear account cause prices to show an elasticity which defies facts. Such enormous amounts of new money are also being poured into the Dominion as to insure present prosperity, an overturn of business wholly beyond the country's intrinsic strength or capacity. Rhodesian Railway bond issues show an improvement, especially the two issues of Mashonaland bonds, otherwise Colonial Railways are of no particular interest.

Changes are noticeably adverse on the week for all leading United States Railroad shares, and the drop in counters like Union Pacific has been about $5. Milwaukees, too, have gone back $6, and others, like Illinois Central, Louisville, Reading Southern Pacific, Southern, Atchison and Baltimore, from $2 to $5. The daily flurry on Wall Street has thus favoured the bears, and really it is difficult to see why they should not be victorious all along the line, but we cannot advise anybody to sell a bear on this opinion, because that simply plays into the hands of the Standard Oil and other cliques who have been manipulating markets in order to throw out at a profit masses of the securities they took up during the panic. Leave them alone. Bonds have been steady, generally speaking, with now and then some improvement shown, but the business done in them here has been so small as to require no analysis from us.

Among Foreign Railway stocks there has been considerably less activity. The Argentine market has rather tamed down, and on the week there are several changes for the worse, noticeably in Argentine Great Western, Great Southern, and Pacific stocks. The demands for new capital are alone responsible for this pause, for it is nothing else. The stocks of the old Mexican Railway, on the other hand, have been pushed up from 1 to 2½ in sympathy with the improvement in the stocks of the Mexican National and Mexican Central companies, now united as an undertaking in Government control, the fusion plan having been accepted by the various parties interested and now declared operative. There has also been a recovery in some of the Cuban Railway issues, and no particular weakness has developed in any direction, although Nicolai Railway bonds have been depressed, as well as the bond issues of the Puerto Cabello Railway.

Banks, Docks and Industrial Securities, &c.

Bank shares have not been much inquired for during the week, but prices have been steady, except for one or two, like Land Bank of Egypt ordinary and the shares of the Anglo-Argentine Bank. Brewery securities are, if possible, a worse market than ever, but that has not prevented Guinness's ordinary stock from being marked up 20 on the week. Other changes are to the bad, but rare enough. A little dealing has sprung up in London Docks ordinary and preferred stocks during the last day or two, and they have improved a little.

Amongst Commercial and Industrial shares and debentures there has also been a slightly improved business doing, but it has been extremely capricious, and nothing like a general improvement has taken place. On the contrary, most changes in share prices are to the bad, and even favourites like Lyons ordinary shares have been offered a little, some people apparently being dissatisfied with the directors' report just issued. Nitrate shares, too, have lost ground, and Artisans' Dwellings ordinary stock has been put down to 77 or less. The shares and bonds of Motor companies continue sensitive, and scarcely anything important in the way of a rise is to be seen throughout the list. Mazawattee Tea shares, however, have continued to move up by timid steps, Houlder Brothers' preference shares are quoted at a slight advance, and an improvement has occurred in the earlier debentures of the Gordon Hotels Company, as well as in British Aluminium first debenture stock and in Commonwealth Oil debentures. Liebig's shares, too, are higher, and a further improvement is noticeable in Underground Electric Railways' notes. For all that the market for this huge miscellaneous assortment is the reverse of active.

Electric, Land and Finance, Iron, Coal and Steel and Other Securities.

Home Electric securities continue out of favour, but the shares and bonds of Canadian companies, or companies controlled from Canada, have been either steady or inclined to improve, and hardly any business has been done throughout the week in any one of them. Peruvian Corporation securities have continued to go

up, especially the debentures, and Hudson's Bay shares have been pushed beyond 90, with business still active for the new account. The shares and debentures of mortgage companies have usually been quite let alone, and Australian descriptions have inclined to fall back. Stock Exchange debentures have also been offered, and a sale was marked yesterday at 84½. Recoveries continue to take place in the issues of financial trusts, and most changes shown there are favourable.

Gas stocks have also been steady on the whole, the only prominent exception being the preference shares of the Cape Town Company, which have gone back to about 6. Insurance shares are attracting no notice from the public at present, and prices rather wobble, with very few changes one way or another. The same observation applies to Iron, Coal and Steel shares and obligations, where, however, the majority of prices have changed for the better when they moved at all. Pease and Partners ordinary and deferred shares, for example, are ½ to ½ higher. United States Steel shares, however, have been shedding part of their fluff in sympathy with Yankee Railroad shares, and in spite of the stern resolve of the ironmasters to maintain prices. Among Shipping securities Orient Steam debenture stock is quoted up 4, and Royal Mail ordinary and preference stocks are both sensibly higher.

Nothing happened amongst Tea, Coffee and Rubber securities, but a few movements, all favourable, have occurred under Telegraphs and Telephones, Anglo-American stocks leading the way. Tramway and Omnibus securities have also been firmer, with a jump of 9 in London General Omnibus ordinary and of 3½ in Mexican Tramways ordinary. B.E.T. shares have improved a little, and the company's debenture stocks are better. Most of the debenture stocks of the old London water companies taken over by the Metropolitan Board are 1½ higher than they were a week ago.

Friday Evening.

The settlement payments and an increase in business made the stock markets more bustling to-day, and Home securities felt the stimulus of the low Bank rate much more than yesterday. This was contango day in the Consol market, and the rate for the June account was only 2 per cent., the lowest for many years. No wonder the stocks went up, only the best price of 87⅞-88 was not quite held to the end. Home Railway stocks were even more buoyant, and light stuff like Great Central preferred jumped 2½. Yankees were weak, and a flavourless market.

B.A. and Pacific new debenture stock was quoted at 1 premium for the special settlement, and new East Indian Railway debentures at ⅞ to 1 premium for scrip.

Much activity continued to be displayed in the Kaffir Circus, and it looks as if the public were beginning to play a little.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: 2⅜ p.c. Ann. ¼, to 92-½, do. 2½ p.c. 1905 and Acct. both ⅜, to 85½-6, Irish Ld. Stk. and Acct. both 1¼, to 91½-2. National War Loan and Acct, both ¼, to 99⅜-100¼, Exchequer 2¾ p.c. Bds. ½, to 99⅞-100⅛, Local Lns. Acct. 1, to 99¼-⅜, Canadian Govt. 1910 1, to 101-3, do. 1913 1, to 104-6, Egyptian Govt. 1, to 99-101, Bank of Engld. 4, to 264-9, India 1931 Acct. 1¼, to 100⅛-¼, do. 1948 Acct. 1½, to 90½-1, do 1926 Acct. 1, to 76-8.

CORPORATION AND COUNTY STOCKS.—Rise: Metro. Water "B" Acct. 1½, to 92-3, Metrop. Cons. 3½ p.c. ¼, to 102½-3½, do. 3 p.c. ½, to 93-4, L.C.C. 3 p.c. Critical Index to New Investments.

City of Winnipeg Loan.

Canada is indeed busy utilising the sentiment of the day, and here is Winnipeg requiring £1,500,000. The Bank of Montreal will receive subscriptions for this issue, repayable April 1, 1940, at 96 per cent., and no doubt Winnipeg will get the money, for it is a growing city and Manitoba at least has proved itself a country of resources and capabilities. Winnipeg has an existing debt of £1,671,741, and this money is wanted "to redeem debt, pay for works already completed and necessary works to be carried out in 1908 and to provide a sufficient sum to meet the sinking fund requirements of the existing debentures of the city." Rather a medley to be sure, but it should be all right for the rateable value of the property within the city is put at £18,765,000, exclusive of non-rated property worth £3,717,588, and the estimated income for the current year is put at £624,000 against an expenditure quite £4,000 smaller. Moreover, the validity of the issue has been certified by the legal adviser of the Bank of Montreal in Canada. The stock will be registered, and transferable free of stamp duty at the Bank of Montreal here.

Buenos Ayres and Pacific Railway.

A new issue amounting to £1,000,000 in 4½ per cent. consolidated debenture stock is announced by the directors of this company. Subscriptions will be received by the London Joint Stock Bank and Martin's Bank, and the price asked is 98 per cent., which is cheap considering the security. In fact, had it not been for the apparent rapidity with which this company is adding to its capital account, and for the traces left of the recent strain upon credit, the stock would not have been offered at any such price. After the end of this year the new issue will rank *pari passu* with the existing £3,000,000 of like stock and be redeemable at any time after June 30, 1920, on six months' notice to the stockholders at 110 per cent. The stock is secured by a charge upon the undertaking subject to the first, second and 5 per cent. debenture stocks, under duly executed trust deeds. Frequent demands for further capital are a necessity for this company because of the rapidity with which it is extending its field of operations and developing its traffic. A table in the prospectus illustrates its growth. Gross receipts in 1901-2 were only £584,267, and the nett income barely £280,000, whereas in 1906-7 the gross income was £2,074,591, and the nett £874,749. It takes only £452,875 to meet the charges upon the whole of the debenture capital created by the company, including the present issue, so that the stock is most amply secured. A comparative mileage table is not given, but the total length of the system now in operation is 2,377 miles, including the company's own main broad gauge line 981 miles long, and the Bahia Blanca and North-Western line, which with its recently constructed extensions is now 618 miles long. Enormous developments are taking place at the port of Bahia Blanca.

Port of Calcutta Loan.

An issue of £500,000 in 4 per cent. sterling debentures is made by the Commissioners of this port through the Chartered Bank of India, Australia and China, at the price of 99½ per cent. The bonds seem amply secured, as at April 30 last the value of the property in the hands of the Commissioners is put at £5,600,000, against a capital debt of £4,245,391, after deducting £452,373 at the credit of the sinking-fund. These figures relate to what is called the Block Account, but the Commissioners own other large properties, and the value of the Strand Bank alone is estimated at £400,000. A sinking-fund is to be established of an amount adequate to redeem the loan in sixty years, but the period for liquidating the present loan has been fixed at thirty years. The Commissioners possess a revenue reserve of £200,000 and a renewal and fire insurance reserve of £80,000. Figures of income and expenditure show uninterrupted expansion beginning with 1900-1901, and the income for the year ended March 31 last is put at £726,666, while in the current year an income of £796,666 is estimated, taking the rupee at 1s. 4d. Payment for the loan is spread over to July 6, but it may be paid up in full on allotment under 3½ per cent. discount.

Shanghai-Hangchow-Ningpo Railway Loan.

This is a 5 per cent. railway loan for £1,500,000 authorised by the Chinese Imperial Government, and subscriptions are asked for it here at the price of 99 per cent. by the Hongkong and Shanghai Banking Corporation, the whole amount to be paid up by July 31 in instalments as set forth in the prospectus. The whole of the money is to be utilised in extending the Shanghai Nanking Railway to Hangchow and Ningpo, a total length of about 219 miles, and traffic is sure to be large in that district which lies in the populous vast alluvial plain forming the ancient delta of the Yangtsze River. Hangchow has an estimated population of 350,000, and Ningpo one of 260,000, and there are several other populous and important markets that will be brought into direct communication with Shanghai by this line. The loan is redeemable in thirty years from June 1, but drawings do not commence till 1918, the first repayment being on June 1, 1919. If any of the bonds are redeemed in advance, on or before June 21, 1928, 2½ per cent. premium will be paid, otherwise redemption is at par. A table of the income and outgo of the Imperial railways of North China shows considerable variation, but at the worst there is ample money available for the interest and redemption of the debt, last year's surplus having been £379,000, while this loan requires only £75,000 for interest. Another £75,000 will become chargeable when redemption begins, but as that proceeds the charge for interest will diminish. Although the construction and control of the line will be in the hands of the Imperial Chinese Government, a British chief engineer is to be selected to superintend construction, and during the whole period of the loan the chief engineer must be a British subject.

Marconi's Wireless Telegraph Company, Limited.

This company wants more money for various reasons, and now invites subscriptions at par for 250,000 7 per cent. cumulative participating preference shares of £1 each. The prospectus states that "the success achieved by the Marconi system in establishing wireless telegraphic communication between the United Kingdom and Canada has made it desirable to increase the capital of the company so as to enable it to further extend its operations." A very good reason, perhaps, but it would surely have been wise to let the public know what the financial results of this success have so far been. We get "estimates" only for this Transatlantic service, based on twelve hours a day working and an average speed of 20 words a minute at 4d. a word. On these modest assumptions we are enabled to see a balance of £18,081 left for reserve or further dividends after meeting the charge imposed by these new preference shares and paying 10 per cent. on £394,190 of ordinary capital. We hope the dream may come true, but have much more disposition to trust in the short distance services, the installations on board ship, and modest business of that kind. We should have liked to see a proper balance-sheet though, because such statements as that shares held by this company in affiliated companies are of the "par value" of £2,453,464, or that the Marconi International Marine Communication Company, Limited, one of the subsidiaries, shows nett earnings rose from £13,448 in 1905 to £37,506 in 1907 inevitably suggest that there must be much more information of a useful and instructive kind which could be quite easily given. Its absence will be sure to militate against the success of the present appeal.

National Railways of Mexico.

Messrs. J. Henry Schröder and Co. and Messrs. Speyer Bros. offer for sale £2,829,177, or $13,753,000, prior lien 4½ per cent. sinking fund redeemable gold bonds of the above company, at 94 per cent., equal to £96 14s. 2d. per bond of £102 17s. 7d. These bonds form part of an authorised issue of $225,000,000, of which about $103,000,000 are issuable for the purpose of retiring bonds and notes of the Mexican Central Railway Company and the National Railroad Company of Mexico, but not more than $64,000,000 are to be issued forthwith. Of the remainder, about $48,000,000 can only be applied for the construction or acquisition of additional lines, and about $47,500,000 after January 1, 1910, for improvements and equipments at a rate not exceeding $2,500,000 per annum cumulative, and about $26,500,000 are available for the purposes of the plan and for improvements, &c., required in the near future. The bonds now offered are repayable not later then June 1, 1957, by an annual cumulative sinking fund commencing in 1917, and to be applied either by purchase below 105 and interest or by drawings at 105, but they may be repaid at that figure in amounts of not less than $10,000,000 on any interest day after January 1, 1917, upon 90 days' notice. They are secured by a first charge on all securities embraced in the plan of readjustment, and on the acquisition of the property of the two railways concerned, by direct charge thereon. In addition they will be secured by a mortgage of all property acquired by the proceeds of any of the prior lien bonds, and by mortgage of all property at any time embraced in the general mortgage with priority over that mortgage, which is guaranteed as to principal and interest by the Mexican Government. The combined receipts from operations of the two companies, after deducting expenses and adding nett income from other sources for the year ended June 30, 1907, were $8,173,872 U.S. gold, and for the six months to December 31, $4,341,540, but it is estimated that for the years 1907-8 and 1908-9 the nett earnings should be $9,012,000 and $10,245,302 respectively, exclusive of any increase to be derived from rate and tariff adjustments, or from economies effected by combining the two systems. Interest on obligations not called for deposits will require $3,932,430, and the interest on the $64,000,000 prior lien bonds as above $2,880,000, so that there should be margin enough to make these an excellent investment.

Ch. Drecoll, Limited.

This is a dressmaking, &c., business established in Paris and Vienna and is to be purchased by a British company with a share capital of £296,000 in 293,000 participating preferred ordinary shares of £1 each and 60,000 deferred shares of 1s. each. The participating preferred ordinary shares are to receive a non-cumulative dividend of 7 per cent. together with 35 per cent. of surplus nett profits, the other 65 per cent. thereof going mainly to the deferred shares. A working capital amounting to £94,000 is to be provided out of this issue but of this £40,000 will be utilised to purchase existing stock-in-trade, furniture, fittings, fixtures, &c. The participating shares are offered for subscription at par and have been all underwritten by the United Investment Corporation, Limited. According to Messrs. W. P. Peat & Co.'s certificate, the profits of the Paris branch have risen from £28,141 in 1905 to £68,324 last year and those of the Vienna business from £1,548 to £4,290, these latter being certified by a Viennese accountant. Adding these figures together and allowing for the preferred ordinary dividend, there is a balance of £52,104 shown by last year's profits available for directors' fees and other purposes. All the capital except £54,000 goes in payment of the property taken over from M. and Madame de Wagner, the vendors, and M. and Madame de Wagner have entered into a contract to act respctively as managing director and general manageress for five years, salaries not stated.

The Queen Gold Dredging Co., Limited.

This is a mining property situated in Chilian Tierra del Fuego which is to be bought by the company for £60,000, payment to be made in the 240,000 deferred ordinary shares of 5s. each. Therefore only 160,000 preferred ordinary shares of 5s. each are now offered for subscription at par, the total capital being £100,000. A variety of particulars are given based on reports and "tests" which may or may not be justified in the event. Upon these the working of one dredge is calculated to yield an "annual profit" of £30,000. Number of years not mentioned.

Letters to the Editor.

DRINK IN THE UNITED STATES.

Dear Sir,—My attention has been drawn to an article in The Investors' Review touching on the drink expenditure of the United States. You point out that in the year ending June 30, 1907, that expenditure remained high in spite of the spread of the Local Option and State Prohibition in America; and you invite temperance reformers to offer an explanation.

The explanation offered by American temperance reformers seems reasonable. They refer to the immense alien immigration which has poured into the States at the rate of a million a year. The million consists mainly of adults, who come from European countries with tax licensing systems and inveterate drinking habits. They find in the States wages far beyond what they are accustomed to. The Foreign Office Report from which you quote deals with the year of boom trade before the recent commercial crisis in America, when an expansion of the drink bill might have been expected. The real cause for wonder is not that this accession to the drinking population of the States, pouring in year by year over the whole of its area, raises the American drink bill; but that the American temperance reformers, in spite of this amazing handicap, are able to maintain and carry forward their restrictive legislation.

May I express my very sincere acknowledgments for your reference to my small book on the liquor question.

Yours faithfully,

Charles Roberts.

House of Commons,
May 26, 1908.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

BANK OF MONTREAL.

In the six months ended April 30 this bank's profit amounted to £189,773, a decrease of £12,184 on the corresponding half of last year, wonderfully little in the circumstances. The bank accordingly pays its quarterly dividends at the rate of 10 per cent. per annum with perfect ease, and after deducing two such dividends has £185,657 left to carry forward or £41,828 more than was brought in. Changes in the balance-sheet show some traces of the strain to which money markets everywhere have recently been put. Capital and reserves remain at the previous figures of respectively £2,958,904 and £2,260,274, but the note circulation has fallen off by £73,104 to £2,156,069. There is also a decrease of about £409,000 in the deposits bearing interest, the total of which is now £19,651,763, but deposits not bearing interest are up by nearly £248,000 to £7,080,612. Amongst the assets, gold and silver coin stands at £1,050,318, and Government demand notes show an increase of £135,555 at £1,363,977. The largest change, however, is in call and short-dated loans in Great Britain and the United States, the increase in which is £997,213 at £6,550,488. Investments, on the other hand, are down by £68,492 to £2,112,720, and there is also a decrease of £78,232 in the notes and cheques of other banks held, the total of which is £735,174, while current loans and discounts in Canada and elsewhere, rebate interest reserved, together with other assets, show a decrease of £245,548 at £21,234,647, the aggregate of the balance-sheet being £34,388,552.

PACIFIC STEAM NAVIGATION COMPANY.

In 1907 the profits of this old company, including £54,967 brought forward, came to £292,963, and after debiting income-tax, &c., and placing £183,877 to depreciation the disposable balance is £99,262, out of which the directors have declared dividends amounting to 25s. per share, of which 10s. was paid November 1 last and 15s. per share on the 1st inst. This leaves £25,406 to be carried forward or £20,533 less than was brought in, but the sum brought in was £34,818 more this time than a year ago. Last year, however, £50,000 was carried to a dividend reserve and £5,000 to the benevolent fund, while £2,200 was given as a special bonus to employees, so that the year now dealt with was a poor one by comparison, and although the dividend remains the same the bonus of 5s. per share granted a year ago has not again been paid. Profit on voyages, indeed, showed a decrease of £156,612 at £225,348, and only £7,014 more at £12,647 was gained from interest, &c. In their report the directors regret the loss of the *Santiago* and the *Colombia*, and point out that these losses, together with the payment made in settlement of the *Oravia-Nereus* collision case, now finally decided against the company, and sundry minor claims have caused a debit of £91,699 to the underwriting account, leaving it at £391,063. The four new cargo steamers referred to a year ago have been delivered and are in active service, and it is expected that the new twin screw mail steamer *Orcoma* will be handed over by the builders early in the autumn. These additions naturally tend to swell out the capital account, and £481,396 gross was added to the value of the fleet and property during the past year, bringing it up to £2,276,816, less the above-mentioned credit to depreciation. That taken off, the value of the property, including fleet, is £297,519 higher at £2,092,939. Less, however, by £32,198 was paid on account of new steamers and launches at £93,138, but coal and stores show an increase of £8,026 at £127,383, and cash is down by £177,854 to £19,052. Debts owing to the company are £2,175 up at £76,261, and debts owing by it are £192,347 higher at £296,709. The underwriting account is down only £35,026 nett to the figure above given, but the benevolent fund is £2,130 less at £7,094, and the balance of receipts and disbursements on account of current voyages shows a decrease of £16,773 at £119,052. It may be added that the amount of £183,887 assigned to depreciation and boiler replacement, &c., was £21,498 less than in the previous year. A year ago, moreover, the Valparaiso earthquake involved subscriptions amounting to £4,666. The working account showed an increase in gross receipts of £149,727 at £1,798,763, but this was more than swallowed up by increased expenditure, coal having cost £160,268 more, wages, provisions, &c., £68,739 more, port and general charges, hire of chartered steamers, &c., £63,570 more, management and agency charges £12,436 more, and insurance, &c., £9,770 more, repairs alone showing a decrease of £8,444, hence the decrease in the nett income.

ORIENT STEAM NAVIGATION CO., LIMITED.

The pleasantest fact in this company's report for 1907 is the announcement that it has entered into a new contract for a period of ten years from January 31, 1910, with the Commonwealth of Australia for the carriage of the mails. Thus closes well what at one time promised to be a vexatious business. Last year's nett revenue, after providing for depreciation, was £32,806 or an increase of £16,840 on the previous year, so that for two years now the company has made good progress, and the balance of voyages accounts after deducting managers' commission was £15,237 up at £00,543. The managers are accordingly able to pay a dividend of 5 per cent. on the deferred shares and will have nearly as much left to carry forward as the total free balance of a year ago. It may be mentioned that the value of the company's steamers has been written down by £50,833 in the past year to a total of £462,115. Cash is strong at £84,996, and nothing in the accounts calls for special notice.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

In declaring the usual interim dividends at the rate of 5 per cent. per annum on the preferred stock and 7 per cent. per annum on the deferred stock, the directors state that the revenue returns for the half-year ended March 31, as compared with the corresponding period of last year have been maintained, but with an increase in expenditure owing to the very high cost of fuel. Passenger traffic was adversely affected by a falling off in the ordinary winter tourist traffic, which is ascribed to the financial troubles in the United States, and by a loss of business on the Egyptian line, where the season was dull and the competition keen. To some extent, however, the deficiencies from these two sources were compensated by a fair advance in Australian receipts. Freights have been adverse throughout the sphere of the company's operations, and business, particularly in the Indian trade, has fallen to a very low level, so much so that several of the cargo steamers have been laid up owing to lack of employment. There seems to be little prospect of an early revival in the carrying trade, and the directors seem far from hopeful as to the outcome of the current half-year's working.

NITRATE PRODUCERS' STEAMSHIP CO., LIMITED.

During the year ended April 30 this company took over the Southern Steam Shipping Co., Limited and the Seafield Shipping Company, increasing the number of its vessels to 12 and the total tonnage to 88,800. This amalgamation took effect as from November 1, so that the accounts now issued include the results of six months' working of the additional boats, and accurate comparison with the figures for 1906-7 is therefore out of the question. Nett freights amounted to £157,681 or an increase of £65,975, but expenses went up about as rapidly and the available profits were only £8,223 higher at £32,746. After providing for administration charges, interest, &c., and writing off £1,180 for costs of amalgamation, the nett surplus including £1,692 or £391 more brought forward was £420 better at £21,610, out of which the usual dividend of 7½ per cent. is paid on the ordinary shares. As, however, this requires more owing to the increased capital, the appropriation for depreciation reserve is reduced by £3,429 to £8,570, and £1,086 or £606 less is carried forward. Including the new boats, the book value of the fleet after deducting depreciation allowances to date of £321,542, is £285,081 or about £4 3s. per ton, a very fair figure, considering that the average age of the fleet is just over six years. The directors point out that the amount written off exceeds an allowance of 5 per cent. per annum on the first cost of each steamer by £119,022, and they claim that this may be regarded as reserve or depreciation in hand. Liabilities on bills payable amount to £137,134, but this high total is probably due to the amalgamation transactions. Debtors and bills receivable at £50,459 exceed creditors by £1,571, and £9,091 has been spent on pending voyages in excess of receipts, but cash is only moderate at £6,272, including £1,620 held on account of the marine insurance fund.

BLEACHERS' ASSOCIATION, LIMITED.

We said last year that there was a weak element in this company's financial structure, and its report and accounts for the year ended March 31 last illustrate the truth of that observation. The trading profits after charging £152,389, or £1,419 more, for repairs and maintenance, show a decrease of £18,724 at £439,214, and after meeting all charges, including £50,000 credited to the depreciation fund and £101,250 for debenture interest, besides £5,809 for bankers' and other interest, and the central charges, directors' fees, &c., totalling £20,851, £246,104 is left, to which £7,279 brought forward is added, making the distributable balance £253,383. The directors place £50,000 of this to the general reserve fund, and £3,239 as against £5,000 a year ago to the fire insurance fund, making it £20,000, and after meeting the 5½ per cent. preference dividend have enough left to give 3 per cent. to the ordinary shareholders as compared with 4 per cent. a year ago, with £6,016 left to carry forward. This balance forward, therefore, continues to dwindle. It is £1,263 less than the balance brought in and nearly £18,000 less than the figure of three years before. Not only so, but the balance-sheet indicates a steady diminution in the cash and bills in hand, which at £16,546 is nearly £14,000 less than twelve months back. Changes in the other items of the balance-sheet are not a very striking kind, but owing to the sale of sundry businesses to the Bradford Dyers' Association, Limited, £118,933 nett has been written off the capital representing goodwill, land, plant, buildings, and so on, together with £14,200 off leasehold and sundry properties. In this way £133,133 has been deducted from the globular valuation of all these assets, but it is still £7,021,296. Stock on hand shows an increase of £7,273 at £252,675, but sundry debtors owe the company £69,340 less at £316,020. In the careful and interesting report of the auditors which accompanies the directors' exhibit, it is explained that an item of £188,000 representing the value of preference shares in the Bradford Dyers' Association is the balance agreed to be paid by that association on the transfer of the fixed assets and goodwill of the several businesses already referred to. What that precisely means we cannot say, but the auditors also point out that the whole of the reserve fund, now £300,000, is in the business, and doubtless most of the depreciation fund of £270,000 is now there likewise. The association

owes £223,964 to sundry creditors, of which £155,006 is debts on trading account and the rest loans from bankers, &c.

WELSBACH INCANDESCENT GAS LIGHT CO., LIMITED.

Last year ended March 31 was the first in which this company received no royalties, the last of its patents having expired in the preceding year. Partly because of this and also because many adverse influences were at work the exhibit is a poor one, and including £36,471 received as dividends on the shares held in the Austrian company, the nett profit was only £70,480 or £13,481 less than in the previous year. Adding the balance of £3,132 brought forward, the sum distributable was £73,612, which was £17,673 less than the available balance at March 31, 1907. No wonder then that the dividend is brought down to 3 per cent. on the ordinary shares as against 5 per cent. in the preceding year, or that the general reserve gets only £10,000 as compared with £15,000, but the balance forward is slightly up at £5,323. The business should obviously be a good one still, and it is simply over-capitalisation that smothers it, but this year seems certain to be worse than last, because the Austrian Company has only been able to declare a 20 per cent. dividend, and that will give the company £12,000 less in revenue from that source this year than it got last. Expenses, however, seem to be kept down to a modest total and some good perhaps may spring from the latest investment of the company. Since the end of the financial year a portion of the securities held for the reserve has been utilised to buy the entire share capital of an incandescent mantle factory in Germany. This company is said to be of well-established repute and doing a good business. It was bought within the past week on favourable terms. Altogether the cash and investments are entered in the balance-sheet at £72,421, so the business cannot have cost such a great amount.

BRUNNER, MOND AND CO., LIMITED.

In its year ended March 31 last this company's profit amounted to £740,951, and was made up to £781,715 by the balance of £40,764 brought forward. Out of this handsome sum the preference dividend is paid, together with a dividend of 30 per cent. on the ordinary capital of £1,962,870, and £100,000 is placed to reserve fund, while £2,500 is written off against patents. This leaves £35,373 to be carried forward. The company has no debenture debt, and its floating liabilities are insignificant in view of the magnitude of the business done. It has a reserve fund of £800,000 and £100,000 is put against a suspense account, the debts owing by the company being £209,717 against £228,669 due to it. Stocks on hand, including steamers, barges, rolling-stock, materials and products are entered at £425,671, a sum certified by the auditors, Messrs. Edmund D. White and Sons, of Liverpool, to be in accordance with the company's books. Investments amount to £861,594, and an original amount of £159,732 set against patents has been written down to £15,669. Cash stands at the comfortable figure of £161,506. All these figures show that the business must be a very fine one.

RUSTON, PROCTOR AND CO., LIMITED.

The past year to March 31 was exceedingly favourable for this concern, and the directors have an excellent report to present. Profits are returned at £70,897 or a few hundreds more than in the previous twelve months, and from these depreciation at the recognised rates absorbed £13,743. Remuneration for the directors was only £1,300, and we cannot help contrasting this figure with the large sums taken by some boards, whose labours cannot be one-tenth so onerous, and who probably require little or no technical knowledge. Debenture interest is £10,000 and preference dividend £7,500, leaving £38,354, which is increased to £44,969 by the sum brought forward so the ordinary shareholders will again receive 8 per cent., another £10,000 goes to equalisation of dividend fund, £500 to employees' aid account and £6,469 is carried to the new year. All which is highly satisfactory, and the financial position is equally good. Goodwill, patents, drawings, &c., £82,603 have long since been written off, and the total reserves now amount to £81,679. Capital outlays during the past year were fairly considerable, but the state of the company's business warrants the directors in keeping everything well up to date. Only £40,555 is due to sundry creditors against debtors £96,635, and cash and bills £119,772, while stock-in-trade is valued at £376,651.

J. LYONS AND CO., LIMITED.

Business continues to grow with this great catering company, and its gross profit of £789,244 for the twelve months ended March 31 last was an increase of £60,963 compared with the previous year. There was also £1,536 more at £8,348 received as interest and transfer fees, so that the entire gross income was £62,498 higher at £797,591. On the other hand, working charges of all kinds went up by £45,522 to £548,766, so that the increase in the nett income was only £17,776 at £248,825. Including £6,169 brought forward, this gave £254,994 for distribution, and the directors are therefore easily able to maintain the dividend on the ordinary shares at 32½ per cent. for the year by a final payment at the rate of 40 per cent. per annum. They also again add £40,000 to the reserve which will raise it to £480,000 and have £15,068 left to carry forward. A year ago, however, £5,000 was written off the book value of investments, but even so the position is a strong one, and the business continues to expand. During the year 13 new refreshment shops were opened, and the directors are continuing this policy of expansion. Changes in the balance-sheet are unimportant though interesting enough. Property and assets, for instance, show an increase of £23,039 on the year after allowing for £20,949 for estimated depreciation, and the total is now £1,085,545. Stock-in-trade has gone up by £23,672 to £194,889, and sundry debtors owe £7,031 more at £56,018, while the increase in the amount due by the company to sundry creditors is £10,990, the total being £92,282. Plant, machinery, fittings, &c., show an increase of £10,310 at £194,754, but investments are down £20,250 at £164,636 and cash is less by £41,163 at £127,981.

GREENWICH INLAID LINOLEUM CO., LIMITED.

This company's sub-title is "Frederick Walton's New Patents." Its report covers the year ended March 31 last, and shows some little setback in the profits, but the decline is only about £3,800, and a year ago there was an advance of nearly £11,000, so that the recoil is slight. After deducting various charges, the final balance is £71,871, and when the debenture interest and preference share dividends are met £67,971 or £4,255 less remains for distribution. The directors accordingly make up the dividend for the year to 15 per cent., leaving £8,471 to be carried forward. Furthermore, £15,000 has been added to the reserve fund, but on the other hand £18,442 was spent during the year on new buildings and machinery, against which £20,000 was written off buildings and plant, &c., leaving the value of the whole property at £334,964. Stock stands at £126,000, debtors owe the company £70,378, and it holds shares in the American Greenwich Linoleum Company entered at £10,172, its other investments being made up to £30,000, all in first-class municipal securities, an increase of £10,000 on the year. Cash, however, is down nearly £40,000 to £11,093. About £2,570 more at £10,271 was spent on upkeep.

SAO PAULO TRAMWAY, LIGHT AND POWER CO., LIMITED.

Mr. William Mackenzie of Toronto's report on this Canadian enterprise in Brazil for 1907 is quite encouraging, and is accompanied by fairly complete accounts. The figures are all in Canadian dollars and gross earnings rose by $[illegible] to $2,018,704. Nett earnings, however, were only $27,711 better at $1,395,874. They were, however, sufficient not only to meet all working charges and maintenance, but to pay the bond interest and to give three quarterly dividends of 2 per cent. and one of 2¼ per cent. for the year on the company's stock of $8,500,000 fully paid. That makes a dividend of 8¼ per cent. for the year. Then $100,000 is put to credit of profit and loss, leaving $244,975 to be carried forward. Most of the revenue credits to profit and loss are used up in improvements and the company wants more capital. It spent $[illegible] or about £150,000 on this account last year, and as both its lighting and power departments are developing at a satisfactory rate the necessity for further capital seems obvious. Therefore, the remaining $1,500,000 of the $10,000,000 of authorised [illegible] will be issued from time to time as the demands of the company determine. Mr. Mackenzie states that the company has [illegible] secured an exclusive 30-year concession for the distribution of light and power in the municipality of Sao Bernardo, and has already entered into favourable contracts in that locality. The exchange has been run at 15 to 15⅛d. per milreis during the year. Delays occurred in completing the Santo A[illegible] but the engineer reports that it will be ready for the supply of water next week. Besides the paid up capital of $8[illegible] the company owes $6,000,000 on 5 per cent. first mortgage bonds, and it has a reserve fund of $1,[illegible], all in the business.

CARTHAGENA AND HERRERIAS STEAM TRAMWAYS CO., LIMITED.

Gross receipts for the year ended December 31 show a small decline of £1,593 at £52,043, but they compare with a phenomenal increase in 1906. Expenses showed a small increase at £30,230, and after providing for debenture interest and sinking fund there remains a surplus of £15,515, making with fees and £2,411 brought in a disposable balance of £17,952 or £1,541 more than the previous year. Out of this £7,000 [illegible] is credited to improvement and renewal fund, a [illegible] per cent. paid for the year and £3,452 carried forward. Debenture interest and sinking fund required £2,[illegible] less than in 1906. A sudden stoppage in the demand for iron [illegible] in the United Kingdom reduced the amount sent down for shipment by 47,966 tons to 472,003 tons, but pig lead went up 3,148 to 39,125 tons. Up traffic amounted to 80,559 tons against 72,333, and [illegible] 29,856 more passengers were carried, but the tonnage [illegible] in the Los Blancos Extension showed a decrease to 142,[illegible] tons. Capital expenditure amounted to £15,133, and now [illegible] at £201,027. Sundry debit balances total £3,[illegible] against credit balances of £3,757, and cash comes to £4,054. Improvement and renewal fund stands at £14,000, and out of this part of the year's capital outlay will be provided.

LAND MORTGAGE BANK OF TEXAS, LIMITED.

Interest collected during the year ended March 31 shows an increase of £1,045 over the preceding twelve months at £44,711 and after various adjustments Texas interest [illegible] amounts to £44,800, and with the addition of £424 interest from banks, £1,578 interest on investments, and £823 [illegible] for property taxes in America (1907) the gross revenue comes out at £[illegible]. Outgoings amounted to £[illegible], including debenture interest £17,100 and £1,247 commission to correspondents. This leaves £21,364 to be carried to profit and loss account, where it is subject to a deduction of 5 per cent., due to the American manager. Adding £22,280 brought in, £43,[illegible] is thus at the directors' disposal. Preference dividends take £[illegible] and 7 per cent. is again paid on the ordinary with, in addition, a bonus of 10 per cent. on preference shares, fractions being paid in cash, leaving £15,225 to go forward. Consequent on the American crisis and a partial failure of crops due to the [illegible] heat of last summer unpaid interest amounts to £516, which does not seem a large amount in itself, although it compares with £[illegible] in the preceding year, but it is expected that it will all be paid in

due course. Loans on mortgage have advanced £7,847 to £558,518, loans, renewals, and extensions having been made during the year to the extent of £120,453 against £159,644, and sales notes taken rose by £2,849 to £7,936; and loans and sales notes to the amount of £80,834 were paid off. Sales notes in hand now total £22,838, while foreclosed properties have been reduced by £10,120 to £1,652, making a total item under these three headings of £583,008, compared with £584,775. Interest accrued is £123 higher at £15,087, and cash amounts to £36,648. Investments figure at £50,237 as at March 31, 1904, but had a market value on April 1, 1908, of £50,703, while reserve stands unaltered at £45,000. Property realisation account showed a credit balance in March, 1907, of £15,708, adding £6,504 profits realised during the year and in suspense and deducting losses and commissions of £3,068, the item is thus raised to £19,143.

HOUSE PROPERTY AND INVESTMENT CO., LIMITED.

The gross revenue from rents for the year ended March 31 improved by £932 to £87,522, but £1,290 more at £8,919 was deducted for empties and bad debts, and the total income, including £2,415 from interest and £403 from commissions, etc., showed a decrease of £316 at £81,422. On the other hand, a saving of £1,544 was effected in repairs, mainly because less was spent on special sanitary and structural work, and after writing off £3,867 for depreciation, of which £443 was profit on estates sold carried direct to special depreciation fund, the nett surplus amounted to £25,550 or £847 more. The sum brought in however was £720 smaller at £640, making the disposable total £26,190 against £26,063, or sufficient to pay the usual dividend of 4 per cent. with a small addition of £127 to the sum carried out at £767. For the second year in succession the reserve fund has to be neglected, while the depreciation above noted does not seem an over generous allowance on properties now valued at £948,319 or an increase of £2,132 on balance. The loan from bankers is no longer stated separately, but is included in the item of deposits, mortgages, etc., which has risen by £3,161 to £233,560. Liabilities for deposit and other interest are £722 lower at £1,363 and sundry creditors have also been reduced by a small amount to £1,753, while sundry debtors, etc., show little change at £7,006, and cash is £250 up at £2,279. A new item in the balance-sheet is £3,537 for shares in the Alliance Assurance Co., representing a portion of the sum received for profit-sharing policies in the Westminster Fire Office on the amalgamation of those companies.

NEW LONDON BORNEO TOBACCO CO., LIMITED.

The 1906 crop of tobacco which was brought to market during the past year was only 137 bales larger than that of the previous season, but the average price showed a substantial improvement of 12 cents for half kilo at 92¾ cents, or about 1s. 5d. per lb. against 1s. 2½d. Gross proceeds amounted to £11,150 up at £73,081, of which expenses took £48,323 or £7,476 more, but miscellaneous receipts were also better, and the nett profits from all sources came to £25,234 compared with £21,251. London office charges were slightly higher at £1,435, but against this nothing had to be provided for interest or for depreciation in Consols, nor was there any debit balance to be wiped out on this occasion, so that after writing £498 off leases the available balance was £6,266 up at £23,300. The dividend on the ordinary shares is maintained at 12½ per cent., giving the directors £1,630 as additional remuneration and £2,330 is put to reserve, after which the lucky holders of the 10 £1 founders' shares divide no less than £5,590 between them. Last year's crop amounted to 8,413 bales or an increase of 1,357, of which 6,669 bales have arrived at Amsterdam and 3,153 bales had been sold up to May 15. Prices so far realised have been decidedly better, the average being 103½ cents per half kilo, but the directors say that some of the tobacco has suffered from drought and the sale of the remaining bales may prove disappointing. Expenditure on the 1907 crop amounted to £39,430 or an increase of £4,477, which we suppose is due to the size of the yield. Liabilities to sundry creditors have risen by £2,546 to £12,671 against an advance of £2,605 to £6,117 in sundry debtors, and although cash has dropped by £1,609 to £1,420 the company has £4,000 out on loan and £6,587 invested in Consols, apart from £11,510 held on account of the reserve. Coolie advances, however, we are sorry to see are £1,547 higher at £3,819. Leases from the British North Borneo Company have been written down to the round figure of £66,000 and the investment in Sapong Rubber and Tobacco Estates, Limited, remains at £18,472, while on the other hand the reserve with the present addition from revenue will amount to £14,084.

CLAUDIUS ASH, SONS AND CO. (1905), LIMITED.

The directors announce that they have purchased the business of the Power Manufacturing Co., Limited, makers of dental chairs and instruments, which, they say, will be a source of additional strength to the company. No information, however, is given as to the price paid for the undertaking, nor is there any indication whether the profits for the year ended December 31 benefited by the purchase. Judging by the figures, we should imagine that the transaction does not enter into the revenue account in any way, as trading profits, after providing for extinction of leases, depreciation, &c., show a comparatively trifling increase of £1,388 at £84,748. Preliminary expenses having been wiped out a year ago with £2,986, the nett profits benefit to that extent this time, and after meeting administration charges and income-tax, come to £75,962 or £4,357 more. Adding the larger balance of £4,882 brought forward, the disposable surplus is £80,844 compared with £75,408, but the directors very prudently maintain the dividend at the comfortable enough rate of 8 per cent., and transfer an extra £2,294 at £20,000 to reserve, leaving £8,024 or £3,142 more to be carried to the new account. During the year the first block of the new buildings in Broad Street was completed, and the directors also bought the freeholds of the adjoining premises, Nos. 13, Broad Street, and 65, Poland Street, and it is no doubt due to these operations that the items of freeholds and leaseholds and plant, &c., have risen by £19,651 and £11,123 to £74,029 and £51,155 respectively. Goodwill remains at £200,000, but a reserve fund is being accumulated as rapidly as possible and now amounts to £40,000. Investments have been reduced by £19,646 to £44,644, a change which probably means that the money has been transferred to the freeholds account. Liabilities to sundry creditors are £3,851 down at £37,894, while, on the other hand, stocks have been increased by £63,300 to £341,387, and consequently we find that sundry debtors are £10,436 less at £196,977, and that cash has dropped by £41,467 to £18,513.

SHORT'S, LIMITED.

The very few licensed premises possessed were capitalised at an enormous figure when this concern was in the making, and instead of taking steps to fortify the position as much as possible, in view of the fact—a trade "secret"—that there is no property in a licence, the directors have hitherto divided pretty closely to the hilt. For several years after the undertaking was formed the dividend on the deferred shares was 10 per cent., and its reduction now to 8 per cent. is due to shrinking profits and not to a directorial desire to make amends for previous improvident finance. Here we have the freehold and leasehold premises, trade marks, designs, licences and goodwill standing at the colossal figure of £451,371, an increase on the year of £1,526, mark you, and yet the total amount of reserve accumulated to date is £17,575. This points to a very serious position when the time limit expires, and shareholders had better regard their dividends as to a large extent return of capital. Of the reserve named, less than £10,000 has been invested in separate securities, and since these are entered at cost a depreciation upon them is only too likely. We note that a mortgage of something like £10,000 has been raised, and while £26,196 is due to sundry creditors debtors owe the trifle of £405, and cash is £9,889. Profit from working account again dropped sharply to £27,621, a drop of £963, interest gave £559 and transfer fees £13, an aggregate of £28,193. The three directors are entitled to £1,500 in fees, an absurdly heavy amount considering the nature of the business, but they waive £300 on account of the past year. Their remuneration thus takes £1,200 and £515 goes for income-tax, leaving £26,478. The preference and preferred ordinary dividends having been provided, the deferred distributions will aggregate 16s. per share, or 8 per cent., which compares with 9 and 10 per cent. respectively in the two previous years, £1,000 goes to reserve and a trifle less at £1,469 is carried forward.

AGUA SANTA NITRATE AND RAILWAY CO., LIMITED.

This company's business was seriously affected by a strike of workmen in December, which caused a reduction of 101,168 quintals to 689,840 quintals in the output. The strike also disorganised the railway service, with the result that 26,293 quintals less at 3,306,639 quintals were carried, and as sales fell to 670,500 quintals, the gross profits showed a decrease of $251,491 at $1,095,866. After providing $101,081 for depreciation the nett surplus was $252,802 down at $994,785, which, converted into sterling, gave £74,609 compared with £93,569. Of this Valparaiso expenses took £6,468 or £4,159 less, and nothing is written off for repairs to the oficina Primitiva against £3,000 a year ago, so the quarterly dividends of 4 per cent. are maintained, and £20,141 or £11,801 less is transferred to the depreciation fund, raising it to £554,171. A new oficina adjoining the property of the company has been acquired for £11,000, and work was commenced on it in February last. In order to consolidate the floating debt and to provide for the reconstruction of the machinery at the oficina Primitiva, the company has arranged for an issue of £100,000 in second debentures, and of these £30,000 had been taken up on December 31. The funds thus obtained appear to have been applied in reducing the liabilities to sundry creditors and on bills payable, &c., which are £25,705 down at £30,403, but on the other hand the amount due to Messrs. Williamson, Balfour and Co. has risen by £34,220 to £88,635, and the overdraft at the bank is also a little higher at £24,516.

GUARDIAN ASSURANCE CO., LIMITED.

In its life department this company earned a premium income of £233,645. This is exclusive of £54,228 that came in under the "Westminster" life account, that business having been absorbed by the Guardian Company. The Guardian's own interest income was £126,806, and after meeting all claims and paying working expenses and commissions at the rate of £14 2s. 9d. per cent. of the premium income the life fund was increased by nearly £56,000 to £3,322,123. Moreover, £30,000 was carried to the investment reserve fund against depreciation. In the fire department the premium income was £538,650 or £12,538 more, and losses swept away £301,519 of this or 55.97 per cent. Expenses and commission together took another 34.03 per cent. of the premium income at £183,308, this ratio showing a decrease of 0.69 per cent. on the figure for the previous year, so the profit on the fire business was £45,681. There was also a substantial profit of £10,174 on the accident, burglary and general insurance branch, of which £5,036 was carried to profit and loss, and the balance to the general reserve fund of the department, raising it to £98,347. Altogether the profit of the year came to about £111,000, exclusive of the fifth share of the quinquennial profits shown in the life department, and

after adding £10,000 to the investment reserve fund and paying £100,000 in dividends to the proprietors a balance of £157,744 is left to carry forward against £148,305 brought in. The dividend is 10s. per share or at the rate of 10 per cent. on the paid-up capital of £5 per share.

TRADE AND PRODUCE.

Wheat.—Except that Liverpool market fluctuated under contradictory American advices, wheat has had a steady week, but only a very quiet trade has passed. English wheat has been firmly held for the most part, though towards the end of the week holders showed signs of being willing to shut the market and a few orders were booked at a little below last Thursday's rates. River Plate parcels, on the other hand, went ½d. in advance. The quantity of breadstuff on passage this week is again larger, 2,985,000 qrs. being on its way to the United Kingdom against 2,880,000 last week, but the Continent gets rather less at 1,875,000 qrs. against 2,020,000. Imports also were higher, being 395,267 qrs. against 351,400 a year ago, and farmers' deliveries came to 63,270 qrs. averaging 33s. 8d. against 37,967 qrs. averaging 27s. 7d. in the same week of last year. American markets went 1½c. to 2¾c. higher on crop news, large buying operations and a big decrease in visible supply—2,145,000 bushels less than last week—but better weather reports broke this rise, and later considerable fluctuations disturbed the market.

Cotton (from our Manchester correspondent).—The week under review has been an unsatisfactory period for our staple industry, the business arranged being of quite small dimensions. Buyers decline to pay current rates for both yarn and cloth, and the recent advance in the raw material is not believed in to any large extent. There is very little prospect, however, of lower prices, the statistical position being strongly in favour of the "Bulls." There has not been quite so much business in the raw material on the spot in Liverpool. The fluctuations in futures have been considerable, and there is great difference between prices for current months and distant positions. Recent weather in the American cotton belt has not been very promising, and the outlook for the crop is not so healthy as some time back. The acreage, however, is likely to be quite equal to last year, and, if anything, rather larger. Egyptian cotton has been firmly held with no particular change in quotations. The all-round inquiry in piece goods for export has not been important. Buyers and sellers have not been able to get to close quarters for lots of any magnitude. The turnover for India is smaller than in most recent previous weeks. Makers of best shirtings and finer goods such as mull-dhooties have stiffened in price, and buyers decline to follow on. A miscellaneous trade has been done for various minor markets, and no improvement can be recorded in the demand for China. Home trade cloths have commanded a little more attention both in light fancy materials for immediate delivery and in heavy cloths for the autumn trade. The experience, however, of most of the wholesale establishments in this district is discouraging, and the half-year's business is likely to prove very disappointing. Burnley manufacturers continue to do badly, and it has been decided to stop all the looms for the whole of Whit week. It is not usual for any holidays to be in force at this time of the year. American yarns for home consumption have moved off slowly in both twist and weft. Stocks can be met with in most directions, and spinners cannot get the high rates necessary to meet the additional cost in the raw material. United action is being taken with regard to short time, and all spindles on American cotton will stop for the whole of Whit week, and on Saturdays and Mondays of the four following weeks, making a total reduction in the output equal to 117½ working hours. There has not been much doing in export kinds, the bids for our Eastern markets being impracticable. Bolton spinnings have been quieter, and quotations are irregular when tested. Some spinners are endeavouring to improve their position. Last Tuesday good middling American spot cotton was quoted at 6.66 according to Sir Jacob Behrens and Sons' circular, which is just 1½d. per lb. higher than on April 29.

Wool.—Market conditions have certainly improved, but generally speaking the tone is not at all buoyant. There is a feeling that the good prices of Coleman Street will not be permanent; some maintain the idea that these high values were the result of manipulation of supplies, and users are only taking what is necessary to keep them going. The dulness of yarns and manufactured goods does not apparently justify this enhancement of raw materials, but these branches themselves show a slight improvement, and particulars of yarn deliveries are coming forward more freely, and it is hoped that as the summer advances the demand for piece goods will increase. Shipping business so far shows no great increase; the United States side of it goes from bad to worse. Continental orders keep up a fair average, but both South African and South American markets show no improving signs.

Coal.—Contracts for gas and railway coals are now being considered, and there does not seem much probability that last year's rates will be renewed. In the case of gas contracts South Yorkshire coalowners have been constrained to lower their prices 6d. per ton, and for locomotive fuel 10s. 6d. per ton, it is said, will be asked instead of 11s. 9d. or 12s., while Derbyshire quotes 9s. 6d. against the 10s. 6d. and 10s. 9d. for last year. The decline is generally put to the decrease in the demand for manufacturing coals, which have thus far to be employed for other purposes, and though steams for export and for navigation are increasingly required it does not counterbalance this decline. Welsh trade is decidedly slack, and prices moving downward—that is, for steams. Anthracites keep firm, in one or two classes even showing a slight advance.

Iron and Steel.—The termination of the shipbuilding dispute has already affected markets for the better. Cleveland pig-iron business has changed from the uncertainty and irritation of the past week to a steady and healthy tone. Reckless speculation is over, at any rate, for a time, and with an increase in exports stocks in public stores are rapidly decreasing again, prices are firmer, and both prompt and forward business this week has been good. East Coast hematite prospects have also improved; it is considered that the end of the strike will even have a better influence on it than on ordinary pig-iron, but so far the West Coast metal has not participated in this improvement. The tone there is weaker, the warrant market dull with falling prices.

Copper.—Prices at first were again adversely affected by the weakness of the share market and liquidations. After the first drop, however, they remained comparatively steady, and later again, though business was very restricted, improved to £57 17s. 6d. cash, and £58 7s. 6d. three months.

Tin.—The market opened fairly good, but soon developed weakness, owing to aggressive bear attacks and reports of heavy shipments. On Tuesday the Dutch sales at about £133 10s. had a strengthening effect for a time, but by Thursday prices had again relapsed to £127 5s. for cash and £126 5s. for three months. To-day, however, there was a sharp rally, and final values were firm at £130 and £128 7s. 6d. respectively.

Tea.—Catalogues of Indian are now getting smaller, and this week only 24,214 packages were offered. The market was again rather irregular, a large number of the sales consisting of final invoices of medium teas, and these were in less demand than of late, and concessions had occasionally to be made to effect sales. Bidding was keen for choice parcels, and common sorts remained steady, the average for the week is 17,111 packages sold coming to 8.03d. averaging 7.87d. in 1907. The best kinds of Ceylons again attracted most attention, and for common and medium kinds an irregular and easier tendency was shown. 22,060 packages were offered, and averaged 7.87d. against 7.91d. in 1907. Java merchants brought forward 1,985 packages, and of these the common kinds were more or less neglected, and consequently were weaker, and several parcels were withdrawn. Messrs. W. J. and H. Thompson give the announcement of the *Times* that at a meeting of the "Council of Ministers at St. Petersburg it was decided to repeal the surtax imposed on Indian and Ceylon tea in 1903, from September 1 next," which should tend to bring back Russian orders to this market. Given the usual deliveries and a rather late season, the statistical position by August must look very sound, and the first month or two's arrivals of new tea from India should come to a willing market, but in the meantime Ceylon and Travancore teas will be supplying the current requirements.

Sugar.—August beet prices moved down to 11s. at first on further realisations, but the Java rains and firmer American reports sent them up again to 11s. 6¼d., and speculators began to cover and to operate, forcing dealers to come into the market. Cuba, it is now considered, will yield a little more than was expected, though the receipts in six ports were only 5,000 tons for 15 factories still at work, but, Mr. Czarnikow's circular declares, it is impossible to say whether America will be satisfied to work on small stocks in August-September in presence of a good fruit crop, and whether Java will ship early. Rains there are not unusual in May; they did not prevent early shipments in 1905, when prices were tempting, but it is not likely that America can afford this year to let 70,000 tons Javas go to the United Kingdom, as was the case last August-December. Against this we shall have Russians here, and without them the market might be different. We are likely to have a fair premium for old crop for some time, but there is always some risk if put very high. The crop reports from the Continent are generally good, except from parts of Austria, where the weather was too dry and hot, necessitating replanting, for which it is rather late. From Russia the official forecast at one time anticipated only an unimportant decrease, if any at all, but the factory figures now published show 9,6 per cent. less sowings. Still, Russia is selling at cheaper prices since the decline here. The American market was very flat at the end of last week, but opened steadier, and with firmer advices from this side Cuban offers grew stronger, refiners bought more freely at gradually hardening values, and there was more interest shown in non-preferential cane sugar for September arrival. Landings in the three ports were 42,000 tons, meltings were 41,000 and stocks 331,000 tons.

Shawinigan Water and Power Company.—Earnings for April were $56,050 being at the rate of $672,600 per annum, compared with $44,150 or at the rate of $529,800 per annum a year ago.

Baku Russian Petroleum.—Production of crude oil for week ending May 23, 179,000 poods, equals 2,886 tons.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending May 23, 247,000 poods, equals 3,982 tons.

A fifty-page booklet on South America is just issued by the Royal Mail Steam Packet Company. It is handsome in form and covers the whole coast both east and west. It is intended to be useful to travellers, and contains some interesting illustrations.

The Chartered Bank of India, Australia, and China announce that the Right Honourable Lord George Hamilton, G.C.S.I., has joined the board of directors in succession to Mr. William Christian, who has resigned after holding office for 34 years.

COMPANY MEETINGS.

MARSTON, THOMPSON, AND EVERSHED.

The ordinary annual meeting of Marston, Thompson, and Evershed, Limited, Brewers, Burton-on-Trent, was held on Thursday at the registered offices, Burton-on-Trent, Mr. Frederick Hurdle, the Chairman, presiding.

The Secretary, Mr. David Burrell, having read the notice convening the meeting and the report of the auditors,

The Chairman said: I have now much pleasure in presenting to you the report and balance-sheet for the year ending March 31, 1908, of which no doubt you have all received a copy, and, if it be your pleasure, we will take as read.

You will see that after making proper allowance for bad debts, depreciation of leases, plant, &c., the profit on the trading for the year amount to £52,961 os. 11d., which together with the balance of £10,620 5s. 2d. brought forward from last year makes £63,581 6s. 1d. Out of this £1,750 has been paid for directors' fees, £14,800 for interest on debenture stock, £14,266 18s. 6d. for dividends on preference shares, and £5,688 os. 1d. for an interim dividend on the ordinary shares (being at the rate of 6 per cent. per annum to September 30, 1907, less tax).

The amount paid by the company as compensation charge under the Licensing Act, 1904, has amounted to £2,785 6s. 4d., leaving a disposable balance of £24,291 1s. 2d.

I am glad to say that the sales show an increase as compared with last year, and there is also an increase in the profits, and you will be pleased to hear that our beers are giving universal satisfaction.

The gross profit has been well maintained, but I have again to mention that the item of repairs to our own houses is on the increase, principally to meet the requirements of the Licensing Benches and local authorities.

I would also like to point out that we have spent a largely increased sum on advertising during the past year, which we believe has had a beneficial effect on the company's trade, but the greatest factor affecting the profits during the year is the increased prices we have had to pay for barley and malt.

Our stocks of barley, malt, and hops have been well maintained. The whole of the items of repairs and advertising before referred to have been paid out of this year's profits.

As I have before mentioned, our contribution to the compensation fund has this year amounted to £2,785 6s. 4d., a slight increase on last year. This sum covers our liability to October next, but we are again writing the whole amount out of this year's profits.

In recommending a final dividend of 6 per cent. for the half-year ending March 31, making 6 per cent. for the year, I wish to say, on behalf of myself and co-directors, how deeply we regret to have to recommend any reduction, but I feel sure you are in accord with this, knowing as you do how necessary it is that the resources of the company should be husbanded at the present time through no fault of our own, but due entirely to the harsh, unjust, and confiscatory measure now before Parliament—a measure which appears to be actuated by political spleen, and which will drive the sale of drink from the legitimate public houses, which are under strict police supervision, to places where no such supervision exists.

The cause of temperance will not be advanced, but the financial ruin which the Bill will cause to thousands of both large and small investors in brewery stocks and shares will be appalling, and I regret the Government should think fit to advocate such a scheme of wholesale robbery. I can only hope that when the Bill is before the House of Lords they will deal with it in that spirit of justice which has always been one of the most cherished traditions of our country.

We propose to carry the sum of £4,000 to a contingency fund, and the sum of £4,160 to the reserve account to replace a like amount taken away, as explained in the balance-sheet.

I shall be pleased to answer any questions arising out of the accounts, and now formally beg to move the adoption of the report and balance-sheet.

Mr. F. Thompson said: At our last annual meeting our chairman laid before you proposals advocating extreme caution in the policy to be pursued in the future management of this company.

We have now before us the proposals of the Government, proposals so extreme in character, so devoid of all sense of justice and equity, that coming, as they do, from the Government in power, they have been denounced by great financiers, including Lord Rothschild, as having dealt "a severe blow to the credit of the whole nation, and lowered the standard of national honour in the regard of all our contemporaries."

Your directors again suggest to you that the policy of caution should be adhered to.

It is the plain duty of everyone in any way connected with our business to unite in its defence, and to spare no effort to resist and finally overthrow this measure which the voice of the people (whenever they have had an opportunity to express it) has emphatically declared to be calculated to serve no good purpose, but to be an act of political revenge.

I have much pleasure in seconding the adoption of the report and balance-sheet, and recommend it with confidence for your approval.

The report and accounts were unanimously adopted.

Mr. Hurdle proposed the payment of a further dividend on the ordinary shares at the rate of 6 per cent. per annum for the half-year, making, with the interim dividend already paid, 6 per cent. for the year, carrying forward £10,443 1s. 1d. to next year.

Mr. Yeomans, in seconding, said: I can only express my regret that we have to reduce our dividend. Mr. Hurdle and Mr. Thompson have referred to the crisis our trade is now going through, and the directors are unanimously agreed that they must pursue a most cautious policy.

The retiring directors—Mr. Sugden and Mr. F. O. N. Hurdle—were re-elected, and the auditors, Messrs. Harrison and Sedgwick, C.A., Derby were re-appointed.

The meeting terminated with a cordial vote of thanks to the chairman.

ORIENT STEAM NAVIGATION.

The eighth annual ordinary general meeting of the Orient Steam Navigation Company, Limited, was held on Wednesday at the company's offices, 13, Fenchurch-avenue, E.C., Mr. Kenneth Anderson presiding.

The notice convening the meeting and the auditors' report having been read,

The Chairman said: We are glad to present again an account which displays a marked improvement on the preceding year, the gross profit for 1907 being £90,542, as against £75,305 for 1906. From this gross profit has to be deducted general charges, which show an increase of £548; interest, which shows a decrease of £2,750; reserve for depreciation, £50,832, and a debit of £4,567 for improvements to the *Omrah*, leaving a net balance of £32,805 as against £17,950 for 1906. Though we had one mail voyage less last year than in 1906, our receipts from passage money were larger, and from freight practically the same, whilst if you apply the better test of voyage averages there is an increase in all sources of revenue, both outwards and homewards. On the other hand, coal, provisions and wages are all higher. This will continue adversely to affect us during the current year, but there are signs of easier conditions ahead in the coal market. From this balance of £32,805 there falls to be deducted the dividend on the preferred shares, and we propose also to pay a dividend of 5 per cent. on the deferred shares, leaving £16,840 to be carried forward. When you remember that our building programme has for years been paralysed by uncertainty, and that we have had to face the competition of steamers newer and larger than our own, I think we have good reason to be satisfied with the result, and happily that uncertainty as to the future is now at an end. In July last the Commonwealth Government cancelled the contract held by the Laing Syndicate, opened negotiations with us for an interim extension of existing arrangements, and invited fresh tenders for a new contract. The Royal Mail Steam Packet Company having intimated their intention to retire from their agreement with us, we submitted a tender for the whole service on our own account, and in November last brought to a successful issue the negotiations both for a two years' extension of the old contract and for a new ten years' contract to take effect thereafter. The Royal Mail Company, who only became our partners in 1906, cease to be so in May, 1909, by which time we have arranged to provide the necessary steamers in substitution for those withdrawn, and from that date the Orient Company will itself maintain a complete fortnightly service; the alternating fortnightly service under Imperial Government contract being maintained by the P. and O. Company, with whom our relations are of the most friendly character. We have already contracted for the five new steamers required for the commencement of the new service in February, 1910. It is, of course, obvious that such an extension of the company's operations must be accompanied by an expansion of its resources. This subject has engaged our most careful consideration, and we shall at an early date lay before you a proposal for increasing the company's capital. As to the merits of the new contract, we are content to let it speak for itself. The period is for ten years as from January 31, 1910, and the subsidy £170,000, as against £120,000 paid since 1905, and £85,000 paid prior to that date. It is true that in 1910 the special subvention of £26,000 paid by Queensland will cease; but you will be glad to hear that all the other advantages of that arrangement, which are considerable, will be continued, whilst so rapid has been the growth of our business with Brisbane that by the time the subvention ceases the extension of our service to that port should be more remunerative without than it was originally with the subvention. On the one side of the account, therefore, we have a subsidy larger by 100 per cent. than it was three years ago. On the other side, the increased size of the steamers and speed of the service involves greater cost of running, but the ratio of increase in cost will be small compared with the ratio of increase in earning power and attractiveness. We have held our own under the conditions of arrested development imposed by the events of recent years, and we have every confidence that the increased earning power will mean increased earnings, now that these conditions are removed, and we have a growing trade to work upon. The prosperity of Australia is on the ascending scale, and in proof of this I refer you to our balance-sheet and to the official values of the imports and exports for 1907, which are approximately 124¾ millions, as against 114½ millions for 1906, an increase of about seven millions in imports and three millions in exports, whilst the balance of exports over imports in 1907 was about 21 millions. The country will no doubt from time to time have to face setbacks, just as all countries have to face them, but nothing has so impressed me in the three visits I have paid to Australia during the last four years as the speed with which Nature there recovers lost ground. The country must advance. It is only a question of how fast the advance will be, and, satisfactory as are the larger receipts from all classes of passengers, nothing is so satisfactory in this connection as the steady growth of the third-class traffic. The continuous decline in homeward freights which has gone on in recent

years owing to the advent of the large carrying cargo boat, has now, I believe, reached its limit, and we can look to the increased volume to compensate us for the fall in rates. Not only, therefore, is the trade outlook promising, but the long delay attendant on the settlement of this mail contract question, however embarrassing to us at the time, has ultimately brought its advantages. We have been able to place our orders for steamers on terms much more favourable than if we had contracted at any time during the last three years, whilst the thorough ventilation of the subject in Australia has dispelled misconceptions as to what is an adequate subsidy for the services required of us, and any feeling that our price was more than a just and reasonable one has consequently disappeared. We enjoy the goodwill of the Commonwealth Government, and, I believe, equally the goodwill of the Australian public. These are not merely matters of sentiment. They are solid assets which we will use every effort to preserve by giving good value for our subsidy, because we rely upon the assistance of the Government and the support of the public to make the service a good bargain for both parties, a success for the shareholders, and a big factor in the development of Australia. After expressing his appreciation of the services of the staff, the Chairman concluded by moving the adoption of the report and accounts.

Mr. T. L. Devitt seconded the motion, which was carried unanimously.

The proceedings then terminated.

GREENWICH INLAID LINOLEUM COMPANY.

The fourteenth ordinary general meeting of the shareholders of the Greenwich Inlaid Linoleum (Frederick Walton's New Patents) Company, Limited, was held on Friday at Winchester House, Old Broad Street, E.C., Sir William Treloar, Bart, J.P., chairman of the company, presiding.

The secretary and general manager, Mr. D. S. Mackay, having read the notice convening the meeting, and the auditors' report,

The Chairman said: I welcome you here to-day on behalf of the directors, and hope you will be satisfied with the report and balance-sheet which I have the honour to place before you. The directors feel that they may congratulate you upon the year's work. Perhaps the position of affairs can be placed before you in the clearest manner by beginning with the profit and loss account, which deals with the result of the year's trading. We made a start with the sum of £7,725, the amount brought forward from last year's accounts. The profit made during the year is, as you will see, £76,053. Although this is about £3,800 less than it was last year, I think you will agree with me that it is highly satisfactory. During the first nine months of the year we had to contend with high prices for all raw materials. Linseed oil was up in price during this time, and so was cork. Fortunately we had foreseen the advance, and provided ourselves with large stocks of both of these ingredients. Oil is like port wine—I do not mean in flavour, but I mean that it improves with age. Cork also may be kept in stock without deteriorating, but there is a third necessary article which does not improve by keeping—I refer to the Hessian which is used in large quantities by all linoleum manufacturers. It was the extraordinary advance in the price of material which cut into our profits very considerably. When I tell you that our consumption of Hessian runs into millions of yards, and that at one time we were obliged to pay an additional 1d. per square yard, you will readily understand why our profits slightly decreased. I am glad to say that recently things have improved in this direction, although there is still room for further reduction. If you turn to the debit side of the accounts you will see that we spent £10,271 upon upkeep, and renewals of plant, machinery and buildings. The bulk of this sum should be regarded more in the light of alterations to and improvements of machinery than repairs or upkeep. We have been busily engaged for some time in developing a scheme for increasing the speed at which our inlaying machines are worked, not only because we wish to make linoleum more quickly, but also and principally because we know that the greater the speed the better the goods are made. This is nearly always the case in all automatic processes. We are anxious in this, and all other matters, to keep pace with the times, and show all concerned that Greenwich inlaid linoleum is better than any other. Another item of expense which we have had to face during the year has been in consequence of the demands made by the London County Council for emergency exits, fireproof and iron staircases, balconies and escape ladders. All these have now been erected at considerable expense under the supervision of the Council's officials, and you will be glad to know that your directors have done everything in their power to ensure the safety and promote the comfort of the employees at both your large factories. After paying trustees' and directors' fees, together with the interest on debenture stocks and preference shares, we have left £60,970 for the credit of the appropriation account. At the risk of being considered monotonous, we recommend a dividend of 15 per cent., which absorbs £36,000. We carry £15,000 to reserve account, and after deducting the directors' additional remuneration there remains a balance of £8,470. Now let us turn to the balance-sheet, where you will see that we have expended £18,441 on new buildings and machinery. This brings up the item of freehold and leasehold lands, buildings, and machinery to £336,522. We propose to reduce this item to £334,964 by taking £20,000 from the reserve account, writing £10,000 off buildings, and £10,000 off plant and machinery. Our stock of manufactured linoleum and of materials and tools, &c., is put down at £126,000. The greater part of this stock is linoleum ready for delivery, all of which has been made with dear materials. We have no desire to inflate our profits, and we have actually taken this down at less than actual cost. The next item calls for some brief explanation. As you all know, we have always done a considerable trade with America and Canada, and in order to develop this trade it was necessary to hold large stocks of linoleum in New York City. There were some complications, which induced us to float a small company incorporated under the laws of the New York State. The capital of the company is 2,500 shares of $20 each. Of course, you hold all the shares but 25, which have to be in the names of your directors and the selling agents as individuals. We have, therefore, complete control of the business. We find this arrangement works very well, and you hold good security for the £10,171 set out in the accounts. Now, to revert to the balance-sheet, you will see that the total amount invested outside the business is £30,000, and, although we get but 3 per cent. to 3½ per cent., you have the satisfaction of knowing the stocks we hold are readily negotiable. The cash at bank and in hand is £11,092. On the other side of the account the only items I need refer to are the creditors. Our trade creditors are £6,392, an unusually large amount for us, but it is accounted for by the fact that some of the new plant and machinery is unfinished, or, rather, was unfinished on March 31, and consequently was not paid for. The other item of £7,243 is made up of a series of small reserve accounts, mainly for the redemption of leases. During the year a seat on the board was rendered vacant by the lamented death of Mr. Harris Lebus. We thought we could not do better than offer this seat to Mr. Frederick James Walton, the son of our old friend the patentee, who is still our largest shareholder. May I say one personal word? You were generous enough this time last year to vote me 100 guineas for my Cripples' Home, and the fact appears in the accounts to-day. I thanked you then and I thank you again now—such generosity is most encouraging. I have very much pleasure in moving the adoption of the report and balance-sheet.

Mr. William Wright seconded the motion, which was then put to the meeting, and carried unanimously.

METROPOLITAN AMALGAMATED RAILWAY CARRIAGE AND WAGON COMPANY, LIMITED.

The annual meeting of the shareholders of the Metropolitan Amalgamated Railway Carriage and Wagon Company, Limited, was held at the Grand Hotel, Birmingham. Mr. Frank Dudley, Chairman, presided.

The Chairman, in moving the adoption of the report, said: In doing so I should like very gently to hint that it is quite competent to my friend Mr. Melvin, or any other shareholder, to move either the reduction of the 10 per cent. dividend or the elimination of the 5 per cent. bonus, or both. (Laughter.) Last year you will remember there were some objections raised to a continuous 10 per cent. dividend. It seemed to be getting monotonous. I am not sure now whether a majority of our shareholders prefer an increase or a decrease in the distribution. Both your board and myself were quite content to go on with what we were old-fashioned enough to consider a pleasing and agreeable regularity, and I can assure you that we who are brought somewhat closer to the various and varying circumstances under which it was earned were very little troubled by the monotony, and were only too thankful to be able to maintain it. (Hear, hear.) There are such things, however, as appetites that grow by what they feed upon, and I am only going to remind you once more that this is a business which emphatically calls for large reserves if its continued prosperity is to be ensured, and to ask you to continue to your board and to myself in full measure that indulgence and that confidence which you have given us in the past, and which has been to us at once an encouragement and a source of strength. (Loud applause.) I am exceedingly happy to be able to congratulate you once more upon a successful year. None the less, however, it has been an exceedingly trying one. All years have their anxieties and their perils, but last year was a more than usually trying and critical year, and I doubt if there are many concerns turning over several millions of money, as we do, who are in a position to say that they have escaped in a year like the last the many pitfalls that were yawning in various directions, and come out with a total of bad debts for the whole year amounting to a sum of £20 4s. 1d. (Applause.) I make special mention of this because I think it is a matter that reflects great credit upon the management and the staff by which those who are responsible deserve our hearty congratulations. You will observe that our paid-up capital has been increased from £1,184,096 to £1,432,940, the increase being the amount issued in shares for the purchase of the business of Dudley Brothers. Our reserve fund, with the additions now recommended, will amount to £150,000. We owe to creditors £157,543, some £16,000 more than last year. It has been necessary to add to our plant account the sum of £[illegible]. Let me again render grateful testimony to the action of the Wednesbury Town Council in again reducing the rates a further 4d., and let me show my gratitude by telling everybody whom it may concern that Wednesbury is one of the best places in the kingdom in which to establish manufacturing industries; that it is not yet all staked out, and that we are prepared to give a hearty welcome to any firm, either native or alien (Mr. Lloyd George's "patent" foreigners—laughter—who will come and relieve us of the distinguished honour of being the largest taxpayers. (Applause.) To go back to the figures for a moment, we have cash at our bankers to the amount of £4[illegible]—something like double the amount we had last year. Our debtors

are £233,736, being £2,500 less; our stock-in-trade some £40,000 less; our investments, which include the Patent Shaft Company and Docker Brothers' shares, nearly £200,000 more, and last, but not least, our profits amount to £246,495, being £39,654 more than last year. These figures will, I think, justify me in the opinion that you have a business built on a foundation of rock, and sound in every particular. (Loud applause.) It is for us to maintain that position, to see that the foundations are not undermined, and it is for you to help us by your confidence and support. I am naturally gratified to be able to report that our most recent addition, the business of Docker Brothers, shows a satisfactory year. In this connection let me take the liberty of repeating an appeal which was addressed some time ago to you, with the most satisfactory results. Already we have to thank many of our shareholders for the valuable assistance they have rendered in specifying the varnishes, paints, and various articles manufactured in this department, and we want to extend that appeal to all of you. We cannot expect many of you to show your interest in the company by buying railway carriages or investing in wagons, wheels, or bridges, or any other little trifles of that kind—(laughter)—but a good many of you might consume your own paints and varnishes, or assist in their consumption by others, and if 10 per cent. dividends and 5 per cent. bonuses are in themelves desirable things—and I am not altogether prepared to deny their desirability—here is a short and easy way in which our shareholders can help them to become more or less permanent institutions. (Applause.) And that we want all the help we can get is becoming more apparent every day. I do not know that I can fairly be called a pessimist. (Laughter.) At the same time, I feel bound to say that some of the signs of the times occasion me a certain amount of misgiving, and compel me to look to the future with some amount of apprehension. I do not think the country has at all adequately realised what the effect of the Miners' Eight Hours Bill upon our manufacturing industries is likely to be, and how serious are its probable results. I am ready to admit that to remedy some evils no price scarcely would be too great to pay; but the long-sustained resistance of the Northumberland and Durham miners to the eight-hour movement is sufficient proof that that is not the case here. The cost of fuel is already so great that the increased charges necessitated by the new legislation will very seriously handicap numerous industries, ours amongst the number, and goodness only knows, with our restricted markets, and they, every one of them, including our own, subjected to unrestricted competition, we need no additional burdens. (Applause.) There are, however, plenty of ways in which trade might be benefited and encouraged by the powers that be, such as the improvement of the consular service, to which Mr. Leitner referred last year, and the appointment of gentlemen of commercial experience and ability to all such positions where their special qualifications might find scope. The present is the most critical epoch that ever British trade passed through. It needs all the care and all the wisdom which both legislators and traders, both masters and men, can bring to bear upon it if we are to hold our own against the formidable competition to which we are exposed.

The motion, having been seconded, was put to the meeting, and carried unanimously.

MIDLAND RAILWAY OF W.A.

An ordinary general meeting of the shareholders of the Midland Railway Company of Western Australia, Limited, was held on Thursday at Winchester House, Old Broad Street, E.C., Mr. W. Capel Slaughter (the chairman) presiding.

The Secretary (Mr. A. J. Barber) having read the notice convening the meeting and the report of the auditors,

The Chairman said: I think that at the outset I may congratulate you and the holders of all the company's securities upon the satisfactory position of the company. Directly I joined the board, in February of last year, I united my efforts with those of my colleagues in the preparation of accounts showing the outcome of the reorganisation scheme from which the company had emerged. In the long interval which has elapsed we have had a reorganisation scheme ultimately culminating in the promulgation of a scheme for straightening out the affairs of the company, and I can assure you that very much remained to be done after that plan was finally adopted to give it practical effect. The company was never placed in liquidation—that was indeed one of the features of the plan of reorganisation; but the effect was that there was never any machinery by which the minorities of our creditors could be bound—I mean the creditors who hold our debenture stock issues—and therefore it was that many persons who had come forward to render assistance to the company were in a position in which negotiations had to be opened with them for the closing up of their accounts. But those obstacles having now been removed, I cannot imagine that, with the record of what has been done, there will be any difficulty in persuading you of the great potential future which awaits this company. My difficulty will be so to couch my observations as not to make them in too sanguine or too optimistic a vein. We have not in our accounts taken any separate credit for what is, perhaps, the most valuable asset we possess—namely, the unsold lands—which at June 30, 1907, amounted to 2,472,140 acres, of which 2,046,046 acres represented lands which were and are charged to secure the £500,000 4 per cent. guaranteed debenture issue and to secure the Government in respect to that guarantee. The remaining 426,094 acres are what we regard as "free lands," because there is not any need to obtain the sanction of the Government to their sale; but those lands are none the less successively charged in favour of the holders of our prior lien debenture stock, our 5 per cent. income stock, and our 6 per cent. income stock. Before the appointment of the Lands Committee less than 100,000 acres of land had been sold. But in 1905 the receivership in the colony having then terminated, the board determined upon a more forward and active policy with regard to dealing with their land. In November, 1905, the Lands Committee was appointed. Between June 22, 1906, and June 30, 1907, they had sold 255,691 acres for over £140,000, and between June 30 and December 31, 1907, they had sold a further 174,478 acres for over £83,800. With the object of stimulating our land sales, we recently made an arrangement with the Government whereby our lands are advertised, side by side with the Government lands, in the Government Land Bureau in Melbourne. The committee are not relaxing their efforts in any way, and on the 19th inst. we had a cable from the other side advising the sale of 12,071 further acres of land for £11,047, or just about 18s. 3d. per acre. Turning to the railway, the results are distinctly encouraging. The gross receipts and the expenses for the years 1899 to 1906, inclusive, are summarised in the profit and loss account. It is true that the gross receipts, after reaching practically £82,000 in 1903, subsequently fell off, but there was a reason for that which now no longer exists, and already for 1907 our gross traffic is the best on record, amounting to £86,233. During some part of the past years I should imagine that the maintenance of the road was not as substantial and enduring in character as we would have liked it to have been. The imperative need of realising enough to meet all the obligations of the company, and to steer it clear of the risk of foreclosure under the guarantee to the Government, had to be the first and paramount consideration of those in charge, and other considerations had in a measure to be subordinate to it. Thanks to our increased railway returns and our land sales, and our consequently vastly improved position, all peril in regard to the obligation of the company under that guarantee has disappeared, and Mr. Smith, the general manager, is free to devote himself to seeing that the upkeep of the line has a considerable share of his attention. The gross traffic receipts have for the seven months to the end of January, 1908, shown an increase of £4,584 over those of the previous year. Having thus briefly, but I think fully, explained to you what has been done upon the other side, it remains for me to tell you what has been done here. Since 1904 the Government guaranteed 4 per cent. bonds have been reduced from £500,000 to £360,000 and the revenue charge thereon from £20,000 to £14,400 per annum. This means that we have already two years—namely, 1909 and 1910—in which, under our contract with the Government, there is no obligation to make any further reduction of that loan. Of course, while on the one hand all blame for the troubles of the past must not be attributed to our predecessors, so all the credit for our comfortable position to-day must not be assumed by ourselves. Great changes have been taking place in the State since the Government contract for the building of this line of railway was granted. At that time there were barely 200 miles of railway in operation in Western Australia; to-day there are over 2,300 miles of railway at work, and while at the earlier period the population of Western Australia was barely 40,000, to-day it exceeds 260,000, and the resources of the State have naturally by these two factors alone been materially and substantially developed. I am glad to believe that our improved relations with the Government are due to its being recognised that this company and its administration have no thought but to act liberally, doing our best to deal fairly with the traffic and with the passengers upon the line, having, of course, due regard to the rights and privileges which we have been accorded for the services which we have rendered. Such being the position, it appears to the board that the path before the company now looks comparatively smooth.

Mr. Andrew Williamson seconded the motion.

Mr. W. R. Lawson urged a more forward development on the part of the company in regard to the sale of its lands, and the Chairman having given the views of the board in regard to this matter, the resolution was adopted.

SIBERIAN PROPRIETARY MINES.

The second ordinary general meeting was held, on Thursday, at Winchester House, Old Broad Street, E.C., Mr James Christopher Williamson, chairman of the company, presiding.

The Secretary (Mr. William Goldie, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said that the company's operations for the period under review—December 1, 1906, to January 13, 1908—showed a loss of £421,085. Against this, however, a net balance of £40,871 was brought forward to the credit of profit and loss at November 30, 1906, which reduced the amount to the debit of profit and loss account at January 13 last to £19,213. This loss was chiefly accounted for by the heavy depreciation in the market value of the company's holdings in Troitzk Goldfields, Limited, and Orsk Goldfields, Limited. In the last balance-sheet it was decided to bring these shares into the accounts at par, that was at £1 per share, while in the present balance-sheet they had been valued at 5s per share, the market price ruling on January 13th last. The amount written off under this head was £376,500, but he desired to point out that this great depreciation was not an actual realised loss, nor, on the other hand, should this value of 5s per share be taken as fully representing the intrinsic worth of the company's holdings in these two concerns. The writing off of the expenditure incurred by the investigation and prospecting of certain mining

propositions which were under option to the company involved £42,395. As regarded their fees, the directors had agreed to accept about half the fixed sum allowed by the articles. As the board now consisted of five members, the annual payment to them under the proposed new scale would amount to £1,800. He thought that the reduction of £3,150 in this respect in a very short time was a very substantial one. It was very disappointing to learn that although the Orsk mines were believed to have considerable possibilities the reefs selected for development had proved to be much poorer in depth than was anticipated, and it was improbable that the mine could be sufficiently proved within the remaining term of the lease, which would expire in March, 1909, to warrant the purchase of the property at any price likely to be accepted by the vendors. It was hoped, nevertheless, that some satisfactory arrangement might be entered into with the lessors by which the company might continue operations, possibly on a royalty basis, and the Orsk board were considering very carefully what steps should be taken to this end. In view of their large interest in that undertaking, the Siberian Company were prepared to render the Orsk Company such financial assistance as might be considered advisable to take up one of the more promising propositions which they had under consideration at the present time. With regard to their interest in Troitzk Goldfields, Limited, he was very pleased to state that the prospects were distinctly encouraging. The property appeared to be opening up well, and there was every reason to believe that the ore continued in payable quantities at depth. The values were not exceptionally high, but they were more or less consistent, and the lodes attained large dimensions. Development work was proceeding vigorously. There was no reason to doubt that the payable ore continued in large quantities at much lower levels, and it was understood that the board were already preparing for the erection of a new reduction plant. A certain amount of financial assistance would undoubtedly be required by the Troitzk Company to enable them to carry out their programme, and the Siberian Company had agreed to advance them, on reasonable terms, funds for that purpose up to £30,000, which amount, it was anticipated, would be sufficient to place the company on a dividend-paying basis. Negotiations were in progress with a view to a satisfactory compromise with the Moscow municipality, and he thought there was not the slightest doubt that the company would obtain from the civic authorities the return of their deposit of £10,480, and possibly some further additional sum. The only other item in the balance-sheet to which reference need be made was the investigation and prospecting account of £859 representing the value of the tangible assets on the Pavlodar property. Of the property comprised in the original lease the company now held one copper "claim" and four coal "prospecting areas." The copper claim was the only one which offered reasonable prospects of eventually developing into a mine of sufficient size to support a smelting works. It was obvious that the value of the mine depended entirely upon its possibilities in depth, and the board decided to sent out a diamond drill for the purpose of testing in a quick and economical manner the nature of the copper deposit below water level. Before taking up any other propositions in Russia the directors would certainly take care to be satisfied not only that the prospects of business were encouraging, but that the terms of purchase were reasonable. Towards the end of last year the directors decided to appoint a local committee to St. Petersburg, and they were very hopeful that this policy would prove of very great value to the company. With regard to their future operations, he desired to point out that the board would carry out a conservative policy. They had ample funds at their disposal, and there was no doubt a very great deal of business would be offered them. They did not intend to confine their operations to Russia, and if any good business in any other part of the world presented itself it would be carefully considered on its merits. The position of the company was an exceptionally strong one. They had practically no liabilities, and of their assets about £180,000 in actual cash was in London. They were, therefore, in a position to undertake promptly any advantageous business that might present itself, and in this fact there were great potentialities. The outlook was distinctly bright, and he was confident that with careful management and prudent progress they would attain the success to which they were all striving.

Mr. Edward Hooper, M.Inst.C.E., seconded the motion, which, after a short discussion, was adopted.

After the transaction of formal business, an extraordinary resolution was passed to alter the articles in regard to the remuneration of the directors.

ROYAL MAIL STEAM PACKET.

The 69th annual general meeting of the proprietors of the Royal Mail Steam Packet Company was held on Wednesday at Cannon Street Hotel, E.C., Mr. Owen Philipps, M.P., the chairman of the company, presiding.

The Secretary (Mr. R. L. Forbes) read the notice convening the meeting and the auditors' report.

The Chairman said: The progress made by the company in the previous four years had continued during 1907 and justified the directors in recommending a dividend of 2½ per cent. on the ordinary stock. They were able to do this after setting aside no less than £185,000 for depreciation. While the fleet had been doubled in size in the past five years, the amount placed to depreciation in the same period had increased at a still greater ratio, and the sum set aside for the last three years had been ample to meet the year's depreciation. The fleet had been maintained at a high state of efficiency. The insurance fund stood at just over £255,000, but the directors hoped to increase it considerably before many years had gone by—to an amount which would justify the company's acting as their own underwriters for the whole of their fleet, as they did for many years in the past. He thought that the proprietors would agree with him that the company should, if possible, have a reserve fund in addition to the insurance fund. For some years the directors had been increasing the balance carried forward, which now amounted to over £17,000, and, if all went well, he hoped that they might be able to use this next year to form the nucleus of a reserve fund. During last year they strengthened their position in the Brazil and River Plate trade by the addition of the fine new steamer *Avon*, and this year they had added the *Asturias*, making five of the famous "A" steamers on this route. He was pleased to say that English tourists were beginning to turn their attention to South America—no doubt attracted by the fine steamers which had been put on this service by the company. The extension of their West Indian service from Panama to New York had steadily developed, and their position in this trade had been strengthened by the provisional arrangement made by them with their foreign competitors. If their mail service to the West Indies was to be continued on the present lines, it was absolutely necessary that the Government should pay a larger sum for the carriage of the mails than the company were now receiving. The present position in the Australian trade was fully explained in the directors' report. As they failed to come to a satisfactory arrangement, they decided not to renew the existing agreement with the Orient Company, which would expire in May, 1909. The directors were taking steps to protect the interests of the proprietors in the Australian trade. They had taken advantage of a favourable opportunity to acquire an interest in the Shire Line of steamers, an old-established line trading to the Far East, and they proposed gradually to develop this business on modern lines. It had been their practice at the end of each year to place contracts for the greater quantity of the coals required by the company, but owing to the excessive prices ruling last autumn, they decided to buy coal from month to month. This course had so far been justified by the results, the price of coal having fallen considerably, although in his opinion it was still very much higher than it ought to be. The question of the improvement of the Port of London had been ripe for settlement for some years, and there was now every prospect that the matter would be brought to a satisfactory conclusion by the creation of a new port authority. The shipping trade was at the present time going through a period of depression, but for the past five years the company had been making steady progress, and now that they had commenced paying a dividend on the ordinary stock, he hoped that they might be able to continue to do so. He concluded by moving a resolution adopting the report and declaring the dividends therein recommended. Mr. A. S. Williams seconded the motion, which was at once unanimously carried.

NITRATE PRODUCERS' STEAMSHIP.

The 13th annual meeting was held on Thursday at the offices of Messrs. Lawther, Latta, and Co., 20, Billiter Buildings, E.C., Mr. John Latta presiding.

The Secretary (Mr. James A. Walker) read the notice calling the meeting and also the auditors' report.

The Chairman said that at the last meeting he mentioned that it had been suggested that they might, with advantage to the shareholders, amalgamate with two other companies managed by his firm, whose steamers were engaged in the same trades. It led to the directors giving considerable attention to the question, with the result that the directors of those two companies were consulted, and, after an open discussion, it was mutually agreed that such a course would be generally beneficial. The trend of trade generally, and of the shipping trade in particular, had been towards co-operation, not for the purpose of raising freights, but in order to be in consonance with a new condition of things non-existent even a few years ago. The shipping trade for the moment was bad, accountable in some measure, he believed, to a combination of unusual events, now historical. Having pointed out that the demands on shipping caused by the war between China and Japan, followed by the Spanish-American war and the Boer war, conduced to an unhealthy increase of new tonnage, he said that to-day no exceptional employment was in evidence; on the contrary, trade generally was seriously shrinking the world over, and consequently existing steamers were greatly in excess of present trade requirements. Those companies who during the period just mentioned did not place considerable sums to reserve against the inevitable depression now prevalent must find themselves in an uncomfortable position. He was wedded to the belief that there were few investments in this country which offered more inducement to investors than shipping managed on sound financial lines. In his opinion the principal causes of the present depression had been scotched. Shipbuilding had practically ceased. Small and antiquated steamers had been compelled for the present to give up the fight. Shipbuilders and other financiers who too often without sufficient inquiry willingly advanced money against shipping property had had a rude awakening. It seemed to him that it would be a great advantage to legitimate shipping investors if the law made it compulsory on the part of auditors to include in their certificate what experience had proved to be an adequate amount of depreciation, and clearly to set forth what the company in question had actually set aside for the purpose. This company had always followed safe

lines, and they were prepared against many years of depression, although they would be all the more pleased if these preparations were never called into action. Their steamers were just over six years of age, yet £321,541 had been written off their first cost as depreciation. Outside that amount ample sums had been spent in maintaining their fleet in a perfect state of efficiency. Were they only to write off 2½ per cent. per annum on these steamers for the rest of their existence it would be sufficient; were the steamers to be sold when suitable opportunity offered the ordinary £5 shares would realise £8 10s. If the ordinary shares had, therefore, a surplus behind them of practically 75 per cent. they would agree that the cumulative preference shares were about as good a business security as it was possible to get. This fact had been appreciated by some of their original shareholders who had complained, and he thought with justice, that they had not had an opportunity of subscribing for these preference shares. The ordinary shares were a good security, and had consistently shown satisfactory returns, but the preference shares, being cumulative, and having a first charge, possessed special attractions to cautious investors, owing to their additional margin of safety. If their business continued to expand as it had consistently done, the directors intended to issue the remaining preference shares at a premium when an auspicious opportunity offered. In the meantime, however, it had been decided to allow the present shareholders the opportunity of subscribing at par for £16,225, thus making the total issue £110,000, and forms of application for these shares would be duly posted.

Mr. Gamble North seconded the adoption of the report, which was carried unanimously.

HOVIS-BREAD FLOUR COMPANY.

The ordinary general meeting of the Hovis-Bread Flour Company, Limited, was held yesterday at Caxton Hall, Caxton Street, S.W., Mr. J. Browne-Martin, the chairman, presiding.

The Secretary (Mr. A. E. Cressall) having read the notice convening the meeting and the auditors' report,

The Chairman said: In accordance with the custom I have observed previously I will deal with the various items in the balance-sheet which may call for comment. The first which will probably strike you is the increased capital of the company, which is now £300,000, of which there is issued £275,000. Those of you who applied for any of the 50,000 shares which were offered for subscription in January last, will have heard that the issue was considerably over-subscribed. I am pleased to say that a great number of applicants for these shares were customers of the company, which was a very gratifying feature of the issue. The next item to draw attention to is the reserve account, which stands at £28,269 as against £21,167 a year ago —a substantial increase, which is accounted for, as you will see by the amount of premiums received on the issue of the ordinary shares after charging the costs of the issue, and, if you agree to this report, the reserve account will be brought up to £30,000, which equals the amount of our debentures issued. Turning to the credit side of the balance-sheet, you will see that, during the current year, we have spent on capital account the sum of £18,277, and in that figure is the balance paid for our Manchester mill, an investment with which we have every reason to be satisfied. Our book debts and stocks on hand amount to £81,298 as compared with £60,855 of last year, an increase of nearly £21,000. This is accounted for by our increased output, and on this item and in paying back the loans from our bankers, which amounted to £19,421 a year ago, the amount of money received from the recent issue of shares had been mainly allocated. Some may think the amount of our book debts too large, but I may mention that our ratio of bad debts has always been small, and for the past financial year is lower than it has been previously. (Hear, hear.) I will now refer to the profit and loss account. We all regret that the nett profit of trade shows a falling off, which is entirely accounted for by the advanced price of wheat. During the first half of the financial year, owing to our having bought wheat very well, we did well. Until the end of 1907 we were not very considerably affected, but after then we had disposed of the wheat we had bought at the lower price and were buying at an increased cost, and at the same time selling Hovis to our agents at the usual price. I have very little hesitation in saying that we did the right thing, and that the shareholders will benefit in the long run. Our sales have very considerably increased, and, although we have not so much to distribute on the dividend for ordinary shares as we have had in previous years, your directors are satisfied that the business has never been in a more healthy condition in all departments than it is at present. You will see that we have allowed very liberally for depreciation, a matter of £10,287, and we have also had to take into account the accrued dividends on the recent issue of shares. I may state that the dividend on the new ordinary shares will be calculated from the dates of payment and on the amounts paid up to March 31 last and at the same rate as the dividend which you passed to-day, and from April 1 to the beginning of the current financial year, the dividend will be calculated at the rate of the next dividend paid on the ordinary shares, and will be paid as and when that is. On the preference shares the dividend will be calculated from the dates of payment in the same way up to September 30 next, when the company's preference dividend is due. I move the adoption of the report.

Mr. Macara seconded the motion, and it was carried unanimously.

The usual formal business was transacted.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1908, and May 23, 1908:—

Revenue and other Receipts.

Bills otherwise issued	1,500,000
Total	£12,000,000

Treasury, May 26, 1908.

FRIENDS' PROVIDENT INSTITUTION.

A bonus report is issued by this well-known old life company for the five years ended with 1907, and shows a nett surplus of £333,796, of which the directors have divided £306,581, leaving £27,215 to be carried forward. In 1902 the surplus was only £233,204. Accordingly the bonus distributed is equivalent to an average return of 6s. 11d. out of every £1 received in premiums during the quinquennium, and the directors claim that economy of management helps materially to create this satisfactory position, the total expense of conducting the business having been only 9.6 per cent. of the premium income, or only three-fifths of the amount allowed for by the method of valuation adopted. From this source alone annual savings have accumulated to the extent of about 6½ per cent. of the premium income. The average rate of interest earned on the whole of the funds has been £3 17s. per cent. after deducting income-tax, and the rate adopted in the actuarial valuation was only 3 per cent. Particulars will be found in the very elaborate and carefully drawn report as to the way in which the bonus is distributed. It should be added that the directors have dealt with the question of depreciation in securities, and in order to meet that £40,000 was transferred from the life assurance fund to the investment reserve fund. After effecting this transfer the life fund stands at £3,305,505, while the balance of the investment reserve fund was £60,311. The total premium income was £889,415, the capital received for annuities sold was £113,474, and the nett interest, dividend and rent income was £600,196, while claims took £811,386, annuities £161,986 and surrenders £50,067.

Notice is hereby given that Marconi's Wireless Telegraph Company, Limited, is issuing a Prospectus (dated 29th day of May, 1908) inviting Subscriptions at par for 250,000 Seven per Cent. Cumulative Participating Preference Shares of £1 each. The whole of the statements below set forth are extracted verbatim from such Prospectus:—

No part of this Issue has been or will be underwritten.

(This Prospectus has been filed with the Registrar of Joint Stock Companies.)

The Subscription List will open on Monday, the 1st of June, 1908, and will close on or before Thursday, the 4th of June, 1908, for Town and Country, and Monday, the 8th of June, for the Continent.

MARCONI'S WIRELESS TELEGRAPH COMPANY

LIMITED.

(Incorporated under the Companies Acts, 1862 to 1890.)

CAPITAL - - - £750,000

DIVIDED INTO

250,000 Seven per Cent. Cumulative Participating Preference Shares of £1 each	**£250,000**
500,000 Ordinary Shares of £1 each (of which 394,190 Shares have been issued and are fully paid)	**£500,000**
Total Authorised Share Capital	**£750,000**

The holders of the Preference Shares are entitled to a cumulative preferential dividend of 7 per cent. per annum, on the amount for the time being paid up thereon, and after payment of a dividend of 10 per cent. per annum on the Ordinary Shares, the holders of the Preference Shares have the right each year to participate *pari passu* with the Ordinary Shares in any surplus profits which it shall from time to time be determined to distribute.

The Preference Shares carry equal rights of attending meetings and voting with the Ordinary Shares, and the right in a winding-up to rank in priority to all other shares for the repayment of capital, and *pari passu* with all other shares in any excess after repayment of capital paid up thereon.

PRESENT ISSUE.

The Company now offers for subscription at par 250,000 Seven per Cent. Cumulative Participating Preference Shares of £1 each, payable as follows:

On Application, 2s. 6d. per Share; On Allotment, 2s. 6d. per Share; and the balance in instalments of 5s per Share, at intervals of not less than Two Months.

The Directors and their friends have applied for 50,000 Shares of the present issue on the terms of this Prospectus.

Applicants for Shares may pay in full on Allotment and will be allowed interest on all moneys paid in advance at the rate of 4 per cent. per annum.

Interest at the rate of 7 per cent. per annum will be charged on all instalments payable in respect of this issue of Cumulative Participating Preference Shares paid in arrear of their respective due dates, and failure to pay any instalment when due will render previous payments liable to forfeiture.

NATIONAL RAILWAYS OF MEXICO

(Ferrocarriles Nacionales de Mexico.)

OFFER OF £2,829,177 : 1 : 8 = $13,750,000

PRIOR LIEN 4½% SINKING FUND REDEEMABLE GOLD BONDS

At 94 per cent.

Part of a total authorised issue of $225,000,000 (which may be increased by $6,000,000) to be secured under a Mortgage as mentioned below. About $103,000,000 of this amount (whereof not exceeding $64,000,000 are to be issued forthwith) is issuable for the purpose of retiring Bonds and Notes of the Mexican Central Railway Company, Limited, and the National Railroad Company of Mexico. The remainder can only be used for defined purposes as explained below.

Repayable by an annual Cumulative Sinking Fund, commencing in 1917, sufficient to redeem the whole issue not later than 1st July, 1957, to be applied either to the purchase of Bonds in the market below 105 per cent. and interest, or by drawings at 105 per cent. The bonds are also repayable in amounts of not less than $10,000,000 at the option of the Company on any interest day after 1st January, 1917, upon 90 days' notice, at 105 per cent.

Principal and Interest will be payable in New York in United States gold coin and in London at the fixed exchange of $4.86 per £; and will be payable or purchased in Germany at the fixed exchange of 4.20 marks per $, in France and Switzerland at the fixed exchange of 5.18f per $, in Amsterdam at the fixed exchange of 2.48 fls per $, in Mexico City at the fixed exchange of 2 gold pesos per $.

Interest payable half-yearly on 1st January and 1st July, at the offices of Messrs J. Henry Schröder and Co., or Messrs Speyer Brothers, without deduction for any tax which the Company may be required to pay thereon, or to deduct therefrom, under any present or future law of the United States of Mexico, or of the United States of America, or the State of New York, or any municipality in said State.

The Bonds will be issued to bearer in denominations of:—£205 15s 2d equal to $1,000, with half-yearly coupons for £4 12s 7d equal to $22.50; £102 17s 7d equal to $500, with half-yearly coupons for £2 6s 3½d equal to $11.25.

Messrs J. HENRY SCHRODER and Co. and Messrs SPEYER BROTHERS offer the above Bonds for Sale at the price of 94 per cent., equal to £96 14s 2d per Bond of £102 17s 7d, payable as follows:—£5 per Bond of £102 17s 7d, payable on Application; £10 per Bond of £102 17s 7d, payable on Allotment; £25 per Bond of £102 17s 7d, payable on June 27th, 1908; £25 per Bond of £102 17s 7d, payable on July 20th, 1908; £31 14s 2d per Bond of £102 17s 7d, payable on August 17th, 1908; total, £96 14s 2d, equal to 94 per cent. of £102 17s 7d.

Payment in full may be made under discount at the rate of 2 per cent. per annum on Allotment, on June 27th, or on July 20th. In default of payment of any instalment the Allotment will be subject to cancellation, and the amount previously paid to forfeiture.

The instalments carry interest at the rate of 4½ per cent. per annum from their respective due dates till 1st January, 1909, and upon payment of the instalment due on allotment Scrip Certificates to Bearer, carrying a Coupon of £2 for each £102 17s 7d nominal value will be issued in exchange for the allotment letter. The Scrip when fully paid will be exchanged in due course for Definitive Bonds carrying interest on the full face value of the Bonds from 1st January, 1909.

The Bonds are being offered simultaneously in New York by Messrs Speyer and Co., Messrs Kuhn, Loeb, and Co., Messrs Ladenburg, Thalmann, and Co., and Messrs Hallgarten and Co.; in Amsterdam by Messrs Hope and Co. and Messrs Teixeira de Mattos Brothers; in Switzerland by the Swiss Bankverein and the Union Financière de Genève.

The National Railways of México will comprise a system of about 7,000 miles under the permanent direct control of the Mexican Government, which owns a majority interest in the Shares of the Company, and guarantees the Principal and Interest of the $160,000,000 General Mortgage 70-year 4 per Cent. Gold Bonds, which rank after the whole of the 4½ per Cent. Prior Lien Gold Bonds, of which the Bonds now offered form part.

A decree of the Federal Executive provides that if the Government shall make any payments under its guarantee the Government is to be deemed a creditor of the New Company for the amounts so paid, but shall not have any right to enforce payment by attachment, receivership, liquidation or other judicial proceedings.

Such of the Prior Lien Bonds as are not reserved for the retirement of existing Bonds and Notes as above mentioned are applicable as follows:—About $48,000,000 can only be applied for the construction or acquisition of additional railroad lines, and the acquisition of Stocks and Bonds of other Corporations owning lines of railroad, &c., and about $47,500,000, after 1st January, 1910, for improvements and equipment at a rate not exceeding $2,500,000 Bonds per annum cumulative; about $26,500,000 are available for the purposes of the Plan mentioned below, and for improvements and equipment required in the near future. The right is reserved to issue $6,000,000 additional Bonds, ranking *pari passu* with the other Bonds of the series, to retire £1,200,000 4½ per Cent. Prior Lien Bonds of the Mexican International Railroad Company or other Bonds which may have been issued to retire them.

The Chairman of the Board of Directors of the National Railways of Mexico has written the following letter with respect to the position of this Company and the security of the Prior Lien Bonds, from which it appears that these Bonds will be practically a prior lien charge on the entire Mexican Central Railway system (about 3,428 miles), and also a charge on the National Railroad Company of Mexico system (about 3,558 miles), subject to about $57,750,000 outstanding indebtedness charged upon the property of the National Railroad Company, and subject, as to the lines of the Mexican International and Interoceanic Companies, to their respective outstanding issues, a large amount of which, comprising the voting control, is held by the National Railroad Company. Of the indebtedness of the National Railroad Company $33,000,000 can be redeemed on not more than six months' notice.

Sufficient Prior Lien Bonds and General Mortgage Bonds are reserved to redeem the Bonds and obligations of the National Railroad Company of Mexico and the Mexican Central Railway Company, Limited, the deposit of which is not invited by the Plan.

Ferrocarriles Nacionales de Mexico,
Mexico, D.F., 6th May, 1908.

Messrs J. HENRY SCHRODER AND CO. and Messrs SPEYER BROTHERS, London.

Gentlemen,—The Mexican Government, which, through ownership of Stock, already practically controls the National Railroad Company of Mexico, has caused a plan to be prepared for the Readjustment and Union of the Mexican Central Railway Company, Limited, and the National Railroad Company of Mexico, through the creation of a new Company, entitled Ferrocarriles Nacionales de Mexico (National Railways of Mexico), organised under the laws of the Republic of Mexico, pursuant to an Act of Congress, approved 26th December, 1906, and a decree of the President of the Republic of Mexico, issued pursuant thereto, dated 6th July, 1907. The Mexican Government will hold a controlling interest in the Stock of this Company.

It is proposed that this Company shall acquire Securities and Stocks of the Mexican Central Railway Company, Limited, and of the National Railroad Company of Mexico, and in due course take over the railways and properties of the two last-named Companies.

Referring to the issue of $13,750,000 National Railways of Mexico Prior Lien 4½ per Cent. Sinking Fund Redeemable Gold Bonds, I beg to state the following: These Bonds form part of a total authorised issue of $225,000,000 (which may be increased by $6,000,000 additional Bonds ranking *pari passu* with the other Bonds of the series to retire £1,200,000 4½ per Cent. Prior Lien Bonds of the Mexican International, or other Bonds which may have been issued to retire them) to be secured under a Mortgage as mentioned below; about $103,000,000 of this amount (whereof not exceeding $64,000,000 are to be issued forthwith) is issuable for the purpose of retiring Bonds and Notes of the Mexican Central Railway Company, Limited, and the National Railroad Company of Mexico, the remainder can only be used for defined purposes as follows: about $48,000,000 can only be applied for the construction or acquisition of additional railroad lines, and the acquisition of Stocks and Bonds of other Corporations owning lines of railroad, &c., and about $47,500,000, after 1st January, 1910, for improvements and equipment, at a rate not exceeding $2,500,000 per annum cumulative, about $26,500,000 are available for the purposes of the plan, and for improvements and equipment required in the near future.

The Prior Lien 4½ per Cent. Sinking Fund Redeemable Gold Bonds of the Company are to mature on 1st July, 1957, and are to be secured under a Mortgage and Deed of Trust to the Central Trust Company of New York as Trustee by the deposit and pledge by way of first charge of all securities embraced in the Plan of Readjustment as finally carried out, and on the acquisition of the property of the National Railroad Company of Mexico and/or the Mexican Central Railway Company, Limited, by direct charge thereon.

The Bonds are to be further secured by the mortgage and pledge of all property acquired by the proceeds of any of the Prior Lien Bonds, and by the mortgage and pledge, with priority over the General Mortgage, of all property at any time embraced in the General Mortgage, or acquired by the use of any of the Guaranteed General Mortgage 4 per Cent. Gold Bonds of the Company.

The Prior Lien 4½ per Cent. Bonds will therefore rank before the $160,000,000 Guaranteed General Mortgage 4 per Cent. Sinking Fund Redeemable Gold Bonds, maturing October 1, 1977, principal, interest, and Sinking Fund instalments of which are to be unconditionally guaranteed by the Mexican Government, which amount may be increased for refunding purposes as provided in the General Mortgage.

Provision is to be made in the Prior Lien mortgage for the creation by the Company of a Cumulative Sinking Fund (the first annual payment in respect of which is to be made for the year 1917) calculated to be sufficient, with accumulations, to retire the entire issue at or before maturity. The Sinking Fund is to be applicable to the purchase of Bonds in the market at not exceeding 105 per cent. and accrued interest, or by drawings at 105 per cent. on not less than ninety days' notice; the Bonds are also redeemable in amounts of not less than $10,000,000 on any interest date after January 1, 1917, at 105 per cent., on not less than ninety days' notice.

On the completion of the Readjustment the Bonds (by means of the deposit of Securities and Shares under the Plan of Readjustment) will be practically a prior lien charge on the entire Mexican Central Railway system (about 3,428 miles), and also practically a charge on the National Railroad Company of Mexico system (about 3,558 miles), subject to outstanding indebtedness of about $57,750,000 charged upon the property of the National Railroad Company and subject as to the lines of the Mexican International and Interoceanic Companies to their respective outstanding issues, a large amount of which, comprising the voting control, is held by the National Railroad Company. Of the indebtedness of the National Railroad Company $33,000,000 can be redeemed on not more than six months' notice.

Sufficient Prior Lien Bonds and General Mortgage Bonds are reserved to redeem the Bonds and obligations of the Mexican Central Railway Company, Limited, and the National Railroad Company of Mexico, the deposit of which is not invited by the Plan, with the object that ultimately the Bonds may become an absolute first charge on the combined properties of the National and Central Railway Companies.

The following securities and Shares of this Company will be forthwith issuable to the Mexican Government, to the public in exchange for securities and Shares of the Mexican Central Railway Company, Limited, and National Railroad Company of Mexico called for deposit under the Plan, and to meet the Cash requirements of the readjustment, viz., about

$64,000,000 Prior Lien 4½ per Cent. Bonds.
$36,000,000 Guaranteed General Mortgage 4 per Cent. Bonds.
$28,833,000 4 per Cent. First Preferred Shares.
$122,793,000 5 per Cent. Second Preferred Shares.
$74,847,000 Common Shares.

Excluded from the foregoing are about $22,300,000 Prior Lien Bonds, and about $11,300,000 Guaranteed General Mortgage Bonds, issuable with respect to Mexican Central Railway Company, Limited, Bonds now in the treasury of that Company and pledged to secure its obligations.

	U.S. Gold.
The combined receipts from operations of the National Railroad Company of Mexico and the Mexican Central Railway Company, Limited, after deducting expenses of operation for the year ending June 30, 1907, and including all net income from other sources, amounted to	$8,173,872.03
Such combined net receipts of the two Companies, for the six months ending December 31, 1907, amounted to	$4,341,540.30

The Presidents of said Companies have made the following estimates of such combined net receipts of said respective Companies for the fiscal years ending June 30, 1908, and June 30, 1909.

	U.S. Gold.
Gross earnings (8 months actual, 4 months estimated) for the fiscal year ending June 30, 1908	$26,991,000
Expenses for the fiscal year ending June 30, 1908	$17,979,000
Net earnings	$9,012,000
Estimate for fiscal year ending June 30, 1909:	
Gross earnings	$29,430,302
Expenses	$19,185,000
Net earnings	$10,245,302

NATIONAL RAILWAYS OF MEXICO—*continued.*

The interest charges on the outstanding obligations, including taxes and rentals, of the above Companies for the fiscal year ending June 30, 1908, amount to $7,664,166.

On the basis that all the securities called for deposit under the plan shall have been exchanged, I estimate that after payment of the interest charge on the obligations of the above Companies not so called for deposit, amounting to $3,932,430, the net earnings accruing to the National Railways (the new Company) would be as follows:—

	1908.	1909.
On the basis of the fiscal year ending June 30th, net receipts as above ...	U.S. $9,012,000	U.S. $10,245,302
Interest on obligations not called for deposit	3,932,430	3,932,430
	U.S. $5,079,570	U.S. $6,312,872
Interest on $64,000,000 Prior Lien Bonds issuable forthwith as above	2,880,000	2,880,000
Balance available for meeting the interest on the Guaranteed General Mortgage 4 per Cent. Bonds, and for dividends on the Stock of the new Company ...	U.S. $2,199,570	U.S. $3,432,872

The foregoing figures do not take into consideration any increased earnings from rate and tariff adjustments or economies and savings resulting from combining under one control the management of the two systems, which I confidently anticipate will greatly increase the efficiency, facilitate working, and considerably decrease the cost of operating the roads concerned.

The Presidents of the National and Central Companies have estimated that the additional net earnings resulting from these changes, which are expected to begin to accrue from July 1, 1908, will amount to a sum exceeding U.S. $2,000,000 per annum.

The Company, through its holding of Shares of National Railroad Company of Mexico, will control the Mexican International Railroad Company and the Interoceanic Railway of Mexico (Acapulco to Vera Cruz) Limited, and the total mileage of the system controlled by it will comprise the following Railways:—

	Miles
National Railroad Company of Mexico, Standard Gauge	1,778
National Railroad Company of Mexico, Narrow Gauge	276
Mexican International Railroad Company, Standard Gauge ...	978
Interoceanic Railway of Mexico (Acapulco to Vera Cruz), Limited, Narrow Gauge	736
Mexican Central Railway Company, Limited, including Mexican Pacific Railway Company, Standard Gauge	3,628
Total	7,396

I am, Gentlemen, Yours faithfully,
PABLO MACEDO, Chairman of the Board of Directors.

A translation of the Decree of the Federal Government of the Republic of Mexico, dated July 6, 1907, constituting the Company, and a draft of the Mortgage under which the Bonds will be secured, can be inspected whilst the Subscription List is open during business hours at the office of Messrs Bircham and Co., 50 Old Broad street, E.C.

London, May 28, 1908.

The Subscription List will close on or before Thursday, 4th June, 1908.

DOMINION OF CANADA.

CITY OF WINNIPEG.

Issue of £1,500,000 4% Consolidated Registered Stock, due 1st April, 1940.

Principal and Interest will be payable at the Bank of Montreal, 47, Threadneedle Street, London, E.C., or at the holder's option at par of Exchange at the Bank of Montreal, Winnipeg, or other Office where the Stock may be registered for the time being. Interest will be payable half-yearly on 1st April and 1st October.

A Coupon for interest on the instalments to 1st October, 1908, viz.:—16s. 5d. per £100 Stock, will be attached to the Scrip.

Issue Price, £96 per cent.

Payable as follows:—£5 per cent. on Application.
£15 „ on 9th June, 1908.
£25 „ on 3rd July, 1908.
£51 „ on 4th August, 1908.

£96

Payment may be made in full on or after 9th June, 1908, under discount at the rate of 3% per annum.

The Bank of Montreal, 47, Threadneedle Street, London, E.C., is authorised by the City of Winnipeg to receive subscriptions for the above-mentioned Stock.

The Stock is charged upon the general rates of the City and is issued under the authority of the Charter of the City of Winnipeg (Statutes of Manitoba 1902 Ch. 77) and amending Acts and By-laws passed in pursuance thereof.

The proceeds of the loan are required to redeem debt, pay for works already completed and necessary works to be carried out in 1908, and to provide a sufficient sum to meet the Sinking Fund requirements of the existing Debentures of the City.

The following information is furnished by the City Authorities:—

1. The existing debt of the City, exclusive of the present issue, is—

General	$2,605,149.92 =	£521,030
Water Works	$1,904,090.34 =	£380,818
Local Improvement and Special Assessments	$3,849,468.54 =	£769,893
	$8,358,708.80 =	£1,671,741

2. The Rateable Assessment for year 1907:

Land ..	$59,504,110 =	£11,900,822
Buildings	$34,321,850 =	£6,864,370
	$93,825,960 =	£18,765,192

3. Property exempt from taxation, in addition to the above-mentioned Assessment .. $18,587,940 = £3,717,588
4. Estimated Revenue for 1908 .. .. .. $3,120,000 = £624,000
   Estimated Expenditure for 1908 .. .. $3,094,958.15 = £618,991
5. Rate of taxation for the year 1907: 16 mills on the Dollar.
6. Estimated population, 111,000.
7. The By-Laws provide for a Sinking Fund, to be levied annually at a rate which it is estimated will be sufficient to redeem the Stock at maturity.

Applications must be made for even multiples of £100 on the form accompanying the prospectus and lodged with the Bank of Montreal, 47, Threadneedle Street, London, E.C., accompanied by a deposit of £5 per cent. on the amount of Stock applied for.

In case of a partial allotment the surplus deposit will be applied towards payment of the amount due 9th June, and failure to pay any instalment when due will render previous payments liable to forfeiture.

Interest at 5 per cent. from the due date may be charged on any overdue instalment.

Provisional Scrip Certificates to Bearer will be issued against Allotment Letters, and will be exchanged for Registered Stock Certificates in due course.

Application will be made for an official quotation for the Stock on the London Stock Exchange.

The validity of the Issue has been certified by the Legal Adviser to the Bank of Montreal in Canada. A Copy of his Report and of the above-mentioned Statutes may be inspected at the Offices of Messrs. Bischoff, Dodgson, Coxe, Bompas & Bischoff, 4, Great Winchester Street, London, E.C.

The Stock will be registered and transferable by Deed free of Stamp Duty at the Bank of Montreal, London.

Interest Warrants will be forwarded by post to the holders of Stock at their registered addresses. In the case of joint accounts the Warrant will be forwarded to the person first named in the account, unless written instructions to the contrary be given.

Prospectuses and Forms of Application may be obtained at the Bank of Montreal, 47, Threadneedle Street, London, E.C., and of Messrs. J. & A. Scrimgeour, 37, Threadneedle Street, London, E.C.

London, 30th May, 1908.

	£9,250,000

ISSUE OF £1,000,000 FOUR-AND-A-HALF PER CENT. CONSOLIDATED DEBENTURE STOCK.

Secured by a Trust Deed reserving to the Company the right to create further Debenture Stock for £2,000,000, of which the present issue forms part, carrying interest at 4½ per cent. per annum and ranking *pari passu* with the £3,000,000 Consolidated Debenture Stock already issued, and a further amount at the rate of £4,000 per mile of additional line hereafter acquired by the Company or of new line for the time being constructed or in course of construction, or about to be constructed (including the extra track taken at £4,000 a mile where existing lines are doubled) in excess of the mileage belonging to the Company in operation on 28th May, 1907, and also for such a further amount as shall be sufficient to redeem prior issues at not exceeding the par value of the Stock for the time being redeemed and any premium payable on redemption under the terms of the issue thereof.

At £98 per cent., payable as follows:—

£5	0	0	on Application.
20	0	0	on Allotment.
25	0	0	on 7th July, 1908.
25	0	0	on 7th September, 1908.
23	0	0	on 7th November, 1908.
Total £98	0	0	per £100 Stock.

Bearer Scrip will be issued to be exchanged for Debenture Stock Certificates on completion of all the payments, the Stock being transferable in amounts not involving a fraction of £1.

The interest is payable by warrant to the Registered Holders of the Stock on 1st January and 1st July in each year.

The first payment of Interest will be made on 1st January, 1909, and will be calculated on the instalments as due.

Payment in full on Allotment and on 7th July and 7th September can be made under discount at the rate of 4½ per cent. per annum.

THE DIRECTORS OF THE BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED, have authorised the London Joint Stock Bank, Limited, and Martin's Bank, Limited, as Bankers of the Company, to receive applications for £1,000,000 4½ per cent. Consolidated Debenture Stock of the Company, ranking *pari passu* with the existing issue of £3,000,000 as from 31st December, 1908.

The whole or any part of the 4½ per cent. Consolidated Debenture Stock is redeemable at any time at the Company's option after 30th June, 1920, at 110 per cent., on six calendar months' notice to the Stockholders. This Stock is secured by a charge upon the undertaking of the Company (subject to the First, Second, and Five per Cent. Debenture Stock), under Trust Deeds, dated 28th May, 1907, 11th October, 1907, 1st April, 1908, and 26th May, 1908, made between the Company and the Trustees.

The Company owns and has in operation 981 miles of broad gauge (5 ft. 6 in.) railway in the Argentine Republic, extending westward from the City of Buenos Ayres to Villa Mercedes, the main line forming part of the system which is to connect the Atlantic and Pacific Seaboards of the South American Continent. Beyond the branch lines already opened to public traffic the Company has under construction or is about to construct additional branches of a length of about 380 miles, and has been authorised by Congress to construct a further branch about 180 miles in length from Alberdi to Sampacho, on the Andine Railway.

The Company also works the Bahia Blanca and North-Western Railway (618 miles now open) and the Villa Maria and Rufino Railway (141 miles). On the 1st July last the working of the Argentine Great Western and Argentine Transandine Railways (637 miles now open) was also taken over and, by this means, the control of the whole trans-continental line from Buenos Ayres to Valparaiso, in so far as it is situated in Argentine territory, has been secured by this Company; and with the Bahia Blanca and North-Western Railway and its recently constructed extensions, this Company is in possession of through communication with the rapidly developing Port of Bahia Blanca.

The total length of the entire system now in operation is 2,377 miles.

The results of past expenditure of capital on the system now controlled and worked by the Company is shown by the following table:—

—	1901–1902	1902–1903	1903–1904	1904–1905	1905–1906	1906–1907
	£	£	£	£	£	£
Gross Receipts ..	584,267	718,001	959,306	1,263,636	1,618,365	2,074,591
Working Expenses ..	304,467	347,407	533,083	719,111	882,404	1,199,842
Net Receipts.. ..	£279,800	370,594	426,223	544,525	735,961	874,749

After including the estimated gross receipts of the Argentine Great Western and Transandine Railways for the purpose of comparison in the 1906-7 figures, the estimated gross receipts from 1st July, 1907, to 23rd May, 1908, show over the corresponding period of last year an increase of £535,738, which should be further augmented by the 30th June, 1908, the end of the Company's financial year.

The General Manager recently estimated that the maize crop would be more or less double that of last year. He now reports by cable as follows:—"Maize is turning out as estimated, but shipment is delayed by recent very good rains over our whole system. We expect a large increase in the area ploughed for which the rains are most opportune. Wine traffic excellent and prospects generally continue most favourable."

The continued expansion of all classes of traffic, the development of new districts, and the greater area of land now under cultivation, have rendered it necessary to provide additional traffic facilities and to increase the carrying capacity of the railway generally.

Dividends at the rate of 7 per cent. per annum have been paid on the ordinary Stock and Shares of the Company since the year 1902-1903. The Annual Interest on the Company's Debenture Capital is £407,875, which will now be increased by £45,000.

The proceeds of the present issue will be applied towards meeting the expenditure on branch lines and the equipment of lines recently opened to public service, providing additional traffic facilities, and to the general requirements of the Railway.

Applications on the form accompanying this Prospectus, together with the deposit of £5 per cent., should be forwarded to the London Joint Stock Bank, Limited, 5, Princes Street, London, E.C., or to Martin's Bank, Limited, 68, Lombard Street, London, E.C.

If no allotment is made, the deposit will be returned without deduction. Should a smaller amount be allotted than applied for, the surplus paid on application will be appropriated towards the balance due on allotment. Non-payment of any instalment upon the due date will render the amount previously paid liable to forfeiture.

Application will in due course be made to obtain a Stock Exchange quotation for this Issue.

Apart from the contracts made by the Company in the ordinary course of business, the following have been entered into within the two years immediately preceding the date hereof:—

Contract entered into on the 29th May, 1906, between the Argentine Government and the Company for the construction of lines from Bunge to Buchardo, from Chacabuco to the Alberdi branch, and from Rawson to a point near O'Higgins.

Contract dated 4th December, 1906, and made between the Company and the Bahia Blanca and North-Western Railway Company, Limited.

Supplemental Trust Deed dated 12th December, 1906, and made between the Company and the Trustees for the 5 Per Cent. Debenture Stock securing £350,000 of such Stock.

Contracts dated 23rd April, 1907, and made between the Company and the Argentine Great Western Railway Company, Limited.

Trust Deeds dated 28th May, 1907, 11th October, 1907, 1st April, 1908, and 26th May, 1908, and made between the Company and the Trustees for securing the 4½ per Cent. Consolidated Debenture Stock.

Contract dated 16th July, 1907, and made between the Company, the Argentine Great Western Railway Company, Limited, and the Argentine Transandine Railway Company, Limited.

Contracts made between the Company and Messrs. Sheppards, Pelly, Price, and Pott, and dated respectively 30th May, 1907, 11th October, 1907, 28th November, 1907, 1st April, 1908, and 26th May, 1908, for the underwriting of this and previous issues.

Contract entered into on the 18th March, 1908, between the Argentine Government and the Company for the construction of a line from the neighbourhood of Caseros to a point near Liniers.

The above Contracts may be inspected at the Offices of the Solicitors on any day while the List remains open, between the hours of 11 and 4.

15,000 Deferred Shares of £20 each and 5,000 Second Preferred Shares of £20 each were allotted as fully paid in 1888, as part of the consideration for the construction of the Railway (subsequently converted into Second Preference and Ordinary Stock).

A Brokerage at the rate of quarter per cent. will be paid by the Company on allotments made to the public in respect of applications bearing a Broker's stamp.

Prospectuses and Forms of Application may be obtained at the Offices of the Company, Dashwood House, 9, New Broad Street, London, E.C., of the Bankers, and of Messrs. Sheppards, Pelly, Price, and Pott, the Brokers of the Company

Registered Offices: Dashwood House, 9, New Broad Street, London, E.C.
27th May, 1908.

TRUSTEES FOR THE FOUR-AND-A-HALF PER CENT. CONSOLIDATED DEBENTURE STOCK.

The Rt. Hon. the EARL OF COVENTRY.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 544. New Series. SATURDAY, JUNE 6, 1908. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one etter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Protectionist Debate.

It covers a large area of printed type in Tuesday's and Wednesday's papers, and does not advance us one iota. We are no more sure than we were before that Free Trade is going to triumph because the Protectionist resolution was defeated on Tuesday night by a majority of 234, there being only 124 mustered in support of the amendment compared with 367 voting with the Government. What is the real strength of this Protectionist agitation? It could not persist through mere imitativeness, the readiness of the mob to follow some accepted leader, nor could it persist in the teeth of experience and the irrefutable arguments of the Free Traders. In spite of prejudice, conviction would be brought home to the minds of all except the most fanatical by the actual facts. The agitation, however, does not diminish; it becomes more virulent, outspoken, and determined with time. Why is this curious exhibition of unreason endowed with such vitality? It is because the nation is spending a great deal more money than it can afford. That is the dominant fact in minds like that of Mr. Bonar Law, and he is perhaps the ablest as he certainly is the most aggressive exponent of Protectionism in the present Parliament. This enormous expenditure is driving the country towards Protection this gentleman and others of his way of thinking persist in maintaining. And we are bound to say that we agree with them. It is all very well for Mr. Asquith to recite, justifiably and in triumphant pride, the great performances of the present Government in the way of reducing taxation and debt. We give the Government every credit for its good deeds in both directions, and shall not inquire how far circumstances helped it in accomplishing what it has done. The fact none the less confronts the nation that national expenditure is growing, that the dead-weight services of the army and navy are costing much more than they did before the South African war, and are likely to increase in burdensomeness for an indefinite number of years to come, that on all sides the demand is "more money."

We still have to submit to a heavy war taxation in time of peace. Ten years ago the income-tax was 8d. in the £, and too high at that. To-day it is 1s. upon unearned incomes and between 9d. and 10d. in the £ as an average. Ten years ago the tea duty was 4d. per lb. or about cent. per cent. upon the price of common teas, and we had no sugar duty whatever. To-day the tea duty is 5d. and the sugar duty 1s. 10d. per cwt. The beer duty was raised in 1894 by 3d. per barrel to 6s. 9d., and the spirit duty by 6d. per proof gallon to 11s., because long before the war the predecessors of the present Liberal Government were busy expanding the outgoings of the nation. In consequence of the war, the beer duty was raised to 8s. per barrel and the spirit duty to 11s. 4d., and we have these duties with us still. The sugar duty of 4s. 2d. per cwt. has been reduced by half, but no small part of the taxation rendered necessary by the war in South Africa is still borne by the country, and the probability is that public burdens will increase instead of diminishing in the near future. It is not only in the direction of dead-weight outlay upon the fighting forces that demands are growing, all round the Government is being hurried forward to make fresh demands upon the resources of the nation. To these demands the law of its being compels it to yield.

How are the demands crowding and jostling in going to be met except by "broadening the basis of taxation," to use the cant and not too sincere euphemism of the Protectionists? As we pointed out at the time the proposal was tabled, Mr. Asquith's old-age pension proposals will within a year or two impose a burden upon the community equivalent to the interest at 3 per cent. upon an additional £200,000,000 of national debt. Where is this money to come from if extra taxation is not imposed, and should extra taxation be required from what sources will it be drawn if not from indirect taxation, that "broader base" which levels all? Some money will doubtless be obtained by slowing down the pace at which the national debt is being redeemed, and we should have no particular objection to that provided an enlightened method of dealing with the whole position of the national debt were adopted by Parliament and the Government. As we have long insisted, the entire debt ought on the earliest opportunity to be turned into a terminable annuity. We should give liberal treatment to the holders of the debt, but throw upon each individual among them the obligation to provide and keep alive his own sinking fund. The whole system of terminable annuities first established by Mr. Gladstone has proved a source of enormous loss to the nation, and that mistake ought not to be repeated. The experiment, however, was valuable in that it showed the way to redeem debt. Only by turning it into a terminable annuity can it be steadily and effectively wiped out, but the blunder lay in making the Government responsible for the replacement of the stock cancelled when the annuity was set up. That responsibility ought no longer to be assumed, and if the debt were treated in an enlightened manner after this fashion, converted, *i.e.*, in one mass into a terminable annuity, no harm at all would be done were redemption meanwhile let alone or only such surpluses as might be realised at the year's end devoted to debt cancellation, especially floating debt. Assume, however, that the sinking funds are curtailed, that as terminable annuities run out no attempt will be made to set fresh ones up again, and still there will soon not be enough money available on the existing basis of taxation to meet the growing demands of the army and navy, the new burden of old-age pensions, the increased cost of education, and the rapid expansion of salaried officialism over every department of the nation's affairs. It is because the prospect is in this respect appalling that there is vitality in the Protectionist agitation. Could expenditure be cut down to a reasonable figure in the matter of the army and navy alone, then there would be hope that a Free Trade system might provide sufficient for all the nation's wants, and even allow the remainder of the war taxes to be taken off; but with every department of expenditure increasing we can have no such hope, and it is but too probable that old-age pensions will prove the last straw driving us on the rocks, imperilling our position as the most enlightened, enterprising and wealthy nation of traders and manufacturers the world has ever seen, and bringing about changes in all directions calculated to arrest our progress and herald our imperial decay.

In the end of last week the *Daily News* got hold of a speech delivered by Mr. S. D. Scudder, of the International Banking Corporation in New York. It set forth in such vivid language what Protection is doing for the United States that the prediction of the speaker is worth quoting. "High Protection," he said, speaking as a banker, "if persisted in, will finally kill all our remaining international facilities. Gradually but surely if our present artificial system is continued, we will be driven within our own walls by the other members of the family of nations." He was dealing with the effect of Protection on his own line of business. Trade with foreign countries is restricted because the tariff prevents an exchange of commodities. The American farmer sells his wheat or cotton in European markets, but the tariff does not permit him to take in exchange the goods of those countries to which he has sold his produce. He therefore has to be paid in money, and money or money's equivalent, Stock Exchange securities or whatever it may be, can only be found readily in London; therefore the banking business of the United States, the "clearing" as it were of that Republic's commerce centres in London and our bankers take a rich toll by it both ways.

There can be no doubt that Mr. Scudder is right. Protection kills foreign commerce, time given, and with us Protection would not only gradually restrict our markets abroad, but it would withdraw from us that incalculably great source of wealth to be found in the mighty clearing business done by our bankers. It is a profit all the world now crowds in to share. Last year, for instance, the total transactions passing through the London Bankers' Clearing House, the greater part of it foreign business, amounted to over £12,730,000,000, and presumably on every pound of this overturn London bankers made a certain profit. We should lose that kind of business gradually, altogether in the end, if we reverted to Protection, just as we should lose our carrying trade. Probably this view of the facts is never squarely looked at by those who advocate duties upon all the articles of consumption used by the people and on foreign manufactures of every description. Some of the people who lend their support to a reactionary, a death dealing, commercial policy of this description may be impelled thereto by unworthy motives—by their own feebleness in business, by the exhaustion of their resources, or by their utter ignorance of anything that relates to the principles underlying the safe and profitable conduct of international trade. With the landlord class unquestionably a long career of extravagance with the accompanying increase of embarrassments, mortgaged estates, diminished rent rolls and so on, constitute a strong impelling motive towards the imposition of duties on foreign corn, cattle, everything agricultural. The gentlemen from the land who support that policy hope thereby to secure increased rents, but with the great bulk of the adherents to the Protectionist shibboleth, the impulsion comes from this startling, irresistible and continuous expansion in the national expenditure. The price we pay for empire is too high to be borne except by concealing it under a broad layer of indirect taxes by which the empire itself would be destroyed. "Broaden the basis of taxation," and you kill the fertility of the revenue, but the broadening is going to come unless the Government has the courage to economise. How much greater would the service of the House of Commons have been to the country this week had it devoted its time to a systematic inquiry into the causes producing the present budget demands of the various departments. But there is not 5 per cent. of the members who would at first be of any practical use at a job like this.

Economic and Financial Notes.

The King and the Tsar.

Sir Edward Grey's speech in the debate on the King's visit to the Tsar was penetrated throughout with the highest attributes of statesmanship. Whatever the motives may be underlying the visit—and Sir Edward was careful not to reveal them—any attempt on our part now to forbid it or to cast a slur on the motives or character of the Tsar would be in the highest degree mischievous. Russia is a friendly Power, a Power, moreover, impelled towards increased friendliness by many motives; but even had she been an unfriendly Power, it is none of our business to interfere in her internal affairs, or to pass collective judgment upon the character of her administration. We do not possess all the data upon which to found a just sentence, and if we did it would be improper and unwarrantable to take any such step, because we have no power whatever to give effect to it. Censoriousness impotent as ours would be could not possibly do anything to remedy the grievances of the Russian people, and might do much to aggravate the evils of which we complained. It would certainly, as Sir Edward insisted,

prepare the ground for future strife. That administrative crimes abound in Russia, that the Jews there are above all often subjected to the most abominable treatment may be, and probably is, only too true; but if we are not prepared to interfere with the armed hand to reform the Russian Government, we must as a nation leave the full responsibility for the crimes on the heads of those who commit them. And we have always felt that sympathy with the Tsar is much more likely to help him than censure. No portion of Sir Edward Grey's speech was finer than that in which he set forth his reasons for trusting the Tsar. We do not believe that he has ever either instigated or suborned "atrocities." His position is beyond any measuring by us a difficult one, surrounded as he is by malignant influences of every type. He is not a strong man—probably enough he would have been killed before now if he had been—and he has against him in his efforts to draw his country towards sane, temperately-guided constitutionalism not only the grand ducal camarilla and the bigoted Church, but a bureaucracy trained to the irresponsibility of absolutism, and, we fear it must be added, the fanaticism of the oppressed. Yet he tenaciously holds by his ideal, perseveres with the work of reform, begins again after every failure, and never quite loses heart. It is the usage here to talk of the present Duma as if it were the merest tool of the bureaucracy, but as Sir Edward Grey also incidentally showed with admirable force, it is nothing of the kind. It is not a speech-making and posturing Duma; visionaries have been excluded from it, probably because the time has not yet come when Russia could afford to give the rein to idealists, but it works steadily, and is plainly beginning to exercise a strong and wholesome pressure not only on public opinion, but upon the hitherto irresponsible autocratic governing machine. Look how it has been overhauling the public expenditure, criticising the "naval programme," appointing commissions to investigate grievances or alleged crimes. Have not "pogroms" ceased or almost since this Duma got to work? Russia is moving forward towards the better day that is to be, as the Foreign Secretary said, and it is our duty to abstain alike from offensive language and well-meant but self-righteous interference. After all, England is about the only country in the world that can afford to tolerate and sometimes to admire Keir Hardies. We have had a growing hope for the future of Russia ever since we first noted the way the third Duma was tackling its work, compelling Ministers to give an account of themselves, checking abuses within its own body as well as in the machine of administration, and therefore we think any attempt on our part to play the Pharisee now peculiarly ill-timed and mischievous. Happily Sir Edward Grey understands the limit of his duties and the responsibilities of his position. His speech was excellent, and will have an excellent effect backed up as it was by the leader of the Opposition in a speech of like temper and sense.

Old-Age Pensions.

The Bill embodying this measure has now made its appearance endorsed by the Chancellor of the Exchequer, Mr. Asquith, Mr. Burns, and the Attorney-General. It has been drafted with great care and obvious solicitude to keep the scheme away from the taint of political partisanship. For all that it is a measure repugnant to old-fashioned ideas of English independence, and the fact that persons in receipt of 10s. a week will still be qualified to receive the 5s. to be provided out of national revenue does not add to its attractiveness. The non-pauper class will get most of the money. We have so repeatedly objected to this new departure that it is hardly necessary to go over the ground again, but a most pertinent letter signed by the acting chairman and general assistant secretary of the Charity Organisation Society throws out one or two fresh points of view which deserve to be emphasised. These gentlemen point out that the legislation now proposed commits us to a non-contributory scheme of pensions which will have an unfortunate influence on the funds at present available for necessitous old age. Pension societies will reconsider their position, and it is "the universal experience that voluntary funds tend to disappear when their object is undertaken by the State." The Charity Organisation Society has for many years favoured the establishment of adequate old-age pensions with the funds formally wasted in doles. That is true, and indicates the only safe policy, a policy calculated to maintain the self-respect of the pensioners. We should have had less objection to this old-age pension proposal by which £6,000,000 to £7,000,000 will presently be charged upon the public revenue if it had been a contributory scheme, if the Government had entered into relations with friendly societies, benevolent clubs, with firms who treat their people liberally, and prodded up other firms that do not yet act with wisdom and genuine benevolence in this respect, in order to establish some thrift-stimulating system wherby the classes likely to be helped by pensions would have been induced to save money in order that the pension might have been something better than 5s. a week at the age of 70.

We could have understood, and possibly supported, a measure of that kind, but here we have proposed to the nation the bestowal of a pure and unrestricted dole, or a dole restricted merely by questions of character, often difficult to ascertain, and therefore sure to be disregarded. The mere fact that local committees are to be appointed to supervise the distribution of the dole does not avert the danger or alter the character of the gift, which is one destructive of thrift, one calculated to make the working population spendthrift, regardless of the future, to a much greater extent than it is now. Our most serious objections, however, still relate to two considerations—first, the absence of any attempt whatever to reform the poor laws and relieve local rates of a burden grown monstrous and intolerable, and secondly the inevitable tendency of all such schemes to expand and to become instruments of political bribery. As Messrs. Mackay and Price, of the Charity Organisation Society, say, the pensionable age will soon be 65, and, in towns at all events, the pension will have to be raised to 7s. a week. They also predict that discrimination will be abandoned as unworkable, and that is unquestionably what is most likely to happen. It is alleged that the mere granting of pensions will reduce the amount spent locally in outdoor pauper relief; but that is an assumption unlikely to be proved wise by events, and it is not outdoor relief which constitutes the source of waste in the administration of the poor law, but indoor. The cost of pauperism in our workhouses has become scandalously excessive without benefit to the pauper inmates. Why could not the Government have put aside its old-age pension project until reform had been accomplished in these directions? At least it might have made the two measures concurrent, and so arranged it that the passing of an old-age pension scheme should have been dependent upon a root reform of the poor-law. It has chosen another course, not because it is the better course, but because it looks the more popular. Five years hence it may be anything but popular, but meanwhile the mischief will have been done, the precedent established, and we shall have entered upon a career of extravagance and political bribery, the end of which no man can see. Just look how Australia is imitating us and bettering us. The Commonwealth Government is going to establish a 65 years of age 10s. a week pension scheme that will cost it £1,800,000 per annum, and will probably have to borrow the money, or most of it, in order to keep the stream of corruption flowing. Not only so, but it is going to endow incapables or incurables from 10 years of age with life pensions, all out of public revenues. We are indeed becoming a degenerate race, and the old sturdy independence is seemingly about to give place to the clamours of helpless and inert populations for bread at the public expense.

British Fire Insurance in 1907.

Their tide of prosperity, measured by the table given below, was so high last year as to almost obliterate the memory of the loss of over £10,000,000 in San Francisco the year before. Long may this prosperity continue. In other respects there is not much new to dwell upon in the history of the year. Amalgamations have slackened for the present, and a kind of counter move has been noticeable, several new fire insurances companies having come into existence, whose career we shall follow with interest. By instinct we always incline to adopt towards monopolies the Irishman's attitude of permanent antagonism to all Governments. And one thing seems assured—the more the old companies by their amalgamations and uniformities in rates endeavour to clinch their monopoly, the more confident may the public be that rivals to their pretensions will be found springing up like mushrooms in the autumn rain.

Why is the Royal so late with its accounts? We have to keep back this table, a table which for these many years now we owe to the courtesy of friends in the city, until it is belated entirely because the management of the great Royal company delays the issue of its report until more than five months of the succeeding year have gone by. Surely a company so obviously well organised as it is might get its figures out a little earlier, and then our table would be up-to date in all respects. The highest loss ratio last year seems to have been experienced by the Guardian company, and the lowest was the luck of the British Law Fire company.

Brunner, Mond, and Company and Their Men.

Special interest attaches at the present moment to some statements made by Sir John Brunner, M.P., at the annual general meeting of his company in the end of last week. He showed, without making any pretence or boasting of his special benevolence, what can be done when the governors of great industries frankly accept their responsibilities and endeavour to treat their workmen as human beings. During the history of the company, he said, they had done a good deal for the comfort and benefit of their workmen, putting aside in the past two years alone £24,923 in connection with their employees' bonus fund. This represented 6d. in the £ on the wages paid during 1906 to all men employed throughout that year, together with a shilling in the £ for all who had worked for five years. But that is not all, although this bonus, allowed, as it is, to accumulate until the men leave the service of the company, and then handed over in a lump sum, is a very substantial contribution towards the provision of an old age pension. But, in addition, the company gives all its men on liberal conditions a week's holiday every year. They get their pay for that week's rest just as if they were at work, and this privilege is not forfeited unless the men are unsteady and absent from work. In the old days, Sir John said, when they mistakenly expected men to work 365 days in the year, the custom was that a man would work on and on until he could work no longer, and then he would spend some time away from the company's employ in ways that did him no good. "At the end of that period, when his money was exhausted, he returned to work a very much worse man than when he left." Now the benefits granted to the men conduce to their steadiness. In 1884, when the company began to give holidays to their steady workpeople, the standard of steadiness then fixed was that not more than ten days should be lost out of a year's service. But in 1907 the standard was reduced to two days, and the directors found that 97½ per cent. of the men were adjudged to be steady. Surely there is an object lesson here deserving even of the Government's consideration. Men thus situated do not require doles out of the Treasury; they and their employers together can provide for old age without coming to the Treasury, and steadiness benefits the employer, as Sir John's repetition of statistics published by him some time ago with regard to the liability to accidents in relation to age significantly proves. The figures are worth repeating. Workmen between the ages of 18 and 25 show an average number of accidents of 8.5 per cent. per annum, between 26 and 30 the average is down to 6.8 per cent., between 31 and 36 to 4.2 per cent., between 36 and 40 to 3.6 per cent., between 41 and 45 to 2.8 per cent., between 46 and 50 to 3.7 per cent., between 51 and 55 to 2.4 per cent., and men of the ages of 56 and over display a liability of but 2.4 per cent. The general inference to be drawn from figures like these is that steady men become more careful as they grow older, and that good treatment, wise and liberal distribution of earned benefits, conduce to steadiness.

The L.G.O. and Vanguard Companies.

Once more the banns have been put up for the union of the London General Omnibus Company with the Vanguard Motorbus Company, but it does not seem to be yet absolutely certain that the contract of union will be completed. Evidently the L.G.O. people are nervously anxious to bring about some agreement whereby a glitter of revived credit may be given to the undertaking, so that it may raise more money. What its actual position is we have no means of knowing. Its last report was kept out of our hands, but the position disclosed by earlier figures was eloquent of impending disaster. As recently as 1904 the directors boldly paid an 8 per cent. dividend on the common stock, but that dropped to 5½ per cent. in 1906, and soon after to nothing at all, while a deficit of nearly £50,000 made its appearance for the first half of 1907. Knowing the company's inner workings as we unfortunately do, we have never believed that its directors had any right to pay the high dividends they did in the earlier years of the present decade. And the condition of the Vanguard Company cannot be very much better, better only because it is a much younger concern, less worm-eaten and cankered. But it is obviously a very watery concern so far as capital goes, being made up of an amalgamation of four unprofitable adventures, viz., the London and District Motor Bus Company, the London and Provincial Motor Bus and Traction Company, the London Motor Omnibus Company, and the Motor Bus Company. For these incipient undertakings, none of which were profitable to their owners, £990,500 was paid in paper. At the present time the capital involved in the L.G.O. Company, including £300,000 of debentures, is about £1,324,000, while that of the Vanguard Company foots up to £865,000, all of which represents the price paid for the buses embraced in the combination. Thus altogether nearly £2,200,000 of capital, nominal or other, is involved in the new project of fusion, and it would be most rash to try and estimate what this nominal capital is really worth. In giving intimation

that it was ready to embrace its rival and combine with it, the board of the L.G.O. Company displayed not only a dread of Vanguard debenture-holders, but an eagerness to foreshadow other amalgamations and combines with a view to as it were corner the street passenger traffic of London. This reveals a nervous dread lest the whole project should again come to grief. And the hope is vain of relief from any combination of the kind, no matter how complete. It is impossible to stop competition on London streets, as the L.G.O. board found out long ago when it had to bury among its already overvalued leaseholds a large sum carried in its accounts against "times," or privileged hours of running. Fares cannot be put up in the face of tube and electric railway competition. The only thing that could be done would be to abate the fighting between the rival companies, but any large reduction in the number of vehicles put upon the streets by the combination would immediately invite new rivals to make their appearance, and the last state of the business would soon be worse than the first. Were we a debenture-holder in either company we should refuse consent until arrangements had been made to pay off the debt in cash.

Rand Amalgamations.

The amalgamation of South African mining companies is being pursued with so much vigour just now that it may be useful to make a few general observations on the subject, more particularly as the Transvaal Government is keeping a watchful eye on this aspect of gold mining finance in the interests of the hitherto powerless small investor. It is a question to which we have addressed ourselves on more than one occasion, because whenever these amalgamation schemes come under our notice a feeling is aroused that the submission of the proposals and plans decided on to the independent body of shareholders is more or less an elaborate farce. A plan of amalgamation may be perfectly sound and acceptable to one and all, so that no protest against its consummation is necessary; but, on the other hand, it is easy to conceive that another scheme may be thoroughly unsatisfactory, and inflict hardship upon a considerable body of shareholders. In each case, however, the result is the same, simply because the vendor-controlled portion of the share capital is always large enough to swamp the vote of the ordinary investor. It is an unfortunate aspect of Rand mining finance that the interests of shareholders and vendor directors are not always identical. You may take shares in, say, a gold-producing, revenue-earning, dividend-paying mine, in which the chances may be fair that in due time capital will be returned with a moderate rate of interest, but presently an amalgamation will be sprung upon you under which unworked, unproved, and possibly unremunerative properties may be joined to yours, based on some flimsy excuse about lengthening life, providing fresh funds, or reducing administrative charges. The general body of shareholders are quite unable to resist these schemes, and they may find their profits dissipated over an enormously larger capital with in all probability very doubtful benefits from the properties joined on. The East Rand amalgamation was typical of all this, and also of something else far worse. The joining of two independent properties may easily be quite indefensible, but what can be said of those cases where a co-partnery exists and enormous promotion profits have been made in first giving a number of properties independent existence? Think of the East Rand Proprietary with its H. F. Company entitled to scoop 25 per cent. of the profits beyond a certain sum, and the half-dozen or more subsidiaries created with heavy capitals, part issued at heavy premiums. Now the whole lot—good, bad, and indifferent—are to return to the body of the parent, and you have only to look at the terms of acquisition, the prices formerly touched by the shares, and the huge prices at which large blocks were sold (the vendors get theirs at par, of course) to realise the enormous profits which must have been netted by means of all this wonderful jugglery. Is it any use protesting? Of course not. It would be sheer waste of time to take the trouble to send out negative votes to South Africa (were one so minded), and this particular scheme went through last Friday by overwhelming majorities, with huge bales of vendors' shares probably in reserve for use if necessary.

This brings us to a really excellent speech delivered by Mr. Hyman at the recent meeting of the Robinson Central Deep. It was instructive in every way—cogent, forceful, and a first-rate portrayal of the position of the independent shareholder in connection with the business under discussion. Unquestionably the Robinson Central Deep (one of the Wernher Beit group) is a rich mine, and is paying handsome dividends, but its life is short, and Mr. Hyman has a probably well-grounded idea that presently some scheme for joining hands with others will be propounded. As a fact, a couple of years ago it was proposed to purchase six claims belonging to the South Rand, and four to the Rand Mines, but the price offered was not considered good enough by the South Rand shareholders, and the matter fell through. What the price offered amounted to the chairman of the Robinson Central Deep refused to disclose, but Mr. Hyman put forward the quite reasonable plea that if these claims are acquired it should be with surplus cash, so that the Robinson Central Deep capital might remain undisturbed. He was not necessarily opposed to amalgamation, but wanted the small shareholder properly looked after, and uttered a very natural protest against a board of directors being at the same time vendors and vendees. Of a series of questions put to the chairman by Mr. Hyman, two may very usefully be set out here, as they go pretty well to the root of the matter. It was asked if, "In sending out proxy forms, will the board enclose with each proxy form a circular distinctly mentioning the owners of the claims, and further stating whether any member or members of the board are interested in the sale as vendors, either directly or indirectly; the proxy form to be worded in such manner that the shareholders can say 'Yes' or 'No' to the scheme?" and also, "In common fairness, will the directors make it a condition that no shareholder or company in any way interested in the sale of such claims shall vote on any shares held by such interested party or parties? because you cannot expect the Rand mines holding 60 000 shares in the Robinson Central Deep and with 10 claims to dispose of to vote against the scheme." With the latter proposition the chairman did not, of course, agree, declaring that no *bonâ fide* shareholder could be excluded from voting, but he was favourable to the first suggestion, and treated the speaker with no little respect. It was left to Mr. Reyersbach, a director of the company and chairman of the Rand Mines, to make a sneering reference to the relative holdings of that company and Mr. Hyman in the Robinson Central Deep, thus showing that he utterly failed to appreciate that gentleman's points. No doubt the discussion of other companies' amalgamations was technically out of order, but the question is a far-reaching and general one, and the chairman was wise enough not to stifle discussion, as presumably Mr. Reyersbach would have done. Mr. Robinson was cabling at the end of last week that he had been discussing the new gold law with the Prime Minister, General Smuts, and Mr. Hull, and understands that amendments will be made to strengthen the position in favour of the Rand gold mining industry, and to give security of title to protect investments. We are not quite sure what this means, but if confidence in the South African gold mining industry is to be restored, the Government must take note of the present unfavourable position of the small investor.

Army and Navy Auxiliary Co-operative Supply, Limited.—Trading profit last year ended February 29 was £102,027, working expenses £64,073, this including £1,802 written off for depreciation. This made the nett profit £41,223, made up to £47,580 by £6,357 brought forward. An interim dividend of 2s. 6d. per share was paid, and the directors now declare another 7s. 6d. per share, making 10s. in all for the year, and after paying income-tax and directors' and auditors' fees have £5,127 left to carry forward.

American Business Notes.

There was again a shifting around of liabilities amongst New York credit institutions. The loans and discount averages of the New York Associated Banks showed a decrease of £786,000 on the week, but the loans and investments of the non-clearing banks and trust companies were up £1,075,000 to £173,352,000. At last the steady exports of gold have begun to tell upon the stock held by the banks, and the specie average of the associated group shows a decrease of £2,645,000. This, however, is offset to the extent of over £517,000 by the specie holdings of the outside institutions whose total average in this coin is over £10,415,000. Paper has taken the place of coin in the vaults of the Associated Banks to the extent of £393,200, and there is an increase of £14,200 in the greenback average holding of the non-clearing bank and trust companies, which companies hold £10,415,400 in specie and £2,415,400 in gold. With the diminution in the credits granted the deposits of the Associated Banks show a decline of £2,227,000, and the surplus reserve has gone down £1,715,000 to a total of £9,582,000 as compared with £2,556,400 at the same date last year. The total deposits of the non-clearing banks and trusts amount to £144,789,000, and the item shows an increase of £1,660,000. Moreover, the loans and investments of these outsiders exceed the amount of the deposits by nearly £29,000,000. Officially the percentage of their reserve to deposits is given at 33.4 per cent. compared with 32.8 per cent. the previous week. We make it out to be about 8.8 per cent.

Speculation has begun to tell upon the overturn of credit, and the Bank clearings for the past week are said to have been 20.2 per cent. larger in New York than for the corresponding week of last year, while for the rest of the country the expansion amounts to 4.8 per cent. This, unfortunately, does not mean that the business of the country is tending to improve, but now that the Currency Inflation Bill has been forced through Congress in spite of the heroic 18 hours' speech of Senator La Folliette and other obstructions, we may expect to see credit operations develop at phenomenal rapidity. Paper will tend more and more to take the place of gold, and speculation will be excited to an ungovernable extent by the knowledge that when an emergency comes along there is £100,000,000 of paper money which can be thrust into the hands of the public to keep it quiet.

American financiers are distinguished above all others for disregard of experience. No law is more invariable in its operation, not even the law of gravitation, than the law which ensures the substitution of a base currency for a genuine one. The more paper money is issued in any country the less coin will that country have, time given. The paper will push out the metal just as a debased coin thrusts out a good one. It will take time to develop the mischiefs that invariably spring from currency inflation, but that they will come is just as certain as that the exports of gold are now stimulated and facilitated by the prospect of more paper money in the United States. Look how dangerous, wealth consuming, the whole operation is. It is credit throughout. Bonds of all descriptions, many of them we should judge not necessarily marketable, are to be utilised as security for the new notes. There is no question at all of holding any coin in reserve against the notes because that would spoil the trick altogether. These bonds may be created *ad hoc*, and may be indifferently secured. A city, say, has issued £1,000,000 of public debt, and that is in all probability only the visible portion of an aggregate indebtedness that may absorb a great part of the surplus of its inhabitants. Houses are built and mortgaged, businesses are created and mortgaged, public institutions are supported with borrowed money, all trade is conducted on credit, and on the top of these multiplied obligations comes municipal debt. Probably also there may be State debts, as there certainly is a modicum of federal and national debt as top dressing, and with obligations originating in these various ways currency is to be created and put into circulation. There can be no means of testing the real value of notes thus secured, and probably there is no intention whatever to take intrinsic value into consideration. The extra currency is to be an "emergency" affair, utilisable only when a pinch comes, but the very fact that it is there and available will always tend to make pinches come.

Congress has adjourned, after doing comparatively little business, but it did manage to vote away upwards of £200,000,000 as the expenditure of the coming year, and it also abstained from passing any laws likely to do much to benefit the country. In fact, energy was concentrated on preparing for the Presidential election, in which the Republicans mean to be victors at all costs. The story, indeed, comes over that even Mr. Roosevelt's ardour has been tamed, and he has slowed down on his attacks upon corrupt corporations, while any attempt to modify the tariff is not so much as hinted at.

The Union Pacific bond issue is out at last, and the need for romancing at an end on that subject. And it is £10,000,000 the Standard Oil people want, not £8,000,000 or any smaller sum. The loan will be in 4 per cent. 100-year gold bonds, said to have been sold to the syndicate—Kuhn, Loeb and Co., Baring Brothers, and Glyn, Mills and Co.—at a price which means an interest charge of 4.1 per cent. upon the revenues of the company. On the "kerb" trading was attempted in the scrip at 97¼, and the last sale was effected at 96⅞. A "first mortgage" bond, too.

The passing of the Wabash and Pittsburg Terminal Railroad into the hands of a receiver is in itself a comparatively small affair. Still, the company, the whole of whose share capital of £2,000,000 is owned by the Wabash Railroad, has a debt in first mortgage 4 per cent. bonds amounting to £5,900,000, and in second mortgage bonds bearing the same rate of interest of £4,000,000, so that something like £10,000,000 of money is involved. Apparently the Standard Oil people or the Rockefellers are prominent credits, and as the company has defaulted on its first mortgage interests its affairs must be in a decided bad way.

Movements of population have been suggestive in the United States this year. Less than a year ago more aliens frequently arrived in New York from Italy in one day than now come in a month. The arrivals during April of this year numbered only 41,274, and in the same month of last year it was 145,256. Arrivals from Canada, however, and Mexico have continued well in excess of the previous year, but the numbers are never great in these instances. While the arrivals have been fewer the outflow has been unusually large, April witnessing the departure of over 77,000 people, and up to the end of that month this year's outflow has been 243,000 as against only 80,427 in the same months of last year. It follows that, while a year ago the population of the States was increased by almost 324,000, in the four months closed with April 30 this year there has been a diminution of almost 119,000.

In order to pave the way for making of the two—the Commerce and the First National—the biggest bank in the United States, the Rockefeller people have fallen on an ingenious method of stowing away a number of the First National Bank's securities. A trust is to be formed with a capital of £2,000,000, and the whole of this capital will be found by declaring a bonus dividend of a like amount out of the accumulated reserves of the First National Bank. No money need pass at all. The new company gets its "capital," presumably in the form of securities representing this portion of the reserve distributed, and starts business without requiring a cent of cash to be subscribed by anybody. What is the use of a smart trick of this kind? It may be valuable by the relief it gives to the First National Bank. Suppose, for example, this bank holds the greater part of the first mortgage bonds of the Wabash, Pittsburg Terminal Railway just defaulted upon. What is to hinder it from handing these bonds over to the trust at par or any price it pleases as part

of the bonus consideration or dividend out of which the new capital is found? It is quite clever and thoroughly up-to-date New York finance, paper, paper everywhere and ne'er a cent to clink.

All railroads continue to display decreases in gross receipts, but some of them are cutting down expenses so drastically that the decline in nett earnings almost disappears, or quite does so. In the month of April, for instance, the decrease in the gross earnings of the Union Pacific was about £89,400, but this was accompanied by an increase of £91,200 in the nett receipts. No other company whose figures we have noticed has been able to attain the height of "economy" thus indicated, but they are all trying to, and the results obtained no doubt imply reduction in wages, dismissal of hands and various other economies. It also too often implies neglect of maintenance and upkeep of equipment. Why repair cars that are idle, why spend money on the road-bed when the Steel combination will not reduce the price of rails? It is better to let everything slide, and by and by when trade revives a bond issue can be made in order to provide means for meeting dilapidations. Betterments and worsements—they are all an affair of capital.

The Amalgamated Copper Company made a profit for the year ended April 30 last of only £1,336,200, which was £1,435,000 less than in the preceding year, or a decrease of nearly 53 per cent. The surplus profits are said to equal 4.3 per cent. upon the stock as against 9½ per cent. the year before, but the company can doubtless pay dividends without any reference to profits, else its reserves cannot be of a very genuine description.

Rather late in the day the report of the Pennsylvania Company has made its appearance. It may be prudent to explain that this company is a "holding" managing company belonging to the Pennsylvania Railroad Company. It controls and supervises all that railroad company's lines west of Pittsburg, and as at least nine railroad companies in that Western system are worked by it direct while it controls many others its finances are naturally somewhat complicated. We should imagine that a great reform might be accomplished in the consolidation of these various properties, because at present and while they are kept going as separate organisations there must be an inconvenient and expensive duplication of accounts, and, at any rate, the higher grades of officials. Be this as it may, the business done by the roads embraced in the Pennsylvania Company's own patchwork was large and fairly profitable in the calendar year 1907 which its figures cover. Gross receipts of all the lines directly operated amounted to £10,267,486, an increase of over £1,060,000. Unfortunately expenses rose by nearly £810,000 to £7,387,000, so that the increase in the nett revenue was barely £251,000 and interest on the funded debt took £194,000 more, while the total increase in what may be called fixed charges exceeded £483,000. For all that the company was able to meet all interest charges and to pay 7 per cent. upon its capital stock the property of the railroad company, while transferring £500,000 to the extraordinary expenditure account, and still had over £250,000 to add to the profit and loss credit balance, bringing it up to £1,797,400, quite a creditable exhibit, even if we allow that the working expenses are distributed arbitrarily, as the allocation of £500,000 to the extraordinary expenditure fund out of the year's profits would seem to indicate. Altogether this Pennsylvania company holds shares in 52 separate companies to an aggregate value of £36,061,500. It has also invested £13,082,000 in mortgages issued by 23 companies. All the mortgages seem to be those emitted by railroad companies, but there is a considerable amount of money, nearly £3,000,000 in fact, in the Pennsylvania Steel Company's preferred and common stocks, and a large holding of the par value of £4,508,000 is in the Cambria Steel Company. The income received by Pennsylvania Company from its securities in the past year amounted to £2,358,400, and its largest possession is in the shares of the Pitsburg, Cincinnati, Chicago and St. Louis Railway Company, whose accounts are issued separately. Of this company's capital the Pennsylvania Company possesses £4,454,000 in preferred and £3,326,000 in common stock. An interesting exhibit is made of the earnings of all the lines either owned by the Pennsylvania Company or in which it is more or less heavily interested. Amongst these lines are nine so-called independent companies where its investments are, as may be said, more in the way of business, and the Pittsburg, Cincinnati, Chicago and St. Louis Railway controls six minor roads, all with separate sets of books no doubt, separate traffic managers, staffs and so on. A table on page 33 of the report gives the summary results for some 33 railways and one coal company. Some day no doubt the accounts will be much simplified, and economy in working brought about by consolidation.

Passing Events.

Everybody is to be congratulated upon the establishment of the penny per ounce letter postage between the United Kingdom and the United States, and not least the Postmaster-General. He announced the welcome change, which is to take effect from October 1 this year, very quietly on Wednesday in the House of Commons, and it may take some little time before the people in either country realise what the boon implies. At first there may be a loss to the revenues of the two countries, but that will soon be obliterated by the much larger correspondence likely to spring into existence under the stimulus applied by the lower letter fee. That is the view of Mr. Meyer, the American Postmaster-General, who says he does not anticipate that the lower rates will eventually react unfavourably on the finances of the British and American post offices. We do not see why they should. Even in the States nobody seems inclined to carp at a reform so obvious, so long advocated and so welcome as tending to knit English-speaking peoples more closely together, and here nobody would think of raising any question about it. When will the turn of the newspapers come? And when that of the Continent?

Quite a heated debate arose on the motion for the adjournment over the holidays with reference to the renewed, but modified, Sugar Convention, and Mr. Thomas Lough was particularly bitter in his attack upon Sir Edward Grey or the Government. He certainly made out a strong case, and we have never been in the slightest degree moved to regard these trade compacts with anything like complacency. They are in all senses "foreign" to us. Possibly, however, Sir Edward Grey could not quite help himself, for no government, however strong, can at once cut the country clear from embarrassing engagements entered into by its predecessor. It would have been better if he had returned to simple Free Trade in sugar as in other commodities, and had the Chancellor of the Exchequer been able to abolish the sugar duties altogether we might have been content to let foreign nations devise means whereby their home consumers might be made to pay for the enriching of monopolists without our taking any part whatever in this rather despicable manœuvre. It might, however, have been hurtful to France if we had taken this straightforward and simple course, and France deserves consideration at our hands. Anyhow, we have not abolished the sugar duty. Sir Edward Grey, however, is too reticent in his conduct of the business side of foreign affairs, not frank and open enough, and hence misunderstandings are apt to arise. Mr. Thomas Lough was therefore all the more easily able to give the Foreign Secretary a disquieting half-hour, and this troublesome subject will never be laid at rest until we shake ourselves clear of compacts of any kind. But has the renewed Convention really contributed to make sugar dearer, or has that been the result of natural causes, such as the extreme shortness of the Cuban crop?

Last week's revenue figures were not quite so flush, but £1,584,230 was gathered in, of which Customs gave £594,000 and estate duties £461,000. Even income-tax

did a little better, with £117,000. Almost the entire revenue was swept away by the demands of the supply services, together with a small disbursement on account of the Consolidated Fund, so that only £40,294 was added to the Bank balances.

Lord Minto telegraphed on Monday last that the number of Indian natives in receipt of relief was 1,321,000. This shows a slight diminution, but the total in the United Provinces is still 1,080,000, and although general rain fell in Burma and North-Eastern India, there had practically been none in the distressed area. Moreover, the decrease in the numbers tabulated is partly due to the substitution of small village works for big public undertakings, and although the spring harvest has relieved the situation in all except the most seriously affected districts, wide-spread distress must continue until the establishment of the monsoon brings about a fall in prices, still very high. The decline in the Bengal figures, which show 40,000 in receipt of relief, is mainly due to the correction of a mistake in the previous week's return, and not to any general change in the situation. In the Central Provinces the demand for employment on relief works is increasing.

Japanese financial affairs are said to be improving, and the *Times* Tokio correspondent sends the information that the Money market there is steadily growing easier and shares rising. Moreover, the applications for re-subscribing the bonds of the first domestic War loan reached £3,500,000, and the applications for ready-money payments to only £1,800,000. It is expected that the Government will redeem the remaining £5,000,000 by drawing lots. He also adds that the insurance companies are beginning to lend money to industrial enterprises at about 9½ per cent., which in the circumstances is not an excessive rate. Moreover, the nett earnings of the Manchurian Railway for the year ended March 31 amounted to £400,000, enough to pay the guaranteed interest and the interest on the foreign loan. All this news is reassuring.

In the disputes over that mean-looking suspension of Dinuzulu's salary, one thing has been forgotten, the necessity the Natal Government is under to economise. "But Dinuzulu's salary was only £500 a year. Surely that could not make much difference to such a fine borrowing Government as is enjoyed by Natal?" Where poverty is so great every penny counts, and it might be worth while for Lord Crewe to consider whether the Zulu chief's stipend might not be provided out of the Imperial Treasury. The Government is in the way of bestowing gifts and pensions. Why not pension Dinuzulu and relieve him from the fear lest even should the Pietermaritzberg Ministry decide to regrant the allowance from Natal, he might one day lose it through the bankruptcy of that State? There is no colony amongst all those that rejoice in living beneath the British flag so reckless in borrowing and so essentially resourceless as that of Natal. Hence to no small extent its zeal in getting up pretexts for seizing the lands belonging to the natives. But they cannot manufacture a land boom that way.

It is interesting to learn that the *Mauretania* in its last race across the Atlantic managed to beat the *Lusitania* by seven minutes. The rivalry between the shipbuilding yards of the Tyne and the Clyde, which has prompted the racing against each other of these two giant ocean flyers, has thus served to bring out the marvellous perfection of their machinery, and may be said to demonstrate that the builders on the one river are as good as on the other. This is interesting, but we should like much to know what it costs. How much extra coal was consumed in beating the *Lusitania* by these seven minutes? It is all right, of course, because the British taxpayer pays handsomely for the display. Still, it would be interesting to have a return of the working costs in coal alone of these two ships in their sensational rivalry. Do they really run with least vibration when they go at their fastest?

The Germans, as is natural, are very much exercised over the coming visit of King Edward to the Tsar, but it is only the German Navy League journals which seem to be really endeavouring to conjure up all manner of blood-curdling phantoms in connection therewith. They are full of denunciations of England, see visions of the exclusion of Germany from Africa, and of a new triple alliance between England, France and Russia, making altogether a fine dust about the spectres of their own heated fancies. It is really moonshine, and King Edward does not go about with treaties in his pocket ready for signature, but no doubt our Navy League will immediately follow the lead thus given by the Germans and overwhelm us with terror-raising predictions about the designs of the Kaiser, the danger of a great European war, the necessity of building a few dozen more *Dreadnoughts*, of hurrying on with the Rosyth naval depôt and the rest of the catalogue. Any pretext is good enough for people who have "a slate loose," as the vulgar phrase is, and whose one idea of strength is to spend money—spend, spend, build, build, borrow, borrow, and all will be well.

A special word of commendation is deserved by the *World's Work* magazine for the current month. It is made up for the most part with articles relating to the Franco-British Exhibition, and is therefore both opportune and valuable. Many of the illustrations are of great interest, and reveal to what extent ornamentation and picturesque effect have been carried in the construction of the exhibition buildings. There is an article on "What France Can Teach Us," and another on "The Exhibition in the Making," together with papers on decoration, sculpture, the British dealer in the French market, the interplay of French and English art, and, above all, two papers on England and France in 1908 and "Aspects of the Great Fair," so that the number is most opportune and topical.

There is a significant observation in the report of Mr. Consul-General W. R. Hearn, on the trade of the Consular District of San Francisco in 1907 with reference to hops. It would seem that the hop growing industry in California is not any happier than here at home. There, as elsewhere, he remarks, "it is usually a feast or a famine with hop growers." The market for no other stable crop is so easily glutted, and Californian growers, like others, extend their yards when prices are high, and reduce them when prices are low. Put alongside this remark, Mr. Gretton's statement made the other day to the Parliamentary Committee on the hop industry with regard to the hop farming in our own country. He said that English hops had been for some time slowly deteriorating, probably owing to over forcing of crops. He also added that they must have a certain admixture of foreign hops in the brewing business, and his firm, Messrs. Bass and Co, used 50 per cent. of foreign hops. They paid more for these hops than for English. As usual, we take it, the trouble in our hop growing industry lies more with the growers than anywhere else.

Continental Memoranda.

The Paris Bourse seems to be getting over its scares about an income-tax, and Rente has been tending to improve these last few days. Money is so cheap in Paris that the gloomiest minded "bear" cannot hope to play with effect or profit against that all-prevailing influence. But there has been nothing particular going on, no new issues of any magnitude coming on the market, only schemes being talked of which hardly interest people here.

There is perhaps one exception to this general statement. A scheme is apparently under consideration both in Paris and London, and it has the concurrence of a certain number of Egyptian financiers. Its object is the formation of an international syndicate to buy back Egyptian securities and lands exaggeratedly depreciated during the recent crisis. It is rumoured that the leading French bank connected with this proposal is the Banque de Paris, and we shall be interested to see what comes of it.

There is also a Spanish loan hanging over the market, but apparently the Spanish Minister of

Finance is unable to make up his mind what to sell it at. Altogether it amounts to about £5,500,000 and will presumably be in 4 per cents., the money to be used for redeeming floating debt. It will interest Paris, but we are not likely to take any particular hand in a transaction of this kind. Portugal is another story, yet even here it does not seem to be the case that a loan of £800,000 or any other amount has been negotiated for Portugal in London, at least the Union Parisienne Bank of Paris and the Bank of Lisbon are now said to have headed a group of French financiers who have agreed to make an advance of £500,000 to the Portuguese Government, of which £250,000 is to be repaid at April 30, 1909. The profits of the Portuguese Match Company are to be assigned as security for this loan, and the Portuguese Government will draw on its financial agent in London for the whole amount. According to the arrangements, the Bank of Lisbon will receive £40,000 per month from the Match Company until the whole of the loan has been redeemed.

German markets are just as uninteresting as French, but they have been exercised during the week over the position of the metal trade and the rumours about the great Phœnix Company's dividend have daily acted as a cold douche upon the minds of speculators disposed otherwise to imitate the Yankee in buying for the rise regardless of facts. Complaint is made also that the United States iron masters are beginning to dump in Germany iron and steel they cannot sell at home because of their refusal to reduce prices, and all sorts of gloomy anticipations are being indulged in. This, too, in spite of the tariff. Politics also are among the influences working to produce stagnation, and there is a great deal of senseless talk excited by the mysterious visit of King Edward to Tsar Nicholas. Nobody seems to have suggested, even in Germany, that the Tsar might be desirous of arranging with the King for an asylum here to which he and his family could retire in the event of affairs in Russia getting too hot for him. It is surely significant that the two monarchs can only meet on the water.

An encouraging description of Chilian finance was given by President Montt in opening the Chilian legislature last Sunday. It is true that the Government had to raise 20,000,000 pesetas in order to cover the deficit at the end of the year, but the exterior debt was reduced by £319,000 during the year to £20,737,000, and of the interior debt, amounting to 179,000,000 pesetas, 50,000,000 has already been retired. The receipts for 1908 based on the actual figures for the first four months of the year are estimated at 200,000,000 pesetas. Efforts are to be made to stimulate immigration, and all foreign colonists who bring some capital with them will be welcomed. Certain moneys are to be devoted to the improvement of the port of Valparaiso, but whence they are to be drawn the summary does not indicate.

The new Hungarian loan is hanging over the Austrian Money Market. It will amount to between 80,000,000 and 100,000,000 kronen, and the Hungarian Prime Minister, Dr. Wekerle, says that he cannot delay the issue, because the needs of the Government are urgent. Doubtless it will be subscribed for. Hungary, in spite of its internal wrangling, is a country that has made considerable economic progress, and it has kept off the money market for some years back.

The Austrian crops of 1907 are said to have brought more money to the farmers of the country than ever before. Although the crop was smaller than that for 1906, both in wheat and rye, the proceeds amounted to almost 760,000,000 kronen more at 1,884,700,000 kronen. This is nearly £80,000,000, and it is added that the level of prices will almost certainly exceed the ten years' average in the present year.

Russia's beet crop seems to be diminishing, at any rate the area under the root this year is only 561,300 hectares against 621,127 hectares last year, a reduction of 9.6 per cent. But for the whole of Europe the reduction in planting amounts to 5.3 per cent., and in Cuba the output from January 1 to April 30 has amounted to only 824,000 tons, compared with 1,231,000 tons in the same period of 1907, so that up to the end of April there is a shortage on comparison of 497,000 tons. No wonder that Cuban railways are doing badly, or that sugar should be getting dearer.

The German thaler has been re-monetised in a sense as a token coin. It was withdrawn under the demonetisation law of July, 1907, but the Government has been obliged to issue it again, and it is now reinstated among the token currency at the exchangeable value against gold of 3 marks instead of 2 marks, the arbitary valuation put upon it before demonetisation.

Members of the German Steel Works Union are to meet at Dusseldorf on June 19 to consider the prices at which half-manufactured and pig-iron are to be delivered for the third quarter of this year. Great differences of opinion exist amongst the members, a minority of whom did the utmost they could at the last meeting to get the prices reduced. The majority, however, want to imitate the United States Steel Trust and keep up prices, no matter what it may cost, expecting, of course, to send their overplus abroad to be sold for what it will fetch. We can have no objection if this majority triumphs, because the cheaper we get iron the better it is for our industries, and if the German ironmasters are satisfied to lose money for our benefit we should be the last to grumble. The German people, however, seem to deserve a little consideration at the hands of even such almighty potentates as the ironmasters.

Gold has been leaving Russia in disquieting amounts, and the *Slovo* declares that the export presses upon Russia the duty to recognise that the limit of indebtedness has been reached. The country is weighed down by the burden of foreign debts. Its public debts average 60 roubles per head of the population, that is to say fully £6, or £30 per family, and considering the low wages prevalent in Russia it is far too heavy a burden for the people. Therefore, this Russian journal warns the Government that before inaugurating a new series of loans it would be well to consider whether the resources of the country will be able to stand the new drain, and whether there will be enough gold to pay the charges imposed by these debts. Granting the necessity of increasing the paper money to nearly £130,000,000, and accepting the amount of the Treasury promissory notes at £23,000,000, the writer suggests that it would be dangerous to allow the country's gold reserves to fall below £100,000,000. At present the stock of it does not exceed £129,000,000, and within the last six months nearly £13,000,000 has been lost by export. Were as much again to disappear abroad the equilibrium of the exchange would, according to this authority, be disturbed. Probably considerations of this kind are weighing with the present Government of the Tsar, and hence it is only an internal loan of £20,000,000 which is always spoken of.

The export of naphtha and its derivatives from Russia is becoming very active. Oils for lighting purposes from Baku to Europe are advancing steadily. In one week between May 16th and May 23rd 402,000 poods were exported against 220,000 in the corresponding week of 1907. Taking this year from January 1st to May 10th, there has been a falling off, as last year these exports were 6,475,000 poods, while at present they amount to only 4,437,000. Exports for the East are, however, considerably above those of last year, having reached 5,404,000 poods against 4,768,000 in 1907.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending May 30, 249,000 poods, equals 4,014 tons.

Letters of allotment for the issue of £1,500,000 City of Winnipeg 4 per Cent. Consolidated Registered Stock were posted on Thursday.

Mr James Kennard Davis has resigned the London agency of the North China Insurance Company, in consequence of ill health, and has accepted a seat on the London committee. Mr William George Bayne, late secretary of the Company at the head office, Shanghai, has been appointed agent in London.

MINOR NOTICES OF COMPANY REPORTS.

Aberdeen Steam Trawling and Fishing Company.—A considerable decrease of £9,378 to £12,732 is shown in the profits for the year ended April 30, and with £4,211 or £895 more brought in the available surplus came to £16,943 against £25,426. Of this £662 less at £7,338 is written off for depreciation and only £202 is provided for boat insurance compared with £2,500 a year ago, while the general reserve is passed over. Then £1,000 is reserved for putting three vessels through No. 2 survey during this summer, so the dividend has to be cut down from 25 to 10 per cent., and even so the balance carried out is £1,122 smaller at £3,404. Book value of vessels is practically unaltered at £116,936, and buildings, plant, &c., are also much the same at £26,325, and against these the reserves now amount to £32,000. Liabilities for loans have been increased by £5,281 to £25,971, bank advances are also £2,030 higher at £11,930, and sundry creditors and bills payable show an increase of £1,008 at £15,741, while on the other hand debtors are only £921 up at £9,382 and cash is trifling at £125.

Aibheel Tea Company.—Unfavourable weather and the prevalance of mosquito blight caused a reduction of 59,701 lbs. to 316,783 lbs. in the crop for last year, and although the price was 0.66d. better at 7.46d. expenses rose by 0.80d. to 5.73d. Nett profits consequently dropped by £657 to £2,174, and with £154 brought in and £19 from miscellaneous receipts the disposable total amounted to £2,347 or £507 less. Out of this a dividend of 10 per cent. is paid compared with 15 per cent. a year ago and £392 more at £546 is carried forward. Estates remain at £19,200 and reserve is also unaltered at £3,000. Floating liabilities are £568 higher at £3,412, but on the other hand stocks come to £276 more at £4,401, debtors have risen by £456 to £1,244, and cash is £119 up at £1,248.

Anglo-Portuguese Telephone Company.—Revenue from all sources for the year ended December 31 amounted to £39,696, of which expenses took £21,507 and royalties to the Portuguese Government £1,103, leaving a nett profit of £17,085. With £3,655 brought forward the disposable total was £20,741, and after providing for debenture interest and sinking fund the shareholders receive a dividend of 8 per cent., £5,000 is added to reserve, and £3,745 is carried forward. The work of increasing the capacity of the underground cables has been begun, and capital outlay during the twelve months was £8,778, making a total of £176,563 against which there are the debenture sinking fund of £2,255 and the reserve of £15,000, the latter being represented as to £10,000 by cash on deposit. Creditors at £9,384 exceed debtors by £7,049, and in addition there is a liability of £14,009 for subscriptions in advance, while stores are valued at £4,700 and cash at £4,956 is barely sufficient to meet the final instalment of the dividend now declared.

Brahmapootra Tea Company.—The past year was a very satisfactory one for this company from every point of view, as not only was its crop 81,684 lbs. larger at 2,424,668 lbs., but the price rose by 0.42d. to 7.47d., while the cost was reduced from 5.18d. to 5.08d. Including £1,762 from interest and dividends, the total income showed an improvement of £6,557 at £77,229, of which £25,938 or £5,849 more was retained as nett profit. Adding £21,919 brought forward, the disposable balance was £54,157, and out of this a dividend of 10 per cent. and a bonus of a further 10 per cent. are paid, giving the directors £1,449 as additional remuneration and £29,808 is carried forward. Except for a fire insurance fund of £2,000 this large surplus is the only thing the company has in the shape of a reserve, although the estates are valued at £73,545 and £24,504 of the capital is invested in sundry Indian railway stocks taken at cost less £500 for past depreciation. Creditors are very light at £6,151 against debtors for tea £10,546, other debtors £3,831, and tea stocks £31,517, while cash is ample at £16,362.

Brown Brothers.—Profits for the twelve months ended December 20, including £2,455 or £180 more brought in, were £1,300 up at £20,894, and after providing for directors' fees and income-tax the disposable surplus was £1,360 better at £17,869. Preference dividend having been met £861 is added to reserve and £1,100 written off investments, after which the ordinary shares again receive 5 per cent and £2,708 is carried forward. Reserve now amounts to £20,988 against freehold land and buildings valued at £13,985 and leasehold premises, fixtures and goodwill at £156,061. Investments are £723 down at £10,149, and as the special reserve has been increased to £3,591 the book value is £1,876 lower at £6,558. Creditors have risen by £7,706 to £57,053, and on the other hand an increase of £15,551 to £83,881 in stocks is offset by a reduction of £15,225 to £64,646 in sundry debtors, but the company has cash and bills amounting to £13,119.

Consolidated Malay Rubber Estates, Limited.—During the year ended December 31 6,201 more trees were tapped than in the preceding fourteen months, and the yield rose from 32,693 to 63,615 lbs. Unfortunately the price realised was 1s. 5.68d. smaller at 3s. 6.14d. per lb., so that gross receipts were only £3,028 up at £11,171, and as revenue from seeds, plants and sundries dropped heavily to £721 the result was a decrease on balance of £245 at £11,892. Expenses on the estate rose by £720 to £5,436, and after meeting London office charges, commissions, &c., the nett profits, including £169 or £141 less from interest, &c., were £1,025 down at £5,674. A sum of £699, however, was brought forward, so the dividend of 10 per cent. can be repeated, and after writing off £358 for balance of preliminary expenses £515 is carried to the new account. Expenditure on development for the year was £5,362, making a total to date of £9,571 in addition to the original £45,000 paid for the property, and as this practically exhausts the paid-up capital the directors intend to offer 7,000 new £1 shares to the shareholders *pro rata* to their holdings at a premium of 10s. per share. Creditors come to £3,245 and £2,800 has been borrowed, but against these produce on hand is valued at £5,715 and cash is comfortable enough at £4,648.

Darjeeling Consolidated Tea Company.—Not only did the crop for 1907 fall short of the previous season's output by 44,506 lbs., but the average price dropped ½d. to 11.18d., while the cost increased by 0.49d. to 9.17d., and total profits were £2,207 down at £3,907. Gross receipts amounted to £19,724, of which expenses took £15,818, and with £1,145 brought in the disposable total was £5,052. Preference dividend requires £3,000 of this, and the directors say that although they could have paid a dividend of 2½ per cent. on the ordinary shares by drawing on the sum brought in they do not consider it prudent to do so, and therefore carry forward the larger balance of £2,023. Beyond writing 12½ per cent. off additions of £755 the directors make no reduction in the lands, which are valued at £110,274, but depreciation is allowed on buildings at 3 per cent. and on machinery at 10 per cent., reducing these items to £5,163 and £2,185 respectively. Liabilities come to £7,476 against stocks and sundry debtors £9,854 and cash £3,548.

Doom Dooma Tea Company.—The output of tea for the year ended December 31 showed a satisfactory increase of 96,126 lbs. at 2,799,726 lbs., but the price obtained was ¼d. lower at 9 19-32d., while the cost of production rose by $\frac{3}{16}$d. to 8⅜d. Gross profits consequently fell off by £6,621 to £18,008, and although the balance brought in was £2,639 larger at £3,232 the amount available for distribution was only £21,254 against £25,232, and in order to maintain the dividend at 10 per cent. £746 has to be withdrawn from reserve. The reserve has also been charged with £2,000 for depreciation of investments, but £789 was added for interest earned, leaving it at £46,532, of which £18,000 is represented by investments and £5,000 by a deposit in London. Floating liabilities have been reduced by £11,574 to £34,706, against which sundry debtors are £1,188 up at £57,744, but cash has dropped from £18,764 to £4,541.

Durham Collieries Electric Power Co., Limited.—Since its business passed under the control of the Newcastle-upon-Tyne Electric Supply Company a better prospect seems to have opened up to it, otherwise the report covering the year ended March 31 last would have been rather disappointing reading. Much interruption of the earning capacity of the company was experienced during the year owing to changes rendered necessary by the transfer of the duty of supplying current to the Newcastle company, but all is now presumably in order and the prospects of a large increase in the company's business are good, the directors say. The collieries are installing new electric machines with a view to the more complete electrification of their pits, and altogether the outlook is favourable. Meanwhile more money is wanted, and the shareholders are to be asked to give the directors power to raise or borrow a further £100,000 in addition to the £150,000 already owing. Of this amount £50,000 will be issued with the least possible delay. The balance-sheet shows poverty in resources. Bills payable amount to £20,141, and sundry creditors owe the company £16,221, while cash amounts to only £448 and expenses of loan on mortgage, premium on redemption of the same, stamp duty on increase of capital, expenses of debenture issue and discount on debentures come to £24,164, carried as an asset in the balance-sheet along with a debit of £11,934 against profit and loss. Investments are entered at £36,193, and £7,818 represents loss on realisation of plant and general expenditure to the end of March, 1906.

Eastern Assam Company.—The output for the past twelve months was only 7,411 lbs. above that of the previous season at 1,025,075 lbs., while the quality was below the average, and this with market conditions adverse to the class of tea produced caused a drop of 0.82d. to 8.82d. in the price. Cost of production, including £890 or £440 more for loss on rice, was slightly higher at 6.68d. per lb., and nett profits showed a decrease of £3,222 at £9,146. Balance brought in, however, was considerably larger at £12,250, giving an available total of £20,651 compared with £18,362, so the directors are able to repeat the 10 per cent. dividend and to raise the sum carried forward by £2,289 to £14,539. Block account is unchanged at £64,997, against which the company has not been able to accumulate a reserve, although this is the 51st year of its existence. Sundry creditors and bills payable are £1,463 down at £2,857, while debtors have been reduced by £3,112 to £19,624, a movement counterbalanced by an increase of £3,058 to £7,079 in cash.

First Scottish American Trust Company.—Nett interest received during the year ended May 1 amounted to £28,341, making with £12 transfer fees a gross income of £28,352 and, deducting management charges, a nett revenue of £25,498. Adding £5,681 brought in the sum available is £31,178. Out of this dividends aggregating 8⅜ per cent. are paid, leaving the carry forward increased to £7,310. Investments at cost less nett profits total £442,512, and cash with £2,440 due but received since striking the balance is £2,450. Reserve stands as at this time last year at £80,000, a partly secured temporary loan is a liability at £44,591 and £589 is owing on sundry balances. The nett revenue represents £8 19s. 2d. per cent. on the capital of £300,000.

General Life Assurance Company.—The 1907 business brought a premium income of £196,925 and an interest and

dividend income, less tax, of £70,954. Claims took £177,163, surrenders £11,249 and expenses and commission about £38,000 or 19.28 per cent. of the premium income. The quinquennial valuation shows a surplus of £93,161, and the directors recommend a dividend of 10 per cent. on the paid-up capital of the company, which amounts to £50,000. Dealing with the surplus brought out by the actuary, the directors state that, including the £20,351 assigned to the investment reserve, the total available is £113,512, but this result is arrived at by taking the assets at the value shown by the books. Unfortunately there has been a phenomenal depreciation therein, and the whole of the surplus is to be retained for the present, policyholders getting no bonus. All liabilities in respect of the fire branch has now run off, and the £1,397 remaining has been transferred to the credit of the proprietors.

H. H. AND S. BUDGETT AND CO.—Nett trading profit for the year ended March 14 amounts to £12,225 making with £909 brought forward and fees £13,142 available. Sundry charges for interest, subscriptions, &c., amounting to £3,740, however, come to be deducted and then the preference dividend is paid, £500 put to reserve, and 8 per cent. is repeated on the ordinary shares leaving the carry forward reduced to £567. The directors' statement that the trading has continued to be of a regular character seems rather anticipatory than reflective when it is remembered that in 1901 the dividend was 1½ per cent., in 1902 12 per cent., in 1904 5 per cent. and in 1905 15 per cent., this being the first occasion that the same dividend has been paid two years in succession. Despite some good years property, including goodwill standing at £83,019, has only been written down £3,223, stock is £46,026, goods in transit £13,129 and cash £4,481. Debtors amount to £86,811 against creditors for £79,833 on various accounts, including the jumbled item "deposits, loans and banks, and including sundry reserves £13,466." In addition to what accumulations may be thus hidden, special reserve is only £1,000.

HOLBROOKS.—Profits of this company for the twelve months ended March 31 amounted to £31,333 or an increase of £1,598, and after meeting debenture interest and income-tax and adding £1,857 brought forward the nett surplus was £1,659 better at £27,801. Out of this the directors pay the now regular dividend of 18 per cent., together with a bonus of 4 per cent. or 1 per cent. more, and transfer another £5,000 to reserve, leaving £2,756 to be carried forward. Property and goodwill account has been reduced by £1,929 to £175,803, while the reserve is now £38,000. Creditors have risen by £4,805 to £18,483, and now exceed debtors by £3,261, while stocks are £1,303 smaller at £44,310. Cash, however, is £4,667 up at £18,321, and investments have been increased by £11,976 to £60,863.

JAIPUR TEA COMPANY.—This company's crop of tea for 1907 was 13,032 lbs. larger at 298,000 lbs., but the quality was not up to the usual standard and the price dropped by 1.21d. to 9.95d. per lb. Receipts from this source were therefore £950 less at £12,364, but the sales of tea seed were considerably larger than the manager had expected, and yielded £2,620 or £1,897 more. Nett profits consequently showed an improvement of £1,558 at £4,464, and with £518 brought forward and £177 from sundries the disposable total was £1,641 up at £5,159. The dividend, however, is maintained at 5 per cent., as the directors prefer to add £3,000, or double last year's appropriation, to reserve and carry forward £659. Extensions in the 12 months cost £1,937, bringing the total of block account up to £29,212 against which the reserve is now £7,500, represented as to £3,178 by an investment in 3½ per cent. rupee paper at cost. Creditors and bills payable are £347 higher at £3,064 but £250 less at £1,250 was borrowed on securities, and on the other side an increase of £1,348 to £9,590 in tea on hand was accompanied by a drop of £587 to £845 in cash.

KINCARDINESHIRE AUCTION CO., LIMITED.—In its year closed March 31 last this company earned £1,679, and after meeting all expenses had about £493 left, so the directors pay a dividend of 9d. per share, a bonus of a like amount, and a poundage on shareholders' purchases and sales at the mart, these three distributions taking £150 each or £450 in all. The undivided balance remaining is £522, subject to payment of income-tax, &c., the balance brought forward having been £493

MADRAS ELECTRIC SUPPLY CORPORATION.—Construction of the generating station is not yet finished, and, indeed, is not so far advanced as the directors had expected, owing to delays in obtaining the necessary bricks and other materials, but the plant, &c., is all ready for installation. The mains in the compulsory area have all been laid with the exception of a small length, and a few consumers with an equivalent of 3,686 8-c.p. lamps are being supplied from the small temporary plant. Contracts for the tramway generating plant, the feeders and the erection and equipment of the sub-station have been let, and it is hoped that the commencement of the tramway supply will be made at the beginning of next year. The share capital is unaltered, but the issue of construction debenture stock has been increased to £249,700 and £29,366 is due to sundry creditors, including £13,010 for the contract retention fund. Against these the capital outlay now totals £177,623, cash comes to £85,247, investments in preferred ordinary shares of the Tramways Company to £20,000, stores are valued at £3,194, and there is £1,085 to come in from sundry debtors.

NEW ZEALAND TRUST AND LOAN CO., LIMITED.—This company is slowly liquidating, and for the year ended December 31 last seems to have gathered in an interest revenue of £3,694. The undivided balance was £21,696 after meeting all expenses and including the balance of £20,190 brought forward, so £2,000 is devoted to pay a dividend of 1s. per share, tax free, on the £1 fully paid ordinary shares. This leaves £19,690 to be carried forward. At the end of the year £35,500 had been collected towards the £49,000 required to be set aside for redemption of capital, and since then the whole amount has been received in London. Early next year the directors hope to be in a position to make further substantial distributions out of the funds which should then be in hand.

NORWICH UNION FIRE INSURANCE SOCIETY.—Premiums for 1907 gave £1,119,358, the total income from interest and everything being £1,166,132. Losses paid and outstanding took £582,302 or 52.026 of the premiums, and expenses and commissions absorbed over £404,000 or 36.10 per cent. of the premium income. Out of the profit of £179,785 made up to £303,976 by the balance of £225,505 brought forward, a profit arrived at after setting aside £373,119 as reserve against unexpired risks, the shareholders get altogether £5 per £12 share, including a bonus of £1. And after writing £49,678 off the value of investments which represents the nett amount less profit on sale and maturity of stocks, a balance of £308,976 remains to be carried forward.

PABBOJAN TEA COMPANY.—The 1907 crop was seriously affected by the severe hailstorm in April, and showed a decrease on the previous season of 82,963 lbs. at 1,283,708 lbs. At the same time the price fell ¼d. to 11d., while the cost of production was 0.44d. higher at 8.87d., and the nett profits consequently dropped from £16,313 to £13,284. This decrease, however, was neutralised by the larger sum brought forward, and the available total came to £25,685 compared with £25,589. Such an improvement would hardly seem to justify a change in the dividend, but the directors think otherwise, and after setting aside another £5,000 for debenture redemption proceed to pay a dividend of 10 per cent. or 2½ per cent. more, cutting down the balance carried out by £1,604 to £10,885. Current liabilities are £8,479 down at £14,834, while on the other hand sundry debtors owe only £398 less at £25,624, but stocks have disappeared and cash has been reduced by £5,740 to £2,550.

PORTMAN ESTATE MANSIONS.—It seems pretty evident that flat-building has been run for more than it is worth, as this company is in arrear in its payment on the preference shares to the extent of £15,938 or approximately four years' dividends after paying 4½ per cent. instead of the full 5½ for the past year ended March 25. Rents for the year amounted to £32,227 and gross revenue to £32,597. Expenses, of which the chief items are ground rent £6,620, parochial rates £5,176, repairs, &c., £2,884 and debenture and mortgage interest £6,900, absorbed £28,003, leaving a profit of £4,594. With £1,573 brought in £6,168, compared with £4,803, is available, out of which 4½ per cent. is paid on the preference shares, leaving £2,534 over. Bickenhall and Montagu Mansions stand at cost value £335,000 with the exception of No. 1, Bickenhall Mansions, which is taken at £2,500 and against which is a mortgage of like amount, improvements less depreciation raising the total to £339,297. Cash comes to £11,310 and £2,234 is owing by tenants, while £2,791 is due to sundry creditors. The annual premium for redemption of these leaseholds was this year £150, but will next year amount to £350 and in 1918-9 will be £1,142 and afterwards £1,422, while the auditors note that this does not cover £80,000 representing the investment of the bulk of the ordinary capital.

SEPHINJURI BHEEL TEA COMPANY.—With 99,423 lbs. more at 1,405,629 lbs. to dispose of this company was fortunate enough to secure an increase of 1.62d. to 6.60d. in the price, while the cost only rose by 0.30d. to 3.63d. per lb. Nett profits consequently improved by £8,762 to £17,772, and with £256 brought in gave a total of £18,028, of which directors' commission took £648 or £423 more. The dividend is then raised by 5 per cent. to 30, after which £6,500 is put to dividend equalisation fund and £500 to hail insurance fund, compared with £500 to the first-named account a year ago, leaving £779 to be carried forward. Reserve is again passed over and stands at £20,000 against the block account of £41,930, but the dividend fund now comes to £14,000. Current liabilities are light at £2,950, while tea stocks are valued at £13,164, debtors owe £1,952, and in addition to £9,609 in cash investments of £9,019 are held.

TARBRAX OIL COMPANY.—Profits for the twelve months ended April 30, including £3,542 brought in, amounted to £23,072, of which interest on loans took £1,902. Preference dividend having been paid, the ordinary shares receive a distribution of 15 per cent. and £3,020 is carried forward. With a paid-up capital of £105,000 the property owned is valued at £155,262, so that heavy borrowing has been necessary, and loans come to £47,275. The directors, however, have decided to issue the remaining 10,000 £1 preference shares in order to pay off part of this indebtedness. Creditors amount to £7,852 against £8,208 due from debtors, stocks valued at £6,074, and cash £10,853, a comfortable enough position.

WILTS UNITED DAIRIES.—Nett profits for the twelve months ended March 31 were £12,830 and with £1,091 brought in gave a total of £14,821 to be dealt with. Out of this the ordinary shares get a dividend at the rate of 8 per cent. for the year, together with a bonus of 2 per cent., and £2,000 is added to reserve, leaving £1,000 to be carried forward. During the year 5,050 ordinary shares were issued at a premium of 2s. per share, and a like number of preference shares at a premium of 2s., bringing the subscribed capital up to £85,006, and as property account, including £13,871 for goodwill, stands at £111,374, there is £31,508 in debenture stock, while reserves of various kinds aggregate £12,756. Creditors amount to £18,449 against £43,321 due from debtors, £9,658 in stocks and £13,228 in cash.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for the 10 days ended May 31, $4,388, decrease $1,340; aggregate from July 1, $210,550, increase $36,431.

Argentine North Eastern.—Traffic receipts for week ended May 29, £3,730, increase £132; aggregate from July 1, £155,049, decrease £8,211.

Assam Bengal.—Traffic receipts for 7 days ended May 2, Rs. 80,500, decrease Rs. 1,291; aggregate from Jan. 1, Rs. 15,86,231, decrease Rs. 31,701.

Bilbao River and Cantabrian.—Traffic returns for May £8,461, decrease £1,439; aggregate from January 1, £41,060, decrease £6,520.

Buenos Ayres Central.—Gross receipts for April £13,182, increase £1,571; aggregate from Jan. 1, £106,595, decrease £2,092.

Canadian Northern Railway.—Traffic receipts for 10 days ended May 31, $192,100, decrease $127,100; total from July 1, $8,338,000, increase $1,808,000.

Egyptian Delta.—Traffic receipts for week ended May 16, £4,862, increase £32; aggregate from April 1, £30,647, decrease £3,498.

Lucknow Bareilly Railway.—Traffic receipts for 7 days ended May 2, Rs. 31,117, decrease Rs. 1,635; aggregate from January 1, Rs. 6,33,701, decrease Rs. 44,152.

Midland Uruguay.—Receipts for month of April, £6,277, decrease £898; aggregate from July 1, £57,177, decrease, £5,044.

North Western of Uruguay.—Traffic receipts for April, $22,100, decrease $1,617; aggregate from July 1, $198,953, decrease $12,118.

Quebec Central Railway.—Traffic receipts for the 4th week of May, $27,888, decrease $3,175; aggregate from January 1, $432,252, increase $82,326.

Quebec and Lake St. John.—Traffic receipts for Feb. $31,941, decrease $2,037; aggregate receipts $68,216, decrease $1,606.

Rohilkund and Kumaon Railway.—Traffic receipts for 7 days ended May 2, Rs. 25,511, decrease Rs. 1,520; aggregate from Jan. 1, Rs. 4,10,977, decrease Rs. 29,713.

Uruguay Northern.—Gross receipts for month of April, £1,702, decrease £164; aggregate from July 1, £17,911, decrease £183.

White Pass and Yukon Railway.—Traffic receipts for week ended May 14 amounted to $23,250.

English.

Cleator and Workington Junction.—Receipts for week ending May 30, £1,217, decrease £255; aggregate from January 1, £25,975, decrease £4,031.

Cockermouth and Keswick Railway.—Receipts for week ending May 30, £796, decrease £71; aggregate from January 1, £15,308, decrease £1,610.

East and West Yorkshire Union Railway.—Traffic receipts for week ended May 30, £408, decrease £70; aggregate from January 1, £9,676, decrease £9.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Bath Electric.—Traffic receipts for week ending May 27, £915, decrease £212; aggregate from Jan. 1, £13,460, decrease £1,499.

Blessington and Poulaphouca.—Traffic receipts for week ending May 27, £13, decrease £1; aggregate from Jan. 1, £172, decrease £42.

Bristol Tramways and Carriage.—Traffic receipts for week ending May 29, £5,014, decrease £4; aggregate from Jan. 1, £102,750, decrease £4,397.

British Electric Traction.—Receipts of all the Associated Companies for the week ending May 29, £29,416; 428 miles.

Burnley Corporation.—Traffic receipts for week ending May 30, £1,260, increase £44; aggregate from January 1, £27,720, decrease £150.

Dublin and Blessington.—Traffic receipts for week ending May 27, £129, decrease £16; aggregate from January 1, £2,328, decrease £162.

Dublin and Lucan.—Traffic receipts for week ending May 29, £130, increase £14; aggregate from Jan. 1, £2,299, increase £60.

Dublin United.—Traffic receipts for week ending May 29, £5,550, decrease £376; aggregate from Jan. 1, £105,237, decrease £1,900.

Hastings and District.—Traffic receipts for week ending May 28, £974, decrease £59.

Isle of Thanet.—Traffic receipts for week ending May 30, £452, decrease £18; aggregate from Oct. 1, £10,356, decrease £749.

London County Council.—Traffic receipts for week ending May 23, £35,478, increase £1,762; aggregate from April 1, £250,104, increase £20,240. Miles 119½, against 116½.

London General Omnibus.—Traffic receipts for week ending May 30, £25,104, increase £3,633; aggregate from Jan. 1, £418,941, decrease £14,341.

London Road Car.—Traffic receipts for week ending May 30, £9,761, increase £1,161; aggregate from Jan. 1, £156,383, decrease, £4,866.

London United.—Traffic receipts for week ending May 30, £7,962, increase £1,464; aggregate from January 1, £124,811, decrease £2,667.

Provincial Trams.—Traffic returns for week ending May 30, £1,683, increase £32; aggregate from Oct. 1, £52,333, increase £80.

Rossendale Valley.—Traffic receipts for week ending May 29, £188, decrease £76.

Sunderland District.—Traffic receipts for week ending May 27, £471, increase £71; aggregate for 30 weeks £13,603, increase £1,107.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending May 31, £1,230, increase £199; aggregate from January 1, £24,770.

Foreign.

Anglo-Argentine.—Traffic receipts for 7 days ending May 27, £19,508, increase £2,846; aggregate from January 1, £390,326, increase £43,073.

Auckland Electric.—Traffic receipts for 28 days ending May 22, £11,341, increase £1,095; aggregate from January 1, £60,224, increase £6,844.

Bombay Electric—Receipts for April, Rs. 1,89,450, increase Rs. 48,150.

Brisbane.—Traffic receipts for month of May, £13,275, increase £2,273.

British Columbia Electric.—Nett earnings for April, $47,623, increase $4,373. Aggregate nett earnings, including income from investments from July 1 to Apr. 30, $785,789, increase $202,562.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for 7 days ending June 2, £7,281, increase £333.

Calcutta.—Traffic receipts for week ending May 30, Rs. 41,522, decrease Rs. 2,934.

Cape Electric.—Traffic revenues for the month of April, Cape Town, £9,874; Port Elizabeth, £3,153.

Carthagena and Herreiras.—Traffic receipts for the month of May, £1,542 decrease £2,714; total from January 1, £9,970, decrease £16,705.

Geneva Trams.—Earnings for April, fr. 190,227; increase fr. 8,883.

Kalgoorlie Electric.—Gross receipts for April, £3,721; aggregate from January 1, £15,040.

Lisbon Electric.—Earnings for April, milreis 115,614.

Madras Electric.—Traffic receipts for fortnight ended May 31, Rs. 18,129, increase Rs. 1,033; aggregate from January 1, Rs. 1,91,381, increase Rs. 18,815.

Melbourne Tramways and Omnibus.—Traffic receipts for May, £44,500.

Mexico.—Nett earnings for month of April, $204,055, increase $43,411; aggregate nett earnings from January 1, $802,524, increase $224,211.

Monte Video United.—Gross receipts for May, £17,193, increase £1,919; aggregate from Oct. £143,971, increase £21,856.

Perth (W.A.) Electric.—Gross receipts for week ended May 22, £1,407, increase £115; aggregate from January 1 £29,673, decrease £852.

Rio de Janeiro.—Gross earnings for 20th week 1908, $26,894; increase $2,333.

Sao Paulo.—Traffic returns for April: nett earnings, $125,484, increase $14,463; aggregate from Jan. 1, $507,246, increase $37,254.

Twin City Rapid.—Traffic receipts for the month of March, $484,622, increase $5,321; aggregate from January 1, $1,408,458, increase $52,517. Nett traffic receipts, $231,788, decrease $13,782; aggregate from January 1, $643,789, decrease $17,855.

The Investors' Review.

The Week's Money Market.

BANK RATE 2½ PER CENT. (Reduced from 3 per cent. on Thursday, May 28.

Norfolk House, Friday Evening.

But for the release of £1,000,000 in gold by the India Council at the end of last week our Money market might have been inconveniently squeezed at the turn of the month, which almost coincided with the Whitsuntide holidays. As it is, the stock of coin and bullion has been increased by only £524,000 on the week, because £518,000 in coin has gone into circulation, and in spite of India's gold the banking reserve is actually £175,000 down through an expansion in the note circulation of £669,000. Helped by the Indian Government, however, the market has never been in the slightest degree inconvenienced, and call money has been kept down to 1½ per cent. as a maximum for seven-day loans. Often it has been no better than 1¼ per cent., and sometimes both call and notice money could be had at 1 per cent. To-day, indeed, one house claims to have got money for a week at ¾ per cent. and call money at ½ per cent.

Such being the position, the discount market has naturally suffered from low rates; the suffering, however, relates only to the future. For the current half-year discount houses must recently have been making excellent profits, as they are now holding bills discounted months back at much higher rates of interest. Whether the three months' bank bills now being discounted at 1⅜ per cent. or even 1 5/16 per cent. will yield a fair profit or none depends upon the continuance of the present ease in the short loan market. To all appearance this ease must remain with us for at any rate the three months, during which time the bills discounted at 1⅜ per cent. or so will be current. And meanwhile the supply of negotiable paper continues noticeably small. No doubt foreign exchanges are again moving against this country, as our low money and discount rates tempt them to do, but it looks as if the Continental demand for gold may continue to be satisfied with the abundant supplies coming to hand week by week from the mines. Should this be so then nothing short of another upset in the United States or an outbreak of credit distrust in Germany is likely to disturb the stagnation of either our or any Continental money market.

Even conservative houses gave 1 5/16-1⅜ per cent. to-day as working rates for two and three months' usances, and in one quarter we were given these quotations for four months' paper.

The Bank of Germany has this week been able to lower its rate, although only by ½ per cent. to 4½ per cent.—a figure not seen since September, 1906. German money markets had almost given up hope of any immediate change owing to the language recently employed by the president of the bank, and the latest return issued by it was not particularly encouraging. It showed a decrease of £898,000 in the cash in hand, and an increase of £4,085,000 in the active note circulation. This narrowed the margin between the legal tax free maximum for paper money and the actual amount of paper afloat. At the previous return the active note circulation was £11,435,000 below this maximum, and the last return showed it to be only £4,930,000 below. Compared with a year ago the position of the Bank is still unsatisfactory, and had gold not come in from abroad, the specie held would probably have shown a much larger decline than it did, and the Bank is still burdened with the work of sustaining credit throughout the empire. It is true the increase in its bills held was considerably less last week than in the corresponding week of 1907, but it is still dangerously high compared with former years. Therefore, Germany is liable to become a forced buyer of gold when least expected, but not, so far as can now be estimated, to an extent calculated to ruffle the equanimity of our market.

As for the Bank of France, its position is now so strong as to encourage the expectation that the demands for the metal from Paris will presently die away altogether. Although last week-end demands for currency caused an increase of £6,732,000 in the active note circulation, the stock of gold held by the Bank has risen by £1,396,000, and the total is now £123,118,000, almost, if not quite, the highest ever exhibited. Nevertheless the Paris cheque hovers round gold point against us, and is low enough probably to ensure further purchases of the metal for France in our open market. But there is nothing disturbing in this fact, and as our own trade continues to diminish, not only our foreign trade but the internal, all the known factors point to a continuance of cheap money in London. The Bank of England, indeed, might have lowered its rate to 2 per cent. this week had its directors been so minded, and whether it likes the step or not it will have to come down to this minimum figure before long unless something quite unforeseen meanwhile occurs. No practical advantage can spring from the present divergence between Bank rate and market rates. Discount houses are buying six months' remitted bills at 1¾ per cent. as a maximum. What is the use then of keeping the Bank rate at 2½ per cent?

The India Council is now £4,000,000 behind in its drafts on India offered here compared with last year. On the other hand owing to the adverse balance of trade it has increased the amount of bills drawn on London to be offered weekly to £1,000,000, and yesterday it sold £750,000, making a total since the commencement of £3,726,000. In connection with the announcement of the issue of sterling bills mentioned below, it was inferred in some quarters that the operation would lessen the possibility of further "unearmarking" of gold. Elsewhere, however, and amongst good authorities, the opinion prevailed that there was no connection between the two, and that more gold might be released very shortly.

Calls due next week fall on Tuesday and Wednesday and total £1,567,500, including (on Tuesday) £500,000 on Grand Trunk Pacific 4 per cent. bonds, £340,000 on Buenos Ayres and Pacific debenture stock, £220,000 on the Salvador loan, and (on Wednesday) £412,500 on London City 3½ per cent. stock.

SILVER.

Notwithstanding the heavy shipments on bazaar account last week, the supplies of spot metal continue ample for the market needs, and prices have moved downwards. Dealings have been on a much smaller scale, and consisted chiefly of covering orders, although the bazaars were again buying moderately. Quotations on Tuesday dropped by 3/16d. and ⅛d. per oz. to 24¼d. and 24 5/16d. per oz. for cash and forward delivery respectively. They fluctuated within narrow

limits during the next day or two, but hardened again to-day and closed at 24⅝d. and 24 1/16d. per oz. With regard to the large amount sent to Bombay a week ago Messrs. Samuel Montagu state that the buying is partly accounted for by the fact that the natives have been tempted by the lower levels ruling to exchange their hoarded rupees for bars. The offer of Rs. 10,00,000 of Council drafts on India per week is still meeting with a very poor response, and Wednesday's applications only amounted to Rs. 35,000 in bills, and allotments were made at the usual rates of 1s. 3 29-32d. per rupee.

Tenders will be received at the Bank of England on Wednesday for £2,500,000 sterling bills, issued by the India Council, to provide funds for capital expenditure on railways and for other purposes. The bills will be in the usual amounts of £1,000, £5,000, and £10,000, and will have a currency of twelve months from June 16.

BANK OF ENGLAND.

The Stock Markets.

At the beginning of the week business was good, especially investment business, but naturally as the date of the holiday was approached dealings dwindled, and for the last two days scarcely anything went on except realisations so far as the local market is concerned. Cheap money, in other words, has not yet so changed the mood of the public as to make people disposed to follow the lead of the inside players who buy for the rise. There is a great army of individuals in possession of securities on which they have seen more or less severe losses, and their first impulse is to sell when the market becomes favourable. Along with this we have a growing volume of new investment business, but that is not yet powerful enough to keep markets steadily moving up. In the speculative departments, moreover, the play is hampered by apathy and distrust. No prudent person cares to join in the manœuvres of the Wall Street market or to respond with alacrity to the blandishments of the Kaffir Circus. Price movements are therefore liable to halts and retreats. This tendency is further emphasised by the continual manufacture and emission of new stocks, so that cheap money gets comparatively little chance to effect its usual amelioration in business conditions. For all that, should cheap money continue we shall see markets broaden, and we think it must continue for some little time to come, until perhaps the difficulties in the United States again bring on a scramble for gold. It must never be forgotten, however, that the production of new gold is so unprecedentedly large as to afford an invaluable protection against another world-agitating crisis of a description similar to that of last October. If half the gold that has come into our market since the beginning of the year had not been available, we should have had no 2½ per cent. Bank rate now, and the crisis instead of being stifled and put on one side, must have continued more or less acute, probably up to the present hour.

Trustee Securities.

On the week there has been a substantial improvement in the price of Consols, which have risen 25s. for cash ex the July dividend and 27s. 6d. for the July settlement. Towards the end of the week, however, the market for the stock became weak, but that was simply on realisations by those who wished to secure their profits before going away for the Whitsuntide holidays. These began yesterday for the Jewish members of the Stock Exchange, and as they are of the highest importance their absence naturally has a marked effect upon the volume of business done. Other trustee stocks have followed Consols, and all are better on the week. Both "A" and "B" Water Board stocks, for instance, are up 2, County Council stocks are mostly 1 better, and a considerable number of provincial corporation stocks have been put up to a like extent. Even India stocks have rallied, notably the 3 per cents., which have gained 2, and are now quoted at about 92 to 92¼ ex the July dividend. Bank of England and Bank of Ireland stocks have both recovered in a marked fashion, one having risen 6 and the other 10½, so that altogether the trustee group of home stocks presents a cheerful appearance. Colonial inscribed stocks have not risen so much as a rule, but a good many of them are ½ up, and two New South Wales issues have gained 1 each, while Cape 3 per cents. are 2 higher. Outside the trustee group we have the same manifestation to note in the Colonial and Foreign group of Corporation securities, in which, however, business has not been active.

Foreign Government Securities.

Continental markets have been more eager in responding to the easier position of Money markets than our own, and a long array of improvements will be

found in our price movements. The most notable recovery has been in Russian and Japanese bonds, and the rise in Russian is ascribed to preparations for a new loan. Something must be on foot, else why should buying have been concentrated upon Russian 4 per cents.? The 1889 loan, for example, is up to about 89, a rise of 1¾ on the week. At this price it only pays about 4½ per cent., whereas the 5 per cent. loan of 1906 at 96 pays over 5 per cent. There must be an occult reason for this divergence, and the market naturally infers that this reason is to be found in preparations for the issue of a new 4 per cent. loan. Whether that be the case or not, business has been active abroad in leading Russian securities, particularly in the 4 per cents., but our market has simply followed the foreign lead, doing little itself. In Japanese bonds, however, the business has been quite active and the recovery marked, especially in the old 4 per cent. loan, which has risen almost to 85. Elsewhere the gains have also been noticeable, all Chilian loans having rallied from 1 to 2, while Argentine and Brazilian bonds are ½ to 1 better. A recovery is also noticeable in German and Prussian stocks, in Greek bonds and some of the Central American issues, so that the Foreign market is obviously in a sanguine mood, even German bourses showing a disposition to play for the rise, in spite of their disappointment over the Reichsbank rate. They looked for a reduction to 4 per cent., and grumbled when they only got a 4½ per cent. rate, but it is accepted as a pledge of more to follow. French Rente alone has been weak, purely on account of the threatened income-tax.

Home and Other Railway Stocks.

Investment business is said to have been brisk in Home Railway stocks early this week, and although business fell off afterwards prices are better throughout, noticeable improvements having taken place in such light material as Great Central preferred and deferred, Great Northern preferred and deferred, Great Eastern, District and North British preferred and deferred. The heavy stocks, however, have not been slow to join the movement, and business gives promise of expansion here with further advances to come. Traffic receipts look better, the decrease for the past week having been no more than £29,211. Naturally the improvement in ordinary stocks has extended to debenture, guaranteed and preference issues in which a long array of gains of 1 to 3 are to be noted, while the lower preferences of the Great Central are 4 to 9 higher with quite a big business in stocks like Midland preference and a fair one in some of the leading debenture issues.

Indian Railway stocks are likewise in the fashion and show improvements where any change has occured, Bengal and North-Western ordinary, East Indian new debenture and Southern Punjab ordinary gaining most. The only weak group amongst colonial issues has been the Grand Trunk, but the "bears" have not made very much of it except during the last day or two, and on the week most of the market counters created by this company show improvement. Canadian Pacific shares are also 1½ better on the week, and bad traffic returns have no effect whatever in breaking the strength of the "bulls." It looks as if the market would only give way when traffic receipts begin to improve, because that would give the signal for realisations. The railway debentures guaranteed by the Chartered Company have continued to go up, and some business has been done in them, even Beira debentures following the fashion.

In spite of the setback which occurred yesterday on Wall Street when the news of the Union Pacific issue became officially public, the week's changes in Yankee Railroad shares are without exception favourable and Union Pacific are about $5½ better xd. Others like Milwaukee, Louisville and Southern Pacific are from $3 to $4 up, and there is not a prominent share in the whole list which has hung back. All this movement originates on Wall Street, and is not followed here. When prices rise London is a seller, partly on its own account, partly for the Continent. In Germany, however, there is much more disposition to imitate the New York master players than here, but the inter-Bourse gamble is limited to Union Pacific and one or two other Standard Oil playthings with only scattered transactions elsewhere. The bond market is steady with occasional improvements, but with little business doing.

The tendency has not been quite so decided amongst Argentine Railway stocks, although they have not receded to any noticeable extent. In fact, the only decline on the week is a few shillings in B.A. and Rosario, but the gains have been unimportant except in some of the preference and debenture issues which are in fair investment demand. Brazilian Railways have also been irresponsive on the whole, although Leopoldina debenture stock has risen almost to par. Cuban Central shares and United of the Havana stock have gone back slightly, but nothing to speak of, and as a whole this group is also indicative of reviving interest and spreading business.

Banks, Breweries and Industrial Securities.

Most changes amongst bank shares, and there are a good many of them, are fractionally to the good, almost the only exception worth mentioning being the shares of the Natal Bank, which have receded. A fair general trade goes on in this group, and as it is exclusively investment business it reveals the disposition of the public better almost than some of the larger segments of the market.

Brewery securities are, of course, a blank, as usual, with however, a slight recovery in Bass's preference stock and one or two others, the chief trouble being lack of business.

Dock stocks are also firm, particularly the debentures of the London and India Company.

As for Commercial and Industrial shares, they can hardly be said to have as yet felt the effects of cheap money and revived interest. Prices are dull, bargains scanty, and speculation is conspicuous by its absence. Scarcely any movements are of a kind to call for notice, but the weakness of the British Aluminium Company's Loch Leven debentures may be noted, and there is some inquisitiveness displayed for information as to the actual position of this company. Fear is expressed that it is over-straining itself. Improvement is noticeable in the shares and debentures of the California Oilfields Company, with considerable inquiry for the shares. The shares of Nitrate companies are still out of favour, and there has been no great activity in the market for such things as English Sewing Cotton and Fine Cotton Spinners shares. The latter, indeed, have been dull, as well as the shares of some of the Manchester warehouse companies. Gordon Hotels shares have again improved a little, and some of the shares of joint-stock shops are rather harder, but the market is at no point active, and there is very little occurring of a kind to stir up public interest.

Electric, Financial Land and Trust, Insurance, and Iron, Coal and Steel Securities, &c.

Well over a dozen movements have occurred amongst Electric Lighting securities on the week's comparison, and they are for the most part favourable, although Canadian General Electric common shares have been flat. Mexican Electric Light, on the other hand, and Mexican Light and Power bonds have been hoisted a little, as well as one or two others in the group of this class of securities controlled by Canadian financiers.

On the week Hudson's Bay shares have lost ground, but this does not imply that the bulls are beaten. Undoubtedly, however, the dividend disappointed many people. The directors announce, after setting aside £25,000 to building account, a final dividend of £2 per share, making with the interim dividend of £1 paid in January last, a total of £3 for the year, tax free. This is just 25s. less than the dividend for the previous year, and the balance forward is only about £2,000 up at £119,890. Were this the worst of it, it would be little of a damper, but in all probability next year's dividend will be less still. Peruvian Corporation debentures are still up on the week, but the

stocks are down, and selling has been rather pronounced for the last two or three days. Other changes amongst Financial Land and Investment securities have not interest enough to detain us. Nor is there anything particular to be said about Financial Trusts, where there is no speculation and very little investment. Prices, however, are better in a good many instances, although usually the changes are unaccompanied by any sign of dealings.

Gas stocks are firm with a noticeable improvement, the result of investment demand, in Gas Light ordinary. Insurance shares are also on the whole steady, in spite of a recoil of 2 in Royal Exchange stock. Northern shares are 2 up and Royal have gained ½, as well as North British and Mercantile, London and Lancashire, and Commercial Union.

The movements amongst Iron, Coal and Steel securities are oftener down than up, and both Beardmore and Dunderland debentures have lost 2 on the week. Thornycroft's second debentures are also 2 down, and nothing has rallied much except Weardale Steel debenture stock, which is 2½ better, and the shares of the Carnegie Steel Trust, hoisted from New York.

Shipping securities have been let alone, and transactions have been scanty amongst Tea, Coffee and Rubber securities, where, however, prices are on the whole good, with now and then a small improvement. Anglo-American Telegraph stocks have not been so buoyant this week as last, but they have not receded much, and in other Telegraph and Telephone securities the changes have been mostly favourable, although Indo-European and Great Northern of Copenhagen shares are both 1 down. The most noticeable movement under Tramway and Omnibus securities is the jump of 8 in London General Omnibus stock on the renewed amalgamation talk, and Road Car shares are ⅝ better on this same impulse. No contract seems to have been yet entered into between the L.G.O. and the Road Car companies, but negotiations are on foot, and any excuse is sufficient to cause the market to be put up. Elsewhere the changes have been less favourable, but Rio Tramway Light and Power bonds are higher, as well as the shares of the Brisbane Company and B.E.T. shares and debenture stocks. British Columbia deferred stock has slipped back 4½, and the preferred is down 7. Mexican Tramways stock has also been flat.

Friday Evening.

This was the first day of the Whitsun holidays on the Stock Exchange, and the attendance of members was rendered smaller than usual by the coincidence of the Oaks Day at Epsom. The Home Railway market was favourably affected by the intimation that instead of an agreement between the Great Central and Great Northern Companies, there is now to be one between the Great Eastern, Great Northern, and Great Central Companies. What the details of the compact may be is not yet known, but the aim will doubtless be to curtail working expenses, and the understanding is based upon the plan recently approved by the shareholders of the Great Central and Great Northern Companies. Whether Parliament will allow friendly fusions of this type to pass is quite another matter. We should doubt it, unless perhaps on the understanding that the arrangement is to extend in other directions and to herald a general effort at co-ordination and economy. The Board of Trade, however, will have to watch jealously that public interests are not interfered with, and probably the most significant point in connection with a movement of this kind is that it foreshadows State purchase.

Prices spurted and continued good to the end with North-Westerns in a manner leading. Yankees were dull in the morning, but better looking at the close. Grand Trunk and Canadian Pacific issues were limp all day. The foreign market was tolerably cheerful and Kaffirs firm on what is described as French support, with a pretty demonstration in Gold Fields.

The Winnipeg loan was not taken up readily by investors, and underwriters are said to have got about 70 per cent. of it, so the latest quotation for the scrip is ¾-¼ discount. The Rangoon loan was also quite neglected and finishes to-night at 1½ discount, but B.A. and Pacific debenture stock went off well as also the Mexican National issue, and quotations for these scrips are respectively 1¼ and 1 premium. The recent Chinese loan is also ¾ premium.

In their report for the past half-year the directors of the Great Indian Peninsula Railway Company announce the coming issue of £1,000,000 new debenture stock at the request of the Secretary of State for India.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: 2½ p.c. Ann. 1905 and Acct. both ¾, to 86¼-½xd, Bk. of Engld. 6, to 270-5, Bk. of Ireland 10½, to 310-20, Indian R. Paper 3 p.c. 1, to 51-4.

CORPORATION AND COUNTY STOCKS.—Rise: Metro. Water "B" Acct. 2, to 94-5, Metrop. Cons. 3 p.c. Stk. 1, to 94-5, do. 2½ p.c. 1, to 79-81, L.C.C. 2½ p.c. 1, to 78-80, do. 3 p.c. Acct. 1, to 93-4, Corp. of Lon. 3 p.c. 1, to 90-2, Bradford 3 p.c. 1, to 87-9, Derby 1, to 86-8, Devon 1, to 88-90, Glasgow 3½ p c. 1, to 99-101, Middlesbro' 3¾ p.c. 1, to 99-101, Rhondda 1, to 93-5, Rhyl 1, to 92-4, Metro. Water "A" 2, to 89-92, Swansea Harbr. "A" 1, to 98-100.

COLONIAL AND PROVINCIAL GOVERNMENT SECURITIES. Rise: Canada Can.-Pac. Rly. 1, to 101-3, Cape 4½ p.c. Dbs. 1, to 101-3, do. 4-yr. Dbs. ½, to 101-2, do. 10-yr. Dbs. ½, to 100-1, Ceylon 4 p.c. 1, to 100-2, N. Zealand 1914 1, to 105-7, Newfoundland 3½ p.c. 1, to 93-5, Quebec 4 p.c. 1934 1, to 101-3, Queensland ½, to 102½-3½, Straits Settlmts. 1, to 101-3, Canada 3 p.c. ½, to 96½-7½, do. 1938 Can.-Pac. Rly. 1, to 101-3, do. 3½ p.c. Stk. ½, to 100½-1½, Cape 3 p.c. Ins. 2, to 84-5, Jamaica 3½ p.c. 1, to 97-9, N.S.W. 1924 ½, to 100½-1½, do. 1918 ½, to 100-1, do. 3 p c. 1, to 88½-9½, do. Scrip. 1, to 50½-1½, N. Zealand 3 p.c. ½, to 88½-9½, S. Australian 1916 ½, to 87-8, S. Nigeria ½, to 95½-6½, Victoria 1929-49 ½, to 100½-1½, W. Australian 1915-35 and 1920-35 both ½, to 98½-9½.

COLONIAL AND FOREIGN CORPORATION STOCKS.—Rise: Cape 4 p.c. Answers to Correspondents.

****** ***A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

Ecclefechan.—We doubt it. The shares have already gone up against actual conditions on the property.

T. W. T.—There has never been any reliable evidence produced that the mine can be a paying one at any time, and everything is against it at present.

W. P.—No, not at present. The last report is very discouraging, and we fear its affairs will be worse before they mend.

R. D. P.—This company has encountered difficulties in getting under way, with the result that its working expenses have been very heavy. Its works should be completed soon. Meantime nett earnings, as published, show that the interest is being earned, but it will take time for the market to recover. No report has yet been issued, but you have certainly cause of complaint. We would suggest writing to the English committee.

T. P.—(1) Not on any account. (2) This is perhaps less untrustworthy, but it offers very inadequate security for the money.

Nemo.—Not the deferred certainly, and we are very doubtful whether a premium should be given for any of the company's stocks in present circumstances. You have been correctly informed as to the mode of payment and the date.

J. B. C.—There ought to be a further and substantial recovery within the period you fix if politics do not intervene, which does not at present look probable.

Tonk.—The company has never provided adequate reserves against the possible termination of its concession, but the cause of the present depression is actual competition and the fear of new legislation. The present is, therefore, a bad time to sell. You ought to get par as a minimum. Your broker treated you very well.

B. W. J.—(1) The price may hold up for some time yet, but the earnings are reduced already, and will be more so as last year's contracts are off. Decidedly we should not buy yet. (2) The chance is favourable in the present state of the market, as the property has some substance.

Vox.—(1) (*a*) It will be a pure rig if these shares go up, as they are still mostly in the hands of the financiers. We should not like to recommend a purchase. (2) (*b*) This is better. As an investment the shares are fully high now, but the gamble looks like taking them higher. (3) We do not think these should be sold just now. (4) We should not care to entrust it with any speculative interest of our own.

Baku Russian Petroleum.—Production of crude oil for two days ending May 30, 58,000 poods, equals 935 tons.

The Union of London and Smiths Bank announce that an office of the Bank will be opened at 52, Church Road, Hove, as soon as the necessary alterations to the premises have been completed.

Critical Index to New Investments.

Cunard Steamship Co., Limited.

This company has created £1,600,000 4½ per cent. mortgage debenture stock to provide for such portion of the cost of new tonnage as has not already been met out of earnings and for other purposes, and half of the amount is offered on behalf of the purchasers at 97 per cent. The stock is secured by a specific first charge on 12 vessels of a gross tonnage of 119,268 tons, valued on December 31 last at £2,190,884, and on the uncalled capital of £400,000. It is further secured by a second charge on 11 vessels of a gross tonnage of 125,198 tons, valued at £3,840,730, which are charged to secure the £2,600,000 2¾ per cent. debenture stock held by the British Government. After allowing for this prior charge, which is repayable by instalments of £130,000 per annum, commencing in November next, the value of the security for the present issue is £3,831,614, while the total assets, exclusive of wharf and other properties on shore, and the working capital amount to £6,433,664. Part of the new stock will be redeemed by purchase or drawings at 102 per cent., at the rate of £80,000 per annum commencing December 31, 1911, and the balance outstanding on December 31, 1920, will be paid off at the same price. Profits after providing for repairs and renewals and insurances, but before charging interest or depreciation, are set out in detail, and show considerable fluctuations, but for 1907 they were £554,794, although the earnings only included the working of the "Lusitania" for four months and of the "Mauretania" for seven weeks, and consequently only the proportionate amount of the Government subsidy of £150,000 per annum. The chairman, however, states that, having regard to the large additions made to the fleet, the average earnings of neither the last ten nor the last three years show the present earning capacity. But even on the basis of the figures given there is ample margin to cover the interest on the full amount, and the stock should be a fairly good investment.

Port of Rangoon Loan.

In the end of last week the Commissioners of the Port of Rangoon offered £500,000 4 per cent. sterling debentures at the price of 97½ per cent., or just 2 per cent. below the figure asked for a similar amount issued by the Port of London, but the lower quotation did not help it much, and the issue was very coldly received. The loan is required to carry into effect certain important schemes which have become necessary in order to provide accommodation for the rapid expansion of the trade of the port. It will rank *pari passu* with previous loans of about £880,000, and is a first charge on the income and on the property vested in the Commissioners, which on April 30 last were valued at over £1,500,000. The income is principally derived from tolls, dues, rates, and charges on the trade and shipping of the port, but another source of revenue which is annually increasing is the rents derived from the properties in land and warehouses. In the past four years the revenue has risen from £111,320 to £157,000, but the expenditure, including interest and sinking fund, has increased from £75,150 to £142,700. The loan is redeemable at par on July 1, 1952, by the operation of a sinking fund, but the Commissioners have the option of repaying at par £344,000 of the amount on or after July 1, 1938, by giving twelve months' notice.

Chilian Transandine Railway Co., Limited.

An issue of £538,650 5 per cent. debentures, series "B," was offered this week through the London Bank of Mexico and South America, at the price of 90 per cent., to provide in part for payment of the second section of this line from Juncal to Portillo, which has already been finished and equipped. These bonds constitute the second of three series for a total amount not exceeding £1,500,000, the first series of £278,100 having already been issued, and are repayable at par on December 31, 1960, or earlier at 105 on six months' notice being given. Interest is guaranteed by the Chilian Government for the period of 20 years ending on July 1, 1928, in return for which it is to receive the excess of traffic receipts over working expenses up to 5 per cent. on the guaranteed capital, and when the nett profits exceed 8 per cent. on the guaranteed debenture capital the excess is to be applied in reimbursing the State for any payments made under the guarantee. Much seems to be hoped from the fact that the line will be the first railway connection between the principal cities of Chili and Argentina, and will shorten the journey between Europe and Valparaiso by over 2,000 miles. It remains to be seen, however, whether sufficient traffic will be forthcoming to make it a profitable undertaking, and even with the benefit of this guarantee the bonds must be regarded as speculative.

Paraguay Central Railway Company, Limited.

Messrs. Chaplin, Milne, Grenfell and Co., Limited, having purchased £210,000 6 per cent. prior lien debenture stock of this company, offered it for sale at the price of 89 per cent. The issue forms part of £600,000 authorised to provide the funds required for the extension of the line by about 73 miles to Encarnacion on the river Paraná, for the purchase of rolling stock, and for the general equipment. With this extension and the completion of the Argentine North-Eastern Railway to Posadas direct communication with Buenos Ayres will be established, and as the new line runs through a fertile and populated district it should prove of considerable benefit. In the five years to April 30, 1907, the nett profit increased from £13,881 to £24,602, while for the ten months of the year ended April 30 last the nett surplus is given as £29,250. The secretary of the company states that arrangements are being made in Paraguay with the object of fixing the rate of exchange at $50 per £ instead of as at present $70, and the change would enable the company to show an increase on its present nett earnings of over £600 per week. This would make the nett earnings from the existing mileage equivalent to £66,450 per annum, or sufficient to pay the interest on the whole of the £600,000 prior lien debenture stock nearly twice over. Messrs. Chaplin, Milne, Grenfell, and Co., Limited, bought the stock from the company at £83 per cent., but have to defray all underwriting and other expenses except the cost of the scrip and certificates, so that their margin of profits may not be large, and in any case the stock at the price asked seems cheap enough as a speculative investment.

Star Tea Company, Limited.

This business of tea merchants, grocers, &c., was converted into a private company in April, 1892, with a share capital of £80,000, and appears to have done exceedingly well. It owns 24 freehold properties in various parts of the country valued at £51,061, on which there are mortgages for £10,200, and 21 leasehold properties worth £19,213, in addition to numerous shops not valued, making altogether over 200 establishments. Profits are given for the five years ended September 30, 1907, and show an average of £19,081 per annum, the improvement having been fairly steady on the whole, although in the last year there was a relapse of about £900. The rapid development of the business has forced the company to borrow pretty freely, and in order to repay these loans and to provide for further development the capital has been increased to £200,000 by the creation of 120,000 6 per cent. cumulative preference shares of £1 each, of which 100,000 were offered for subscription. No independent valuation of the assets is given, but the directors state that at the date of the last balance-sheet the total, including £44,000 for goodwill, £41,663 for plant, machinery, &c., £91,742 for stocks and £12,219 in cash, was £256,264, against which liabilities for loans, &c., amounted to £156,044, showing a surplus of £100,220. The preference shares, therefore, seem well enough covered, and should be placed without difficulty amongst the company's own customers.

West Ham Gas Company.

Funds are required by this company for providing further prepayment installations, the demand for which is still considerable, and the directors this week offered for sale by tender £25,000 perpetual 4 per cent. debenture stock, £25,000 5 per cent. preference stock, and £50,000 consolidated ordinary stock. The minimum prices were fixed at 102 per cent. for the debenture stock, 115 per cent. for the preference, and 101 per cent. for the ordinary stock, payable 10 per cent. on application, 10 per cent. and premium on June 23, and 80 per cent. on July 6. Since 1902 the sales of gas have increased at a steady rate from 1,153,442,000 cubic feet to 1,813,996,000 cubic feet, and the nett profits, after payment of debenture interest, &c., rose from £34,382 in 1902 to £55,531 in 1906, but dropped back a little to £54,870 for the past year. The standard dividend on the ordinary stock when gas is at 2s. 11d. per 1,000 cubic feet is 5 per cent. per annum, with the provision that a further 2s. 6d. per cent. per annum may be paid for each reduction of 1d. in the price in any complete half-year.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1908, and May 30, 1908:—

Revenue and other Receipts.

Treasury, June 2, 1908.

The Week in Mines.

Kaffir Shares.

The breathless pace in the Kaffir Circus has not been quite maintained this week and towards the end of it the Bulls were feeling much more subdued. On one or two days the performance was not so bad, but it is useless to blink facts, and there is no denying that the public has not danced so energetically to the magnates' tune as they would like us to believe. That business has shown very great improvement admits of no question, but all said and done the shops have not managed to off-load so very many shares on to the ordinary speculative investor. The Continent has taken a fair amount of shares and a pretty big option business stimulated inquiry, but the attitude of Paris is never two days alike, and the advent of the monthly bourse settlement led to some realisations. Mr. Robinson did his best to give things a shove up, announcing by cable a satisfactory interview with General Botha and others regarding the new Transvaal gold law, and also something pleasing regarding the prospects of South African mines, but the public did not exactly struggle to buy shares, as most of the dealers anticipated, and singularly enough the comparatively dull tone noticeable during the last few days really dated from the receipt of these messages. Mr. Robinson has been unfortunate lately. The enormous majorities with which the East Rand fusion scheme was accepted by all concerned was merely what had been expected, and exercised no influence, although the shares of this company were exceedingly strong at one time. The other leaders were also very prominent at intervals, and the pause was in all probability really welcome because such a break-neck pace must have led to an equally violent reaction had it continued much longer. The nearness of the Whitsun holidays gave a good excuse for moderating things a bit, and the professionals were glad to take a little profit, having backed "stumers" in the Derby to a man. The settlement, too, is near at hand, Tuesday being Contango day, and it was probably thought worth while to eliminate a few weak Bulls so as to leave the way clear for another grand outburst after carry-over day. All things considered the market has been kept very well in hand, and having expended so much energy and money in getting values where they are, we may be sure that prices will not be allowed to slide back until a supreme effort has been made to bring in the public in really substantial numbers. Will it succeed? We very much doubt it, and it would be folly to miss such a fine opportunity to reduce losses. It is said that schemes have been prepared for the reorganisation of the Bantjes and Vogelstruis Deep Companies.

Land, Rhodesians and Diamonds.

The movements among land and finance shares have never approached the sensational and the market has followed fairly closely the course of the Kaffir Circus. In other words the tendency has been somewhat irregular with comparatively small changes. There was less desire to mark up the low-priced land shares, and it is fairly obvious that whatever else it may be doing the public is not coming for these things. It would need a very optimistic mind to imagine any satisfactory result from a purchase of such stuff, and we should be sorry indeed to buy the bigger price shares such as Welgedachts and T.C.L. The financial embarrassment of the first named has been conveniently forgotten, and we wonder how many people realise that to give a yield of, say, 6 per cent. on T.C.L., hardly an extravagant return, would at present price require about £120,000 per annum. What are the prospects of the company earning that net profit in the approximate future? Rhodesians rarely gathered much force and Chartered shares have been left to take care of themselves after the previous week's excitement and circulation of ridiculously improbable stories. A great effort was made with Tanganyikas, and the price

touched 4, but they were soon bundled back to 3⅞, and one wretched speculator who gave an order for a little block of shares "at best and cut a loss of ¼," had both transactions completed in a very few hours. The rubbish heap in this section was rather "off." Diamond shares remain an uncertain and erratic market, De Beers having moved within a fairly wide compass. Their lowest price was 10¾ and the best 11⅛, but the close was rather sickly. Premiers kept up better than the others and Roberts Victor spurted smartly to nearly 2. The poor old Lace Diamond Company has gone to rest without ever giving its shareholders a penny piece in dividends. The mine was closed down last January "pending an improvement in the diamond market," and now a cable comes along saying that all the company's assets have been realised to the full extent of the company's liabilities and there will be nothing for the shareholders. This was supplemented by another cable to the effect that a circular would be issued to the shareholders giving full particulars, and that it would be sent by next mail, and later on came the news that the property had been sold for £20,000 with the exception of the diamonds on hand. Now it is said that reconstruction is probable, and shareholders are to be given a chance to come in. Yes, yes, of course; but they will be wise to cut their losses.

West African and Australasian.

There is very little to be said concerning these sections. Jungle shares were a little more active at one time and prices went up, but the market attracts scarcely a trace of genuine business and values were soon descending again. An attempt to form a street market was a lamentable failure. No real tendency developed in either the Broken Hill or West Australian sections. Just for a little while the latter seemed likely to attract increased attention and the principal shares, such as Ivanhoes, Kalgurlis, and Horse Shoes, improved, but the firmness did not hold to the end. The Barrier things were dull with lead and zinc, and New Zealands did not become prominent.

Copper Tin and Miscellaneous.

Copper shares were strongest in the early part of the week when Rio Tintos rose to almost 65 and the others in proportion, Great Cobars, however, being an exception. The Yankee rally was helpful, but later on prices slipped off rather speedily and Rio Tintos were soon a good pound below the best. Tin shares and the metal showed an improving tendency. In the Miscellaneous group Esperanzas were in some demand, but Mexico El Oros continued dull. A final dividend of 3s. per share is announced on Tomboys making 6s. for the year, against 7s. 6d. for the previous twelve months. Siberian Props recovered a small loss and Indians were irregular.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Transvaal Coal Trust.—This company's annual report to the end of 1907 contains much that is interesting. The information is set forth under several separate heads, the most important being property, gold mining rights, coal mining and, of course, finance. A Government proclamation of March 8, 1907, constituted the farm Brakpan a public digging, as from April 8, 1907, and all necessary steps were taken to safeguard this company's interest as well as those of the Brakpan Mines, in which the company holds 260,000 shares. The directors have purchased the coal rights over a portion of the farm Grootpan in the Middelburg district and adjoining a freehold farm belonging to the company having an unpronounceable and almost unwriteable name. The report sets it out as Kleinzuikerboschplaats, or something to that effect. A further number of the option contracts originally secured for the purposes of the new coal area have been abandoned during the year. There is nothing fresh to be recorded concerning the Brakpan mine developments and as regards New Rietfontein, a new agreement has been entered into with the Eastern Exploration Syndicate, under which it has been granted a one-sixth interest in any consideration which the company might receive or make when dealing with the gold rights over this farm. At present the company's chief energies are devoted to the coal mining section of its business, and this seems to have been attended with fairly satisfactory results. The company has become a member of the Coal Owners' Association, and while the output of mineral shows a considerable decrease, that is partly accounted for by the early exhaustion of the pit at Brakpan. A total of 33,704 tons was disposed of at Oogies, the profit being utilised to write off the whole of the temporary plant and initial development, as well as to provide a portion of the first year's debenture interest. Development at Oogies and De Rietfontein continues satisfactory. Balance from coal mining account is £32,246 and administration and other charges took £7,834, leaving £24,392. Interest, rents, &c., increase this to £30,151, and after placing £1,483 to suspense account to cover bad and doubtful debts and £4,155 for depreciation, the balance over is £24,512. The 5 per cent. dividend paid requires £25,000, and the balance of £3,019 brought forward is reduced to £2,532. The Brakpan Colliery formerly standing at £23,545 has been reduced to £6,405 by a transfer of £16,517 from share premiums and £623 sales of plant and machinery. The company has a good supply of free assets.

Great Eastern Collieries.—This company's output for 1907 was fairly substantial at 190,289 tons, but the directors tell us there has been no improvement in the coal trade throughout the year and competition is now keener than it has ever been. Has not the Coalowners' Association had any beneficial result? Other companies say it has. One serious and sundry minor subsidences occurred during the year, hindering work and costing money for compensation. The result is a loss on coal mining operations of £5,094 to which must be added £5,758 written off for depreciation, so that the credit brought in was reduced to £6,046. The winning of coal at the new coal field has been carried on continuously throughout the year from the temporary shaft. Development is being continued, and the coal opened up is of good standard quality. Negotiations with the Transvaal Government for the right to work the coal areas on the farm Geduld contiguous to one of the boundaries to the No. 1 mine have been successfully concluded. The coal areas in question are believed to be of considerable extent, and the directors look for good results, sufficient to convert recent losses into substantial profits.

Namaqua Copper.—Nett sales for the year ended December 31 were £146,241 and interest and transfer fees gave £3,082, an aggregate of £149,323. Against this the expenditure under all heads was £122,224, leaving a profit of £27,099. Including £3,232 brought in the disposable sum is £30,331 and an interim dividend of 7½ per cent. or 3s. per share absorbed £14,150. It would not be difficult to repeat that payment, but in view of the depressed state of the copper market and the fact that the recent work of exploration (for which a special fund was provided and is now exhausted), has not yet resulted in any material new discoveries the directors think it wise to keep a little extra in hand. They therefore propose a final payment of 2s. per share, making 12½ per cent. for the year carrying forward £6,749. The sales of fine copper for the year were 2,432 tons, but the profits showed a considerable diminution due, of course, to the fall in the price of the metal. Reserves of ore in the mines and at the surface are estimated at 124,420 tons, while at the Flat mine the reserves of slimes and tailings suitable for treatment are put at 94,500 tons.

New Einasleigh Copper Mines.—This company was formed in January, 1907, and the report now issued covers the period to January 31 last. It is not altogether satisfactory, there having been much delay in the commencement of operations partly due to the abundantly wet season and partly to the scarcity of good miners. A gold discovery some 30 miles away from the mine attracted all the miners in the company's service, and the sinking of the main shaft could not be resumed until the end of February, when plenty of labour became available. One good point is that the Etheridge railway will pass within 300 yards of the property instead of being twelve miles off as expected. Its completion is expected before the end of the summer, and it is hoped that the shipment of ore will not be delayed beyond this time. Negotiations are still in progress with the Chillagoe Company concerning a contract either for the sale of the output outright or for a smelting agreement, but the directors are also considering other arrangements for the disposal of the products. Development work to date appears to be of a satisfactory character.

MacGregor Cloncurry Copper Mines.—This company's group of mines consists of four properties, the Wallaroo, Wee MacGregor, Great Central, and Wattle. Some additional adjoining leases have been secured, and applications made for limestone, flux and ironstone areas. Soon after development work was started the directors accepted an offer of 16s. per share for 50,000 shares of the unissued capital which has placed the company in a strong financial position. After paying all [illegible] and general expenses, as well as development works, there is a cash balance of £50,000. Very [illegible] the cost of starting development, the cost of carriage being excessively high and the scarcity of labour also greatly retarded the opening up of the mines. An estimate of the ore reserve is 9,000 tons, carrying 10 per cent. copper, the approximate nett profit on which with copper at £56 10s. per ton would be £18,000.

Elliott's Metal Company.—This company does not provide exact details of profits, but after paying debenture interest and other first charges, there is a nett balance for the year to April 4 last of £33,418. A dividend of 5 per cent. will be paid on the

ordinary shares, £9,500 is allowed for depreciation, reserve fund gets £11,000 making it £45,000, and £2,268 is carried forward. The stocks of silver and copper have been valued at prices considerably below those current on April 4 last, and the total, including stores, tools, &c., is £247,524. Works, plant and machinery are valued at £205,473, after deducting no less than £150,254 on account of works renewal fund.

Beatrice (Rhodesia) Company.—Another of the group of Rhodesian mines which have caused such terrible losses to British investors, and one in regard to which hopes of any recovery must be completely abandoned. It is nearly three years since the shareholders had any communication of importance from the directors, it being stated, as far back as September 1, 1905, that the mine had been let on tribute on favourable terms, and that the profits would be handed to the Mashonaland Agency in liquidation of debt owing on loan No. 2. Royalty received from the tributors for the period from August, 1905, to January 31, 1908, was £10,203, and this sum, after deducting general expenditure in London and South Africa, has been paid to the Mashonaland Agency on account of interest, and in part repayment of the loan mentioned. The mine, however, proved to be a miserable disappointment at the lower levels, and as no one would provide further funds to carry out the development policy advocated by the Chartered Company's resident mining engineer, the tributors gave notice to terminate the lease. Up to the present no arrangements have been made with other tributors. The profit and loss account for the three years to the end of June, 1907, shows the enormous deficiency of £21,683, making the total to date £70,673, and no charge has been made in respect of development redemption. Total loans with interest outstanding amount to £61,027, and the casn balance is £180.

Broomassie Mines.—Progress of a satisfactory character appears to have been made by this company during the year to December 31 last, and the shareholders ought to be in a fair way to receiving their first dividend. Operations during the twelve months were regulated by the amount required for expenditure, and the 20-stamp mill was only run 219 days, during which time 15,638 tons were crushed for a recovery of 18,951 ozs. of bullion, equal to 24.23 dwts per ton over the plates. Value of the gold was £73,931 or £20,224 more than in 1906, and the output for the first four months of the current year, including recovery from the cyanide plant, which commenced running at the end of February, 1908, has amounted to £35,276. These figures do not include the value of the concentrates recovered, and the returns for the whole of the current year promise to show a further substantial improvement. Working costs were naturally affected by the small tonnage treated in 1907, and amounted to 39s. 11d. per ton of ore crushed, exclusive of development redemption and depreciation, but in the opening quarter of 1908 the costs upon an increased tonnage were only 28s. 11d., a drop of no less than 11s. The reorganisation of work at the mine was effected last autumn without having to draw upon the special contingency fund of £15,000 which had been specially arranged to meet the possibility of the production not being sufficient to cover the expenses in consequence of the unavoidable interruption of work during the retimbering of the main shaft. An extension of the Government railway from Tarkwa to Prestea crossing the Ancobra river at a point about two miles from Broomassie has been sanctioned by the Colonial Government, and it seems likely that a branch line from the Ancobra river to Broomassie will also be constructed. All which is very satisfactory, and should tend towards a material reduction in working costs. Ore reserves at March 31 last were estimated at 36,589 tons, containing 42,225 ozs. of fine gold, valued at £179,458, and it is expected that when the programme for the current year is carried out these reserves will be considerably increased. The directors have entered into an agreement for the acquisition of a 45 per cent. interest in the Dainsu lease on the Prestea-Broomassie line of reef. Bullion account for the year is £73,085, against which mine and other expenses came to £31,221. Development redemption took a further amount of £28,695, and the remainder was absorbed by depreciation and London expenses.

Gold Coast Investment.—The current quotation for this company's shares is about 1s. 3d., the last making-up price having been 9d., but it is interested in such a fearful collection of rubbish that to buy shares would be something worse than a gamble. In all shares are held in 16 different companies, 82 per cent. of them owning properties on the Tarkwa banket range, 17 per cent. is in properties on the Prestea quartz range, and 1 per cent. in sundries. It all sounds very fine, but "the directors regret very much that the investments on current prices still show a heavy depreciation." We fancy shareholders will be anxious to know the actual extent of this wastage, especially as they have had no statement from the directors for a very long time, the report and accounts now issued covering a period of 2¼ years to December 31, 1907. The investments stand in the balance-sheet at £371,815, and the revenue from all sources for the period covered by the accounts was £156. Outlay was £1,266 and the debit at general expenditure account is increased to £21,000.

Tronoh Mines.—This is a tin mining property in the Federated Malay States, but it is passing through one of those troublesome periods common to most mining enterprises, and just now shareholders are reaping no return. Mining methods are being altered on the advice of the manager, the company having decided to abandon the shafting system in favour of the open cast. This has entailed a considerable expenditure on machinery and plant, as well as a large amount of development work, and the board has been obliged to suspend dividends for the current year. But shareholders should get their reward in due course. Further mining lands adjoining the property originally acquired have been purchased, thus ensuring a considerable extension of the life of the mines. In the twelve months to the end of December, 1,617 tons of tin ore were sold, realising £154,090, a decrease of 250 tons and £45,375. A large proportion of the shrinkage was brought about by the severe drop in the price of the metal during the year, and heavy influxions of water on several occasions. Including sundry items the total revenue was £156,089 as against £202,660, but notstanding this the outgo was £9,486 larger at £112,609, mining costs going up practically £10,000. Profit was fully £56,000 lower at £43,481, and after paying dividends amounting to 25 per cent. £30,727 is carried forward against £27,247 brought in.

North Mount Boppy.—This concern is the outcome of the second reconstruction of our old friend the Royal Oak of Hauraki, and the report and accounts now submitted cover something over a year to December 31 last. They will not work shareholders into a state of wild enthusiasm. When operations were recommenced the first thing to be done was to unwater the mine and repair the timber in the shaft, work which knocked a hole in two months. This accomplished, work was commenced on the western lode, but sudden inflows of water on several occasions caused delays and loss of time. Efforts were made to overcome this difficulty, and operations were continued on the western lode, a large, well-developed lode running through the entire property, so says the report, but nothing striking was met with, and work at this portion of the mine was suspended, and the eastern cross-cut continued. The mine manager considers the latter the most promising part of the mine, as every foot driven east brings the work nearer to the course of the Mount Boppy Company's main lode. It is estimated that this should be cut between 500 and 600 ft. from the company's shaft. Expenditure for the period was £4,230 or £4,050 in excess of income, and the cash remaining is only £2,666.

Indian and Colonial Goldfields.—This company issues a cheerful sort of statement for the eighteen months ended April 30 last. In it the directors much regret that the condition of the mining markets has rendered it impossible to effect sales to any extent, but the expenses are reduced to a minimum, and the board continues to act practically as liquidators in the hope of still being able to make some little return to the shareholders. There is no intention of making a call on the shares, and it is not proposed to undertake any new business beyond the company's available resources, which is so far reassuring. We may be sure that the company will not plunge into any huge financial scheme with the mentioned resources, as they chiefly consist of a profit and loss deficiency of £59,570 and cash £41. Sundry shares are entered at £36,383, and the auditors kindly point out that the depreciation on that portion having published prices (about three-fifths of the whole) is roughly 95 per cent. The rest cannot be valued at all, and we note that a loan of £515 granted to the company is secured on 12,298 of these shares. Revenue for the period under review was just under £16 and expenses and interest came to £307, so that the sooner the liquidation is completed the better. A loss on sale of investments amounted to £203 and £8,579 was written off sundry shares, making the year's loss £9,138 and the total to date £59,570, as mentioned.

Mysore West and Mysore-Wynaad Gold.—The reports of these two companies are issued separately, but are quite identical. They each state that work has continued to be carried on jointly with the other on the Tank Block property. Shareholders have already been informed by circular that mining and milling operations were suspended in August last year, since when the large accumulations of tailings have continued to be profitably treated. The superintendent advises against undue haste in the selection of a new mining property, but since writing his report he has indicated a locality which is considered likely to be a favourable one for opening out a new mine "both in respect of its auriferous indications and of the convenience of transport and re-erection of the Tank Block machinery, which if not so used will be simply thrown away." The directors propose to negotiate with the owners of the prospecting licence, which covers the area, but they will not make any final arrangements without the sanction of the shareholders. Both companies have a fair amount of cash in hand, and while the West company allows £8,152 for development and depreciation, the Wynaad sets aside £7,651, and writes off £499 from leasehold properties.

Komata Reefs Gold Mining.—It had been the intention of this company's directors to stagger the shareholders with a 2d. dividend, but on second thoughts they decided not to do anything rash owing to disappointing returns for the current year. During 1907 28,430 tons treated produced bullion which realised £46,958 and £486 came in from sundry sources, making a total of £47,444. Profit was £4,956, and this, together with £3,590 brought in, is carried forward. Tonnage treated increased by 6,790, but the grade of ore dropped from £2 2s. per ton against £1 13s. 3d., and it was fortunate that 10s. could be knocked off the working costs. Ore reserves are put at 29,050 tons, worth 31s. per ton, and 24,900 tons worth 47s. per ton. Recent development work has shown a very marked improvement, and the manager does not take a despondent view of the outlook.

North Brancepeth Coal Company.—This company's operations during the past few years have varied very slightly, and

the total revenue for the past twelve months ended March 31 was £66,797. Depreciation took £5,612, and directors' and auditors' fees £1,275, leaving £59,909 nett. Add £6,067 brought in and the total for disposal is £65,976, but while the interim dividend was 40s. per share the final is 10s. less, making 70s. for the year, from which it may be inferred that the operations in the second half of the year were not so profitable as in the opening half. The directors predict fearful things if the Miners Eight Hours Bill becomes law, but it is apparently only the nation which will suffer, not the company.

MINING RETURNS.

Associated Northern Blocks.—Milled 3,703 tons; treated 1,450 tons slimes; yield, £9,377.

Balaghât.—4,600 tons, 2,292 ozs.; tailings, 4,368 tons, 315 ozs.; total, 2,607 ozs.

Barrett.—407 ozs., value £1,650; profit, £500.

Boston Copper.—9,265 tons sulphide, contents 388,000 lbs.; 15,670 tons porphyry; 1,440 tons concentrates, contents 369,000 lbs.

Broomassie.—Crushed 1,658 tons, 2,183 ozs.; and 19½ tons of concentrates of an assay value of £23 9s. per ton; tailings, 2,386 tons, 686 ozs.

Champion Reef.—14,673 tons, 7,693 ozs.; tailings, 18,884 tons, 2,431 ozs.; total, 10,124 ozs.

Crown Deep.—Crushed 39,250 tons, 12,014 ozs.; by cyanide, 36,889 tons, 5,041 ozs.; total, 17,055 ozs.; profit, £40,000.

Day Dawn Block and Wyndham.—Treated, 800 tons; value, including concentrates, tailings, &c., £2,000.

Dharwar Reefs.—Crushed 1,350 tons, 667 ozs.; tailings assay per ton 4 dwts. 3 gr.

Duff Development.—79 ozs. of gold.

Glynn's Lydenburg.—Crushed 2,505 tons, 657 ozs.; cyanide, 1,692 tons, 624 ozs.; slimes, 813 tons, 414 ozs.; total, 1,695 ozs.

Geldenhuis Deep.—Crushed 32,880 tons, 7,049 ozs.; by cyanide, 32,660 tons, 3,946 ozs.; total, 10,995 ozs; profit, £15,150.

Golden Pole.—Crushed 1,200 tons, 466 ozs.; sands, 970 tons; concentrates, 12 tons, 18 ozs.; total, 624 ozs.

Great Cobar.—Treated 17,326 tons; output matte, 1,807 tons; contents, 450 tons copper, 1,166 ozs. gold, 6,927 ozs. silver; ingot copper made at Lithgow 370 tons; despatched 363 tons.

Jumpers Deep.—Crushed 21,010 tons, 4,815 ozs.; 21,560 tons by cyanide, 1,843 ozs.; total, 6,658 ozs., profit £4,400.

Koffyfontein.—4,900 carats diamonds recovered; 314,000 loads blue ground on floors.

Meyer and Charlton.—Crushed 13,532 tons, 2,316 ozs.; from cyanide, 2,832 ozs.; total, 5,148 ozs.; profit, £9,365.

Mills Day Dawn United.—6,107 tons, value, including residues, £22,100.

Mysore.—16,650 tons, 15,494 ozs.; 14,618 tons tailings, 2,007 ozs.; total, 17,501 ozs.

New Goch.—Crushed 23,559 tons, 5,049 ozs.; from cyanide, 2,432 ozs.; total, 7,481 ozs.; profit, £12,074.

New Vaal River Diamond.—Diamonds registered by diggers on the Vaal River Estate, £1,615.

Newhouse.—Treated, 16,770 tons; produced, 472,000 lbs. copper

North Broken Hill.—Treated 2,600 tons crude ore, assaying 16.0 per cent. lead, and 6.8 ozs. silver per ton, producing 440 tons concentrates, containing 309 tons 2 cwts. lead and 9,240 ozs. silver.

Nundydroog.—7,280 tons, 6,102 ozs.; 4,825 tons tailings, 432 ozs.; total, 6,534 ozs.

"O. K." Copper.—Treated 916 tons crude ore, producing 79 tons fine copper.

Pniel Diamond.—Value of diamonds registered by diggers £1,750.

Ooregum.—10,149 tons, 5,792 ozs.; 8,986 tons tailings, 867 ozs.; total, 6,659 ozs.

Queensland Copper.—Ore treated, 1,358 tons; production, 221 tons matte, containing 126 tons fine copper; shipment advised, 202 tons matte; value, £7,600.

Roberts Victor Diamonds.—7,871 loads washed, producing 3,844 carats, an average of 48 carats per 100 loads.

Roodepoort United.—Crushed 17,380 tons, 4,520 ozs.; from cyanide, 1,897 ozs.; total, 6,417 ozs.; profit, £10,451.

Rose Deep.—Crushed 35,800 tons, 7,579 ozs.; by cyanide, 35,165 tons. 3,456 ozs.; total, 11,035 ozs.; profit, £16,350.

Scottish Gympie.—Crushed 7,900 tons, 2,525 ozs.

Tolima.—60 tons, value £3,100; profit, £650.

Transvaal Gold.—Crushed 10,216 tons, 3,485 ozs. Central cyanide 4,619 tons, 1,753 ozs. Central slimes 3,600 tons, 1,007 ozs. Kameel's cyanide 1,280 tons, 343 ozs. Kameel's slimes 717 tons, 193 ozs. Elandsdrift.—289 tons, 224 ozs. Total, 7,005 ozs.

Vereeniging Estates.—Output 29,010 tons.

Victoria Proprietary.—431 ozs. from 1,520 tons crushed.

Voorspoed Diamond.—24,329 loads washed, producing 5,005 carats.

Weardale Lead.—Ore raised, 354 tons; pig lead smelted, 283 tons; average price obtained for pig lead sold, £12 19s. 6d. per ton nett.

CAPITAL AND COUNTIES BANK.—Liabilities on May 26 consisted of £34,201,631 on simple contracts and £501,088 on bills, and assets of £5,644,701 cash in hand and at Bank of England, £5,784,718 money at call and short notice, £4,963,620 Consols and other investments, and £19,339,201 bills of exchange, promissory notes and advances to customers.

TRADE AND PRODUCE.

WHEAT.—Markets have been dull, with a poor attendance, and even lower prices failed to attract buyers. Sellers of foreign wheat would have accepted from 1d. to 2d. per cental less than last week's rates, even if they had had it offered to them, and English wheat went about 6d. lower in the early part of the week. Farmers' deliveries came to 61,802 qrs. averaging 33s. 5d. against 28,070 qrs. averaging 31s. 4d. in the same week of 1907. Supplies of English wheat, says the *Manchester Guardian*, are liberal at all markets, and the old stocks are rapidly disappearing, which seems to show that farmers regard the present average price sufficiently remunerative to induce them to sell and secure a balance at their bankers in preference to waiting for a possible rise in June and July. Imports this week were again fairly moderate, 338,987 qrs. against 586,740 qrs. a year ago, and the quantity of wheat and flour on passage shows a decrease to the United Kingdom and an increase to Continental markets, 2,840,000 qrs. going to the first and 1,930,000 qrs. in the second against 2,985,000 and 1,875,000 qrs. respectively last week. Prices in America were sustained by crop news till towards the close of the week, when news was more bearish. The visible supply shows a decrease of 1,254,000 bushels on the week.

COTTON (from our Manchester correspondent).—The holiday feeling seems to have begun to show itself this week earlier than usual, and buyers and sellers have not been disposed to enter into important transactions. There has been a distinctly quiet tone throughout all sections, and the total sales nothing like clear the production of the spindles and looms, even allowing for a good deal of short time. Now and again it is said that a revival will take place after the holidays, but this remains to be seen. The raw material has been steadier in price, and there are few signs of lower rates; but markets have been active, buying on the spot being of much smaller extent than in most recent weeks. American yarns for home use have only been in dull demand throughout the week. No free buying has occurred in either twist or weft, and spinners have had to be content with booking small lines. The rather firmer attitude on the part of some producers is not so pronounced, and irregularities are increasing. Towards the close of the week spinners, owing to the approaching stoppage, have stiffened a little in price. There is little hope of relief without an increasing demand, and manufacturers for the present have no difficulty in securing necessary supplies. Some users are prepared to purchase for distant month at low rates, but many producers want business to be completed quickly. Stocks of all kinds and qualities are abundant. Neither in export yarns has there been much doing. Small sales have occurred for India in dyed yarns, but our Eastern markets on the whole are very quiet. Deliveries for the Continent are being taken a little better, but users abroad have plenty of stuff to be sent in, and decline to follow on contracts now running out. Bundles of a special character have been slow. Very few practicable offers have come through in gassed yarns for Japan. Some inquiry for the Levant has not been of a practicable character. The quiet state of trade has resulted in sellers of Egyptian yarns not being quite so difficult to deal with. Certain favourite marks are stiffly held, but, on the whole, buyers with definite offers can get in at low rates. Fresh orders are needed in some quarters, and to keep machinery running unremunerative prices are frequently taken. There has only been a retail trade in both carded and combed descriptions. The general inquiry from abroad in piece goods has been quite unimportant, and sellers have met with a discouraging demand.

Speaking generally, the cloth section has been decidedly dull, with scarcely a redeeming feature in the situation. Burnley goods have been a little stiffer in price, but buyers for the most part have held aloof. T-cloths and Mexicans show no improvement.

Sir Jacob Behrens and Sons' circular quoted the American Bureau Report published during the week. This report gave the average condition as 79.7 against 70.5 same time last year, with an increase of about 1 per cent. in the acreage planted. It had very little effect upon the market, as these figures had already been anticipated. Opinions vary as to crop prospects, but the Bureau Report would lead one to expect a better result than last season. Since that report was compiled wet weather has predominated in the cotton belt—whether detrimental or otherwise, it is difficult to say. The tendency of prices has been against buyers, but the week closes with very little change in quotations. The difference between old and new crops has been reduced about 10 points. The latest reports from Alexandria are more favourable, and Egyptian cotton is quiet and unchanged in price.

WOOL.—Bradford users are beginning to make a stand against the London standard of prices, and in 40's tops at present there is a decidedly weakening tendency. Merinos are steadier, but very little business is being done in them. The new English clip is attracting a good deal of attention just now. At first it looked as if growers would stand out for very high rates, but latterly there has been more of a tendency to come nearer to Bradford's idea of what prices should be. In yarns and in manufactured goods things are as a rule flat, with activity only in special lines, such as fancy goods for the metropolitan and Continental orders. There are plenty of inquiries and offers going about for yarns, but the price is generally considered about 1d. lower than it ought to be.

COAL.—Very little is doing in the trade just now. Locomotive coal contracts are still in abeyance, and nothing definite is

likely to be done for a week or two yet. One or two gas contracts have been completed at 6d. per ton below last year's rates, and house coals are now 1s. per ton cheaper. Steams for shipment are still in good demand, but business is not so brisk in this respect as was expected at this season. Scottish shipments show a considerable reduction from last week, and Welsh prices, though still quoted up to 16s. 3d. for the best, sales have in one or two cases taken place at 15s. 9d. But exports for the Welsh docks are increasing, Swansea and Newport in particular showing an expanding trade.

Iron and Steel.—A little improvement in demand has been noticed in East Coast hematites, and prospects, as in other branches of the trade, are considered better now that shipbuilding difficulties are modified. But so far it is chiefly "prospects," actual business of the moment not being very brisk, though Cleveland pig-iron users are showing more willingness to buy future metal, as well as for prompt delivery, and prices for both are rising. Stocks in public stores also are reduced, in spite of the inpouring at the time of the squeeze, though the decrease is a very small one compared to May of last year, only 3,551 tons against 78,599 tons, which represented a broken "record." Demand for manufactured goods keeps quiet, and quotations for bars and angles have again been reduced.

Copper.—A moderate business has been done, and prices on the whole have remained steady. Forward delivery at one time touched £58¾, owing chiefly to the cheerfulness displayed in American shares, but that price did not last long, and yesterday closed at £58⅜, cash at £58⅛. The market was steady to-day, and the final prices 58¼ for cash and 58⅛ at three months. Messrs. Henry R. Merton and Co., Limited, give the visible supply as 31,158 tons, against 26,643 tons a month ago. The total monthly supplies are 37,129 tons, and the deliveries 32,614 tons, against 38,977 tons and 35,599 tons respectively for the previous month. The Chili charters total 3,300 tons. The stocks in England and France total 22,033 tons, compared with 18,043 tons a month ago.

Tin.—Values at first dropped to £126 for June dates and £125½ for three months, but strong advices from the East and an active business passing soon sent them up as high as £130½ and £130. Afterwards they fluctuated, and with some bear pressure dropped from £1 to £1¼, but yesterday at the close showed an improvement again up to £129⅝ for cash and £129½ three months. To-night the quotations were heavy at practically 129 for both spot and three months. Messrs A. Strauss and Co. give the visible supply as 15,993 tons, against 13,262 tons on April 30. The quantities on the spot and landing are 4,374 tons, against 5,877 tons a month ago. May deliveries in London were 1,381 tons and in Holland 999 tons, making a total of 2,380 tons, compared with 2,684 tons for April. The Straits shipments total 7,000 tons, of which 4,690 tons are for London, 1,325 tons for the States, and 985 tons for the Continent.

Tea.—These markets are now closed until after the Whitsuntide holiday, and no public sales will take place till June 15. Indian auctions showed little change on last week, and for the 19,505 packages offered bidding was brisk enough, but with no noticeable improvement in rates for common and medium teas. Latest advices from the tea districts, according to Messrs. Gow, Wilson and Stanton, Limited, state that weather is most favourable on the whole, but the outturn last month was poor except as regards Assam and part of the Dooars; 15,940 packages were sold on garden account averaging 7.90d. against an average of 7.69d. in the same week last year. Ceylon offerings came to 32,746 packages, the largest since January 7. The quality continues to fall off, as is usual at this time of year, which accounted for the lower quotations in many instances given for common and medium kinds, but anything of good favour attracted keen competition, and went in favour of sellers. The average for the week was 7.73d. against 7.58d. in 1907. Java sales consisted of 2,367 packages, which met with a fair demand at last week's rates.

Sugar.—The trade has curtailed purchases, and speculators have acted with caution, says Mr. Czarnikow, in his circular this week, and August beet fluctuated between 11s. 6¼d. and 11s. 0⅜d. France seems inclined to reduce her stock before the Russians interfere with sales to this country, and if this continues, our final stocks in Europe will be very moderate, but quite sufficient considering the premium now ruling. At some period the prices of the two crops will have to be equalised, but if this should happen too early, more sugar might go to America than we could conveniently spare, therefore a certain premium should be kept up for some time to come. The weather on the Continent at present seems to be very favourable, and during a continuance of same we cannot expect speculation alone to raise values of next crop, but with the higher prices of roots, factories are not likely to force sales at what would be a loss to many, and as long as the news of the next Cuban crop do not improve considerably, there would be no need for it. We shall not get 50,000 tons Java, but a fair quantity of next crop beet will probably be shipped to the United States, both of which shortages cannot be entirely made good by Russians, and the world's stocks next season, after a good fruit crop, would look rather small if Cuba does not yield an important increase on this year's results. There are still 11 Cuban factories at work, the receipts in six ports being 4,000 tons, but in other ports the proportion is no doubt much larger. Crop reports from Austria are now better, since rains (partly torrential) have fallen, and the present warm weather there, and in Germany allows of the fields being put into good order, present appearances being favourable. From France, too, the advices are good, but with the still high prices of alcohol farmers may not finally fulfil all root contracts made with sugar factories. The American market has been somewhat irregular, but became firm notwithstanding the more or less discouraging cables from this side. The interest centred chiefly in sugars available and near-at-hand, for which the quotation has been raised to 4.36 cents. Distant arrivals, on the other hand, are neglected, and buyers only indicate for foreign sugars much lower prices than for ready. The prospects of the fruit crop in the United States are rather less favourable owing to reports of damage having been done in some districts by tornadoes, but, so far nothing very definite is known. Landings in the three ports for the week were 39,000 tons, meltings 41,000 tons, and stocks 329,000 tons.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

GREAT INDIAN PENINSULA RAILWAY COMPANY.

Gross earnings in the second half of last year went up less than 1 per cent., but expenditure was 16.47 per cent. higher, so that the nett earnings fell off by 18¼ per cent., or Rs. 23,67,300. After deducting the sum due to State lines, the nett revenue balance showed a deficiency of Rs. 12,07,396 on the amount necessary to cover the fixed charges of capital under the contract, and this is carried forward to the current half-year, when the complete year's accounts were made up. The surplus a year ago was Rs. 12,92,370, so that there is actually a diminution of nearly Rs. 25,00,000 on the comparison. How this has been brought about the directors are at some trouble to explain, and when the working expenses of an Indian railway rise by over 12 per cent. at one jump to 63.33 per cent. of the receipts in all there seems to be room for explanation. Under maintenance, the board says, there was a special outlay on ballasting, strengthening girders, remodelling the goods yard at Wadi Bandar, &c. Heavier renewals of engines and boilers were undertaken, and materials were more costly. A large portion of the increase under carriage and wagon expenses was due to the greater number of vehicles renewed and repaired, and so on, but the most serious cause of increased costs seems to have been the dearness of coal. The coal bill was increased by Rs. 5,21,387, of which only one-half could be assigned to extra mileage, and there does not appear to be any remedy for this dearness until the company can get its line extended to Indian coalfields. It has a colliery of its own, but that now turns out only about 30,000 tons, and does not seem capable of producing more than 50,000 tons a year, while the company requires close on 600,000 tons. While business is thus hampered the demand for capital continues strong, and in the past half-year Rs. 61,30,428 were spent on this account, or say £409,000; therefore more capital has to be raised, and at the desire of the Secretary of State the company is about to make an issue of £1,000,000 in new debenture stock. No resolution is required to sanction this issue, which will take place under terms of the Purchase Act of 1900, this railway being now the nominal property of the Simla Government. Its accounts are therefore accompanied by detailed statements regarding the annuity branch of its capital, investments relating to which amounted on May 31 to £2,429,232, an increase of £355,992 compared with December 31 last.

INDIAN MIDLAND RAILWAY COMPANY.

Why is this company still endowed with a separate board and all the furniture of separate accounts? It is now virtually part of the Great Indian Peninsula system, and presumably this directorial redundancy will be changed before long in the interests of public economy. Like the controlling company, the Midland's business in the December half-year, the lean half, was poor, and the nett revenue deficiency Rs. 6,52,455, but in the June half of the year there was an excess over and above the amount required to pay interest charges of Rs. 12,42,305, so that for the whole year there is a surplus of Rs. 5,89,849, which is Rs. 4,16,573 better than a year ago. Accordingly the board is able to declare a dividend of 5s. 6d. per cent., to be distributed over and above the guaranteed interest, and a year ago nothing at all was distributed. Into the particulars of the business done by this company it is unnecessary to enter here at present, but the board of the Great Indian Peninsula mentions some interesting changes which have taken place in the character of the traffic. "The tendency," they say, "in the Berars and Central Provinces, as also in the South-East district, is to take up for cotton land which was formerly cultivated for food grain, the result being that these districts, which at one time exported wheat and other food grain largely, have now to import these commodities for local consumption."

MADRAS AND SOUTHERN MAHRATTA RAILWAY CO., LIMITED.

Gross receipts for the six months ended December 31 were the highest ever earned by the group of lines controlled by this company, and at Rs. 62,80,914 exceeded those of the corresponding half of 1906, which was the previous best, by Rs. 7,17,450. Of this improvement Rs. 1,16,347 came from passengers, and it was due to an increase of 458,714 in the number carried. Goods traffic rose by 93,513 tons in weight and Rs. 5,87,235 in earnings, the principal gains being Rs. 1,85,590 in cotton, Rs. 1,55,063 in

managanese ore and Rs. 1,57,269 in oils and oil seeds, while the largest decrease was Rs. 53,672 in grains other than wheat, although salt and provisions also showed comparatively heavy declines. On the expenditure side, maintenance of way took Rs. 1,85,679 more, locomotive expenses were Rs. 1,21,062 higher and carriage and wagon expenses Rs. 1,67,818 up, the total outgoings beingRs. 5,51,152 heavier at Rs. 43,16,291. Nett revenue was therefore Rs. 1,66,298 better at Rs. 19,64,622, but of this Rs. 3,25,333 was payable as profit to the owners of the railways not included in the contracts, and after adding outstandings of previous half-years the nett surplus amounted to Rs. 16,42,813 compared with Rs. 14,64,299. The company's share is one-fourth or Rs. 4,10,703, of which Rs. 11,854 is deducted for moiety of Indian income-tax payable on Southern Mahratta profits for the official year 1908-9, leaving Rs. 3,98,849 or Rs. 43,551 more to be dealt with, which has realised £26,434. Under the special arangements made between the Secretary of State for India and the company's representatives, the company's share of surplus profits for the current half-year has been agreed at Rs. 6,99,533, and this amount is to be paid over on June 30 and made available for distribution to the present stockholders along with the balance of their reserve fund. The directors are thus able to recommend a distribution of £4 10s. per cent. in addition to the £1 15s. per cent. for the half-year as guaranteed by Government. It is stated that the new contract embodying the terms agreed upon between the Secretary of State and the company has not yet been drawn up, but will be founded on the heads of agreement signed by the parties. In accordance with the terms of this new contract, the £1,500,000 capital which the company is about to create will be appropriated amongst annuity holders of the Madras Railway as from July 1, and will rank with the existing capital of £3,500,000 in all respects, including the benefit of the Government guarantee of a minimum dividend of 3½ per cent. per annum.

BANK OF BRITISH WEST AFRICA, LIMITED.

During the twelve months ended March 31 this bank issued 10,000 new £10 shares £4 paid at a premium of £1 per share, making the paid-up capital £100,000, and the extra funds at the directors' disposal no doubt account in great measure for the increase of £6,385 to £49,127 in gross profits. Adding £2,176 or £602 more brought forward, the total income was £51,303 compared with £44,316, but expenses, owing to the establishment of new branches and development of the business in other ways were £4,622 up at £31,873. Rebate on bills took £837 less at £1,252, and after putting another £5,000 to reserve and writing off £2,500 against £3,000 for depreciation, £10,678 or £3,702 more was left, out of which the dividend is raised from 8 per cent. to 10 and a slightly larger balance of £2,278 is carried forward. The reserve was further credited with the premium of £1 per share on the new shares, and now amounts to £50,000, or just half the paid-up capital, which is not a bad proportion. Liabilities on current accounts and fixed deposits have been increased by £166,180 to £825,477, drafts issued are £1,717 higher at £95,029 and bills for collection £2,582 up at £44,576, while liabilities on bills rediscounted come to £62,093. Against these cash has risen by £213,345 to £452,395, investments have been increased by £32,949 to £182,018 and loans, advances, &c., are £71,031 larger at £172,695, while bills of exchange held have been reduced by £87,950 to £244,462. Premises and furniture less depreciation now provided amount to £5,786 more at £28,466, and the directors explain that this increase includes the total cost of the Coomassie building, the purchase of a valuable freehold site at Sierra Leone, and the balance of the cost of the Accra premises.

ASSOCIATED NEWSPAPERS, LIMITED.

This Harmsworth Company, proprietors of the *Daily Mail*, of which an edition for the blind is published daily—surely a most enterprising adventure—the *Evening News*, and the *Weekly Dispatch*, made a profit in its year ended March 31 last of £155,664, a decrease of £6,214 on the previous year. The decline is accounted for by a reference to the costs and damages incurred in respect of the Soap Trust libel actions, and must be considered a remarkably good result in view of the heavy amounts disbursed. The directors accordingly not only put the usual £20,000 to reserve, but begin a second reserve with an additional £20,000, and still manage to pay 10 per cent. on the deferred shares, leaving £23,116 to be carried forward, or £14,994 less than was brought in. Altogether the reserves will now amount to £80,000 and the company possesses investments amounting at cost to £174,675. It owes creditors £139,283, and has cash in various forms amounting to £247,563, so that the position is comfortable-looking, in spite of the fact that goodwill, copyrights, freehold, and leasehold properties, machinery, plant, &c., after deducting unspecified depreciation on buildings, &c., are entered at £1,366,919. Debtors, it should be added, owe the company £127,648, but its stock of paper, &c., is quite small at £7,938 and that shows good business management. It is mentioned in the report that the pulp and paper-making works of the Anglo-Newfoundland Development Co., Limited, continue to make most satisfactory progress.

PEASE AND PARTNERS, LIMITED.

No exact comparison can be made with the preceding balance-sheet, because it covered only ten months, the company having altered the date of its year to April 30. For the twelvemonth ended on that date this year the working profit was £281,160 and £15,949 was brought forward, so that altogether £297,118 is available for distribution, and the directors meet all fixed charges and make up the dividend on both the ordinary and deferred shares to 12½ per cent. for the year. In addition, special expenditure amounting to £47,291 has been written off out of revenue, while the allowance for depreciation of leaseholds is £42,140, and yet the balance of £25,437 left to carry forward is £9,488 larger than the one brought in. During the year £26,574 of unpaid purchase money accounts has been paid off, so leaving the balance of the amount payable for Eldon Colliery. Gross profit, including interest, dividends and rents receivable came to £288,623, and directors' auditors' and trustees' remuneration amounted to £4,815, while interest on unpaid purchase moneys and employees' deposits took £1,345, and educational and charitable agencies were given £1,295. The balance-sheet shows minerals, land, houses, coke ovens, fixed plant, &c., on hand valued at £1,365,113 after deducting £50,322 in all for depreciation. Additional expenditure in the year, however, came to £55,136. The working stock of coke, wagons, tools, horses, timber, &c., shows a decrease of £4,355 at £135,220, and sundry debtors owe the company £10,287 less at £155,220. An entry called "shortworkings upheld as recoverable," amounts to £25,820. Investments amount to £243,403 and include Consols, Irish Land stock, North-Eastern Railway and Canadian Pacific Railway debenture stocks, Corporation and Railway Preference stocks, besides shares in Wilsons, Pease and Company, the Skinningrove Iron Company, Horden Collieries, &c. Cash and bills in hand amount to £94,498 and £31,482 is entered as expenditure at Peases West on coke ovens and bye-product plant. This is exclusive of the above-mentioned £47,291 of special expenditure written off. The reserves altogether amount to £166,600, of which £60,000 is for renewals and improvements. The company owes sundry creditors £158,574 against the above-mentioned sum owing by sundry debtors.

LIPTON, LIMITED.

This company is taking power to issue 250,000 additional ordinary £1 shares as and when required, and it will soon need all the money if its controllers proceed in disregarding every rule of circumspect business in neglecting to provide for depreciation on a proper scale. The profit earned in the past year came to £268,754, including profit from the estates in Ceylon, and £4,848 was received as interest, &c., on investments. These two sums, together with £733 received from transfer fees, give £274,335 as the entire gross income, and out of this only £27,624 was allowed for depreciation on plant, fittings, fixtures, utensils, &c., at stores, head office, and branches, and in Ceylon. It also includes provision for depreciation on leaseholds, and is a ridiculously small amount on properties capitalised at £2,144,000, including £309,647 entered against plant, fixtures, fittings, utensils, horses, carts, &c. The directors for the past year take £5,000 more than a year ago at £6,200, so that they are now accepting their full remuneration, and after making these deductions, in addition to £75,771, the cost of working the business, auditors' fees, &c., writing off £1,334 for bad debts, and giving the trustees for the debenture-holders £630, the nett profit is as stated above. Management expenses, &c., cost £19,813 more than in the previous year. Out of the nett balance £15,000 is carried to reserve and the dividend on the ordinary shares is made up to 8 per cent. for the year, as against 6½ per cent. a year ago, from which fact we rather infer that the directors are more solicitous to make a good market for the new shares than to broaden the basis on which an unquestionably splendid business rests. It should be added that the directors have carried forward £20,000 off the year's very large expenditure on advertising to the new accounts, a step which more than neutralises the addition to the reserve. Altogether the reserve only amounts to £296,667 in the balance-sheet, and of that £166,667 represents a premium of 5s. per share received by the company. A branch has been established at Sydney owing to the new Australian tariff, but the business only began towards the end of the financial year, and the directors can but hope that it will be an additional source of profit. Is it partly on account of this Australian adventure that the company owes the bank £150,655 on overdraft? In addition to this debt, bills payable amount to £263,533, and the company owes sundry creditors and directors' fees—a curious mixture—£232,824. Thus the floating debt of the company, as it may be called, over and above the £500,000 of 4 per cent. debenture stock amounts to £647,000, and against this sundry debtors owe the company only £266,576. Stock-in-trade, however, figures at £903,533, which seems overpowering, and the company has investments entered at cost amounting to £124,656, upon which at the date of the balance-sheet, March 14 last, the depreciation was nearly £5,000. Cash shows an increase of nearly £19,000 at £84,892, the total of the balance-sheet being £3,564,813.

PEARKS, LIMITED.

A reduction of £1,182 to £86,084 in gross profits for the twelve months ended April 18 was offset by a decrease of £1,325 at £49,832 in administration charges. Advertising expenses, however, took £10,200, repairs cost £2,202, and after providing £2,721 for interest, the nett profits were considerably lower at £21,059. Of this £6,000 is reserved for depreciation and £2,000 for doubtful debts, compared with £5,000 and £2,000 respectively a year ago, but the dividend on the ordinary shares has to be cut down from 4½ to 3 per cent., and the sum carried on is only £9,380 against £13,321 brought forward. The company still has to lean very heavily on credit, and in addition to an increase of £11,424 to £212,317 in sundry creditors and bills payable, including the special account, the directors have had to borrow £7,000. This increase is partly due to the expenditure on leasehold premises, &c., which amounted to £11,615, making a total of £26,405, apart from goodwill, trade marks and trade names standing at £105,102. Stocks are £7,250 lower at £52,017, but sundry debtors and bills receivable have risen by £6,773 to £126,040, cash is £1,230 larger at £16,437, and

investments and shares are £3,061 up at £73,762. General reserve and depreciation fund have been increased by £7,694 to £86,697, but the doubtful debt reserve is £181 down on balance at £3,808, old debts to the extent of £1,181 having been written off.

WM. CORY AND SONS, LIMITED.

Again this great coal dealing business made a substantial profit in its year ended March 31, 1908, but the total, including income of the reserve fund, after providing for depreciation and all expenses, was £7,274 less than for the previous year at £215,719. After deducting directors' and managing directors' remuneration £15,850, and paying £420 to the trustees for the debenture-holders, £199,449 was left, made up to £239,556 by the balance of £40,107 brought forward, so the directors are able to place £10,000 to the reserve fund as against £15,000 for the previous year and to make up the dividend on the ordinary shares to 10 per cent. for the year by a final payment of 6s. per share. This will leave £43,817 or £3,710 more to be carried forward. A year ago, however, £7,000 was assigned to the redemption fund for the debenture stock and in the past year only £2,450 seems to have been devoted to its cancellation. This brings the amount of the debenture stock outstanding down to £704,950, but the company wants more money and the shareholders are to be asked to extend the borrowing powers so that the directors may be able to raise money up to an amount equal to one-half the nominal capital of the company for the time being. On the present capital this would permit them to borrow nearly £300,000 additional. The balance-sheet shows a reserve fund of £265,000, an insurance fund of £40,000, and a balance of the redemption fund for the premium on outstanding debenture stock of £56,396. Debts due by the company, credit balances, &c., amount to £398,944, an increase of £55,721, and debts due to the company, bills receivable, payments in advance, &c., are £59,357 up at £402,582, while investments show an increase of nearly £15,000 at £361,396. This is exclusive of the £410,000 representing the ordinary shares in Rickett, Cockerell, and Co., Limited. Cash stands at £17,963. No mention of "coalite" is made in the report. What has become of that wonderful fortune-making discovery? This company was to be the general vendor of its product.

REDFERN, LIMITED.

This high-class dressmaking business improved its position in substantial fashion during the financial year which ended on January 11, and if recent results can be kept up ordinary shareholders ought to be in sight of a dividend. Gross profits were £92,587 as against £86,995 in the previous twelve months, and the increase in the sum brought forward was £6,527 at £18,690, making, with £5 from transfer fees, a total of £111,282. General business expenses were £70,071, depreciation allowed is £1,851, London office expenses, income-tax, and interest are £2,394, and directors' fees £650, leaving £36,315. Only the preference dividend is paid, and as it takes just £6,000 the sum to be carried forward is £30,315 or close on £12,000 more. Property account is £208,957, including goodwill, and the reserve fund amounts to £20,000. Sundry debtors show the heavy increase of £20,000 to £152,077, which is much too large, but if customers are tardy with their payments this item must continue ponderous. It would hardly be good policy to worry the Royal Houses of Europe, who owe one-fifth of the money. To help the finances of the business £20,357 has been raised on loan and at the meeting the chairman hinted that it would be better to replace this floating debt with a fixed debenture issue. Differences as to policy have arisen on the board, and Mr. Godfrey Jackson has decided to retire, but we cannot help thinking that the present method of concentrating all energies on the French business is hardly wise.

SANTA ROSA NITRATE CO., LIMITED.

Profits for 1907 fell off by £1,024, and as the directors did not repeat their generous action of a year ago and return their fees of £760, the total income showed a decrease of £1,786 at £19,912. At the same time, London office charges were heavier at £1,806, while loss on exchange increased from £787 to £3,476, and after writing another £1,758 off preliminary and debenture issue expenses the available surplus was £7,463 less at £10,119. With £7,191 or £3,882 more brought forward, the disposable total amounted to £17,310 against £20,891 a year ago, but the directors again provide the £10,000 required for debenture redemption by transferring £4,500 to reserve and £5,500 to depreciation account. Of the balance remaining £5,980 is appropriated to wipe out the remaining preliminary expenses, leaving £1,330 to be carried forward. Additions to property account were only £813, leaving the item £4,687 down on balance at £208,435, against which the reserve now amounts to £21,275. Floating liabilities, including £19,398 due to Valparaiso bankers, are £1,796 up at £30,900, but, on the other hand, sundry debtors have risen by £9,356 to £10,385. Stocks have been reduced by £5,008 to £27,102 and cash and bills receivable have dropped slightly to £13,124.

A. J. WHITE, LIMITED.

The demand for this company's panacea seems to have been stimulated to some purpose by the lavish distribution of wonderful pamphlets during the twelve months ended March 31, as gross trading profits improved by no less than £5,668 to £36,184. Interest on investments again produced £1,077, and after providing for directors' and auditors' fees the nett balance, including £7,733 or £488 more brought in amounted to £43,890 compared with £37,734. Preference dividend having been met with £30,000, the ordinary shares return to the dividend-paying ranks for the first time since 1902-3, but the distribution is a modest one of 1¼ per cent. leaving £7,640 to be carried forward. Although the report states that the gross profit is arrived at after providing for depreciation, the balance-sheet figures give no indication of anything having been written off, but the accounts seem to have been drawn up with the idea of concealing the position as much as possible. Goodwill, trade marks, &c., stand at their original figure of £914,398 or nearly 91½ per cent. of the total capital, stocks, plant, machinery, &c., all jumbled together, are just a trifle higher at £30,870, and interest in subsidiary companies at cost is unaltered at £10,296. So far as the current position is concerned, the company is comfortable enough, as debtors at £25,491 exceed creditors by £11,093, and cash has risen by £3,325 to £12,083.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Bengal-Nagpur.—£1 per cent., payable with usual guaranteed interest of £2 per cent., for half-year ended June 30, making £3 per cent.

Cordoba Central.—For 1907, viz.: £4 15s. per cent. on the first preference stock, making £7 5s. per cent. for the year; £2 10s. per cent. on the 2nd preference stock, making £5 per cent. for the year; £9 per cent on the ordinary stock and £3 10s. per cent. on the income debenture stock (Central Northern section), making £4 10s. per cent. for the year.

BREWERIES.

Barclay, Perkins, and Co.—At the rate of 4 per cent. per annum on the preference shares.

Stretton's Derby.—Interim on the ordinary shares at the rate of 7 per cent. per annum for half-year ended March 31.

MINES.

City and Suburban.—3s. per share.

Durban-Roodepoort.—Interim on account of the year ending Dec. 31, 1908. of 2s per share, payable June 30.

Globe and Phœnix.—Interim of 1s. per share for year 1908, payable July 8.

Kalgurli.—Interim of 7s. 6d. per share, payable July 7.

May Consol dated.—20 per cent,, payable June 30,

Mills' Day Dawn United.—1s. per share, payable 27th inst.

Nigel.—15 per cent.

Talisman Consolidated.—Interim at the rate of 1s. 3d. per share, payable June 25.

Tomboy.—3s. 6d. per share, payable 26th inst.

MISCELLANEOUS.

Assam Company.—Balance of 5 per cent., or 20s. per share making 8½ per cent for 1907.

Banco Nacional de Mexico.—Further of 14 per cent., making 20 per cent. for 1907.

British and Foreign Marine Insurance.—Interim of 8s. per share, free of income-tax, for half-year ending June 30.

Canadian General Electric.—1¾ per cent. on the common stock for three months ending the 30th inst., being at the rate of 7 per cent. per annum.

Dooars Tea.—30s. per share (15 per cent.) on the ordinary shares in respect of 1907, making 20 per cent. for the year.

Ebbw Vale Steel, Iron, and Coal.—10 per cent. for year ended March.

Empire of India and Ceylon Tea.—15s. per share (7½ per cent.) on the ordinary shares in respect of 1907, making 10 per cent. for the year.

E. Rich and Company.—Interim of 2 per cent., being at the rate of 4 per cent. per annum, for half-year ended March 31.

Hannans Land.—Interim for 1908 of 2½ per cent., payable June 5.

Lautaro Nitrate.—Final for 1907 of 10s. per share, making 16 per cent. for whole year.

Lungla (Sylhet) Tea.—Final preference of 3 per cent.

R. H. and S. Rogers.—Interim on the ordinary shares of 2½ per cent. per annum for six months.

London and South-Western Bank.—The statement for May 30 shows current accounts and deposits of £14,358,867, other liabilities £476,643, and acceptances and endorsements £44,415, against assets consisting of cash in hand and at Bank of England £2,174,290, money at call and short notice £1,222,550, British Government and other securities £4,025,981, and bills discounted, loans, &c., £9,412,689.

London and Westminster Bank.—Liabilities on May 30 consisted of current accounts and deposits £25,612,492, acceptances and endorsements £921,832, and other liabilities £1,241,284, against which there were cash in hand and at Bank of England £3,902,766, money at call and short notice £5,458,500, Imperial Government securities £3,885,000, bills discounted, loans, &c., £16,448,406, and other securities £1,359,105.

Parr's Bank.—Liabilities on current and deposit accounts, &c., on May 28 amounted to £27,385,901, and on drafts current, acceptances on behalf of customers, &c., to £2,236,073, against which cash in hand and at Bank of England stood at £4,251,707, money at call and short notice £6,931,330, Government and other first-class securities £3,930,931, bills of exchange £1,782,776, and loans and advances to customers £13,589,597.

London City and Midland Bank.—The statement for period to May 21 showed current, deposit and other accounts of £52,042,295, and acceptances on account of customers £2,046,384 against assets consisting of cash in hand and at Bank of England £9,918,970, money at call and short notice £6,138,759 investments £6,589,754, bills of exchange £5,262,712, and advances on current account &c., £29,209,312.

COMPANY MEETINGS.

PEARKS, LIMITED.

The ordinary general meeting of Pearks, Limited, was held yesterday at Winchester House, Old Broad Street, E.C. Mr. W. H. Lensh, the chairman, presided.

The Secretary (Mr John Dumphreys) having read the notice convening the meeting and the auditors' report,

The Chairman said: Since our last meeting of shareholders your company has gone through perhaps the most trying year of its existence, and in common with other large provision companies, whether wholesale, retail, or manufacturing, we have been very seriously handicapped in profit-making by the abnormal turn of the markets during the period under review. Tea prices advanced enormously, and as we had to maintain our standard qualities at the respective retail prices, it meant that the falling off in profit on that line alone was more than sufficient to account for the difference in the nett profit earned during the past year, as against that earned the year ending April, 1907. In addition to this, we have had to sell sugar in certain districts at below cost price, and for a time cheese was sold at, or below, cost. It was also a matter of general newspaper comment that butter for several weeks was being sold by almost every large retailer in the United Kingdom at prices actually below wholesale market rates, even when best butters in open market were fetching 1s. 4d. to 1s. 6d. per lb.—the public were still being supplied with good pure butter at 1s. 2d. to 1s. 4d. per lb. It has been altogether a year of such excitement and fierce competition in the retail provision trade that we think all our shareholders must have been partly prepared to find our profits for year ending April, 1908, rather lower than for the preceding year. Fortunately, we had well bought stocks and contracts to draw upon for nearly all these lines, but the effect of this almost reckless competition was that we had to lose the profit on some of our best purchases, and for a time we were handling goods at practically no profit at all to prevent our customers being enticed away by the low prices so extensively advertised by competitors. Now turning to the report, in the profit and loss account you find gross profit on trading is £5,195 less than during the previous year. Advertising shows an increase of £1,747, but it is quite possible that our nett profits would have been even better had that item been increased by as much again. On the passing of the 1907 Butter Bill it became necessary for us to educate our customers and the public generally as to the meaning of the new word "Peark's own," and why milk blended butter had to be sold under the new name. We shall maintain the quality at a high standard, and sell it at low prices bearing a fair margin of profit, and we see no reason to anticipate any detriment to this company from the working of this new Act. The amount for interest shows an increase. This you will doubtless realise was due to the fact that for a considerable period during the past year the Bank rate was quite abnormally heavy. £6,000 has been added to the reserve for the depreciation of premises, fixtures, &c., making this reserve up to the respectable total of £40,505 7s. 4d. The general reserve account has also been increased by £1,694 3s. 4d., and we have carried £1,000 to the reserve for doubtful debts, and after writing off £1,181 9s. 8d. against old debts we still carry forward £3,808 9s. 10d. to reserve for future depreciation under this heading. The nett result shows a profit of £21,059 9s. 3d., to which we add the amount brought forward from last year, £16,320 15s. 2d., giving a total of £37,380 4s. 5d. After paying the 6 per cent. on preference shares and providing for a dividend at the rate of 3 per cent. per annum on the ordinary shares, we carry forward to next account £9,380 4s. 5d. Now as regards the present position and future of your company, your directors are very hopeful. Our credit to-day is better and stronger than it has ever been. We have effected considerable economies in our general working, and the efficiency of the management is greatly increased both at head office and branches. During the past year and at the present moment our buying of the chief lines, such as tea, butter, cheese, and sugar have been so well managed that we could sell our entire stocks of these commodities in the wholesale markets at a good profit, and in some cases at much better profit than we shall realise in retail trade, so that, as our volume of trade is being well maintained, we only need ordinary fair market conditions for buying and selling during the next few months to ensure being able to show better results next year.

Mr Plank seconded the resolution, and it was carried unanimously. The usual formal business was then transacted.

MOLASSINE COMPANY (1907).

The ordinary general meeting of the Molassine Company, Limited, was held yesterday at the offices, 36, Mark Lane, Mr. Fred Livingstone, Chairman and Managing Director, presiding.

The Secretary (Mr. A. E. Smith) having read the notice convening the meeting and the auditors' report,

The Chairman said: As chairman of the old Molassine Company, it was my privilege to preside at seven annual general meetings of the shareholders, and on each occasion the directors were able to announce that the result of the trading of the year under review showed a satisfactory increase in the profits over the previous year. On this, the first annual meeting of the present company, the same gratifying feature exists, and your directors have pleasure in stating that their anticipations of a successful year's trading have been realised. Eliminating shillings and pence, after paying £1,138 for expenses incidental to the formation of the company, and which will not occur again, the nett profits for the period from February 5, 1907, to March 31, 1908, say nearly 14 months, are £25,099, against £11,438 for the last twelve months' trading of the old company, which ended on October 31, 1906. The capital reserve fund has to be raised to £25,000 before the deferred shares can participate in profits; this fund, after making provision for payment of dividends on both preference and ordinary shares to March 31 last, now amounts to £15,866, which must be considered very satisfactory for the short time the present company has existed. Turning to the balance-sheet, you will notice that the liabilities of the company consist of sundry creditors to the extent of £17,543, whereas on the assets side of the sheet you find cash £20,263, sundry debtors £40,887, shares in other companies £8,583, stocks £12,992, or a total of £82,725, and in addition to which there is a further substantial asset in the sum of £23,750, the uncalled capital on the deferred shares, so that the financial position of the company is an exceedingly strong one. A call will shortly be made on the deferred shares, which will in the main replace the cash now being paid away in the dividend on the ordinary shares. The demand for the company's products showed a very satisfactory increase during the year. The quantity of molassine meal sold for forward delivery as at March 31 last was in excess of the tonnage on the same date of the previous year. The deliveries so far in the current year show an increase. The output of molassine meal has continued to increase, economies being thereby effected in the cost of distribution, and although the margin of profit has been decreased, your directors have adopted the policy of giving the greatest possible advantage to buyers, with the result that molassine meal is not only the popular food of the day, but its price compares favourably with that of feeding materials generally. Since the close of the financial year your directors have purchased the lease of an extensive waterside property and premises at East Greenwich, where they intend to erect their own offices and other buildings, also plant and machinery for the manufacture of the company's products, which it is expected will result in a considerable economy to the company. I now move that the report and balance-sheet, as submitted to the meeting, be and is hereby confirmed and adopted, and that a dividend at the rate of 10 per cent. per annum be paid on the ordinary shares.

Mr. W. A. Ouston, jun., seconded the resolution, and it was carried without comment.

Mr. A. Love moved the re-election of Messrs. Cooper Bros. and Co. as auditors, and this having been seconded by Mr. W. J. Brown was carried unanimously.

A vote of thanks to the Chairman on the motion of Mr. Penrose Greene terminated the proceedings.

At a special meeting held subsequently it was decided to eliminate "1907" from the title of the company.

NEXT WEEK'S MEETINGS.

TUESDAY, JUNE 9.

Bank of British West Africa.—Liverpool, 12.30 p.m.
Commercial Bank of Scotland.—Edinburgh, 1 p.m.
Indian and Colonial Goldfields.—2, Gt. Winchester Street, E.C., noon.
Linggi Plantations.—Corbet Court, E.C., noon.
Masbonaland Agency.—Salisbury House, 12.30 p.m.
Nile Valley (New).—Winchester House, 12.15 p.m.

WEDNESDAY, JUNE 10.

Beatrice (Rhodesia).—2, London Wall Buildings, E.C., 3 p.m.
Boots Cash Chemists (Eastern).—29, Farringdon Road, E.C., 3 p.m.
Botallack Mines.—Cannon Street Hotel, 2.30 p.m.
Gt. Lucknow Consols.—Salisbury House, noon.
James Deuchar.—Newcastle-on-Tyne, 11 a.m.
Komata Reefs Gold Mining.—Winchester House, noon.
Lipton, Limited.—Winchester House, noon.
Madras Electric Supply.—Salisbury House, 3 p.m.
Makum (Assam) Tea.—Blomfield House, noon.
Namaqua Copper.—Cannon Street Hotel, 2 p.m.
New Zealand Trust and Loan.—9, King William Street, E.C., 3.30 p.m.
Paraguay Central Railway.—New Broad Street House, noon.
Pease and Partners.—Darlington, noon.

THE

BOOK MONTHLY.

An Illustrated

RECORD, GUIDE, AND MAGAZINE,

for

BOOKSELLERS, LIBRARIANS, & PUBLISHERS,

for

BOOK-BUYERS, READERS, AND WRITERS.

This is **A MAGAZINE *DE LUXE*,** a most tasteful and dainty sample of the typographer's skill, and at the same time one of the most painstaking and useful serials of the kind ever published. Its **ILLUSTRATED ARTICLE** is always packed with interesting Notes and Pictures, its **GENERAL ARTICLES** are both Useful and Entertaining, and its **LIST OF BOOKS ABOUT TO APPEAR** and of **BOOKS THAT HAVE APPEARED** are month by month Complete and Valuable as a **GUIDE** to the Bookbuyer and for **REFERENCE.**

The price is only

SIXPENCE NETT PER MONTH,

or Eightpence post free, or 6s. and 8s. per annum, post free, and its publishers are

SIMPKIN, MARSHALL, HAMILTON, KENT & CO., LIMITED.

*** *Kindly order it of your bookseller, and judge for yourself.*

SIR HUBERT VON HERKOMER

AND

PUBLIC OPINION.

Sir Hubert Herkomer, the distinguished artist, writing from Bushey to the Editor of PUBLIC OPINION, says, on February 11, 1908:—

"Dear Sir,—It gives me great pleasure to tell you how your paper, PUBLIC OPINION, answers a purpose in my life. Although I read a great deal, I find it impossible to keep abreast of the trend of higher thoughts that is going on around me, which can only be gathered from various articles and letters in newspapers, and articles in magazines. But your paper gives me the assurance that I miss nothing which would be of use to me in the train of thought upon which I may be engaged, and seldom does a weekly issue of PUBLIC OPINION appear from which I cannot cull some useful suggestion. As a leeturer of art, I need all the suggestions on life that I can get into my hands, for I treat art in all its phases popularly. From PUBLIC OPINION I get to know certain modern authors with whose methods of thinking I am in sympathy, and those I follow up further. Your paper does me the service to point to them.

Your selection of current thought is worthy of all praise, for it gives one the wholesome feeling that the world is, after all, not going to the devil, but contains thinkers and good men and women.

I wish you with all my heart continuous success with your paper.

Yours very truly,
(Sgd.) HUBERT VON HERKOMER.

Percy L. Parker, Esq.

PUBLIC OPINION.

A weekly Review of Current Thought and Activity.

EVERY FRIDAY. TWO-PENCE.

Edited by Percy L. Parker.

The purpose of PUBLIC OPINION is to provide information by means of a weekly review of current thought and activity as they are expressed in the world's newspapers, magazines and books, and to put on record the ideas and activities which make for religious, political and social progress.

PUBLIC OPINION can be obtained from any Newsagent or Bookstall, or will be sent Post Free for one year to any address in the United Kingdom for 10s. 10d.; and to any place abroad for 13s. per annum. Orders should be addressed to—

PUBLIC OPINION, 30 & 31, Temple House, Tallis Street, London, E.C.

SPECIMENS FREE ON APPLICATION.

Printed for the Proprietors by St. Clements Press, Limited, Newspaper Buildings, Portugal Street, Kingsway, London, W.C., and Published by Clement Wilson at Norfolk House, Norfolk Street, Strand, W.C.—June 6, 1908.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 545. New Series. SATURDAY, JUNE 13, 1908. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Our Foreign Trade in May.

There can be no question about it, the figures look disastrous. Imports at £44,271,217 show a decrease of £8,344,418 on the same month of 1907, or 15.8 per cent. Exports of British and Irish produce are also down 15.8 per cent. or £5,855,671 to £31,066,877, and the decrease in re-exports of foreign and colonial merchandise is no less than 23.29 per cent. for the month or £2,020,112 at £6,431,654. For the five months ended with May the exhibit is not so black since imports are down little more than 10 per cent. and exports only 7 per cent. on the comparison, but re-exports have fallen off by 25.2 per cent. The totals will be found in our table. Probably enough some portion of this decrease is ascribable to the fact that there were five Sundays in May this year. It is true that May 1907 embraced the Whit Monday holiday but that does not involve such a complete cessation of work all over the kingdom as a Sunday. There is, for instance, no Whit Monday in Scotland. But allowing for any benefit to last year in the difference of working days, the figures are still black enough, and the worst of it is that the falling off is not yet to be ascribed to prices so much as we should like to see it. We are still paying more for all our cereals except oats than we did in May last year, and there is no satisfactory decrease in any of the raw materials required by our manufacturers except hemp, flax and jute. Raw cotton is fully as dear as it was a year ago and although wool has declined in a marked degree the general statement remains true that the leading raw commodities imported have not cheapened to the extent we might expect. The tendency of prices, however, is downward and that is the most hopeful indication in the returns. On the other hand our dependence upon foreign supplies of food is unpleasantly on the increase and including tobacco we last month spent about £18,261,000 upon foreign articles of consumption. This was less by about £2,000,000 than the cost of similar imports in either of the two previous years, but for the five months ended on May 30 our imports of food, drink and tobacco have cost us nearly £3,000,000 more than in the same five months of last year and upwards of £4,500,000 more than in the first five months of 1906, the bill for these commodities having this year reached almost £98,600,000.

Exports are suffering from diminishing foreign orders quite as much as, if not more than, from lower prices. Amongst the great articles of export, machinery shows an increase of nearly 3 per cent. in value compared with May last year, and coal is still bought in larger quantities than it was a year ago, while the price is actually higher now than in May 1907; but these are the only exceptions of importance. Copper is happily much cheaper, and the quantity exported has fallen off only 24 per cent. against a decline of 52.5 per cent. in the value. The decline in the quantity of cotton yarn exported is also 21.6 per cent., and here the value has fallen 26 per cent. On the other hand, cotton piece goods which have shrunk 15.1 per cent. in quantity have lost only 14.5 per cent. in value. The decline, however, in jute and linen yarn and piece goods is important in quantity, and in the case of linen piece goods is greater than in value. The same observation applies to woollen and worsted yarns and tissues which have fallen off from 21.4 per cent. to 37.4 per cent. in quantity, and from 16 to 36 per cent. in value. From these examples it will be seen that the

volume of our trade is sinking in a very uncomfortable fashion, and the only comfort to be drawn from this fact is that diminished orders emphasise the distress of foreign customers much more than our own. There is hardly a country in Europe which has taken more iron and steel from us this year than last, and if our exports of railway iron and steel keep up, as they do in a notable way, to South America and British India, it is probably because the money is being raised here with which to pay for the goods ordered. As for cotton textiles the whole world may be said to want less of them from us than it did a year ago. Every European country except Austro-Hungary has taken less last May than in May, 1907, but when comparison is made with 1906 the exhibit is not quite so cheerless. France, for example, took more cotton fabrics last month than in May, 1906, and the imports of Greece although unimportant were larger as well as those of Turkey. The imports of China, including Hongkong, however, show a continuous decline on the three years, and so do those of the United States, Colombia and Panama, Venezuela and the Argentine Republic. The demand from India appears to keep up wonderfully well in the circumstances although there was a heavy decline in the imports of Bengal last month, a decline not nearly compensated for by the increased shipments to Bombay and Madras. Trade in these textiles is also dwindling with the Straits Settlements, and although Australia has taken more, New Zealand and Canada have taken a good deal less, measuring by quantities alone. Europe is also purchasing much smaller quantities of woollen and worsted tissues, especially worsteds, and the demand from the United States is naturally poor in the extreme. That country is also ordering very much less linen textiles, and the decline in the foreign demand for this particular class of goods is nearly universal, the only prominent exceptions in the table being the Argentine Republic and British East India. It would be easy to go on cataloguing these unpleasant facts for many columns but we prefer to leave any detailed analysis until the trade record for the whole six months is before us.

Is there any consolation to be drawn from a study of the figures? Not much at present, but it must never be forgotten that the recoil was due. We were going ahead too fast because all countries were doing so and the depression is obviously much more marked among our customers than it is at home, at least as yet. It will doubtless pass away after a more or less prolonged season of depression but while it exists we must act with extreme caution and be prepared to see considerably lower prices than those now prevalent before the turn for the better comes. As yet prices have not been permitted to go back to the extent necessary as foundation for a rally in business. There is too much combination to maintain the price of raw materials, too much leaguing together to prevent the natural movement of the market, and because raw materials are held up indiscreetly by the middle men who control markets, the prices of finished articles cannot be allowed to decline as they must do before the beginning of a healthier business can be discerned. Another point worth noting is the strain which diminished trade and unsatisfactory prices are putting upon home business of all kinds. Many joint-stock companies in this country are now beginning to feel acutely the consequences of their excessive capitalisation and it need surprise no one if liquidations and reconstructions become fashionable before the present wave of depression has reached its lowest. There is a great deal of bolstering, of keeping up appearances, of recourse to credit as a means of disguising the loss of substantial assets, and these obstructions will have to be cleared away, at least in some measure, before a vigorous and durable revival can come about. A mere credit-induced revival is to be deprecated.

Excess value of imports over exports	68,996,160	70,401,347	60,673,761	— 9,727,586

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.
The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board values."

London, Brighton, and South Coast Railway.

This is a small railroad for its total length owned is only 470 miles, and including lines worked or worked over only 487 miles. It, however, is most favourably situated for traffic, and managed last year to earn gross £3,307,312. But this was £87,799 less than the earnings of 1906, and working expenditure was brought down by no more than £17,909 to £1,936,236. Of this decrease £17,278 is ascribable to maintenance of way and works, and seems a doubtful economy. Locomotive power cost £11,539 more, but £8,964 less was spent on repairs, repairs and maintenance being favourite objects for the exercise of short-sighted thrift on too many of our railways. Traffic expenses went up by £8,031, general charges by £2,861 and compensation by £482, but law and Parliamentary charges, amounting to £10,086, showed a decrease of £1,929.

When we come to the analysis of the various sources of income we find that the first-class gave only £184,753, which was £15,267 less than in 1906. The second-class also dropped back by £9,256 to £295,714, and worst of all there was a decrease of £43,019 in the third-class traffic whose total was £1,266,710. These decreases are habitually laid to the charge of the electric tramway competition, the use of automobiles and such like, never to the mismanagement of the company. None the less is it a fact that the board of the Brighton company is not a body of business men, and it has not handled its public as a shrewd trader would. Taking advantage of its monopoly so far as Brighton, Worthing and other places are concerned, high fares are charged, and not only that but capriciously varied fares, so that at your choice or according to circumstances you can pay 17s. for a first-class return ticket to Brighton, a distance of 50½ miles from London, including the cost of the Pullman-car both ways, or you can do the same journey returning the same day for 12s., or you can join a mob excursion "there and back" for 3s. 6d. Lower fares, especially for the first and second classes, and greater uniformity would probably do a good deal to restore the prosperity of the coaching traffic, but we fear it is useless to expect anything of the kind. Even the season-ticket receipts of the company fell off last year by £3,855, although the total of £313,906 was still tolerably handsome. As for goods traffic, that is always of comparatively little importance to this company. Merchandise and cattle gave altogether last year only £486,086, and minerals £343,748. It seems reasonable to say that these sources of income should also give better results if taken care of by an active mind trained to handle and expand business on business lines. At any rate, both these branches of revenue showed unpleasant decreases, merchandise being down £5,777 and minerals £8,305 compared with the preceding year. Altogether the prospects for the stockholders of this once prosperous looking little property are not of the brightest.

Nett revenue is still ample to cover debenture and preference stock charges, but the ordinary stock must be threatened and suffers now. The entire nett revenue for the past year was down nearly £78,000 to £1,389,756. Of this the debenture stock took barely £291,000, and general interest charges, rents, &c., took another £32,292. After meeting all prior charges there was £484,135 left to be given to the ordinary stock, which was £76,440 less than in the preceding year. But traffic receipts are still falling back, and therefore a further diminution is likely to occur in the dividends payable to the ordinary stockholders for 1908. And as intimated above, we fear that the nett revenue is really more than it should be. Carriage and wagon repairs, for instance, at £170,286, came to little more than £10 per mile of line, against £13 for the Chatham and South-Eastern and nearly £15 for the London and South-Western. The scale of maintenance was also low compared with the South-Eastern and Chatham, but that line may require more because it is in a more dilapidated condition. It is, however, in the capital account that we have most ground to fear lest revenue should be supplemented in an illegitimate fashion. Altogether, the capital spent upon this small property amounted at the end of last year to about £31,536,000, which meant upwards of £67,000 per mile, and out of this handsome figure no less than £3,534,000 is represented by working stock, which seems an enormous amount for so small a line. Last year's outlay on working stock charged to capital was only £6,955, but the company spent £254,100 out of capital in the year on lines open for traffic, its total capital expenditure for the year having been £261,056. In the accounts £216,400 figures as money spent on lines abandoned, but no railway board ever thinks of writing off a dead loss of this kind. It is carried on for ever. The capital outlay upon docks and steamboats has amounted to £318,297, which does not seem unreasonable, and there is a fairly adequate attempt made to write it down. The Brighton Company deserves credit in this direction, since its steamboat fund amounts to £229,298, all in the business, but still presumably offset against capital charges. It has also an insurance fund of £29,126, but all the same its capital account was overdrawn at December 31 last by £1,055,438. Against this it held trust funds to the amount of £1,136,000, including £291,411 of savings-bank money, £587,189 of benevolent and pension funds, and the above-mentioned steamboat and insurance funds. As capital outlay is still going on at Victoria Station and elsewhere along the line, it follows that before long the company will have to issue more stock in one form or another, and it will doubtless be able to do so easily enough on terms. The terms, however, tend to grow more onerous with time, and the public is getting thoroughly suspicious of the management of our railways.

Not only is there a want of harmony amongst the companies, but the whole governing is characterised by an empiricism which suggests waste. Why, for example, should a company like the Brighton be able to work its traffic at a cost representing only 58.54 per cent. of the gross receipts when the South-Western spent nearly 63 per cent. and the Great Eastern nearly 63½ per cent. We leave the South-Eastern and Chatham out of the reckoning, because it is a combination by itself. No doubt the trains of the Brighton Company trundle backwards and forwards comfortably without putting any great strain upon staff, or rolling stock, or permanent way; but coal must be dear for this company as for its neighbours, and on the main line, at least, the standard of upkeep must be fairly high, else accidents might happen, so there must be other reasons for the low ratio of expenses to receipts, and when Mr. Winston Churchill comes to discuss terms of purchase with the company we may be sure the point thus raised will not be overlooked.

The Rhodesia and Mashonaland Railways.

They have been a long time in preparation, the reports of these two great empire-making and wealth-destroying partners in the Chartered Company's adversity, and they must be held mainly responsible for the pitiful, almost sympathy arousing, position of that notorious concern, now rapidly approaching bankruptcy. So we fear, despite that £750,000 raised on second debentures after the most desperate exertions of those who would stave off the evil day just a little longer. What is the use of £750,000 raised twelve months after the date of the last Chartered accounts, bearing in mind that the guarantees on these railway debentures run to £520,000 a year and that the B.S.A. was possessed on March 31, 1907, of just £141,000 in cash. No doubt default on the railway debentures has been put off for another year or so, but to go on postponing the inevitable is merely aggravating the position, not helping it. There has got to be default or partial default on these railway debentures, and any attempt to disguise the fact is childish self-deception. We do not say the Chartered Company does so deceive itself, but the moment for owning up has evidently not yet arrived, and for the present at any rate it is the same old story of excuse for bad and in some respects worsening performances and hopes and promises of better times ahead. Yet when Chartered shares are whipped into life and driven up a shilling or it may be two to the accompaniment of rumours that an arrangement with the railway debenture-holders is to be proposed, we never get a denial of the stories, and it is so useful to familiarise the debenture-holders with the idea instead of dropping a bombshell in their midst just when they have finished reading the reports and sucked it all in as gospel. These railways are draining the lifeblood out of the Chartered Company, and as the recent debenture issue was obviously the directors' last throw, they must very soon realise the truth of the adage that you cannot get blood out of a stone.

Then the regrets will be great that the Chartered Company did not accept the good advice given long back by many whom experience had endowed with greater foresight than the directors possess, and frankly admit that unfortunate miscalculation had prevented the hoped for speedy realisation of these magnificently imperial Rhodesian schemes. No one, perhaps, is quite sure what they were or are, but Imperialism and money-making were doubtless intended to march hand-in-hand, and since it is virtually impossible for these railways to pay their way for many years to come, the only thing to do is to own up and make the best bargain possible. Remember that to an unknown extent these railways have been feeding upon themselves, and we should greatly like to see a complete record of the earnings from the carriage of construction material, so that the real value of the boasted nett earnings might be ascertained, together with the burden on capital account which they imply.

Let us take first the Rhodesian Railways, the accounts of which cover four half-years to September 30, 1907, and we cannot do better than reproduce in tabular form the details of traffic for each complete period of twelve months :—

	Year Ended Sept., 30, 1906.		Year Ended Sept. 30, 1907.
Average miles open	1,305	..	1,392
Train miles run	867,959	..	881,909
Gross revenue	£544,033	..	£492,153
Expenditure	£344,062	..	£319,724
Nett earnings	£199,971	..	£172,429
Number of passengers	171,571	..	204,725
Tonnage of goods and minerals	249,925	..	293,916
Tonnage of construction material	39,747	..	3,541
Revenue from live stock and vehicles	£12,925	..	£17,461
Revenue from passengers	£108,990	..	£116,622
Revenue from goods and minerals	£292,661	..	£325,116
Revenue from construction material	£98,384	..	£1,366

Eliminate the construction material and the gross increase for 1907 over 1906 exceeds £45,000, which seems moderately encouraging, especially as a large proportion of the gain came from the newer sections of the line north of Bulawayo, but what is the use when the ultimate nett loss for 1907 was £34,254 more than in 1906 at the enormous figure of £195,768? Note also the following : "A far greater expansion of traffic would have taken place had the consignments of ore from Broken Hill, which commenced in October, 1906, been continued. The shipment of this ore has, however, been temporarily suspended until the best method of separating the lead and zinc ores has been satisfactorily settled." But there are some who say that this separating problem is incapable of solution, and if we look at the reports of the Mashonaland Railway and Rhodesia Railways Trust it can be ascertained that the construction of the line from Kalomo (North-Western Rhodesia) to Broken Hill (281 miles) for the purpose of this traffic is resulting in actual working loss, quite apart from the attendant debenture charges. For the month of September, 1906, the revenue was £2,009, the expenditure £3,037, and the loss £1,028, while for the following year the figures were £27,293, £33,750, and £6,457 respectively. Even when the Broken Hill ore was being carried there seems to have been a deficiency, and the service on this 281 miles of line is now one train per week. Reverting for a moment to our comparative statement, is it not just a little singular that whereas 249,925 tons of ordinary goods and minerals produced a revenue in 1906 of £292,661, or little more than £1 per ton, the cost of carrying 39,747 tons of construction material should have been £98,384, or as near as may be £2 10s. per ton? We are aware, of course, that the construction material goes the entire distance, but it looks like swelling revenue at the cost of capital, and we must not dream of the only prudent policy of carrying such material at cost. We can but hope that the visit of Mr. C. C. Harvey, late president of the New Orleans and Associated Railways, to South Africa on behalf of the railways will have beneficial results, and the report which he has made is now receiving very careful consideration.

"Populate the land" is really the only cry, but it seems to us that the maintenance of existing railway rates, as is clearly intended, can hardly conduce to that desirable end. It is all very well to talk about the establishment of an organisation for the creation and development of an export trade in agricultural produce, and the belief that under present conditions fair profits can be made by all, but while this might be done with one or two successful harvests, how about the time when shortage has to be faced? That present railway rates are a burden on the community, and keep likely settlers away, can hardly be doubted, but it might be many years before the companies could reap the reward of revision and reduction, and meanwhile the finances would get into steadily increasing disorder. The few observations made on the report regarding working expenditure do not hold out great hopes of material reduction, and if by any chance the Victoria Falls should suddenly become an unpopular touring-ground, it would beat a philosopher as much as a duke to guess what will happen.

The company's accounts, rendered separately for the four half-years, are really worthy of closer examination than we have space for. However, the loss for the six months to March 31, 1906, was £54,345 ; for the following six months £107,069 ; for the six months to March 31, 1907, £98,067 ; and for the final half-year £97,702—a total of £357,182, which increases the revenue deficiency to date to £1,136,466. During the two years the provision for depreciation of rolling stock was £59,500, increasing the account to £349,302 and £36,033 was written off discount on debentures, reducing that item to £88,039. At September 30 last no less a sum than £506,075 was owing to the Chartered Company on account of guarantees, &c., and there were great unknown liabilities in respect of freight rebates and possible sums payable to the Government of the Bechuanaland Protectorate. The amount due to the debenture holders for interest was £108,102 and the cash balance £11,262.

Of the Mashonaland Railway we can, unfortunately, say but little. Thanks to the dispute between this company and the Beira and Beira Junction Railways the accounts are withheld until it is decided either by the results of the litigation or by the negotiations now pending how they are to be prepared. Revenue for the year to September 30 last is set out month by month, and the details are a mere repetition of the Rhodesian Railways' story of revenues swollen by construction material traffic and consequent loss when it ceased. The total receipts for the year were £207,825 and the expenditure £129,721, leaving a nett income of £78,104, but for the previous twelve months the revenue was £268,454, the outlay £147,810, and the profit £120,643. Thus the latest figures show a heavy and serious falling off. The reduction in rates from Beira which came into operation in October, 1905, appear to have secured for the Beira route a proportion of the Rhodesian trade which in earlier years entered the country *vid* the southern route, and we gather that the concession has been of benefit. All this applies to the Beira-Salisbury line, and in order that the position may be made clear we give a comparison similar to that of the Rhodesian Railways.

	Year Ended Sept. 30, 1906.		Year Ended Sept. 30, 1907.
Number of passengers	17,503	..	17,296
Tonnage of general goods	28,446	..	36,651
Tonnage of minerals	16,687	..	34,555
Tonnage of construction material	35,860	..	1,938
Tram miles run	381,915	..	327,915
	£		£
Revenue from passengers	11,639	..	12,027
Revenue from general goods	139,660	..	159,932
Revenue from construction material	89,683	..	2,083
Revenue from parcels and excess luggage	2,459	..	2,558
Revenue from livestock and vehicles	1,464	..	2,004
Revenue from minerals	9,021	..	24,619
Revenue per train mile	14/1	..	12/8
Expenditure per train mile	7/9	..	7/11

The situation in some respects closely resembles that of the Rhodesian Railways, but there are points of

difference, notably in connection with the train mileage and the extent of the passenger traffic. We have already referred to the Kalomo-Broken Hill extension, and although doubtless useful from a mining standpoint, the Lomagunda and Eldorado branches are lamentably poor as revenue earners. With a final remark that the Beira-Salisbury section earned the smallest revenue last year of any since it was opened, we will turn to the last document, that of the Rhodesian Railways Trust, which, as the sole shareholder of the two lines, controls them. It does not tell us much, but the information that the 1,939 miles of line have a debenture debt of £11,310,000, or £5,600 per mile, is interesting. The annual charge imposed by these debentures is £520,471, or £268 per mile of line open, and the chances of the railways earning this vast sum are so remote that they must be counted out so far as this generation is concerned.

Economic and Financial Notes.

The Wasteful Growth of National Expenditure.

Mr. Harold Cox prefers to call it "the magnificent muddle of departmental finance," but the two phrases mean the same thing, and we earnestly commend this independent M.P.'s essay on the subject to the attention of electors. It deserves to be reprinted and circulated broadcast throughout the land. Appearing as it does in the June number of the *Financial Review of Reviews*, it is likely to reach only a special group of citizens. The whole article is good, but the best part of it is that wherein Mr. Cox takes up and illustrates the contention of Mr. Gibson Bowles. He was the first in these days to point out how perfectly delusive the annual figures published by the Treasury relating to national income and outgo have become, and are. But as they stand these figures are startling enough in the lesson they convey, and this Government is not fulfilling its pledges in keeping down expenditure. When in opposition it could be zealous, and on May 20, 1901, Sir Henry Fowler moved a resolution to the effect that the financial proposals of the then Government did not exhibit that regard for economy "which the alarming increase that has recently taken place in the normal expenditure of the country imperatively demands." The whole Opposition, including the present and the late Prime Minister, supported this motion; yet at that time the total expenditure as given in the accounts, after deducting the sum applied in reduction of debt, was only £124,532,000, whereas in the current year it is estimated at £144,974,000. And this expansion is not all the fault of the army and navy, but very much the reverse. The bill on public education has grown from £11,950,000 in 1898-9 to £17,578,000 estimated for 1908-9, and the clamour on all hands is "Give us more money." Every section of the Government's supporters keeps hammering at the door of the Treasury, and it seems powerless to stem the torrent of waste, because the Government appears to be only too eager to gratify all comers.

And, as we have said, the figures as published give but a faint idea of what is going on, partly because of the confusion into which the public accounts have gradually drifted through lack of consistent, intelligent and regular supervision, but also because so much money is spent which never comes into the accounts at all. Those "appropriations in aid" are dealt with in the most capricious manner, and Mr. Cox makes telling use of the few facts which an examination of the muddy, festering mass of figures has enabled him to reach. The expenditure of no single department is all grouped under its proper head. The Post Office, for example, receives royalties on the use of the telephones, a tax paid by the National Telephone Company, and that is treated as departmental revenue which does not appear in the accounts issued by the Treasury. The Bank of England pays a tax of about £187,000 per annum for the privilege of issuing notes and that tax is carried direct into the revenue accounts of the Exchequer. A similar illustration of go as you please or can is found in the fact that the estimates show an item of £58,000 paid to the railway companies and others for the transaction of public telegraph business. That is shown in the accounts as part of the expenditure of the department, but the sum of £536,000 paid to cable companies, &c., is treated as diminution of revenue, and appears in the finance accounts under the head of "payments out of receipts." It is a wonder the item appears at all. Those are examples anybody will understand, but there are very much worse instances of confusion than these, and it is probable that our expenditure is nearer £175,000,000 than £147,000,000 per annum, without counting pensions or anything of that kind. Mr. Cox therefore is doing an excellent service in the cause of economy by insisting upon the startling character of the public accounts. It is impossible for the present House of Commons to understand them, and we have long insisted that they are not meant to be understood, certainly not understood by the House of Commons.

Why, for example, should the Civil Service estimates carry a nett sum of only £8 as the charge upon revenue of the Bankruptcy Department of the Board of Trade when the gross charge is £112,000, that sum being covered by what are called "appropriations in aid," by the revenue drawn in by the department and never brought into the accounts? If an ordinary business were conducted in this fashion it would be bankrupt on the average every five or ten years, and our present Government is failing altogether to do its duty by the manner in which it permits the confusion to continue, not less than by its extravagance. Some items illustrative of this extravagance are set forth at the end of the article. We find, for instance, that the salaries and expenses of the Home Office have risen from £120,000 in 1898-9 to £250,000 in the current year, those of the Board of Trade from £178,000 to £313,000, those of the Board of Agriculture from £99,000 to £148,000, those of the Local Government Board from £195,000 to £242,000. The bill for stationery and printing has jumped in the same period by £166,000 to the startling figure of £735,000. In all the list there is not a single item reduced. It does not need any great mental acumen to comprehend that this kind of thing cannot go on much longer, and therefore we once more insist that the estimates ought to be submitted to committees of the House before being laid before it. These committees ought to have the power to summon the officials concerned in drawing up the figures and compel them to explain. Also there ought to be a special committee appointed to overhaul the system of bookkeeping so as to pave the way for a thorough simplification of the nation's income and outgo. If these changes are not made, we shall go on with our heads in the air until a remedy of any kind will be too late.

The Proposed Railway Fusion.

At the end of last week it was officially announced that the Great Northern, Great Central, and Great Eastern Railway Companies had agreed to combine forces, and were going to Parliament to get powers to unite their businesses. To what extent this fusion is to go was not disclosed, but the move is quite natural as a consequence of the defeat of the Great Northern and Great Central attempt to combine last year. All the three railways require to study economy, and the Great Central is, as we have long insisted, by itself hopelessly bankrupt. The capital involved, or at any rate the money spent by the three companies together, is about £165,000,000, and they are at present governed by boards of directors, which embrace altogether 35 gentlemen, mostly gentlemen who know little about practical business, and many of whom are past the old-age pension limit. The nett revenues of the three properties, as exhibited by their accounts, amount to about £5,900,000, and both the Great Eastern and the Great Northern still manage to pay dividends on their ordinary stocks, but the Great Central is in this respect, as well as in regard to many of its preferences, a mere derelict.

With such revenues, however, there ought to be abundant room for economy, and if the reorganisation of traffic facilities is gone about in a proper business way we see no reason why any particular outcry should arise against the move. It is either this or an agitation in favour of State purchase. We had much rather that the railways of the country put their own house in order, made wise traffic arrangements for the smooth and economical conduct of business, and in other ways endeavoured to reduce expenditure without putting additional burdens upon travellers and traders, than that the State should take over the whole railway system and bring a new public department into existence whose operations it would be impossible for Parliament to control, and which would be subject to all kinds of pressure, tending to increase expenditure and to favour certain classes of the community at the expense of the rest. Care, however, will have to be taken that the railway companies are not given a too free hand in dealing with their customers. They should not need coercion in this direction, because the experience of many years should have taught even the densest board that the way to get traffic is to work at low rates, but they will require to be watched.

Only in one prominent respect should we like to see the legislature interfere in an emphatic fashion, and that is in dealing with the foreign traffic. The Great Eastern and Great Central Companies are steamship-owning lines, and they have been ambitious to develop a passenger and goods business with Holland, Belgium, and Germany. They will probably have to be allowed to continue this business, but stipulations ought to be inserted in the Act empowering the fusion of the three with the object of protecting the home producer against those low through rates from the Continent that have done so much to devastate agricultural England. There is no reason why the railway companies should not be compelled to treat the home farmer and manufacturer with the same liberality extended so freely to those of the Continent. The railways have only to reorganise their local business upon a proper footing in order to be able to convey live stock and produce, raw materials and manufactures of every kind to any part of their systems at rates much lower than they now habitually charge. In their obscurantism and unbusinesslike habits our railway boards have done more than any other single agency in the country to stifle the growth of local traffic. To some extent the Great Eastern has seen the evils of its ways in this direction, but there is much more to be done before the home customer can be said to stand on a footing of equality with the foreign. Vigilance will, therefore, have to be exercised by the House of Commons in dealing with the proposed Bill, and care taken that the boards of the combination are kept in order with reference to the Continental traffic.

Sir Thos. P. Whittaker on the Licensing Bill.

Through sheer pressure of work we have too long neglected Sir Thomas P. Whittaker, M.P.'s trenchant sixpenny pamphlet on "The Licensing Bill: Some Facts and Arguments in Support." Now that we have read it we gladly bear testimony to its excellence and cogency within the limits assigned. Nothing could be more effective than Sir Thomas's exposition of the law before 1904, or than his exposure of the rottenness of much brewery finance. His chapter on "Some Specimen Balance-sheets" contains exhibits of different groups of breweries which illustrate with telling effect the consequences of over-capitalisation and disregard of reserves, all wholly after our own heart. There is a group of only 30 breweries whose accounts come well out of the ordeal. Another group of 30 described as "good to middling" displays some of the weaknesses produced by excesses in dividend distribution, and there is a third group composed of 82 companies, described as "less good to weak," whose exhibit is deplorable. We have not space for particulars, and must rest satisfied with recommending all interested to study the figures for themselves. They reveal, as does the record of prices for brewery stocks, which is also a valuable part of the essay, that neither threatened law-making nor the operation of laws already in existence has had anything appreciable to do with the depreciation of brewery securities. The ruined market for them is the consequence of morally untrammelled mania in company manufacture, to put it mildly; and most of the outcry against the Bill of the Government is raised to obscure the facts, not the outcome of genuine alarm or of threatened "confiscation and robbery." Because this is so the brewery interests have more and more alienated from them the sympathies of unprejudiced people, and created a feeling of resentment and disgust which will powerfully aid the passage of the Bill now before Parliament.

Into the other branches of the subject discussed with no little force and intimate knowledge of the facts by Sir Thomas Whittaker we cannot now enter, but shall keep his book at hand for reference as the war of words goes on. But there can be no doubt of the power vested in Parliament to impose whatever taxation it pleases, and we should have welcomed any proposal to graduate licences according to the standing and returns of the premises occupied by sellers of drink. That seems to us a more simple and effective way to reduce the number of licensed houses than the complicated and elaborate Bill of the Government with its "time limit," its "compensation" tax, and so on. Is there anything in the reactionary Act of 1904 which stands in the way of this straightforward reform? It may be feasible, as Sir Thomas asserts, for well-managed breweries to write off out of profits all that the 14 years' time limit demands of them and more than their experience will demand, but with weak breweries whose finances are already strained, dozens of which are already bankrupt, it will be another story. We should have graduated the scale of licences and left the brewers to cope with their self-created financial difficulties as best they could. All the blame for the present complicated state of affairs, which constitutes the apology also for the Government Bill, is laid upon the Act of 1904. That Act was "a great wrong to the nation," says Sir Thomas. We are not so sure, and should have liked him to demonstrate this point more fully. Did the Act of 1904 make licences a freehold, or was the object merely to seem to raise their status in this direction so as to give a pretext for the institution of a compensation levy for abolished licences? Was not that system of taxation itself the greatest blot on the Act, and is not the present Government repeating and aggravating the mistake then made? If licences to drink-selling houses are annual, giving no fixity of tenure or privilege of any sort, why should the State in grandmotherly fashion intervene to declare that the brewers must provide a fund to recoup themselves—their debenture and shareholders—for the loss brought upon them by a reduction in the number of licences? Is that really the business of the State? Are not licences being reduced under the existing Act much at the discretion of the justices, just as before the Act of 1904 came into force, and will the new Act, when it comes, do much to accelerate the speed? Upon branches of the subject suggested by these questions Sir Thomas does not throw light, and he ignores the "club" difficulty. And we hold still that there can be no cancelment of the "monopoly value" so long as the Exchequer depends on the drink revenue for between £37,000,000 and £38,000,000 of the public revenue. A larger share in the product of a monopoly created by this taxation may be secured to the nation by graduating the scale of charges for licences, but neither the "time limit" nor the compensation levy will abolish it. Will Sir Thomas Whittaker, who knows the subject as few men living do, give us another essay in which the present law and its operation will be fully expounded and contrasted with what the new law will do to liberate the nation from the drink curse?

Things in California.

There is much interesting matter in Mr. Consul-General Hearn's report about San Francisco, and we

commend it to the study of Protectionists on more grounds than one. California does not seem to benefit much by the ruthless tariff in the United States and its trade languishes, even with Asia which should be its best and nearest customer. In the matter of climate its position is so favourable that it must enjoy a great home market for its fruits, but it is losing anything approaching predominance in the wheat trade abroad, and its shipping business was last year a profitless one. The quality of its wheat has deteriorated with the exhaustion of the soil which was continually sown with the same crop without fertilisation of the land. Continuous use of the same seed, moreover, in a climate which favours the formation of starch rather than gluten, has contributed to put Californian grain out of favour, and the farmers probably had no inducement to strike out a better course, and no means often, even if they had had the inclination. The railway land-grabbers saw to that. California also suffers from monopolies. The coal trade of San Francisco is practically under the influence of one firm who secured the control of it two years ago, and all the industries of the State seem still to be in a more or less rudimentary condition. A list of them is given, ranging from agricultural implements to wool scouring, and there is only one industry in all the display whose output exceeds £1,000,000 per annum. Sugar refineries produced £3,200,000 worth of sugar last year, and employed 950 hands, but no other industry gives anything near this. The next consists of foundries and machine shops, employing 3,700 hands, and turning out £950,000 worth of products. Even the breweries only gave an output of £600,000, and in no direction does the trade of the country display any marked development. Its fruit harvest was bad, too, except for grapes, and a tariff does not provide compensation.

But what we wished particularly to call attention to in the interests of our Protectionists is the condition of the unemployed. The winter of 1907-8 proved to be a very hard one for this class of human beings in San Francisco. The absence of sufficient activity in building, coupled with the influx of workmen from all parts of the States, in the expectation that this trade would be flourishing, is given as the cause of the great lack of employment, but up to the spring of 1907 no difficulty was experienced of skilled workmen in getting employment at good wages. Afterwards, however, the railroad companies stopped all new work and discharged men to reduce expense, and building in the city diminished in activity, so that the number of unemployed was something between 20,000 and 25,000. So much distress has not existed in San Francisco since 1894. One good thing though about San Francisco is its freedom from debt, in spite of the corruption which has corroded its municipal administration. Its citizens are therefore in a good position to borrow money now when they want it to improve the port and to rebuild the property destroyed by the fire and earthquake. What that fire cost the insurance offices we have more than once stated, but it may be worth mentioning again that in 1906 the total amount paid by the fire insurance companies was £30,074,500. The year before they paid little more than £774,000, but in 1907 they paid £1,290,000. Premiums, however, are now much higher than they were, and even at this higher figure the ratio of losses to premiums was only 39·7 per cent. In the two years before the fire it was 37·7 per cent., and the fire year it was 1,135 per cent. of the premium income. Thirteen offices have withdrawn altogether or disappeared from business since 1905, but those who remain are at present reaping a rich reward.

LLOYDS BANK.—The balance-sheet for May shows liabilities consisting of current and deposit accounts £70,216,220, and bills accepted or endorsed £1,548,763, and assets of cash in hand and at Bank of England £11,918,741, cash at call and short notice £5,866,197, bills of exchange £7,917,109, Consols and other investments £11,665,766, and advances to customers and other securities £38,151,109.

American Business Notes.

It is becoming a question of some interest as to when the New York market will again begin to be uncomfortable for want of means. As yet credit is being generated so adroitly and capital is being secured abroad with such energy that there is never even a flurry in the Wall Street short loan market. Exports of gold, however, cannot continue as they are doing, nor can the deficit of the Washington Government expand with the speed now threatening without producing trouble. As it is, money does sometimes betray a tendency to stiffen in the open market, although the bulk of the call loan business is still done at less than 2 per cent.

Last week's return of the New York Associated Banks, however, displayed a loss of gold, the average of the stock of it held being £557,000 down, and as loans also fell off by more than £703,000 the deposits suffered to the extent of £658,000 in spite of an increase of £249,000 in the average of greenbacks held. The difference in the surplus reserve, however, was barely £144,000 the wrong way, and the average was still £9,438,400 as against little more than £1,196,000 a year ago. Where, then, is the money coming from to carry on the bull campaign on the Wall Street Stock Exchange? It is being supplied by the banks and trust companies outside the Clearing-house, whose averages for the past week show an increase of £2,892,000 in the loans and investments, making the total under this head £166,244,000. Their specie average has also gone up £648,000 to £11,145,200, and they held nearly £19,000 more legal tender notes at £2,434,200. Deposits amounted to £148,407,000, an increase of almost £4,000,000, and it is observable that the total of the loans and investments exceeds that of the deposits by nearly £18,000,000. There is inflation in these figures, but apparently not yet to an extent calculated to ruffle the equanimity of the Money and Stock markets. They are borrowing in Europe and discounting the harvest.

Meantime the business of the country shows little sign of revival. On the contrary, the evidence of distress is continuous and sometimes disquieting. Another railway has gone into the hands of receivers since we last wrote. As a consequence of the bankruptcy of the Pittsburg and Wheeling Terminal Company, the Wheeling and Lake Erie road has succumbed. It has a capital of one sort or other amounting to between £8,000,000 and £9,000,000, as far as the published figures indicate, and both these bankrupt roads are only adjuncts of the wattle and daub Wabash system which is controlled by the Gouids. Mr. George Gould has left for Europe, and before he departed he graciously bestowed some cheering words upon newspaper reporters. Everything is all right with the other roads, he assured them, and he does not think any more receiverships likely, although the Missouri Pacific has not been able to pay a dividend, and although traffic receipts upon these and other railways continue suggestively poor. But then, has not the Missouri Pacific Company been able to sell £6,000,000 of 4 per cent. bonds at some price or other?

And now the Union Pacific has launched its £10,000,000 loan, and Mr. Harriman graciously permits people in this country to subscribe for £4,000,000 of it at what he doubtless considers the moderate price of 95½ per cent. He tried, it is said, to sell it to the syndicate at 90. Does it pay 9½? The security may be right enough, though decidedly not cheap; it is the men who control the property whom we doubt, and because of their past deeds and manipulations we shall carefully abstain from counselling anybody to put money into these bonds. In fact, it would be folly to do so, because there can be no end or limit to the capital demands of a system like that of the Union Pacific. It is not a mere railway always requiring, but a sort of financial trust in addition, buying control here, selling stocks of other railways at a profit,

using money provided by stockholders and bondholders to carry out gigantesque gambles by means of which sundry individuals and not the company or organisation make money. Already it is notified that on October 13 next Union Pacific shareholders will be asked to double the recently authorised bond issue of £20,000,000, half of which is now put upon the market, but this additional £20,000,000 is to provide for first mortgage bonds outstanding. What is behind that device? We are not now able to surmise, but the first mortgage bonds under terms of issue cannot be redeemed at the option of the company before July 1, 1912, and even then they must be bought in at a premium of 2½ per cent. Moreover, the bonds are convertible into stock reckoned at 175 at any time before July 1, 1917, we should therefore infer that what is wanted is elbow-room in capital creation, the means at hand with which to perpetrate fresh grabs, coups and market strippings.

Mr. J. P. Morgan is said to have bought £6,000,000 of New York City paper, and at a concealed price, and the city will want the money. Between now and the end of next year its expenditure is computed at £29,250,000, and there is a debt of £8,770,000 due to be redeemed before the end of the current year. Probably New York is still good for all its obligations, but how long will it continue to be?

An interesting display has been issued by the banking authorities of Washington, setting forth the extent to which Clearing House certificates were emitted by the banks during the panic. Details are of little interest here, but we may note that the aggregate creation of New York was over £20,200,000, and the maximum amount outstanding at no time exceeded £17,700,000. The aggregate issue for the whole Republic was almost £50,000,000, though the maximum amount outstanding was at the worst barely £44,000,000. In one place the amount created was as low as £9,000. When it is recollected that the legislature at Washington has just sanctioned the creation of emergency currency to the amount of £100,000,000 it will be seen that the scope for inflation thus granted goes far beyond anything demanded by business exigencies during the worst time of the October panic. And these emergency notes are to be issued against, among other papers, bills of exchange, which may be mere accommodation bills, thus giving a temptation that may prove irresistible to the concoction of all manner of impostures.

Revenue is decreasing a little in Canada, but nobody pays the slightest heed to that because all the reports about the coming harvest are of the most optimistic description. According to present appearances, says the *Times* Ottawa correspondent, Western Canada will yield the biggest crop in its history. Meanwhile the Dominion Parliament is passing the supply votes at such a slow pace, that Press and Parliamentarians are alike clamouring for the institution of the closure. Perhaps there may be some "deal" on hand behind the scenes conducing to the reluctance of the members to expedite business. Or are they all watching the crops grow out West? What will Canada do if nobody should want its corn? We also have the promise of a good harvest. So has the United States, so all Europe and Argentina.

Passing Events.

Much interruption to revenue gathering seems to have been caused last week by the beginnings of the Whitsun holidays. Customs alone did fairly well with £469,000, and estate duties at £389,000 might have been worse, but excise was poor at £228,000, and stamps not prolific to requirements at £156,000. As for income-tax, it accounted for no more than a beggarly £20,000, and the entire revenue of the week was only £1,276,380, which was £391,120 short of the outgoings, although the demands made by the various departments classed under "Supply" was only £1,438,000. After this month has entered the past the weekly revenue exhibits should begin to prove unusually interesting. It is impossible that trade should continue to ebb and the revenue to abound as it has done since the Liberal party came into power. Not only is the business overturn much smaller, but profits are being reduced on all hands, and therefore a recoil in the public income is certain. Mr. Asquith seemed to take no account of the signs of the times in his Budget estimates, so it is perhaps as well that we are to have an autumn session. He may be sobered a little by then.

It is not very cheering for the Government to find the various gatherings of delegates from friendly societies more or less disposed to sneer at the Old Age Pension Scheme. The Grand Master of the Manchester Unity of Oddfellows, one of the most powerful organisations of the kind, whose aggregate funds amount to £13,370,000, was particularly forcible in his condemnation of the measure, which he said would be more accurately described as an encouragement of improvidence than as an old age pension scheme. It was his opinion that the Bill in its present form would be highly detrimental to their own and similar societies. It puts a premium on unthrift, in fact. This, perhaps, may be cited as an extreme view, but many other speakers at the meetings of these various societies said practically the same thing, and all united in demanding a reduction in the age to 65. We fear therefore that the Bill is going to meet with a good deal of opposition in quarters that might perhaps have been expected to welcome it, but such is the fate of Governments that start out to play the part of providential grandmother for all the dispossessed in the land. We hope the project will be withdrawn for many reasons, not least because we cannot afford any such luxury, and the welcome it is getting should give the Government courage to drop it.

Speaking at a recent meeting, the Prime Minister of New Zealand announced that the revenue of the colony for the past fiscal year amounted to £9,065,000, the "highest on record." Customs gave £162,000 more, railways £143,000 more, stamp duties £185,000 more, and the income-taxes £117,000 more than in the previous year. Of course, such a foundation was one on which Sir Joseph Ward was able to excel himself in denunciations of those who "attack" the financial position of the country. During the last 12 years, he said, only one law had been passed increasing taxation, viz., a graduated land tax on estates exceeding £40,000 in value. But surely a new tariff, screwing up duties in many directions, has been put in operation within that time? And why, if New Zealand is prospering so furiously, we must always ask, should the borrowing be so tremendous? Sir Joseph declared that during the last five years the Government had borrowed £3,600,000 in Australia and nearly £2,000,000 in New Zealand itself. This is over and above what has been annually issued on the London market, of which he made no mention, and is much more than a carefully-managed community of New Zealand's size ought to require. Now that trade is diminishing the revenue will probably shrink back a little and chastened ideas begin to prevail.

Sundry quaint pieces of news from the same happy land have been telegraphed by the *Times* Wellington correspondent. The most important is to the effect that in spite of the wave of prosperity which diligent cultivation and sheep farming together with loan raising has created in the colony during the last 12 years, charitable relief has increased beyond the bounds of reason. Outdoor relief is greatly abused, and this in spite of an elaborate old age pension scheme. Other information indicates that those arbitration and conciliation courts which were set up and boasted about without stint have proved an utter failure. Sundry Blackball strikers were fined by this court and refused to pay the fine. Their furniture was seized, and the miners took occasion on the day of the sale to cease work and make a holiday of it. The total amount realised by the sale of bicycles, sewing machines, and furniture was 12s. 6d., the matter being treated as a huge joke. So much for sham philanthropy and State interference.

At last Chili is to be in a position to construct a harbour at Valparaiso. A syndicate of French and

British firms, consisting of the Société de Construction des Batignolles, Messrs. Fould et Cie, Messrs. Dollfuss and Viriot, Messrs. Erlanger and Co., and Pauling and Co., has undertaken to execute the work and convert Valparaiso into a first-class port by constructing breakwaters which will shelter the greater part of the bay and jetties alongside which vessels will be able to moor. The cost is put at £4,000,000, and the syndicate is to find the whole of the capital required. It will reimburse itself from the revenues of the port, which it will manage for 32 years, the Chilian Government guaranteeing 5 per cent. interest on the capital and a sinking fund of 2 per cent. The completion of this work is of the highest importance to the republic.

India last week had little rain over the greater part of the country, except in Burma and the North-East. The weather during May has been drier than usual, and the mean rainfall for the month for India as a whole was 13 per cent. below normal, so the numbers in receipt of famine relief, although slightly down so far as the United Provinces are concerned, still amount to 1,308,000, and no immediate prospect of improvement can be looked for.

Mr. W. R. Lawson has brought together the lively and interesting articles contributed by him recently to the *Financial Times*, in a pamphlet to be got from the publishers of that paper, post free, for sixpence. The publication is opportune, and a good many interesting hints, facts and comparisons will be found in the pamphlet which should be helpful to our law-makers when they come to deal with Mr. Lloyd George's Bill. To us one of the most fascinating chapters is that entitled "An Ideal River Front Which Might Have Been," but the thoughts excited by it are too unpleasant to dwell on, and the picture, at any rate, has now small practical value. What the citizens of London have to see to, and to watch that Parliament sees to, is the creation of a first class port with perfect approaches so that we may have done with the ever-recurring outcry about the Continent beating us and the decline of the Port of London. To accomplish the object in view much more will be necessary than the absorption of all the joint stock dock companies of London and the substitution for their boards of directors of a composite port authority or board. The whole system of handling business requires to be overhauled, and the railway companies must be coerced if they cannot be persuaded to lend a hand in perfecting the system of handling the traffic. One of the most telling parts of Mr. Lawson's pamphlet is that in which he describes the obstructive policy of the railway boards when the dock companies wished to get powers that would have enabled them as a constituted railway authority to provide for the efficient handling of the goods arriving at and leaving port. The railways destroyed their Bill, and we, consequently, have excellent and admirably managed warehouses and provision for storing and classifying goods, and the most primitive and old-fashioned method of collecting and distributing these goods it would be possible to imagine. Hence there is enormous waste at the Port of London. Goods are mishandled, lost, damaged, destroyed; time is wasted in hauling them up and down stream, and there is neither co-ordination nor concentration in the treatment of commodities reaching the port. All this will have to be changed, and to effect complete reform here will prove to be a much harder job than the mere buying up of the dock companies.

BRISTOL WAGON AND CARRIAGE WORKS CO., LIMITED.—After adding £2,600 to depreciation fund as compared with £4,000 a year ago the board of this company had £21,163 left, out of which it has paid two dividends of 4 per cent. on the ordinary shares together with a bonus of 2 per cent. on the called-up preference and ordinary capital alike, and after doing all this will have £10,163 over to carry forward. It now (March 31) owns 453 railway wagons, but there is no profit and loss account to show what the working of the business may mean. Sundry creditors and the contingency account are put together at £85,468 all owing by the company, and debtors owe it £42,180. Its stock-in-trade is put at £84,133, and it holds investments entered at £33,054. Cash and bills receivable amount to £4,957.

Continental Memoranda.

In spite of occasional fits of realising the Paris Bourse has been in rather a happier mood. Prices there show on the whole a tendency to improve, while those in Berlin keep sagging the dominant influence in both markets being the visit of King Edward VII. to Tsar Nicholas II. France perhaps hopes to see as one result of the new accord thus staged in the eyes of men the English market opened more freely to Russian securities. Berlin, reflecting the feeling throughout Germany, is haunted by the fear lest some sinister design should lie behind this toasting and feasting under strict police and military guard. So far as has been made public, the only political result of consequence arising from the meeting seems likely to be the settlement of Macedonia and of South-Eastern Europe generally at the expense of the moribund Turkish Empire, but doubtless many other points of difference have been discussed, although we do not imagine that anything in the nature of an alliance hostile to Germany has even been mentioned.

Apart from these political questions, cheaper money is everywhere tending to put strength into stock markets, and although Vienna grumbles that London no longer leads the way, that is only a transitory mood, because Vienna is busy with the Hungarian loan, the Vienna loan and other new creations of debt which come at a somewhat inconvenient moment, seeing that the note circulation of the Austro-Hungarian Bank is much distended while its metallic reserve is decreasing. On the surface, however, prospects are fair, and the prediction of some Paris financial writers that a great development of business and gambling is to take place may be verified. At any rate, markets are superficially getting over the difficulties everywhere created by the collapse in the United States last October, and if only new stocks find buyers there is considerable probability that speculation will again get into full swing all over the world in preparation for the next smash.

It is said that the Credit Lyonnais is going to issue in Paris the £1,200,000 forming the balance of the Moscow City loan, the first part of which has been placed here. Will the bonds be interchangeable between the two markets, because if so that would be a point in favour of the price? We think well of the Moscow loan, although deprecating any attempt to introduce Russian State securities here. It will be time enough to do that when the Tsar can go about amongst his people and amuse himself as King Edward does, or when Russia modifies her tariff in the interests of her people, and is able to give better protection to private foreign capital.

Roumanian foreign commerce was larger in 1907 than in any previous year, and against imports of about £19,000,000 shows exports of nearly £20,000,000.

Some interesting statistics have been published relative to the progress of Suez Canal traffic. Since 1890 the receipts have risen from £2,800,000 to £4,800,000 for the past year, an expansion of 70 per cent. Working expenses have also increased, but at nothing like the same ratio. They came to £1,280,000 in 1890, and were only £1,740,000 for the past year, or barely 36 per cent. It follows that the nett profit has risen by about 100 per cent. from £1,520,000 to £3,000,000. All the time the Canal has been improved in various ways, deepening work goes on continually, and not only has the original breadth been widened, but an elaborate programme of improvements was begun last year, to be finished in 1912 or 1913. When that date comes it is hoped that the Canal throughout its length will be of the same width as at the passing stations now.

Spain is not particularly happy in its financial circumstances, although the country is undoubtedly doing better in some respects. Its foreign trade, however, has been severely handicapped, so far at least as iron ore is concerned, by the recoil in trade, our own imports of this commodity from Spain being now lower to a very distressing extent. This, however, will only

be a temporary obstruction, and if Spain gets the fine harvest promised recovery should set in. Last year's harvest was bad, involving large imports of grain, and the payment for this has depressed the value of the peseta. There are many ifs, however, in the problem. If buyers would come forward for the iron and other metals waiting for over a year to be shipped, if the Finance Minister had more initiative than his predecessors, and would think out some plan for demonetising part of the silver coin now glutting the vaults of the Bank of Spain, and replacing it by gold, and if at the same time he could stop the forgery of silver money, the exchange might recover. Meanwhile, the revenue is falling off, and the subscriptions to the new issue of Treasury obligations are coming in very slowly.

A crisis is apparently almost at hand in the Brazilian coffee trade. It originates in that daft valorisation scheme into which the Province of San Paulo plunged without regard to consequences, and the action of the Bank of France in refusing to discount Brazil coffee warrants except on the basis of 40 francs per bag is likely to precipitate the collapse. One paper says that the San Paulo Provincial Government has £500,000 of bills soon to fall due in London, held by a bank here, and it will have difficulty in raising the money. These and other maturing obligations are forcing sales of coffee, and these can only proceed at the risk of a complete breakdown in the market.

News comes from abroad that the United States Steel Trust is negotiating with the Russian Government for the sale of 1,000,000 tons of steel rails to be used in completing the Siberian Railway. We hope it will take payment for the order in Russian bonds, and that the price will be satisfactory to both parties. Russia cannot afford a high price, even if she borrows the money with which to pay the bill. And what about Russia's own iron works, those belonging to the Government included? The multitudes of the unemployed increase in Russia now, not only in the metal but in the textile industries.

From Paris also comes a story to the effect that Japanese financiers lately went to New York to negotiate a loan of £30,000,000, and that they have come to terms with a syndicate, at the head of which are Messrs. Harriman, Schiff and August Belmont, who have accepted the responsibility of launching the loan. Nothing whatever of this information seems to be known in London, and we should doubt its truth; hope, indeed, it is not true, in the interests of Japan herself.

A loan for the Brazilian State of Bahia, amounting to 2,000 contos, has been arranged with the Bank of Brazil on a 7 per cent. basis. That means an early introduction of the bonds on European markets.

Some interesting comparative figures relating to banking deposits have been put together by M. Aynard, the well-known Lyons banker and director of the Bank of France. He points out that the total amount of deposit and current account balances in France is only about £180,000,000, while in England the total is about £900,000,000 for the home banks alone, and if foreign and colonial banks with money in London be included it is £1,480,000,000. In the United States, however, the total is £2,600,000,000, and M. Aynard declares that there is too much dormant wealth in France. That is no doubt true. On the other hand, there is a great deal too much credit in the United States, and the deposit liabilities there are to a much greater extent than in any other country the product of debt.

A loan of £2,500,000 for the city of Berlin has been bought by the Deutsche Bank at the price of 98. It will doubtless be consumed at home. According to a Munich paper the managers of the Reichsbank have discovered that at certain of its branches bills have been renewed and renewed for two or three years. As it is against the custom of this bank to carry credit bills, the directors have decided to eliminate these as quickly as possible. We hope no upset will arise in consequence, but the state of credit in Germany continues unpleasantly ticklish. According to official statistics the number of failures in Germany for the first quarter of 1908 was 3,189. This compares with 2,516 in the same quarter of 1907.

People in Germany have been hoping that business would revive, but it grows steadily worse, and the metal and mining industries are described as being in a very nervous condition. The Luxemburg Pig-Iron Company has announced the intention to restrict production by 40 per cent. in the third quarter of this year, and the Düsseldorf Pig-Iron Syndicate is meeting with serious difficulties in renewing its contracts, it being more than likely that renewal is impossible on the present basis. Bank and Industrial shares also continue weak, and are naturally sympathetic with each other because so many of the industries have been called into existence and sustained while living by the banks.

Between 1898 and 1905 Russian exports continually increased, while the imports, thanks doubtless to the inhuman tariff, remain pretty much unchanged; but in 1906 exports fell off to an important extent and imports went up, the effect doubtless of much borrowing abroad. Last year the decrease in exports continued, and simultaneously imports went up by about £5,000,000 to almost £70,000,000. Exports, however, are still largely in excess of imports in value, although the decline has been notable since 1904. But the heavy and continuous drain put upon the country by its enormous foreign debt demands on the average of years much more than the margin shown between import and export values, and, therefore, the danger now is that, unless further loans can be raised abroad to stave off the inevitable, gold will be drawn out of the country and the value of the rouble forced down.

The Week in Mines.

The Carry-Over.

As soon as they returned from the Whitsun holiday dealers in the Kaffir Circus plunged into the carry-over arrangements and found the account to be settled of fair dimensions. There was not a great deal of stock to be carried over for the public because, as we have remarked before, they have not been drawn into the business to a really noticeable extent, but professional speculation has increased considerably, and rates were inclined to be stiffer. The general charge on Kaffir shares was 6-7 per cent., or about ½ per cent. higher than on the last occasion, but Rand Mines, Johnnies, Modders and Gold Fields were all taken in at 5½-6½ per cent. and East Rands which opened at 4½-5½ per cent. subsequently went off to even, the shortage being attributed to a "straddle" by some dealers in connection with the amalgamation. Among Diamond shares, De Beers were carried over at 3-4 per cent., Premiers at ½ per cent. more, Jagers at 4½-5½ per cent. and New Vaals at 5½-6½ per cent., a gradually ascending scale according to the importance and size of the company. The Rhodesian general rate was 6-7 per cent., Chartered being continued at ¾d. and Bankets at 5½-6½ per cent. West Africans were borrowed on at 6-8 per cent., West Australians at 5½-6½ per cent., Broken Hill and Australian Copper shares at 5-7 per cent. and the American group at 6-8 per cent. The making-up list again had a most attractive look under the lead of Diamond shares, Premiers being up 1 5/16 and De Beers 1⅛. Ferreiras and South African options rose ⅜, H. F. and Rose Deep ⅝, Gold Fields and Modders 9/16, East Rands and Geldenhuis Deep ½, Rand Mines, Jagers, Casons and T.C.L. 7/16, Gold Trusts, Central Minings, Angelos, Driefonteins and Giants ⅜ and a host of others from 5/16 downwards. West Australians gave advances of 7/16 in Horseshoes and 5/16 in Ivanhoes, while among Copper shares Rio Tintos were up 2¼, Anacondas 9/16 and Spasskys 13-32, but Libiolas dropped 3/16. In the Miscellaneous assortment, Santa Isabels were ½ lower and Mexico El Oros made up ⅛ down.

Kaffir Shares.

So far as it has gone the new account has been a decided disappointment. The market wound up before

the holidays with such a blaze of strength that the bulls came back on Tuesday prepared for another brilliant display, but from the moment the carry-over arrangements were completed things began to go off. During the first hour or so there seemed a chance of further improvement, but the persistent absence of the public is rendering the game an increasingly difficult one to play. The moment the shop support ceases and professionals think about taking a little profit prices begin to move down, and the more or less artificial character of the recent upward drive is revealed. The Continent instead of continuing a buyer turned round, Berlin selling in this market as well as in others and in all directions trade became appreciably smaller. It is curious the way business dries up the moment the market turns. There is, of course, no reason to suppose that the magnates intend to throw up the sponge just yet. If they do, it means that the latest attempt to work the market for their own ends has signally failed. It must have been an enormously expensive business to get prices to their present level, and while the Continental public may have helped the movement to some extent, the same cannot be said of investors here. The New Modderfontein sends further news regarding the proposed increase in the capacity of the reduction plant from 30,000 to 45,000 tons per month. The extension will consist of the addition of 60 stamps and one tube mill at an estimated cost of £104,000 which will be provided out of profits without interfering with the present rate of dividends. This rate we may assume is 15 per cent. per annum, the company having just declared the unexpectedly good dividend of 7½ per cent., which compares with 3¾ per cent. last June and 5 per cent. last December. The company's latest return, by the way, does not look at all good. Other dividends will be found set forth below. The output and labour returns for May did not give entire satisfaction. Compared with April, which contained a working day less, the yield of gold was larger by 16,160 ozs., meaning that the daily average was slightly smaller, but a good deal of gold appears to have been put to reserves. For the first time for many months the recruiting of natives fell short of the time expirations and other wastage, so that the number of "boys" employed was less by 1,495. As during the same period the Chinese labourers employed were reduced by 2,392 the total shrinkage was considerable.

The following dividends have been declared for the opening half of the year:—

	Dividend for Half-year to June 30.	Issued Capital.	Amount of Divid'nd	Dividend for Half-year to June, 1907.	Dividend for Half-year to Dec., 1907.
	%	£	£	%	%
New M'dderfontein	7½	1,200,000	90,000	3¾	5
Robinson Central Deep	45	4,400,000	198,000	37½	40
Apex	10	148,931	14,893	10	10
Village Main Reef	25	472,000	118,000	20	25
Geldenhuis Estate	30	200,000	60,000	40	35
Ferreira	150	95,000	142,500	150	150
Robinson	15	2,750,000	412,500	10	14

Rhodesian Land and Finance.

Owing to their rubbishy nature it is likely to prove much more difficult to keep Rhodesian things on the move than it is the steady dividend-paying Rand shares, and if the South African markets take a pronounced downward turn the great majority, which are little if at all better than waste paper, will probably go back with a bang. They were decidedly off colour this week, and the absurdity of valuing Tanganyika shares at £4 is beginning to appeal to the most short-sighted bulls. This particular counter relapsed somewhat smartly, and the Banket things were anything but gay. Land and Finance shares, after an initial spurt, kept Kaffir shares company and closed heavy, Central Minings dropping ¼ and the others in proportion. Diamond shares made a brave effort to keep up, De Beers climbing to 11 1/16, Premiers to 7 7/16 and Jagers to 3 3/16, but a couple of diamond firms in America were reported to have gone under, and this influence together with the all-round dulness speedily took prices back. Among the smaller shares Roberts Victor went up to 2, but New Vaals and Frank Smiths did not hold early gains.

Australasian and West African.

West Australians were a fairly good although quiet market, and Horseshoes had a smart rise consequent on some buying from Paris, the market being bare of shares. The Great Fingall dividend of 2s. 6d. per share was more than had been expected, and the shares also went ahead in company with Kalgurlis, Lake Views and Ivanhoes. Great Boulders were a little dull. A 2s. dividend declared by the Associated Northern Blocks was quite without influence. The colony sent enough supporting orders to give Broken Hills a firm appearance, the metals being fairly steady, but all told the amount of business going on was quite insignificant. West Africans were inclined to improve, and some of the leading shares added pence.

Copper, Tin and Miscellaneous.

Copper shares have been an improving market, and Rio Tintos soon rose to 66. A small rally took place in the metal, the outlook for which is said to be better. Advices from the States were likewise more encouraging. Anacondas, Tharsis, Mount Lyells, and most of the other leading shares all showed small gains, but Great Cobars were a poor market, and dealers are anxious for the report and accounts. Tin and tin shares were weaker, and in the Miscellaneous list the American group hardened all round, Esperanzas being assisted by a dividend of 3s. 6d. per share. Indians showed some irregularity, and Siberians were just as before.

MINING NEWS.

*** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Transvaal Gold Returns.—During May the output of gold from the Transvaal was 581,992 ozs., being an increase of 16,160 ozs. over the preceding month, which contained one working day less, so that the daily average was down by 87 ozs. But some 15,000 ozs. is said to have been put to reserves, so that the actual yield shows considerable improvement. Value of the output was £2,472,143, and with the exception of last December, when the figures were swollen by large contributions from reserves, the total is the highest reached. For the first three months of the half-year the yield has been 2,824,984 ozs., worth £11,999,760. Subjoined is our usual comparison:—

—	1903.	1904.	1905.	1906.	1907	1908.

* Includes £53,766 not declared previously

Native and Coolie Labour.—The native labour returns are not so satisfactory. The number lost by time expiration and other wastage was 9,644, but the recruiting brought in only 8,149, owing to the sowings for the crops now proceeding, and the nett loss for the month was 1,495, reducing the native strength from 130,991 to 129,496. The loss of Chinese amounted to 2,392, making a total decline in the number of workers of 3,887. Subjoined are the complete particulars for the past twelve months:—

Month.	Natives Joined.	Natives Left.	Nett Gain or Loss.	Natives Employed end of Month.	Chinese.
May, 1907	7,649	7,804	155*	91,669	53,409
June	6,065	8,014	1,882*	89,787	51,497

Rand Reconstructions.—We mentioned last week that plans had been prepared for the reorganisation of the Bantjes Consolidated Mines and Vogelstruis Consolidated Deep, and now the essential details are available. Apart from minor points of difference, quite natural where two separate undertakings are concerned, the schemes are identical, and it is fairly obvious that the parties responsible for the proposal are the same in each case. In the case of the Bantjes it is proposed to reduce the capital by three-fourths to £108,588, giving shareholders one share for every four now held, and then to increase it to £248,588 by the issue of 140,000 new shares at par. These shares will be guaranteed without remuneration, and in the first instance will be offered to present proprietors in the proportion of 8 new for every 25 old. The guarantors are to be given an option for two years on a further 140,000 shares at £1 2s. 6d. each, and those who subscribe for the first issue will share *pro rata* in the option. The funds to be provided by the guaranteed issue of 140,000 shares would be more than sufficient to provide for the erection of 40 stamps and 2 tube mills with the necessary cyanide plant and to liquidate existing liabilities. When the mine closed down in 1899 ore reserves consisted of 158,000 tons with an average assay value of 9 dwts. in the eastern section and 75,000 tons valued at about 7½ dwts. in the western section. As to the Vogelstruis Deep, the reduction of capital on the same lines will bring it down to £98,250 and the additional share issue will be 131,000, raising the total to £229,250. From that point onward the terms are identical with the Bantjes. If the proposal be accepted it is intended to equip the mine with 60 stamps with cyanide and slimes plant, and crushing would probably be started within nine months, by which time ore reserves should amount to approximately 156,000 tons. The funds provided would be sufficient to carry on this work, and to meet all payments in connection with the debentures up to and including June 30, 1909.

Village Main Reef Gold Mining Company.—This well-known South African company, one of the few registered in this country, has a pleasant record to place before the shareholders for the year to December 31, 1907. The 220 stamps crushed 462,900 tons of ore, which yielded 124,883 ozs. of fine gold. The subsidiary plants gave a further amount of 59,512 ozs., so that the total production was 184,396 ozs. valued at £775,963 or £1 13s 6.314d. per ton, being a decrease of 1s. 1.899d. per ton compared with the preceding year. Working costs were £443,573 or 19s. 1.980d. per ton, the considerable decline of 3s. 2.357d., and the profit comes to £332,390 or 14s. 4.334d. for each ton. Interest and sundries increase the profit to £338,536, and after providing the regular charges, which include profits tax, debenture interest and depreciation, the sum remaining is £269,342. To it is added £34,266 brought forward, making £303,608, and after providing two dividends of 4s. and 5s. per share respectively there is the substantially increased sum of £91,208 to be carried forward. This is a really excellent display, and we may note that the dividend just declared for the half-year to June 30 brings the aggregate to date to £1,448,743. The manager of the mine says that its general conditions have not altered materially, and if no interference with labour intervenes the average profits of the past year will be well maintained in the immediate future. The company has a large tonnage of low grade rock, and every effort is being made to mine these blocks as narrow as possible in order to bring them within the payable limit. Payable ore reserves are calculated at 2,436,302 tons of an average value of 6.98 dwts., an increase in quantity of 154,940 tons and in value of 0.13 dwts. The two additional tube mills at the Wemmer mine and the slimes plant to deal with the accumulated tailings at the mine, have been erected, one of the mills commenced running in February, 1908, and the slimes plant has been in operation since August last.

Talisman Consolidated.—In the year to February 28 the ore crushed amounted to 46,384 tons, which gave 35,577 ozs. of fine gold and 335,026 ozs. of fine silver, the value of which was £196,900. All told, the revenue was £199,347, and after meeting expenditure of every kind the balance of profit is £104,155. From it shareholders have had six dividends of 1s. each per share, and the sum of £36,334 brought in is increased to £47,489. The two dividends declared this year have aggregated 2s. 3d. per share. Development work during the year opened up 44,066 tons of ore, and the reserves now amount to 67,221 tons, estimated to be worth £3 16s. 6d. per ton. The question of increasing the power and pumping plant to provide for the development of the mine in depth has been under consideration for some time past, and the board has now authorised the purchase and erection of plant sufficient to enable the mine to be worked at much greater depth, the cost of which is estimated at £18,500. It is expected that the complete equipment will be in operation by the end of December next. It is proposed to elect a third representative of the New Zealand shareholders to the board.

Briseis Tin Mines.—This company did well enough during the twelve months to December 31, 1907, the quantity of black tin obtained from Briseis and New Brothers Home No. 1 Company being 1,413 tons, which produced 1,031 tons of metallic tin. Of this 910 tons belonged to the company, and realised £151,222 nett, the average price obtained being £166, which is heavily in advance of the figure now ruling. Trading profit after paying all expenses was £109,220, from which depreciation and expenditure upon the Ringarooma property took £10,383, leaving £92,836, to be increased to £135,072 by the balance brought forward. Four quarterly dividends of 9d. per share took £90,000 and £45,072 is carried forward. In the circumstances the current price of the shares, 6s. 6d., looks low, but the company's capital is heavy at £600,000, and the outlook is apparently none too promising. Referring to future operations, Messrs. Lake and Currie, the consulting engineers, say that providing no unforeseen reduction occurs in the average quality of the remaining drifts, it is hoped that the present average output may be obtained from the Briseis property until the southern section is exhausted, which will probably be towards the end of this year. Thereafter a considerable reduction in the output will be inevitable, as it will be impossible to maintain the present total from the northern section alone. During the year a large amount of prospecting work was done on the Ringarooma property, but it will probably be two years before sufficient overburden is removed to enable systematic operations on the drift to be commenced.

Botallack Mines.—According to the report of this Cornish tin mining company made up to March 31 a considerable amount of work has been done at the mineral section of the mine. The 30-fathom level east has been opened up, and tram lines laid for a total distance of about 50 fathoms from the shaft. These developments have produced excellent stores of tin, so says the report, and there is evidence of a considerable quantity of ground existing above the 30-fathom level which will provide payable stoping ground for use immediately the battery starts working. Twenty head of stamps with the necessary dressing plant have been erected, and will commence crushing this month. Under its lease from Lord Falmouth the company was under covenant to start sinking a new central shaft within two years. This shaft has already been commenced and is now down to a depth of 295 ft. from the surface. During the progress of the work a new lode has been passed through showing good values, and a crosscut at depth is being commenced with a view to proving this lode. Pumping has already been commenced at the Wheal Cock section of the mine, and this has been encountered to the 33-fathom level below adit. The electric pumps have proved highly satisfactory. Development expenditure to date is £16,654 and the London outlay £896 nett, while the cash balances stand at £16,780.

Russian Collieries.—This undertaking does not make a brilliant display for the nine months ended January 13 (December 31 old style), but it is some improvement on the previous year. In future the accounts will be made up to the date mentioned, so that the annual meeting may be held earlier in the year than has hitherto been the case. Output of coal for the nine months was 175,700 tons, an increase of 33,437 tons against the corresponding period, a small quantity was purchased, and stocks at the beginning of April were larger so that the total to be handled was 191,999 tons compared with 152,560 tons. Sales showed the substantial increase of 37,298 tons, and an additional 5,759 tons at 88,757 were sent to the coke ovens, so that after allowing for slightly larger consumption at the collieries the quantity left in stock at the end of December was 3,904 tons smaller at 5,125 tons. Production of coke came to 62,928 tons or 7,619 more, and the sales were up 6,788 to 62,390 tons. Colliery earnings amounted to £15,821, being at the rate of £21,000 per annum, which goes against only £13,650 in the previous year. With these increased earnings and the saving effected by the moiety of interest waived by the debenture holders the balance standing at the debit of profit and loss account has been reduced from £6,862 to £3,208. The financial position does not look very healthy, and obliga-

tions are being piled up in a way that must mortgage the future far too heavily. The directors lament that their appeal for £50,000 on profit sharing debenture stock brought applications for £30,000 only, and while the provision of further working capital is doubtless very necessary the amount of debt fixed and floating is already exceedingly large. Arrears of preference dividend now amount to 35¼ per cent., and depreciation, debenture redemption and contingency reserves total only £36,000 against property and capital outlay of over £600,000.

GREAT LUCKNOW CONSOLS.—Shareholders of this reconstructed New South Wales mine are anxious to know how things are going on, and while the board would have preferred to delay until the shaft had been completed and a drive in the bottom level started, by which time they would have been in a position to give more definite information, it has been decided to call the proprietors together in order to report to them as far as possible. The programme as sketched out by the chairman at the last general meeting is being vigorously prosecuted, and until this has been accomplished no news of importance can possibly be forthcoming. Development and New South Wales expenditure from September 1, 1906, to February 29, 1908, came to £6,796, and London outlay from November 1, 1906, to April 30, 1908, to £2,105, but cash resources still amount to about £7,000.

NEW CRAVEN'S CALEDONIA GOLD MINING.—This small Charters Towers company reports that during the half-year to March 20 tributors crushed 305 tons for 243 ozs. valued at £769 and sands worth £142, making a total of £912, from which the company's royalty was £70. Its mining, general and other expenses being £530 there is a deficiency of £459, increasing the debit to date to £4,549. No. 4 level has been driven 86 ft. east, following an average of six inches of mineral stone. This level can be driven on its present course some hundreds of feet, and the stone is accompanied by a formation of an open character. A tribute has been let on a block below this level, and the company will probably shortly be raising stone from this section.

TRADE AND PRODUCE.

WHEAT.—Very little has been done in the markets this week, as they have been more or less of a holiday nature throughout. Prices were down from 1½d. to 2d. on the week for different foreign wheats, a drop in American markets, good weather reports, and tolerably heavy shipments all helping the easier tendency. English wheat has been in small demand, and was offered at from 6d. to 1s. per quarter cheaper. Farmers' deliveries for last week were 54,367 qrs. averaging 31s. 1d. against 34,122 qrs. averaging 32s. in the same week of last year, but the averages for the nine completed months of the serial year is 33s. 3d. per qr. against 26s. 8d. per qr. last year, and the present weakness is not looked upon as permanent. Imports continue moderate, and we received 35,177 qrs. against 470,377 a year ago. The quantities of wheat and flour on passage are much the same as last week, 2,890,000 qrs. coming to the United Kingdom and 1,890,000 to the Continent. American markets fluctuated a good deal, though always with a bearish tendency.

COTTON (from our Manchester correspondent).—There has been very little doing in our market this week, owing to the usual Lancashire holidays at Whitsuntide. All the spinning mills on American cotton have been closed down, owing to the short time resolution of the Masters' Federation. In various manufacturing districts weaving sheds have been entirely at a standstill, notably in Burnley. On 'Change business was only really attempted on Tuesday last, when a "sort" of market-day was held. Neither buyers nor sellers, however, were much inclined to enter into important engagements. Only a miscellaneous inquiry for piece goods has come through, few sales of weight being recorded. The all-round demand for India remains quiet. The China market shows very little alteration. Piece goods of various descriptions are irregular in quotation. Makers of best shirtings hold pretty firmly for late rates. Most kinds of goods made from Egyptian yarns are more deeply sold than other cloths. Producers, therefore, are firmer in price. The home trade demand remains of small dimensions. Distribution in the wholesale houses is fairly satisfactory. In the yarn section only a retail business has transpired. Bolton spinnings are rather stiffer in price than American kinds. There has not been much doing in either descriptions. Home counts remain slow. Practicable offers in shipping bundles have been few and far between.

WOOL.—Business has been slow and of a holiday nature. Little change has taken place in the value of crossbreds, for which demand at present is very dull, and merino consumers also show a disposition to mark time only, declaring that London basis of values is still too high, and both spinners and manufacturers are holding off in confidence that they will get what they want cheaper later on. English wools have done better, but here also there is a difference of opinion between buyers and sellers as to what the price ought to be in regard to the new clip. Home trade in manufactured goods is slack, and Continental and colonial markets are steady, except as regards South Africa and the United States.

COAL.—As elsewhere, Whitsuntide extended over the most of the week, and next to no business has been done. Foreign demands still continue large, though not quite so heavy as they were a short time back, and Scottish ports in particular show a noticeable falling off. Prices continue steady. Welsh steams are a little easier, but there are no indications as yet of a definite drop in them or in other varieties, except, naturally, house coals.

IRON AND STEEL.—Buyers of Cleveland pig-iron have been placing good orders for prompt and forward needs, and show more confidence in the market. Producers, therefore, are little satisfied with the state of affairs. Stocks in Connal's stores are again decreasing steadily, as production is not sufficient to meet requirements, and are now down to 54,103 tons. The smallest total reported for some years. East Coast hematites have better prospects also, home consumption has improved, and some large exports have been sent off this week, but west coast business shows no improvement. In manufactured iron and steels not much change has taken place for the better. Demand is poor, except for steel rails, and prices have been still further reduced in Scotland more than in England, for Scottish bar makers are only asking £6⅛, less 5 per cent., and English £6¼, less 2½ per cent. f.o.b.

COPPER.—The market has shown some improvement since it reopened. Some good speculative inquiries came forward. American advices were better, and though Thursday morning showed a reactionary mood with rather free offerings of forward metal, an increase in demand soon recovered the initial loss and sent cash metal up to £58⅝ and three months to £59⅛d. Prices weakened to-day and closed at £58½ for cash and £59 for three months.

TIN.—Some free selling in the East caused a reaction at the opening, and prices dropped to £128½ for prompt and forward metals. It recovered later, and though not very active, strong Eastern advices where business was done at £130¼, c.i.f. London, sent the prices up here. On restricted offerings prices hardened to £130 for three months, but dropped before the close to £129¾, prompt metal finishing at £129¼. To-day's close was firm at £129½ for three months and £129 for prompt.

SUGAR.—Some important transactions in America stimulated both trade and speculators over here, according to Mr. Czarnikow's circular, and prices for most kinds of sugar moved upwards. 88 per cent. has sold up to 11s. 4½d. f.o.b., and 75 per cent. at 9s. 9d. About 15,000 tons of Javas in store in Liverpool was placed at 12s. 6d. c.i.f. in New York, making a gap in stocks on this side, and fresh arrivals are not likely to reach any important figure. The American market has been active all round with hardening values, and should consumption not be checked it is expected that in face of this unusual statistical position of sugar over there foreign supplies will be in demand for some months to come. Landings in the three ports were only 20,000 tons this week, meltings 45,000 tons, reducing stocks to 304,000 tons. From cane-growing countries there is no change to report; seasonable rains are now general in Cuba, which, it is hoped, will benefit the growing crop, but the opinion prevails that a good yield for next season can scarcely be looked for. Cables from Java state that grinding is proceeding satisfactorily in most districts, though in some parts rains are still falling. From Brazil we hear that the crop outlook is better than last year, but there can be but little available for export.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

X.E.N.—Your figures are right enough, but the theory now is that costs will prolong life enormously. Your first example is in point. It will last fifty years longer the talk is. Letter held over.

J.H.—Prices may recede further for metals, and probably will, but although that should postpone buying it need not impel real holders to sell. There might be rallies in prices meanwhile. (2) We cannot get at the bottom of this, but the company has raised too many loans, and prices of the metal have shrunk, while stocks increase. We do not think you should buy yet. (3) "B" and "C" are about equal, and are surer of interest, meanwhile "A" is at present rather a gamble, but will rise fast if traffics improve. You have sent too much in your second remittance, and we hold 2s. to your credit.

B.W.J.—(1) Very speculative. Some of the properties owned are doing better, but not sufficiently so to justify any important rise. (2) The ordinary stock now keeps fairly steady, but we should not buy yet. Wait until you see some improvement in receipts. For your purpose the debentures are the more attractive at present.

J.G.M. (1) We do not see much use in them, but the capital account is closed, and good dividends seem assured for a good many years. (2) We cannot estimate the life, but it is at least 20 years. (3) No not quite, but the company has got some money to go on with. You should not buy just yet, but more trouble may come to the surface again. We treat these as two queries, and have placed 10s. to your account, with thanks.

VIRGINIA.—A New Jersey company, with a good monopoly. It is doing better, or was recently. The margin of revenue over bond interest is still microscopic, but the business will grow, and the bonds are a fair investment of their class.

H.H. The shares are fully paid, and you might venture on the number you name, although trade in that part of the country is not so good as it was.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended June 7, $2,789, decrease $1,803; aggregate from July 1, $213,339, increase $34,628.

Argentine North Eastern.—Traffic receipts for week ended June 5, £3,826, decrease £426; aggregate from July 1, £158,875, decrease £8,637.

Assam Bengal.—Traffic receipts for week ended May 9, Rs. 77,500, decrease Rs. 14,302; aggregate from Jan. 1, Rs. 16,67,059, decrease Rs. 42,675.

Bilbao River and Cantabrian.—Traffic returns for May £8,461, decrease £1,439; aggregate from January 1, £41,060, decrease £6,520.

Buenos Ayres Central.—Gross receipts for May £13,793, increase £698; aggregate from Jan. 1, £121,782, decrease £1,394.

Canadian Northern Railway.—Traffic receipts for 7 days ended June 7, $143,700, decrease $64,400; total from July 1, $8,481,700, increase $1,743,600.

Egyptian Delta.—Traffic receipts for week ended May 16, £4,862, increase £32; aggregate from April 1, £30,647, decrease £3,498.

Lucknow Bareilly Railway.—Traffic receipts for week ended May 9, Rs. 33,958, decrease Rs. 713; aggregate from January 1, Rs. 6,67,943, decrease Rs. 44,581.

Midland Uruguay.—Receipts for month of April, £6,277, decrease £898; aggregate from July 1, £57,177, decrease, £5,044.

North Western of Uruguay.—Traffic receipts for May, $21,000, decrease $4,751; aggregate from July 1, $220,481, decrease $16,346.

Quebec Central Railway.—Traffic receipts for the 1st week of June, $18,724, increase $132; aggregate from January 1, $450,976, increase $82,458.

Quebec and Lake St. John.—Traffic receipts for Feb. $31,941, decrease $2,037; aggregate receipts $68,216, decrease $1,606.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended May 9, Rs. 22,059, decrease Rs. 1,581; aggregate from Jan. 1, Rs. 4,34,024, decrease Rs. 30,300.

Uruguay Northern.—Gross receipts for month of May, £1,638, decrease £664; aggregate from July 1, £19,549, decrease £847.

White Pass and Yukon Railway.—Traffic receipts for week ended May 14 amounted to $23,250.

English.

Cleator and Workington Junction.—Receipts for week ending June 6, £931, decrease £350; aggregate from January 1, £26,906, decrease £4,381.

Cockermouth and Keswick Railway.—Receipts for week ending June 6, £921, decrease £116; aggregate from January 1, £17,839, decrease £1,726.

East and West Yorkshire Union Railway.—Traffic receipts for week ended June 6, £389, decrease £101; aggregate from January 1, £10,065, decrease £110.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Bath Electric.—Traffic receipts for week ending June 3, £793, decrease £166; aggregate from Jan. 1, £14,254, decrease £1,666.

Blessington and Poulaphouca.—Traffic receipts for week ending June 3, £12, increase £1; aggregate from Jan. 1, £185, decrease £40.

Bristol Tramways and Carriage.—Traffic receipts for week ending June 5, £5,294, increase £342; aggregate from Jan. 1, £108,044, decrease £4,055.

British Electric Traction.—Receipts of all the Associated Companies for the week ending June 5, £30,674; 428 miles.

Burnley Corporation.—Traffic receipts for week ending June 6, £1,235, increase £62; aggregate from January 1, £28,955, decrease £212.

Dublin and Blessington.—Traffic receipts for week ending June 3, £134, increase £7; aggregate from January 1, £2,462, decrease £155.

Dublin and Lucan.—Traffic receipts for week ending June 5, £134, increase £22; aggregate from Jan. 1, £2,351, increase £82.

Dublin United.—Traffic receipts for week ending June 5, £5,839, increase £116; aggregate from Jan. 1, £111,076, decrease £1,794.

Hastings and District.—Traffic receipts for week ending June 4, £1,014, increase £109.

Isle of Thanet.—Traffic receipts for week ending June 6, £583, increase £73; aggregate from Oct. 1, £10,939, decrease £676.

London County Council.—Traffic receipts for week ending May 30, £35,692, increase £4,882; aggregate from April 1, £285,796, increase £25,122. Miles 119⅛, against 116½.

London General Omnibus.—Traffic receipts for week ending June 6, £25,311, increase £3,332; aggregate from Jan. 1, £444,252, decrease £11,009.

London Road Car.—Traffic receipts for week ending June 6, £9,664, increase £840; aggregate from Jan. 1, £166,047, decrease, £3,674.

London United.—Traffic receipts for week ending June 6, £7,843, increase £1,269; aggregate from January 1, £132,654, decrease £1,459.

Provincial Trams.—Traffic returns for week ending June 6, £1,823, increase £131; aggregate from Oct. 1, £54,156, increase £211.

Rossendale Valley.—Traffic receipts for week ending May 29, £188, decrease £76.

Sunderland District.—Traffic receipts for week ending June 3, £504, increase £83; aggregate for 31 weeks £14,107, increase £1,190.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending June 7, £1,397, increase £190; aggregate from January 1 £26,166.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending June 3, £17,855, increase £1,303; aggregate from January 1, £408,181, increase £44,376.

Auckland Electric.—Traffic receipts for 28 days ending May 22, £11,341, increase £1,095; aggregate from January 1, £60,224, increase £6,844.

Bombay Electric—Receipts for April, Rs. 1,89,450, increase Rs. 48,150.

Brisbane.—Traffic receipts for month of May, £13,275, increase £2,273.

British Columbia Electric.—Nett earnings for April, $47,623, increase $4,373. Aggregate nett earnings, including income from investments from July 1 to Apr. 30, $785,789, increase $202,562.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for 7 days ending June 2, £7,281, increase £333.

Calcutta.—Traffic receipts for week ending June 6, Rs. 45,978, decrease Rs. 562.

Cape Electric.—Traffic revenues for the month of April, Cape Town, £9,874; Port Elizabeth, £3,153.

Carthagena and Herreiras.—Traffic receipts for the month of May, £1,542 decrease £2,714; total from January 1, £9,970, decrease £16,705.

Geneva Trams.—Earnings for April, fr. 190,227; increase fr. 8,883.

Kalgoorlie Electric.—Gross receipts for May, £3,939; aggregate from January 1, £18,979.

Lisbon Electric.—Earnings for April, milreis 115,614.

Madras Electric.—Traffic receipts for fortnight ended May 31, Rs. 18,129, increase Rs. 1,033; aggregate from January 1, Rs. 1,91,381, increase Rs. 18,815.

Melbourne Tramways and Omnibus.—Traffic receipts for May, £44,500.

Mexico.—Nett earnings for month of April, $204,055, increase $43,411; aggregate nett earnings from January 1, $802,524, increase $224,211.

Monte Video United.—Gross receipts for May, £17,193, increase £1,919; aggregate from Oct. £143,971, increase £21,856.

Perth (W.A.) Electric.—Gross receipts for week ended May 29, £1,358, increase £3; aggregate from January 1 £32,444, decrease £791.

Rio de Janeiro.—Gross earnings for 20th week 1908, $26,894; increase $2,333.

Sao Paulo.—Traffic returns for April: nett earnings, $125,484, increase $14,463; aggregate from Jan. 1, $507,246, increase $37,254.

Twin City Rapid.—Traffic receipts for the month of April, $493,497, increase $28,277; aggregate from January 1, $1,901,955, increase $80,793. Nett traffic receipts, $247,172, increase $41; aggregate from January 1, $890,961, decrease $17,814.

The Investors' Review.

The Week's Money Market.

BANK RATE 2½ PER CENT. (Reduced from 3 per cent. on Thursday, May 28.

Norfolk House, Friday Evening.

People have almost forgotten about the Bank rate in the City, and pay no attention to it. When the subject is mentioned the opinion is often expressed that we shall see no reduction below 2½ per cent., and it does not matter very much because the Bank would be for all practical purpose as far from the market were its rate 2 per cent. as it is now, and when money outside can be had at 1 per cent. or less on call and 1 to 1¼ per cent. on seven-day notice, it is impossible to keep the discount rate firm. Nominally the quotation for fine remitted bills of two and three months' usance has been 1⅜ per cent. all this week and four months' paper has been quoted at about 1½ per cent., with sixes at 2 per cent., but for short usances at least the rate has tended to go below 1⅜ per cent., and only stiffened up yesterday, when the supply of bills became fuller and while the market was under the influence of a gold story. Russia, it was said, is about to withdraw £4,000,000 of the metal from our market, and on that rumour bill brokers promptly raised their quotations to 1½ per cent. as a minimum for 60 and 90-day Bank bills and 1⅝-¾ per cent. for fours, sixes remaining at 1⅞-2 per cent. Under the influence of this transitory firmness the brokers offered bills to the joint-stock banks at 1⅜ per cent., but only one bank bought July and August maturities at the figure. This spasm of hardness gave place to renewed flabbiness to-day, although brokers still give 1½ per cent. as their finest two, three, and four months' rates. The banks are working a little more freely.

It was all the Russian gold fright, and there is nothing in it. If the market had looked at the latest return of the Imperial Bank of Russia it would have seen that nearly £700,000 of the gold reserve held by it abroad has been withdrawn during the interval between the returns. The bank, however, still holds in foreign markets about £13,500,000 of gold on account of the Government, and it is probable that the £4,000,000 referred to was the London portion of this in the custody of the London and Westminster Bank. Some of this metal has been going away, and it may continue to go because Russian domestic credit requires to be sustained, and because a new loan has to be arranged for, but its departure should have no influence whatever on current rates here for the Bank of England has nothing to do with the transaction.

Our market is, therefore, likely to remain in a helpless condition so far as rates go until well over the holidays. The changes in the Bank return are unusually insignificant and indicative of continued stagnation. There is not a movement of as much as £250,000 in any single item of the account. Coin and bullion has gone down about £205,000, but only £7,000 nett of that has gone abroad, the rest is merely holiday absorption of coin into the circulation, and that has been balanced by a reduction of £142,000 in the note circulation, so that the banking reserve is little more than £62,000 down on the week. Other deposits have increased by about £94,000, and Government balances are £37,000 less, so that all the week's business and pleasure has made no impression worth speaking of on the figures. Apparently the Bank continues to pick up other securities, and if it had not been for an increase of £128,000 in that item the open market would have been a few thousands poorer than it is, but not enough to make the slightest difference in current rates.

Abroad the position grows more comfortable so far as the State Banks and Bank rates are an indication. The note circulation of the Reichsbank is now £7,233,000 below the legal maximum compared with £4,930,000 the week before. It continues to draw in metal, and cash in hand is accordingly up £561,000, while the note circulation has dropped back nearly £1,253,000. The Bank of France is also becoming unusually strong, and not only did its note circulation fall back by £6,414,000 during its past week, but the coin in hand has again risen by £1,302,000 until the total is almost £124,420,000. Credit business seems diminishing in France as elsewhere, and cash is accumulating. Rates for money are also dropping back everywhere, and not only has the Swedish State Bank reduced its discount rate to 5 per cent., but the Bank of the Netherlands has come down from 3½ per cent. to 3.

Indian finance seems to be getting into a considerable coil, and we do not quite like the necessity the Simla Government has been under to put out £2,500,000 of India bills. The money is wanted to provide funds for capital expenditure on railways in India and for other purposes, the other purposes being principally the maintenance of the rate of exchange which is threatened by the excess of drafts offered in India on London. This week £1,000,000 of these drafts was offered in Calcutta and only £70,000 was sold yesterday. The total sales to date, however, amount to £4,114,000, and to-day the India Council has had its ten lakhs by special sale, after getting not a single application on Wednesday. Is this speculation against the coming monsoon?

Next week calls to the amount of £4,632,362 fall to be paid, of which £2,442,055 comes on Monday, when £750,000 is required on Southern Nigeria stock, £740,000 on Canadian Northern Railway 4 per cent., £225,000 on Grand Trunk Guaranteed, £362,500 on North British Railway 4 per cent. preference and £175,000 on Port of Calcutta bonds, besides other smaller items. Nothing much comes upon the market on Tuesday and Wednesday, but on Thursday £875,000 is due, £450,000 of it on Water Board "B" stock and £425,000 on Peruvian Corporation debentures. Then on Saturday the Canadian Pacific Railway Company hauls in £1,003,612 on its last issue of shares.

SILVER.

The improvement in the Indian trade position and anticipations of a favourable monsoon have brought a steady demand for silver from the bazaars, and have also caused a certain amount of covering by the "bears." Prices, consequently, have gradually hardened day by day and at 24⅝d. per oz. for cash and 24 11/16d. per oz. for delivery two months forward they show an improvement on the week of ¼d. per oz. No applications were received for the Rs. 10,00,000 of

Council drafts on India offered on Wednesday, but the whole amount was disposed of in bills at 1s. 3 29-32d. per rupee to-day. Another Rs. 10,00,000 will be offered next week.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict. cap. 32, for the Week ending on Wednesday, June 10, 1908.

The Stock Markets.

Markets have not been altogether satisfactory since business was resumed after the holidays. The public is not displaying sufficient appetite. On Tuesday and Wednesday a fair investment business went on, partly the result of orders accumulated over the holidays, but since then there has been a reaction, and yesterday the tendency was mean, prices weak and everybody disposed to grumble. Yet markets are broadening, not only in the Kaffir Circus, which is being whipped up in the most energetic fashion and without the slightest trace of compunction, but elsewhere. The good traffic show made by our railways for the Whit week at first induced people to buy, but there is no great strength in that market, and in spite of last week's increase of £144,517 the aggregate decrease for the half-year is still about £974,000, so that the dividend outlook is not particularly brilliant. No general observations whatsoever require to be made about the position elsewhere, except on one point—the rush of new issues is, stockbrokers say, damaging business more than helping it. As long, however, as these issues are absorbed and in proportion as they are absorbed, they must increase the amount of transactions passing through the market, and there is as yet no particular indication of glut. Public tastes show caprice, or judgment, just as the observer may estimate. Some stocks are thought too dear and let alone, others too speculative. When a thing looks cheap, however, it is snapped up at once, and the longer we have cheap money the larger will the appetite be, political frights and such like apart.

A new Swedish loan is at hand, and seems to be needed, for money has been very dear in Sweden, and only this week has the State Bank there been able to lower its discount and loan rates by 1 per cent. to respectively 5 and 5½ per cent.

Trustee Securities.

On the week Consols have again gone back, until the money price is no better than 87⅜. With that stock County Council, Water Board and India stocks have all dipped a little, but there has been no depression amongst Domestic Municipal stocks, in spite of the new issues about to come upon the market. Sheffield is coming for £1,500,000, Reading for £189,000, both in 3½ per cent. stocks, and already Stockton-on-Tees has bid for £315,200. There are many more loans of the same description to follow because the municipalities have been borrowing in secret from their banks, on short debentures, anyhow, and much of the public issuing now begun means a consolidation of floating debts. Colonial inscribed stocks have been resting, and there is practically no movement at all on the comparison of weeks, but we shall have new issues there likewise before very long. And this week Western Australia has offered £1,000,000 in 3½ per cent. stock, which has not been welcomed quite with enthusiasm. "We want 4 per cent. at least for our money," the investor says.

Contangoes.

When business was resumed on Tuesday the mining account occupied the market, and on Wednesday the regular account was dealt with. Money for it was obtained at 2 to 2¼ per cent., the finer rate being that charged by the banks to money brokers. Such low quotations made the arrangement of the speculative account a matter of the greatest ease, and when we find Home Railway stocks carried over at 4 per cent. and often less, everything included, the rate on American rails not more than 3 per cent. and on Argentine 4 per cent. as a maximum, while the contangoes on Foreign Government bonds were rarely more than 3 per cent. and sometimes barely 2 per cent., the comfortableness of the position needs no further illustration. The bear account in Rio Tinto shares helped to put the contango thereon down to 2 or at most 2½ per cent., but the rate on Hudson's Bay shares went up 1s. to about 3s. per share, and even that is only about 4½ per cent. on the current price.

Foreign Government Bonds.

There has been some selling of Japanese bonds, partly from abroad it is said, and we notice elsewhere rumours of another loan contracted in New York which have been current on the Continent, and may be cited as a cause of the selling. Brazilian bonds kept steady with slight improvements in some of them, and in spite of a small relapse in Argentine 4 per cents. the market for that group has been reasonably firm. Russian bonds, however, have not benefited by the meeting of the monarchs, and rumours persist that a new loan is being got ready. The only inter-Bourse stock of any magnitude which has moved up on the week is Spanish, but there are only Bourse reasons for the rise.

Home Railway Stocks.

Rather a sharp depression is shown on the week in some of the Home Railway stocks, but Great Eastern has benefited to the extent of 3¼ by the fusion project and Great Central preferred is ⅝ up, while Great Northern deferred has gained 1¼. The heavy stocks are also better, at least Great Western has gone up along with Midland deferred and North-Western, but the stocks of Southern lines are, with the exception of South-Western, inclined to drop back, and Brighton "A" is down 1½. Metropolitan stock has also lost that amount in spite of holiday traffic and the benefits coming from the Anglo-French Exhibition. Business, too, has been growing smaller as the week drew near its end. It may, however, revive again now that the account is out of the way, and debenture and preference stocks continue in moderate request with, as a rule, improvements in prices where any change has taken place. Chatham preference stocks, however, are flat along with the ordinary shares.

Indian and Colonial Railways.

The appearance of the half-yearly reports of Indian railways has not stirred up the market for their stocks to any activity. It is steady at the best, and East Indian 3 per cent. debenture stock has given way. The dividend on this company's deferred annuities is slightly down on the year, and there is no particular encouragement to buyers in the existing condition of Indian trade or finance.

The only sensation in the Colonial Railway department has been the tumble in Grand Trunk stocks. Nearly all the newspapers have taken to publishing bear homilies on the finances of this company, and with fairly good reason, for the last traffic exhibit, coming as it does after others equally disturbing, has brought the market to the opinion that there may not be enough nett revenue at the end of this half-year to cover the charge of the guaranteed stock, let alone the first preference. So the bears promptly took advantage of the prevailing mood to bang the market, and the guaranteed stock was yesterday driven down to 90½, a figure from which there was very little rally. As for the first and second preferences they are 5 to 6 lower, and the third preference has dropped 3¼. Canadian Pacific shares, which are under the same adverse influence, have kept wonderfully steady, and the eager bears keep asking why. We know no reason beyond the skill with which this company's finances are handled and the magnitude of the bear account. It is stupendous not only here, but on Continental markets, and until something occurs to frighten the bulls they seem able to keep the market in their grip. Dealings, however, are narrowing, and the position is in other respects the reverse of cheerful.

American and Foreign Railroads.

Some play has been made with Union Pacific shares, and Erie shares are also tossed about a little, but our market remains indifferent to all Yankee manœuvres, and prices have not been good in that part of the market. On the week the declines are usually insignificant, the only prominent exception being Illinois Central shares, which have lost 3, but apathy rules, and that is well, for nothing in the condition of business within the United States warrants commitments in this direction. Bonds have been steady enough, but quite lifeless.

Among Foreign Railway stocks changes are fairly numerous and rather mixed, the Argentine group keeping on the whole firm with now and then some trifling decline, but the leading stocks are generally either steady or a trifle better. Brazilian Railway securities have also been firm except Leopoldina ordinary stock, which has gone back 1, but there are fewer indications of business even in the most popular securities. Speculation has almost died down in the Mexican market, and although prices there are good they are lifeless. The same observation applies to Cuban Railways, which, however, are rather firm.

Banks, Breweries, &c.

Most of the fairly numerous changes amongst Bank shares are favourable and Union of Australia have been put up 3. London and Westminster, Standard of South Africa and Hongkong and Shanghai are all 1 up, other changes being fractional. Now and then somebody manages to carry through a bargain in Brewery and Distillery securities, but generally speaking they lie dormant with nobody looking at them. All is quiet likewise among Dock securities.

As for the large Commercial and Industrial market it never offers anything exciting. Prices, though, seem disposed to harden there, and now and then a transaction is recorded as proof that there is really something going on. James Nelson and Sons shares, for instance, are being actively inquired after, and a fair amount of business has passed in the shares of the Niger Company, as well as in some few debenture stocks, a majority of the resulting changes being fractional improvements. Holland and Hollands preference shares, for instance, are ⅜ up, and the only prominent recoil is in London Hydraulic Power debenture stock, which has lost 2 on the week. The favourable display and cheering observations made at the meeting of J. Lyons and Co. have not brought business in the shares, but the 4½ per cent. debenture stock has been lifted 2. Russian Petroleum "B" debentures have been put down 9 on the week and were dealt in yesterday at 34½. It is feared that the 5½ per cent. debenture-holders will seize the property.

Electric, Financial, Gas, Insurance, &c., Shares.

Some half-dozen changes are visible on the week in the prices of Domestic Electric companies' shares, principally those of the metropolis, but the business done has been minute. A little activity has developed in Mexican Light and Power stock and bonds and the stock is up 3½ on the week. In the Financial, Land and Investment group the only fact we need note is a decline in the various issues of the Peruvian Corporation, which have been subjected to a little selling pressure. Business is almost at a standstill in Hudson's Bay shares, but the price holds about 88½. Financial Trusts have been firm on the whole and move upwards when they shift at all.

Gas stocks, too, are quite steady, and West Ham preference has been put up 3½ to help the new issue. Insurance shares likewise hold last week's prices, or a little more, Alliance old shares being ½ better and Marine and Thames and Mersey Marine are each ½ up.

Something like depression has come across the Iron, Coal and Steel securities' market, but Dorman, Long's 4 per cent. debenture stock has been lifted 1 and there is a slight improvement shown in Howard and Bulloughs ordinary shares. Dunderland Iron Ore debenture stock is 3 down and a slight relapse has occurred in the ordinary and preference shares of Pease and Partners. Nothing has moved amongst Shipping securities, and the changes amongst Tea, Coffee and Rubber shares are rare and insignificant.

American Telephone and Telegraph stocks have been put up on New York prices, and there has been some improvement in Eastern Telegraph ordinary and in National Telephone preferred and deferred stocks, especially the deferred, with a little business in most of them.

Under Tramway and Omnibus securities we find London General Omnibus debentures quoted 3 higher and Mexico Tramways common stock up 6. Rio de Janeiro Tramway Light and Power first mortgage bonds are also quoted 1¾ higher and there has been a fair amount of business going on in them. The new issue of £3,500,000 in 5 per cent. bonds, bringing the total capital of the company up to £13,500,000, is being underwritten at 75, which looks a tempting price, but the capitalisation is formidable. B.E.T. shares and debenture stocks are all better and there is some disposition to inquire after the securities of this company, but the public need not be in any hurry.

Friday Evening.

The markets generally experienced a sharp set-back this afternoon which was put down to a variety of causes. Of them the most tangible was the report that the Erie Railroad contemplates funding the coupons of the prior and general liens until July 1, 1909. Added to this the failure of the new Union Pacific issue and lower prices from New York did not inspire confidence. It is said that despite the early closing of the lists for the Union Pacific 4 per cent. bonds underwriters had to take between 60 and 70 per cent., and that the step was taken to prevent possible withdrawals. Consols fell about ⅜ to 87⅜, affected by talk of new loans—Swedish, which appears to be already underwritten, and Russian, which is, of course, denied, in addition to municipal issues by Sheffield, Reading, Newport, and others. Germany seems to be uncomfortably involved over its United States railroad position, and failures in America in the diamond trade forecast further trouble in that direction. As a result of these various adverse factors, Kaffirs fell back on vain attempts to get the "shops" to take stock. Union Pacific new loan fell to 1 discount. Eries dropped 4 to 18¾, though ¼ better at the end, and Tintos closed 1⅛ under the best at 65. The new West Australian loan is quoted ½ discount. Buenos Ayres and Pacific new scrip, on the other hand, are 1-1¼ premium, there being an inclination to pick up debentures in the foreign railway market, and Legal Insurance shares command a premium of 2s. to 3s.

THE WEEK'S PRICE MOVEMENTS.

Critical Index to New Investments.

SHEFFIELD CORPORATION 3½ PER CENT. STOCK.

The London City and Midland Bank announces that it will receive on behalf of the Corporation of Sheffield applications for £1,500,000 of 3½ per cent. stock at the fixed price of 97. Only £500,000 of this is new debt, £1,000,000 being required to repay £900,000 of existing temporary loans bearing higher rates of interest. The new money is to be applied to the extension of the water, electric lighting and tramways undertakings, and for street improvements, baths, hospitals, sewerage works, &c. Altogether, including the £1,000,000 to be repaid out of the present issue of stock, the debt of Sheffield is £8,977,000, and the rateable value of the city £1,828,160. The corporation is, however, possessed of valuable assets yielding revenue in the shape of the already mentioned public works, together with the markets and other undertakings representing a capital value of £5,840,000, so that the new loan looks amply secured. The whole of the money has to be paid up by December 1 next in instalments of £15 each, except that due on the 1st prox., which is £17.

WESTERN AUSTRALIA 3½ PER CENT. INSCRIBED STOCK.

An issue of £1,000,000 of the above stock, forming the second instalment of a loan of £2,467,000 authorised for

the construction of railway, harbour, and river works, &c., was offered by the London and Westminster Bank at the price of 97 per cent. The new stock ranks *pari passu* with the existing £1,000,000 3½ per cent. stock, 1927-47, and is secured upon the consolidated revenues and assets of the Colony, subject to prior charges for certain loans. It is repayable at par on June 1, 1947, but may be redeemed on or after June 1, 1927, on six months' notice being given. Under the Colonial Stock Act, 1900, the stock is a trustee security, but the Colony's debt is already a pretty heavy one, and at the price asked the new stock does not seem particularly attractive.

Stockton-on-Tees 3½ per cent. Redeemable Stock

The National Provincial Bank of England invites applications for £315,200 of the above loan, which is issued for the purpose of repaying loans bearing a higher rate of interest. The price asked is nominally 97, but a full six months' interest will be paid on January 1, although the last two instalments of 35 per cent. each are not due until August 10 and September 10 respectively. In addition to owning its gas and electricity works, markets, &c., which have cost £422,446 and produce an annual gross profit of £21,199, the Corporation is joint-proprietor with the Corporations of Middlesbrough and Thornaby of a waterworks undertaking which had cost up to February 14 last £2,729,871. The revenue from this has increased from £42,236 in 1879-80 to £123,004 in 1907-8, and Stockton's share is five-twelfths. Gross revenue from all sources during the year ended March 31 amounted to £208,368, while the nett loan debt at the same date was £1,448,115, of which £1,133,511 represents waterworks, leaving only £314,603 as debt on the remaining undertakings and assets. The new stock is secured on the whole of the revenues of the Corporation, and ranks *pari passu* as to security with the existing redeemable stock. It should be a good enough investment, but it is by no means cheap.

Reading 3½ per Cent.

Through the London and Westminster Bank £198,000 of this stock is offered for subscription at 98 per cent. or 1 per cent. dearer than the Sheffield loan. The stock is to run for 70 years, and must all be paid up by August 19 next. The lists will close on or before Thursday. No details are given about the town's finances or property, but Reading is a prosperous place, and its total rateable value is said to be £435,500. Part of the money now asked for is required to pay off temporary loans.

Tottenham and Edmonton Gas Light and Coke Company.

This company, which was formed in 1847, took powers in 1906 to increase its authorised capital by £600,000 in "A" or "B" consolidated or new preference stock to a total of £1,120,520, and its borrowing powers by £200,000 to £349,470. No part of this fresh capital has yet been issued, but the directors now invite tenders for £25,000 of it in "B" consolidated stock at a minimum price of 107 per cent. The company's area of supply includes amongst others the districts of Tottenham, Edmonton, Wood Green, Palmer's Green, and as building on a large scale is going on the business is bound to increase. Sales of gas have risen from 662,001,000 cubic feet in 1901 to 1,271,094,100 in 1907, and are still growing, the sales for the first quarter of the current year having been 45,026,700 feet more than in the corresponding period of 1907. The standard price of gas fixed by the company's Acts of Parliament is 3s. 8d. per 1,000 cubic feet, with a standard dividend of 3½ per cent. on the "B" stock, but the price has been reduced from 3s. 4d. in 1901 to 2s. 6d. last year, with a corresponding advance from 4 per cent. to 5¼ in the dividend under the sliding scale, and the directors are hopeful of being able to make a further reduction in the near future. The issue appears to be a sound enough investment, but as the existing "B" stock is quoted at 105-6, the minimum price fixed makes it seem dear.

Anglo-Argentine Tramways Co., Limited.

In continuance of its policy of securing control of the tramway systems in Buenos Ayres, this company has agreed to purchase £300,000 5 per cent. debentures of La Capital Traction and Electric Company, which holds a large interest in several of the undertakings. To provide the funds for this and for other purposes the directors have sold £565,000 4 per cent. debenture stock to the Law Debenture Corporation at 86¾ per cent., and that company in turn offers it for subscription at 92. The stock is secured by a floating charge on the undertaking and assets, subject only to the existing £266,600 6 per cent. debenture stock and to an annual payment for 80 years from January 1, 1905, to the City of Buenos Ayres Tramways Company of £71,060. It is redeemable at 102 by purchase or drawings by the operation of an annual sinking fund, commencing at once, calculated to redeem the whole amount by June 30, 1968, but the whole or part may be repaid at the same price on six months' notice expiring after June 30, 1918. According to the last report the gross income, including six months' receipts of the Belgrano Company, amounted to £1,009,568, and after providing for expenses, interest and sinking fund on the 6 per cent. debenture stock, annuity to the "City" company, and a half-year's interest on the unpaid purchase money for the Belgrano Company, the nett surplus was £237,606. The purchase of the Belgrano line, however, will be completed next month by the issue of 280,000 ordinary shares of £5 each, and the company will then be relieved of the annuity of £60,500 now payable. In addition, the interest on the La Capital debentures will yield £15,000, so that without taking into account any further improvement of the business there would be £313,105 available to meet the annual charge of £25,096 for interest and sinking fund on the new stock. There is therefore ample security, even as matters stand, but the position will be further improved if the directors carry out their proposed arrangement with the holders of the 6 per cent. debenture stock for the exchange of their holdings into new 4 per cent. debenture stock ranking *pari passu* with this issue.

Union Pacific Railroad Company.

We deal with this issue under "American Business Notes," and it is only necessary therefore to set out a few of the facts here for reference purposes. The total amount is £10,000,000, or $50,000,000, in 4 per cent. 1st lien and refunding mortgage bonds, of which £4,000,000 was reserved for London and $30,000,000 for New York. Messrs. Baring Brothers and Co., Limited, and Messrs. Glyn, Mills, Currie, and Co. offered the London portion in bonds of £200 and £100 for subscription at 95½ per cent., and it was stated that one-third of the amount had been placed before the issue of the prospectus. The American portion will be in dollar bonds only, but the sterling bonds will be exchangeable for dollar bonds on and after June 1, 1910, at a fixed exchange of $4.85 per £1 sterling, *i.e.*, upon payment of $15 per £100, with adjustment of interest. The bonds are repayable in 2008, but the entire amount outstanding may be redeemed at the option of the company at 107½ per cent. and accrued interest on September 1, 1918, or upon any semi-annual interest date thereafter, subject to at least three months' notice. They are secured by a first mortgage on 1,177.71 miles of main track, including the portion from Julesburg to La Salle, Colorado, of the main line from Omaha to Denver. For the year ended June 30, 1907, the surplus income of the Union Pacific and auxiliary companies, after payment of fixed charges, was $36,176,920, of which $24,589,902 came from transportation operations.

Grand Hotel, Worthing, Limited.

This company proposes to erect a modern high-class hotel at Worthing upon the site of the Royal Sea House Hotel, which was burnt down in 1904. It is estimated that the hotel can be built, equipped, and furnished for about £45,000, and another £15,000 is paid for the free-

hold land, with four shops, and a perfectly equipped bar. Mr. C. E. Tinelli, proprietor of Morle's Hotel, Jermyn Street, London, calculates that a gross income of £34,770 should be earned at a cost of £16,561, giving a nett profit of £18,209, and apparently it is on these figures that the capital has been fixed at £100,000, in £1 shares. All of these are offered for subscription, and as a speculation may be considered fair.

WHITEAWAY, LAIDLAW AND CO., LIMITED.

A company formed to amalgamate two already affiliated businesses in London and the East- India, China, the Straits Settlements and Ceylon. The business is that of drapers, outfitters, and general dealers, and the Eastern firm dates from 1882. From the first prosperity appears to have attended its operations, and for the past five years ended February 29 last Messrs. Cooper Brothers here and Messrs. Lovelock and Lewis in Calcutta certify to profits averaging £55,914 before deducting salaries paid to partners, interest on partners' capital and on loans and English and Indian income-taxes. The price to be paid by the company for this business is £540,000, including £82,389 for goodwill. Altogether the share capital is to be £600,000 in £1 shares, of which 400,000 will be 6 per cent. cumulative preference and the rest ordinary. All the 200,000 ordinary shares and 100,000 of the preference will be taken by the vendors in part payment, leaving 300,000 preference shares to be issued. They are offered to the public at par. The money must all be paid up by September 5. No founders' shares will be issued and the present capital will not be underwritten. In this and other respects the promotion is notably clean and straightforward.

NEXT WEEK'S MEETINGS.

MONDAY, JUNE 15.

Briseis Tin Mines.—Salisbury House, noon.
Chaffers Gold Mining.—Winchester House, 2.30 p.m.
Dooars Tea.—Winchester House, 1.30 p.m.
Great Indian Peninsula Railway.—Salisbury House, 12.30 p.m.
Indian Midland Railway.—Salisbury House, 1 p.m.
London, Paris and American Bank.—40, Threadneedle Street, E.C., noon.
Mashonaland Railway. — 2, London Wall Buildings, E.C., 11.30 a.m.
Rhodesia Railways.—2, London Wall Buildings, E.C., noon.
Rhodesia Railways Trust.—Salisbury House, 3.30 p.m.
Tower Tea.—Winchester House, 11.30 a.m.
United Electric Trams of Monte Video.—Winchester House, noon.
Young's Paraffin Light and Mineral Oil.—Glasgow, noon.

TUESDAY, JUNE 16.

Aron Electricity Meter.—Winchester House, 2.30 p.m.
Bengal-Nagpur Railway.—Gresham House, 2 p.m.
Brush Electrical Engineering.—Salisbury House, 11.30 a.m.
Chargola Tea.—45, Leadenhall Street, E.C., 2 p.m
Cordoba Central Railway.—Winchester House, noon.
Ebbw Vale Steel, Iron and Coal.—Hotel Metropole, 2.30 p.m.
Elliott's Metal.— Birmingham, noon.
J. and J. Baldwin and Partners.—Huddersfield, 2.45 p.m.
Lungla (Sylhet) Tea.—5, Fenchurch Street, E.C., 12.30 p.m.
Nedeem Tea.—5, Fenchurch Street, E.C., 11.30 a.m.
Royal Insurance.—Liverpool, 11 a.m.
San Paulo Coffee Estates.—57½, Old Broad Street, E.C., noon.
Talisman Consolidated.—Winchester House, noon.
Trust Union.—Winchester House, 2.30 p.m.
William Cooke and Co.—Sheffield, noon.

WEDNESDAY, JUNE 17.

Aluminium Corporation.—Winchester House, noon.
Assam Oil.—Winchester House, noon.
Bristol Wagon and Carriage.—Bristol, 1 p.m.
Clayton Aniline.—Manchester, 2.30 p.m.
Day Dawn Block and Wyndham Gold Mining.—Cannon Street Hotel, noon.
Lautaro Nitrate.—River Plate House, noon.
Leyland Shipping.—Liverpool, 2 p.m.
Lockharts.—Salisbury House, 2.30 p m.
Rubber Estates of Ceylon.—4, Lloyd's Avenue, E.C., noon.
Scottish Assam Tea.—Edinburgh, 11.30 a.m.
United Gold Coast Mining Properties.—Winchester House, 12.15 p.m.
Village Main Reef Gold Mining.—Winchester House, noon.

THURSDAY, JUNE 18.

Hazell, Watson and Viney.—Kirby Street, E.C., 5.30 p.m.
La Reina de Plata.—Winchester House, noon.
Nerchinsk Gold.—Salisbury House, 2.30 p.m.
Newport Abercarn Black Vein Steam Coal, Winchester House, 10.30 a.m.
St. John Del Rey Mining.—Cannon Street Hotel, 2 p.m.
Spies Petroleum.—London Chamber of Commerce, noon.

FRIDAY, JUNE 19.

Antofagasta and Bolivia Railway.—Winchester House, 12.30 p.m.
Deccan Goldfields Development.—Winchester House, noon.
Demerara Railway.—110, Cannon Street, E.C., noon.
Lake Copais.—Winchester House, 12.30 p.m.
Mint.—Birmingham, 2 p.m.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1908, and June 6, 1908:—

REVENUE AND OTHER RECEIPTS.

—	£	Total Receipts into the Exchequer from April 1, 1908, to June 6, 1908. £	Total Receipts into the Exchequer from April 1, 1907, to June 8, 1907. £

MEM.—Treasury Bills outstanding on June 6, 1908.—

Bills issued by Public Tender	£10,500,000
Bills otherwise issued	1,500,000
Total	£12,000,000

Treasury, June 9, 1908.

A branch of the London and County Bank has been opened at 159, Rushey Green, Catford, under the management of Mr. W. Curtis.

SOUTH-WEST SUBURBAN WATER COMPANY.—Gross receipts for the six months to March 31 improved by £[illegible] to £[illegible], against which maintenance expenses were reduced by £204, but management charges rose by £122, owing mainly to the appearance of a new item of £112 for superannuation account. Nett profits therefore were £180 up at £7,004, but £126 less at £3,355 was brought forward, and as interest on bank overdraft and temporary loans required an extra £100 the disposable surplus was only £8,026 compared with £[illegible]. Preference dividend having been met a dividend of 5¼ per cent. per annum on the original shares is proposed, leaving £3,[illegible] to be carried forward. Floating liabilities are light at £2,724 apart from accrued interest and dividends and £[illegible] for guarantee deposits for laying mains, while debtors for water rates, &c., come to £13,410. Capital expenditure amounts to £286,771, and as this account is overdrawn by £10,063 the company has had to borrow £11,000, but its bill for raising additional capital is now before Parliament.

MINING RETURNS.

Abbontiakoon Block 1.—Crushed 5,111 tons, fully treated 4,884 tons, yielding 1,058 ozs. from plates and 582 ozs. from sands and slimes; total, 1,640 ozs.

African Gold Dredging.—Produced 297 ozs.

Akrokerri (Ashanti).—Crushed 2,890 tons, 957 ozs.; 1,500 tons tailings, 122 ozs.; total, 1,079 ozs.

Angelo.—Milled 34,000 tons, 13,697 ozs.; profit, £29,577.

Ashanti.—Obuasi: Crushed 5,532 tons, 3,068 ozs.

Asbanti Rivers and Concessions.—Total output, 544 ozs.; value, £2,176.

Associated of W. Australia.—Treated 10,443 tons for £21,371.

Ayrshire.—Crushed 8,797 tons, 1,363 ozs.; cyanide 4,320 tons, 655 ozs.

Bibiani.—Crushed 4,551 tons, £6,416; cyanide 3,240 tons, £2,104. Total £8,520.

Brilliant Central.—Treated 1,019 tons, value, including concentrates, &c., £2,250.

Brilliant and St. George United.—Treated 588 tons, value, including residue, £3,000.

Briseis Tin.—Shipped 21 tons, including six tons for New Brothers Home No. 1.

Broken Hill Proprietary.—Refinery products (including product from ores purchased)—silver, 418,979 ozs. (fine); soft lead, 7,504 tons; antimonial lead (estimated), 88 tons, including 154,388 ozs. fine silver and 3,362 tons lead from ore purchased; zinc concentrates 6480 tons, containing silver, 101,449 ozs. (fine); lead, 671 tons; zinc, 2,745 tons.

Broken Hill Proprietary Block 14.—2,436 tons carbonate ore despatched, containing 860 tons lead, and 29,527 ozs. silver.

Broken Hill South Blocks.—Treated 7,100 tons ore; produced 1,205 tons concentrates, containing 789.2 tons lead and 10,483 ozs. silver.

Burbank's Main Lode (1904).—Crushed 1,953 tons, 823 ozs.; 1,052 tons cyanide, 128 ozs.; total, 951 ozs.

Burma Ruby.—72,000 loads washed, producing rubies value Rs.37,000; royalties, Rs.10,000.

Cape Copper.—O'okiep, 1,147 nett tons of 16 per cent. equals 183 tons fine copper; Nababeep, 4,567 nett tons of 4 per cent. equals 182 tons fine copper; total, 365 tons fine copper.

Carrington's United.—274 tons smelted, 12 tons copper.

Cason.—37,500 tons milled, 13,684 ozs.; profit, £26,528.

Chillagoe.—Chillagoe 1,214 tons copper ore, and 3 tons lead ore; Mungana 1,044 tons copper ore, and 2,883 tons lead ore; purchased 35 tons copper ore, and 185 tons lead ore; totals, 2,293 tons copper ore, and 3,071 tons lead ore, producing 308 tons blister copper, 117 tons copper matte, and 496 tons lead bullion, containing 348 tons copper, 496 tons lead, 59 997 ozs. silver; 543 tons fluxing ore treated, produced 61 tons lead, and 2,374 ozs. silver.

Chinese Engineering.—Output of coal, 28,000 tons; sales, 26,000 tons; consumption, 1,700 tons.

City and Suburban.—Crushed 26,200 tons, 7,300 ozs.; profit, £10,014.

Consolidated Langlaagte.—23,300 tons, 7,755 ozs.; profit, £10,406.

Consolidated Main Reef.—Crushed 14,219 tons, 3,275 ozs.; sands and concentrates 14,219 tons, 1,990 ozs.; total, 5,265 ozs.; profit, £5,915.

Crown Reef.—Crushed 24,500 tons, 5,487 ozs.; by secondary treatment 23,945 tons, 2,963 ozs.; from dump 1,105 ozs.; total, 9,555 ozs.; profit, £21,006.

Durban-Roodepoort. — Quartz milled 12,585 tons, 2,710 ozs.; tailings 8,430 tons, 978 ozs.; slimes 4,665 tons, 229 ozs.; total 3,917 ozs.

Driefontein.—Milled 30,500 tons, 11,309 ozs.; profit, £22,131.

Duff Development.—Recovered 105 ozs.

Durban-Roodepoort Deep.—Crushed 12,640 tons, 3,601 ozs.; cyanide 11,852 tons, 1,353 ozs.; total, 4,954 ozs.; profit, £4,650.

Eaglehawk.—Crushed 1,100 tons, 166 ozs.; cyanide 92 ozs.

Eldorado.—Banket: Crushed 2,850 tons, 1,450 ozs.; cyanided 2,850 tons, 235 ozs.; total, 1,685 ozs.; profit, £3,600.

Ferreira.—Crushed 24,340 tons, 8,546 ozs.; by secondary treatment 26,140 tons, 4,431 ozs.; total, 12,977 ozs.; profit, £31,040.

Ferreira Deep.—Crushed 33,965 tons, 12,954 ozs.; by cyanide works, 32,146 tons, 6,096 ozs.; total, 19,040 ozs.; profit, £53,900.

Foldal Copper.—Ore produced (including 400 tons underestimated April) 6,663 tons; ore sorted from tonnage already published 309 tons; ore shipped 6,888 tons.

French Rand.—Crushed 17,500 tons, 2,967 ozs.; by secondary treatment 19,226 tons, 1,860 ozs.; total, 4,827 ozs.; profit, £1,804.

Geldenhuis Estate.—Crushed 19,350 tons, from mill 3,710 ozs.; tailings 1,853 ozs.; slimes 425 ozs.; total, 5,988 ozs.; profit £11,720.

Giant of Rhodesia.—Treated 6,381 tons, 2,535 ozs.; profit, £6,010.

Ginsberg.—4,181 ozs. from 12,020 tons; profit, £5,698.

Glen Deep.—Crushed 21,740 tons, 4,313 ozs.; cyanide 21,265 tons, 3,333 ozs.; total, 7,646 ozs.; profit, £11,000.

Glencairn Main Reef.—4,567 ozs. from 21,300 tons; profit, £4,580.

Globe and Phœnix.—Crushed 6,398 tons, 2,598 ozs.; tailings, average assay value per ton, 4.74 dwts. Cyanide 4,400 tons, 428 ozs.; slimes 2,041 tons, 229 ozs.; total, 3,255 ozs.

Golden Horse-shoe Estates.—Ore treated 22,990 tons, 12,134 ozs.; profit, £24,637.

Great Boulder Perseverance.—Treated 17,139 tons for 5,263 ozs. fine gold and 587 ozs. fine silver.

Great Boulder Proprietary.—Treated 14,342 tons, 13,291 ozs. tailings (old) 7,108 tons, 448 ozs.; total, 13,729 ozs.

Great Fingall.—Ore 22,181 tons, 5,040 ozs.; tailings 21,717 tons, 1,770 ozs.; concentrates 464 tons, 1,462 ozs.; total, 8,272 ozs.

Great Fitzroy.—Crude ore 2,710 tons for 267 tons copper matte, containing 73 tons copper and 386 ozs. gold.

Hainault.—Crushed 5,964 tons, 1,617 ozs.

Hannan's Reward.—Crushed 6,500 tons, 685 ozs.; tributors, £405.

Ivanhoe.—Output: Crushed 19,440 tons, 3,396 ozs.; sands, 8,900 tons, 1,061 ozs.: slimes, 8,810 tons, 2,654 ozs.; concentrates, 1,730 tons, 2,335 ozs.; to al, 10,046 ozs.

Jubilee.—Crushed 5,334 tons, 1,304 ozs.; cyanide, 3,720 tons, 493 ozs.

Jumpers.—Crushed 8,680 tons, 2,761 ozs.; tailings, 946 ozs.; current slimes, 302 ozs.; accumulated slimes, 372 ozs.; total, 4,336 ozs.; profit, £4,189.

Kalgurli.—10,910 short tons, 7,082 ozs.

Knights Deep.—43,800 tons, 14,608 ozs.; profit, £27,156.

Lake View Consols.—9 740 tons ore, 2,753 ozs.; profit, £1,166.

Lancaster.—Crushed 12,600 tons, value £6,855; cyanide 9,504 tons, value £4,412; value by-products, £273; total £11,540.

Lancaster West.—Crushed 6,684 tons, value £5,456; cyanide 5,616 tons, value £4,521; value by-products, £938; total, £10,915; profit, £3,301.

Lancefield.—7,313 tons treated, 2,192 ozs.

Langlaagte Deep.—Crushed 39,573 tons, 9,074 ozs.; cyanide 39,210 tons, 3,393 ozs.; total, 12,467 ozs.; profit, £17,250.

Langlaagte Estate.—Crushed 48,333 tons, 9,825 ozs.; tailings 26,600 tons, 3,352 ozs.; slimes 24,252 tons, 1,869 ozs.; total, 15,046 ozs.; profit, £24,250.

Le Roi.—Shipped 5,673 tons, containing 2,840 ozs. gold, 3,950 ozs. silver, and 154.300 lbs. copper.

Le Roi No. 2.—Josie—Shipped 2,410 tons; nett smelter receipts £8,892, being payment for 1,892 tons shipped, and £292, being payment for 86 tons concentrates shipped; in all, £9,184.

Luipaards Vlei.—Crushed 16,565 tons, 2,511 ozs.; tube mills, 993 ozs.; cyanide, 1,282 ozs.; slimes, 258 ozs.; total, 5,044 ozs.; profit, £6,922.

Main Reef West.—Crushed 4,831 tons, 1,039 ozs.; sands and concentrates, 4,881 tons, 632 ozs.; total, 1,671 ozs.; profit, £378.

May Consolidated.—Crushed 15,650 tons, value £15,918; cyanide, 10,185 tons, value £5,691; slimes, 4,912 tons, value £1,287; total value, £22,896; profit, £11,110.

Meyer and Charlton.—Crushed 13,582 tons, 2,316 ozs.; cyanide 2,832 ozs.; total, 5,148 ozs.; profit, £9,365.

Mount Boppy.—6,350 tons, 1,406 ozs.; cyanide 3,486 tons, 1,470 ozs.; slimes, 2,836 tons, 1,079 ozs.; concentrates 21 tons, 150 ozs.; total, 4,105 ozs.

Mount Morgan (Queensland).—Gold reduction works treated 21,783 tons ore, produced 6,800 ozs. fine gold; copper reduction works treated 19,176 tons ore and metalliferous flux, produced 632 tons blister copper, containing 626 tons copper and 8,216 ozs. fine gold; 60 tons copper precipitate produced, containing 18 ozs. gold and 45 tons copper.

Mysore West.—Mysore-Wynaad: 95 ozs. from 2,952 tons cyanided.

New Comet.—Milled 26,250 tons, 8,961 ozs.; profit, £14,033.

New Goch.—5 049 ozs. from 23,599 tons crushed; 2,432 ozs. from cyanide; total, 7,481 ozs.; profit, £12,074.

New Heriot.—Crushed 9,500 tons, 4,355 ozs.; profit, £7,678.

New Hillgrove Proprietary.—Total yield, £1,300.

New Kleinfontein.—Milled 38,856 tons, 13,637 ozs.; profit, £23,014.

New Modderfontein.—Crushed 29,300 tons, 8,936 ozs.; by secondary treatment 30,945 tons, 3,259 ozs; total, 12,195 ozs.; profit, £20,021.

New Primrose.—20,234 tons, 7,672 ozs.; profit, £15,049.

New Rietfontein Estate.—18,000 tons, 9,265 ozs.; profit, £16,476.

New Unified Main Reef.—10,520 tons, 4,186 ozs.; profit, £6,794.

New Zealand Crown.—Crushed 1,359 tons ore; value, £3,369.

Nigel.—Crushed 10,800 tons, 4,543 ozs.; profit, £7,041.

Nigel Deep.—4,263 tons, 1,855 ozs.; profit, £843.

North Broken Hill.—Treated 2,640 tons crude ore, assaying 16.1 per cent. lead and 6.4 ozs. silver per ton, producing 445 tons concentrates, containing 314 tons lead and 8,900 ozs. silver.

North Randfontein.—Crushed 17,638 tons ore, 3,935 ozs.; tailings 10,800 tons, 1,846 ozs.; slimes 6,517 tons, 643 ozs.; total, 6,424 ozs.; profit, £9,200.

North White Feather.—Crushed 2,100 tons, 894 ozs.

Nourse.—Crushed 35,058 tons, 8,913 ozs.; cyanide 34,633 tons, 4,168 ozs.; total, 13,081 ozs.; profit, £18,500.

Oroya Black Range.—Crushed 4,318 tons, 2,550 ozs.

Oroya-Brownhill.—Crushed 12,019 tons, 3,774 ozs.

Peña Copper.—Output 17,000 tons; shipments of ore 13,696 tons; 95 tons fine copper in precipitate produced.

Penhalonga Proprietary.—Crushed 12,500 tons, 2,367 ozs.; profit, £4,187.

Porges Randfontein.—Ore crushed 16,088 tons, 3,920 ozs.; concentrates 1,670 tons, 535 ozs.; tailings 9,764 tons, 1,260 ozs.; slimes 4,531 tons, 498 ozs.; total, 6,213 ozs.; profit, £9,000.

Prestea Block A.—Crushed 6,270 tons, 2,993 ozs.; 4,242 tons tailings, 521 ozs.; total, 3,514 ozs.

Princess Estate.—Crushed 9,058 tons, value £13,749; cyanide, 5,849 tons, value £4,910; total, £18,659; profit, £7,017.

Queensland Exploration.—255 tons ore, yielding 34 tons matte, containing 25 tons copper.

Rezende.—Crushed 3,500 tons, 1,001 ozs.

Rhodesia.—Colleen Bawn—Crushed 899 tons, 208 ozs.; 372 tons by cyanide, 381 ozs.; 590 tons slimes, 283 ozs.

Rhodesia Consolidated.—Nelly—Crushed 1,635 tons, 1,230 ozs.; cyanided, 820 tons, 448 ozs.; total, 1,678 ozs.

Robinson.—Crushed 42,500 tons, 16,319 ozs.; by secondary treatment 42,401 tons, 8,871 ozs.; total, 25,190 ozs.; profits, £84,248.

Robinson Central Deep.—Crushed 30,210 tons, 11,119 ozs.; by secondary treatment 29,632 tons, 4,833 ozs.; total, 15,952 ozs.; profit, £46,426.

Robinson Deep.—52,399 tons, 20,646 ozs.; profit, £42,639.

Simmer and Jack East.—37,100 tons, 9,535 ozs.; profit, £7,576.

Robinson Randfontein.—Ore crushed 16,430 tons, 2,955 ozs.; concentrates 1,450 tons, 308 ozs.; tailings 9,675 tons, 1,387 ozs.; slimes 4,535 tons, 385 ozs.; total, 5,035 ozs.; profit, £3,000.

Roodepoort Central Deep.—Crushed 8,706 tons, value £9,869; cyanide 5,590 tons, value £4,659; total, £14,582; profit, £3,459.

Roodepoort United.—4,520 ozs. from 17,380 tons crushed; 1,897 ozs. from cyanide; total, 6,417 ozs.; profit, £10,451.

Selukwe.—Crushed 5,993 tons, 1,003 ozs.; cyanide, 3,850 tons, 215 ozs.; total, 1,218 ozs.

Simmer and Jack Proprietary.—69,940 tons, 26,551 ozs.; profit, £64,055.

Sons of Gwalia.—Ore crushed 13,205 tons, 2,509 ozs.; tailings, 7,320 tons, 1,019 ozs.; concentrates, 202 tons, 550 ozs.; slimes, 5,683 tons, 412 ozs.; total, 4,490 ozs.

South Kalgurli.—Crushed 9,033 tons, yield 2,950 ozs.

South Randfontein.—Ore crushed 16,131 tons, 3,118 ozs.; concentrates, 1,575 tons, 519 ozs.; tailings, 9,475 tons, 1,739 ozs.; slimes, 4,643 tons, 626 ozs.; total, 6,002 ozs.; profit, £6,100.

Talisman Consolidated.—Ore treated 4,237 tons, value £18,909; profit, £11,340.

Tanganyika.—Kansanshi—385 tons ore smelted, produced 72 tons metallic copper.

Tingha Consolidated Tin.—Production of tin, 98 tons 5 cwts.

Tomboy.—Crushed 8,700 tons, value $52,000; concentrates shipped 930 tons, value $32,000; total value $84,000; profit $39,000.

Treasury.—9,567 tons crushed, 1,578 ozs.; 9,798 tons sands and concentrates, 1,446 ozs.; total 3,024 ozs.; profit £2,177.

Troitzk.—1,820 tons, 435 ozs.; tributors 462 tons, 88 ozs.; alluvial mining by tributors 20 ozs.; total 543 ozs.

Van Ryn.—Crushed 23,690 tons, 7,617 ozs.; 16,659 tons sands, 1,555 ozs.; 8,031 tons slimes, 741 ozs.; total ozs. 9,913; profit £21,621.

Village Deep.—Crushed 28,600 tons, 4,944 ozs.; 28,332 tons by secondary treatment, 4,018 ozs.; total 8,962 ozs.; profit £9,000.

Village Main Reef.—Crushed 41,600 tons, 10,353 ozs.; sands and concentrates 28,280 tons, 4,048 ozs.; slimes 15,329 tons, 1,270 ozs.; total 15,671 ozs.; profit, £30,486.

Vivien.—Milled 3,261 tons, 623 ozs.; tailings 2,445 tons, 291 ozs.; current slimes 816 tons, 157 ozs.; accumulated slimes 412 tons, 130 ozs.

Wanderer (Selukwe).—Cyanide 17,040 tons, 1,885 ozs

Wassau.—Crushed 5,150 tons, 1,605 ozs.; cyanide 3,725 tons, 416 ozs.; total, 2,021 ozs.

West Rand Central.—Crushed 2,526 tons, 469 ozs.; cyanide 2,090 tons, 310 ozs.; slimes 1,066 tons, 128 ozs.; total 907 ozs.

Windsor.—Crushed 5,037 tons, 1,243 ozs.; cyanide 3,602 tons, 640 ozs.; total, 1,883 ozs.

Witwatersrand.—34,360 tons, 10,560 ozs.; profit, £16,041.

Witwatersrand Deep.—Crushed 38,140 tons, 9,904 ozs.; sands and concentrates 37,370 tons, 5,550 ozs.; total, 15,545 ozs.; profit, £31,078.

Wolhuter.—Crushed 21,100 mill tons; sands and slimes 21,100 tons: mill 2,737 ozs.; sands 2,743 ozs.; total, 6,480 ozs.; profit, £6,585.

Worcester.—Crushed 4,500 tons, 1,307 ozs.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Antofagasta (Chili) and Bolivia.—Final of 2½ per cent. on the deferred ordinary stock for 1907, making 5 per cent.

Denver and Rio Grande Railroad.—Semi-annual of 2½ per cent. on the preferred capital stock, payable July 15.

New York Central and Hudson River.—1½ per cent., payable July 15.

Societa Italiana par le Strade Ferrate della Sicilia (Italian Company of Sicilian Railways).—Lire 12.50 per share, being second payment on account of 1907-8.

INSURANCE.

Merchants Marine.—Interim of 1s. 6d. per share, for half-year ending 30th inst.

Reliance Marine.—Interim of 2s. per share.

Sea.—Interim of 6s. per share, being at the rate of 30 per cent. per annum on the paid-up capital.

MINES.

Apex.—10 per cent. for half-year ending June 30.

Associated Northern Blocks (W.A.).—2s. per share, payable July 3.

Esperanza.—Interim of 6d. per share, and an additional interim of 3s. per share for quarter ending June 30, payable July 18.

Ferreira.—150 per cent., payable June 30.

Geldenhuis Estate (Elandsfontein No. 1).—Interim of 30 per cent., payable June 30.

Great Fingall Consolidated.—Quarterly interim of 2s. 6d. per share, payable July 10.

Natal Navigation Collieries.—Final of 2½ per cent. for year ending the 30th inst.

New Ravenswood.—Interim, payable 24th inst., on account of profits for current year, of 6d. per share, being at the rate of 12½ per cent. per annum.

New Modderfontein.—Interim of 7½ per cent for half-year ending June 30.

Robinson.—Interim of 15 per cent. for half-year ending June 30.

Robinson Central Deep.—Interim of 45 per cent. for half-year ending June 30.

MISCELLANEOUS.

De Keyser's Royal Hotel.—Interim on the ordinary shares for six months ending 30th inst. at the rate of 5 per cent. per annum.

Indian and General Investment Trust.—3½ per cent. on the deferred stock for year to April 30.

Johannesburg Estate.—5 per cent.

Lungla (Sylhet) Tea.—10 per cent. on the ordinary shares.

Mexican Light and Power.—1 per cent. on the outstanding ordinary shares, payable July 15.

National Mortgage and Agency of N.Z.—Interim at the rate of 7½ per cent. per annum for six months to March 31, payable July 7.

Nedeem Tea.—10 per cent. on the ordinary shares.

Newcastle Breweries.—Interim on the 6 per cent. cumulative preference shares for half-year ended April 30 at the rate of 6 per annum.

Sao Paulo Tramway Light and Power.—Quarterly of 2½ per cent. on the capital stock.

United Lankat Plantations.—Interim of 5 per cent. and a bonus of 5 per cent. on the issued ordinary share capital.

Virginia Carolina Chemical.—Quarterly of $2 per share on the preference shares, payable July 15.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns*

EAST INDIAN RAILWAY COMPANY.

A very elaborate report is always issued by the board of this premier railway of India for each half-year, and many particulars are embraced in it which might deserve mention if we had space. We must, however, confine attention to the main facts. These are, as regards receipts, a decline of Rs. 4,80,227 in the gross earnings for the December half-year and an increase of Rs. 5,88,788 in the working expenses. Thus the nett income was down Rs. 10,69,000 or over £71,000. Both coaching and goods traffic were prejudicially affected during the period by the strike amongst the subordinate European and East Indian running staff which took place in November last. Working expenses, however, are still kept remarkably low, and were only 40.08 per cent. of the gross receipts for the December half-year. Excluding the receipts and charges for traffic carried on behalf of the company itself, the percentages for the December and June half-years were respectively 40.37 per cent. and 37.24 per cent. Economy, however, has been exercised in repairs and upkeep, this company having followed the established English fashion of letting things slide until capital is required to make good dilapidations. Thus in the past half-year out of a total capital expenditure of about £449,000 something like £164,000 was absorbed in paying for new locomotives and rolling stock. Altogether the capital cost of the property at the end of December last was about £38,000,000 or say £16,300 per mile, and the company is still spending freely, and since the date of the report £2,450,000 of 3½ per cent. debenture stock has been issued at 3½ per cent. discount. This has been consolidated with the £2,000,000 of similar stock issued in July last. Goods traffic was poor in the half-year, but passenger receipts went up. The company converts the main figures into sterling at 1s. 4d. per rupee, and on this basis the gross receipts came to £2,648,267 and working expenses to £1,087,958, leaving £1,560,309 as nett earnings. Of these nett earnings £1,146,358 was required to meet interest and other charges, being an increase of about £30,000 on the amount so absorbed for the second half of 1906, so that the nett surplus left was under £414,000 or about £100,000 less than for the corresponding half-year. For the whole of 1907, however, the surplus is barely £69,000 less at £1,121,841, and the directors are therefore able to distribute as their share of the surplus a dividend for the half-year at the rate of 15s. per cent. on the deferred annuity capital and the deferred annuity class "D." This is over and above the 4 per cent. guaranteed. For the whole year 1907 the dividend is thus £5 16s. 4d. per cent. upon these annuities, or just 1s. 8d. less than for 1906. For the first 22 weeks of the current half-year the receipts have shown some improvement, but not very much, the approximate returns being Rs. 3,74,19,000 against Rs. 3,68,37,000. The principal causes of the poor goods traffic in the second half of 1907 was want of rain, so that there was less cotton and grain of all sorts to carry as well as smaller quantities of hides and skins, jute and gunny bags. The people had evidently less money to spend also, for the carriage of piece goods showed a decrease of 5,331 tons, but there was an increase of 27,569 tons in the railway plant carried, although the amount earned thereon was about Rs. 98,000 less. A heavy decrease of 94,352 tons took place in the quantity of rice carried, but there was a larger business in salt, in metals and in oil seeds. The company's collieries, it may be added, turned out last year nearly 817,500 tons of coal, of which about 497,000 tons were steam coal, and the company itself consumed 600,075 tons of steam coal.

BENGAL NAGPUR RAILWAY COMPANY.

In the December half-year this company's gross receipts increased by Rs. 7,01,481 and the working expenses Rs. 4,97,432, so that there was an improvement of over Rs. 2,04,000 or about 3.5 per cent. in the nett income. Expenses went up mainly owing to heavy but necessary repairs to the rolling-stock. Coal was also dearer, so that the total outgoings were 54.09 per cent. of the receipts compared with 53.13 per cent. in the corresponding half-year. As it was, however, the company's share of the nett profits would have been better than it actually turned out but for an increase of £4,527 in the charge for guaranteed interest, a steadily mounting figure because the capital expenditure is being continually added to. Thus in the past six months £202,634 of additional capital was sunk in the property, making its total cost, including £1,340,903 representing "other advances" made by the Secretary of State to the company, £21,452,961. Still the company's share of the profits was £55,945 after deducting income-tax, and including the balance of £25,517 brought forward and the interest accrued thereon there was £82,973 left for distribution at the end of the year representing the accumulated profits of the twelve months. Out of this the directors recommend a dividend of 1 per cent. over and above the 4 per cent. guaranteed on the company's capital. A year ago the dividend was 1½ per cent., but £54,473 is now left to carry forward or more than twice the amount brought in.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY.

Bad times haunted this company in 1907, and the accounts covering that year bear the marks. Gross receipts from the railway and waterworks increased £15,609 to £1,022,698, but expenditure went up £60,203 to £666,179, so that there was a decline of £44,594 shown by the nett receipts of £356,519. A slightly less amount was also collected as registration fees, &c., but the balance brought forward was £4,718 better at £25,108, and the outcome would not have been so bad looking but for the fact that a year ago £5,353 came in as proceeds of investments realised against nothing this time, so that the final nett revenue of £381,891 is £45,330 lower. At the same time fixed charges are going up, and it took £26,147 more to pay debenture interest, dividends on the preference and preferred ordinary stocks and the interim dividend on the deferred stock than it did for 1906. Less money, however, is set aside to various funds. A year ago £50,000 was put by for renewals and £5,000 written off Huanchaca rights, besides £2,000 devoted helping to wipe out the expenses connected with the conversion of the ordinary stock. That was £57,000 altogether, whereas this year the entire amounts assigned come to only £33,141, although at £24,641 £32,122 less was entered as "interest and differences in exchange." Other assignments are £3,000 to fire insurance, £2,000 written off discount and expenses on the issue of 4½ per cent. debenture stock, £1,500 off the cost of the issue of the 5 per cent. debenture stock and £2,000 off the cost of conversion of ordinary stocks. Out of the ultimate balance of £66,353 a final dividend of 2¾ per cent. is declared on the deferred stock, or just half the distribution made at the same date a year ago. That provided for £25,103 will be left to carry forward, or say £5 less than came in. Throughout the year the exchange was adverse, and that affected the company's receipts most seriously. At one time the Chilian dollar was down to 9d., and it fluctuated between that and 13⅞d. A great deal of work is going on in improving the property and extending it, details of which will be found in the report, and the new water pipe line to the nitrate districts was completed and began its supply towards the close of the year. Practically the line seems to have been remade in recent years, and in part out of capital. The main line throughout the nitrate districts was last year renewed with 65-lb. rails to replace the old 36-lb. hitherto existing. This charge is partly a revenue one, but we are not quite so sure about some of the others, the bridge renewals, renewals of rolling stock and so on. At any rate, in the capital expenditure of 1907 which aggregated £840,228, £26,837 is put against cost of relaying permanent way, that no doubt representing the difference betwen the cost of the old material and the new. Floating stock, lighters, &c., cost £48,569 and rolling stock no less than £225,125, the capital outlay on the railways including new branches being £598,971 and on waterworks and condensers £241,257. Improvements and extensions will doubtless pay, and one year with another the business must be an excellent and expanding one. The company has so many sources whence to draw traffic. If the nitrate business falls off, mineral ores of various kinds come forward to take its place, and as Bolivia is penetrated by branches of the line there ought to spring up an agricultural traffic of increasing value. Since near the end of last year the company has been allowed to charge a fixed exchange of 1s. 2½d. per Chilian dollar, and that will materially help the revenue in the current year. For the first five months of this year the approximate gross receipts of the undertaking have been £519,538 as compared with £397,861 in the same period of last year.

CORDOBA CENTRAL RAILWAY CO., LIMITED.

Gross receipts of this company's original line for the 12 months ended December 31 showed a further improvement of $44,862 at $2,126,815, but working expenses owing to the higher cost of fuel and labour increased by $51,853 to $1,011,826. Nett revenue was consequently $6,991 down at $1,114,989, and after making provision for doubtful debts, &c., the nett surplus in sterling was £96,945 or £1,398 less. On the Central Northern section a decrease of $11,851 to $4,623,016 was accompanied by a reduction of $57,028 to $3,205,424, owing to considerably less having been spent on repairs and renewals, but when the nett income is converted into sterling the gain of $45,177 at $1,417,592 gave place to a drop of £1,380 at £122,420. Costs of fuel and labour also had a marked effect on the results of the North-West Argentine Extension, and while the decrease in gross receipts was $32,398 at $1,362,844 the nett surplus was no less than $55,709 down at $530,237, or in sterling £45,210 against £51,218. Passenger traffic on all sections yielded more, the improvement being most noticeable on the Central Northern and North-West Argentine, where the receipts rose by $52,338 and $70,146 respectively against an increase of only $14,786 on the original line. The reverse, however, was the case with regard to goods traffic, the revenue from this source on the original lines being $17,833 larger in spite of a reduction of 18,137 tons in the weight carried, while the Central Northern section showed decreases of 17,069 tons and $79,318 and the North-West Argentine decreases of 33,243 tons and $97,213, largely because of the poor sugar harvest. Ratio of working expenses to receipts rose by 1.46 per cent. to 47.57 on the original line and by 3.09 per cent. to 61.09 on the North-West Argentine, but on the Central Northern it was 1.05 per cent. less at 69.34 for the reason given above. The Cordova and North-Western Railway which was worked by this company up to March 25 last showed improvements in both passenger and goods traffic for the year, and the one-fourth share of the nett profits came to £3,063 or £52 more. The available balance of the North-West Argentine Extension was £5,445 down at £14,350, and of this one-fourth has been transferred to the nett revenue account of the original line and three-fourths to the Central Northern nett revenue in accordance with the terms of the purchase agreement. After making these adjustments and providing for debenture interest and interim dividends on the first and second preference stocks the balance of nett revenue of the original line amounted to £65,881 compared with £69,675, out of which £5,569 or £3,793 less is transferred to revenue reserve account making it £45,993. The surplus remaining is therefore the same as a year ago at £60,312 or £25,312 in excess of the amount required for a dividend of 5 per cent. on the ordinary stock and the £7,000 payable to the Central Northern section. This surplus is divisible into three equal parts, of which two parts belong to the holders of the first preference stock and income debenture stock (Central Northern section) in the proportions of four-fifths and one-fifth respectively, and one part to the holders of ordinary stock. Including £10,375 payable out of the profits of the original line the nett revenue of the Central Northern section is £110,137 or £4,144 less than a year ago. The directors now propose to repeat the dividends of 4¾ per cent., making 7¼ per cent. for the year on the first preference stock, 2½ per cent. making 5 per cent. on the second preference, and 9 per cent. on the ordinary stock, leaving £437 to be carried forward to the credit of the last-named. On the income debenture stock, however, the distribution is reduced from 3⅝ to 3½ per cent., making 4½ against 4⅝ per cent., and the sum carried out is £289 smaller at £2,197. Proposals for the raising of additional capital and for the simplification of the accounts have been approved by the shareholders and debenture stock holders interested, and in future the Central Northern and North-West Argentine will be worked as one undertaking. The existing 4 per cent. debenture stocks aggregating £2,900,000 will be exchanged for an equivalent amount of 4 per cent. consolidated debenture stock (Central Northern section), of which £3,000,000 has been created. In addition the directors were authorised to create £600,000 5 per cent. second debenture stock for the purposes of the Central Northern section, and £600,000 in share capital for the original line and £240,000 of the latter will be allotted at par *pro rata*, during the current year to the holders of the first preference and ordinary stocks. The construction of the Cordoba Central Buenos Ayres extension from Rosario to the city of Buenos Ayres has made fair progress, some 235 kilometres of rails having been laid out of a total of 300 kilometres. Much delay was experienced in obtaining the approval by the Municipality of the detailed plans for the entrance from Rivadavia to Buenos Ayres, where 10 kilometres of retaining wall have to be built and the land reclaimed from the Rio de la Plata. Everything is now definitely arranged, and as the work is being pushed on as rapidly as possible it is anticipated that the whole line will be provisionally opened before the end of the year.

BANK OF ADELAIDE.

In its half-year ended March 30 last this bank earned £59,951 nett or £56,510 after paying its note tax, the actual balance at credit of profit and loss after all adjustments have been made being £59,014. Out of this the directors carry £20,000 to reserve fund and pay a second dividend at the rate of 9 per cent., making the distribution that rate for the entire year as against 8¾ per cent. paid for the previous year. The balance left to carry forward will then be £21,014 or £1,510 more. A scheme for an officers' provident fund has been sanctioned and £30,000 devoted to its initiation, an excellent step. The balance-sheet shows no striking changes, but notes in circulation are up £5,918 to £185,540 and bills in circulation down £199,400 to £270,414. Deposits also are down £178,020 to £3,090,618. Specie, cash, &c., show an increase of £6,628 at £514,809, balances due from other banks are £34,045 higher at £159,066, but short call money is down £55,000 and Government debentures held stand about the same at £458,089, the total of this group of assets being £14,158 lower at £2,059,475. Remittances *in transitu* are £102,628 higher at £106,755 and bills receivable and advances are down £249,726 at £2,006,688, the total of the balance-sheet being now £4,317,625.

WESTERN AUSTRALIAN BANK.

Nett profits are rather less for the six months ended March 30 but at £23,568 the reduction was only £1,190. Less by £2,249, however, was brought forward at £11,318, so that the

free balance of £34,886 was £3,439 worse. The directors, however, were able to give the shareholders a dividend at the rate of 20 per cent. as usual, including the partly paid new shares, and had £17,880 left to carry forward or only £5,445 less than was brought in. The reserve, exclusive of this balance, is now £431,560. The 2,500 new shares put up for tender, and on which £10 per share will be called up, were successfully placed at an average of £27 3s. 6d. per share, a price that will yield £42,932 to the reserve when the payments have been completed. Already £31,500 of the premiums has been received. The balance-sheet shows a decrease of £16,963 in the note circulation at £107,520 and of £82,527 in the non-interest-bearing deposits of £1,143,355. Interest-bearing deposits are also less at £780,060, so that the entire liability under this head is £246,204 lower at £1,923,415. This is compared with a year back, and on the same basis the reserve is £56,560 up. Specie held is £228,679 less at £506,411 and bullion £14,182 less at £257,570. The holdings of public securities are unchanged at £104,140, but balances due from other banks have gone up £19,849 to £47,776 and bills receivable and advances are £83,458 higher at £1,787,278. Remittances *in transitu* are also at £30,483 £11,724 up, and the value of bank premises has been raised by £2,500 to £65,000. The total of the balance-sheet is £2,816,280.

BIRMINGHAM AND MIDLAND TRAMWAYS, LIMITED.

Receipts in the tramways section for the year ended December 31 amounted to £44,751 or a decrease of £13,940, which the directors suggest is due to the fact that the figures of the earlier year included six months' receipts of the Dudley Road tramway. Power and running expenses, probably for the same reason, took £3,412 less at £17,741 and repairs and maintenance costs were £747 lower at £5,498, leaving the nett revenue £9,781 down at £21,513. Further progress was made in the lighting section so far as the public business was concerned, and sales yielded £2,173 more at £3,539, but nearly the whole of this was wiped out by the continued decline in current supplied to the tramways, and the total income in this department was only £960 up at £8,303. Outgoings, including £831 for repairs and maintenance, were rather heavier at £5,251, and the nett surplus amounted to £3,052 compared with £2,214. With an additional £3,742 at £4,446 from sundry receipts and £494 more at £26,337 from interest and dividends, the profits from all sources amounted to £4,707 less at £55,347, while on the other hand rents of lines rose by £200 to £4,487 owing to the increased rental paid for the tramways in Smethwick in consideration of an extension of tenure granted by the Council. Debenture interest acquired an extra £1,653 at £15,766, but £1,000 less at £1,500 was placed to renewals account, and after meeting administration and general expenses of £5,622 and paying preference dividend the nett surplus, including £552 brought in, was £16,933 against £22,552. Of this £3,550 or £800 more is transferred to debenture redemption fund, and the dividend on the preferred ordinary shares has therefore to be reduced from 5½ per cent. to 4, while the sum carried out is cut down to £83. Expenditure on the tramway undertaking for the completion of the car sheds and workshops at Tividale amounted to £8,715, while £16,105 was spent on the Bearwood Road sub-station and additional plant and cables for the electric light section, making the total outlay on property £466,764, exclusive of £12,260 for freehold lands. Against these the renewals account comes to £4,000, and the depreciation and reserve fund to £79,743, or together just under 18 per cent., in addition to which there is a debenture redemption fund of £2,874. A further £3,780 debenture stock was purchased and cancelled during the year, leaving £348,457 outstanding, but mortgages on land are unaltered at £4,357, and the company still owes £75,000 to the City of Birmingham Tramways Company, while sundry creditors have risen by £3,403 to £30,403. On the other hand, debtors are £4,594 up at £31,041, and investments have been increased by £3,826 to £817,293, but loans are £81,000 down at £70,450 and cash has shrunk by £19,084 to £4,063. A sum of £59,000 is due from the Dudley, Stourbridge and District Electric Traction Company for balance of purchase price of the Kenver Electric Light Railway, but there is no hint in the report as to when the directors expect this to be paid.

BRUSH ELECTRICAL ENGINEERING CO., LIMITED.

A measure of reduction in the capital of this company has taken place during the twelve months ended December 31 last, £170,488 in all having been written off the ordinary and preference shares or 13s. 4d. off each £2 share. This leaves the shares at the awkward book value of £1 6s. 8d. each, so it is now proposed to turn these shares into 6s. 8d. units and to consolidate every three of these smaller shares into one new £1 share, giving the shareholders four of such new shares for every three at present held. Last year's gross profit is brought out at £63,294, and after meeting various charges, including £5,246, the final balance of the loss on the Australasian branch, and £4,309 written off as depreciation on stores and undertakings, together with £1,163 deducted for bad debts, the balance over would have been considerable but for what is described as excess cost of manufacture and penalties incurred in consequence of a strike of workmen. These losses are assessed at £17,982 and all written off, so that the company has only £10,229 of a nett profit remaining, and this is set aside to form the beginning of a new reserve, the old reserve and depreciation funds as well as the balance of profit brought forward from 1906 having all disappeared in the capital reduction. The directors are to be commended for not making any attempt at present to pay a dividend, and they seem to have made a satisfactory arrangement with the B.E.T. company regarding its advances to their company. Indeed, they could not have compelled that company to accept £2 ordinary shares of the Brush company at par in satisfaction of an advance of £30,740 made to it by the B.E.T. company without security in 1901. The advance is now to be repaid in twelve half-yearly instalments, the unpaid balance carrying 3½ per cent. interest. Complaint is made that the company is short of capital. It tried to raise some in January last but failed owing to the opposition of the first debenture stockholders, so now arrangements have been made to issue £125,000 5 per cent. prior lien debenture stock specially secured on the freehold and leasehold properties. How the existing first debenture stockholders will relish that proposal remains to be seen, the existing debt on 4½ per cent. first and second debenture stocks being £300,000. The total amount due to the B.E.T. company, by the way, is £48,325, which is an increase upon the figure of the preceding year. Patents and goodwill are now written down to £100,000, and that is £99,999 too much, there or thereby. Sundry debtors owe the company £22,264 or £17,450 less. Shares and debentures at or below cost price are brought down to £101,335, but what they are worth the auditors are not able to say. Property has been written down by £55,094 after allowing for additions of £6,406 made during the year. The company owes £73,314 to its bankers and others and has pledged £127,840 of its debentures and securities against the loans, and in addition £111,529 is owing to sundry creditors and on bills payable. It is a melancholy display altogether.

MONTREAL LIGHT, HEAT, AND POWER COMPANY.

Further progress was made by this important Canadian enterprise in the year ended April 30 last. Its earnings rose by about $339,000 and its expenses by $123,000 to respectively $3,592,218 and $1,651,656. The nett income was therefore $2,140,562 and as fixed charges came to but £493,095 the board was able to disburse $1,020,000 in dividends upon the share capital of $17,000,000 with $627,467 to the good. Of this balance $318,422 is appropriated to depreciation and insurance and the remainder goes to swell the accumulated surplus to a total of $1,414,000. Neither the report nor the accounts state the rate of dividend paid, but it absorbed $170,000 more than in the previous year, presumably because more capital had been issued. On the actual capital the dividend paid represented 6 per cent. During the year $525,000 in 4½ per cent. bonds due 1932 were issued to "repay" the company for money spent on the extensions of the gas and electric departments and $75,000 against cancelled debentures of the Royal Electric Company. Another $53,000 was issued to provide for the redemption of 6 per cent. bonds of the Lachine Rapids Hydraulic company, and at the date of the balance-sheet the actually outstanding amount of the company's own bonds was $6,076,000 or £1,215,200, and of the Lachine sinking fund "bonds" $3,419,000 or £683,800, being a debt of £1,899,000 alongside a paid-up share capital of £3,400,000. These capital liabilities are represented by "stocks, bonds, and interests in other corporations" of the book value of $23,905,924 or £4,781,185, and "new construction" $3,850,876 or £770,175 more. What is done with the accumulated surplus? Current assets, excluding "bonds in Treasury $581,000," amount to $1,045,078 and current liabilities, excluding the surplus, to $775,804. Extensions and improvements in the gas department will be largely, if not wholly, completed in the coming year, and a great extension in the underground conduit system for the electric department is now in contemplation or in hand. Further issues of capital, therefore, seem probable at an approximately early date.

YOUNG'S PARAFFIN LIGHT AND MINERAL OIL CO., LIMITED.

In its working year ended April 30 last this Scotch company got together a credit on profit and loss account of £114,430, including £8,510 brought forward, and after paying all current charges and providing for maintenance of works and mines the board places £20,000 of the money to general depreciation and £15,000 to retort reserve and plant replacement fund, besides assigning £10,193 to meet exceptional outlay at the works. Then after paying the debenture interest a dividend of 7 per cent. is declared on the ordinary shares, together with a contingent dividend of 8 per cent. on the "B" debenture bonds. This leaves £8,808 to go to the new year. Mining and manufacturing costs were greatly increased during the year. Since March, 1907, five advances have taken place in the wages of shale miners aggregating 1s. 6d. per day. Fuel prices went up proportionately by the sliding scale until an advance of 3s. 4d. per ton was reached as compared with the previous year. Oil workers also got their wages up and miscellaneous stores were dearer. The £10,193 spent on improvements calculated to effect economy in the consumption of fuel might have been charged to capital but the board decided to charge it to revenue. And capital expenditure within the year amounted to £17,061 in addition, the details given showing it to be all legitimate. Stock-in-trade has increased by £17,427 and amounts to £64,938, but this is due to the fact that prices for solid paraffin and candles were not fixed until the end of April, several weeks later than in the previous year. Deliveries were therefore held back. At the date of the balance-sheet the company owed £57,058 to sundry creditors, including wages, and debtors on open account owed it £56,130, while bills and cash in hand came to £28,080. General stores stood at £81,027, and the company had £24,228 worth of plant, lamps, lamp wick, fittings, &c., in Birmingham. Its position appears to be sound and comfortable.

SPIES PETROLEUM CO., LIMITED.

We wish all the Russian petroleum companies could make as pleasant a display as this one, although it does want more capital, and proposes to ask the shareholders for permission to create 225,000 new shares of 10s. each. In the year ended

December 31 last, old style, however, the company did well and shows a nett profit of £32,174 made up to £47,952 by the balance brought forward from the previous year. Of this £18,800 has been written off for depreciation, and from the balance the directors recommend a dividend of 2½ per cent. This will leave £2,527 to be carried forward against £15,768 brought in. Some new sources of oil have been lighted upon and one has turned out rich. The production is accordingly much greater this year than last, the increase since January 14 last up to June 7 having been 2,669,520 poods. Prices have been kept up for crude oil at Baku at a good level, but during the past two months there has been some falling off, although that depression also seems to be passing away again. The balance-sheet shows that the issued capital at the end of the year was £355,000 and that the expenditure to the same date had been £384,631. This reveals an excess of outlay amounting to £29,631, and it is proposed to adjust the balance by issuing the remainder of the authorised capital, viz., 65,000 shares of 10s. each, which will shortly be offered to the shareholders at par. The property is valued at £474,231, before writing off £70,799 for depreciation, and of this total £237,026 has been laid out on buildings, plant, &c., £42,424 of it last year. Stock on hand is valued at £36,496. Debtors owe the company £16,526 and it owes sundry creditors £57,763, including £24,997 of deposits by oil buyers. The company is strong in floating resources, having £20,750 lent in London against securities, besides cash, principally in Russia, amounting to £11,564.

EBBW VALE STEEL, IRON AND COAL CO., LIMITED.

"Record" outputs were obtained during the 12 months ended March 31 from both the collieries and the iron and steel departments, and still the directors are not altogether satisfied. According to their report it was impossible to obtain a satisfactory profit in the last-named section as selling prices were almost entirely govefned by "Foreign Competition," but the statement looks rather as if Mr. Joseph Brailsford were still seeking to get up a case for the Tariff Reformers. No statistics are put forward to prove that profits were not good before the slump, but it is admitted that in consequence of the acute and general depression prevailing considerable difficulty was experienced in obtaining sufficient work to keep several of the departments even partially employed. This taken in conjunction with the remarks on the course of the coal market would seem to account fully for the failure to earn a further increase in profits, for that after all is what the whole thing means. Gross profits were practically stationary at £170,558, and considering that a year ago the improvement amounted to £79,400 there does not seem to be much cause for grumbling. The balance brought forward was £4,591 larger at £10,461, giving a total to be dealt with of £181,019 compared with £176,314, of which current and legal expenses took £9,491 or £764 more, and interest on debentures and calls in advance £20,708 or £496 less. Then an extra £4,070 at £31,524 is written off, being the expenditure on new work during the year plus £10,000 for depreciation, £10,000 is set aside to form a reserve against liabilities under the Workmen's Compensation Act and £15,000 is put to collieries extensions account against £37,736 for suspense outlay written off a year ago. These appropriations leave £94,296, so the directors are able to maintain the dividend at 10 per cent. and to raise the sum carried out by £13,084 to £23,545. Property account less the depreciation allowance and £1,470 for property sold is £11,470 down at £1,084,318, but a large proportion of this total must be represented by wasting assets and the reduction does not seem very adequate, especially as there is nothing in the shape of a reserve to supplement it. Creditors have been reduced by £14,827 to £184,547 against which debtors are £9,612 down at £186,040, but stocks are £12,928 up at £152,424, investments and loans have risen by £9,840 to £76,932, and cash and bills come to £9,249 or £5,896 more.

SOUTHERN ALBERTA LAND CO., LIMITED.

The accounts presented cover the period from the inception of the company on October 5, 1906, to December 31, 1907, and show property at cost £300,686. From this is deducted £80,029, stock and equipment of Grand Forks Cattle Company, which is dealt with separately, leaving the item at £220,657. The severe winter of 1906-7 caused heavy losses of cattle, but as they were purchased to enable the company to take over the closed leases of the Grand Forks Cattle Company and acquire the lands held by it, the whole stock, with £89,501 further purchases and expenses from date of acquisition, aggregating with proportion of management expenses £169,899, is carried to suspense account to be written down as liquidated. Sales on this account to date amount to £141,693 leaving a deficiency of £28,206. Expenditure on irrigation, etc., figures at £9,217, and equipment and improvements at £9,892. Inventories, live stock, &c., are entered at £51,573, and £14,281 is due from sundry debtors and bills receivable against £4,566 owing to creditors in Canada and London. Cash at bank is £50,876, and £20,348 is lent at short notice. On the other hand there is an estimated liability of £234,922 in respect of 380,573 acres purchased at $3 per acre with £13,133 expenditure to date and deposit, of which £9,217 already appears among the assets. The balance due to the vendors of £15,000 has been satisfied by an issue of shares to that amount.

BOOTS CASH CHEMISTS (EASTERN), LIMITED.

In the year ended March 31 last this company made a trading profit of £36,292, brought up to £36,349 by transfer fees. The amount is £538 more than the profit of a year ago, and the nett profit of £23,164 is £163 up. The depreciation allowances, however, came to £325 more at £12,451. A balance of £10,704 was brought forward, so that altogether the amount distributable was £33,868 or £862 more. Slightly more is payable in dividends owing to the additional issue of shares a year ago, but this is more than covered by the extra profit; in fact, it seems to have taken but £148 more to complete the dividends on the various classes of shares, including 12 per cent. on the ordinary capital. Then £1,000 was again placed to branch managers' (chemists) provident fund, £100 goes in donations to medical charities and £900 is written off special displacements and depreciation of fittings at Cambridge. Management expenses for the year, including managing director's remuneration and directors' fees, tax free, took the modest sum of £750, and £10,518 was left to carry forward. The balance-sheet shows reserves amounting to £79,050 and a depreciation fund of £47,899. The company owes sundry creditors £63,624 and sundry debtors owe it £1,560. Goodwill remains at £25,000, stock-in-trade stands at £107,431, and cash amounts to £15,485. Both freehold and leasehold properties have risen, freehold by £11,531 and the leasehold, with all their appliances, libraries, &c., by £8,998, so that the freehold properties are now valued at £154,859 and the leaseholds with their contents at £194,068, a total increase of £20,529 on the year.

WEST INDIA AND PANAMA TELEGRAPH CO., LIMITED.

Receipts from messages, etc., for the half-year ended December 31, amounting to £36,247 show an increase of £3,064 over the corresponding period in 1906, and with £15 from transfer fees and £1,000 transferred from income-tax account, the total revenue is £3,059 higher at £37,262. Expenses show an advance of £1,416, so that the balance carried out of working account is finally £1,643 to the good at £14,234. Interest brought in £1,747 or £199 more and with £1,014 balance from last half-year there is £16,439 to deal with, out of which after paying the first preference dividend the directors are able to pay 26s. per share on the second preference on account of dividends accrued to December, 1907, and still carry forward £557. This payment leaves arrears on the second preference shares of £10,272, or nearly four years' dividend. Capital expenditure remains unaltered at £1,314,756, but cable in stock shows a reduction of £10,015 to £7,915 compared with the second half of 1906. The s.s. *Henry Holmes* represents £36,909, but the reserve against the vessel, after adding the £1,112 appropriated for the past half-year and deducting £892 cost of docking, survey, and repairs, has advanced £1,390 to £11,783. Traffic and other debit balances are £1,357 higher at £6,354, while corresponding credit balances have put on only £117 at £5,401. Bills receivable and remittances in transit total £10,728 or much as before, and cash is £26,154. Cable depreciation reserve is unchanged at £93,596 as are also investments standing at cost price £80,663.

LAGUNAS NITRATE CO., LIMITED.

Serious labour troubles on the Pampa and in the Port, culminating in a strike, interfered considerably with this company's operations during the latter part of 1907, and not only had the oficina to be closed but shipments of nitrate were suspended. Trading profits under these circumstances fell off by £1,293 to £43,807, and as miscellaneous receipts were £1,246 less at £22, the disposable total showed a decrease of £2,539 at £43,829. Expenses, including £2,332 for income-tax provision and £475 paid to the Permanent Nitrate Committee, further reduced the surplus to £35,524 compared with £38,637 a year ago. Owing to the financial position of Chili and the fall in exchange, the directors are of opinion that the company should retain adequate funds in hand, and they have therefore decided to write off the exchange suspense account of £6,715 and a sum of £4,063 from sundry debtors. These appropriations leave only £24,746 to be dealt with, so the dividend is cut down from 4 per cent. to 2, and after transferring £6,264 or £3,627 more to reserve, £482 is carried forward. Cost of works and properties and interest in the Jazpampa Bajo Nitrate Co., Limited, remain unaltered at £875,739, but capital stocks are £787 higher at £11,680, and the reserve even now only reaches £30,000, so that the situation still requires strengthening considerably. Stocks, doubtless because of the suspension of shipments, have risen by the substantial figure of £29,524 to £71,000, while debtors show a corresponding drop of £30,951 at £20,284 and cash is £4,449 down at £3,520. On the other hand, liabilities to sundry creditors and on bills payable are £207 down at £28,663, but the bank overdraft has risen by £4,909 to £24,841.

JOSEPH BURTON AND SONS, LIMITED.

Keen competition and the high price of tea and other commodities are the reasons put forward for the further shrinkage of £2,671 to £20,446 in the income for the year ended April 25. The balance brought forward was £299 larger at £7,684, but nett profits were none the less £2,346 down at £12,588, although the directors provide compensation for an increase of £188 to £2,627 in the allowance for depreciation by a reduction of £178 to £6,976 in the curiously mixed item of debenture and loan interest and directors' fees, etc. Out of this surplus the ordinary shareholders again receive 5 per cent. and another £2,500 is transferred to reserve leaving £5,338 or £2,346 less to be carried to the new account. Additions to properties were £1,538 against a depreciation allowance of only £500, leaving this item £1,037 up at £247,449, while rolling stock, fixtures, plant, &c., was £1,755 higher at £56,121 after deducting £2,126 written off. On the other hand reserve now totals £25,000 but is practically all in the business as the only investment consists of £7,307 in shares in allied businesses. Creditors show little change and are still decidedly heavy at £95,654, while a reduction of £6,826 to £53,501 in sundry debtors is only partly offset by an increase of £3,883 to £74,674 in stocks, and cash seems very inadequate at £1,689.

JAMES DEUCHAR, LIMITED.

It is quite refreshing to come across a brewery company's report in which the directors make no reference to the Licensing Bill, and the moderation in this instance is the more noteworthy because the profits for the year ended April 30 show a marked falling off. Revenue from all sources was £8,864 smaller at £54,080, and after paying directors' and managing directors' remuneration and transferring another £4,000 to reserve the director write off £120 more at £3,818 for depreciation, but balance this by providing £118 less at £2,355 for licences compensation. Adding £7,863 or £2,273 more brought forward, the disposable surplus was £50,570 compared with £57,163, of which debenture interest absorbs £18,750 and preference dividend £6,500, after which the dividend on the ordinary shares is reduced from 12 to 9 per cent., leaving £7,270 or £593 less to be carried forward. Freeholds, copyholds, and leaseholds, &c., have been increased by £1,117 to £795,106 against which the depreciation fund now stands at £42,280 and the general reserve at £32,046, or together less than 9½ per cent., and even of this only £28,650 is separately invested in unspecified securities. Liabilities to sundry creditors are £4,745 down at £44,986, but this is accompanied by a reduction of £24,413 to £50,165 in stocks, while a decrease of £905 to £10,437 in sundry debtors is largely offset by an increase of £714 to £16,097 in cash. Fixed and loose plant is valued at £18,401, and no mention is made of anything having been written off this item for depreciation.

EDWARD AND JOHN BURKE, LIMITED.

No explanation is forthcoming of the decline in profits for the year ended April 30, although this amounted to the fairly substantial sum of £5,213 at £96,032. The balance brought forward, too, was £6,741 smaller at £9,281, making a total decrease of £11,954 at £105,313, and as administration charges, debenture interest and preference dividend absorbed rather more, the nett surplus was only £51,100 compared with £63,646. A year ago, however, the directors put £17,000 to a reserve for depreciation of investments and £7,000 to the business maintenance fund, and wrote off £4,940 for extensions to the bottle factory, whereas now they content themselves with adding £14,000 to the business fund. They are therefore able to repeat the dividend of 8½ per cent. on the ordinary shares, and by withholding the bonus of £1,200 to the staff have £12,875 or £3,594 more to carry forward. Business premises, &c., are unchanged at £913,929, and the reserve is also unaltered at £100,000. Investments representing this fund remain at £100,000, and general investments are £2,000 down at £27,487, but against these two items there is, of course, the depreciation fund of £17,000, which should be ample enough for the purpose. Stocks have been increased by no less than £25,370 to £188,018, which is not a very healthy sign when profits have shrunk and trading balances are adverse, a decrease of £12,384 to £23,737 in sundry debtors being accompanied by a drop of no more than £684 to £33,746 in sundry creditors. Cash and bills, however, although £5,961 lower, are still substantial at £77,921.

ROCK LIFE ASSURANCE COMPANY.

In 1907 this company's premium income amounted to £216,041 nett, and its interest and dividend income was £92,135 after deducting income-tax, the total revenue of the year being about £329,000, and after meeting claims and paying working charges, &c., the life fund was reduced by £131,278 to £2,289,802. Claims took £168,641 and surrenders £25,529 as against £19,801 in capital received for annuities sold. The current charge of annuities was £32,357. Expenses of management and commission took 33.33 per cent. In dealing with the quinquennial valuation it is pointed out that the £70,518 of depreciation shown in the life fund has not been written off, but is held in suspense account pending a recovery in the value of the securities. This suspense account figures in the life funds as above stated, but the directors have added to the stringency of the investigation by writing off £46,229 from the amount at which the policyholders interested in the shares of the company stand in the balance-sheet. The valuation brought out a surplus of £171,518, of which £35,518 was carried to the investment reserve and £24,034 apportioned to the subscription capital and general reserve fund, so that there is no further bonus, although the surplus but for depreciation would have shown enough to provide a compound reversionary bonus at the rate of 20s. per cent. per annum for the valuation period. In the accident and general department the income for the year was £20,999, exclusive of £732 received as interest, and claims paid took £27,555. A large part of this, however, was disbursed in commutation of a number of old claims, and it is stated that the cost of the new claims, including a liberal estimate for those remaining unsettled at the end of the year, amounted to 39.2 per cent. of the premiums.

ROYAL INSURANCE CO., LIMITED.

In its fire department the premium income for 1907 was £3,070,215 and the nett losses £1,758,760. Expenses and commission took £1,258,000, losses being equal to 47.79 per cent. of the premium income, and expenses and commission to 34.28 per cent. or thereby. After meeting all charges and carrying £100,000 additional to the fire fund, the balance of profit left is £553,038. The employers' liability section of the accident department also gave a nett premium income of £111,680, claims taking only £33,794, so that after meeting commission and management expenses there was a surplus of £35,023, to which has been added £9,077 brought from profit and loss to constitute a fund of £45,000. The accident and general section also gave a premium income of £50,623, but here the claims took £25,595 and the surplus left after paying expenses was only £6,175. With the help, however, of £50,000 drawn from profit and [illegible] and other odd amounts, a balance of £63,035 is carried forward. The life business showed a premium income of £709,892, claims took £567,328, and commission and expenses took about 11 55 per cent. of the premium income. At the end of the year the life fund amounted to £9,007,314, being an increase of £424,850 on the year, or almost exactly the amount of the interest income. Altogether the balance at the credit of profit and loss amounted to £1,371,967, including £647,629 brought forward. Out of this the purchase price of the Northern Accident business acquired by the Royal, and the expenses in connection with the organisation of the accident department have been paid, together with expenses connected with the conversion of the company into a limited liability one. Together these took £118,925. Then besides the two sums mentioned allocated to the accident funds £15,000 is carried to the credit of the superannuation fund, making £74,076 altogether set aside. From the balance of £1,048,337 remaining, the directors pay a final dividend of 10s. per share, making £1 per share for the year on the £10 shares, 30s. paid up or 66.66 per cent., and have still £917,708 left to carry forward. The total resources of the society in all forms aggregate £14,298,500.

MINOR NOTICES OF COMPANY REPORTS.

ALLEN, EVERITT AND SONS, LIMITED.—High price of metals and enhanced competition again put difficulties in the way of this company's profit earning, but the disposable balance for the year ended March 31 last was £10,622, including £1,902 brought forward, and the board is able to pay the debenture interest together with nine months' dividend on the preference shares as well as to write £1,600 off for depreciation, leaving £522 to be carried forward. The ordinary capital of £96,000 gets nothing. Cost of production has brought down the profits, but hopes are held out that all will be well in the near future, a fair working basis having now been reached. The small arrears of preference dividend will be paid on June 30.

CARDIFF CHANNEL DRY DOCKS AND PONTOON CO., LIMITED.—Nett profit for the year ended March 31, after making all usual allowances, including maintenance and provision for redemption of the first mortgage debentures and debenture stock, amounts to £19,993. Adding £41,301 brought forward, the sum of £61,294 is available. Out of this is paid the preference dividend and 7 per cent. as against 5 and 3 for the two preceding years on the ordinary shares, of which 3 per cent. was paid in November, 1907, leaving £49,607 to be carried forward. Freehold and leasehold properties, &c., including cost of debenture stock issue, remain at original cost, £372,195, and the auditors note that no depreciation has been written off the pontoon buildings, plant and machinery. Tools are valued at £9,457, and stocks and materials at £13,698. Sundry debtors and outstandings amount to £46,795, while liabilities to trade creditors and outstandings, including contingency account, total £23,587. Cash comes to £41,911 and investments at £1,347 is all that represents £27,500 first mortgage redemption account and £20,000 reserve for redemption of "B" debentures.

CHESTER'S BREWERY CO., LIMITED.—Profit for the year after paying £3,060 to the compensation fund was up £3,116 at £48,999, and the directors pay the preference dividend and bring the ordinary up to 8 per cent. for the year by a final distribution at the rate of 10 per cent. per annum. The reserve fund is then strengthened by £20,000 or £7,500 more than it got a year ago, but ingoings account and writing off to extinguish licences are given respectively £1,440 and £2,000 less. Then £5,897 or £202 more is written off extraordinary outlay in respect of rebuildings and alterations and £1,056 less at £4,689 is left to carry forward. The board of this well-known brewery does not say a single word about the Licensing Bill. There is nothing in the balance-sheet that calls for particular notice.

COLONIAL AND UNITED STATES MORTGAGE CO.—Profits for the year ended March 31, after providing debenture interest, amounted to £25,091, giving with £6,119 brought in an available balance of £31,210. Out of this is paid the preference dividend, £15,000 transferred to reserve, and 8 per cent. paid on the ordinary shares against 7 per cent., leaving the carry forward reduced to £3,454. Mortgages on real estate total £604,048, balances in respect of land sold £11,102, farms and properties on hand £17,969, stores, cotton stock, &c., on hand £3,035, interest accrued £13,287, balances at branches £3,042. Reserve fund investments are itemised at £50,000, including offices site, &c., £9,000. Cash comes to £17,443, and £800 is due on sundry outstanding accounts. Liabilities include loans on deposit and interest accrued £20,913, investors in United States mortgages —balances—£1,017, and sundry outstanding accounts £1,922. Reserve with the year's addition and £5,000 from contingency fund now aggregates £100,000. The report claims that the company rather benefited from the American monetary panic, and obtained all money required at 4 per cent.

DAMANSARA (SELANGOR) RUBBER COMPANY.—The rubber crop for the six months ended December 31 amounted to 41,880 lbs. and produced £6,870, in addition to which £305 was received for 130 16 piculs of coffee and £351 came in from miscellaneous sources, making the total income £7,526. Of this £3,873 was retained as nett profit and £1,500 was brought in, or £4,894 in all, out of which dividends aggregating 5 per cent. have been paid and £237 is carried forward. Expenditure on the estates now amounts to £80,333 against a paid-up capital of £76,876 and £1,553 received on account of calls. Creditors and bills

payable at £6,020 exceed debtors by £1,806, but cash comes to £3,807. Part of the above revenue was derived from a new estate having 194 acres in full or partial bearing, which was purchased from the Malay States Coffee Company, but which does not appear in the balance-sheet as the transfer had not

Derby Tea Company.—The 1907 crop was very little behind that of the previous year, while the quality was as good, and with a favourable market the price was 1.51d. better at 6.9d. Gross profits were £16,605, and after deducting manager's commission, &c., the nett profits, including £3,593 brought forward and £180 from interest were £19,208. Preference dividend requires no more than £900, and as the ordinary share capital is only £20,007 the large surplus enables the directors to pay a dividend of 30 per cent. and a bonus of 20 per cent., after which £2,000 is added to the insurance fund and £6,304 is carried forward. Block account stands at £35,007 or the exact amount of the capital and buildings, machinery and light railway less depreciation amount to £1,239, reserve for working capital and equalisation of dividends comes to £10,000 and the insurance fund to £4,000, of which £5,720 is invested in good securities. Floating liabilities are small at £1,451 against tea stocks £7,973, sundry debtors £4,286, temporary loans £5,057 and cash £6,726.

Dhendai Tea Company.—A sharp drop of 0.73d. to 8.35d. in the price realised in 1907 was not counterbalanced by the increase of 6,811 lbs. to 328,160 lbs. in the crop, and gross receipts were £707 down at £11,459. Expenditure, however, was less, so that nett profits were only £236 lower at £1,409, and with £45 more brought forward the disposable balance was £1,738 against £1,928. This enables the directors to repeat last year's dividend of 5 per cent., with a reduction of £191 to £138 in the sum carried out. Reserve, of course, has again to be passed by and that fund remains at £500, but there is a further fund of £1,518 representing the difference between assets and liabilities taken over to put against the capital expenditure of £32,000. Liabilities to the company's agents have been increased by £234 to £2,096, but other creditors are £54 down at £1,244 against which stocks are £1,303 larger at £6,419, but debtors and cash have pretty nearly reached vanishing point, the figures being £4 and £12 respectively.

D. F. Tayler and Co., Limited.—After the usual allowances, nett profit for the year ended March 31 amounts to £12,987, including £758 from last account. Out of this debenture interest and preference dividend being provided for, £2,000 is placed to reserve, and 10 per cent. paid on the ordinary capital, leaving the carry forward a trifle higher at £830. Property account is increased by £3,411 laid out during the year to £134,762. Stock is not heavy at £27,226 and cash and bills ample at £6,417. Trade balances are well the right side, £17,216 being due from debtors against £10,516 owing. Reserve (including depreciation) will total with the year's contribution £27,000, but is only invested to the extent of £9,048. With this exception the balance-sheet is clean and satisfactory.

Doloo Tea.—The crop for 1907 amounted to 960,389 lbs. or over 80,000 lbs. more than the estimate, and the company was also fortunate in securing an improvement of 0.73d. at 7.02d. in the price. Gross receipts were £25,377 of which expenses took £12,687, and with £2,774 brought forward the available total was £15,465. Preference dividend and manager's and assistants' commissions having been paid £3,000 is put to a reserve fund and the ordinary shares receive 16 per cent., but the sum carried out is reduced to £663. Block account stands at £79,344, and against this the present appropriation from revenue constitutes the only reserve. Creditors come to £3,373 compared with £3,524 due by sundry debtors, but stocks on hand are valued at £10,000, and cash, including £5,000 on deposit, is £5,970.

Egyptian Delta Land and Investment Co., Limited.—This company seems to have done little more than mark time in its year to March 31 last, but it did gather a nett profit of £11,220 exclusive of £236 brought forward, and out of this preliminary expenses of £1,000 are written off and a dividend of 5d. per share will be distributed, leaving £3,701 to be carried forward. The crisis of the past year had the effect of hanging up dealings in land so that it is difficult for the present to carry out any important realisations, but the future looks more hopeful, and the directors promise that they will lose no time in selling some of the property at good profits when the chance arises.

J. and J. Baldwin and Partners, Limited.—The position of this company has gone from bad to worse, and in its year ended April 30 last it realised a deficiency of £8,597 after meeting the debenture interest, the profit brought out being barely £599 after providing for depreciation of mill buildings, plant and machinery. As there was a deficiency of £8,856 brought forward, it follows that at the date of the balance-sheet the company was £17,453 to the bad on revenue. This melancholy state of affairs is attributable, the board says, to the sudden and extraordinary fall in the price of raw materials involving a very heavy loss on stock, but it adds that the general business of the company has been well maintained and the turnover the largest on record. How is it that stock-in-trade amounts to £322,499, and what is the real value of goodwill, trade marks, &c., entered at £75,000? Sundry debtors owe the company £96,630, and it owes sundry creditors £67,957 exclusive of the debt of £242,000 on 4 per cent. first mortgage debentures. Depreciation on property valued a year ago at £126,000 was only £2,283 nett, but about £1,397 nett was written off engines, boilers, plant, office furniture, &c., &c.

Jhanzie Tea Association.—While the 1907 crop was only 7,186 lbs. smaller than that of the previous season at 1,321,829 lbs., the price dropped by 0.24d. to 9.06d. and gross receipts showed a decrease of £2,875 at £48,371. The saving in expenses was trifling, and after paying managers' commission the nett profits were £2,224 less at £8,133, but a larger balance of £1,489 was brought in and interest and transfer fees yielded more, reducing the decrease to £1,703 at £9,839. Of this £807 is written off block account against £2,000 a year ago, but the dividend has to be cut down from 8 per cent. to 7 and the sum carried forward is £136 smaller at £1,270. Floating liabilities are very little altered at £18,048, and on the credit side a drop of £4,634 to £17,079 in stocks is offset by increases of £3,664 to £5,122 in cash, £551 to £4,337 in sundry debtors and £560 to £1,307 in advances on account of the current year. Block account will now stand at £100,000 or the amount of the paid-up capital, but the reserve is unaltered at £14,000 and the portion invested is also unchanged at £6,319.

Longai Valley Tea Company.—The early cessation of rains in this company's district caused the crop for the year ended December 31 to fall short of the previous output by 14,351 lbs. at 791,889 lbs., but the price realised was 1.44d. better at 7d. per lb. Gross income was £22,402, of which £11,213 was retained as profit, and with £2,091 brought forward and £93 from interest gave a disposable total of £13,398. Manager's commission took £782 of this, £147 was written off the light railway, and after meeting preference dividend and sundry charges £11,306 was left, out of which the ordinary shares get a dividend of 12 per cent. and a bonus of 5 per cent., £1,000 is transferred to insurance fund, and £3,336 is carried forward. Block account stands at £56,002 and buildings, machinery, &c., are valued at £2,275, while the reserve and insurance fund all told amount to no more than £10,000, and of this only £3,364 is separately invested. Creditors come to £2,136 against £3,246 due by debtors., £8,236 for tea in hand, and in addition to £4,510 in cash the company has £1,631 out on temporary loans.

Lucas and Co.—A decrease in sales and an increase in the cost of materials have contributed to reduce the profits of this Leamington brewery. The accounts for the year ended March 31 show gross profits on sales of £71,775, making with £3,757 from rents and interest a gross revenue of £75,532. Outgoings absorbed £53,272, leaving £22,260 nett and giving with £782 brought in a disposable sum of £23,042. Debenture interest and preference dividends paid, £3,000 is put to reserve and 10 per cent. paid on the ordinary share capital, leaving £779 to go forward. The directors, who have the distinction of including among their number a lady, express their disbelief in the Licensing Bill being allowed to become law, and decide to distribute the profits as heretofore. Estates, goodwill, and fixed plant figure at £336,200, loose plant, &c., at £13,850; stocks of beer, &c., £20,185, book debts, rents, and loans (gross) at £24,305, while £11,727 is due to creditors and £10,000 owing to bankers. Cash comes to £2,076, and the reserve, which will amount to £39,000 with the present contribution, is represented by investments to the extent of but £1,404.

Makum (Assam) Tea Company.—A drop of 1.16d. to 8.35d. in the nett prices realised for the past season's crop was not made good by the increase of 99,426 lbs. to 1,077,926 lbs. in the quantity, and profits fell off by £2,049 to £9,678. The balance brought in, however, was £485 larger at £4,322, and as only £1,500 debentures were redeemed against £3,500 the nett surplus after meeting all charges was £1,558 up at £9,360. Out of this a dividend of 10 per cent. is paid, compared with 7½ per cent. a year ago, and the sum carried out is further increased to £4,630. Block account is unaltered at £97,369 and the company, of course, has nothing in the shape of a reserve. Creditors and bills payable come to £1,109 more at £14,344, while debtors are £1,302 down at £4,312, but stocks have risen by £3,181 to £18,503 and cash is £510 higher at £3,090.

Mint, Birmingham, Limited.—The twelve months ended March 31 last was a better year than the previous period for this company. The profit amounted to £23,873, brought up to £27,866 by the balance of £3,993 brought forward. The total was £8,373 better than a year ago, and the directors are therefore able to continue to pay the 10 per cent. dividend and the bonus of 5s. per share as well as to place £10,000 to the reserve account raising it to £110,000, leaving £5,866 to carry forward. Nothing in the balance-sheet calls for special mention, but the directors say that they have invested another £15,399 in securities outside the business, making the total of such investments £37,000, and from the list given the stocks held are obviously of the first quality. Therefore £3,507 has had to be written off to bring them down to the market value of March 25, 1907.

Molassine Company (1907).—Nett profits for the period from February 5, 1907, to March 31 last amounted to £25,100, out of which the preference dividend is paid, and after giving the ordinary shares 10 per cent. the balance of £11,444 is put to capital reserve fund. Although the company was only incorporated on February 5, 1907, it took over the business of its predecessor as from the preceding Nov. 1, during which time a profit of £6,132 was earned. Of this £1,710 went for interest on the purchase price and £4,422 was transferred to capital reserve. That fund now amounts to £15,866, but it goes against a patents and goodwill account of £111,299, and as the principal patent dates back to 1894 the strengthening of the reserve should be the main object of the directors' ambition. Sundry debtors at £40,887 exceed creditors by £23,343, stocks seem moderate at £12,992, and in addition to cash and bills amount-

ing to £20,264, the company owns shares in other companies having a book value of £8,584.

Netherlands Bank of South Africa.—The prevailing depression in South Africa during the past year has seriously affected the business of this Transvaal bank, and earnings for the year ended December 31 show a substantial diminution. Accompanying the restriction of trade, the further serious fall in the value of property and share investments has decided the directors to provide for contingencies by setting aside the whole of the nett profits of £11,096 to a special reserve. Cash in all quarters amounts to £120,055 and remittances in transit figure at £26,563. Investments and securities are valued at £56,073, while bills discounted, loans, advances, &c., aggregate £605,637. Bank premises represent £38,598, and bills held for collection appear as per contra at £41,810. Notes are in circulation to the extent of £17,622. Current accounts, deposits, acceptances, &c., contribute a liability of £377,580, and £44,643 is in reserve. The issued capital is £400,000 and the balance-sheet totals £892,752.

North British Cold Storage and Ice Co.—Gross earnings for the year ended April 30 amounted to £9,087, showing a satisfactory advance on the year. With £18 increase in stocks, £4 from transfer fees, and £23 interest, the gross revenue is £9,132, and after paying debenture interest, tax and fees, and allowing for depreciation on plant, £3,120 is carried out as nett profit, giving with £392 brought in £3,512 disposable. Out of this £1,000 is set aside for redemption of debentures, 6 per cent. paid on ordinary share capital of £30,000, and £712, subject to directors' fees, is carried forward. Property account aggregates £38,800. Sundry amounts due to the company figure at £855, while just £1 more is owing on similar items. Cash comes to £1,313. Depreciation and debenture redemption accounts total £4,000 with the year's addition, and reserve amounts to £1,500. During the past year £750 debentures were redeemed.

Romai Tea Company.—With 13,804 lbs. more tea at 270,973 lbs. to dispose of this company found the market less favourable, and the average price was 0.14d. smaller at 8.81d. Gross proceeds rose by £297 to £9,881, but expenses increased to a greater extent, and nett profits, including £694 or £56 less brought forward were only £2,705 compared with £2,917. The directors, however, are not deterred by such a trifle, and again increase the dividend by 2½ per cent. to 10, although this means that the reserve gets £500 or half last year's amount, and the balance carried out is reduced by £89 to £605. Reserves all told now stand at no more than £2,476 against estates valued at £16,000. Creditors have risen by £1,082 to £2,241, but stocks are £1,875 higher at £5,767, while debtors have dropped by £56 to £98 and cash comes to no more than £28.

Royal Bank of Australia.—Nett profits for the half-year ended March 31 after deducting interest and rebate on bills amounted to £15,017 and £4,941 was brought forward giving a total of £19,958 to be dealt with. Out of this a dividend at the rate of 7 per cent. per annum is paid, £7,500 is transferred to reserve, and £1,500 set aside to defray the cost of alterations to the Melbourne premises, leaving £3,958 to be carried forward. The directors state that they have succeeded in obtaining a share of the State Government banking account on the same terms as the other banks, and that this, in conjunction with the general expansion of the business, has necessitated somewhat extensive alterations in the head office premises. With a paid-up capital of £200,000 and a reserve now amounting to £87,500 the bank had liabilities of £13,036 on notes and £152,052 on bills in circulation. Government deposits, interest bearing, amount to £40,434, and other deposits come to £1,232,099, of which £738,587 bears interest. Cash assets, including coin, bullion, &c., £308,538, bills and remittances in transit £301,819, and investments £28,400, come to £651,655, real estate is valued at £64,367, and bills discounted and advances total £1,020,320.

Villa Maria and Rufino Company.—This line is worked by the Buenos Ayres and Pacific Railway Company, which pays a fixed sum per annum to cover the guaranteed interest on the 4 per cent. first debenture stock, and a dividend of 3 per cent. on the guaranteed stock. The directors therefore do not enter into many details of operations, but content themselves with a statement that in addition to a satisfactory development of its own traffic in wheat, hay, and general goods, the railway benefited from the timber transported for the works of the Pacific main line and branches and receipts improved by £21,377 to £86,217. Capital expenditure for the past year, including £5,082 for discount and expenses of issue of first debenture stock, amounted to £23,953, and as the overdraft on this account is now £45,997 the Pacific Company has had to advance £47,997, of which £2,000 is still held in cash.

National Provincial Bank of England.—The statement for May 27 shows liabilities on notes or bills of £572,181, and on simple contracts of £54,707,946, against assets consisting of cash on hand and at Bank of England £8,465,040, money at call and short notice £3,185,296, British Government and other securities £14,527,926, and bills of exchange £34,448,865.

Messrs. J. Henry Schröder & Co. have received a cable from their Santos agents advising them that they have further encashed £7,500 in respect of the surtax collected weekly for the service of the State of San Paulo 5 per cent. Exchequer Bonds, making a total of £810,400 encashed since August 1.

COMPANY MEETINGS.

LIPTON.

The tenth ordinary general meeting of Lipton, Limited, was held on Wednesday at Winchester House, Old Broad Street, E.C., Sir Thomas J. Lipton, Bart., chairman, presiding.

The Secretary (Mr. Wm. S. Carmichael) read the notice convening the meeting and the report of the auditors.

The Chairman pointed out that that was the tenth year in which he had presided at their meetings, and during that period they had paid dividends on the ordinary shares averaging 7½ per cent. per annum. At the last meeting he foreshadowed that at no distant date the business would exceed anything hitherto accomplished, and from the turnover point of view the volume of the business done for the past year exceeded by over £1,000,000 anything they had previously achieved. They were not only maintaining this advance, but in the period which had elapsed since the books were closed they showed an increase of fully £250,000 over last year. They had devoted a considerable amount of money to refitting and enlarging the branches, and to adding machinery and plant to their stores and warehouses, and he felt certain that in the years to come they would reap very considerable benefit from these improvements. The increase in their export trade was a satisfactory feature, for it showed great strides. Since they last met he had visited Egypt, where they were doing a very considerable trade, and also Ceylon, where they had a large amounted invested in tea, cocoa, and rubber estates, and he could report most favourably upon the condition of their estates and properties. They had opened a wholesale warehouse in Australia, at Sydney, which was previously supplied from Colombo. Owing to the changes in the Australian tariff they could now only ship bulk tea from India and Ceylon, and the blending, packing, &c., was done in Sydney. They had also opened a branch warehouse in Bombay and established another in Karachi to deal with the growing trade of Northern India. The financial crisis in the United States at the end of 1907 interfered very much with their export trade to the American Continent, but he looked to a return to the old figures and a larger trade in the future. To cope with the expansion of the business, and to keep abreast of the times, they found they required to have a larger capital, and with the enormous volume of trade they were now doing, it was essential that they should have sufficient funds at their disposal to enable them to buy in large quantities and to the best advantage. The reconstructions, improvements, and additions which had been carried out during the past twelve months in the branches and in the various warehouses and factories, at home and abroad, represented a sum of over £123,000. Stocks amounted to £246,000 more than at the same time last year, and the liabilities were likewise increased on account of the much larger volume of business. They had had numerous requests from shareholders and others to open additional branches in towns where they were not yet represented, and they had already opened and were arranging to open many new branches in the principal towns on a scale which would be a credit to the company. For that and other reasons the shareholders would be asked to approve of the increase of the capital by the creation of 250,000 additional ordinary shares of £1 each. The company must go on progressing, and the extension of the business would mean increased revenue, and the shareholders would benefit accordingly in the future.

Mr. T. R. Smith seconded the motion, which was adopted.

An extraordinary general meeting was subsequently held, at which a resolution was passed to increase the capital by the creation of 250,000 ordinary shares of £1 each. In reply to a question by Mr. Chandler the chairman stated that the directors intended to give the present shareholders a preference in the allotment of the new shares. They would do their best to meet Mr. Chandler's suggestion. He personally thought it would be a fair thing to give the ordinary shareholders preference to the extent of two shares to one.

BOOTS CASH CHEMISTS (EASTERN).

The sixteenth ordinary general meeting of Boots Cash Chemists (Eastern), Limited, was held on Wednesday at the City office of the company, 29, Farringdon Road, E.C., Mr. Jesse Boot (chairman and managing director) presiding.

The Secretary (Mr. Alexander L. Milne) having read the notice convening the meeting and the auditors' report having been read,

The Chairman said: The trade name of our business—that is, "Boots Cash Chemists"—becomes more and more a household term from year to year. To-day we are more firmly established than ever in the favour of the public, and although we do not extend our new branches like a tree in the first few years of its existence, we strengthen the old ones, and put on fresh shoots from time to time like a vigorous elder tree. Our profits have kept pace with our expenses, and although the public services in the shape of increasing rates and taxes are continually nibbling at them without our having any say in the matter—though we have taxation without representation—I, at any rate, am not averse to our taking our due share of the burden of the public utilities and providing for the health and well-being of the people without complaining as long as the rates and taxes are well and economically administered. Our shareholders cannot fail to be pleased with the accounts now proposed to be adopted. They vary little from last year, and I will not go through the routine changes of bills and buildings this occasion, merely remarking that, looking back to our first prospectus, where 10 per cent. per annum on the ordinary shares was held out as something in the nature of a maximum to be achieved, it is gratifying to think that we have been able

to maintain a 12 per cent. rate for so many years, and that even in a time of declining trade like the present we are still able to do so. This we are doing without dividing up profits to the hilt, for, as you will see, the net profit amounts to £2,500 more than the amount payable in dividends, whilst we carry forward a large amount, and have already enormous reserve funds. Everybody says there is a slump in trade, and I suppose that is so—things are quiet—but I should certainly add steady, and the day-to-day requirements of the public will not allow of anything abnormally depressing in retail trade for any lengthy period unless things get much worse than there is any prospect of at present.

Alderman James Duckworth, M.P., in seconding the motion, said he was sure that it was a matter for great gratification that, while they had had changes during the year in the condition of trade generally, their own trade had kept up, so that they were able to declare the same dividend as before. He thought it showed that the business was well established.

The resolution was carried unanimously.

Mr. Parsons, in acknowledging the re-election of the auditors, said that it was a great pleasure to be associated with them. They were appreciated by the public now, but he could remember the time, during the early years of the company, when they were regarded with grave suspicion by the outside public. The position as regarded capital was sounder than ever. When they realised how much of the capital was represented by freehold properties they began to realise what a sound substratum of assets they had.

HAVANA CIGAR AND TOBACCO FACTORIES, LIMITED.

The profit from all sources is put at £45,080 for 1907. This is an increase of £1,154 on the previous year, and after meeting current charges the balance is £2,878 up at £41,464. When debenture interest has been paid £27,164 is left, made up to £30,314 by £3,150 brought forward. Out of this the preference dividend for the year to October 31 last was paid, leaving £11,414, out of which £8,264 is devoted to reimburse the Henry Clay and Bock Company on account of the balance of £8,686 provided by it to pay this company's preference dividend for the year ended October 31, 1905. The remaining sum of £3,150 is held to provide a preference dividend from November 1 to December 31, 1907. The balance-sheet shows the company to have a claim on Henry Clay, Bock, and Co., for balance of working capital and accrued profits, amounting to £199,025. This is a reduction of £9,434. Preliminary expenses are still carried in the balance-sheet and amount to £4,283. The stock of tobacco, cigars, &c., amounts to £19,246, and the value of the properties, goodwill, &c., taken over, stands at £564,721. There is a reserve fund of £1,994, and the position is from many points of view still the reverse of strong.

SOUTHERN INDIA TEA ESTATES COMPANY.

A substantial increase of 67,186 lbs. to 656,575 lbs. in the crop for the year ended February 29 was accompanied by an improvement of 0.42d. to 6.07d. per lb. in the price realised and gross profits were consequently £2,657 larger at £6,231. After meeting all charges including another £500 written off for depreciation the nett balance, with £1,494 or £385 more brought forward, amounted to £6,407 compared with £3,200. Preference dividend takes £438 and as the directors have at last realised the necessity of strengthening the financial position they content themselves with raising the distribution on the ordinary shares from 6 per cent. to 8. Of the remainder £1,357 is transferred to reserve and £2,921, or nearly double the amount brought in, is carried to the new account. Even yet, however, the position is none too strong, and the directors in taking this course would seem to have made a virtue of necessity. Sundry creditors have risen by £305 to £5,022 and although on the other hand stocks are £2,233 up at £7,321 sundry debtors and cash are both small at £217 and £382 respectively, and any larger dividend on the ordinary shares would have curtailed the surplus of free assets to an uncomfortable extent. Block account at £35,137 is £535 down against which the reserve now is only £2,500 and is all in the business, £1,456 being represented by coast advances.

RUBBER ESTATES OF CEYLON, LIMITED.

Although this company has 2,772 acres under rubber, some of it from five to seven years old, its revenue from that source is still infinitesimal, and it has to depend on its tea and other products for an income. The crop of tea for the past year was 23,309 lbs. smaller at 370,497 lbs., but cocoa increased by 350 cwt. to 1,178 cwt. and 164,808 or 44,139 more cocoanuts were gathered, and the total receipts from sales rose by £3,804 to £12,329. The company is also by way of being the owner of a plumbago mine, from which it received Rs. 8,470 in royalties, and with an increase of £1,602 in stocks on hand the nett profits were £2,142 up at £5,218. Adding £144 brought forward and £173 from interest, &c., the surplus was £5,535 compared with £3,457, of which London office charges took £806 and another £250 each was allowed for depreciation and writing down preliminary expenses. Then £325 was written off for loss on rice, and £146 for bad and doubtful coast advances, after which the dividend is increased by 1 per cent. to 4, leaving £789 or £645 more to be carried forward. Outlay on the estates for the year amounted to £11,672, making a total of £75,866, and as a consequence of this cash has been reduced by £5,088 to £795. Creditors and bills payable are £1,251 higher at £7,961 against increases of £1,602 to £6,305 in stocks and £144 to £949 in sundry debtors, and it is difficult to see where the money is to come from to pay the dividend just announced. The company, it is true, is carrying as assets coast advances of £3,456, and preliminary expenses of £3,277, but neither of these items is of a kind to provide the necessary funds.

The Full Prospectus has been filed with the Registrar of Joint Stock Companies.

The SUBSCRIPTION LIST will OPEN on THURSDAY, the 11th day of JUNE, 1908, and CLOSE on or before THURSDAY, the 18th day of JUNE, 1908.

The Grand Hotel, Worthing
LIMITED.

Incorporated under the Companies Acts, 1862 to 1900.

CAPITAL - - - - £100,000

Divided into 100,000 Shares of £1 each.

The above Shares are now offered for public subscription, payable as follows: 2s. 6d. per Share on Application, 2s. 6d. per Share on Allotment, and the balance in calls of not more than 2s. 6d per Share at intervals of not less than 2 months.

Directors.

ROGER C. RICHARDS (Barrister-at-Law), Ashdown Park, Coulsdon, Surrey, Chairman.

ALEXANDER DAVIDSON (Director of the African City Properties Trust, Ltd.), 23, Upper Thames Street, E.C.

RICHARD MOXON, Brewer (Director of John F. Betz & Son's, Ltd.), Ash & Coy., Dane John Brewery, Canterbury.

N. E. ROBINS, Insurance Broker, 75, North Street, Brighton.

W. E. KING, Engineer, Arundel House, Liverpool Gardens, Worthing, and 75, North Street, Brighton.

Bankers.

LLOYDS BANK, LIMITED, WORTHING.

Auditors.

Brokers.

JAMES FLOWER & SONS, 1, Angel Court, and Stock Exchange, London, E.C.

Secretary.

CHARLES FORBES.

Offices of the Company.

6, OLD JEWRY, LONDON, E.C.

ABRIDGED PROSPECTUS.

The Company has been formed for the purpose of erecting a modern High-Class Hotel at Worthing, Sussex, upon the site which has been recently acquired, and upon which stood the well-known Royal Sea House Hotel which was burnt down in 1904. The site faces the Sea and Pier in the heart of the Town, and the Theatre, Band Stand and Concert Hall are all within a minute's walk.

Since the Royal Sea House Hotel was burnt, a High-Class and modern Hotel such as it is proposed to erect has been much wanted in Worthing. It is the opinion of residents, tradespeople and others who know Worthing, that this Hotel must command an immediate success, inasmuch as the present first-class hotel accommodation is insufficient to meet the demand.

As Worthing is the sunniest town and one of the warmest towns on the South Coast during the winter months, it is anticipated that a large winter, as well as a summer trade, will be done by this Hotel.

There is an excellent Train Service direct to and from London. There are also trains every few minutes to Brighton, and during the summer months a splendid connection by Motor 'Bus.

The Pier Company at Worthing are preparing plans for considerable improvements in the Pier.

There is an excellent 18 hole Golf Course on the outskirts of the Town.

Plans on modern lines have been prepared by Mr. S. E. Davies, Architect, of 44, Gresham Street, London, who has had very extensive experience. They provide for very spacious Palm Court, Winter Garden, Halls, Lounges and Saloons, Coffee, Dining, Billiard and Drawing Rooms. About 120 Bedrooms, with lifts to all floors. A special feature will be the provision of fitted Baths in a large number of Bedrooms.

The Architect, in preparing the plans and other details in connection with the Hotel, has provided for the requirements of the motoring public, who frequent the district in large numbers, and it is proposed to erect a smart and well equipped Garage adjoining the Hotel.

There will be a large Restaurant with sheltered balcony on the ground floor, which will be open to Motorists and other visitors to the town who may not be staying at the Hotel.

The cost of building, equipping, furnishing and decorating the Hotel is estimated at about £45,000.

The land, which is freehold, including four shops and a perfectly equipped bar, has a superficial area of about 16,500 square feet. It has been agreed to be sold to the Company at the price of £15,000, has a frontage of 218 feet, and and is at the corner of Marine Parade and South Street. The shops are let on lease to good tenants and produce an annual income of about £350, increasing within the next few years to about £500.

The site, buildings, &c., have been valued by Messrs. Bullock and Sadler, of Brighton (who have had a wide experience in the district), at over £15,000.

Mr. C. E. Tinelli, the proprietor of Morle's Hotel, Jermyn Street, London, W., who was for twelve years with the Café de Paris, Monte Carlo, the Grosvenor and Carlton Hotels, and was General Manager for three years of the Victoria Hotel, Woodhall Spa, has made a report on the prospects of the Hotel, and estimates the income from all sources at £34,770 0s. 0d., and entire expenditure at £16,561 0s. 0d., leaving a net profit of £18,209 0s. 0d.

Mr. Tinelli's detailed financial statement can be seen at the offices of the Solicitors to the Company, at 4, Queen Victoria Street, London, E.C.

A licence has been unanimously granted by the Worthing magistrates.

The minimum subscription named in the Articles of Association on which the Directors may proceed to allotment is 1,000 Shares, but the Directors do not propose to allot unless upon a subscription of not less than 20,000 Shares.

The preliminary expenses exclusive of brokerage are estimated at about £3,000.

The contracts and the Memorandum and Articles of Association of the Company can be seen at the offices of the Solicitors to the Company at 4, Queen Victoria Street, London, E.C.

Application for settlement of the Shares will be made to the Committee of the London Stock Exchange in due course.

Full Prospectuses (upon the terms of which applications will alone be received) and Forms of Application can be obtained at the Offices of the Company, or from the Bankers, Brokers, Solicitors, and Auditors.

Dated the 10th day of June, 1908.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 546. New Series. SATURDAY, JUNE 20, 1908. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Debate on Old-Age Pensions.

The Bill will pass the Commons. Of that there never was any doubt, and Mr. Harold Cox only mustered 29 in support of his amendment for delay. As Mr. Asquith said in his wind-up speech, all parties in the House are pledged to the principle of these State doles, and the differences brought out in the debate were differences of detail, not of principle. The trend of opinion seemed to be towards modifications calculated to remove the already modified restrictions contained in the Government's Bill, and to lower the age at which candidates become eligible for a share of the money. We are not much interested in that phase of the question, because we know that a beginning only is needed and soon pensions will become universal. There is really no available logical standpoint against enlargement for those who support the principle that allows the revenues of the State to be utilised for poor relief. The peer equally with the meanest citizen is entitled to his 5s. or his 10s. per week, and some peers may be poor enough to require it before all is over. Our contention always has been much like that put forward by Mr. Balfour. "It is perfectly impossible," he said, "to consider this scheme apart from the Poor Law," and he contended that the Government might have waited for the report of the Royal Commission now investigating the working of that law before burdening the Exchequer with new charges, heavy to begin with and certain to grow. There is rhetorical exaggeration in Mr. Balfour's reference to the repudiation of the national debt as one possible consequence of the cost of pensions, but it appears to be the intention of the Government to cut down the sinking fund charges, but no curtailment of this kind will suffice. Soon it will become a question which existing branch of the public services is to be made to suffer in order that the steadily mounting total of old-age pensions may be provided for, and the Opposition is not without ground for dread as to the fate of the army and navy. No Ministry, though, could ever have the courage to propose a reduction in the votes for the fighting services; all must rather be busy in augmenting them. Therefore, the establishment of an old-age pension charge upon the national revenue is the first step towards the reimposition of a protectionist tariff on the German or United States model. It will be a tariff of small beginnings no doubt, just like the pensions themselves, but it will grow to great things even as the pensions must. Just note what the "moderate" working man is invited to claim or expect in speeches like that of Mr. Barnes, the Labour member from Glasgow. The aged poor, he said, do not get "their fair share of the benefits of free trade" by the Government scheme. The 10s. limit of independent income "is a direct discouragement to thrift," and he saw no reason why a married couple should get less money than two people living separately. Another Labour member, Mr. O'Grady, would like the millionaire to be able to claim his pension "equally with John Smith in receipt of his 9s. per week." He has received many letters and resolutions asking that the starting age should be reduced to 65. "In 15 years the members of his party would come along and claim that the age should be reduced to 55." "Why not?" he added, in response to Opposition cheers. And, indeed, why not?

£105,710, or including £13,115 brought forward, £118,825. The profits, moreover, were not all produced by the dividends and interest received from the company's numerous subsidiaries, nor their contracts, because another £49,954 came in as the final slice of the gain made by promoting the Bombay Electric Company. This profit was taken in shares at par, and we should like to know whether these shares have been sold or whether they still figure amongst the company's share investments, the total of which shown in the balance-sheet is £5,007,703. If the shares have not been sold, then to this extent the profit is simply a book entry, and the directors are distributing as cash what is really only paper. Moreover, there will be no such entry next year, and unless the undertakings from which the company draws revenue increase much in profitableness, next year's revenue will be much worse than this one, for only £131,414 came in as dividends on shares held, and £17,029 as interest on the company's holdings in subsidiary debentures. The gross profit altogether from what may be called the company's business was little more than £190,000, since besides the Bombay company's shares taken in as profit, £10,882 is credited as nett profit on sale or realisation of investments. It was, therefore, well that the board should reduce the dividend, painful though the operation may be and difficult. It deserves, indeed to be commended, because by depriving the preference shareholders, only for a time let us hope, of half their dividend, they are able to add £35,000 to the general reserve, raising it to £602,420, and still have £35,394 left to carry to the new year. Most of this reserve, it should again be explained, which figures at such a handsome total, is the product of premiums received on the sale of shares, and the money ought therefore to be in no sense available for any but capital purposes. Goodwill has been reduced to a nominal £1,000, and the balance-sheet is weak principally from the fact that the sundry debtor and debit balances foot up at £545,801 after deducting a reserve of £32,617. Is there danger that any portion of this money will be lost? Because, if so, to the proportion it is lost the reserve accumulated from premiums will have to be drawn upon.

Many interesting particulars are given relative to the condition of the companies in which the trust is interested. Altogether, their paid-up debenture and share capital is put at £11,642,328, exclusive of £143,372 spent by the trust on undertakings at Barrow, Brighton and Shoreham, and Mumbles. Including this figure, the British Electric Traction Company's proportion of this capital, as revealed in its books, is brought up to the above-mentioned £5,007,703, and an income of 5 per cent. upon that amount would mean upwards of £250,000 per annum, whereas the actual income, including £5,000 the interest on Consols held, was less than £160,000. In that contrast the secret of the whole of the company's difficulties may be said to lie. Amongst the good points to be noted, however, is the rapid and material decrease in management and commission expenses. For 1904-5 the total of these was £61,436, or 20·4 per cent. of the gross profits, and for the past year it was £27,446, or 10·9 per cent. Gross profits, by the way, fell off last year £17,198, and several explanations are given as helping to account for the decline: the badness of the season, the lowering of fares—a mistake now in process of remedy—and the rawness of some of the enterprises originated by the trust. As years pass improvement may be expected, at any rate in traffic receipts, and provided various subsidiary companies make adequate provision for repairs, renewals, and general waste before declaring their profits, the financial position of the group ought in the course of years to become more satisfactory. Meantime a general council has been formed which is taking over the supervising management of the whole system, a system embracing between 40 and 50 different or affiliated undertakings. The total route worked by the trust company's subsidiaries was at the end of last year nearly 394 miles long, exclusive of 42 miles of omnibus routes, and the number of passengers carried was larger at 288,770,028, but the numbers per route mile fell off by almost 20,000 to 662,726, the reduction being explained by the transfer of certain lines at Birmingham to the corporation. Receipts per route mile were also less by £132 at £3,342.

The Rand Main Reef.

Although doubtless very satisfactory, too much importance must not be attached to the information sent this week by the Robinson Gold Mining Company concerning the payable character of portions of the main reef on that company's property. As is quite well known, the main reef of the Witswatersrand quartz-bearing bed is of very low grade, and in their mining operations the companies have so far only extracted what are known as the south reef and the main reef leader. Few of the companies have ever bothered about the main reef, and it has never been taken into account in estimating the lives of the mines, so that beyond the knowledge that it could not possibly pay to extract it with working costs at the figures hitherto prevailing little or nothing has been done to put the reef to a thorough test. It varies in grade in the different mines, and while the Robinson has placed practically no reliance upon it as a factor in feeding the mill small amounts taken from localities of enrichment have been lately mixed with the richer stuff, and crushed with satisfactory results. The last annual report gave some information on this point, and in view of the low costs at which this mine now works, thanks in part to the much smaller outlay on development, it was decided to resample the main reef. So far, about 10,000 linear feet have been resampled, and of this footage 8,490 ft. were found to yield an average of 7·07 dwts. over an average of 41·29 ins. upon an estimated stoping width of 60 ins. This, it should be noted, is much greater than most mines can count upon. It is calculated that about 760,000 tons, of a value of 4·87 dwts., are available for stoping, allowing for 12 per cent. sorting. The recoverable yield is estimated at about £1 0s. 4d. per ton, and as the monthly statistics show the working costs in the Robinson Mine during April and May were slightly under 13s. per ton. At present the crushing capacity of the plant is about 42,000 tons per month, and it has been decided to increase it immediately to 53,000 to 55,000 tons. It is hoped by this means that the total working costs will be reduced to 12s., so that the main reef should yield a profit of 8s. per ton. The increased capacity of the reduction plant will be devoted exclusively to the treatment of the main reef, and the result of operating will be, as far as possible, shown separately in the annual accounts—very satisfactory news, as it will provide valuable data for other companies. It is calculated that the tonnage of main reef at present exposed will supply the additional plant for six years at a profit of about £50,000 a year, and the capital expenditure necessary, say £60,000, will be taken from the accumulated funds. It may be mentioned that the 10,000 ft. resampled represents some 26 per cent. of the probable total contents of the main reef in this company's property, and no accurate information is available concerning values of the remaining 74 per cent., but development and sampling are being actively continued, and the directors have every reason to think that additional large quantities of payable ore will be disclosed. To some extent, of course, the entire business must be regarded as an experiment, and it will not do to run away with the idea that what can be done in the Robinson Mine can be imitated in all the others. Few companies even approach the low level of working costs attained by this prominent member of the Wernher Beit group, and while the main reef in other mines may easily give a much lower value, the chances of the better yield are decidedly remote.

Great Cobar, Limited.

The first annual report and accounts of this big mining venture, so unenviably prominent during the last few weeks, are out at last. We suppose they ought to be regarded as reassuring, but since their issue the shares have suffered another serious slump, and are now a long way below their par value of £5, after having

been over £12 at one period of the copper boom. It will be remembered that only a short time ago, just about a month, all sorts of adverse rumours concerning the position of the concern were put in circulation, and, although strenuously denied by the company's officials, did not produce the peace of mind essential to complete happiness. It may be said straight away that most of the stories were absurd exaggerations, particularly the one declaring that the company had not made profits during the 15 months that it has been producing copper for sale, but the rumour-mongers "knew something," as the saying is, and we get it confirmed that the cost of the new plant has been enormously greater than anticipated, in addition to which the usual delay in its erection has been experienced. For all this the causes are manifold, among the more important being the scarcity of labour, the difficulty of securing delivery of the materials ordered in Australia, increased wages, and the higher Customs duties put into force by the Commonwealth after the contracts for the new machinery had been placed. We suppose it is impossible for an English board of directors, free to buy how, where, and when they like, to realise how great is the difference when operations have to be conducted on behalf of a company domiciled within a Protectionist country. There ought to be a very liberal allowance for possible vagaries of the tariff and other disabilities, but such a course would probably frighten away speculators and investors altogether. The directors lay great stress on the disadvantages under which the mines have worked in consequence of the defective and inadequate plant taken over at the formation of the company, and impress upon the shareholders that there is no sort of comparison between the results secured from the old plant and those to be achieved with the new one.

When the latter is in operation the directors declare that the output of copper will be at least doubled, and the cost of production so far reduced that it will be possible to work profitably at the lowest average price of copper which has ruled in any period during the past 50 years. This fully disposes of any suggestion that all was not well with the new plant—as a fact, it is scarcely completed yet—but seeing that one-half of the current year has already elapsed, and that the machinery can hardly be in full operation for two or three months at least, it would be reassuring to learn that adequate profits are being earned with the old plant, greatly improved by the company since taken over, with copper at existing prices. "Up to the present the available water has been sufficient for all purposes." So runs the opening sentence of the paragraph dealing with the water supply, but it does not entirely satisfy us since it fails to dispose of the assertion that the company had to bring water about 130 miles to the amount of 80,000 gallons daily. The new plant will not require more water than the present one, but—and this seems somewhat significant—in view of the small rainfall in the district it has been considered advisable to supplement the capacity of the present reservoirs, and an additional dam is being built capable of holding 80 million gallons. The news regarding developments and ore reserves leaves little or nothing to be desired. The new shaft has been sunk and connected at the various levels with the ore bodies in preparation for the starting of the new plant. The developments throughout the mines are described as most satisfactory, and the quantity of ore blocked out, 1,989,000 tons, equal to five years' supply for the new plant, is larger by half a million tons than when the company took possession, and of value equal to that smelted during the period under review. Moreover, the general manager declares that the prospects are considerably better than when the mine was acquired. In the 15 months to the end of December, 1907, the total material treated in the furnaces was 277,551 tons, which produced 15,953 tons of matte. This was despatched to Lithgow for treatment, and gave 6,115 tons of copper, 17,167 ozs. of gold and 104,292 ozs. of silver.

Total revenue including sundry receipts, interest, &c., amounted to £603,656, against which the cost of production was £353,048, London office expenses, including £8,191 for directors' and trustees' fees, were £11,876, and one or two small items £300, leaving £238,431. Debenture interest requires £49,500, and the directors having somewhat unwisely paid a dividend of 15s. per share last September, absorbing £112,500, there remains £62,903, which it is proposed to carry to a dividend reserve fund. London and colonial income taxes absorbed £13,528. Regarding the company's financial position it must be confessed that it is not very brilliant. Capital expenditure over and above the purchase price has been £210,770, and the total property is now held up at £1,224,787. It does not equal the issued share and debenture capital of £1,305,836; but, nevertheless, the company is heavily in debt, for the reason that no less than £144,072 was paid away for underwriting commission and £22,596 for preliminary expenses. Metals on hand are entered at £121,717, we hope conservatively valued; but loans with interest come to £127,212 and sundry creditors to £45,146, whereas debtors owe the small sum of £6,378, and cash is just £2,042, out of a balance-sheet total of £1,541,107. By no means a promising position, and we do not pretend to understand the following cryptic paragraph referring to the capital outlay:—"On reference to the balance-sheet, it will be seen that the sum of £183,000 has been spent on new works; the excess capital expenditure was temporarily met out of profits. An adjustment of this is being effected in the current year out of the debenture provision set apart for the purpose at the formation of the company, and although the cost of the new works has been higher than anticipated for reasons already given, the provision has proved ample for all requirements." Dealing finally with the depreciation question, the directors refer to the much discussed provision in the trust deed for the redemption of £100,000 of debentures per annum commencing with the current year, and give their opinion that this will be ample allowance for all purposes, especially as a good deal of money has been spent out of revenue on the improvement of the works. We quite agree and sincerely trust that the directors' confidence that all obligations will be duly met will be justified by events. But in the meantime, a substantial addition to the company's liquid resources would doubtless be exceedingly welcome.

The Position of the National Debt.

The annual return setting forth many particulars relative to the National Debt deserves notice. First of all there is satisfaction in noting the rapidity with which the public debt has been reduced from the maximum figure of £798,349,190 in 1903 to £762,320,051 at March 31 last, this latter figure including £2,500,000 of temporarily redeemed Treasury bills which were renewable in the new financial year. Even now, however, the debt is about £127,000,000 more than it was at March 31, 1899. And the gross total as now given omits a good deal which ought to be taken notice of in any complete statement of the nation's liabilities. For example, contingent liabilities aggregating more than £4,500,000, as particularised in a separate account, are left out of account, yet these are all, in a sense, direct liabilities, as some of the items indicate. For instance, the State owed at March 31 last £1,932,135 to suitors in the English Supreme Court of Judicature, and £956,153 as liability on bankrupt estates, besides £868,000 on account of unclaimed dividends. No doubt the money is all invested in Government stock, so that with these obligations added to the debt totals there would be duplication, but we think they should be noted alongside as it were. And the actual liability is really much larger than is shown, because the vicious practice continues of concealing the deficits upon Post Office and trustee savings-banks accounts, and on Friendly Society deposits. These ought to be stated, and we hope Mr. Lloyd George, with his courageous and vigorous understanding, will see the reasonableness of gratifying the public demand in this respect by compelling the permanent officials to let the nation know what its risks are in these directions. All that we get in the official return is this note, "the Consolidated Fund is

liable to make good any amount by which the funds held by the National Debt Commissioners may prove insufficient to meet the claims of depositors in the Post Office Savings Banks, or of the Trustee Savings Banks and Friendly Societies."

This is a mockery, as the facts relating to these deficits in the past sufficiently indicate. In the items composing the above given aggregate of the National Debt, we have, for example, the remains of an annuity created to cover trustee savings-bank deficiencies in 1881. The capital balance due on that account is now £770,414, but the original amount was at least £4,000,000. It is imperative, therefore that the country should know how it stands in relation to these trust funds. Is the deficiency on them to-day £25,000,000 or £30,000,000, or what? Then there is another class of liability which ought not to be lost sight of, consisting of guaranteed loans, the aggregate of which is about £164,000,000. Out of that total £71,059,000 represents Local Loans stock created to provide money lent again to local authorities, and another £36,670,000 is Irish Land stock, while £23,334,000 remains to be paid of the £35,000,000 endorsed by us for the Transvaal. Amongst the other items there is £7,640,400 still due on account of the Alexandria indemnities and other expenses connected with the Egyptian war, and the loan raised to Turkey during the Crimean war remains at the fixed amount of £3,815,000. Possibly enough we may never be called upon to make good, wholly or partially, our guarantee in any of these instances, but in any complete statement of the National Debt all the facts ought to be given.

Reverting to the figures of this debt as given it seems reasonable to inquire why the total should vary in two different returns. The larger one we have been dealing with professes to exhibit over a series of years the gross liabilities of the State as represented by the nominal funded debt, estimated capital liability in respect of terminable annuities, unfunded debt, and other liabilities with additional particulars that need not be set forth. The other return is merely the total amount of dead-weight debt outstanding at April 1 last with similar statements in respect to other capital liabilities, and the total debt is not given in identical figures in the two returns. This, no doubt, is partly explained by the fact that in the larger return the capital of the Russian-Dutch loan is included, whereas in the other it would seem to be omitted, but the facts ought to be made clear, and why should one guaranteed obligation be included in the fuller debt return and none of the others? This oddity looks like a specimen of that peculiar book-keeping referred to by Mr. Harold Cox in the article noticed last week. Taking the figures as they stand in the larger return, the South African war may be said to have added £163,000,000 to the National Debt, that and the other warlike expenditure in which the late Government indulged and that the present Government continues. This debt is in addition to the enormous increase in public taxation, and is further supplemented by the moneys laid hold of by the suspended service of the terminable annuities. In the fiscal year ended March 31, 1899, for example, the amount applied in redemption of debt was £8,980,000, and in the succeeding year it was £6,324,000, but in the year ended March 31, 1901, it was only £1,563,385. These at least were the amounts derived from the old and new sinking funds, but the sums charged against revenue alone in both 1901 and 1902 were barely one-fifth of the sum so allotted in 1898-9. We have, therefore, at least £12,000,000 from this source to add to the money sunk in the war.

The list of applications for the issue of 100,000 ordinary shares of £10 each in the Burma Railways will be closed to-day (Saturday), June 20.

Messrs. J. Henry Schröder and Co. and Messrs. Speyer Brothers announce that allotment letters for National Railways of Mexico Prior Lien 4½ per cent. bonds may now be handed in at their respective offices to be exchanged for scrip.

Messrs. J. Henry Schröder and Co. have received a cable from their Santos agents advising them that they have further encashed £8,600 in respect of the surtax, collected weekly, for the service of the State of San Paulo 5 per cent. exchequer bonds, making a total of £819,000 encashed since August 1.

American Business Notes.

Appearances are still favourable to continued low rates for floating balances in the New York market. The sale of Union Pacific bonds has not been a great success either in America or in Europe, but the money is raised somehow, and a steady absorption goes on all over Europe of securities of this kind. This must be sensibly helping the American money market to surmount its difficulties, and although the trade of the country continues backward the mood becomes more confident for several reasons, chief amongst which stands the harvest outlook. Industries are resuming activity, and there is less unemployment. Everybody also expects that when the conventions to select candidates for the Presidency have been held a time of activity may follow, as the election excitement will not grow to a white heat during the months of July, August, and September. The main force, however, behind the business revival is the successful raising of fresh capital.

Last week's return of New York Associated Banks' averages indicated that the increased demands for credit capital have left some impression upon the figures. Loans and advances, however, have risen by barely £453,000, notwithstanding the credit required by the manipulators of the Union Pacific issue. More remarkable is the improvement of £1,104,400 in the specie average, especially as it is accompanied by a gain of £473,200 in the stock of greenbacks. This makes an increase of about £1,578,000 altogether in the money on hand, so that what with the increase in the credits it was inevitable that the deposit average should also go up. It was £1,351,200 higher on the week, and the average surplus reserve has gone up by £1,240,000 to £10,678,200. A year ago it was only £903,000. No wonder, therefore, that money keeps cheap.

Most of the pressure of providing new credit in order to smooth the way for fresh issues of stock still falls upon the outside banks and trusts, whose loans and investments went up last week by £2,266,200 to £178,510,000. These institutions also gained about £801,000 in specie, making their total holdings £11,946,000. They also held nearly £2,487,000 of greenbacks or £53,400 more, and deposits were accordingly up £3,059,200 to £151,524,200, or nearly £27,000,000 less than the loans and investments. In spite of the indications of increased credit business these figures give, the bank clearings for New York last week were 13.5 per cent. less than in the corresponding week of last year, and in the whole of the country outside New York the decrease was 16.6 per cent. In some respects that is a favourable sign, because it may possibly point to better commerce. That is to say, the decrease might have been larger had finance business alone been in question. It should be noted that the gold in hand has risen in spite of continued exports to Germany. About £750,000 has gone thither or been engaged to go this week, bringing the total thus far sent to Europe up to £9,000,000.

Stock markets are not very happy with it all, and got a bad blow in the end of last week by the Erie default, coming as it did upon the heels of other ominous incidents of a like character. It is not technically a default in the case of the Erie, only a "funding" of coupons, Messrs. J. P. Morgan and Co. having performed another of those brilliant feats of finance which we do not find any of their great Jewish rivals disposed to indulge in. They have bought the interest coupons of the Erie Company's bonds maturing prior to July 1, 1909, and will pledge them under "a collateral indenture" securing the recent issue of three-year Erie notes. What this means we are not sure, but it seems to indicate that Messrs. Morgan made themselves responsible for the credit of Erie over a period of, say, fifteen months, and no doubt hope by that time to be able to create some other security which the public will absorb, in order to repay themselves. The Erie Railroad will not be able to liqui-

date this debt by that time out of its own earnings, but there is some project being talked about for uniting this concern with the still more helpless Wabash property, and as that would prepare the way for an Atlantic outlet for the Gould roads we may perhaps look for some wonderful financial performances during the summer. It is conceivable enough that were the discredited securities of these roads huddled together and a new "mortgage" bond created and offered at a tempting figure, something approaching a rehabilitation of derelicts might be accomplished. But Erie will always be rotten at intervals, or rather at intervals Erie rottenness will always come to the surface to disturb market equanimity.

Meanwhile, debt creation is a brisk business, brisker than gold exports in the circumstances, though these still go on, and the Illinois Central, which a short time ago issued £2,805,000 of new stock is now preparing to put a like amount in bonds in the hands of the public. The money is wanted to clear up the company's floating indebtedness, and we quite expect floating debt to figure prominently amongst the influences impelling railroads all over the Union to make fresh emissions. But the board of the Illinois Central does not seem to find the financiers eager. The Baltimore and Ohio company, however, is said to have sold £1,522,000 of bonds, so there should be money available for dividends, come of traffic what may.

A notable decline is again shown in the figures of the republic's foreign trade for May, especially in imports, which fell to £16,846,200 as compared with £5,302,400 for May 1907. Exports, however, keep up in a satisfactory fashion and are probably larger in bulk for the past month although not larger in value than for May last year. The total value anyway was £26,679,400 against £26,952,000 in the corresponding month.

A few interesting facts have been made public with regard to the copper mining business in the United States. That is to say the Amalgamated Copper Company, which is a would-be monopoly or copper trust company, the Anaconda Mine, and Mr. Heinze's United Copper Company, have all issued their accounts as well as the Butte Coalition Mining Company and others. Briefly, every balance-sheet shows a sharp decline in revenue. In its year ended April 30 last, the nett income of the Amalgamated Company was little more than £1,336,000 as compared with £2,831,000 in 1907, when the harvest of the skilfully managed copper rig was at its fullest. In 1907 the company paid dividends of 7¾ per cent., or 2 per cent. more than in 1906, and still had an apparent surplus of nearly £446,000 left, while for the past year it has only paid 4 per cent. with £105,000 left. The Amalgamated Company lives upon and by other companies, and one of its most important investments is in the Anaconda company whose mines were shut down for some time during the year, and whose revenue is accordingly much diminished. It produced only 63,055,661 lbs. of copper in the calendar year 1907 against 94,963,835 lbs. the year before. An equally unpleasant exhibit is made by the Heinze United Copper Company whose income fell in the year ended May 31 to £172,200. The year before it was £1,313,200, so that after paying a dividend of 1¾ per cent. there was barely £2,600 left, while in the previous year the dividend was 7 per cent with £605,000 left. Little more is needed to indicate the extent to which combining and manœuvring have transformed the copper mining industry into a gamble more dangenerous to get entangled in than the Kaffir or Jungle market. And the position of the copper trade is at this moment most unsatisfactory. Nobody knows what amounts of hidden stocks are still held concealed, and until these are disposed of prices must remain not only treacherous but liable to mysterious fluctuations.

The Westinghouse Electric and Manufacturing Company of Pittsburg is not making very satisfactory progress with its reconstruction. That, however, is not altogether what the merchandise creditors' committee says in its report just issued announcing that the time for adhering to the reconstruction and assessment scheme will be extended to the end of the current week. On the contrary, this committee declares that "most satisfactory progress" has been made with the merchandise creditors, who are no doubt accepting the new paper of the company because there is nothing else to be had, and in the hope that it may turn out of some value. Only "fair progress," however, has been made in the work of obtaining subscriptions from existing stockholders. The hope none the less remains that adhesions and cash will come in to provide the £2,000,000 required. If this hope is falsified then foreclosure must ensue. We have the feeling that it would be much more humane to put the thing out of its agony right away, because £2,000,000 is not nearly enough to set the company on its feet again.

Particulars of a sort have made their appearance relating to the business of the Morgan Shipping Combine, grandiloquently known as the International Mercantile Marine Company. Its report for 1907 has been issued, and discloses gross receipts amounting to £7,853,400. This is an increase of only £416,000 on the previous year, and the nett earnings of £1,404,800 are £200,000 less, while the nett surplus is given at £806,800 or £199,000 less. The actual free nett revenue seems to have been about £800,000, or a little more, and the whole sum was transferred to the depreciation fund, raising that and the insurance fund together to £1,200,000. It is stated that these figures are the largest in the company's history, but they cannot be described as overwhelmingly exhilarating, and we should imagine that every year the concern finds the competition more destructive of profit. However, it is declared by the board that all the payments made on account of new steamships under construction came out of current funds—not necessarily out of revenue—because the report goes on in the American manner to intimate that the item of capital assets in the balance-sheet has been increased without any addition to the company's debt. The addition may only be a preparation for a fresh issue of shares, and in the meantime certain bonds are being retired, no less than £72,800 of the first mortgage 5 per cent. bonds having been redeemed out of the earnings of the American and Red Star lines left over from 1906 and a further £50,000 is to be utilised out of the earnings of 1907. The debenture bonds of companies held by the public have been brought down from £155,716 to £139,200 or little more. When the building programme by the company is completed the number of steamers in service, including the subsidiary lines, will be 132, with a total capacity of 1,159,704 tons, and the directors declare that the general trade between Great Britain, Australia and New Zealand was much better last year than in the previous one. The earnings improved, so that the nett voyage earnings have nearly doubled in four years, while there has been a decrease in the cost of administration and also in interest and fixed charges. It will be wonderful, indeed, if this enormously over-capitalised structure manages to struggle along and pay its debenture interest. The general balance-sheet made up at December 31 last shows assets entered at £38,894,400, which represents a surplus of £62,527 over the liabilities.

An interesting speech was that of Sir Thomas Shaugnessy, the president of the Canadian Pacific Railway, delivered at a banquet held to celebrate the opening of the Toronto-Sudbury branch just built. This new line is said to give access to a large unoccupied area, brings Toronto within 36 hours of Winnipeg, with other advantages. In the course of his speech Sir Thomas made one more rousing prediction about the extent and quality of the coming Canadian wheat crop out West. With reasonable weather, he said, a harvest of 100,000,000 bushels of wheat might be expected. The most interesting statements, however, in the speech had reference to the way the company is spending capital. Within six years, Sir Thomas declared, £18,000,000 of capital has been expended

in building new lines, improving rolling-stock, and providing new steamboats. Have we not here the key to the wonderful success of the Canadian Pacific Railway? It is always pouring out capital unstintedly, and very often on objects which we fear are not properly assignable to capital account. New lines must be built with new money, but we are not so sure about the additions to the ocean fleet or about the rolling-stock, and can quite understand the steady enthusiasm with which Lord Strathcona and all connected with the Canadian Pacific Railway Company foment a propaganda for a subsidised "All Red" route. Will the board of the Canadian Pacific publish the accounts of its Atlantic and Pacific steamship services separately?

Passing Events.

Some little talk has been excited by the zeal of M.P.'s to try and convict our joint-stock banks of deliberate cheating. The subject comes up almost annually, like the big gooseberry or the sea serpent. Vague accusations float about always to the effect that enormous amounts of money and valuables are lying hidden in banks for which no owners are to be found. The suspicious gossip is ready to jump to the conclusion that the banks do not want to find owners, and every now and again a simple-minded, ambitious, or malignant M.P. endeavours to stir the matter up by questions in Parliament. One member has made a guess at a sum exceeding £600,000 as the value of the property thus kept out of the hands of its real owners. It must be a fantastic guess. That banks do have waifs and strays of balances and odds and ends of valuables left on their hands and never claimed is true enough, but the amount is never large, and most, if not all, banks when they find property lying dormant and unclaimed do their best to discover the owners thereof. This assurance is always given when the question springs up, and quiets the suspicions for a time, but it crops up so often that really it may be worth discussion whether the banks should not oblige themselves to publish, at stated intervals, particulars of all money balances and valuables in their hands which have been for a period, say ten years, unclaimed. There can be no harm in that.

From the point of view of the popular superstition generated by secrecy, little effective objection can be offered even to the Bill introduced on Wednesday by Mr. Horatio Bottomley. Its object is to compel disclosure of dormant balances, unclaimed securities, and valuables now in the custody of bankers, and Mr. Bottomley persuaded the House to read it a first time by a majority of 139—193 for, 54 against—by telling it some unbelievable stories of bank grabs and windfalls. It is so very likely that an old lady's bank balance of £28,000 would find no claimants after her death, or that "a wealthy man," whose money was all deposited with various banks, would leave no trace of his wealth. And no doubt that officer's £6,000 will now be available for his family—unless, indeed, it may have been invested by mistake in the "Selected Mines" or the "Joint Stock Trust." The officer was Mr. Bottomley's friend, and surely that clever gentleman might be able to guide the family to the place of deposit, or to indicate the particular part of some great bank building reared with the unsurrendered cash. The exaggerations were gross, but they do not seem to have been palpable to the House of Commons, and we, therefore, venture to suggest that bank boards should not wait for any such compulsion as this astonishing financier seeks to apply, but of their own accord issue particulars of all the unclaimed moneys and valuables in their keeping.

It would seem, according to the preliminary figures issued by the Board of Trade, summarising British Railway results for the past year, that the companies spent only about £7,147,000 of new capital in that time. This was a remarkably self-denying performance on their part, and we fear the current year will not show such restraint. Altogether the capital of the companies represented by assets now amounts to £1,091,597,000, deducting the £196,000,000 or so of duplications, inflations, and consolidations. The summary figures do not give any indication of the amount of capital spent, but all the figures will be found in the fuller return when it comes out. Gross receipts were about 3.6 per cent. better, and totalled £121,538,000 from all sources. The passenger traffic gave £50,971,000, the goods traffic £61,167,000, steamboats, canals, harbours, docks, &c., £5,037,000, and miscellaneous sources of income £4,333,000. Working expenses rose by over 5 per cent. to £76,664,000, so that the increase in the nett revenue was only some £428,000 or less than 1 per cent. at £44,874,000.

A small improvement in Indian weather occurred last week. Lord Elgin, telegraphing on June 15, announces that some rain fell in all provinces, but for the most part it was slight, and over the greater part of the country is still below normal. It is, however, predicted that the monsoon rains will probably be weak during June, but that over the whole period it may be nearly normal, only slightly behind. We hope this prediction will come true, for the general situation in the distressed area is unchanged, and the total number of persons in receipt of relief was at the date of the telegram 1,301,000, of which 1,059,000 were on the works in the United Provinces. Since the Viceroy's telegram was sent, however, the monsoon has burst, as the phrase is, and if the rainfall is abundant, the numbers of the visibly hungry or distressed will begin to diminish; but it does not follow that the condition of the population will materially change for the better these many months to come, and the plague scourge born of hunger promises to continue unabated. Hunger, in fact, is the father of the plague, and the plague kills its millions.

Last week's revenue figures are bulged notably by the heap of money poured in from the Post Office. Altogether receipts came to £2,856,580, and of this the Post Office contributed £1,320,000 as compared with only £510,000 in the corresponding week of the previous year. The seemingly capricious way in which the revenue of this department is flung into the Treasury renders it necessary to be slow to draw inferences, but other departments also did a little better last week, all except property and income-tax, which only gave £18,000. Customs, however, contributed £517,000 and Excise £503,000, while £334,000 came in from estate duties. All the money and more was used up, but only £2,533,235 of it went in ordinary current expenses, including about £60,000 handed over to local authorities. Supply services absorbed £2,473,000, and then £500,000 was applied in reduction of the public debt out of the surplus realised on last year's budget. Even then the balances in the Banks of England and Ireland were reduced by only £176,655.

Sir Julius Wernher must not be held deprived of all consoling elements when we think of his mistakes, grabs, griefs and losses over Lemoine, the diamond-maker. The whole of the money advanced by the De Beers magnate has not been taken from him by the merry joker. In his capacity as member of the diamond-buying syndicate behind De Beers Sir Julius will have had his share of the profit made on the diamonds bought by Lemoine for his comedy to set against the—£64,000 was it?—that that humourist extracted from him in cash. We do not hint that the nett loss may not be important to M. Lemoine still, but whatever the money compensation may be to Sir Julius it cannot really suffice as balm to the wounded spirit of the great "Kaffir King." The worst of it is that we all thought him such an astute man; pictured him as hovering above mundane affairs like a kind of financial golden eagle ready to swoop and scoop all that offered into his inaccessible nest. And now M. Lemoine has made him the object of infinite laughter. It is a sad fall, and we shall never get

over it any more than Sir Julius. Mercifully, both of us are getting up in years. But is the spirit of monopoly really so blind as all this, and was it Jagersfontein diamonds that M. Lemoine "manufactured" by his exquisitely simple process—all a matter of "heat and pressure"—applied to the "carbon" of over-reaching brains? Ho! ho! There is no help for it, we *must* laugh, for 'tis as good as a droll story from Touraine.

Continental Memoranda.

One has said it so often that the frequent repetition of the fact that the world's Bourses constitute one market swayed by the same influences becomes trite. But then it is true. We have been complaining of want of business here since the holidays ended, and on the Continent the stagnation is quite as great as here. Markets there are no doubt affected more acutely by political rumours than ours is, and the gossip excited first by the meeting of King Edward VII. and Tsar Nicholas II. at Reval, and next by some cryptic utterances of the German Kaiser, have had a good deal to do with the hesitation of French and German markets. Like our market, however, they are all likewise under the influence of fresh creations of capital. Loans and new issues of shares are continually being arranged for, and their actual or prospective launching damps the ardour of speculators. In Paris there is quite a rush of new creations, mostly on account of enterprises outside France. Money is wanted to the tune of nearly £9,000,000 for the Nord-Donetz Railway, and the negotiations for the capital required in the Bagdad Railway enterprise are going on. These are but examples which might be multiplied at great length. Business is, therefore, slack on the Bourse, both in France and Germany; in fact, everywhere, and Governments are struggling with their deficits. The issue of that internal loan for £20,000,000 in Russia is now being prepared for. Spain is trying to get together some £4,000,000 or £5,000,000, and Germany is wrestling with the deficit of her Imperial Budget without seeing the way to cover it.

In France the strain of Government demands is becoming almost intolerable, and M. Paul Leroy-Beaulieu points out that within a period of three years the budget demands of the Government have risen by £9,560,000, or at the rate of £3,520,000 per annum, and he wants to know whether France can support such a continuous increase in her burdens. His answer is an emphatic No! and there is a fact of the highest importance which has a considerable bearing upon the probability that this answer is correct. The population of France is declining. According to statistics furnished by the Minister of Labour, deaths exceeded births in 1907 by 19,920. Since 1800 the deaths have exceeded the births only in six years, and when the cholera years, 1854-55, and the two war years, 1870-71, are deducted, these six years are all after 1890. The worst feature is that in 1907 there were about 45,000 more marriages than in 1890. The average increase of the population between 1901 and 1905 was only 18 per 10,000 inhabitants. In 1906 the increase fell to 7 per 10,000 inhabitants, and now there is a decrease. Contrast this with what goes on elsewhere. During the period 1901 to 1905 the excess of births over deaths per 10,000 inhabitants was in Italy 106, in England 121 and in Germany 149. The career is to the country whose population increases with the greatest speed and the greatest steadiness, and we should, therefore, infer that France must decay under her present intolerable burdens. Economy is, therefore, urgently required—a cutting down of expenses. But how can economy be brought about when Socialism dominates in domestic affairs, and, above all, when the dead weight of military expenditure and debt interest deprives every Government of any opportunity to effect adequate reductions in the national budget? Since 1893 the budget estimate in France has risen by nearly £27,300,000, while between then and now two great conversions of the public debt have been made in 1894 and 1902 by which more than £4,000,000 per annum was saved on the service of the debt.

Producers abroad are beginning to be alarmed at the effect of the fall in silver on the trade of the Far East. This question affects the United States and Canada quite as much as Europe. Cheap silver will increase the competitive power of Japanese and Chinese manufacturers in the Asiatic markets, and restrict the import of commodities that have to be paid for in gold. It will also unfortunately increase the weight of the indemnity and other debt payments China has to make in Europe, and although there may be compensations for her in some directions this danger must not be lost sight of when the railway obligations now being frequently emitted by China are weighed by the investor.

Electric companies in Germany are all wanting more money, from the great Allgemeine Company downwards, and Germany is even more obsessed by new demands for capital than we are. Much of this hunger for the money of the public, money which unfortunately it does not at present possess, is ascribable to the fact mentioned in another part of this issue that the German banks have been carrying industries by means of advances on continually renewed accommodation bills. The banks are now struggling to release their capital, and accordingly one business after another is seeking money. The Allgemeine Elektricitäts is said to be about to ask for £750,000, and the Schuckert Company of Nuremberg is raising, or trying to raise, a similar amount in 4½ per cent. obligations. The Siemens and Halske Company is also in want of £425,000, and the Electrical Driving Power Company of Berlin is providing for an issue of £450,000 likewise in 4½ per cent. obligations.

Among other new issues, all for industrial companies, the most important is a 4 per cent. loan of £2,500,000 for the Krupp Company. Only part of it will be issued now in a 4 per cent. bond to be offered at 96½. This is not the largest steel company in Germany, but its prosperity has been great, and for the last two years a 10 per cent. dividend has been paid, while last year the share capital was increased by £1,000,000. The proceeds of the new loan is to be used partly to acquire more iron and coal mines. Swarms of smaller issues are also hanging over the market, but none of them are of much interest here, the companies having only a local importance. The failures of motor manufacturing companies are by no means yet at an end.

Discussions continue in Germany around the question of the new taxes to be imposed in order to obtain that £20,000,000 of extra revenue which the Government wants, and a sketch has been published in a French newspaper professing to be an interview with Herr Sydow, the Finance Minister. According to this he is said to be going to make beer, brandy, and tobacco pay, and will increase the contributions exacted from certain States in the Imperial federation besides extending the legacy duties. If that is his plan it will certainly fail, but the difficulty lies in the fact that no matter how you shift, change or increase taxation in countries like France and Germany, there is only a certain amount of margin available if the people are to continue to live, and for the present this margin has been almost exhausted. So what is the good of more taxes?

It is said that the new Hungarian 4 per cent. loan will be issued at the average price of 92½. It amounts to 128,000,000 kronen nominal, or say £5,000,000, but the total authorised issue is almost £6,000,000.

According to figures issued by the Imperial Statistical Bureau, the total number of German securities brought into the Berlin Bourse during the past eleven years has been £1,468,000,000, and out of this total industrial stocks represent £229,000,000.

The Week in Mines.

Kaffir Shares.

It would, perhaps, be a slight exaggeration to say that the bottom has fallen out of the Kaffir boomlet, matters have not quite reached that stage yet, but it looks very like the end of the rise, and the prediction that the movement would be kept going until the close of the month is hardly likely to be realised. Of course, no one can be quite sure, because the shops and supporting houses are fairly clever up to a point, and they may give prices another run if only to check the growing discontent of House jobbers, who, despite 20 lessons, have allowed themselves to be caught again. From the very first we have insisted that the public was not behind this latest outburst, but dealers allowed themselves to be deluded into the belief that the had only to shout loud enough and public buyers would soon be coming along in a never ending stream. The inevitable result is that every dealer has a nice little bookful of shares, supplied in roundabout fashion, through the Continent and so forth, by the shops we may be sure, which he could no more sell at anything near present quotations than he could fly in the air. In fact, in these days flying would be a sight easier. It is no use expressing amazement that the House has once more allowed itself to be bamboozled by these magnates, the trick is done; but we are not going to express sympathy presently, when loud lamentations are heard that business has dried up, and the comical part is that, when it is realised that business, such as it was, has come to a dead stop, all the blame will be put on the Government, and City editors and others will talk trash about "socialistic tendencies" and other nonsense. It is all very amusing, but we are glad to note Lord Selborne's courageous utterance at the opening of the Transvaal Parliament in which he spoke of the complete success of the Government's Chinese labour policy, the dawn of a happier era and the real progress made by the mines—especially we might add, since the Transvaal was given responsible government and the coolies commenced to go. But the Governor-General's speech did nothing to help prices, did not bring a single additional order from the public, and the undoubtedly satisfactory news from the Robinson referred to elsewhere was equally without effect. Quotations have not fallen much at a time, but many would prefer a good shake out to the steady dribble which takes all the heart out of the market. Scarcely any attempt is now made to form a street market, the majority of dealers having had quite enough of it at four o'clock. The latest dividends are subjoined.

It is announced that the New Unified Main Reef, the Ginsberg, and the Glencairn Main Reef will declare annual dividends at the end of the year.

Land, Rhodesians and Diamond.

For a little while Rhodesians made a brave effort to resist the reaction, and one felt quite sorry for the dealer who bid 17s. 3d. for Chartereds in the Street one evening, and got them before he could wink the next time. They were soon down to 16s. 6d. or thereabouts, and the other big'uns, like Tanks, Zambesias, Explorations and the Banket things soon gave up the hopeless struggle. The Rice Hamilton reconstruction, with its 6s. a share assessment, was a nasty one in the eye for those who have been working this Rhodesian rubbish, but happily scarcely a soul has been deceived, and those who manipulated the market have doubtless got the shares. We wish them joy. Which is the next company with pluck enough to ask shareholders to put up another half-dozen years' directors' fees and "administration" expenses? It is a great game while it lasts, and we should not have thought it would have gone on so long. Land and Finance shares could not, of course, keep clear of the Kaffir unrest, but Diamond shares bucked up late on fairly persistent reports that the De Beers preference dividend due this month was a dead certainty. One or two small parcels of diamonds have been sold by the Premier Company and the Syndicate, but only very inferior stuff, and there is absolutely no demand for the best class stones.

Australasian and West African.

These sections have been very neglected, and Broken Hill shares showed dulness in the absence of support, and a decline in the price of lead, but Zincs improved on the circular giving the results of the running of the Elmore plant. The usual initial difficulties were encountered, but these are being gradually overcome, and the results for the first week of June, compared with the same period in April, show very material improvement. With slight alteration still better returns can be secured, and the directors say "there appears to be no reason why the standard of the results obtained in the numerous experimental runs should not be attained in regular working." West Australians showed small irregular changes, the colony buying a few of the small priced things. New Zealand shares were inclined to be heavy, and there was nothing doing in West Africans.

Copper, Tin, and Miscellaneous.

In the copper list Rio Tintos moved very narrowly for them, little interest being taken in the market, and such things as Amalgamated, Anacondas, and Bostons were completely under the influence of Yankees. Namaquas were dull, but Lyells, Elliotts, Tharsis, and Capes were steady. Great Cobars went back with a rush, and bear covering only steadied the market for a little while. Tin shares eased off on a drop in the metal. Among Miscellaneous shares, Le Rois were lower, and El Oros came on offer just before a poor return for May was announced, although the reduced profits were said to have been caused by heavy rains. Mexico El Oros were also inclined to go lower, but Indians were steady on the whole. The directors of Stratton's Independence announce that the sum of £23,820 only having been subscribed towards the proposed debenture issue of £50,000, the money has been returned as the minimum allotment was to be £35,000. A new scheme for raising the £50,000 is under consideration, and a meeting of shareholders will shortly be called to consider it. The shares remain in the neighbourhood of 1s. 3d. Ymirs were dull, although arrangements have been made for the exchange of 90 per cent. of the debentures into shares at par, which will save the company £3,500 a year in debenture interest, and reduce the mortgage indebtedness to £4,000. To provide the necessary shares and a balance for additional working capital, 200,000 new shares will be created.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

RICE HAMILTON EXPLORATION.—The fact that this Rhodesian venture is proposing to reconstruct will surprise no one, but few could have thought the directors would have the temerity to suggest an assessment of 6s. per £1 share. The board may have an idea that shareholders have been carried away by the wonderful South African boom lately witnessed, but when the annual report and accounts have been perused the conclusion will be inevitable that market booms do not make dividends, and the chances of this enterprise ever paying one are remote indeed. If success is to come to the company it must be through the Sabiwa mine, but it seems to us that the prospects held out by this property are the reverse of encouraging, and the experience of most other Rhodesian mines does not lead one to suppose that improvement will take place in depth. Of course, further development is recommended which should disclose a large body of payable ore so we are assured, but the treatment plant will have to be altered and increased, and if operations are to proceed shareholders must put their hands in their pockets. At present the company is very heavily in debt, and while the mortgage creditors seem to be indulgent it would almost certainly be a better course to let them have the property than to throw good money after bad. The working for the year 1907 resulted in a loss of £16,565, the revenue from bullion being only £39,112 against expenses and depreciation aggregating £51,380, and after appropriating the remaining balance of reserve, £2,624, there is a debit to profit and loss of £13,942. The cash balance at the end of last year was £293, and no less than £43,714 was owing to sundry creditors.

PENHALONGA PROPRIETARY MINES.—We are glad to be able to point to a fairly satisfactory year's work by this company. The opportunity comes so rarely with Rhodesian undertakings. Tonnage milled in the twelve months to December 31 was 94,080, the recovery being 18,828 ozs. of fine gold, 126,594 ozs. of silver and 763 tons of lead, the total value of which was £107,248 or 22s. 9.593d. per ton. Working costs were £75,888 or 16s. 1.591d. per ton, and the profit was £31,361 or just over 6s. 8d. per ton. After providing for debenture interest and depreciation and writing off £400 from debenture issue expenses, the sum remaining is £16,057, including £2,165 for interest and transfer fees. With £1,837 brought in the total for disposal is £17,894, but in order to pay dividends aggregating 6 per cent. the carry forward is reduced to £569. A debenture issue to the amount of £61,850 was made in the beginning of the year for the purpose of doubling the existing stamp mill and providing for the excess development necessitated by the greater stamping power. The new plant has been erected, and commenced running on January 15 last, but as the foundations of the old mill required repair the original 40 stamps were closed down as soon as the new ones could be started. The repairs required were pretty extensive, but 20 of the old stamps were got to work in April, and the remaining 20 last month, so that the full complement of 80 stamps is now at work. In view of this increased milling capacity, every effort has been made during the past year to place the ore reserves in a position to meet the extra demand, and the amount developed and exposed at the end of the year was 532,500 tons. No values are assigned for the reasons stated in previous reports.

MOUNT LYELL MINING AND RAILWAY.—A cabled summary of this company's half-yearly report appeared in our issue of May 16, and the complete statement has just come to hand from Melbourne. The working results need not be repeated, but there are one or two other points of interest, and special attention is called to the good results which have attended the active development work carried on for some time past in the North Mount Lyell mine. The ore reserves have received a very large accession during the half-year, due primarily to the development at the 1,000 ft. level, where the downward continuation of the ore from the 850 ft. level has been established. The other factor in the increase of the ore reserves has been that the ore bodies at the 850 ft. and upper levels have been proved to cover a larger area than was previously estimated, while the manner in which the ore bodies are opening up at the 1,000 ft. level encourages the expectation that they will be met with at still greater depths. A new electric winding plant has been ordered, capable of handling ore more expeditiously and economically from further depths, and since the close of the half-year preparations for the further sinking of the main shaft have been taken in hand. The blister copper produced for the half-year cost 15s. 4.39d. per ton of ore treated, which was slightly less than in the previous six months, and the charge includes the usual 2s. per ton of Mount Lyell ore debited as the cost of the overburden removed. The plant has been materially improved, and maintained in a high state of efficiency. Profit on the railways was £3,696, and as to the chemical and superphosphate works those at Yarraville have been in full operation upon a satisfactory and payable basis, while the works at Port Adelaide are now completed, and the manufacture of superphosphate to meet the next season's demand for fertilisers in South Australia will shortly commence. The output from the coke works has supplied the coke for the company's furnace requirements, besides a surplus which has been sold at remunerative prices.

TASMAN AND CROWN LYELL EXTENDED MINES.—This in a way is a new enterprise, being a reconstruction of a company very similarly named, and in the second half-yearly report, made up to March 31, the directors congratulate the shareholders on the improved prospects of the property. A fair amount of development work has been carried out during the period at a low average cost, and the ore reserves, as anticipated last half-year, have been considerably increased. A disastrous bush fire caused great damage, much delay and inconvenience, but the work of rebuilding has made excellent progress. It is anticipated that in about three months' time it will be possible to despatch trial parcels of galena and copper ore to determine its commercial value, and should the result be satisfactory the question of connecting the mine by a tram road will have to be dealt with. Total expenditure for the period was £483, and the debit to profit and loss account is increased to £1,634.

NERCHINSK GOLD COMPANY.—If market prices are any guide this company is in a poor way indeed. Its own shares of £1 stand at the imposing figure of 9d., and those of the Kluchi, in which it has a large interest—no less than 145,000 £1 shares valued at par—at about 3s. Last December, when the accounts were made up, the quotation was ⅞. However, the directors do not despair, and refer to the considerable amount of work done on the Kluchi since last year's meeting. Development has been pushed on rapidly, and Mr. Rowland Fielding, an independent engineer, who was sent out last year to examine the mine, has reported very favourably. He advises vigorous development—most engineers do—and when the suggested work is completed a considerable addition to the ore reserves should have been made if continuity of width and value is maintained. Yes, of course. Ten head of stamps have been erected, and additional crushing by this means was started in January, with what result is not stated. We wonder why? There are five workable Tremaine mills on the mine, which are run intermittently as allowed by the variable water supply, and a cyanide plant is being erected for about 100 tons per day It is expected to start work in about a month, while a Cobbe-Middleton pan has been sent out with the object of considerably increasing the crushing capacity of the stamps. These have crushed up to 5 tons per stamp, and with the new additions are expected to crush up to 7 tons per day. According to the latest estimates of the engineers, the mine from July will begin working on a payable basis. A good deal of prospecting work has been done by several parties, but with no very fruitful results so far. Operations, however, are proceeding. Two of the directors went to St. Petersburg last year, and were successful in settling all outstanding questions between the company and the authorities. Excess of expenditure over revenue was £11,673, but £2,418 was applied in reduction of property account. The company is very short of cash, but there are some calls outstanding.

ST. JOHN DEL REY MINING COMPANY.—During the twelve months to the end of February the quantity of ore raised was 156,459 tons, of which 151,454 tons were crushed, yielding 97,104 ozs. of gold valued at £324,882. Other revenue increased this sum to £338,187 against which the working costs came to £229,896, development expenditure to £15,222, and debtors and transport charges to £16,977. A sum of £10,159 is transferred to capital account for new works and £14,420 for bond redemption, and after providing London expenses, &c., the sum left is £46,261. Interest on bonds and tax amounted to £6,760, preference dividend requires £10,500, and £28,678 has been distributed in ordinary dividends, being two payments of 6d. each. The opening out of the lode at No. 15 is said to be satisfactory, both as regards area and quality, and compares favourably with the horizons above. Considerable improvements have been made in the compressed air drilling plant, which, coupled with the introduction of electric traction, have effected a saving in the cost of extraction and transport, and will enable a larger output to be made. A mine working at the depth of the St. John Del Rey needs constant increase of power, involving expenditure for machinery and plant, and in addition the cost of sinking the "F" shaft which is now proceeding rapidly must be provided for. This shaft will greatly facilitate the ventilation and working of the lode in the horizons below No. 12. Nothing definite has yet been done in regard to the iron ore on the company's lands, but the whole question is being thoroughly investigated. The labour question continues "troublesome," a state of affairs common to most companies.

DHARWAR GOLD MINES.—In course of time this concern may turn out to be a profitable enterprise, but meanwhile shareholders will have to exercise a good deal of patience. During the past year to March 31 vigorous operations have been conducted on the Attikatti and Hosur blocks, and a certain amount of prospecting was done on Block No. 35, but work on the last-named was suspended pending the grant of a mining lease. Best results have been secured on the Hosur block, and the policy of the company will be to continue vigorous development in the hope that the mine will soon have reached a stage of importance sufficient to justify its flotation as a separate concern, when a substantial profit should accrue to this company. With regard to the option of purchase of Block No. 22A granted to the Mysore Gold Mining Company for a term of three years from March 1, 1907, important discoveries have been made on the adjoining block during the past year, and the outlook is regarded as distinctly favourable. The agreed price should the option be exercised is £30,000, payable as to £5,000 in cash and £25,000 in fully-paid shares. Revenue expenditure during the period under review was £10,775 against an income of £305, while the capital outlay was £1,298. The cash reserves amount to £14,316, but a portion of this will be required to pay up calls under the assess-

rent on the Dharwar Reefs Gold Mining shares, of which the company holds 18,386. The reconstruction of this concern is said to have been a complete success, and the prospects are evidently considered encouraging.

Mysore Reefs (1905) and Explorers.—There is nothing very exciting in the report of this concern for the eleven months to the end of March last. It may be remembered that the directors despatched an expedition to the Federated Malay States for the purpose of examining and reporting upon the value of certain tin lands, but the result was not satisfactory, and Mr. Churchward, the engineer, had no alternative but to recommend the board not to take up the options. Other properties were examined, but the outcome was equally unsatisfactory, and the engineer returned to England in November last. The property on the Dharwar goldfield, over which the company holds an option, has been prospected during the past twelve months, but only low values have been found, and in view of the fact that the property immediately to the north is being actively developed it was decided to suspend operations and await the results of that work. None of this seems particularly encouraging, but the period has not been a complete blank. An opportunity occurred to underwrite a portion of the capital of the Anantapur Gold Field, concerning which some particulars were published a few months back, and after consultation with the larger shareholders an agreement was entered into to guarantee 15,000 shares of £1 each, the commission being 20 per cent. payable in shares.

Day Dawn Block and Wyndham Gold Mining.—This company's operations for the year to December 31 were not very successful, the total receipts being £65,979 against an expenditure of £59,474, leaving a balance of £6,505. With £9,233 brought in the total for disposal is £15,738, and while the directors have paid an interim dividend of 6d. per share this has reduced the free credit to £2,655, the distribution including colonial taxes having absorbed a sum of £13,083. The year is said to have been devoted for the most part to development and prospecting, but no very promising results have been obtained. The company's chairman is anxious that it should take an interest in the Mount Morgan Extension Company, in the prospective value of which he has the utmost confidence. The directors apparently recommend the proposal, but are giving it the most careful attention as it involves the expenditure of a considerable amount of capital. In the circumstances they propose to invite the co-operation of a committee of shareholders to confer with them and to report to the general body of proprietors at a meeting to be subsequently convened. The company has a good cash balance.

Niddrie and Benhar Coal.—Out of a total revenue for the year to April 30 of £203,398, of which £199,610 came from coal and ironstone, this company managed to retain £20,941 as nett profit and including £362 brought forward the sum for disposal is £21,303. Debenture interest requires £3,000 and depreciation £9,066 leaving £9,237, so that the dividend can only be 1s. per share with £1,237 to next account. The company depreciates its property at 5 per cent., and the general financial position is satisfactory, but there is nothing in the shape of a reserve fund. During the earlier part of the financial year the demand for coal was good, but at the end of 1907 a serious depression occurred in the general trade of the country and coal prices fell rapidly. The present rate of wages is said to be much higher than is warranted by prices, and an application for a reduction has been made to the Conciliation Board.

DIVIDENDS ANNOUNCED.

BANKS.

African.—At the rate of 6 per cent. per annum for half-year ended March 31, carrying forward £9,973.

Bank of Roumania.—Balance of 4s. per share for year ended April 30.

INSURANCE.

Clerical, Medical, and General Life.—8s. per share for half-year, payable July 1.

London and Lancashire Life.—For half-year ending 30th inst. at the rate of 3s. per share.

Maritime.—Interim of 2s. per share, being at the rate of 10 per cent. per annum.

TRAMWAYS.

Buenos Ayres Grand National.—Final at the rate of 2s. 6d. per share, making 5 per cent. for year to March 31, on the 5 per cent. cumulative preference shares, payable Aug. 1.

Melbourne.—4½d. per share for quarter ending June 30, payable July 1.

BREWERIES.

South African.—7½ per cent. on the ordinary shares.

United States.—2½ per cent. on the ordinary shares for year to March 31.

MINES.

Angelo.—25 per cent. for half year ending June 30.

Cason.—28¾ per cent. for half-year ending June 30.

Crown Deep.—Interim of 70 per cent. for half-year ending June 30.

Driefontein Consolidated.—20 per cent. for half-year ending June 30.

East Rand Proprietary.—22½ per cent. for half-year ending June 30.

Ferreira.—150 per cent. (30s. per share), payable Aug. 4.

Geldenhuis Deep.—Interim of 22½ per cent. for half-year ending June 30.

Geldenhuis Estate (Elandsfontein No. 1).—Interim of 30 per cent., payable Aug. 4.

H. F.—33⅓ per cent.

Knights Deep.—Interim of 15 per cent. for six months ending June 30, being at the rate of 30 per cent. per annum, payable Aug. 13.

Le Roi No. 2.—Interim of 2s. per share.

Luipaards Vlei Estate.—Interim of 5 per cent., payable July 15.

Meyer and Charlton.—Interim of 30 per cent. and a bonus of 20 per cent., together amounting to 10s. per share.

Mount Boppy.—Interim of 3s. per share, payable July 1.

Mysore.—Interim of 3s. 6d. per share, payable July 10.

New Comet.—15 per cent. for half-year ending June 30.

New Kleinfontein.—10 per cent. for half-year ending June 30.

New Rietfontein Estate.—Interim of 3s. per share for half-year ending June 30.

The Investors' Review.

The Week's Money Market.

Bank Rate 2½ per cent. (Reduced from 3 per cent. on Thursday, May 28.)

Norfolk House, Friday Evening.

Ease appears to have definitely settled down on our market for months to come. Short loans at the banks are quoted at 1 per cent. and day loans at ¾ to 1 per cent. Loans over the end of the month can be got at 1½ per cent. or less. Nothing ruffles the dead surface of the market. If a large demand upon credit is made, like the India Council's bill issue last week, the money is no sooner paid in than it is lent again, and our own Exchequer got the £2,500,000 of six months' renewal bills tendered for last Monday at an average price equivalent to £1 11s. 8.8d. per cent. discount. It will probably get the £2,500,000 of similar paper to be tendered for next Monday at as fine a rate, although the market yesterday tried to find an excuse for quoting discount "firmer," because only £1,800,000 of the bills next falling due, and which this further issue is to replace, is held publicly. But the rate on fine three months' remitted bills remains at 1⅝ per cent. as a maximum, and has not been better than 1½ per cent. any time this week. Much of the business is done at 1 5/16 per cent., and even six months' bills are quoted at 1⅞-2 per cent., with a downward tendency to-day for all rates. Sellers, in fact, tried 1¼ per cent. as a working rate for three months' remitted bills.

How money and discounts can remain otherwise than cheap it is impossible to see in the present condition of markets. The Reichsbank has at last lowered its discount rate by ½ per cent. to 4, and its rate for advances to 5 per cent., and it could not have avoided doing so in face of the great increase in its strength. Its note circulation is now £13,207,000 below the legal maximum and gold is steadily pouring into the bank from New York at the same time that the sluggishness of domestic business is bringing down the note circulation. The last return, dated June 15, shows an increase of £3,015,000 in the cash and a decrease of £2,552,000 in the note circulation. Gold is also still being piled up by the Bank of France almost as if a great war were being prepared for, and its total stock is now £125,218,000, having been augmented by £798,000 during the week at the same time that the note circulation fell off £942,000. Changes like these appear to ensure low rates for money all over Europe for the next three or four months at least. New York, moreover, spares the gold sent to Europe without a trace of difficulty, and we are so comfortable as to be able to see with complete equanimity the raw gold from the mines absorbed every week by Paris. We may regret that we lost it all before the year is out, but there is no philanthropy in business, and circumstances prevent the gold from resting here.

Why the Bank rate should remain at 2½ per cent. with the open market where it is, and the Bank itself lending all its influence to produce still greater ease, is a question so hard to answer that people have ceased to ask it. In the last three weeks, to go no further back, the Bank has added over £1,150,000 to its "other securities," and as the market has not required to borrow from it all this eke must mean investments of some description, by the Bank itself, credit that is put upon the market by it when the market was comfortably provided already. Its other securities rose last week by £551,000, and when the bankers' money thus released was added to by the return of £872,000 in coin and £232,000 in notes from the internal circulation at the same time that Exchequer receipts and payments balanced each other to within £17,000 against the market, it is no wonder credit jobbers and bankers are becoming plethoric. Other deposits, in fact, have risen by £1,703,000 on the week, and are now at £46,032,000, £3,450,000 above the corresponding week of last year.

Trade depression must further lessen the country's demands for currency, and even if it does not a reserve of £28,527,000 should be big enough to protect the market from all ordinary risks. Next month will see the circulation expand and the reserve go down, but that is usual and the changes will not be great enough or enduring enough to exercise much influence on sentiment or interest and discount quotations.

Calls next week aggregate over £3,018,000, the heaviest demands falling on Tuesday and Thursday. On Tuesday Montreal City takes £500,000, the East Indian Railway £735,000 and the West Ham Gas Company about £15,000, while Thursday brings a demand for £1,500,000 payable on the latest New South Wales loan. On Wednesday £175,000 is due upon Colombian National Railway bonds and the rest is made up of trifles.

Silver.

With the commencement of the monsoon in India the inquiry for silver on bazaar account became more active, and prices promptly jumped ¼d. to 24⅞d. per oz. for both spot and future metal. The demand was large enough to absorb the moderate supplies available from day to day, and although a little weakness was caused at one time by the receipt of lower currency figures, quotations were unaltered, and the market quickly rallied. Towards the end of the week a further advance to 25⅛d. per oz. was brought about by bear covering on the news that the monsoon had burst in Calcutta, and the market closes steady. For the first time in many weeks the offer of Rs. 10,00,000 of Council drafts on India met with a good response, the applications amounting to Rs. 12,75,442 all in bills, and tenders at 1s. 3 29-32d. per rupee, received about 78 per cent. Next Wednesday another Rs. 10,00,000 will be offered. On the other hand, although only £500,000 in sterling bills were offered in Calcutta, no applications were received, and it is now hoped that the difficulties with regard to the maintenance of the exchange are at an end.

The Stock Markets.

Markets are distressingly idle and everybody is again grumbling almost as much as they did when we were in the midst of the Yankee panic. Why there should be this deadness is not so difficult to explain, as we have often insisted. Credit is burdened by the multitude of new demands made upon it, and old losses have not been made good. There has been no time to make them good in any department of business, but the most prominent influence standing in the way of vigorous resumption of dealing is the over-eagerness of market leaders. They cannot make up their minds to go quietly, but try to organise rushes so that they may hustle the public into their particular compound, and unload upon them the stuff they have been carrying so long. The public is not going to be hustled as the players in the Kaffir Circus have begun to find out. In the first place people have no money to spare for the luxury of a gamble, and, secondly, they are not in the mood even if they had, so when the hoist is applied to Home Railways, or to particular securities in any part of the market, the rise artificially induced is taken by the outside people, or the great majority of them, as a hint to sell or to stand off. Look how little public response there has been to the demonstrations originating on Wall Street. Continental markets, at any rate the German and Dutch, have been induced to make a show at least of joining in the play, but our market continues apathetic to a degree never before witnessed in connection with Yankee securities. We are as bad here as in the United States themselves, whence the news comes almost daily that the dealing is "wholly professional," and we think that the German investor would be in the same boat as the English and American were it not for the extensive commitments of German banks in Yankee finance. The banks, in other words, are the players in unison with the Harrimans, Goulds and other professional leaders of the market, and their object is to unload upon a public that so far refuses to respond to their blandishments.

Is business going to continue much longer in this unsatisfactory state? Most likely it will. We are near the end of the half-year, and its approach will make dealings grow more scanty on the Stock Exchange, and when the new half-year begins we shall be looking for reduced Home Railway dividends, and talking about holidays, and trying to prevent underwritten securities from going to too great a discount, so that there is not much prospect of active markets this side September unless something political happens to produce a spasm of fear, when doubtless there would be a stampede of selling. Everybody, indeed, wants to sell something, and that is why markets are dull, and without real elasticity at any moment. Whenever the professional element sends a price up it gets the stock, and is forthwith obliged to pull up and wait.

Trustee and Other Stocks.

The true inwardness of markets continues to be indicated by the weakness of Consols, which are again slightly lower. Irish Land stock, however, has been lifted somewhat, thanks to the removal of fears about a further emission, but Local Loans stock and India stocks are dull, and as for the Domestic Corporation assortment it has been left alone as if the market were afraid even to quote a close price for three-fourths of the items. Probably enough the market could not provide much stock were a demand to arise, but, on the other hand, it certainly does not want to be saddled with any of what the public now holds when new issues are making their appearance. It has only got about 43 per cent. of the Sheffield loan, but it would have been glad to take less. Yet the loan has been a greater success than many people expected. Colonial inscribed stocks have also been dormant enough and amongst Foreign and Colonial Municipal securities the only noticeable advance has been in the fully paid scrip of the City of Moscow loan, which has been dealt in as high as 92. It may recede a little when the other portion of that city's borrowing is put upon the Paris market.

Foreign Government Securities.

There must be political unrest behind the extreme stagnation of Continental Bourses. No doubt the latest utterance of the Kaiser flurried people abroad a good deal, but the only effect is to stop business, not to induce selling. Nothing but a mobilisation of troops on the Austrian or Russian frontier in view of a division of the Turkish Empire after the fashion of Poland will really disturb the equanimity of Bourses to an extent sufficient to make them interesting. Last week's price movements are just as significant of apathy as usual, and yet the selling mood predominates. South American Government stocks have been heavy, notably Brazilian, but Argentine 4 per cents. have also shed a fraction, and the majority of movements elsewhere are downwards, Swedish 3½ per cents. being put back a little on the new loan without any selling to speak of. Japanese bonds have kept their prices well, and there has been no movement of importance anywhere else, although German 3 per

cents. are lower in spite of the reduction in the Reichsbank rate to 4 per cent. But then Germany is threatened with syncope through deficits.

Home and Other Railways.

Selling has rather predominated in Home Railways, and there has been a fair amount of business in Great Eastern, Great Western, Great Northern deferred, and above all in Midland deferred, but the movements in prices do not as a rule much exceed ½ the wrong way, and on the week Midland deferred has gained a little. That is almost the only change for the better in the active list, and South Eastern ordinary has been put down 3. Great Central preferred and deferred have also begun to shed the gains brought about by the proposed fusion. Steadier quotations are, perhaps, to be found amongst the privileged groups, since some few debenture and guaranteed stocks are higher, but there is little or nothing going on in them. Last week's traffic receipts are only £38,446 to the bad, and there may be a little whip-up at the end of the half-year.

Indian Railways are quiet enough, and little has happened in the Colonial group apart from Grand Trunk stocks, which rallied a little towards the end of the week after being decidedly flat, Grand Trunk ordinary and third preference, being respectively ¾ and 1¾ higher, simply because bears have been closing, and few buyers for the rise coming in. Canadian Pacific shares continue to be less played with, but that does not make the price in the least degree weaker. On the contrary, there has been a small gain on the week. People have again been selling Mashonaland and Rhodesia Railways debentures, or trying to, and they have accordingly slipped back.

Apart from a drop of 4½ to 6 in the preferred stocks of the Erie Railroad, a product of the juggle by which default is in appearance avoided and capital openly utilised to hide it, very few changes amongst Yankee Railways go beyond the $1, and most of them were only $½, that is to say amongst the leading market counters. Business, too, has been very much smaller, the gamble even in Union Pacific ordinary having died away under the blight of the unsuccessful bond issue. In spite of the alleged over-subscription, which was a faked affair, the scrip of this issue has been quoted at 2 to 1 discount. Illinois Central and Southern Pacific shares have been the weakest next to Erie. Bonds have also lost now and then to a small extent, although here likewise the only important drop has been in Erie prior general lien issues, which are $8½ and $12 down.

Declines are likewise noticeable amongst Argentine Railway stocks. They are not serious as a rule, although B.A. Gt. Southern preference is down 2, but they express the market apathy and the feeling that the new capital issues are coming rather faster than accords with the digestive power of the market. Hence business is very limited, and dealers incline to put prices back. Antofagasta deferred stock has been put up to 128, and some of the Russian Railway bonds are higher in preparation for the big Donetz issue, but quotations are regulated by the Continent in most of these. Brazilian Railways have suffered with Argentine, and the stocks of the old Mexican Company have not been supported, but Cuban things are firm on the whole.

Banks, Breweries and Industrial Securities.

Dealings in Bank shares lack breadth, as one man put it. Prices, however, are good, particularly for the shares of some of the leading home banks, and now and then a few bargains take place. We cannot say the same of the Brewery group of stocks, because they as a general rule show no life at all, and the only changes worth mentioning this week are an improvement of 3 in Guinness preference and a decline of 2½ in City of London preference. Watney, Combe's stocks, too, have gone down again, but they are always doing that. The shares of Yankee Breweries, however, are pretty steady as well as some of their bonds, but Ohlsson's Cape Breweries "B" debenture stock has dropped to about 60. Dock securities are firm, and prices are generally undisturbed in the Commercial and Industrial sections with slight improvements in many directions, not, however, amongst the shares of Motor companies, although even there greater steadiness is visible with now and then a few pence added to the price. Debentures, too, seem to be fitfully inquired for, and we note recoveries in British Aluminium Loch Leven debentures and Calico Printers' debenture stock. No important decline has taken place, not even in the shares of Nitrate companies, although they are weak enough. Speculation, however, is rarely noticeable, although James Nelson and Sons' ordinary shares are still dabbled in, and business is visible in the shares of Harrod's Stores, the Humber Company, Lipton's, Telegraph Construction and others.

Miscellaneous Securities.

We may pass by the Electric group of securities with hardly a word, for the best we can say is that steadiness prevails. Some few shares, indeed, are 2s. 6d. to 5s. better, but there is no appreciable amount of business coming forward at any point, not even in the carefully nursed Mexican and Canadian group of Electric securities.

All is quiet likewise in the Financial, Land and Investment division, with some recovery in Peruvian Corporation stocks, and another hoist of 2 in Hudson's Bay shares. Western of Egypt Corporation shares are naturally enough flat, but Western of Canada shares are played with, and have risen 1s. Financial Trusts are, as a rule, better when they have moved, and odds and ends of orders come along daily, mostly of an investment type; indeed, there is no room whatever for speculation here.

Gas stocks, too, are firm, and the demand for Gas Light and Coke ordinary has been sufficient to send it up to 98 this week. Scarcely anything goes on amongst Insurance shares, which barely retain their prices, although no decline of the slightest importance has occurred anywhere. Northern Assurance shares, indeed, have risen to about 83.

Iron, Coal and Steel shares and obligations form just as uninteresting a market as the others, and changes in prices indicate pessimism, although no serious decline has taken place. Some debentures, indeed, like those of Armstrong, Whitworth or Cammell, Laird and Wm. Cory and Co. or Vickers first and third have recovered a little, and shares have seldom lost more than 2s. 6d.

Under Shipping a little business has been done in P. and O. stocks, Union Castle ordinary shares and "Shell" Transport preference, prices remaining practically as before. Tea, Coffee and Rubber shares have lost ground in a few instances, but there has been hardly any business going on. Telegraph and Telephone securities, on the other hand, continue to improve with no exception of any importance, and National Telephone deferred stock has risen to 114. Indo-European shares, too, are 1½ up.

Amongst Tramway and Omnibus securities the shares of the B.E.T. Company show a faint rally, and the second debentures are up 2. Havana Electric bonds have also risen 2, but London General Omnibus stock is 5 lower. That, however, is the only serious reverse, and Mexico Tramways stock and bonds, as well as Montreal Street Railway debentures and San Paulo Tramway Light and Power stock are all higher on the week.

Friday Evening.

When the weather isn't too bad for business it is too fine, and to that in default of anything else must be attributed the paucity of interest in the stock markets. Continued cheap money, and the reduction in the Berlin bank rate have to-day helped gilt-edged securities, and Consols have put on ¼ to 87⅞. Home Rails were quite listless, showing unimportant fluctuations in either direction. Yankees, if anything, showed a dull tendency, but closed slightly above the lowest point, the new Union Pacific bonds recovering to ¼ dis. Kaffirs have manifested a distinct recuperative power after the dulness of yesterday, which was largely due

to selling against end of the month options. The new Swedish loan at discount reflects the market view of the issue, and the new Winnipeg loan is quoted at ½ discount. Vera Cruz Terminal, on the other hand, boasts a premium of ⅝. In the Miscellaneous department the only feature was a continued inclination to pick up foreign tramway stocks, especially Mexican and Anglo-Argentine debentures. Bays are lifeless at 91, and Legal Insurance are 2s. 6d.-3s. 6d. premium. In Trunks the probabilities of dividends on firsts and guaranteed form the basis of much discussion, the large aggregate decreases in traffics causing no little apprehension.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: Irish Ld. Stk. and Acct. both ¼, to 90⅜-1½, Canadian Govt. 1910 1 to 102-4, do. 1913 1, to 105-7, Indian R. Paper 1, to 62-4, do. 1854-5 ½, to 63-4. **Fall:** 2½ p.c. Ann. WATERWORKS.—Rise: S. Essex 1861 5, to 190-200.

Critical Index to New Investments.

SWEDISH GOVERNMENT LOAN OF 1908.

Messrs. C. J. Hambro and Son are authorised by the Swedish Public Debt Office to offer for subscription at 98 an issue of £3,000,000 sterling, bearing interest at 4 per cent. per annum until June 20, 1918, and thereafter at 3 1/2 per cent. The prospectus, unlike the usual run of such documents, gives no particulars regarding the present financial position, and beyond a vague statement that the proceeds of this loan will be devoted to works of a productive nature does not enter into any reasons as to why the money is required. It is generally understood, however, that a good deal of it will be used for railway construction, and as the country's finances are known to be sound, the loan should meet with a favourable reception. No particular date is fixed for redemption, but the Government reserves the right to pay off all or any part of the loan after December 20, 1920, on three months' notice.

BURMA RAILWAYS CO., LIMITED.

An issue of £1,000,000 in ordinary shares of £10 each is offered by this company at £10 4s. per share or 102 per cent., to provide funds for doubling certain sections of the line on either side of Rangoon, improvement of the permanent way and works, building of a bridge across the Irrawadi near Mandalay, and other purposes. The company works the system of railways in Burma for the Indian Government, and under its contract is guaranteed a dividend of 2 1/2 per cent. on its share capital, with a proportionate share in the surplus profits, now amounting to twelve thirty-fifths. For the two years ended June, 1904, the company's share of the nett earnings, which was then only one-fifth, enabled it to pay 1 1/2 per cent., in addition to the guaranteed dividend, in 1905 the extra distribution was 2 per cent., and in 1906 and 1907 £1 18s. per cent. The surplus profits are divided yearly, and are paid on January 1 for the year ending the previous year, so that holders of the new issue will not receive their first share of surplus profits until January 1, 1910, but the Secretary of State has agreed to pay on January 1 next

a special dividend of 1½ per cent. per annum, calculated on the instalments as due. At the price asked the shares are 4½ per cent. under the quotation for the existing ordinary stock, and seem a cheap and good investment. They have been underwritten, but the commission is the modest one for these days of 2s. 6d. per share or 1¼ per cent.

City of Quebec.

Messrs. Coates, Son and Co. are authorised to offer for subscription £71,900 4 per cent. 54-year debentures at 97½ and £42,921 3½ per cent. consolidated registered stock at 91½, the issue being made in connection with the redemption of 6 per cent. debentures maturing on July 1 and for other city purposes. Holders of the 6 per cent. debentures may exchange into either of the new securities, and will receive £100 debenture and £2 10s. in cash or £109 5s. 9d. in consolidated stock or £100 stock and £8 10s. in cash for each £100 of the maturing debentures. The consolidated stock now offered forms part of an authorised total of £654,480, of which about £499,374 has been issued, and is redeemable by half-yearly drawings at par within 65 years from January 1, 1897. Including the debentures now maturing the total debt is $8,576,000, but the city owns waterworks and other properties valued at $7,000,000, while the rateable value of assessable properties is $1,693,000, so that both securities should be well enough covered.

Rio de Janeiro Tramway, Light and Power Co., Limited.

The Bank of Scotland and the Canadian Bank of Commerce, on behalf of the contractors, will receive subscriptions for £900,000 5 per cent. 50-year mortgage bonds of this company at the price of 80 per cent. These bonds form part of an authorised £3,500,000, and we are glad to see that the whole amount is not to be put out here or at once, as was reported some time ago from the Continent. Already, however, about £900,000 has been placed in France and Belgium and a further £860,000 is reserved for these countries. All the money is to be paid up by December 1 next. Redemption is to take place by drawings at par beginning in 1918 or by purchases below par. Allottees may pay up in advance, and those who do so will receive a coupon for £1 1s. 6d. payable October 1. As readers know, this Scoto-Canadian Company owns great properties, and is carrying out vast undertakings—electric power generating, tramway making, gas and electric lighting, &c.—in and around Rio, and has already issued £5,000,000 of share capital and £5,000,000 in first mortgage 5 per cent. debentures. Its revenues should therefore be large, and have been steadily expanding. They came to £447,588 gross and £161,575 nett for the first four months of the current year, or at the rate of £545,000 nett per annum, although the tramway system is neither completed nor completely electrified, and the supply of power only in its beginnings. The only danger ahead seems to be in the Brazilian Exchange, but the business must be extensive under any circumstances conceivable and the property valuable.

Western Wheat Lands and Timber Co., Limited.

This company was incorporated in December, 1906, to deal in Western Canadian lands and timber limits, and has a capital of $1,000,000 or £205,761 in $1 shares, of which 233,000 have been issued in payment for land purchased, together with 3,000 for cash. The land acquired consists of 71,000 acres on the Canadian Northern Railway, about 35 miles from Winnipeg, and in addition to the consideration in shares the company has to pay to the Manitoba Government a further $3.05 per acre by nine equal annual instalments with interest at 6 per cent. per annum. With this added the total cost per acre works out at $6.33 per acre, but the company has granted an option to the Alberta Land Company to take up 200,000 acres at $9 per acre within one year from June 9, 1908, and on the exercise of that option it will be entitled to take a further 20,000 acres at $14, and another 20,000 at $17 within four years, if the land has not been otherwise disposed of. Pending the sale of the lands, the company proposes to make an income out of its hay, and estimates that it should earn a nett profit of $75,000 per annum from this source for the next three years. Cash, however, is required to meet the amount due to the Manitoba Government, so 200,000 shares were offered at £1 0s. 7d. per five shares, and provided everything works out according to calculation these may prove a fair speculation.

City of Saskatoon.

This is the latest, and probably the smallest, of the many recruits to the ranks of Canadian municipalities seeking to borrow on our market. Its population is estimated at no more than 7,100, but as the city occupies a central position in the wheat belt, it has hopes of becoming a railway and commercial centre. With this in view the authorities have sanctioned water works, sewerage, electric light and power works, and now offers £100,000 5 per cent. sterling debentures at 101 to pay for them. On the present assessable value of the city the borrowing power is put at £287,507, while the outstanding debt, including this issue, is only £101,918, but even the latter figure is a heavy burden for its population, and the debentures do not seem an over-attractive investment.

Terminal Railroad Association of St. Louis.

Messrs. Lee, Higginson and Co., of Boston, U.S., and Messrs. Higginson and Co., of London, having purchased from this company an issue of $1,000,000 general mortgage 4 per cent. gold bonds, and having already placed $550,000 of them, offered the balance for sale at £194 per $1,000 bond or 94½ per cent. These bonds form part of an authorised total of $50,000,000, of which $17,500,000 are reserved to retire four underlying issues, $20,800,000 including this issue are outstanding, $200,000 having been retired by the sinking fund, and the balance may be issued for extensions and improvements at not over $1,000,000 per annum. They are redeemable on January 1, 1953, and should be a good investment, as they are guaranteed by no less than fourteen proprietary railway companies which pay proportional rentals for the use of the property sufficient to meet all expenses and charges as part of their operating expenses.

Boscawell United Tin and Copper Mines, Limited.

Very considerable efforts have been made to attract attention to this promotion, and the prospectus has been advertised with a lavish expenditure seldom equalled. The company acquires a lease for 42 years from October, 1907, of the mineral rights of seven extensive mines and mineral setts in the parish of St Just, Cornwall, covering about 660 acres, and having a workable length of seven miles on strike of six main lodes. It is estimated that the Boscawell Downs lode alone contains ore reserves of 768,530 tons, on which a profit of £246,332 is looked for taking tin at £117 and copper at £55 per ton, while it is confidently expected that the 19 other known lodes traversing the property will contribute largely to the future output when operated on up-to-date lines. The total capital is £200,000, divided equally into preferred and deferred ordinary shares, the former being preferential as to capital and entitled to a preferential dividend of 7 per cent., with half the surplus profits after a like dividend has been paid on the deferred shares. Only the preferred ordinary shares are offered for subscription to provide the working capital, and while they are of necessity speculative, there is in their favour the fact that the vendors are content to take their price entirely in deferred shares.

Cosmopolitan Publications, Limited.

A most extraordinary proposition is put forward by the promoters of this concern, who claim to be "experts" in the matter of providing opinions and information regarding financial affairs. Some time ago the editor of the *Cosmopolitan Financier* had the brilliant idea of increasing his subscription list by giving to everyone who paid 14s. 6d. for a year's subscrip-

tion a free option on a Continental Government or Municipal bond, and the empty, but generous-looking offer may have attracted a certain number of people. No particulars are given of the results, but these seem to have been successful enough to encourage the promoters to further efforts. Accordingly this company has been formed to take over the paper with a capital of £125,000, divided into 100,000 6 per cent. preference shares of 5s. each, 1,200,000 9 per cent. ordinary shares of 1s. each, and 800,000 deferred shares also of 1s. each, most of which is pure water. The preference shares were offered for subscription and £20,000 of the proceeds were to go to the vendor in part payment of the purchase price of £120,000, the balance being made up of the ordinary and deferred shares. But the vendor is too generous-minded to keep all this wealth to himself, and proposes to distribute the ordinary shares amongst the subscribers to the journal, giving 20 to each subscriber who exercises his option to purchase a bond, 15 to each subscriber who relinquishes his option, and a like number to every new subscriber within a year. What the paper has done since it was started is not disclosed, but instead a wonderful display is made of what it is expected to do, and the vendors talk airily of a subscription list of 100,000, a bookstall and newsagent sale of 26,000 and advertisement receipts of £37,898 per annum or a total of £122,898, of which £66,018 is to be nett profit. The assumptions are hardly what might be expected from expert financial advisers who take themselves seriously, and recipients of prospectuses will probably save money in the long run by putting them in the W.P.B.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

F. E. D.—We are doubtful in present circumstances. The interest may be paid regularly, but the price seems more likely to go down than much up within the next twelvemonth.

C. H. M. C.—Nothing except the critical state of financial affairs in that part of the world, the fierce competition with foreign institutions and the liability of £5 per share.

C. A. J. B.—"New York Commercial Chronicle." Messrs. Edwards and Smith, Draper's Gardens, E.C.

A. C.—(1) We think you might as well take your profit here. Affairs are not quite happy in that part of the world. (2) We have not got this report yet. If you have a copy, perhaps you will let us look at it, and then this question can be answered.

B. W. J.—No, we should not think of buying now. Your brokers must be misinformed about the state of the account, though the large holdings are probably what they state.

Books Received.

The Annual Financial Review, Canadian. By W. R. Houston. (London: Effingham Wilson, 54, Threadneedle Street, E.C.) Price 20s., nett.

Notes on the Financial Problems on the Commonwealth and the States of Australia.

The Great Northern Central Railway of Colombia 5½ per cent. first mortgage bonds.—Notice is given that coupon No. 2, due July 1, 1908, will be paid on and after that date (less income tax) at the London and South-Western Bank, 170, Fenchurch Street, London, E.C.

LUNGLA (SYLHET) TEA CO.—A favourable season helped this company considerably, and the output rose by 279,984 lbs. to 2,638,573 lbs., while the average price was 0.22d. higher at 7.35d. and the cost laid down in London showed a decrease of 0.29d. at 4.60d. Including £1,284 or £553 more brought forward, £59 from sales of sisal, and £96 from interest, the nett profits amounted to £31,476 or an improvement of £9,069, and after providing for debenture interest, managers' commission, &c., £26,723 was left compared with £17,890. Advantage was taken of the larger surplus to raise the dividend from 6 per cent. to 10 and to add an extra £2,500 at £7,500 to reserve, leaving £2,923 to be carried to the new account. Liabilities have been reduced by £2,534 to £22,949, while miscellaneous assets in London and India are £4,985 up at £44,718 and cash has risen by £2,852 to £3,476. Block account is only a trifle lower at £263,068 against which the reserve will now amount to £25,000. During the year £3,900 debentures were purchased at a cost of £3,828, and these figure in the balance-sheet as an asset.

TRADE AND PRODUCE.

WHEAT.—Markets showed a stronger tendency at the beginning of the week, weather reports were bad, American cables strong, and both spot and futures advanced, but business generally has not been active. Millers showed little desire to increase their holdings, and prices reacted again to something below last week's final rates. Sales of English wheat continue heavy, as farmers are evidently anxious to sell all they can at the high prices, but these free supplies are having the effect of easing prices. This week 40,160 qrs. were delivered, averaging 32s. 7d., against 38,008, averaging 31s. 10d., a year ago, showing that prices now are not much higher than last year, but up till this week the average for the whole season came to 6s. 5¾d. above last. Imports for the week were 350,677 qrs. against 795,667 in 1907, and the quantities of wheat and flour on passage to the United Kingdom amount to 2,820,000 qrs. against 2,890,000 last week; to the Continent, 1,830,000 against 1,890,000. American markets lost their early rise of 1 cent to 1¼ cent, and became depressed under heavy realising and bear selling.

WOOL.—At present markets are moving quietly, and prices remain fairly steady, especially for merinos. Topmakers are not forcing sales, and cheap lots are not to be had anywhere, but consumers and spinners are keeping back their purchases as much as possible. They declare that importers will again have to hold over big stocks of wool at the next London sales, and prefer to wait and see how things turn. The new English clip is just coming into the markets, and evidently in much better condition than last year, but so far it is not possible to ascertain how values will go. Buyers are not keen to get the wool at all. "With trade contracting and a sensibly lessened demand for English fleeces," says the *Manchester Guardian*, "especially in America, many dearly-bought stocks remain in dealers' hands, and are acting to-day as a dead-weight upon the trade in domestic sorts."

COTTON (from our Manchester correspondent).—Our market has presented a quiet appearance throughout the past week. The effect of the recent holidays has not entirely passed away, and buyers and sellers have been slow at getting to active operations. The all-round inquiry has not given much encouragement to spinners and manufacturers and the total sales in both yarn and cloth have been quite unimportant. American cotton has been steady in price, and there seems to be little hope of lower values. Recent advices with regard to the American crop are fairly favourable, but the prospects are very uncertain. A miscellaneous inquiry for piece goods has been dealt with for various markets. A large line at the present time is quite exceptional, however. Rather more bids for India in light goods have come through, but in numerous cases buyers and sellers have not been able to bridge the difference between price and offer. Shirting makers have not met with much success, the bids from the other side being impracticable. A few small lines have been secured for China in bleached cloths. Some sellers report a little more life for the Levant and Egypt, but the business is unevenly distributed. Burnley manufacturers are doing very badly, and the annual holidays, which take place in a fortnight's time, are likely to be extended. Numerous concerns are only working half their looms. In coloured woven goods and sateens there has not been much fresh business for producers. Makers of T-cloths and Mexicans find difficulty in improving their position. Poor reports are coming through from the home trade houses, and the autumn trade is disappointing. Flannelettes are dragging in demand, and both makers and distributors are hampered by large stocks. In American yarns for home consumption a quiet feeling has prevailed. Medium wefts on the whole are rather better situated than twists. Ring beams are in plentiful supply stocks held at certain mills being extensive. Very little has been done in export kinds for any market. India buyers are open to purchase at a price. Bolton spinnings remain fairly steady, but only a retail business has transpired. No doubt, Sir Jacob Behrens and Sons' circular tells us, the short-time movement will spread, and any acute position be avoided as far as possible. The differences between old and new crop months have again widened, and it is thought that the new crop is doing better than those interested in keeping up prices would have us believe. Egyptian cotton keeps steady and unchanged in price.

COAL.—The general trade depression now shows signs of taking a firmer grip upon this industry. From all parts come reports of slackness in the home consumption, of weakening prices and of a decrease in exports. Even the North of England where exports hitherto have kept up so well show a falling off, and prices are decidedly easier. Steam coals that ought to be shipped from Humber ports are accumulating at sidings, though for the moment, says the *Engineer*, it is just a question whether these deliveries are being held back through merchants on this side still expecting to place their orders at lower rates, or through dearth of business in foreign markets. The Welsh position is regarded as insecure with trade troubles ahead, and lower prices seem imminent.

COPPER.—Prices have been irregular and fluctuating, and for a time the half month's statistics had a weakening effect, stocks again showing a material increase. But the later tone was steady if quiet, and holders confident and not inclined to press sales, and yesterday's closing prices only showed a slight drop on the week at £58½ cash and £58¾ three months. The close to-night was at £58¾ for money and £59 at three months. Electrolytic, £60. Messrs. Henry R. Merton and Co., Limited, give the visible supply on June 15 as 33,403 tons, against 31,158

tons at the end of May. The supplies for the fortnight total 18,036 tons and the deliveries 15,791 tons, this making the stocks in England and France 24,878 tons, against 22,033 tons a fortnight ago. The Chili charters amount to 950 tons.

Tin.—Values ruled firm at first and three months realised £130, but the improvement was checked by freer disposition in the East to sell, and lower prices were accepted here in consequence. Several small liquidations followed, and values yesterday eased down to £127⅛ cash and £127¾ three months. To-day the market was quiet but rather firmer at £127½ cash and £128¼ three months.

Iron and Steel.—No eagerness to do business is displayed in either of these. Cleveland makers are for the time being well booked, and have put their quotations up so high that Scotch buyers prefer to get their wants supplied from cheaper makers. Yet Cleveland supply is short of requirements, and stocks do not accumulate. West Coast hematites still move downwards. Demand is small, and even where makers are fairly well supplied with orders they are only for insignificant quantities. Neither has the East Coast trade improved as was expected, and the increase of workers at the shipyard has not had the looked for strengthening effect. In manufactured iron and steel orders also are coming in but slowly. Steel plates and angles are again reduced through the competition of Scotch manufacturers apparently, where two firms outside the association underbid and captured orders. Iron plates and angles have not been reduced to the same extent, but there is not much profit anywhere except in steel rails, where exports are heavy.

Tea.—Indian sales only comprised 11,312 packages this week, and the small amount did not stimulate prices to any great extent. They remained practically as they were before Whitsuntide—strong for best teas, irregular and occasionally lower for mediums and easier all round for the commonest kinds, some of which were rather undesirable in quality. New season's teas, of which 791 packages were catalogued, were of good average quality, and sales on garden account for the week were 7,013 packages averaging 7.73d. against 12,570 averaging 7.40d. in the same week of 1907. Ceylon offerings on the other hand were large, importers bringing forward 39,297 packages, but bidding was better here than for Indian teas, although for poorer liquoring teas the tendency was to lower prices. For this week the average came to 7.55d. against 7.12d. in 1907. Java catalogues consisted of 3,016 packages, and for these there was a rather irregular market. Common sorts were easier, but one or two of the better and fine kinds met with good competition.

Sugar.—Prospects for the new crop seem better than last year. Both before and after the Cuban crop it will apparently be drawn upon by America, Mr. Czarnikow's circular declares, and Cuba therefore plays a very important part again. It seems that the weather there is more favourable than last year, but it cannot make good all the damage done, and it cannot increase the area under cultivation. There is a fair amount of planting going on, but, of course, this cane will not be available for the next crop, and for two years there has been very little fresh planting, whilst every year a certain area goes out of cultivation. Therefore the very serious effect of drought last year was somewhat aggravated by reduction of area, and though the coming yield per acre looks decidedly better, the area may be again less. On balance, Cuba expects to produce more next year, but it is not certain that the East will allow the same quality of Javas again to go West; thus, with a good American fruit crop, it seems that our coming beet crop may be drawn upon to a larger extent, because last autumn there were no shipments, so that a larger production in Europe, plus Russian sugars, with increasing consumption and a revival of shipments elsewhere, would not cause an accumulation of stocks, and does not make 10s. look too high a price, unless we have exceptional weather. The market has been full of rumours of further sales, which were not authenticated, and prices declined about 4½ per cent. It is rather disappointing, says Mr. Czarnikow, that with 85,000 tons gone to U.S. in May, our European stocks have not decreased more than in 1907, and are still within 100,000 tons of last year. We seem to have shipped 37,000 tons less elsewhere, which figure is so low that it may require correcting, and we consumed 25,000 tons less, whilst producing 8,000 tons more. Even with further shipments to America, our opinion expressed two months ago seems to obtain confirmation, that with 1s. or more premium until September, we may, with the aid of Russians, have as much sugar visible on October 1 as last year, but with an important deficit then to be covered in America. If, however, the two crops get equalised too soon, we should lose too much old sugar to America. It seems that in France, especially, the holders wish to reduce stocks, prices declining from 31 francs to 29.50 francs, whilst new crop is at 28.87 francs. New York also declined in sympathy with the market here, and 96 per cent. was gradually reduced to 4.36 cents. Otherwise the market was dull. Landings for the week in the three ports were 46 000 tons, and meltings were 45,000, leaving stocks at 305,000 tons.

Societe Francaise de Petrole, Limited.—In its initial stage the various reports are cited to show that all is going well. Apparently oil has not yet been struck and difficulties have been encountered in sinking the wells, but all the hands are said to be energetically working at the necessary preliminaries to a strike of oil, and the concessions have been duly transferred to the company, which has paid over the stipulated money to the vendors.

Company Reports and Balance Sheets.

*** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns*

BOMBAY, BARODA AND CENTRAL INDIA RAILWAY COMPANY.

In addition to its own system of 2,436 miles no less than 1,829 miles of which are of metre gauge, this company works over 650 miles belonging to his Highness the Gaekwar and to various Indian States or other companies, so that altogether its field of operation embraces over 3,086 miles of road and the Baroda Company itself has been the property of the Simla Government from the end of 1905, since which date £563,000 of additional capital has been spent, about £152,000 of it in the past half-year. Some of this capital has been utilised to pay for the extra cost of 90 lb. rails and another portion of it on additional carriage and wagon stock, on vacuum brakes, and so on. In the half-year ended December 31 last the gross earnings were Rs. 4,59,000 more than the forecast made six months ago, and working expenses were about Rs. 3,38,000 less, so that the improvement in the nett income was Rs. 7,97,000 or thereby, equal to about £53,000. The greater part of the increase in passenger traffic came from third-class, but there was a decrease in the goods traffic receipts on the Bombay and Baroda line itself, as well as in general merchandise, the decreases occurring chiefly in manufactured cotton, oil seeds, and railway material for other railways. For the entire year the nett income was Rs. 2,62,96,897, from which Rs. 2,00,00,000 were deducted as payable to the Secretary of State, in addition to which Rs. 2,39,318 had to be paid as interest upon the additional capital provided since January 1, 1906. Allowing for unrealised earnings, the surplus balance was therefore Rs. 60,38,990, and the company's portion of this, after deducting income-tax, was Rs. 4,40,813, or about £29,160. Of this, however, English income-tax requires about £1,460, so that the divisible profit coming to the shareholders is £27,700, and out of that the directors propose to pay a dividend of 10s. per cent. making with the guaranteed 30s. £2 per cent. for the half-year, subject to income-tax. This makes up the dividend for the whole year to 3½ per cent. and leaves about £18,000 to carry forward. Indeed, the surplus profits held in reserve after the dividend is paid will amount to £33,000. It must be an expensive business conducting traffic upon a railway of different gauges, but instead of extending the metre gauge which is really sufficiently broad for almost all traffic purposes in India, the Government continues to extend the 5 ft. 6 in. gauge of our old Great Western Railway, and the directors say that about 200 miles of the Nagda-Muttra Railway will have to be completed before the new broad gauge route to Upper India becomes available. So there is plenty of scope for further capital expenditure.

SOUTH INDIAN RAILWAY CO., LIMITED.

This company has devoted a good deal of attention to the development of what may be called its suburban traffic by means of "shuttle services," and these have proved so popular that the number of trains on the system has been increased from 136 a day in the second half of 1906 to 208 in the six months ended December 31 last. Thanks to this development, the number of passengers carried exclusive of season ticket holders rose by 1,562,232 to 9,745,601 and the receipts from coaching traffic were Rs. 4,89,230 higher at Rs. 39.28,119. Revenue from goods traffic was only Rs. 38,021 up at Rs. 29,73,878, partly because there was a heavy falling off in grain traffic, due partly to the poor harvest and partly to the famine conditions in Northern India and the holding back of local supplies. Miscellaneous receipts fell off by Rs. 10,700, and the increase in gross income from all sources consequently amounted to Rs. 5,16,542 at Rs. 70,00,120. Working expenses were only Rs. 57,132 heavier at Rs. 34,66,357, the ratio to earnings being only 49.52 per cent. compared with 54.34, but the smallness of the increase is not due to real economics having been effected, and will probably have to be paid for later. Maintenance of way cost Rs. 21,089 less, and the saving in this case was legitimate enough, as it was due to a large credit on account of stores returned to stock. Under locomotive expenses, however, in spite of a rise in cost of coal and of higher wages paid, there was a reduction of Rs. 1,17,146, which is accounted for by the fact that no engines were replaced during the six months compared with eight at a cost of Rs. 3,16,318 in 1906. The company's agent reports that 11 engines should have been replaced, but there was delay in getting sanction to the type to be provided, which prevented the order being placed in time. Traffic expenses took Rs. 70,287 more and special and miscellaneous charges Rs. 12,523 more, the latter increase being chiefly due to the payment of famine allowances. Nett earnings were Rs. 35,23,763, and after making sundry adjustments the balance was Rs. 35,32,051 or Rs. 5,76,010 more than a year ago. Deducting interest charges and contribution to the surplus fund, the amount divisible between the Government and the company was Rs. 20,66,812, of which the company's share, after deducting Rs. 4,671 for loss on the Travancore branch, amounted to Rs. 2,14,480. This was brought home at 1s. 3d. per rupee, and realised £17,170, to which were added £16,284 brought forward and £242 from interest on deposit, making £33,006 to be dealt with compared with £21,470. A dividend of £2 per cent. or 10s. more than for the second half of 1906 is declared, making with the guaranteed interest 7 per cent per annum against 6 per cent. a year ago and 7½ per

cent. in 1905, and £14,906 is carried to the new account. With reference to the growth of the passenger traffic, the agent states that, owing to the difficulty of obtaining funds, further extensions are practically impossible. The demands for funds for the provision of rolling stock during 1908 have been cut down from Rs. 31,13,000 to Rs. 17,65,450, while the requirements in connection with the improvement of station facilities have also been reduced from Rs. 28,57,000 to Rs. 14,11,000, and the position is described as fast becoming critical. In accordance with the agreement with the Secretary of State, the sections of the company's lines north of Katpadi, 264 miles in length, were transferred on January 1 to the Southern Mahratta Railway, and the section of the late Madras Company west of Jalarpet, 573 miles in length, was transferred to this company on February 1. The directors say that the surrender of the sections was no loss to the company, as they were the least paying portion of its system, and as the result of the extraordinary development now taking place, the 866 miles of the company's own railway are earning actually more than when the line was 1,130 miles long. Sanction has been given by the Indian Railway Board to the construction of the extension on the Island of Rameswaram, and the Colonial Government has sanctioned the survey of a line in Ceylon to a point where connection can be made between the two railways by means of a ferry across a distance of about 20 miles of shallow water.

ASSAM RAILWAYS AND TRADING CO., LIMITED.

Gross receipts from the railways for the year ended December 31 increased by £2,077 to £69,296, but expenses took £3,253 more, owing to heavier outgoings under the head of locomotive expenses, and nett revenue was consequently £1,176 down at £26,066. Receipts on general trading account after allowing for difference in stocks improved by £9,588 to £163,976 and expenses took £5,760 more at £116,533, leaving a profit of £47,443 compared with £43,615. Dividends and interest yielded rather more, but there was a loss of £60 on exchange against a gain of £334 a year ago, and after providing for commissions to managers, income-tax, &c., the nett surplus was only £3,155 better at £73,707. Adding £4,147 or £1,402 more brought forward, the disposable total was £4,457 up at £77,854, out of which the dividends on the pre-preference and new 6 per cent. shares have been paid, and the preferred "A" shares get 8 per cent. for the year or the same as in 1906, leaving £8,604 or £4,457 more to be carried forward. Expenditure on the railways was £12,013, of which £9,970 was on the Saiqua Ghat extension, making the total capital outlay to date £589,938, while the expenditure on the collieries, saw-mills and brickworks was increased by £962 to £305,983. A sum of £10,000 was added to the colliery depreciation fund out of revenue, making that fund £30,000, and in addition £1,000 was set aside towards forming a fire insurance fund.

WEST OF INDIA PORTUGUESE GUARANTEED RAILWAY CO., LIMITED.

A very substantial increase took place in this company's earnings for the year ended December 31, both import and export traffic being considerably larger. Imports of coal from Calcutta rose by 15,148 tons in addition to which 16,930 tons of better grade coal were imported from England and kerosene oil also showed a small improvement, but railway materials fell off. On the other hand, exports direct to Europe amounted to 23,517 tons grain and seeds against 3,326 tons in 1906 and manganese ore shipments increased by 57,190 tons to 98,567 tons. Revenue from goods traffic was consequently Rs. 2,80,485 up at Rs. 6,17,453 and with gains of Rs. 11,201 in coaching traffic, Rs. 7,950 in miscellaneous and Rs. 1,78,625 in harbour receipts the total revenue was Rs. 4,78,261 better at Rs. 11,01,876. Expenditure on the railway rose by Rs. 1,72,793 and harbour charges were Rs. 56,807 heavier, the proportions to revenue being respectively 59.36 and 45.81 per cent. Including general expenses the outgoings were Rs. 6,43,286 or Rs. 2,28,618 more, leaving an improvement in nett revenue of Rs. 2,49,643 at Rs. 4,58,590. The large increase in traffic has made it necessary to provide increased facilities, and the Portuguese Government has sanctioned works amounting to Rs. 9,02,921, the cost of which is to be recovered from nett revenue. These works include two additional crossing stations on the Ghats, extension of breakwater and quay wall by 500 ft. and 300 ft respectively and improvements of the harbour water supply. With the consent of the Portuguese and Indian Governments the working agreement with the Southern Mahratta Railway was extended for one year to June 30, 1908, and has now been further extended to June 30, 1912.

BUENOS AYRES GRAND NATIONAL TRAMWAYS CO., LIMITED.

Wonderful prosperity is exhibited by the accounts of this company for its year ended March 31 last. Its gross receipts from lines worked by it and by the Buenos Ayres New Tramways Company were £380,969 or £59,713 more than in the previous year. Working expenses were also higher at £242,118, but the increase was no more than £21,729, so that the nett income of £138,851 was £37,984 better. The Grand National Company's share of this handsome income was £91,447, an increase of £23,041, and after meeting all administrative charges, together with interest on debentures, &c., the balance of £37,841 is £10,611 up. Out of this £2,602 more at £3,502 has been transferred to debenture reserve funds, together with £3,726 to income bondholders' interest account, and the 5 per cent. cumulative preference shares not only get their full dividend for the year, but £3,293 has been added to the contingency fund against a few hundreds a year ago, and £4,819 is left to carry forward. The balance-sheet shows a heavy increase of £227,216 in the amount spent on electric traction and equipment on joint account, whose total is now £975,073, including £103,500 or £15,750 more as discount on the conversion of debenture stock. This total embraces £34,500 of Buenos Ayres New Tramways Company's stock. Construction and equipment, the most important item of all amongst the assets, has been increased by £6,710 to £1,579,109, £9,560 having been spent on capital account during the year and £3,150 received as product of sales of horses and harness, old cars, and permanent way materials. Stores conversion account is down £30,513 to £33,397, and other sources show an increase of £5,133 at £22,766. Sundry debtors owe the company £12,120 more at £22,644, and cash is up £13,735 to £50,004. Under liabilities we note an increase of £100,000 in the amount of conversion debenture stock issued, whose total is now £699,300, and of £50,000 in the conversion debenture stock of the New Tramways Company, whose total is £300,000. Creditors at £179,251 show an increase of £70,778 in the debts due by the company on various accounts, including £109,270 of borrowed money, or £50,887 more than a year ago.

INDO-CHINA STEAM NAVIGATION CO., LIMITED.

The trade depression in China during 1907, which is said to have been of almost unprecedented severity, kept this company from making any very appreciable headway, and it has once more had to draw heavily upon its accumulated funds. Nett earnings of steamers with £30,000 from underwriting account and apparently £50,000 from reserve amounted to £104,227 or £2,909 less than for the previous year, but this way of stating the figures hardly reveals the true position. A year ago the withdrawals from underwriting and reserve funds respectively were £37,637 and £60,000, while in addition the exchange reserve of £4,000 was wiped out, and if these figures are deducted in both cases, we find that the business yielded an income of £24,227 compared with £5,499, so that, bad as the display is, there was some sign of improvement. Adding £1,242 more at £3,695 brought forward and £56 from transfer fees, the total income was only £1,639 lower at £107,078. Debenture and general interest, however, took an extra £2,113 at £13,878, owing to the issue of debentures made during the year, and general charges also rose a little to £6,215, and in order to provide the full dividend on the preferred ordinary shares as against 2½ per cent. on the undivided capital in 1906, the provision for depreciation is reduced by £16,248 to £56,585. Then £754 is written off debenture issue expenses, and the sum carried out is £10,060 larger at £13,755. The auditors point out that while insurance premiums actually paid were charged in working expenses, nothing was allowed for premiums in respect of the company's own underwriting account. That fund is now down to £240,001 against a book value of the fleet of £1,006,258, and unfortunately it will have to be further reduced through the loss of one of the vessels, while the general reserve is now only £10,000. Creditors at £78,253 exceed debtors by £3,637 and cash amounts to no more than £5,922, but the issue of debentures has enabled the company to pay off £113,500 of its loans and £36,019 of its deposits, leaving these items at £6,500 and £38,926. Debenture issue expenses amount to £17,351, and apparently the directors intend to take ten years to wipe this paper asset out of the balance-sheet.

JAMES EADIE, LIMITED.

"The licensed trade, as now organised, is called upon 'to extinguish itself' in the supposed public interest at its own cost; and this, combined with the Time Limit principle, may be cited as a precedent for the annexation to the State of many other classes of property." This is the language in which the board of this brewery, a model in its way, sets forth its reasons for offering uncompromising opposition to the Government measure, and there is not a little in the warning. As for the company's own business, it goes steadily on. Profits last year ended March 31 were £83 more than the year before at £54,134, and as the balance of £163 brought forward was also £115 better, it followed that the total of £54,298 to be dealt with was £198 up. The debenture interest and preference dividends are met as usual, but only 2½ per cent. instead of 5 per cent. is paid on the ordinary shares, and an extra £6,000 can in this way be set aside to "special reserve" over and above the £6,000 again carried to "general reserve," which is thereby raised to £80,000. The compensation levy for the year was £2,772 or £86 higher, and this charge "together with the increase in local and imperial taxation during the past eight years adversely affects dividends by not less than 5 per cent. per annum." Mortgages and loans are less by £7,325 at £112,640, stock-in-trade is £4,038 up at £57,330 and cash £1,720 lower at £9,937. Sundry creditors are owed £26,488 and sundry debtors owe the company £22,364.

LAUTARO NITRATE CO., LIMITED.

Gross trading profits for the year ended December 31 last amounted to £150,407, inclusive of transfer fees £17, dividends £1,304 and interest £195, and show a decline of £2,721, small compared with the reduction shown in the previous year. After making various provisions which amount to £3,811 less and allowing £960 more for depreciation at £15,000, the available surplus with £1,501 brought in totals £130,053 against £131,107. Out of this £23,000 or £500 less is applied to new works account, the appropriation of £4,000 to fire insurance is repeated, £423 less at £10,000 is added to reserve and the dividend of 10 per cent. is paid for the fourth successive year, leaving £8,233 to go to the new account. Property, which last year showed a reduction of £30,000, is now down half that amount to £420,302.

Nitrate in transit to the value of £212,286 or £59,341 less has since been realised. Stocks on hand are £56,630 lower at £170,756, and cash and investments are £72,982 and £19,626 higher at £92,444 and £60,596 respectively. Debtors are £1,484 higher at £39,027, but £66,248 is due to creditors in London and Chili, and £209,758 is owing on bills payable. Reserves aggregate £75,080 with the year's appropriations, and new works account disappears from the sheet, the expenditure on the year being met by the balance of £7,714 with the £23,000 set aside out of profits. No allowance was this time made for depreciation of investments account against £500 last time, and the item thus remains at £3,478.

SAN SEBASTIAN NITRATE CO., LIMITED.

Labour troubles were frequent during the year ended December 31, and probably account for the reduction of 13,442 quintals to 143,790 quintals in the quantity of nitrate dealt with. In spite of this falling off in production and of a general increase in the cost of supplies, the profits improved by £1,196 to £11,909, and with rather larger receipts from interest, &c., the total income was £1,357 up at £12,345. London office expenses, less one-third of the directors' fees surrendered, and reserve for income-tax took a few pounds more, but there is nothing this time to correspond to the £100 subscribed to the earthquake fund, and the nett profits came to £10,412 or £1,439 more. Balance brought forward, however, was £1,370 smaller at £1,101, so that the available surplus showed very little change at £11,513, and the directors content themselves with repeating the dividend of 6¼ per cent., and after adding another £1,000 to reserve they raise the sum carried out by £69 to £1,169. Property account was increased by £1,319 to £134,661 and depreciation was ignored for the second year in succession, although it would appear that the machinery and plant is nearly worn out. At least, the directors have raised £35,000 by an issue of 6 per cent. first mortgage debentures since the accounts were closed, for the purpose of erecting a new maquina, and under the circumstances the reserve of £13,000 seems inadequate. Creditors are £382 down at £4,505, and the overdraft of £4,441 appearing a year ago has been paid off, but at the cost of a reduction of £6,443 to £13,388 in stocks of iodine and nitrate. Cash and loans are £3,254 higher at £13,334 and sundry debtors have risen by £528 to £754, but tools, stores, &c., have dropped by £3,022 to £5,172.

INDIAN AND GENERAL INVESTMENT TRUST, LIMITED.

Receipts from interest and dividends on investments for the year ended April 30 increased by £577 to £25,919, and the total income, including £959 from underwriting commissions, showed an improvement of £1,365 at £29,298. Of this, management expenses took £2,854 and debenture interest £10,688, and after transferring £5,348 or £896 more to reserve the available balance amounted to £10,408 compared with £9,935. The dividend on the preferred stock having been met, the extra £473 at their disposal enables the directors to pay an additional ½ per cent. at 3½ on the deferred stock. Profit on sales of investments added to reserve was only £1,665 against £9,525 a year ago, but on the other hand £9,561 less at £3,247 is written off investments, leaving the fund £3,765 higher on balance at £35,161. Investments have been increased by £6,375 to £509,235, spread over 120 securities, of which £328,037 is in Indian securities, and the directors make a special point of noting that the Trust has no money invested in debentures or shares of English breweries. With regard to this item, however, the auditors have again to report that the reserve, so far as they are able to judge, does not quite cover the depreciation of the investments. Advances on securities are £8,726 up at £18,119 and sundry debtors have risen by £1,463 to £1,544, but cash has dropped by £14,193 to £15,818, while on the other hand sundry creditors have been reduced by £2,396 to £1,851.

TRUST UNION, LIMITED.

The language of the report for the year ended May 15 last is merely a repetition of that of the year before. Business has again been difficult, the year being one of almost continuous depression, the South African investments continuing to be anything but elastic. Since the date of the report, however, there has been some change for the better in this last respect, and perhaps a more hopeful show will be made next year. As it is the nett profit, including £3,109 brought forward, was £24,658, and the directors are able to pay a dividend of 3 per cent. on the ordinary shares, after meeting all charges and writing off £1,083, the discount and expenses on the 4 per cent. debenture stock issue, and have still £7,328 left to carry forward. The directors further have applied £5,000 at credit of reserve account towards meeting the depreciation upon the securities, and with this appropriation are of opinion that the further loss exceeds by very little the 1½ per cent. mentioned a year ago. The rise in Kaffirs may have wiped this out since. Last year's balance-sheet contained an entry, "liability for securities bought for future settlement, £21,281." That has disappeared as well as the reserve. Secured deposits are £1,000 down at £38,500, and sundry creditors and credit balances are £3,834 up at £8,110. Investments at or under cost are entered at £507,592, a decrease of £3,241, but loans, advances, and participations in syndicates show an increase of £7,686 at £18,385. Sundry debtors also owe the trust £3,281 more at £6,966. Cash at bankers is £1,331 up at £10,887. The gross profit, it may be added, was £1,421 better, and the nett £1,893 up.

URBAN ELECTRIC SUPPLY CO., LIMITED.

Further progress was made by the 13 small undertakings which go to make up this company's business, and during the year ended December 31 an aggregate addition of 52,957 8 c.p. lamps was made increasing the total to 402,597. Gross receipts from all sources rose by £3,308 to £36,433, but expenses took a little more and the nett revenue was £3,211 up at £34,640. Dividends paid and accrued again absorbed £32,500 of this, but an extra £1,686 at £10,686 was required for interest on debenture stock and calls in advance, and £462 or 1 per cent. per annum on fixed plant and machinery of works which have been completed for more than five years has to be placed to a depreciation reserve in accordance with the arrangement made with the contractors. In addition £1,612 is written off the stock of wiring goods at branches, and although £633 came in from interest on deposits. Edmundson's Electricity Company had to provide £9,988 under its guarantee compared with £10,061 a year ago. Capital expenditure continues to grow at a steady pace and amounted to £38,210, bringing the total up to £1,049,957, including £239,154 advanced to the Camborne and Twickenham undertakings, and the company has not yet reached the stage when the question of creating a proper reserve can be considered. Thanks to the issue of debentures made a year ago, the liabilities to contractors and other creditors have been reduced by £23,079, but they are still very heavy at £197,989, while increases of £7,379 in sundry debtors and £4,254 in cash only bring these items up to £55,501 and £7,842 respectively. Preliminary expenses still figure as an asset for £1,565, together with discount and stamp duty on debenture stock, which now amounts to £8,844 or £4,694 more.

SOUTH AUSTRALIAN COMPANY.

This prosperous chartered company's report makes very pleasant reading for its shareholders, despite the fact that the actual income for the year ended April 30, with colonial accounts to December 31, appears to show a falling off of £5,497 compared with the previous period. With £9,019 compared with £1,371 brought forward gross revenue is £2,151 up at £78,868. Expenses increased by £956 to £23,154, so that the available balance is only £1,196 better at £55,714. Out of this £5,000 is carried to reserve, a dividend paid of 55s. per share, of which 25s. was paid in January, compared with 50s. for the previous year, and the carry forward is increased to £11,664, but no allocation is made to wharf account, which then got £5,000. This is the first occasion of an interim dividend being paid, a practice which will be continued in future, the balance being declared in June and paid in July. Revenue items are profit on sales of land £4,558, rents £34,524, an increase of £523, wharf receipts £20,600 nett, up £547, from a gross amount of £25,095 arising from 966 vessels of 570,358 tons burthen, and interest on balances due for land sold and on investments produced £10,134. In property stock account there is a decrease of £3,064 to £914,625, due to the deduction of the value of land sold and a reduction made in the valuation of some suburban allotments. The total land owned by the company was at December 31 36,167 acres or 1,300 less. But, on the other hand, the value of recently erected buildings in Adelaide and part of the expenditure on vineyards has been added. Balances due amount to £83,946 and investment account, which includes 921 of the company's own shares, is £10,753 higher at £136,547, while cash in London and colony is £1,618 lower at £21,972. On the other side property reserve account is reduced by £2,984 to £630,625. Colonial capital account stands at £143,468, wharf renewal account is unchanged at £10,330 and dividend equalisation reserve is raised £5,000, the year's contribution, to £50,000, while £5,000 balance credit has been received from the colonial manager since December 31.

WIENHOLT ESTATES COMPANY OF AUSTRALIA.

A decrease of £5,219 to £40,438 in receipts from the wool clip for 1907 was neutralised by a gain of £5,482 to £26,224 in the profit on cattle account, and as sheep account gave an increase of £6,313 at £11,881 against a small drop to £2,398 in horse account, the total income from all sources was £6,186 better at £80,940. Expenses absorbed most of this improvement, in spite of a reduction in debenture interest, and nett profits were only £1,842 up at £29,517, bringing the total at the credit of profit and loss account to £103,624. The whole of this amount has still to be carried forward, as the arrears of the £25,000 per annum set aside by the prospectus of October, 1899, and trust deed of January, 1900, have not yet been made good. Leasehold properties have been reduced by £2,418 from realisations, but otherwise stand at their original cost, and it is evident that this item will require severe pruning before the company's affairs can be brought into a healthy condition. Freehold land and other property realised to date amount to £52,684, and this together with £78,969 which has been accumulated as a fund for depreciation of plant, &c., reduces the value of the stations and stock to £469,929. Other assets consist of £55,102 in cash and promissory notes for land sold, held by the debenture trustees £27,177 value of wool in hand, £2,087 in cash, and £3,009 for rents paid in advance, &c. On the other hand £1,896 is due for an overdraft in Australia, £16,745 has been borrowed on the security of unsold wool and £4,527 is owing to sundry creditors.

ALUMINIUM CORPORATION.

This company was only incorporated on April 10, 1907, and has not yet reached a revenue-earning stage. Good progress, however, has been made with the Dolgarrog Works, and as soon as the pipe line is finished, which it is expected will be in August next, the production of aluminium will commence. The Wallsend works are now completed and partially in opera-

tion, and aluminium of high quality is being produced. Leases of valuable bauxite properties in the South of France have been acquired, and this company, in conjunction with one of the largest chemical companies in Great Britain, is forming the Bauxite Refining Co., Limited, of which it will hold three-fourths of the shares. These developments have necessitated further financial provision, so £150,000 first mortgage debentures have been created, and arrangements are being made for the issue of £100,000. They will be secured by a first charge over the whole undertaking, and holders will be entitled to exchange them at their face value for 7 per cent. participating preference shares at any time before December 31, 1913, when the debentures are redeemable. The properties stand in the balance-sheet at £86,140, in addition to which £100,455 has been spent on construction and equipment of works, £6,200 on the Wallsend electrical sub-station and £4,453 on the transmission line. General expenditure, less rents, interest, &c., amounts to £2,605, and underwriting commission and preliminary expenses figure as an asset for £58,657, which seems a very heavy amount on a capital of £285,830. Cash and temporary investments come to £41,185, debtors owe £1,333, and stocks stand at £3,808 against £20,975 due to sundry creditors.

ASSAM COMPANY.

The total crop for the year ended December 31 amounted to 4,216,860 lbs. or an increase of 201,935 lbs., but little or no benefit was derived from this larger output as the average price realised was 0.51d. down at 9.15d. per lb., and gross receipts showed a reduction of £687 at £159,669. Owing to a large proportion of equipment expenses on the new property at Tingalibam being charged to current revenue the cost worked out at 8.06d. per lb., but taking the old gardens only it was 7.84d., leaving a profit balance of 1.31d. per lb. Nett profits on the old gardens were £26,499, and after providing £2,400 or £646 less for managers' commissions and £2,655 for upkeep of new unproductive cultivation, the nett surplus was £21,728 compared with £29,398 for the previous year. Adding £736 or £513 less brought forward the disposable total amounted to £8,183 less at £22,464, but the directors nevertheless maintain the dividend at the old rate of 8½ per cent. Out of the balance remaining they write £2,655 off the outlay on Tingalibam and transfer £3,015 to the new extension fund, against £10,000 to that fund, £4,000 to reserve and £736 carried forward in 1906. Expenditure on the new property less £6,217 received for the 1907 crop reached a total of £20,655, of which £18,000 has been debited to capital and £2,655 wiped out from revenue as above noted. A sum of £3,564 spent on the Lakmijan gardens has been charged to new extensions account, leaving that fund at £16,469. Capital outlay on Tingalibam for 1907 was £2,534, but £6,299 is deducted for premiums received on 521 shares, so that block account is down by £3,766 at £209,415 against which the reserve fund is £47,932, while the insurance funds have been increased by £1,296 to £12,355, and are invested in securities valued at £12,376 or £1,183 more. Bills payable and sundry creditors have been reduced by £3,576 to £67,957, and on the other hand debtors have risen by £10,031 to £43,571, and cash is £2,202 higher at £23,426 against a decrease of £2,322 in stocks of tea on hand.

EMPIRE OF INDIA AND CEYLON TEA CO., LIMITED.

Unfavourable weather was experienced on all three estates of this company, and the Dooars gardens in addition suffered from a bad attack of mosquito blight, with the result that the crop was 74,785 lbs. smaller at 1,375,272 lbs. The Assam output dropped by 210,072 lbs. to 2,747,286 lbs., but in Ceylon the company managed to gather 19,149 lbs. more at 528,404 lbs., in spite of the weather. Garden costs rose by 0.13d. in Assam, 0.30d. in Dooars, and 0.16d. in Ceylon, but the average prices realised improved by 0.90d. and 0.92d. in the two last-named against a decline of 0.36d. in Assam, and the proceeds from all sources were only £4,857 down at £137,989. Deducting from the expenditure the £1,000 reserved for coolie recruiting out of the previous year's revenue the nett profits, after providing £5,233 or £992 more for commission to managers and staff, and adding the larger balance of £2,723 brought forward, showed a reduction of £3,852 at £38,682. This does not deter the directors from again paying a dividend of 10 per cent., but it does prevent them from adding anything to reserve compared with £5,500 put to that fund and £1,000 appropriated for recruiting as above noted. The balance carried out, however, is increased by £2,944 to £5,666. Last year's appropriation to reserve was the first made out of revenue, the remaining £14,500 of that fund being made up of profits earned prior to the incorporation of the company, and the position of the company is not what it should be to justify the payment of so large a dividend. Estates are valued at the old figure of £446,818, and the auditors only certify to the correctness of the accounts subject to any question as to depreciation. Liabilities, including £31,373 of borrowed money, are £13,799 down, but are still quite heavy enough at £47,527. On the other hand, an increase of £6,307 to £10,952 in sundry debtors is more than off-set by reductions of £8,709 to £56,627 in stocks and £845 to £3,245 in cash, while no less than £33,016 has to be found for the final dividends now declared. Expenditure in advance stands at £6,975, advances to coolies at £8,018, and the only thing in the shape of an investment on account of the reserve is £3,896 in Tezpore Tramway Company shares.

GALAHA CEYLON TEA ESTATES AND AGENCY CO., LIMITED.

This company's own crop of tea for 1907 was only 20,068 lbs. larger but 245,265 lbs. or 120,396 lbs. more was made from bought leaf, and the total output was therefore 140,464 lbs. up at 1,648,021 lbs., while the price rose by 0.49d. to 6.06d. The cardamom crop increased by 618 lbs. to 11,102 lbs., and although the price dropped by 1.71d. to 1s. 2.92d., the income from all sources showed an improvement of £7,126 at £59,923. Cost of production took £5,333 more at £45,778, and £165 was written off coast advances, but London charges were a trifle lower, and after meeting debenture interest and providing the usual £750 for depreciation the nett profits, with £276 brought in, showed an improvement of £1,990 at £9,866. Of this the directors put £1,000 to reserve or the same as a year ago, and seem to think that they have done all that prudence requires, as they proceed to raise the dividend from 6 per cent. to 10 and carry forward £266. Yet the reserve will now amount to no more than £11,700 against a block account of £179,990, and even that is all in the property. Creditors are £3,001 up at £18,310, but the overdraft of £6,209 in last year's balance-sheet has disappeared, which is so much to the good. On the other hand, however, stocks have been reduced by £1,059 to £5,369, and although cash is £2,081 higher at £5,172, there is £2,780 less at £6,278 to come in from sundry debtors. Coast advances have gone up with a rush from £2,149 to £3,304 and it would be interesting to know whether the small sum written off is sufficient to provide for all losses under this head.

DOOARS TEA COMPANY.

The increase of 1,301,085 lbs. in the 1906 crop was a piece of exceptional good fortune, which the directors did not expect to maintain. As a matter of fact, they allowed for a shortage of 384,142 lbs. in their estimates, but even this proved below the mark, as owing to mosquito blight the actual outturn was 499,262 lbs. smaller at 5,100,880 lbs. Some compensation, however, was found in an improvement of 0.61d. to 7.28d. in the price, and although the costs rose by 0.39d. to 4.88d. nett profits were almost identical at £51,480. The balance brought in was £1,282 less at £7,884, but the decrease is not sufficient to affect the dividend and bonus, which again aggregate 20 per cent., and after putting another £15,000 to reserve £6,539 is carried forward. A big reduction of £34,509 to £12,546 has been effected in curent liabilities, while stocks of tea are only £19,766 smaller at £57,171, debtors owe £8,718 or £1,312 more, and cash is £2,603 up at £5,477. Block account is unchanged at £286,573, against which the reserve now stands at £90,000, all in the business at present. The directors, however, state that they propose, should the opportunity offer, to invest not more than £7,000 in the ordinary shares of the Oriental Rubber Company, which was formed in February, 1906, to acquire a property in the Federated Malay States, and is expected to have 1,000 acres planted by the end of the current year.

NEDEEM TEA COMPANY.

Unusually severe attacks of mosquito blight at some of the gardens caused a decline of 250,113 lbs. to 5,021,429 lbs. in the outturn for the year ended December 31, but the quality was better, and the average price rose by 0.81d. to 7.50d. per lb. Profits amounted to £51,534 or an improvement of £12,560, and with £599 brought forward gave a disposable total of £52,133 compared with £40,260. After providing for income-tax and writing off £142 for deficiency on consignments to America against £1,070 provided for loss on investments a year ago, the surplus was £51,345, managers' commission and directors' additional remuneration absorb £1,457 more at £3,907, and the dividend on the ordinary shares is raised by 4 per cent. to 10, after which an extra £2,000 at £16,000 is transferred to reserve and £2,000 is written off machinery leaving £2,438 or £1,738 more to be carried forward. Block account is £188 up at £482,817 owing to a purchase of land, and machinery has been increased by £2,430 to £5,173, making a total capital outlay of £487,990, against which the reserve is now £60,000 or about 12¼ per cent. Loans are £26,449 lower at £6,662, bills payable come to £2,000 less at £38,000 and sundry creditors have dropped by £3,784 to £11,673. Tea stocks are £14,378 down at £47,397, but debtors are up at £4,859, and although cash has shrunk to £737, the company has lent £1,533 in Calcutta. Expenditure on account of the current season is £1,257 smaller at £4,378, but advances at gardens show an increase of £988 at £4,166.

NEW DARVEL BAY (BORNEO) TOBACCO PLANTATIONS, LIMITED.

Not only was the 1906 crop of 7,015 bales smaller than that of the previous year by 217 bales but the average price fell by 2¾d. per lb. to 1s. 8½d., and gross profits, including £474 or £202 less from interest, &c., showed a decrease of £0,346 at £18,820. London office expenses were only a trifle heavier and £414 more at £2,706 was brought forward, but even so the disposable surplus was only £17,853 compared with £26,883. The directors, however, avoid the necessity of reducing the dividend below the 2s. paid for 1906 by transferring £2,000 to reserve against £12,000 put to that fund and £850 written off investments a year ago, an arrangement which leaves them with £4,526 or £1,820 more to carry forward. Plantations and property are still carried at the round figure of £100,000, and the special reserve is now £32,000, apart from the reserve of £9,773 created by taking 15s. per share credited as paid up on shares not taken up by the shareholders. Sundry creditors have been reduced by £1,162 to £12,893, while debtors are £2,623 up at £9,956, but bills payable have risen by £10,000 to £46,500, and cash is £10,982 smaller at £14,185 as the result of an increase of £15,720 to £63,390 in the expenditure on account of the 1907 crop. Investments are unaltered at £14,450. Of the 1907 crop 3,670 bales have been sold at very satisfactory prices considering the depressed state of the market, and about 3,100 bales are still on hand.

SAN PAULO COFFEE ESTATES CO., LIMITED.

The enormous crop of 1906 was followed by a very poor one last year when only 27,511 cwt. or 41,005 cwt. less were produced, and the directors say that the company in consequence experienced one of the worst years since its formation. They find some consolation, however, in the fact that a smaller crop can be better harvested and prepared for the market, and they also claim that the valorisation scheme of the San Paulo Government helped to soften the blow by bringing about an improvement of 6s. 3d. to 30s. 9d. nett per cwt. in the price realised. It may have done so to some extent, because circumstances have been favourable, but apparently another big crop is expected this year, the company looking for 50,000 cwt. from its own two estates, and the real test of the Government scheme will come when that is brought to market. Profits from the estates fell by £25,352 to £8,663, of which administration charges, &c., including £1,526 for interest, discounts, and commission, and £117 for difference in exchange took £4,044, and as debenture interest and sinking funds required £14,880, the nett result, after deducting £4,274 brought forward, was a loss of £5,987. A year ago a profit of £14,877 was shown, but that figure included 8,482 cwt. of coffee on hand, which were valued at £1,293 more than they actually realised. During the year another £6,400 of the first mortgage debentures were redeemed, together with £1,200 of the Santa Ernestina debentures, making a total paid off to date of £55,300, and this amount has now been written off the estates, reducing their book value to £406,537. Liabilities to sundry creditors are £17,535 down at £51,448, but on the other hand sundry debtors come to £31,471 less at £28,960, while cash is only £322 up at £1,168, and expenditure on account of the current season £4,598 or £1,166 more.

SELANGOR RUBBER COMPANY.

Including £487 value of rubber on hand, sales during 1907 produced £23,154, and other receipts brought the total gross revenue up to £24,160. The output of dry rubber amounted to 120,524 lbs., exceeding the estimated production of 100,000 lbs. The yield per tree was about 1½ lbs. and the price obtained averaged 3s. 10d. per lb., showing a decline of nearly 1s. 3½d. per lb. compared with 1906. For the current year it is anticipated that the tapping force can be largely augmented, and an output is estimated of 200,000 lbs., accompanied by a marked reduction in tapping charges. Outgoings at home amounted to £1,098, of which one-half £549 is charged against this account, and one-half against estate maintenance, and colonial expenses came to £9,332, leaving £14,279 nett profit, and giving with £735 brought in a divisible surplus of £15,014. Out of this the general manager's commission takes £1,129, £1,200 is allowed for expenditure on temporary abandoned area, £300 for depreciation, and 10d. per share paid on the fully paid 2s. shares and 6d. on the partly paid, or at the rate of 41.6 per cent., leaving £629 to go forward. Estates stand at cost £4,910. This distribution compares with 40 per cent. in 1906, and 20 in 1905. Maintenance and development is increased by the year's expenditure of £8,648 to £35,539. Buildings, &c., less depreciation, and plus £2,517 expended, are £1,517 higher at £4,701, and £1,660 is represented by as many shares in the Sungei Way Rubber Company. Advances account for £1,799. Debtors owe £969, while creditors want £1,089, and £1,397 is due on bills payable and £4,395 to bank overdraft, but on the other hand cash, which is small at £259 is increased by £9,154, since realised for rubber on hand at December 31. The actual area under rubber is now 1,504 acres, a resurvey showing a decrease of 48 acres from the amount given in last year's report.

ASSAM OIL CO., LIMITED.

Owing to mechanical and engineering troubles the progressive increase in the quantity of the crude output referred to a year ago was not maintained during 1907, and, in fact, some wells which had been counted on to increase the supplies were closed owing to difficulties with the casing. This caused a slight setback in the production, but apparently prices realised were rather better as nett profits rose by £1,674 to £26,326. The financial position, however, is still so far from satisfactory that the directors have again decided not to pay a dividend, but to transfer £20,000 to depreciation account against £17,500 appropriated to that fund a year ago, leaving £826 less at £6,326 to be added to the balance of £13,862 brought forward. Expenditure on development of drillery, additions to refinery, &c., amounted to £16,609, making a total to date of £399,070, against which the depreciation fund now stands at £55,000. The loan from the Assam Railways and Trading Company remains at £30,000, but the overdraft at the bank has been reduced by £9,802 to £5,935, and liabilities to sundry creditors are £2,426 lower at £9,768, while on the other hand stocks and stores are valued at £24,152 or £1,892 less, and cash has dropped slightly to £508 but debtors owe £475 more at £10,024.

COLOMBO GAS AND WATER CO., LIMITED.

Private consumption increased by six million cubic feet during the past year ended May 26, but owing to a reduction in price, the balance of profit of £6,467 shows only a small increase. At the same time the Kandy electrical station, while selling an increased amount of current encountered higher cost of maintenance. In detail gas rentals in Colombo produced £18,527, residual products £4,121, and meter rentals and sales of fittings together £2,312, and working expenses absorbed £7,778, and coal carbonised £7,114. In Kandy electric current brought in £3,402, while fuel took £1,211 and working expenses £2,189, and London expenses came to about £1,300. After providing debenture interest and bringing in £1,952 from last account, £7,211 is available, out of which the preference dividend is paid and the ordinary is raised by 1 per cent. to 5 per cent., leaving the carry forward higher at £2,525. Capital expenditure at Colombo is reduced by £2,000 received for lamp columns taken over by the municipal council to £92,909, and the Kandy electrical works represent £13,300. On the other side £3,516 debentures have been paid off, leaving capital account with a credit of £3,183. Cash in various quarters comes to £3,458 and stocks of fittings, coals, &c., are valued at £10,417. Debtors and creditors nearly balance at £5,195 and £4,744 respectively, and depreciation account amounts to £3,000. The company has entered into a new contract with the municipality of Colombo to light the public lamps for 10 years from 1907.

GILROY, SONS AND CO., LIMITED.

A very sorry tale is told of the jute trade in the report of this Dundee company for the year ended May 31. Manufacturing account shows a difference to the bad of £33,878, making the loss on the year's trading £4,534. With £2,284 or £395 less brought in profit and loss account, therefore, shows a debit balance of £8,503 compared with a credit of £25,637 in 1907 after clearing the arrears of preference dividend then outstanding. While there was a saving of £599 in nett debenture interest there was a new charge of £464 expenses connected with renewal of debentures. Tay works are unchanged at £325,000, but are stated to have been maintained in their usual efficiency out of revenue. Stocks are £6,015 heavier at £122,362 and rather unwieldy in face of the competition from Sweden. Stagnant trade is reflected in a reduction of trade debts by £16,265 to £11,662, while creditors are a few pounds less at £1,672. Cash is £89 up at the insignificant sum of £91, but the company is £15,380 deeper in debt to bankers at £52,561 and further liabilities are £1,708 on sundry balances and £1,492 due for jute afloat. The reserve fund of £20,000 is partly represented by investments of £10,187 with a present market value of £9,624. The figures indicate a generally unsatisfactory state of affairs, which have every prospect of being worse before they are better.

R. WAYGOOD AND CO., LIMITED.

Business would appear to have been good during the twelve months ended March 31, as trading profits improved by £6,855 to £61,328, but the revenue from interest and dividends was £1,669 smaller at £6,090. At the same time expenses rose by £3,538 to £40,959, and after writing off £3,010 for depreciation the nett profits, including £3,069 or £891 more brought forward, were only £2,476 up at £26,545. Managing director's and directors' fees took £2,800 of this, £500 is again written off patents, and another £1,500 is added to reserve, after which £2,000 is written off investments, and the ordinary shares receive 6 per cent. or the same as a year ago, and the sum carried out is increased by £476 to £3,545. The reduction of the patents and goodwill account is not progressing very rapidly, and that item still stands at £67,076, while freehold and leasehold property, plant, &c., has risen by £1,277 to £72,510, and against these the reserve only comes to £20,500. Trade debts and liabilities are only a few hundreds down at £30,134, and debtors have been reduced by £9,181 to £39,036, but stock and work in progress is £10,579 larger at £89,601, and cash and bills are £3,084 up at £11,053. Dividends accrued, however, come to £1,621 less or £3,487, and investments and loans are now valued at £56,893.

SPENCER, SANTO AND CO., LIMITED.

The depression in the building trade, and particularly in that branch of it devoted to the development of new estates, continued very severe during 1907, and under the circumstances it is not surprising to find this company reporting a further big shrinkage in its nett profits. Not only was difficulty experienced in securing remunerative contract work, but the company was unable, through the stagnation of the property market, to dispose of many of its properties, with the result that nett profits fell by £9,439 to £9,015, the decrease being the more serious in that it follows one of £7,351. A small saving of £598 at £2,316 in general expenses was neutralised by the reduction of £3,140 to £1,256 in the balance brought forward, and the available total was £11,980 down at £7,956. Out of this the preference dividend is paid, but the directors do not feel justified in paying anything on the ordinary shares, and as the reserve is also passed over the sum carried out is raised by £1,136 to £2,392. Freehold and copyhold estates, leasehold premises and goodwill have been increased during the year by £13,849 to £253,475, and considering the condition of affairs it is rather unfortunate that no explanation is given of this addition to the property. Another item on which light should be thrown is that of sundry investments and loans, now amounting to £47,149 or £17,735 more, especially as it is to these that the increase of £27,812 to £95,303 in the company's borrowings against security is due. Stock is £867 lower at £10,529, and machinery, &c., £1,540 down at £34,796, and against these the reserve is unaltered at £15,006, but £836 has been added to the leasehold redemption fund, making it £4,503. Liabilities to creditors are £5,327 up at £37,067, while on the other hand increases of £3,276 to £31,287 in sundry debtors and £10,636 to £14,903 in cash are offset by a reduction of £14,097 in balance of uncompleted work.

Underground Electric Railways of London.—A meeting of holders of the profit sharing secured notes has been called for June 30 and of holders of unpaid coupons for interest of the above notes, and of Power House first and second debentures for July 1, to consider a scheme of arrangement dated April 7.

MINOR NOTICES OF COMPANY REPORTS.

ARON ELECTRICITY METER.—The accounts now submitted cover a period of six months only, instead of a year, and show a gross profit, including dividends and interest received, of £18,331. Of this, £2,361 is written off for depreciation, and after providing for all charges the nett profit with £6,228 brought forward amounted to £17,714. A further dividend of 7 per cent. is paid on account of arrears of preference dividend and £5,000 is transferred to the reserve against goodwill and patents, leaving £3,971 to be carried forward. The allowance for depreciation just about balanced the outlay on property for the half-year, and that item is only £136 down at £185,724, while the reserve for patents and goodwill now amounts to £14,000, of which £13,306 is separately invested. Stocks of meters, clocks, &c., have been increased to £58,249, debtors are £1,151 up at £47,371, and cash has risen by £6,331 to £15,861, but loans at short notice are £4,000 lower at £6,500. Creditors are very slightly altered at £10,911.

BARRENECHEA NITRATE COMPANY.—The accounts just issued cover a period of fifteen months to December 31, instead of a year, so that comparison is hardly possible, but it is significant to note that there was a big decrease in profits. After deducting £5,971 for loss on exchange, the total income was only £30,062 against £39,976 for the preceding year, while the nett profits amounted to £22,929 or £7,346 less, although nothing was provided for debenture redemption compared with £4,000. Out of this a dividend of 15 per cent. is paid against 25 per cent., but £15,285 is put to reserve and £894 is added to the balance of £13,958 brought forward. During the period £9,400 of the first mortgage debentures was paid off and the property account reduced by that amount to £86,246, against which the reserve now stands at £34,000. The debenture redemption fund stood at £14,033, but the directors announce that the remaining £12,900 first mortgage debentures have since been paid off. Floating liabilities are £17,531 up at £62,064 against increases of £20,594 to £52,572 in sundry debtors and £9,627 to £17,862 in stocks, but cash has dropped by £5,931 to £6,170.

BIRMINGHAM TRUST.—A year ago the balance-sheet of this undertaking showed that the directors had substituted home commercial and industrial securities and mines for their Foreign Government and gas stocks, and the exchange would appear to have been a disastrous one. The total book value of the securities held is only £942 less at £149,194, but the depreciation on them on April 30 was £43,028, as compared with £19,851 a year ago. Revenue from all sources for the twelve months was £335 down at £6,948, but interest charges were smaller, and after providing for administration expenses, &c., the nett profits were only £93 less at £6,401. With £12,842 or £596 more brought forward, the disposable total amounted to £19,243 against £18,740, and after meeting preference dividend, which took a little extra owing to a further 260 shares having been paid up in full, the ordinary shares get their usual 4 per cent. and £13,293 is carried forward. The loan of £5,000 appearing in last year's accounts has been paid off, while on the other side of the balance-sheet the item of sundry debtors, which a year ago stood at £989, has been wiped out and cash is £1,026 down at £454.

BOOTH STEAMSHIP COMPANY.—Profits from steamers and other accounts for the twelve months ended March 31 amounted to £160,665 and £29,057 was brought forward, making a total of £189,722. Of this, £93,618 was written off for depreciation, debenture interest took £18,000, and directors' and trustees' fees £2,210, leaving £75,894, and after paying the preference dividend and 10 per cent. on the ordinary shares £34,394 is carried to the new account. Additions to the fleet during the year cost £52,825, making a total of £1,482,773, on which the depreciation allowance to date amounts to £354,875, and the reserve stands at £150,000. A sum of £111,002 has been paid on account of steamer building, and other assets consist of various properties valued at £5,825 and investments valued at £194,762. Creditors come to £87,184, bills payable to £186,902, overdraft from bankers to £85,374, and loan from Alfred Booth and Co. £3,000, against which ledger balances abroad total £56,083, debtors owe £33,790, and cash is £2,023.

DRAKE AND MOUNT (1902), LIMITED.—This Surrey business of corn and coal merchants, which amalgamated two old-established firms, shows a satisfactory increase of £1,151 in gross profits at £8,716. With a saving of £105 in salaries, &c., at £188, and an increase of £60 in directors' fees at £1,760, the board is enabled to devote £850 or £450 more in writing off the outstanding balance of preliminary expenses, and bring out a nett profit of £5,918 or £746 higher than the preceding year's, giving with £112 brought forward a disposable balance of £6,030. Preference dividend paid the ordinary dividend is raised 1 per cent. to 6 per cent., and the carry forward is very little less at £105. Property aggregates £76,555, an increase of £4,492, and cash is consequently reduced by £4,945 to £851. Trade balances are larger, debtors owing £5,443 more at £40,491 against creditors for £23,517 or £5,245 more. Loans on property represent £40 less at £1,654 and stocks have fallen £1,970 to £13,771. Mr. William Pace, the late proprietor of the Egham business incorporated in the company, retires from the board, but does not seek re-election, and it is not proposed to fill the vacancy. The purchase of an old-established business at Addlestone has contributed materially to an increase in business and a freehold site acquired near Farnborough Station is proving serviceable to the business at that place and Aldershot.

ELMORE'S GERMAN AND AUSTRO-HUNGARIAN METAL CO., LIMITED.—After paying all charges the nett income for 1907 was £804 compared with £268 for 1906, but the company draws its principal income from the dividends paid by the Austra... Elmore's Metall Co., and including £223 standing at the credit of the preference shareholders' reserve there seems to be enough money to pay a dividend of 2½ per cent. to the preference shares; so in view of the improved financial position and of the anticipated increase in the Metall Company's profits, this dividend is declared free of income-tax. The three ordinary directors have again waived £275 of their fees for the year. In the balance-sheet the estimated dividend on the Metall Company's shares is put at £5,976, and the balance of profit at the year's end was £1,308, including the amount brought forward. The preference shares will require £1,875 to pay the 2½ per cent. dividend.

HAZELL, WATSON AND VINEY, LIMITED.—Nett profits for the year ended March 31 fell off by £1,417 to £14,111, but £679 more at £3,851 was brought forward, giving a total of £17,962 compared with £18,700. The dividend on the ordinary shares, however, is maintained at 10 per cent., but £1,000 less at £1,500 is transferred to reserve, leaving a slightly larger balance of £4,112 to be carried to the new account. Freehold and leasehold properties, less a mortgage of £11,000, are £9,317 up at £88,241, while machinery, copyrights, goodwill, &c., have been reduced by £1,705 to £126,352. Against these the reserve now comes to £29,000, but is not separately invested, although the company holds £9,914 in shares in Letts's Diaries Company and similar securities and £2,742 in railway preference stocks and bonds. Liabilities to trade creditors are £4,819 down at £16,366, but £25,248 is due to cash creditors and for deposits by employees, &c. Debtors on the other hand owe £46,649 or £4,210 less, stock and work in hand is valued at £23,908 and cash and bills come to £11,565.

KELLY'S DIRECTORIES.—Gross profits for the year ended March 31 rose by £491 to £47,304 and £12,274 or £2,187 more was brought forward giving a total of £59,578 to be dealt with. Of this an extra £749 at £3,894 was written off for depreciation, and after providing for directors' remuneration, debenture interest, preference dividend and interim dividend on the ordinary shares £35,523 or £1,690 more was left. The dividend of 9 per cent. and bonus of 3s. per share are repeated for the fourth year in succession, and the directors then transfer double last year's amount at £8,000 to reserve and reduce the sum carried out by £2,310 to £9,964. Creditors are £2,309 down at £9,538, but sundry debtors, although £3,714 lower, still come to £24,695, while cash and bills have risen by £9,698 to £33,614, and the company has £6,565 or £936 more due to it for loans and interest. Works in progress, copyrights and goodwill have been reduced by £1,153 to £330,308, against which the reserve of £38,000 seems somewhat inadequate. Freehold premises are £708 higher at £62,025, but printing plant is £1,697 down at £56,851.

LANKAPARA TEA CO.—Although the 1907 crop fell short of the estimated quantity, it was 54,000 lbs. over that of the preceding season at 1,085,400 lbs., and the average price was 0.16d. better at 7.43d. Gross receipts were £2,541 higher at £33,953, but expenses took more, leaving nett profits £1,759 up at £13,098, to which were added £1,062 brought forward and £35 from interest, making an available total of £14,195 against £12,349. A year ago £1,000 was added to the debenture reserve, but as these have now been paid off, the directors feel justified in raising the dividend by another 6 per cent. to 26 per cent., which will leave £1,193 to be carried out. Creditors are £1,287 higher at £7,096, and on the other hand, while stocks have been reduced by £5,500 to £15,520, debtors have risen by £1,577 to £2,585 and cash is £4,743 up at £4,985. Estates account remains at £50,253 against which the reserve is only £6,750, and under the circumstances it would have been more prudent to strengthen this instead of increasing the dividend.

MATALE CEYLON RUBBER COMPANY.—The directors state that it was found impossible during 1907 to carry out in full the programme of tapping operations, as all the available labour force was required for weeding and general cultivation of the property. Receipts from sales of rubber, cocoa, &c., were consequently only £377 against an expenditure of £417 on the 86 acres in bearing, while general outlay in Ceylon amounted to £3,507 and London expenses took £178, so that altogether there was a debit balance of £3,725 to be carried forward. Cost of the property up to the end of 1906 stands at £28,576, while advances to coolies come to £1,150, and as the issued capital is only £30,000, the company is leaning pretty heavily on credit. Floating liabilities amount to £3,073, and against these debtors owe £270, stocks are valued at £122 and goods in stock at £60, and cash comes to no more than £61.

NEW RIVER COMPANY.—Revenue from all sources for the twelve months ended March 25 amounted to £11,961 or an increase of £1,623, and as £1,300 less at £1,045 was spent on repairs, the nett profits, after meeting administration charges were £2,812 better at £8,985. A smaller balance of £2,321 was brought forward, and after providing £309 for depreciation the surplus available was £10,933 compared with £9,146, an improvement of which the directors take advantage to raise the dividend by 1¼ per cent. to 6¼ per cent., leaving £2,401 to be carried forward. Reserve is again ignored, and stands at no more than £2,500, but estates improvement fund is higher at £1,691, owing to the receipt of £1,530 as premium on renewal of leases. Sales of freehold property have reduced this item by £4,685 to £81,228, and investments are £2,651 down at £46,423, but leasehold property comes to £1,811. Creditors amount to £2,002 against £2,028 due from debtors, and cash has risen by £9,430 to £14,328.

Malacca Rubber Plantations.—No statement is made as to the amount of last year's crop nor as to the prices obtained although the high price of 4s. 3d. per lb. was realised for a small parcel of exceptional quality. The area under rubber is 6,436 acres, carrying some 1,027,500 trees, of which 50,000 will be tapped this year. Nett profits for the year ended December 31 last amounted to £1,125, as compared with £3,840 in 1906, but £20,924 was spent on development, out of gross revenue of £23,038, and debited to revenue, making a total of £44,073 so spent since the inception of the company in 1906. With the transfer of the balance of £7,500 from the vendors' guarantee fund the sum of £8,625 is available for dividend on the preference shares, but as that guarantee has now expired the directors are not prepared to sanction any further dividend until the result of the year's working has been ascertained. Property now stands at £267,105. Cash is £7,320, and debtors at £6,864 are about £100 less than the sum due to sundry creditors. Preliminary expenses are not a serious item at £1,166, but there is a contingent liability of £10,331, with interest at 7 per cent., repayable to the guarantor out of future profits in excess of 10 per cent. on the nominal capital.

Scottish Assam Tea Co.—The output for the year ended December 31 was 10,848 lbs. larger at 604,560, and after making the usual deductions for loss by weighing, samples, &c., the amount available for sale was 598,768 lbs. or 12,863 lbs. more. Unfortunately the price dropped by 0.42d. to 8.42d. and gross receipts were £578 down at £21,011. Freights and charges were a little heavier at £2,041, and as expenses absorbed £19,736 or £68 more the nett result from the estates was again a loss of £759. Exchange operations, however, gave a profit of £6,175, and with £144 from interest and £358 brought forward the disposable surplus was only £525 lower at £5,917. The dividend of 5 per cent. is therefore repeated, but the directors transfer £500 to reserve against £1,000 a year ago and carry forward £1,438, subject to directors' fees and other charges estimated at about £1,000. Debtors have risen by £780 to £3,750 and exceed creditors by £2,700, while stocks are £3,650 up at £11,348, but cash has fallen from £10,676 to £4,647. The assumed value of the estate remains at £70,000, against which the reserve stands at no more than £5,000.

Sungei Kapar Rubber Company.—This company, which was formed in 1906, commenced tapping in March of last year and obtained 22,000 lbs. odd of dry rubber from slightly over 39,000 trees, or about 0.56 lb. per tree, the oldest trees being five years old. The cost of tapping and marking trees came to 36.71 cents per lb., and the price obtained averaged 3s. 8¾d. gross per lb., giving a profit after allowing for estate expenditure and expenses of sale of £1,717, and with interest £127 and £16 from transfer fees a gross income of £1,859 and £1,419 nett. From this the deduction of the debit brought forward leaves £1,217 to credit of profit and loss account. With about 4,000 more trees yielding rubber this year, the crop is estimated at 40,000 lbs. dry rubber. On the two estates owned the total acreage planted with rubber is 1,635. Property figures at £85,438, including £4,142 spent in development during the past year. Cash with remittance in transit totals £10,463, and £1,770 has been realised on rubber since striking of balance, and debtors owe £819 but £1,220 is due to sundry creditors. The issued capital is £99,850.

Sungei Way (Selangor) Rubber Co., Limited.—This company does not commence tapping till 1909, and its accounts, therefore, represent expenses of development only. The estate as purchased in 1904 figures at £10,380 and £9,139 has been spent on maintenance and development during the past year, so that with the addition of home expenses, less sundry small receipts, this item is £9,843 up at £20,863. Advances account stands at £1,016, and £3,171 is owing to creditors, overdrafts, and on bills payable, against £98 due from sundry debtors. The area under cultivation has been reduced to 1,138 acres by the abandonment of 16 acres of swampy land, and of this total 135 acres have been planted during the past year. The growth of rubber is reported to be good all over the estate, and the trees seem to show no deterioration from the cessation of weeding in 1906, due to a scarcity of labour which has been largely overcome.

Virol.—Whatever sweetness this company may find in the uses of adversity, it doesn't appear to make much of the uses of advertisement, for with a gross profit of £19,561 or £426 less for the year ending March 31, including £65 from discounts, interest and transfer fees, a profit is declared of £80. But this is after writing off £13,000 from advertising acount, which stands in the balance-sheet at £2,612 higher, so that actually the result is a loss of £2,532. Expenses, too, appear to have risen £221, since with £3,040 or £726 more brought in £3,119 or only £79 more is declared available after payment of debenture interest. There is obviously, therefore, no distribution. The balance-sheet is hardly even interesting. Cash is £642 down at £3,352. Goodwill, patents, trade marks, machinery, &c., have actually been spared £20 out of the year's results, so that if there is an adequate amount of depreciation, the figure of £25,507 is very largely represented by intangible assets. In addition to advertising costs of £54,094 there is a stock of advertising matter, which is £78 less at £2,351, and sundry stocks stand at £97. Debtors owe £2,600 less at £11,567 against creditors for £9,437, which shows a decrease of £760. The report states that more than 700 hospitals, sanatoria, &c., are using Virol. Possibly the company should be judged from a philanthropic rather than commercial standpoint.

COMPANY MEETINGS.

ELECTRIC TRAMWAYS OF MONTE VIDEO.

The fourth annual general meeting of the United Electric Tramways of Monte Video, Limited, was held on Monday at Winchester House, Old Broad Street, E.C., Mr. George A. Touche presiding.

The Secretary (Mr. Albert J. Side) read the notice convening the meeting and the auditors' report.

The Chairman first apologised for the absence of Mr. William Trotter, the chairman of the company, on account of ill-health. Proceeding to move the adoption of the report and accounts, he stated that the report was satisfactory both as regarded the actual results it showed and the indications which it contained of what might be expected in the future. To the directors it was especially encouraging, because it related to what he might call a transition year—a year in which large charges had to be debited to the profit and loss account in respect of interest on debenture stock, which had been issued to provide funds for the electrification of the lines, and while they had had to bear those charges, the benefits arising from the electrification had only been gradually accruing. The gross receipts amounted to £199,037 compared with £129,978 a year ago. The operating expenses had been 66.24 per cent. as against 73.86 per cent. Of course, they expected to get those expenses very much lower in the future. The net receipts showed an increase of £33,216, having risen from £33,978 to £67,194. The increase in the gross receipts over the previous year was equal to 53.13 per cent. and the increase in the net receipts 97¾ per cent. As these were the first accounts showing any results from electric traction, and they showed them only for broken periods, a comparison with previous years would be of very little value. That comparison was only useful as indicating, in the words of the report, that the "expectations of largely increased takings when animal traction shall have been entirely superseded have been amply justified." In order to show the developments to the latest date, the directors had included in the report the traffics, not only for the year to October 31, 1907, but for the half-year to April 30, 1908. These showed a continuous increase over the same period of the previous year. The gross receipts for the six months to April, 1908, were £126,778, or an increase of £19,937. The net receipts for the same period were £52,507, an increase of £12,571 in the half-year. With regard to passengers, the three half-years to April 30, 1906-7-8, showed that the numbers had been as follows:—7,305,517, 10,969,092, and 13,525,865 respectively, showing an increase in the present year as compared with last of 2,556,773. The car miles had also increased, comparing the half-year to April 30, 1908, with that to April 30, 1907, from 2,281,935 to 2,981,987, an increase of over 700,000. These increases were made with only 50 miles of single track opened by the end of April, the rest being animal track. On November 3, after the close of the accounts of the local company, the extension to Sayago, a small village north of Monte Video, was opened for public service. The inauguration of this extension was a great success, and the immediate traffic results showed that the line should prove an important source of income to the company. The extensions would be continued to the popular resort of Colon in the heart of one of the most beautiful districts surrounding Monte Video. The managing director stated that the increase in the Sayago traffic was the more satisfactory, as it was not drawn from other lines by competition, but was largely a new passenger movement arising from the change of traction in that section, which had remained practically stationary for years past. The traffic improvements were the more gratifying in view of the continual bad weather in Monte Video during the summer season. On the Union system they looked for good results when the line was completed electrically. The various advices received from Monte Video all stated that large increases might be looked for. In the managing director's report he expressed the view that on the completion of this section the working of the whole tramway system would be considerably improved. Not only would the cost of producing current be reduced, but the working expenses should also be reduced, and the number of passengers per car mile increased. Last year the directors gave an estimate of the expected results when the electrification and the extensions were completed. The short effect of that estimate was that the gross receipts should be not less than £255,000, in which case the anticipation of nett receipts of upwards of £100,000 when the 80 miles of line were fully constructed and electrified seemed reasonable. Although their experience was limited, nothing had happened in the interval to lead them to think that these figures were unduly sanguine; on the contrary, the actual results had, if anything, exceeded their estimates. The gross takings last year were practically £200,000, while for the six months to April 30 last they were £126,000. During the year they had expended £259,248, making the total amount charged to the electrification account over £800,000. Recently they had obtained a quotation for the debenture stock on the London Stock Exchange, and, as it appeared to be the desire of the proprietors that they should also make application for a quotation for the shares, the matter was receiving the consideration of the board at the present time. In conclusion, the chairman congratulated the shareholders upon possessing a very satisfactory property, and on having come into it at a comparatively early period in its development.

Mr. H. F. Gunning seconded the motion, which was carried unanimously.

The Chairman next moved: "That each of the 40,000 preference shares of the company of £10 each be sub-divided into two preference shares of £5 each, to be numbered 1 to 80,000 inclusive, and that each of the 40,000 ordinary shares of the company of £10 each be sub-divided into two ordinary shares of £5 each, to be numbered 80,001 to 160,000 inclusive." He stated that it was the expressed desire of a large majority of the proprietors that the shares should be split, and the board were glad to do what they could to carry out their wishes.

Mr. T. Frame Thomson seconded the resolution, which was unanimously agreed to.

On the motion of the Chairman, seconded by Mr. Thomson, a resolution was passed varying the articles of association as set forth in the notice.

A vote of thanks to the chairman and directors concluded the proceedings.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY.

The twentieth ordinary general meeting of the Antofagasta (Chili) and Bolivia Railway Company was held yesterday at Winchester House, Old Broad-street, Mr. Richard H. Glyn presiding.

The Secretary (Mr. A. W. Bolden) having read the notice convening the meeting and the auditors' report,

The Chairman said that, as in March last he explained they anticipated, the outturn of the past year did not exhibit such favourable nett results as the previous year, the nett profits showing a decrease of £44,594 as compared with 1906, so that they were only able to pay 5 per cent. as compared with 7½ per cent. on the deferred stock. During the year the traffic was handled under great difficulties owing to its being greatly congested, and the cost of working was high. Coal was a serious item, showing an increase of £40,000. Wages also rose considerably, for the depreciation of the currency caused an enormous rise in the cost of living, and there was an increased demand for labour owing to the building of new oficinas. Besides this they were working all the year at an average exchange of 12d. However, the general traffic was expanding satisfactorily, and their goods and mineral traffic showed an increase in tonnage of 12.62 per cent. They were advised that they might look for considerable further expansion. The passenger traffic also continued to show fair results, and they might look forward to further considerable expansion in that direction. They had sent out a large quantity of new rolling stock, and there were thirty powerful engines now in course of being placed on the line as well as a large number of new waggons. They had also sent out two combined dining and sleeping coaches in order to improve the through service to Oruro at the Bolivia end of the line and to shorten the journey. It was most essential to foster the long distance traffic. The new works they had had in hand were now mostly completed, and the rest were nearing completion. The Collahuasi branch was giving a considerable amount of traffic, and the Boquete branch they were very hopeful about. This branch was ready to take up the machinery to the oficinas in course of construction. The delay had been largely due to the commercial crisis in Chili. The works on the branch to Mejillones were completed, and there was considerable traffic here already. This greatly tended to decrease the congestion at Antofagasta. At the port of Mejillones the works were being pushed forward as rapidly as possible, and they were pressing on the construction of their new workshops. The new pipe line was finished, and they were looking for a considerable increase in their receipts from water supply. They were now stipulating for payment in sterling instead of currency in future contracts. By the provision of this water they created traffic. Their capital expenditure on waterworks had been large, but the return up to the present had not been satisfactory. There were two items in the balance-sheet requiring explanation. One was the sum of £164,728 settlement with the Antofagasta Nitrate Company. The directors felt that though the amount paid to the Nitrate Company might appear large, it was a fair settlement, and the Nitrate Company should in the near future provide them with a considerable traffic. The company was now on the same footing as their other customers, and there would be a considerable relief from congestion. It was proposed to deal with this amount year by year, but they had not thought it necessary to make any provision for it in the past year's accounts. The other item was a sum of £222,852, loans outstanding. Since the date of the balance-sheet these loans had been provided for by the proceeds of recent issues. With regard to construction generally, they hoped that unless some particularly favourable opportunity offered for an extension of their line they would not have to provide further capital for some little time. There was a possibility, however, of having to run a pipe line into Mejillones in the near future, but the expenditure would not be a large one. The result of the present year would, he believed, be better than last year. Their sterling gross receipts for the five months to the end of May were £120,000 in excess of those for the same period of last year, and they would feel the effect of cheaper coal and more engine power, but of labour he was afraid he could not say the same thing. While exchange kept low and conditions generally remained as at present they could not look for any relief in that quarter. He moved the adoption of the report and accounts.

The Hon. Charles N. Lawrence seconded the resolution.

In answer to a question, the Chairman said that if the rate of exchange had been 1s. 2½d. instead of 1s. it would have made a difference of £104,000 in their favour.

The resolution was carried unanimously.

Mr. R. H. Glyn and Mr. E. M. Underdown, K.C., were re-elected directors, and the auditors having been reappointed proceedings terminated.

ALUMINIUM CORPORATION.

The first annual general meeting of the Aluminium Corporation, Limited, was held on Wednesday at Winchester House, E.C., Sir James Sivewright, K.C.M.G., the chairman, presiding.

The Secretary (Mr. L. Whittem Hawkins) read the notice and the auditors' report.

The Chairman, after dealing with the principal items in the balance-sheet, said: When I had the pleasure of meeting the shareholders in August last I expressed the hope that in the beginning of the year we would be producing aluminium, and that hope, I am glad to say, has been realised. In March the first furnace was tapped at Newcastle-on-Tyne, and we have been gradually adding to our furnaces there. The aluminium which is produced is of a very high quality indeed; in no case has it fallen under 99 per cent. of the pure metal. Our carbon furnace is in full operation; we are duplicating it; in fact, there will be three. In North Wales the works have been prosecuted with great vigour, and the hopes that I held out in August that these works would be in operation on August 1 next will, I think, also be realised. In the beginning of that month we shall be turning out aluminium at Dolgarrog to the extent of about 1,500 tons per annum. When this company was brought out aluminium was selling at from £180 to £200 per ton. We based the figures in the prospectus upon aluminium selling at £120 per ton, but aluminium to-day has had a still further drop and is in the neighbourhood of £80 per ton. Still, we view the situation with perfect equanimity, and I have no hesitation in saying that when our works in North Wales are in operation, and when the other works are completed, the Aluminium Corporation will be in a position, even with aluminium at £80 per ton, to make a good profit and to pay substantial dividends on its capital. At the present time we are buying our alumina in the open market, but if we are to enter into the market we have got to save every single sixpence we possibly can, and we have decided to put up our own alumina works. Since this decision was come to I myself went to the Var district in France, where the best quality of bauxite, which is the basis of alumina, comes from. I saw a good many properties there and we took prior leases, carried out prospecting and exploiting operations, and I am glad to say we have been eminently successful there. Then we have succeeded in making arrangements with a very large alkali company to form a company to be called the Bauxite Refining Company. The alkali company will supply us with caustic soda at the market rate, just at our doors, and coal is to be had very cheaply on the spot, so that we should be able to supply aluminium at a price which will leave us some profit, at all events. We have made arrangements with one of the leading companies in Great Britain for the rolling of our sheet aluminium and for the drawing of our wires, so that we shall be in a position from the very commencement to turn out the wire or sheet article, as the case may be. We have taken authority to create £150,000 of 5 per cent. debentures, and we shall issue £100,000 of these before very long. The shareholders will have an opportunity of subscribing for the debentures, and they will be informed of the terms as soon as the definite arrangements have been made in regard to that issue. The security, in my opinion, is unquestionable.

Mr. Edward Manville seconded the motion. In reply to the Marquis of Graham, the Chairman stated that no more time than was absolutely unavoidable would be lost in closing the liquidation of the Aluminium Syndicate. The motion was unanimously adopted.

An extraordinary general meeting was then held, when the resolution passed on the 1st instant, assenting to the company applying to the Light Railway Commissioners for an order authorising the construction of the Abbey Dolgarrog and Trefriw Light Railways, was confirmed.

Money is well spent
if spent on

DELICIOUS

MAZAWATTEE

TEA

FULL WEIGHT WITHOUT WRAPPER.

SOLD BY LEADING GROCERS EVERYWHERE.

ABRIDGED PROSPECTUS.

OFFER of FOUR PER CENT. DEBENTURES and THREE AND A HALF PER CENT. CONSOLIDATED REGISTERED STOCK in connection with the redemption of Six per Cent. Debentures of the City of Quebec, maturing 1st July, 1908, and for other City purposes.

The LIST for CASH SUBSCRIPTIONS will be CLOSED on or before TUESDAY, the 23rd June, 1908.

DOMINION OF CANADA.

CITY OF QUEBEC.

OFFER of £71,900 4 PER CENT. 50 YEAR BEARER DEBENTURES of £100 EACH; also of £42,921 3½ PER CENT. CONSOLIDATED REGISTERED STOCK.

The Debentures are authorised by the Act 7, Edward VII., chapter 62. Interest will be payable half-yearly on the 1st January and 1st July, at the Banking House of Messrs. Glyn, Mills, Currie and Company, the first coupon being payable on the 1st January, 1909. A sinking fund will be provided to meet the payment of the Debentures at maturity.

The Consolidated Registered Stock is issued in virtue of the Acts of the Legislature of the Province of Quebec, 55 and 56 Vic. cap 50, sec. 15; and 59 Vic. cap. 47, sec. 29.

It forms part of a total authorised amount of £654,480, of which about £499,374 has been issued.

Interest will be payable by Messrs. Glyn, Mills, Currie and Company on the 1st January and the 1st July in each year, by warrants, the first warrant for six months' interest being payable on 1st January, 1909.

The Stock is redeemable by half-yearly drawings at par within 65 years from the 1st January, 1897, and the next half-yearly payment for stock drawn, in which the stock offered will participate, will be made on the 1st January, 1909.

PRICE for the DEBENTURES, £97 10s. PER CENT.

PRICE for the CONSOLIDATED REGISTERED STOCK, £91 10s. PER CENT.

Messrs. Coates, Son, and Co., with the authority of the City of Quebec, and on behalf of contractors for the above described Debentures and Consolidated Registered Stock, will receive applications for the same, payable as follows:

DEBENTURES.	CONSOLIDATED REGISTERED STOCK.
£10 per cent. on Application.	£10 per cent. on Application.
£87 10s. per cent. on 30th June, 1908.	£81 10s. per cent. on 30th June, 1908.
£97 10s.	£91 10s.

Applications in cash, on the forms marked A and B issued with the prospectus, for the Debentures and Consolidated Registered Stock respectively, must be accompanied by a deposit of £10 per cent. on the amount applied for, and forwarded either to Messrs. Glyn, Mills, Currie and Company, or to Messrs. Coates, Son and Company.

The 6 per cent. Debentures maturing on the 1st July next will be accepted at their par value as the equivalent of cash. Holders of such debentures who decide to exchange their debentures for the new issue of 4 per cent. Debentures will receive £100 Debenture and £2 10s. in cash for each £100 of the maturing Debentures, and must lodge their Debentures ex the July coupon with their applications on the form marked C, either with Messrs. Glyn, Mills, Currie and Company, the Clydesdale Bank, Limited, or Messrs. Coates, Son and Company.

Holders of the Debentures maturing on the 1st July next who decide to exchange their Debentures for Stock will receive at their option Consolidated Registered Stock at the rate of £109 5s. 9d. for each £100 Debenture deposited, or £100 of Stock and £6 10s. in cash, and must lodge their Debentures ex the July coupon with their applications on the form marked D, either with Messrs. Glyn, Mills, Currie and Company, the Clydesdale Bank, Limited, or with Messrs. Coates, Son and Company.

The following figures are based on information supplied by the city authorities:

1. The Assessment of the City is based on the rentals of assessable properties, the total value of such rentals amounting	$1,693,000
2. This rental value capitalised at 4 per cent. would amount to...	$42,325,000
3. The total amount of the City Debt, including the Debentures now about to be redeemed, is	$8,576,000
4. The City possesses Water Works and other properties, amounting to	$7,000,000
5. The revenue of the City in 1907 was	$812,000
6. The expenditure of the City in 1907 was	$7908,000
7. The population of the City is about	75,000

The maturing 6 per cent. Debentures not offered by the holders in exchange for new Debentures or Consolidated Registered Stock will be paid off on July 1st, 1908, at the Offices of the Clydesdale Bank, Limited, 30, Lombard Street, E.C., and must be left with that bank three clear days in advance for examination.

Copies of full prospectus and forms of application may be obtained from the Bankers, Messrs. Glyn, Mills, Currie and Company, 67, Lombard Street, E.C.; the Clydesdale Bank, Limited, 30, Lombard Street, London, E.C.; or from Messrs. Coates, Son and Company, 99, Gresham Street, E.C.

18th June, 1908.

THE GREAT NORTHERN CENTRAL RAILWAY OF COLOMBIA, LIMITED.

5½ Per Cent. First Mortgage Bonds.

Coupons must be left three clear days for examination.

By order of the Board,
WILLIAM CHAPLIN,
Secretary.

123, Dashwood House, New Broad Street, E.C.,
19th June, 1908.

PENNSYLVANIA RAILROAD SIX PER CENT. GENERAL MORTGAGE AND THREE-AND-A-HALF PER CENT. CONSOLIDATED MORTGAGE STERLING BONDS.

The COUPONS due on the 1st July next on the above named Bonds will be paid at the Financial Agency of the Company in London, THE LONDON JOINT STOCK BANK, LIMITED, 5, Princes Street, London, E.C., where the customary lists may be obtained.

The Coupons must be left three clear days for examination.

Applications for payment must be made between Ten and Two o'clock.

The London Joint Stock Bank, Limited,
19th June, 1908. 5, Princes Street, London, E.C.

SWEDISH GOVERNMENT LOAN OF 1908

For £3,000,000 Sterling.

(or Frs. 75,600,000, or Kroner 54,480,000, or Marks 61,200,000.)

Bearing Interest at £4 per cent. per annum until 20th June, 1918, and thereafter bearing Interest at £3 10s. per cent.

Coupons payable 20th June and 20th December.

Authorised by the Swedish Diet under date of 3rd June, 1908, and sanctioned by His Majesty the King of Sweden.

Messrs. C. J. HAMBRO & SON are authorised by the Swedish Public Debt Office (Riksgäldskontor) Stockholm, to offer for Public Subscription the Bonds of the above Loan at **£93** per **£100** Bond,

PAYABLE AS FOLLOWS:

£5	**0**	**0**	**per cent. on Application.**
15	**0**	**0**	**per cent. on Allotment.**
10	**0**	**0**	**per cent. on 21st July.**
10	**0**	**0**	**per cent. on 24th August.**
58	**0**	**0**	**per cent. on 22nd September.**
£98	**0**	**0**	

The Bonds will be for amounts of £1,000, £500, and £100, and will bear the Swedish, French and German equivalents at the fixed exchanges of Kroner 18.16, Francs 25.20, and Marks 20.40. They will be furnished with twenty Coupons, due 20th June and 20th December, payable in London by Messrs. C. J. Hambro & Son in Sterling, in Stockholm at the Public Debt Office in Kroner, and in other Continental places as may hereafter be designated by the Public Debt Office, at the exchanges fixed on the Bonds. A talon will be attached to the Bonds on presentation of which new Coupon sheets will be issued free of expense in London.

Interest accrues at 4 per cent. from the dates of the instalments and the first coupon amounting to £1 5s. per £100 Bond will be payable on 20th December, 1908.

Bonds can be registered in the name of the owner at Stockholm free of expense, the Coupons remaining payable to Bearer; the holder of such registered Bonds can have them again made Bonds to Bearer by presenting them at Stockholm for that purpose. The Bonds and Coupons can also be deposited at the Public Debt Office, Stockholm, and Certificates obtained thereagainst in the name of the owner, the interest being remitted by cheque.

The Swedish Government reserves to itself the right, on giving three months' notice, to redeem the whole Loan or any part thereof after 20th December, 1920; such notice will be published in the Swedish Official Journal and in three London papers. Bonds so redeemed will cease to bear interest from the date for which their redemption is fixed.

Coupons not presented within two years of their due date will be payable only in Stockholm, and Coupons not presented within ten years and Bonds not presented within thirty years of their respective maturities will be forfeited.

The proceeds of the Loan will be devoted to works of a productive nature.

Applications for the Bonds should be made on the prescribed form and be accompanied by the requisite deposit on the amount applied for

Should no allotment be made the deposit will be returned in full, and where the allotment is less than the amount applied for, the balance of the deposit will be retained towards the instalment payable on allotment, and any excess will be returned to the applicant.

Payment in full may be made on allotment or any subsequent date (except Saturdays) under discount at the rate of 2½ per cent. per annum.

Scrip Certificates will be issued in exchange for Letters of Allotment, and Scrip Certificates will be exchanged for Bonds when ready for issue.

Failure to pay any instalment on its due date renders all previous payments liable to forfeiture.

The LIST OF APPLICATIONS will CLOSE on or before MONDAY, the 22nd June, 1908.

70, Old Broad Street, London, 18th June, 1908.

TOTTENHAM AND EDMONTON GAS LIGHT AND COKE COMPANY.

Sale by Tender of £25,000 "B" Consolidated Stock.

NOTICE IS HEREBY GIVEN that it is the intention of the Directors to sell by Tender £25,000 "B" Consolidated Stock of this Company, being the first issued portion of the additional capital authorised by the Tottenham and Edmonton Gas Act, 1906.

Dividends paid on the "B" Stock during recent years have been:—

1901	...	...	4 per cent. per annum.
1902	...	...	4½ " " " "
1903	...	...	4½ " " " "
1904	...	...	4¾ " " " "
1905	...	...	4¾ " " " "
1906	...	...	5 " " " "
1907	...	...	5¼ " " " "

A further ¼ per cent. per annum may be paid for each penny per 1,000 cubic feet by which the price of gas is reduced below its present rate of 2s. 6d. per 1,000.

The Stock will be allotted to the highest bidders, but no Tender will be accepted at a lower price than £107 per £100 Stock.

The last date for the receipt of Tenders is Monday, July 6th, 1908.

Particulars of Sale and Forms of Tender may be obtained on application to me.

By order of the Directors,
E. TOPLEY,
Secretary.

Chief Offices of the Company,
639, High Road, Tottenham,
May 25th, 1908.

FIXTURES AND REPAIRS.

By W. DE B. HERBERT, M.A., LL.M., Barrister-at-Law.

Price 2s. 6d.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 547. New Series. SATURDAY, JUNE 27, 1908. (Registered as a newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Growth of Pensions.

We continue to be much interested in and instructed, if not amused, by the hustled progress of the Old Age Pensions Bill through the House of Commons. The measure is so elastic and the Government so squeezable, that we know not where we may be on the morrow. Mr. Lloyd George is not yet prepared to adopt a sliding scale in virtue of which possessors of an independent income of 10s. a week will get it made up to 15s. by the Exchequer, and whose effect would be to even all pension-eked incomes up to that comfortable minimum of £39 per annum, but he did agree to "slide" the pension so as to even the income up to 13s. per week, or £31 6s. per annum. The happy possessor of 8s. a week of his own will get it made up to 13s. by 5s. contributed out of the general taxation, he who has 9s. will get an additional 4s., and he who has 12s., 1s. more. The extra cost of this will be about £100,000 per annum, the Chancellor of the Exchequer thinks, and what is that to a Government rich enough to be able to borrow money for six months at little more than 1½ per cent. per annum interest?

Equally pliant was the Treasury Bench on the question of married couples, or two people living together. The theory of the Government was that in such cases the pension could be reduced, because rent, &c., would be saved. Instead of 5s. a week or whatever the maximum sum might ultimately be, they were to get 7s. 6d. for the pair of them, so as to illustrate the practical economy animating our good and thrifty Ministry. But the Labour Party would have none of this loaf or rent-trimming thrift, and so Mr. Barnes on Wednesday moved that the Darby and Joan arrangement should be eliminated from the Bill—and the Government agreed, fearful lest a combination of Tories, Labour members, and enthusiasts of all colours should land it in a mess; in defeat, to put it short. In giving way Mr. Lloyd George endeavoured to strike a bargain to the effect that no further amendments would be pressed calculated to increase the cost of the "experiment," but whether he expects to gain his point may be doubted. It is anyhow obvious already that the flood-gates of extravagance are opening wider and wider, and what the happy pensioners fail to secure this year they may get next. The Government has embarked on an unknown ocean without a compass and without a port of destination, and there is no knowing where it will land itself. A spirit of vague benevolence animates its members, and it is being gratified in a pleasant, amateurish, have-what-you-like way that would be delightful to behold did it not promise to be so costly to the unpensionable.

Contrast the happy-come-have-it way this revolutionary measure is being handled in the Commons with the intelligent and logical structure of the German invalid and old age pension arrangements. An instructive summary of the German pension provisions and how they are worked was contributed to Wednesday's *Westminster Gazette* by Mr. Alfred Mond, M.P., and is well worth mastering. In Germany a State pension system is the inevitable product of universal compulsory military service, and its adjunct a protective tariff, but it is none the less a contributory system, to the maintenance of which the State gives a mere 50s. a year, and whose benefits are conferred much more upon

the invalided than on the old. The State's share is insignificant even for Germany. As Mr. Mond says, the fabric is too elaborate for close imitation here, but it is at least a well-considered and co-ordinated fabric, whereas the erection the Commons is now busy with bids fair to insure little except waste and the political corruption of the working classes.

And were it otherwise, we cannot afford to be generous on the scale proposed. Mean as the Imperial contribution to invalid and old age pensions looks in Germany, it is more than the budget-makers there find convenient, and increases the perplexity of Finance Ministers, who see nothing but recurring deficits of expanding amounts confronting them. But in Germany conscription has compelled the State to assume this burden as a barrier against a Socialist revolution, if nothing else, and Germany, as we pointed out when dealing with the subject a short while back, has no poor law draining away £22,000,000 or £23,000,000 a year from those of us not yet in the workhouse. We have not yet reached universal conscription, nor its corollary, a protective tariff, and we have an unreformed poor law. Upon us, therefore, no urgent obligation lies to institute an old age pension drain upon the Exchequer, ill-considered, loosely framed, indefinitely elastic; the project is merely an exhibition of ill-guided amateur law-making, prompted by an effusive sentiment of benevolence vicariously exercised and with a view to political ends. It is from this point of view amusing to see the adroit way the Opposition is shaping its behaviour, so as to be able to go to the constituencies and say, "But for us you would not have had this and that; we supported the Government, and even improved its scheme." And the working man voters will naturally reply, "Good for you, and now what else are you going to do for us?" Thereupon an auction of principles by no means Dutch in character will be started between rival factions, and the faction which does most to meet the demands of the multitude will have the greatest chance of seizing and keeping "power." The spectacle does not promise to be edifying or to conduce much to the stability and glory of our Empire.

London and South-Western Railway.

In 1907 this, the best of the companies south of the Thames, earned a gross revenue of £5,476,552, including the income from the Southampton Docks and from the Waterloo and City Railway, the latter acquired within the year. These figures give an increase of £106,181 on the preceding year, but unfortunately working expenditure increased by £126,036 to a total of £3,445,800, locomotive power having cost no less than £75,719 more and traffic expenses £21,316 more. There was very little increase either in maintenance or in the cost of repairs, the one demanding only £410 and the other £1,147 more. Ordinary compensation, however, took £2,416 less at £14,516, but unhappily the company had had to provide in the previous year no less than £65,000 on account of the accident at Salisbury. Looking at the various heads of revenue, we find that the total income from passenger traffic was £3,333,869 or an increase of £8,324. First-class traffic, however, gave £3,030 less at £255,998, and there was also a decrease of £3,418 in the receipts from second-class, which came to £344,101. But third-class gave an increase of £6,510 at £1,914,547, and £3,486 more at £275,672 came from season tickets. Merchandise traffic and cattle together yielded £1,030,150 and minerals £458,606, the increase in the merchandise business having been £17,449 and from minerals £25,752. These movements are in harmony with those indicated by the reports of other companies analysed by us, and may be regarded as the top of the wave, at least for the goods part of the business, and probably for both first and second class passenger traffic.

Coming to the total nett revenue, which from all sources amounted to £2,030,752 or £19,855 less, it appears that debenture stock interest took £3,562 more at £434,684, but the charge for rents and leases was £24,626 down at £77,068, this decrease being due to the absorption of the Waterloo and City line and the small Axminster line. General interest charges went up £1,611 to £5,403, and the total amount of the prior charges was £532,055, a decrease of £69,553. Comparison here, however, is vitiated by the £65,000 set aside out of the profits of 1906 to meet the claims arising through the Salisbury accident. The preference dividends took £20,000 more at £706,000 and the ordinary stock got £26,023 more at £803,133, the dividend on it for the year having been 5¾ per cent. against 6 per cent. for the previous year—for every year, in fact, since 1902, when only 5⅝ per cent. was paid.

Capital expenditure during the year amounted nominally to £1,114,653, but £627,340 of this represents the cost of transferring the Waterloo and City property to the South Western, and another £45,000 went to meet the cost of the Axminster line purchase, so that only £443,275 of new money was actually laid out on the property. Altogether, however, the capital expenditure now amounts to £50,405,212, but this includes about £3,680,000 representing "consolidations." Deducting that, the cost of the 858 miles owned by the company works out at almost £66,500 per mile. But if we include the leased and worked lines, the addition of which brings up the total mileage operated by the company to 977 miles, the cost is less than £58,350 per mile; sufficiently high, but there is, perhaps, some excuse for it, although the company has spent £5,810,469 on working stock, £100,000 of it in the past year. On lines open for traffic the capital outlay in 1907 was £232,679, and nothing was laid out on new works, but altogether the cost of the Southampton Dock enterprise to the company has been £4,033,465, and in the past year £88,905 was laid out on this enterprise from capital, while the capital expenditure on steamboats was £20,395 within the same period. Indirectly, perhaps, this Dock undertaking pays, but the figures are not sufficiently explicit or detailed to make us sure whether it does so in any direct way.

What, then, is the position of the capital account at the present time? It was overdrawn at December 31 last by £923,339. There was still, however, a margin before the whole of the trust funds would be swallowed up, for they total £1,220,000, of which £434,523 represented savings bank deposits, £300,952 superannuation fund, and £480,000 the insurance, pension and renewal funds. There is also £325,365 credited to the steamboats renewal fund, and no doubt mostly, if not all, expended on the fleet, for on steamboats the total expenditure up to the end of last year had amounted to £610,725. There were over and above reserve and fire funds amounting together to about £155,000. On the whole, the position of the capital account is not so bad as that of many of our railway companies, but it is still uncomfortable enough in view of the character of some of the savings bank and superannuation fund liabilities, and money continues to be spent at the rate of about £500,000 per annum, so that there really is no end to the prospect of increase in the dead weight. For all that the South-Western Company has for many years been managed with great vigour and ability, has been more progressive and generally enterprising in relation at least to foreign traffic than any other southern road possessing docks and steamboats. And it has had its reward, the business having been progressive to a satisfactory extent and the dividends paid to the ordinary stockholders wonderfully steady. Most years the distribution has been at the rate of 6¼ per cent., and in 1900 6⅝ was paid, while last year the decline from the highest since 1899 was only 17s. 6d. per cent. Now that an increasing number of American ships is calling at Southampton it is probable that before very long the business will

again spring forward, in spite of the bad times through which we are passing. On the other hand, unless the company revises its suburban fares, and in other ways strives to cheapen the cost of travelling to the public, so as to compete effectually with other methods of locomotion, it may lose in domestic business more than it gains on foreign, and it has throughout its modern history made the mistake all other British railways have fallen into, in that it has paid far too much attention to the development of Continental and American trade connections to the neglect of the home producer. How is the money going to be found to pay for the conversion of the line to electric traction?

The "Venture" Team.

It is just about eight years since these allied concerns issued reports and balance-sheets to their shareholders, with the approval of a large number, it must in fairness be stated, but the directors at last break silence, and while the proprietors have lacked official knowledge of the position of the several undertakings, the story now unfolded will hardly surprise them. Embellished though it is with details of magnificent achievements and of fortunes missed, the statement must be counted a confession of dismal failure, and now with all their capital lost, reorganisation is the only alternative to self-destruction, and, as the board asserts, the sacrifice of a reputation and goodwill, built up by years of labour and much cost. Right from the commencement, away back in 1897, the three concerns have been closely connected, and shared each other's woes and losses, so that, generally speaking, what we say about one applies with equal propriety to the other. The Venture Corporation led off as an amalgamation of several syndicates engaged in purchasing, developing, and dealing with mining properties in Western Australia, which in a time of great speculative activity acquired many properties and interests at cost or market price. On this basis the capital was fixed, and 472,430 shares of £1 each were issued. When the balance-sheet was drawn up at December 31, 1899, several of the assets taken over by the Corporation had already considerably depreciated, and, to put the matter in a nutshell, the whole of the original capital has been lost. The Mines Corporation of New Zealand saw the light about a dozen years ago, and was reorganised in 1897 for the purpose of reducing the heavy outstanding liability on the shares. Not all the remaining capital has been lost, but it is a pretty near thing, and the same has to be said of the London and Continental Investment Corporation, formed in 1895, and reorganised in June, 1897, for the same reason as the Mines Corporation. Having said this much, we may start fair and square with the thrice-told story, as each of the companies issues a separate report and set of accounts. When the co-partnership had been fixed up, the directors, in an unlucky moment, turned their attention particularly to the United States and Mexico, as offering the most promising field for "sound" mining enterprise, and landed on the Stratton's Independence misfortune. Up to a point a large cash profit was realised, which was quite natural, because it was some time after the promotion that it was discovered the deal had not been on the square, and serious troubles arose. Bankers had advanced upwards of £400,000 towards the amount required to complete the purchase of the vendor's interest, and when the doubtful nature of the ore reserves was revealed, it was impossible to sell enough shares to repay even half the advances. In the end the Stratton's deal involved the allied enterprise in the fearful loss of £250,000, and an appeal to the law met with no success.

This awful failure almost brought about complete collapse, and if the position of affairs had been published to the world, liquidation or the provision of a large sum by the shareholders would have been inevitable. So the directors decided to cease the issue of accounts, in order to give them an opportunity to pull things round. This policy is said to have been justified by results, as by the gradual realisation of assets and from profits secured from new business carried through, the whole of the Stratton's loans have been paid off. Business was kept on the move all the time, an enormous number of projects receiving attention, and many of the ventures which the Corporation promoted or was interested in in various ways included such important enterprises as Camp Bird, Esperanza, Dolores, Oroville Dredging, Clayton and Shuttleworth, John I. Thornycroft, Johnson and Phillips, Caucasus Copper, Russian Mining, and the Mexican Mining and Industrial Corporation. In every case it was necessary that important sums of money should be found, and the partnership profit on the business was the tidy one of £199,740, but the heavy commitments in connection with the latest issue, the Oroville Dredging, coming at the time of the Yankee crisis, caused considerable financial distress, necessitating the liquidation of the Corporation's position and the sale of practically all its marketable assets. With some of the enterprises the company is still connected, but money is required to protect them, as the shares are not of a marketable character. Providing they are properly safeguarded good profits are expected, but this means reorganisation and amalgamation with the allied concerns, the provision of further cash being an absolute necessity.

Before outlining the scheme proposed we will take a glance at the multitudinous accounts, commencing with the Venture Corporation. The partnership account, it must first be mentioned, produced in eight years to December 31 last a loss of £162,388, despite the profit on certain business carried through of £199,740. The Stratton's deal brought a loss of £250,572, other deficiencies were £49,253, and general costs brought the total outgo up to £375,012. The Venture Corporation's share of the loss was £74,401 and its total outlay £121,124, against very trifling receipts, so that we get at an initial debit of £118,086. To it has to be added loss on shares, &c., £81,843, West Australian Mining Department losses £383,333, and amalgamation expenses written off £5,877, a total of £589,140, so that making allowance for the credit of £123,451 brought forward, there is a realised loss of £465,689, or practically the entire capital. An elaborate analysis of the figures of the smaller concern is unnecessary. Suffice it that the London and Continental Investment has a deficiency of £156,553 against a capital of £188,527, and the Mines Corporation of New Zealand has lost £83,747 out of £92,489, but in each case the loss will be much increased should the Venture Corporation be unable to fulfil its obligations. The three companies have just £58 in cash between them. Under the scheme of reconstruction a new company will be formed, with a capital of £250,000 in 1,250,000 shares of 4s. each, to embrace all three companies, and the plan provides for an allotment of fully-paid shares and the right to subscribe for additional shares with an assessment. For every 100 fully-paid £1 shares Venture Corporation shareholders will receive 23 new shares of 4s. each and 100 credited with 2s. paid, but there is no obligation to take up the last-named. For 100 Mines of New Zealand shares there will be allotted 9½ fully and 12½ partly paid new shares, and for 100 London and Continental Investment shares 63 of the former and 50 of the latter will be given. It is proposed to have 400,000 of the new shares guaranteed, and in this shareholders may participate, and a curious point is that the proposal will be carried into effect when the directors think the majority in favour is large enough.

Another Stock Exchange Faux Pas.

That, we fear, is the only correct description of the proposed new rules. They are of the Noah's Ark model—an attempt to put business back into channels worn out a generation ago. What the great market wants is freedom from useless or antiquated restrictions, liberty to do legitimate business in the most economical way modern usages and scientific appliances have made possible. By no other course can the Exchange be rendered permanently supreme over all competitors. But this does not seem to us to be what the proposed rules mean in any sense. They have not been drafted in the interests of the market as a whole or of the public by which the market lives. The ends aimed at by the committee are class ends, narrow, selfish, and, we should judge in some cases, obstructive to business. The jobber shall job and job only, and the broker shall "broke" and nothing more. No broker is to be allowed to deprive a dealer or jobber of his market "turn," and no jobber must interfere with the broker's right to earn a commission. Country brokers must therefore deal through London brokers members of the Stock Exchange, and when a broker may be able to accommodate two clients, a buyer and a seller of the same security, he must not any more study their interests and effect the transfer direct for a small fee; he must provide for three commissions by putting the transactions through a jobber's books so that the jobber may live. "Shunting" will be at an end, and many things besides, but the market will get its "turns." It will not thus resume control of the great houses outside it, or draw back to its floor the business of the public. No thought whatever seems to have been given to the greater interests involved, and the public will be consigned to perdition in the shape of the tender mercies of the bucket-shop keeper more emphatically in the future than now. We think the Committee might have done better than this, might have shown a little breadth and elevation of mind, instead of behaving merely like a parish vestry whose members are anxious that none of the "perks," sacred through old usage, shall go past them. Stock Exchange reform must be something quite different from what is now proposed, something in harmony with the wants of the day, something tending to greater freedom in doing business, fuller publicity, greater promptitude and economy. The redundant agencies and charges will have to be eliminated, and all restrictions upon bargain making fined down, all tolls reduced.

Those London Tramway Accounts.

No small admiration must be felt and expressed by advocates of prudent, pure and far-seeing finance at the step taken by the Finance Committee of the London County Council. This enlightened body, so ably presided over by Mr. Hayes Fisher, has decided to lay to heart the criticisms those invited experts, Messrs. Pixley and Peat, recently published upon the Council's accounts, and proposes to make haste to write off dead or "obsolete" capital. An example of perfection is thus being set, not only to municipalities, but to joint-stock companies throughout the kingdom, which they will do well to lay to heart. Our railway companies above all need the lesson very badly. How much "dead" capital the best managed of them groans under probably six months' labour by a staff composed of their most skilful figuring men would fail to determine; but that dead capital clogs them on every hand is patent enough. We are not going to have anything of that kind in relation to the tramway undertakings of the London County Council, this Finance Committee says, and its officials have figured the thing up for it, so that there may be no mistake. The actual deficiency on obsolete capital account is brought out by them at just a little less than £1,000,000—£961,954, to be exact—and the committee has determined to write the whole of this off, not immediately or in a lump, but over a series of years, beginning from March, 1914. The scale of repayment is so arranged that no direct additional burden will be laid upon the ratepayer. He may not get his rates reduced, but there will be no necessity to raise them because virtue in relation to the debt upon the tramways will have involved additional charges, and yet by March 31, 1929, the whole of that £1,000,000 will disappear. Not only so, but a great deal of the other and live debt of the Council incurred on tramway and other public works will have been lifted off the backs of the citizens, for the redemption of the debt goes on automatically and all the time on the lines and scale by law established. Not content with this most exemplary reformation in account keeping, this salutary lesson in book-keeping, the Finance Committee has further almost decided to increase the provision for reserves. It does not agree with those purist accountants, Messrs. Peat and Pixley, who insisted that more should be put aside for repairs and renewals, in spite of the fact that the County Council is compelled by law to redeem its whole debt within a certain period. The accountants pointed out that only £105,000 has been set aside out of revenue from the electric system as renewals reserve fund, whereas on the basis of a penny per car per mile almost £183,000 should have been set aside. The committee ventures to thing that this is hypercriticism, and we venture to agree with the committee. Nevertheless the reserves are to be strengthened, if necessary, although at present no definite additional sum has been set aside. There is a shortage of £17,000 on the "revised estimate," but the case may be met by labelling certain moneys the "renewal reserve fund," and by establishing a "general reserve fund" to catch overflow money. Really it does not seem necessary to do more, for under the scheme whose results are tabulated in the last report of the Finance Committee, no less than £1,801,084 will be knocked off debt charges by March 31, 1929. Of this, £1,459,260 will represent the decrease in the interest charge and £341,824 will be the amount of the reductions effected in the annual charge involved in the repayment of capital, owing to the discharge of certain loans. By that date, too, the whole of the obsolete capital—a curious word, but highly suggestive—will have been written off. How much new debt may have been incurred in the meantime it is not at present anybody's business to inquire. Sufficient for the day is the virtue thereof.

Ohlsson's Cape Breweries.

As recently as 1902-3 this company gratified its shareholders with a dividend of 52 per cent., but that was the zenith of its prosperity, and the fact that it was able to make such a handsome distribution has, we fear, been the means of its undoing. Signs were not wanting even at that time of the long period of depression from which South Africa has suffered, but the demand for beer had not fallen off in proportion to the shrinkage in trade, and the directors acted as if they thought this state of affairs would continue. Fresh capital was raised for extensions of the brewery facilities, and for a time it looked as if the outlay might be justified, because profits were still on the upward grade. As, however, business dwindled, the power of the population to absorb beer became less and less, and the downfall since 1904-5 has been rapid. For that year the directors managed to pay a 40 per cent. dividend by putting £20,000 less to reserve and carrying forward a smaller balance, but the following twelve months brought a very different state of affairs. Special losses had to be met out of revenue to an extent which the directors did not disclose in the report, and in spite of the further capital brought into the business by an issue of "B" debenture stock, the trading profits were £71,000 down, and the dividend was reduced to 22½ per cent. A year ago there was a further shrinkage of about £28,000 in profits, with a reduction to 10 per cent. in the dividend, and now this has been followed by a decrease of £21,816 to £67,845 in trading profits and rents for the twelve months ended March 31 last. Interest on investments and transfer fees yielded £92

less at £373, and after deducting £5,000 or the same as a year ago for depreciation, the total revenue was £21,908 down at £63,217. Debenture interest required £31,500, London office expenses £5,871, and income-tax £3,537, and £1,059 had to be found for interest on loans, leaving £18,169 against £41,781. Adding £28,088 brought forward, the disposable total is £46,257, of which £11,500 is taken for preference dividend and the balance of £34,757 is carried forward, the ordinary shares for the first time in the company's history having to go without a return. This, however, does not complete the tale of misfortunes which have overtaken the company, as the depression in trade has brought to light many weak spots in the loans, trade investments, &c., and in order to provide for losses under this head £30,000 was taken from reserve in 1905, £10,000 from revenue in 1906, and £80,000 from reserve a year ago. Now another £10,000 is taken from reserve to provide against accounts previously estimated to be good but now found to be irrecoverable, and it is more than doubtful whether the end of such writings off has yet come. Notwithstanding the persistent shrinkage in trade, the directors are still laying out money on extensions, and last year spent £15,588 on permanent improvements and the purchase of premises for a depôt at Kimberley, as well as compulsory outlay on new drainage at Johannesburg, making the total value £1,454,825, against which the reserve stands at £640,000. Plant and machinery was increased on balance by £2,209 to £155,044 by the purchase of plant for bottling stores at Kimberley and elsewhere and by additions at the breweries. Creditors are £1,208 up at £39,969, and in addition the company has borrowed £7,500, while on the other hand stocks have been reduced by £7,310 to £144,076 and sundry debtors, loans, trade investments, &c., thanks to the sum now written off, come to £9,831 less at £161,793. Cash is £8,357 smaller at £8,725, but bills receivable come to £4,137, and investments with £114 for accrued interest are valued at £11,022, the market valuation being £9,635.

Canadian Financial Troubles.

They are not yet patent to the eye, but no element seems to be neglected by the Government and people of the Dominion to make the display of financial heedlessness a first-class one when it does come. At the beginning of May we drew attention to the rapidity with which debt and capital obligations to the Mother Country were being piled up by the Dominion since the new year began. The total for the present year to the end of April exceeded £16,133,000. During May and June this has not been added to very much, for the £5,000,000 Dominion loan announced this week is new money only to the extent of £1,351,500, provided holders of expiring debts elect to convert, which many may not. There has accordingly been a degree of slowing down, so that adding the issues of May and June to date, the total for the half year is still under £20,200,000. This is as far as public emissions reveal, and it is a heavy enough amount for so young and raw a land. From what we gather, moreover, there is no change in the disposition, whether of the Government or the people of Canada. They are not slowing down because they do not want our money, all they can get of it, but because difficulties are being experienced in procuring subscribers to new loans. Some little time ago it was reported in the Ottawa *Evening Citizen* and other papers that the Dominion Finance Minister, Mr. Fielding, was away in New York endeavouring to get financiers there interested in the Dominion loan to be raised for the construction of the Government portion of the Grand Grand Pacific. What success he had has not been told, but the difficulty is unquestionably becoming greater not only for the Government, but for the Grand Trunk Railway, the Canadian Pacific Railway, the municipalities and states of the Dominion and joint-stock capital devourers of all kinds, to procure the money demanded on terms they can afford or are willing to concede. Hitherto the Government of Canada has talked of borrowing at 3½ per cent., and now it has to spring to 3¾ per cent., with small probability that its loan will be fully taken up. This is really fortunate for the Canadian people, because they are plunging so fast ahead and nourishing so many wild projects for which they have no money of their own, but in furtherance of which they are ready to pledge all their possessions and mortgage their future and ours, that it is for their good a halt should be called. The spirit which prevails in that part of the British Empire and the recklessness with which schemes are advanced, and if possible planted upon the British public, is described with no small force and much accuracy by a contributor to the Toronto *Sun*, and as what he says should be of no small value to people here, we append a considerable portion of the article. The writer begins by pointing to the fact that the Dominion revenue is shrinking now at the rate of £400,000 a month. It may spring up again when prosperity returns, but that will not be yet awhile, and in the meantime the prospect is not cheerful:—

> Unfortunately, while the revenue is thus declining the bloated expenditure cannot very well be reduced; consequently an era of deficits appears to be at hand. Moreover, with an immense sum to borrow in the near future for the renewal of old loans and the construction of the Government portion of the Grand Trunk Pacific, we can no longer obtain money in London at 3 per cent., but must be prepared to pay something like 3½ per cent. for it.
>
> In political economy there is a law known as the law of diminishing returns, which may be stated thus: That in all countries, but more especially in old ones, there comes a time when, for the purpose of raising more food-products, recourse must be had to inferior land, and the produce from such land does not increase in proportion to the amount of labour or capital applied; for instance, doubling the labour does not double the produce, but yields a smaller proportionate return. This at bottom is merely saying, what every Canadian farmer knows, that the cultivation of poor soils is not as remunerative as the cultivation of rich ones.
>
> One is constantly reminded of this principle in reviewing some of the railway projects now before the country. We in Canada have spent a huge sum since 1867 in building railways; more, perhaps, man for man, than any other people in the world. Speaking generally, the railways traverse fairly good regions. Few yield much to the investor, yet those in the worst financial plight have a future in the sense that the territory they serve is tolerably certain to be covered with population some day. There is now a marked tendency, however, on the part of promoters to seek Government assistance for the construction of lines in inferior territory where the country's investment cannot at best be very profitable and may be a total loss; and this tendency, a general election being at hand, is being encouraged by the politicians in and out of office.
>
> The Government is already pledged to the Hudson's Bay Railway. Although it will run for 500 miles through a sub-Arctic desert from The Pas to Churchill, I do not put that enterprise down as an absolutely wasteful one, for the reason that it may possibly serve the Western farmers as a grain route and as a route for the importation of their merchandise, provided the tariff on British goods is reduced so that they may be able to compete with the protected manufactures of Eastern Canada.
>
> But a good many other schemes with politicians for sponsors can only be described as potential sink-holes for public money. For example, there is the projected line from Quebec to the Labrador coast, which will traverse a vast barren stretch to end at a port where, it is obvious, not a pound of freight will ever be landed whilst the St. Lawrence affords navigation westward to Quebec and Montreal. The country from Les Eboulements east is a wilderness of rock and muskeg, in crossing which, as the saying goes, a crow would have to carry a knapsack. The line would probably not add ten thousand dollars' worth to the agricultural production of Quebec, which will soon have an immense back country opened by the Grand Trunk Pacific for her surplus population at the front, and is thus under no necessity to attempt the impossible task of developing her inhospitable eastern extension.
>
> Then there is the scheme for building from Edmonton into the heart of the Peace River Valley. Is there no room left in the West, that we should have to bonus a road to a new El Dorado? And suppose we get there, is it fit for agriculture, or, merely, as some say, a howling waste where frost prevails every month of the year? The promoters want a subsidy of $[illegible] a mile for 350 miles, branches included, and evidently consider themselves modest.
>
> And what of the road fathered by Hon. William Pugsley, Minister of Public Works at Ottawa, when he was a New Brunswick Minister, which is to run from the north-West boundary of the Province down through a more or less bleak country to St. John? New Brunswick is not growing in population, and has not been for 30 years. We are already committed to building the Grand Trunk Pacific as far east as Moncton for the sake of these people, who have also the Intercolonial, in which [illegible] $80,000,000 of the Canadian taxpayer's money has been sunk.
>
> In British Columbia they want to build two roads into the remote north. Connection must be made, of course, with the

Grand Trunk Pacific from Vancouver, but what is the sense of going into the empty spaces beyond the Grand Trunk Pacific? Has any part of the Province already served by subsidised railways been fully developed? If not, where is the wisdom of opening new territory so far away? The usual story is told of fabulously rich gold and silver-lead mines. If there are gold mines worthy of the name they will be exploited by private enterprise; if there are lead mines we would rather they were not made accessible by railway construction, since we should forthwith have to bounty them. With all her boasted mineral wealth, Southern British Columbia is now begging for a renewal on an increased scale of the lead bounty of $2,500,000 voted five years ago.

To go no further, here are nearly 2,000 miles of projected road for which Government aid is demanded. The lines, speaking generally, would penetrate regions of inferior productivity to those already opened, and not yet anything like filled; indeed, it is tolerably safe to say that we have good land on hand sufficient to accommodate five or six, or probably ten times our present population, so that these new ventures are not only of doubtful merit as investments but quite unnecessary at the present stage of our national development.

A prodigal outlay on railway subsidies is "pie" for the average politician, Liberal or Tory; but the construction by Government or through the instrumentality of a Government guarantee of a big canal like the Ottawa and Georgian Bay, which would cost anywhere from $100,000,000 to twice that sum, would suit him even better; and both parties in the Ottawa region are accordingly urging Sir Wilfrid to begin that gigantic enterprise. We may easily be dragged into it. Everybody laughed when the Trent canal was first mooted, but party exigencies forced the Tories to take it up, and subsequently obliged the Liberals, who had protested against it, to continue the work, which has cost to date nearly $6,000,000.

Ordinary prudence counsels us not to attack the far northern parts of Canada, which lie almost within the shadow of the Pole, until we have turned to account the more fertile regions now awaiting the advent of capital and labour. We certainly cannot afford to build or bonus railways into them in the present condition of our finances. Unhappily, the Canadian politician will venture anything for votes, and there is no intelligent public opinion in the country to restrain him, the popular idea, and a very dangerous one it is, being that we cannot spend too much borrowed money in hard times.

American Business Notes.

Present appearances point to the failure of the Standard Oil and other interests to stimulate outside participation in the Wall Street share gamble. Not only has the public in Europe refused to be drawn in to part with its clothes and money, but the rise engineered by the giants of the market have brought in European sellers, and this week the market in New York has been at times very sick. Obviously the load of securities its credit institutions may be called upon to carry could soon again strain their resources. The New York Associated Banks' average figures for the past week show an increase of £5,091,000 in the loans and discounts, the largest witnessed in any one week since the panic subsided. No doubt the banks have also gained on the average £2,130,000 in specie and £534,000 in greenbacks, so that the deposit average is up by £6,401,000 and the surplus reserve by £864,000 to a total of £11,742,000 against £1,126,000 at the same date last year, but all this does not disguise the fact that the load of paper carried by means of credit is rapidly increasing. It is not by any means all new paper, but much of it represents stock which the public at home and in Europe have been holding, and that is now being handed back to the master players.

Witness what took place early this week in regard to the Chicago Rock Island and Pacific Railroad Company. Its securities began to crumble in price on Wall Street in a most alarming manner on Monday, and the fall was accompanied by a report that the concern was going into the hands of a receiver. This was not true, or at any rate premature, and the real cause of the collapse which demoralised the market all round was apparently heavy selling from Europe. There was ground for that selling since the nett receipts of the company for the expired ten months of its year ending next week show a decrease of £1,106,000. The market is depressed for other reasons. Dividends are either being cut down or disappearing altogether, and in the beginning of the week the C.C.C. and St. Louis Company omitted to pay anything on its common stock, while the Lake Erie and Western defaulted on its preferred stocks. The Republican Iron and Steel Company also failed to pay a dividend, and the Louisville and Nashville Company cut its dividend by ½ per cent. to 2½ per cent. Probably enough it should not have paid anything.

The figures of the outside banks and trusts do not indicate the same pressure to which the Associated Banks were subjected, still their average of loans and investments shows an increase of £780,000 at £179,290,000, and while their specie average has risen by £256,000 to £12,202,000, their stock of greenbacks has fallen back £51,000 to £2,437,000, and the deposit liabilities are up only £956,000 to £152,480,000. The loans and investments are nearly £27,000,000 higher than the liability on deposits.

In the circumstances of the market it is not surprising that the Standard Oil group should be endeavouring to strengthen itself on all hands, but it has not yet been able to carry through the amalgamation of the National Bank of Commerce with its National City Bank. Could that feat be accomplished the new bank would be the largest joint-stock concern in the world with a liability on deposits exceeding £87,000,000 and a paid-up capital and reserve of nearly £18,000,000. One writer, indeed, goes into comparisons between this skyscraper credit institution as reconstituted and the banks of Europe, and is able triumphantly to say that none of the great joint-stock banks of London would have within £20,000,000 of the deposits the United National City and Bank of Commerce would display. Doubtless this huge credit gasometer would be an immense help to the Standard Oil people in manipulating their various projects designed to strip the public and the market, to facilitate the fresh impostures and the flooding of investors everywhere with treacherous securities. But there are many difficulties in the way of the completion of such a transaction, not the least being the fact that the Mutual and Equitable Life Insurance Companies of New York virtually own one-third of the Bank of Commerce stock between them, and through their affiliation with various creature trusts control a good deal more. Perhaps, however, this very ownership will stimulate the managers of these banks to fuse interests, because under the new insurance law the life companies will have to sell all their stocks by the close of 1911. Unless companies are specially created to act as purchasers they will find great difficulty in obeying this legal obligation, and therefore their managers may be willing to help Rockefeller and his gang in coopering up this huge bank or credit generating and manipulating mill.

Talking of insurance companies, it may be mentioned that the Mutual Life Insurance Company of New York is said to have entered into negotiations for the sale of its land in Paris in pursuance of the policy which the new board has adopted to withdraw from foreign countries. To our life offices here this will be good news, for, although the competition of this and other American life offices here is now very much crippled, not anything like so effective as it was before the scandals, it is still troublesome, and the mystery in which their operations is wrapped up, thanks to the defectiveness of our insurance laws, enables them to carry on their operations at a cost and with a regardlessness of consequences which still make them formidable competitors amongst a public as ignorant as ever of the principles underlying sound life insurance business.

A rumour was circulated some days ago to the effect that the universal Mr. J. Pierpont Morgan had bought up the Westinghouse Electric Company of Pittsburg by giving £8,000,000 in bank paper for it, or something approaching two-thirds of the nominal value of its properties. This report was promptly denied as it would have implied bankruptcy, liquidation in the hands of a receiver who never works for nothing or cheap. It is just as well that the story should be untrue. Instead of the company becoming openly or hopelessly bankrupt it is now declared that its receivers have succeeded in getting £1,200,000 sub-

scribed towards the capital necessary to enable business to be resumed, and that the whole property will therefore soon be taken out of their hands and restored to the management of the shareholders and Mr. Westinghouse. If that gentleman has learned wisdom by the things he has suffered, the future history of the company may be more agreeable to watch than the past has been. That a splendid business exists there can be no doubt at all, but it has been over-driven, financed with fury, and its ruthlessness towards all competitors has not a little contributed to bring it into discredit and to the verge of ruin. In this world people must give and take if they are going to live and thrive, and the Westinghouse company will have to change its tactics both in America and here if it is to keep on its legs long as a revenue-earning enterprise. But after all it is not certain that the company is out of its slough, for the date on which the reorganisation is to become "effective" has been extended to September.

Excellent reports continue to be received about the state of the crops all over North America. The Canadian crop is estimated at something like 133,000,000 bushels for this season, and in the United States, where the harvesting of winter wheat has already begun in some districts, the outlook is for a crop nearly up to the average and of excellent quality. Altogether the yield is estimated at approximately 748,460,000 bushels, or nearly as much as the bumper crop of 1901. This is good news in many ways, but it does not seem to stimulate the public to buy securities any more than the machine-governed selection of Mr. Taft as Republican candidate for the Presidency. As Mr. Dooley remarked in one of his quaint essays, it was known outside New York a twelvemonth back at Christmas that Mr. Taft was to be the capitalists' nominee in succession to Mr. Roosevelt, and in spite of all the arts in which the American spectacular political campaign manager is a pastmaster this estimable gentleman's name has been received with the utmost coldness by the democracy. Perhaps heat may generate between now and November 4, though that is doubtful, and were it possible to conceive of an opponent put forward, not by any political machine, but by the spontaneous selection of the people, the Republicans would stand a poor chance of putting their man into the office. Naturally enough, however, politics will more or less interfere with business until the fight is ended. There will be rumours and alarms, scares and bursts of confidence which may sway Wall Street prices to some extent, but which will do much more to keep people away altogether from any participation in the play.

A much greater influence in the way of generating business may be exerted by the harvest. Should it prove a large one there will certainly be some development of speculative activity in spite of adverse circumstances. Traffic receipts will in imagination grow to unprecedented totals, and the benefits to accrue therefrom will be discounted as usual. Our own fear is that the harvest may be too good to be of any appreciable use in relieving the tension produced by extravagant resorts to credit. The harvest promises to be good everywhere, even in poor worn out Europe, barring some districts in Russia which do not count, so that at present the outlook is for unusually low prices—prices, in fact, so low as to render the carriage of grain from the interior unprofitable either to the railways or to the farmers. We have seen before now a glut of grain that could not be sold, and the immediate prospect is that we shall see this again.

But it may be worth mentioning that there is some revival of business activity in the United States even now. It is not enough to put heart into things or to give much impetus to the prosperity generating talk of the "Sunshine" and other associations which have sprung up, but the latest return of idle railroad wagons shows a decrease of 25,000 on the previous figure. No doubt the total number idle is still 350,000, but it is something to find any decrease whatever, and as the harvest comes on, employment may be found for a considerable additional number of these idle cars, provided recklessly by means of borrowed money and now threatening to go to rack and ruin. The Erie Railroad, by the bye, is said to be about to repair 5,000 of its idle cars in a twinkling, but no mention is made of the source whence the money to pay for the repairs will come. Mr. Morgan is no doubt going to furnish it out of the money he is advancing for the bond coupons which are not to be paid.

After again and again saying they would never, never cut prices, the bosses of the Steel monopoly have decided to lower them for every description of iron and steel except rails. They will have to cut the price of rails also if Europe refuses to find the money to enable the railroads to pay for what they order, but these unbusinesslike individuals must save their face in some way, so rails are to stick meanwhile at $28 per ton, but billets are to be cut by $3, sheets and bars by $2 a ton, Pittsburg plates by 10 cents the lb., and so on. It is hardly worth while giving the round prices, for the cut is trivial in the circumstances, and merely a preliminary to further and more dividend obliterating steps in the same direction at no distant day. "The cuts have stimulated business." Do not believe it.

Passing Events.

It is with pleasure that we welcome Sir William White on the side of common sense in ship of war construction. He was for many years Chief Constructor of our navy, and speaks therefore with an authority no sea lord or Parliamentary spokesman for the Admiralty can lay claim to. This is what he says speaking of the *Dreadnought* class of ship. "Those who share my views," he says, "do not believe that the *Dreadnought* and her successors represent the most efficient fighting type." "We believe," he further observes, "that the development of submarine attacks renders it undesirable to pursue the policy of continuous increase in dimensions and costs of successive ships," and after explaining that he and those of his way of thinking are not necessarily in favour of small ships as the best instruments with which to meet monster war ships in battle, he proceeds to observe:—"The balance of advantage in our judgment would lie with the larger number of ships, each of considerable power, while in such a squadron the reduction in available force consequent on the loss or absence of an individual ship would be less. If these views are correct, it would be possible to provide a British fleet capable of meeting all requirements and sufficient in number to make us secure against all risks without incurring so large an expenditure as is inevitable if the present policy is continued." That is exactly what The Investors' Review has been contending for many years back. We are wasting money, not only foolishly but criminally, in inventing and constructing monster ships of ever expanding size which would just be as easily sent to the bottom, if not more easily sent, than the smallest gun tub that plunges about our harbours and collides with our mercantile shipping.

Last week the Exchequer had a fairly good turn, its total receipts being £2,698,000 of which excise gave no less than £1,201,000, Customs £536,000 and the Post Office £400,000. Income-tax continues to provide only minute sums, but no doubt after the turn of the half-year the receipts from that source will expand, even though company dividends are reduced. Stamps, however, are not at all so elastic as the Exchequer requires and last week gave only £112,000, while the estate duties' receipts were only £296,000. The week's entire income, however, was a good one, take it altogether, and the Treasury did not manage to spend the whole of it within the week, for the Bank balances went up by £517,000, supply services having taken only £1,050,000 and the National Debt and other consolidated charges about £387,500.

Captain Norton seems to have been a little flippant in his replies to questions put by Mr. Macveagh relating to the unclaimed funds in the hands of the Postmaster-General. "Does my hon. friend mean to convey that the accounts of the Post Office Savings

Bank are kept so loosely that the officials cannot add up the totals of the unpaid money?" queried Mr. Macveagh. "Apparently that is so," answered Captain Norton, and the answer was received with a shout of laughter. This is hardly the way to deal with a question of such importance, and we hope the Government is not going to set the same bad example to the other joint-stock banks in this matter that it does in its account-keeping. While the other banks write down their securities, at any rate their Consols, in correspondence with the decline in the market price of the stock, the Post Office Savings Bank not only ignores depreciation of this kind but conceals it. We expected something better of the present Ministry, and regret to be so often disappointed. The whole subject, however, will have to be tackled in a serious spirit, and the Government ought at once to order the officials of the Post Office Savings Bank to make up a complete return of the dormant balances in its possession. Having done this and made the facts public, which would not cost very much money and should not involve much extra labour, it ought then to proceed to invite the other banks throughout the country to make the same investigation and give the results a like publicity. We do not believe that the balances hid away are anything like so great as gossip says; but there are such balances and as long as they are kept out of sight the imagination of gossips will have free scope. Conceivably enough the rumour borne of irresponsible and uninformed talk might at a critical moment endanger the very stability of some bank.

Much commotion seems to have been excited in Germany by Mr. Lloyd George's reform in the English patent law. "Immense losses" are said to have occurred in consequence of its operation, and the German Association of Industrials petitioned the Imperial Chancellor, the Federal Council and the Reichstag to endeavour to obtain a prolongation for at least a year of the term within which patents already granted may be operated without coming under the new regulations which otherwise would be in force at the end of August next. Failing success in this direction, the association demands that retaliatory measures shall be put in force against England, whatever these may be, and at the same time that negotiations with England be initiated with the object of securing an early abolition of the clause requiring a patent to be worked in the country in which it is taken out. No doubt there is good ground for much of this agitation, but it does not follow that Mr. Lloyd George was wrong to get the amended law passed. It is our own citizens after all that a British patent is primarily supposed to protect, and by granting its privileges to all and sundry its value as a help to the domestic inventor and manufacturer of inventions was destroyed. This might not have been so large a ground for complaint had it not been for the ruthlessness with which powerful foreign capitalists and joint-stock banks used the protection of the English patent law to crush the native inventor. That was the deepest grievance of all. Nothing could exceed the brutal heartlessness with which the small man who ventured to fight for his own hand or whose patent in any colourable degree seemed an infringement of the foreign owned competitive patent was crushed out, hunted down and ruined. Had Mr. Lloyd George therefore done nothing else by his Act he would have deserved gratitude for putting an end to this contemptible tyranny.

In answer to Mr. Bowles, the following particulars about debt redemption under the present Government were given by Mr. Hobhouse, the Deputy Chancellor of the Exchequer. Mr. Bowles wanted to know where these "forty millions redeemed" of which so much has been heard went or came from. It will be seen that they have not yet all come to hand, and that much of the £27,000,000 actually paid off is ascribable to the automatic action of the sinking fund. And why should "other capital liabilities" have been incurred when the surpluses were so abundant?:—

The sum of 40 millions referred to in the question is the estimated nett reduction of the aggregate liabilities of the State in the three years ending March 31, 1909. It includes the actual reduction effected in the two years 1906-7 and 1907-8, amounting to £26,664,000, and also the estimated reduction in 1908-9, amounting in round figures to 14 millions. It is, of course, impossible to give particulars of the Debt to be redeemed in the current year. For the two years 1906-7 and 1907-8 the particulars are as follows:—Funded Debt, £8,438,000; terminable annuities, £4,052,000; unfunded debt—war stock and bonds, £6,041,000; Exchequer bonds, £8,500,000; Treasury bills, £4,713,000—total, £31,744,000. Deduct net increase of other capital liabilities, £5,080,000; total net reduction, £26,664,000.

A moderate decline occurred last week in the numbers in receipt of relief on public works in India. Their total is now down to 1,267,000 according to the Governor-General's telegram on June 22. Of this total 1,032,000 are in the Central Provinces, the most severely stricken. The prospects now are that we shall see a more or less steady diminution in the numbers of the distressed, because rain fell during the week in all provinces, and was heavy in Bengal and in a good many other parts of the country. In the Central regions, however, it was still for the most part light, and will have to be much more abundant if relief is to come next autumn and winter. Permanent relief is not to be hoped for. India will always have famine, and with famine arises plague, under the system of government with which it is now blessed, the exploiting and exhausting system. One would therefore like to get some further particulars relating to the effects of hunger upon large masses of the people than the mere totals in receipt of public relief supply. What is the present death rate in these famine-stricken regions? How far does the hunger of the country districts affect the stamina of the people in the towns, and what relation does plague bear there to hunger? That is to say, do the ravages of the plague increase in proportion as hunger spreads and die away when an abundant rainfall gives the people a little more to eat, or is plague chronic and constant?

A tenth interim report has been issued by the Beira Railways Debentureholders' Committee. It deals with the long struggle to get some concession out of the Chartered Company, and mentions the triumph of Mr. Frederick Walker, against whom a libel action was brought. The committee not only congratulates Mr. Walker on his success and on the persistent and courageous attitude he has assumed and maintained in his fight for the bondholders' interests, but mentions that it proposes to make good to him any costs he may not recover from the other side. That is the least he deserves at the committee's hands. The most interesting point, however, raised in the circular relates to the defiance, as it may be called, of the law by the Beira Railway directors, who have not thought fit to issue any report or to convene any meeting of the shareholders since January 9, 1907. The committee is of opinion that unless a meeting is held within the next 10 days each director of the company will be liable to a penalty of £50 under provision of the Companies Act of 1907, which comes into force on July 1. The directors' report, together with the accounts of the company since September 30, 1905, are accordingly looked for immediately. Meanwhile the business of the line seems to be looking up a little, since last month's traffic income of £19,625 was the best May traffic since 1904.

What may be at the bottom of the continued hostility evinced by the *Financial News* to everything Brazilian we have no means of knowing, and really do not much care. Moreover, in a good deal of what it says about the coffee valorisation scheme it is impossible not to agree. We look for trouble in connection with that Utopian project, which was conceived in economic ignorance, and carried out with a regardlessness to consequences worthy of a political Don Quixote. It is going too far, however, to demand the interference of the President of the Board of Trade, as the *News* does, in order to prevent the formation of a company registered at Somerset House under the title of "The State of San Paulo, Brazil, Pure Coffee Company, Limited." It may be that this is a device fallen upon in order to obtain some intermediary cushion with which to break the fall when the crash comes in the price of coffee, but that is legitimate enough provided everybody understands what is intended. If

the company takes to gambling in coffee, as alleged, it does not follow that the public is going to join in the play, and this is still a free country. The State cannot interfere to protect people from such projects any more than it can shield them from the manœuvres of the outside brokers and bucket-shops whose advertisements appear continually in the *Financial News*.

The chairman of the Lautaro Nitrate Company at the meeting last week had a good deal that was interesting and instructive to say about the combination of producers. That combination provides only for a limitation of the output each year, by fixing the maximum quantity to be produced by the different oficinas, and does nothing in the way of helping to improve the market. With the largely increased number of companies now embraced in the combination, the quota assigned to each has been cut down to less than half the productive capacity, and the cost from this and other causes has been increased. At the same time, the restriction of output has not had the desired effect of keeping up the price, and heavy falls have taken place during the past six months. Under these circumstances, Mr Rau complained—and there is a good deal of ground for his complaint—that the combination did nothing either to help the producer in his efforts to secure an adequate price, or to obtain a wider market for his output which would help to minimise the effect of so many additions to the participants in the fixed annual quantity. He urged that steps should be taken to secure the assistance of the middlemen who directly influence consumers, and so prevent the market from falling into the hands of speculators. Some of the companies were, and are, doing their utmost on their own account to carry on a propaganda amongst users of artificial manures, but isolated work of this kind can never be so effective as concerted action. Another argument in favour of a united effort is that producers would be able to regulate their shipments in accordance with the requirements of the market. At present the individual ships when it suits him, and the result is that there is often a plethora in some quarters and a scarcity in others, and the uncertainty caused in this way tends to drive consumers into using other manures of which the supplies are more certain and regular.

Continental Memoranda.

Bourses are not very happy. They try to put on a show of prosperity, but it ends in nothing since the public does not come forward to relieve the professionals of their burden. So when realising takes place, as in the case of the late Mr. Bischofscheim's estate, the markets at once squirm and go flat. Then, too, political ghosts haunt men's minds. There is the eternal Morocco question, and the Kaiser's recent speech has had the effect of turning thoughts towards the fate of the Turk. France is spending too much money in Morocco without any prospect of reaping advantage from the investment, and her engagements there will weaken her influence when the Macedonian and other Turkish problems come up for settlement by the arbitrament of the machine gun, as they must do at no distant day. It is quite within the range of probability that the whole of Europe may be thrown into a turmoil of war before the blight of the Turk is removed from some of the fairest countries in the world. Many people think that when the July coupons are out there will be a revival in activity, and perhaps that is according to rule, but if any large amount should be available for investment, which we doubt, it is likely to be absorbed in new issues much more than in old, so that the prospect is by no means a merry one, and we do not look for good, solid, active business this summer abroad any more than here.

The question of the harvests is also beginning to exercise considerable influence, and markets are already anxiously counting up probabilities. In Europe the prospect has been spoiled recently by drought, and a rather poor harvest is looked for both in Roumania and Russia. The drought in Roumania, indeed, lasted until June 10, and the rain which has since fallen came too late to do good in many of the wheat districts. Winter wheat in Russia is in a bad condition, but the prospects of the spring wheat are distinctly better, although it is too early yet to estimate what the entire yield will be. For other parts of Europe however, the outlook is tolerably cheerful, and should the aggregate crop be larger than last year's to an important extent and of better quality, stock markets may be strengthened, always provided politics do not intervene to put a damper upon men's spirits. In the States and Canada a big harvest has already been discounted.

Amongst items to be mentioned is a Madrid loan of £6,400,000 nominal in 4 per cents. in the air to compete with the Spanish Treasury issue, of which, however, the greater part is to be set against old obligations falling due.

The Russian interior loan of £20,000,000 is to be issued at once at the price of 95 per cent., and the official euphemism is that the money will be devoted to the improvement of railways already in existence. It will be a 5 per cent. loan, and all the Russian banks, including the State Savings Banks, which underwrite £5,000,000, are going to take part in the subscription with a view to trade off the bonds on foreign markets. Russia has no money to spare for Treasury purposes, and the whole fabric of Russian finance would crumble to pieces were foreign markets closed to new loans. This danger for Russia must not be left out of sight in any estimate of probabilities in Turkey. Russia could not carry on a war to make good her claims to the succession in Constantinople without help from the cosmopolitan usury markets, and there is no one market except that of France, which is always more ready to invest in foreign loans than in domestic enterprises, where Russia could hope to get much new money. But the interests of France are by no means all in harmony with those of Russia in the Near East, although more so than with Germany, and were a war to break out between Russia, Germany, and Austria over the division of the spoil in Turkey, France, although inclined to side with Russia, would inevitably be compelled to keep her money at home in order to be ready to intervene in the struggle when the favourable moment came. It is well to speak bluntly about contingencies of this kind because the ever acute Macedonian question warns us to expect trouble in that part of the world. There will be no expulsion of the Turk without bloodshed, of that we may be sure, and militarism, as well as the necessities springing from militarism, is impelling the Powers of Western Europe to bring on a conflict. It is much more respectable looking to go bankrupt sword in hand than to dwindle into inanition through the slow exhaustion of resources in the ease of peace. Meanwhile the agreement relating to the Danube-Adriatic Railway is to be signed this week in Paris. Under it the Imperial Ottoman Bank is to furnish 45 per cent. of the construction expenses, but preparatory work will not go further than Stillia at present because Russia does not want greater progress to be made. Here, also, is a hint that in spite of these agreements trouble is brewing.

An issue of £5,000,000 in Treasury bonds bearing 4 per cent. interest is to be made by the Prussian Government. It was only in April last that this Government created £42,500,000 of a State loan, but only £32,500,000 of that was issued in what may be called permanent 4 per cent. stock, leaving another £10,000,000 to be put out in Treasury bonds. It is half of this balance which is now to be put upon the market, and although the banks knew that it had to come, they are by no means inclined to welcome it.

Spanish budget estimates for 1909 show that a total revenue of over £41,000,000 is looked for, of which £18,200,000 will come from direct contributions and about £15,000,000 from indirect. Customs and monopolies are expected to yield a little more than £4,000,000, which is surely a small result from a tariff so vexatious and ill-arranged as that of Spain. The

balance will be made up from domains and the revenues from State property with a lump of £1,000,000 or so described as "Treasury revenue," which is drawn from payments made to exempt men from military service. Expenditure is put at rather more than the revenue, but not much, and the principal charge borne by the State is the public debt, which takes 39 per cent. of the total revenue. The army and navy between them take 20 per cent., although the naval expenditure has been increased only by about £400,000 since 1905. Although the country is thus barely paying its way, its condition is much superior to that of former years. In 1898 the deficit was as much as £5,350,000, but ever since the loss of her colonies Spain has been growing more prosperous, and if the resources of the country were better attended to, there is no reason why the budget should not soon display a succession of comfortable surpluses which might be devoted to public works.

Business in Germany is perhaps a shade better than it was, and gradually the banks seem to be readjusting their burdens in connection with over-stimulated industries. New capital is being created to be sold to the public, so that the banks may escape from their commitments. As yet little progress has been made in this transfer, but the banks will doubtless succeed in the long run as the public is sure to buy if the bait is judiciously and systematically presented to it. But the note of pessimism still so dominates both the Berlin and Frankfort Bourses that they even found a ground for suspicion in the reduction of the Reichsbank rate to 4 per cent. The bank is very much stronger in gold than it was at the end of last year, having drawn in since then something like £16,500,000; that is to say, it held only some £25,000,000 at the end of the year, and it now holds £41,400,000. There was thus to all appearance good reason for the bank rate to be brought down to 4 per cent., but as Germany has had no experience of such a rate since 1905 the boon seems to have perplexed boursiers, and they are now talking of politics as the cause of the reduction. "It was made to dissipate the bad effects produced by the Kaiser's speech and to facilitate the financial transactions of the State." We do not know whether there is any ground for this depressing view, but the State certainly wants money on all hands, and a new German colonial loan of £7,500,000 is expected almost immediately. A small portion of the issue will be used to redeem about £1,000,000 of the East African Railway Company at 103½, and, of course, the banks have to underwrite the whole.

From Amsterdam the news comes that the Dutch Royal West Indian Mail Company is going to issue 1,500 new shares of a nominal value of 1,000 gulden at 102½ per cent. These shares, although issued in the middle of the year, will participate in the dividend from January 1 last.

A tabulated exhibit has been published illustrating the growth of Russian obligations. In 1883 the total public debt of the Empire, floating, consolidated, or redeemable, amounted to £344,200,000, and as late as 1901 it was only £617,000,000, but it is now £871,000,000, demanding for interest, &c., £38,472,000. Between 1883 and 1904 the total of the consolidated obligations outstanding has quintrupled, while the amount of the redeemable loans has increased by one-fourth. In the 25 years between 1883 and 1908 the consolidated loans rose from about £55,000,000 to over £366,000,000, and the redeemable loan from £289,400,000 to £533,000,000. What has Russia done with the money? Her autocracy has been kept alive and sundry wars have been fought, sundry railways have been built and a few prisons, but the commerce of the country as measured by internal prosperity has not expanded in anything like the proportion it should have done if these debts were to be borne easily by the population. For 1907 the total trade of the Empire, out and in, was barely £168,000,000, of which £69,600,000 was imports and £99,200,000 exports. No doubt this is an increase of £5,300,000 on the total for 1906, when the imports were £62,400,000 and the exports over £100,000,000, but it is noticeable that the exports in 1907 shrunk, while the imports expanded, and these facts cannot be regarded as a symptom of health, seeing that Russia is so heavily indebted to other countries. And how poor the totals are!

The year 1907 was rather a disastrous one for the Russo-Chinese Bank, which continued to suffer from the consequences of the war, losing heavily by numerous failures amongst its Eastern clients and also by defalcations at some of its branches in the Far East. Hence the total deficit shown by the balance-sheet is £420,600. Happily the bank has a special reserve fund of £442,600, and that is utilised to obliterate this deficiency, leaving the special reserve at barely £22,000. The bank has also a general reserve of £475,000, and that remains untouched, so the worst only means "no dividend" for the shareholders.

It is reported by the *Cote Européenne* that the De Beers Company has exhausted all its reserves, and is now arranging to issue new obligations up to a total of about £1,500,000, but the new debt is not to be put upon the market until the autumn or a little before the next balance-sheet is published. Will the market take it? We see that a big jeweller in Germany, who failed a short time ago, is likely to pay only from 5 to 8 per cent. of his liabilities, and he has innumerable imitators in Europe and America.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1908, and June 20, 1908:—

REVENUE AND OTHER RECEIPTS.

—		Total Receipts into the Exchequer from April 1, 1908, to June 20, 1908.	Total Receipts into the Exchequer from April 1, 1907, to June 22 1907
Balances, April 1:	£	£	£
Bank of England	—	7,783,121	5,807,721
Bank of Ireland	—	1,135,841	1,124,702
		8,918,362	6,932,423
REVENUE.			
Customs	—	6,552,000	7,708,365
Excise	—	6,676,000	7,268,292
Estate, &c., Duties	—	3,928,000	4,855,814
Stamps	—	1,554,000	1,797,000
Land Tax	—	310,000	370,000
House Duty	—		
Property and Income Tax	—	4,156,000	4,298,000
Post Office	—	4,190,000	4,140,000
Crown Lands	—	130,000	110,000
Receipts from Suez Canal Shares and Sundry Loans	—	5,000	7,500
Miscellaneous	—	668,536	657,694
Revenue	—	28,169,536	31,212,665

Critical Index to New Investments.

GOVERNMENT OF THE DOMINION OF CANADA.

Holders of the £3,648,500 outstanding 4 per cent. bonds and stock due on November 1 next are offered an extension at 3¾ per cent. until May 1, 1912. In addition, the Bank of Montreal offers for subscription in cash at par sufficient 3¾ per cent. stock to make up with the extended bonds and stock a total of £5,000,000, which has been authorised for the purpose of providing for maturing obligations and construction of public works. Holders of the new issue will have the option up to September 30, 1910, of conversion into 3 per cent. inscribed stock 1938 on the basis of £106 for every £100 of the present loan. The life of the stock is, of course, short, and for that reason it may not suit every investor, but it is none the less a good security.

BRADFORD DYERS' ASSOCIATION, LIMITED.

Owing to the arrangement made last year with the Bleachers' Association, Limited, whereby this company discarded its general market bleaching business and acquired the dyeing business of the Bleachers' Association, and to the purchase from the Winterbottom Book Cloth Company of the business of the Salford Dyeing Company, it is necessary to extend the facilities for dyeing and finishing. Considerable capital is also required for the equipment of the Salford Company's works, the completion of the extensive works at Handforth, and the large additions now being made to some of the original works of the association, and the unissued balance of 312,000 5 per cent. cumulative preference shares of £1 each were, therefore, offered for subscription at par. The properties owned, exclusive of goodwill, were valued by Messrs. Edward Rushton, Son, and Kenyon, after making adjustments for the exchanges with the Winterbottom Book Cloth Company at £3,647,224, while book debts, investments, cash, &c., less liabilities outstanding, bring the total of the assets up to £4,458,427. Profits are given for the eight years to December 31, 1907, and show that, after payment of debenture interest, the surplus available was more than twice the amount required to meet the preference dividend. Owing to the depression in trade, it is not anticipated that the current year's results will be quite so satisfactory; but the directors hope that the greater efficiency of working will tend to minimise the general reaction, and the shares seem a reasonably good investment.

BRITISH-SUMATRA RUBBER ESTATES, LIMITED.

Three estates in the Sudang district of Sumatra, having an area of 5,999 acres, of which 2,700 are under cultivation with rubber and coffee, are acquired by this company, which has a capital of £130,000, divided into 70,000 6 per cent. cumulative participatory preference shares and 60,000 ordinary shares of £1 each. The estates were valued in September last at £113,000, but are sold to the company for £80,000, payable £38,000 in cash, £12,000 in preference shares, and £30,000 in ordinary shares, plus the cost of planting 75,000 rubber and 28,000 coffee trees during the current year, which is estimated not to exceed £3,000. In adddition the vendors and promoters have been granted options to take up 30,000 of the ordinary shares at par under certain conditions. Of the total capital 58,000 preference shares, entitled to a cumulative dividend of 6 per cent. and to an equal share in all dividends distributed in excess of 6 per cent. on the ordinary, were offered for subscription. The total number of rubber trees planted is 282,481, but very few apparently will reach the producing stage during the next three years, and the company in the meantime is relying on its coffee crop to meet the preference dividend. The estates are taken over as going concerns, but no results of past workings are shown, and applicants are expected to be satisfied with an estimate of an annual profit of £8,000 per annum from coffee. This will amply cover the preference dividend at the fixed rate, and the shares ought to be a fair speculative venture for those who like a long lock-up.

UNIVERSAL MOTOR CAB COMPANY, LIMITED.

Most of this prospectus is taken up with references to the achievements of the General Motor Cab Company, and the promotors admit their venture has been induced by a study of that company's results. Their copy, however, is on a modest scale, the capital being only £50,000, divided into 49,500 preferred participatory ordinary shares of £1 each, and 10,000 deferred shares of 1s. each, with which it is proposed to buy 100 cabs at the price of £375 each. Taking the gross receipts at £2 per cab, as against £2 3s. 6d. earned by the General Company, it is estimated that the profits would amount to £25,500, out of which £8,400 would be absorbed by hire of taximeters, licences, and depreciation allowances, leaving £17,100 available. Only the preferred shares were offered for subscription, the deferred shares being held at the disposal of a gentleman who advanced the £4,500 required for preliminary expenses, and who has 12 months in which to make up his mind whether they are worth taking up or not. As they are entitled to four-tenths of the nett profits, after paying 7 per cent. on the preferred shares and putting 10 per cent. of the surplus to reserve, it is evident that if the company is only half as successful as expected he will stand to make a very good thing indeed out of the temporary employment of his money. The fact, however, of his taking so long to think about it is sufficient evidence that he is by no means certain of the success of the undertaking, and it might be as well to follow his example and adopt a waiting policy with regard to the shares offered.

DIVIDENDS ANNOUNCED.

MINES.

Anglo-Australian Exploration.—Interim of 1s. per share, payable July 4.

Associated of Western Australia.—1s. 6d. per share, payable July 24.

Koffyfontein Estates.—10 per cent. and a bonus of 5 per cent.

De Beers.—20 per cent. (10s. per share) on the preference shares, making 40 per cent. for year ending 30th inst.

Langlaagte Estate and Gold.—At the rate of 20 per cent. per annum, amounting to 2s. per share, for six months to June 30.

Mount Morgan.—1s. per share for quarter ending Aug. 31, payable July 1.

Ooregum Gold, India.—Interim of 4d. per share on the ordinary shares, payable July 30.

Oroya Black Range.—Interim of 1s. per share, payable July 15.

MISCELLANEOUS.

Arica and Tacna Railway.—4s. per share against coupon 66.

Australian Agricultural.—40s. per share, making interim £4 per share on account of the operations for 1907.

Bank of France.—For half-year of 80 francs nett.

British North Borneo.—Four per cent. for year ended Dec. 31.

Canada Company.—£1 per share for half-year ending July 10.

Cotton Powder.—5 per cent. on the ordinary shares.

De Dion Bouton.—Interim of 7 per cent. per annum (8 2-5d. per share) on the ordinary shares for past half-year.

Mond Nickel.—15 per cent. on the ordinary shares for the year ended April 30, and 48 per cent. on the deferred shares, placing £25 000 to reserve and carrying forward £29,900.

Nantes Butter and Refrigerating.—Interim at the rate of 10 per cent. per annum for half-year ending June 30.

New Sharlston Collieries.—Interim of 10s. per share.

New Westminster Brewery.—Interim of 5 per cent. per annum (2s. per share) on the ordinary shares for past half-year.

Provincial Trams.—Interim of 3s. per share upon the ordinary shares in respect of financial year ending Sept. 30 next, payable June 26.

Riverside Orange.—Interim at the rate of 10 per cent. per annum (7½ per share) for half year to March 31, payable July 15.

Shell Trading and Transport.—Final 5 per cent. (making 15 per cent. for 1907) will be paid on July 1. First interim of 5 per cent. for 1908.

Trustees', Executors', and Securities Insurance.—On the ordinary stock at the rate of 5 per cent. per annum for half-year to May 3, making distribution at the rate of 5 per cent. for the year, placing £5,000 to reserve, and carrying £16,600 forward.

Wagon Finance.—Interim at the rate of 5 per cent. per annum.

A quotation has been granted by the Committee of the Stock Exchange, London, to the 250,000 shares of $100 each of the Rio de Janeiro Tramway Light and Power.

The debenture transfer books of the Commonwealth Oil Corporation will be closed from June 25 until July 2nd for the preparation of interest warrants to June 30.

Baku Russian Petroleum.—Production of crude oil for four days ending June 20, 146,000 poods, equals 2,354 tons.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending June 20, 222,000 poods, equals 3,572 tons.

The Week in Mines.

The Carry Over.

There has been nothing very exciting in the mining departments this week, and business never approached activity either before or after the carry over. The account to be arranged was of fair dimensions, and rates were about the same as on the previous occasion. The general charge for continuing Kaffir shares was 6-7 per cent., with lighter rates here and there. Modders were continued at 5½-6½ per cent., Gold Fields and Rand Mines at 5-6 per cent., and East Rands at 1½-2½ per cent., a more or less artificial scarcity of the last-named still existing. Among Diamond shares, De Beers were arranged at 2½-3½ per cent., Premiers at 5-6 per cent., Jagers at 4½-5½ per cent., and New Vaals at 5½-6½ per cent. The Rhodesian general rate was 5½-6½ per cent., Tanganyikas costing 6-7 per cent. to carry over, and Chartered ½d.-1d. West Africans were taken in at 5-7 per cent., West Australians at 5½-6½ per cent., and Broken Hill and Australian Copper shares at 4-6 per cent., but Broken Hill Proprietary were scarce and cost only 1 per cent. The American things were continued at 5-7 per cent. The making-up list did not make quite such a brilliant display as usual, but there were a number of rises. South African Options rose ⅛ during the fortnight, Robinsons 9/16, Central Minings ½, and Heriots and Meyer and Charlton 3/16. On the other hand, Premier deferred dropped 9/16, African Concessions ½, De Beers deferred 7/16, Modders, Apex, H. E. Props., and Eldorados 5/16, and Gold Fields, East Rands, S.A. Gold Mines, Wit Townships, Rhodesia Explorations, Tanganyikas and Rand Mines ¼ or thereabouts. West Africans gave a fall of ⅜ in Nigeria Investments, and in the West Australian list Associated and Kalgurlis were 3/16 to the good. Tasmania Golds were 3s. 3d. lower. Broken Hills showed little change, but among Copper shares Capes were up 7/16, Rio Tinto rose ¼, and Whim Wells ¾, but Great Cobars were 1/16 worse, and Anacondas fell ⅜. Tin shares showed irregularity, Tronohs falling 5/16 and Cornish Consolidateds 3/16, while Wheal Commerce made up 3/16 better. Waihis Grand Junctions and Mount Zeehan preference were 3/16 down.

Kaffir Shares.

The course of the South African market since the carry over has been very discouraging for the bulls. It is very difficult to keep up the spirits and appear to be cheerful when no orders are coming along, and it is very doubtful if much self-deception of this sort is being practised just at present. Probably because the energies of dealers were flagging a little, the Central Mining reorganisation scheme was trotted out again, and had a momentary effect in bucking things up, but it is impossible to keep prices on the move without a steady flow of investment orders, and in the absence of these the market speedily settled down into pronounced dulness. The Central Mining scheme is said to be on the basis of £12 in new shares and £5 in 4½ per cent. debentures for each £20 share. The maturing of a large number of unexercised options was said to be partly responsible for the heaviness of the market at the close of last week, as a good many uncalled shares had to be sold, but there has been no such influence at work during the past few days, and yet prices have continued to pursue a downward course. Some liquidations on account of an important deceased estate were said to have been in progress, and it needed a considerable effort to prevent prices from falling. Quotations are not much changed on the week, but the market is poorly supported, and the professionals do not want any more shares. They are seeking for a means to get rid of those already possessed. The Continent has been practically out of the market, and the public here are as stand-offish as ever. A few more dividends have been declared, but they exercised no influence.

Land, Diamonds and Rhodesias.

Central Minings had a good spurt on the reorganisation rumours, some Paris bears being caught out, but the improvement did not fully hold and most of the principal counters slipped off. It is said that the Johnnies company will soon declare a dividend, and it may be so, but we should be inclined to doubt it. Rhodesians have been quietly offered, and Chartered have again gone below 16s. Of course, shares are not pressed for sale either in this or any other section of the South African market. Any attempt to do that would probably knock the bottom clean out, because the shops will not take any shares we may be sure, and the only thing for the overloaded professionals to do is to hang on and hope. Diamonds have been a poor market throughout, and De Beers deferred have again touched 11.

Australasian and West African.

Some of the small-priced West Australian shares came into demand on encouraging news from the mines, but the market was exceedingly neglected, and nothing good came from the declaration of dividends of 1s. per share by the Oroya Black Range and 1s. 6d. by the Associated. The big priced shares were dull and heavy. New Zealands were slightly irregular, and Broken Hills after going up were inclined to give ground here and there. The metals were fairly steady. Two or three West Africans moved 6d. or so, but there was nothing doing.

Copper, Tin and Miscellaneous.

Copper shares have shown a pretty general setback, but Rio Tintos had a small recovery from early weakness. The metal was flat, and will continue so in the opinion of good judges. Tin shares were quite idle, and would probably have gone lower had any business been transacted. In the Miscellaneous group the American gold shares attracted some attention, and Mexico El Oros were put up in anticipation of the announcement of a first dividend. This was subsequently declared at 5s. per share. El Oros were in some demand, and Esperanzas were unaffected by the further decline in the profits for May. Ooregums and Balaghats improved, but Mysores dropped below 5.

MINING NEWS.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Forbes Rhodesia Syndicate.—The report and accounts of this enterprise cover the period from March 8, 1906, to December 31, 1907, and it has the somewhat doubtful advantage of being registered in Southern Rhodesia. The reconstruction left the venture with a capital of £60,000 in 120,000 shares of 10s. each, 7s. paid, and of these 28,921 have been issued. Unhappy shareholders have not been very smart in paying up their calls, and they will wail loud and long on learning from the managing director's report what the syndicate has missed through not having a little more of the ready at its disposal. As it is operations have been restricted to a minimum, and fabulous fortunes have slipped from the company's grasp. Note, for example, that the tributing syndicate, had the interest been fully maintained (a matter of about £4,000), would have yielded 40 per cent. on the present capital. This kind of thing makes one's mouth water, but we do not know that shareholders need dispair, because if the cash will last out there are any number of promising interests to exploit quite apart from a quantity of doubtful mining properties and claims. There is asbestos, chrysolite, a most valuable mineral, and sansieveria useful for making rope and twine, on which the Imperial Institute has reported favourably, so that when markets have been found an honest penny may be forthcoming from these sources. Besides all this there are any amount of share interests, and if a number of them still carry uncalled capital a lucky turn up may one day increase the company's cash balance from the present amount of £203, and enable it to come up smiling whenever a call is announced. The debit balance for the period under review was £938, although a revenue of £3,466 was gathered, but South African salaries took £1,301 and directors' fees £560.

Piggs Peak Development.—In their report for an unnamed period to the end of March the directors state that the Swaziland Commission has recognised and confirmed the company's rights to its mineral and water concessions. Since the last report the operations have been chiefly directed to opening up and proving in depth the ore chute in the old section of the Peak mine. The circular issued to shareholders in April showed that down to the sixth level there had been developed and blocked out ready for stoping 131,865 tons of an average value of 11 dwts. per ton. The line of reef on which the Peak mine is situated

can be traced right through the concession, and in addition there are other bodies running parallel. Surface prospecting has been commenced on these outcrops, with the result that in numerous places they have been proved to be auriferous, and it is believed that other chutes of ore similar to that of the Peak mine have been located. An extensive deposit of iron ore exists on the property, which the directors believe may prove to be of considerable importance to the company. The directors arranged a loan of £12,000 from one of the largest shareholders to enable them to erect reduction and cyanide plant equal to an annual capacity of 30,000 tons. This plant is now almost erected, and the directors are looking to the commencement of regular profitable milling operations being commenced early in July. We gather from the balance-sheet that the accounts cover a period of three years to March 31, and in that time the debit balance has been increased from £11,530 to £18,849, including £1,500 for directors' fees credited but not paid. There is a war suspense account of £5,670, and the cash balance is reduced to £440.

NORTHERN TRANSVAAL LANDS.—This company is going slow just now, but the directors have faith in an ultimate clearing of the South African clouds, and indeed consider there is little doubt that during the past year material progress in agriculture and stock farming has been made in the Transvaal. A gradual improvement in this direction is looked for, which will ultimately be beneficial to the whole community. The marked prosperity among farmers is a satisfactory feature. Meanwhile, the utmost economy is being exercised, and a considerable decrease in expenditure has been accompanied by an increase in rents. Every endeavour will be made to balance income and expenditure pending the development and realisation of the large mineral resources. Last twelve months the balance on the wrong side was £360, raising the debit to date to £5,021, and the company is getting very short of cash. Its property consists of 63 farms comprising 307,017 acres, over which the whole of the freehold and mineral rights are possessed, and there are in addition mineral rights over three other farms, the surface rights having been disposed of. The whole stands in the books at £21,765, and while it does not appear that much in the way of metals has been discovered, copper, tin and coal have been found on adjoining properties. Total capital issued is only £31,218, and against certain investments standing at £7,306 there is a suspense account of £3,659.

UNITED GOLD COAST MINING PROPERTIES.—It is not very clear whether shareholders of this undertaking have been without news for four years or more, but the balance-sheet made up to March 31 last shows details of expenditure for no less than 4¼ years to that date. Anyhow, there is mighty little information to be imparted now that the report and accounts are submitted, for the very simple reason that no further work has been carried out on any of the company's concessions. The agreement with the vendors to vary their rights, referred to at the last general meeting, has been duly carried out. Under the new arrangement, instead of the company having to allot 40,000 fully-paid shares to the vendors when the titles to four of the properties had been confirmed, the vendors are now entitled, whenever any of the properties are dealt with, to receive 40 per cent. of the proceeds either in cash or shares, presumably at the option of the directors. The company can abandon any of the concessions by giving formal notice to the vendors, who can call upon it to retransfer such concessions to them. The holding in the Wassau West Amalgamated Mines remains unchanged, and constitutes one of the most important assets possessed. So we are told, but rather less than four years ago instructions were given to suspend mining operations until such time as transport and other charges could be materially reduced and development work carried on more economically. West African expenditure up to March 31 was £4,630, and the London outlay, including £887 loss on realisation and depreciation of Consols and Cape of Good Hope stock £2,602, but against all this £3,033 came in from interest and transfer fees. We should like to know the present approximate value of the investments at cost £34,578, as the principal portion consists of loans, debentures, and shares in various West African companies. Property account stands at £54,497, and the company is practically free from debt.

BURMA RUBY MINES.—For the first time in the company's history the yearly washing has exceeded two million trucks of earth, the number for the year to February 29 being 2,033,666 compared with 1,890,914 in the previous 12 months, but the cost was only 0.1d. lower at 7.6d. per truck owing to the greater amount of rock met with in the mines. The revenue under all heads was £110,025, and after meeting expenditure of every kind, including depreciation, there remains a profit of £13,823. Of that £4,357 is payable to the Government of India for royalty, and after adding £9,440 brought forward the disposable credit is £18,906. But the depression in the market for precious stones has temporarily affected the sale of rubies, and has necessitated the restriction of the output and the most rigid economy of the company's resources. Since February night work has been entirely stopped, and the rate of coolie wages and all other expenditure have been cut down as low as possible. In the circumstances payment of the half-yearly rent due to the Government on February 29 last has been deferred, and a dividend payment is also postponed until the demand for rubies revives. The Mogok Valley drainage tunnel, which now stands in the balance-sheet at £33,887, is nearing completion, and should be finished in the course of the coming autumn. The company's finances are in fairly good order.

MILLS DAY DAWN UNITED GOLD MINES.—Output for the half-year to April 11 was 24,477 tons, which produced 13,830 ozs. worth £49,655, while 1,355 tons of concentrates sold [illegible] £2,385, 5,655 tons of sands sold realised £2,913 and 22,389 tons treated yielded £21,173, a total of £106,129. Revenue under every head was £106,166, and the profit for the half-year came to £32,954, out of which £45,000 was distributed in dividends, leaving £4,554 to be carried forward. The condition of the mine is described as satisfactory, especially in regard to its prospects in the new ground above No. 5 level and below No. 10 level. The directors point out that the area of unexplored ground below No. 13 level is fully 70 acres and that the property has great possibilities in depth. The existing output and quarterly dividends of 1s. per share will be maintained. The financial position is satisfactory, the company having no floating or fixed liabilities of any sort.

GOLDEN BLOCKS (TAITAPU).—This company seems to go along in a somewhat free and easy fashion, but it made a profit of £107 in the twelve months to December 31 last, and that is something. The tonnage crushed was 1,726 and the yield 1,409 ozs., or about 16¼ dwts. to the ton. Value realised was £5,507 and interest and transfer fees gave £95, or £5,602 in all, against which the expenditure was £5,495. Total credit to profit and loss is £1,867, and this will be carried forward. During the opening five months of the current year 708 tons have been crushed for 766 ozs., which is a full ounce per ton. Development is being vigorously carried on in the low levels, two of which have been extended into Block 4, but so far without payable results. The manager is of opinion that the payable stone has gone under foot in Block 3, and can only be won by sinking below No. 3 level. Inquiries are now being made as to the best and cheapest method of doing this, the officials apparently being unable to solve the riddle. Prospects in Block No. 2 are considered promising, and work is to be energetically pushed on.

TAITAPU GOLD ESTATES.—There is nothing very encouraging about the report for the two years ended December 31, and it must need an optimistic mind to share the directorial belief in the ultimate success of the estate and its revenue-earning capacity. Prospecting for gold has led to no result worth mention, and all operations have been suspended. Unhappily, the company has had very bad luck with its coal-drilling operations, as after many difficulties had been encountered in getting the work fairly going, the drill rods broke just when success seemed to be within reach. Operations in other directions are considered pretty encouraging, but nothing very definite has been ascertained so far, and it was not possible to take advantage of the activity displayed in the Collingwood district in the formation of a large iron ore and smelting company. Land settlement seems to be making some progress, and in various directions the estate is being developed in an encouraging manner, but there is the everlasting cry for money. An issue of £25,000 in 8 per cent. debentures was attempted, but the shareholders responded with £7,810 only, and are strongly urged, in their own interests of course, to subscribe the balance. There was a debit on the two years' operations of £6,927, raising the aggregate deficiency to £11,443. The auditors point out that the holding in the Golden Blocks (Taitapu) is taken in the balance-sheet at 5s. per share, whereas the last making-up price was 1s. 6d., and no depreciation has been charged in the accounts.

BLAYNEY COPPER MINES AND SMELTING.—This New South Wales company can hardly be counted a brilliant success as yet, and the confession has to be made that the operations on the Blayney mine have failed to disclose any appreciable body of payable ore, and all operations below ground have ceased. In the circumstances there does not appear to be anything very sensational in the statement that the company now has a plant capable of meeting all metallurgical requirements. Not only so, but the heavy fall in the price of copper led to the shutting down of many mines in the district, with the result that the company's public smelting business had to be suspended, and the anticipations of a considerable revenue from this source have not been realised. However, the directors are doing their best to ensure regular and adequate supplies of [illegible], and they have under option a property at Wellington, New South Wales. It has been favourably reported upon, and is now being prospected. To provide for these operations and to meet outstanding liabilities the capital has been increased by £75[illegible], which seems considerable. During the half-year to the end of January the smelting department produced a loss of £1,414, while the mining department had a balance of £[illegible] on the other side, the total deficiency after meeting a number of small general charges being £1,641.

GREAT COBAR NORTH.—There are a [illegible] and a brigadier-surgeon on the board of this [illegible] rate mining experts no doubt, and they tell us that the progress of operations from the commencement has been of a [illegible] nature. The work has been largely concentrated upon the No. 3 shaft, which has now reached a depth of 732 ft. and is timbered to the 500 ft. level; crosscutting and driving have been commenced at the 700 ft. level, and the statement made by the general manager in his report to the shareholders in August last that the prospects of striking a rich ore body would increase with deeper sinking appears to be fully borne out by the results of the work, so says the report. The investigation of the Occidental mine, under option to the company, has been continuously carried on, and the directors are awaiting the general manager's conclusions as to the result. A full report upon the company's mine will be available at the shareholders' meeting on Tuesday, but it should have been circulated before that date.

TRADE AND PRODUCE.

WHEAT.—Markets have been dull and lifeless all the week, with prices decidedly easier. An upward movement in America towards the close and bullish weather reports had an improving tendency upon speculative positions. News of small clearances in the Argentine and a general statistical improvement kept cargoes from any marked decline, but spot parcels were down about 2d. per cental under last week's prices. English wheats also favoured buyers at 1s. or so per quarter, and were in small demand. The quantity of wheat and flour on passage to the United Kingdom is smaller at 2,455,000 qrs. against 2,820,000 last week, and to the Continent 1,735,000 qrs. are going against 1,830,000. Imports are up again to 658,443 qrs. against 751,531 a year ago, and farmers' deliveries total 37,231 qrs. averaging 32s. against 31,351 qrs. averaging 31s. 4d. in 1907. Except that towards the end of the week American markets were stimulated by heavy export shipment and bad weather news, they also have had a quiet time with prices generally easier. The visible supply shows a decrease of 2,600,000 bushels on the week.

WOOL.—Business has not shown any great animation, but markets have been firmer and more confident. Some top-makers have advanced their quotations ½d. since last week, a move that has been done more in self-defence, says the *Manchester Guardian*, and made mostly by those who recently sold at very low rates and have been caught. English wools at the county sales are being bought up freely (considerable purchases being made on United States account), but there still remains a difference of opinion as to the relative values of English and colonial wools, and holders have had to give way in many cases to affect purchases. Compared with June, 1907, the average fall in prices at Leicester is about 10s. per tod of 28 lbs. Yarn spinners do not find their position improve, and have difficulty in getting new business at a profit, and it is the same in manufactured goods. Until this end of the trade improves it cannot be considered on a really satisfactory basis.

COTTON (from our Manchester correspondent).—No prominent new feature of moment has shown itself in our market during the week under review. A fair amount of business has been under consideration, but sellers have met with many difficulties in arranging transactions. The steadiness in the price of American cotton is welcome and in some directions shippers of piece goods seem to be feeling their way towards more active operations. Although the situation abroad is gradually improving, it must be some time before stocks in dealers' hands can be materially reduced. Most of our outlets are not unhealthy and it is thought that in the autumn a revival in the demand will show itself. A scattered business has transpired in piece goods, and on the whole Calcutta is the best of the Indian outlets. Some fairly large sales have been put through in fine goods, such as dhooties. Offers for shirtings for the most part have not been of a practicable character. China buyers have tested prices a little more freely and in the opinion of some authorities we are not very far off more active purchasing for Shanghai. The financial situation in Egypt is improving, but shippers are not stimulated to purchase more than sorting up lots. The Levant market does not show very much change. In Burnley goods there has been a dull feeling. T-cloths and Mexicans still move off slowly. Most kinds of cloth made from Egyptian yarn are fairly well held owing to the increasing engagements of makers. Home trade houses have not met with much activity, although spot parcels are more numerous than a few weeks back. Buying for the autumn is of comparatively small dimensions. In American yarns for home use there has only been a retail business done, and the all-round demand is disappointing. The position of wefts is rather better than twists, but in most counts and qualities fairly early delivery can be secured. Shipping bundles have moved off slowly for all markets, and although India buyers have been prepared to operate, the bids in most cases have been quite out of the question. Some re-sales of yarn bought for China have been a feature of the week. Bolton yarns have been steady in price, with a moderate turnover. Producers of carded numbers have gained some strength. Weak holders of July-August contracts sold out on Tuesday last, report Sir Jacob Behrens and Sons, but these contracts appear to have passed into stronger hands, and this has created a much better feeling. Liverpool is decidedly more "bullish" than New York, no doubt on account of the small stocks as compared with last year. The fall on the week does not exceed $\frac{1}{16}$d. per lb., either in American or Egyptian cotton. Spinners of American yarns report very poor progress, and one hears of a reduced output all along the line. As Continental spinners are also working short time, this, in conjunction with the reduction of working hours in America, should improve matters before long. At present there is no margin of profit anywhere, and spinners agree that any improvement must come out of cheaper cotton. They are therefore refusing to reduce their quotations for forward delivery to any appreciable extent, in spite of lower quotations for the raw material.

COAL.—Dulness reigns pretty well everywhere in this trade now. House coals are practically at a standstill, and prices may go even lower than they are. Shipping is only fairly good, and in the North of England has slackened considerably. The large demand from abroad has ceased, and prices, which in consequence of that demand were very much raised, have now to be reduced again, and, unless trade takes a sudden and unexpected spurt, it is not likely that we shall see such high rates for some time. Gas coal contracts are in the market here and there, and generally are concluded at 6d. per ton less than last year's. Welsh coalowners seem to consider that their position shows some improvement. Steams and anthracite are both firm, and in fair demand.

COPPER.—The market has been neither active nor firm, and prices have given way steadily all the week. No support came from speculators and bear sales were heavy, and notwithstanding some good purchases towards the end by prominent houses prices relapsed to £57 cash and £57⅝ three months.

TIN.—Prices improved at first under support from prominent houses and the absence of aggressive sales in the East. But they soon slipped back, and after fluctuating narrowly fell to £125 cash and £126¼ three months. To-day, however, a slight rally lifted the spot quotation to £125¼, but forward metal was unchanged at £126¼.

IRON AND STEEL.—From all quarters come complaints of poor trade. Cleveland pig-iron is again falling in price, but compared with other parts of the country it is still considered too dear and consumers are as much as possible taking their supplies from cheaper centres, Scotch founders particularly. The Continental demand from this district has also fallen off, and exports for the second year have not begun so well as the first. Speculators are keeping out of the market, and consumers will not buy freely in futures. East and West Coast hematites both show signs of further depression, and though makers reduce their prices they cannot induce buyers to come forward, nor will do so as long as other trade prospects influencing the iron market are in such an unsettled state. Manufactured iron and steel branches tell the same story, steel rail makers alone doing a fair average business.

TEA.—With little of last season's crop now to be disposed of, Messrs. Gow, Wilson and Stanton, Limited, think that the combined amount of Indian and Ceylon tea offering during the next few weeks should be quite moderate. No doubt the unattractive quality of Ceylons and the rather indifferent assortments of Indian have helped to lower quotations, for otherwise the sound statistical position gives little reason for this gradual decrease in values. Up to the present any of the new crops offered have been disappointing, Assams especially being of poor quality, but recent arrivals show an improvement. Indian auctions were again small this week, amounting to only 9,212 packages, of which 1,196 packages were new season's tea. Bidding was slack, and except for a few parcels of old crop, buyers showed no desire to operate except at reduced prices. The whole of the new tea was sold on garden account at an average of 8.91d. against 8.52d. in 1907, and 3,734 packages of last season's averaged 7.47d. against 7.26d. in 1907. The quantities of Ceylon offered were again large, viz., 32,485 packages, and for best descriptions the market kept firm, but for common and medium, which comprised a large proportion of the sale, sellers had to bring down their prices a fraction, and for the week 7.38d. was averaged against 7.16d. in 1907. Java sales amounted to 2,789 packages, which passed with fair competition, but with a little irregularity in the prices of common grades.

SUGAR.—The market has been speculative, with constant fluctuations disturbing the confidence of the trade. Old crop quotations for actual sugar rallied slightly early in the week through reports that the weather in Austria and Germany was too dry for the growing beet crops, although there is still 10½d. per cwt. premium upon August as against October-December, while in France the premium for prompt delivery was only 2¼d. Any improvement in futures was therefore bound to affect prompt deliveries in French crystals, and, according to Mr. Czarnikow, the offers of these have been the principal cause of the depression here lately. Round 10s. holders of new crop and fabricants do not seem anxious sellers, otherwise a few days' heat and drought would not affect the market so quickly; what they are more concerned about is how and when the equalisation in value of the two crops will take place. If most of the August tenders were to be taken up by consumers here and in America, there might be a bear account to cover, but otherwise a speculator would hardly take up August beet at 11s., when he can buy the more valuable crystals at a small fraction more for the end of August. If there were an American demand in sight it would be the best support of the market, but that somewhat depends on Java shipments. It is expected that about eight steamers will leave that island in June, which with the two boats in May would mean only 60,000 tons afloat, so that 100,000 tons might be required of July to keep up moderate stocks in the United States. Should the fruit crop be really as abundant as expected, it seems that American stocks will be finally very near beet-importing point, even if the printed stock is correct. The German area under cultivation is now officially stated at 434,886, against 448,500 hectares, being 3 per cent. less instead of an estimated 2 per cent. The fields generally are in good condition, but after great heat rain is wanted, and local thunderstorms supply it here and there. As yet there is very little to complain of, but the great factor will be the weather in the later months. The tone in America, in face of the continued dull advices from the term markets on this side, has been disappointing this week and an easier tendency has been manifest, 96 per cent. Centrifugals declining to 4.25 cents. This, says Mr. Czarnikow, is rather surprising in view of the latest reports respecting the fruit crops in the United States, where record yields are expected, and naturally should have the most favourable effect upon consumption. The landings in the three ports for the week were 47,000 tons and meltings 42,000 tons, leaving stocks at 309,000 tons.

Letters of allotment for the issue of 300,000 preference shares in Whiteaway, Laidlaw & Company, Ltd., have been posted to English applicants.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for week ended June 21, $3,500, increase $110, aggregate from July 1, $219,056.

Argentine North Eastern.—Traffic receipts for week ended June 19, £3,065, decrease £1,571; aggregate from July 1, £166,095, decrease £10,280.

Assam Bengal.—Traffic receipts for week ended May 23, Rs. 79,000, decrease Rs. 5,570; aggregate from Jan. 1, Rs. 18,28,154, decrease Rs. 53,881.

Bilbao River and Cantabrian.—Traffic returns for May £8,461, decrease £1,439; aggregate from January 1, £41,060, decrease £6,520.

Buenos Ayres Central.—Gross receipts for May £13,793, increase £698; aggregate from Jan. 1, £121,782, decrease £1,394.

Canadian Northern Railway.—Traffic receipts for 7 days ended June 21, $151,200, decrease $51,100; total from July 1, $8,793,700, increase $1,629,000.

Egyptian Delta.—Traffic receipts for week ended June 6, £4,569, decrease £54; aggregate from April 1, £44,203, decrease £3,865.

Lucknow Bareilly Railway.—Traffic receipts for week ended May 23, Rs. 32,159, decrease Rs. 16,510; aggregate from January 1, Rs. 7,42,256, decrease Rs. 58,439.

Midland Uruguay.—Receipts for month of May, £6,808, increase £343; aggregate from July 1, £64,204, decrease, £4,482.

North Western of Uruguay.—Traffic receipts for May, $21,000, decrease $4,751; aggregate from July 1, $220,481, decrease $16,346.

Quebec Central Railway.—Traffic receipts for the 3rd week of June, $28,986, increase $4,615; aggregate from January 1, $500,865, increase $88,016.

Quebec and Lake St. John.—Traffic receipts for Feb. $31,941, decrease $2,037; aggregate receipts $68,216, decrease $1,606.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended May 23, Rs. 24,524, decrease Rs. 1,354; aggregate from Jan. 1, Rs. 4,96,169, decrease Rs. 14,898.

Uruguay Northern.—Gross receipts for month of May, £1,638, decrease £664; aggregate from July 1, £19,549, decrease £847.

White Pass and Yukon Railway.—Traffic receipts for week ended June 7 amounted to $33,702.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending June 20, £1,113, decrease £311; aggregate from January 1, £29,152, decrease £5,073.

Cockermouth and Keswick Railway.—Receipts for week ending June 20, £870, decrease £27; aggregate from January 1, £18,007, decrease £1,674.

East and West Yorkshire Union Railway.—Traffic receipts for week ended June 20, £421, increase £34; aggregate from January 1, £10,585, decrease £436.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending June 17, £748, decrease £62; aggregate from Jan. 1, £16,144, decrease £1,366.

Blessington and Poulaphouca.—Traffic receipts for week ending June 17, £20, increase £5; aggregate from Jan. 1, £248, decrease £1.

Bristol Tramways and Carriage.—Traffic receipts for week ending June 19, £4,787, decrease £220; aggregate from Jan. 1, £119,833, decrease £2,377.

British Electric Traction.—Receipts of all the Associated Companies for the week ending June 19, £29,554; 428 miles.

Burnley Corporation.—Traffic receipts for week ending June 20, £1,150, decrease £68; aggregate from January 1, £31,565, decrease £81.

Dublin and Blessington.—Traffic receipts for week ending June 17, £159, increase £23; aggregate from January 1, £2,831, decrease £48.

Dublin and Lucan.—Traffic receipts for week ending June 19, £136, decrease £2; aggregate from Jan. 1, £2,769, increase £136.

Dublin United.—Traffic receipts for week ending June 19, £5,420, decrease £1,087; aggregate from Jan. 1, £122,740, decrease £2,745.

Hastings and District.—Traffic receipts for week ending June 18, £1,014, increase £4.

Isle of Thanet.—Traffic receipts for week ending June 20, £697, decrease £64; aggregate from Oct. 1, £12,623, decrease £370.

London County Council.—Traffic receipts for week ending June 13, £39,378, increase £7,219; aggregate from April 1, £361,883, increase £37,526. Miles 121½, against 116½.

London General Omnibus.—Traffic receipts for week ending June 20, £24,358, increase £1,201; aggregate from Jan. 1, £494,155, decrease £7,041.

London Road Car.—Traffic receipts for week ending June 20, £9,529, decrease £1; aggregate from Jan. 1, £185,511, decrease, £3,291.

London United.—Traffic receipts for week ending June 20, £7,413, increase £115; aggregate from January 1, £151,044, increase £2,690.

Provincial Trams.—Traffic returns for week ending June 20, £1,790, decrease £27; aggregate from Oct. 1, £58,610, increase £1,134.

Rossendale Valley.—Traffic receipts for week ending June 19, £198, decrease £3.

Sunderland District.—Traffic receipts for week ending June 17, £442, decrease £3; aggregate for 33 weeks £15,217, increase £1,397.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending June 21, £1,205, increase £36, aggregate from January 1, £29,388.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending June 17, £17,760, increase £1,558, aggregate from January 1, £444,747, increase £48,218.

Auckland Electric.—Traffic receipts for 28 days ending May 22, £11,341, increase £1,095; aggregate from January 1, £[illegible], increase £6,844.

Bombay Electric—Receipts for April, Rs. 1,89,450, increase Rs. 48,150.

Brisbane.—Traffic receipts for month of May, £13,275, increase £2,273.

British Columbia Electric.—Nett earnings for April, $47,623, increase $4,373. Aggregate nett earnings, including income from investments from July 1 to Apr. 30, $785,789, increase $202,562.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for 7 days ending June 23, £7,508, increase £776.

Calcutta.—Traffic receipts for week ending June 20, Rs. 34,546, decrease Rs. 10,786.

Cape Electric.—Traffic revenues for the month of May, Cape Town, £9,752; Port Elizabeth, £2,800.

Carthagena and Herreiras.—Traffic receipts for the month of May, £1,542 decrease £2,714; total from January 1, £9,970, decrease £16,705.

Geneva Trams.—Earnings for May, fr. 228,506; increase fr. 18,528.

Kalgoorlie Electric.—Gross receipts for May, £3,939; aggregate from January 1, £18,979.

Lisbon Electric.—Earnings for May, milreis 141,816.

Madras Electric.—Traffic receipts for fortnight ended June 15, Rs. 18,226, increase Rs. 2,496; aggregate from January 1, Rs. 2,09,607, increase Rs. 21,311.

Melbourne Tramways and Omnibus.—Traffic receipts for May, £44,500.

Mexico.—Nett earnings for month of April, $204,055, increase $43,411; aggregate nett earnings from January 1, $802,524, increase $224,211.

Monte Video United.—Gross receipts for May, £17,193, increase £1,919; aggregate from Oct. £143,971, increase £21,856.

Perth (W.A.) Electric.—Gross receipts for week ended June 19, £1,258, decrease £93; aggregate from January 1 £34,967, decrease £917.

Rio de Janeiro.—Gross earnings for 23rd week 1908, $27,527; increase $2,374.

Sao Paulo.—Traffic returns for April: nett earnings, $125,484, increase $14,463; aggregate from Jan. 1, $507,246, increase $37,254.

Twin City Rapid.—Traffic receipts for the month of April, $493,497, increase $28,277; aggregate from January 1, $1,901,955, increase $80,793. Nett traffic receipts, $247,172, increase $41; aggregate from January 1, $890,961, decrease $17,814.

Bank Rate 2½ per cent. (Reduced from 3 per cent. on Thursday, May 28.)

Norfolk House, Friday Evening.

A sort of uneasy ease abides with the market, and in spite of the continued absorption of our floating balances by the German banks, who are availing themselves of cheap money here to transfer the weight of their industrial commitments as much as possible to our market, the six months' discount rate has been pressed down to 1⅞ per cent. In the early part of the week most brokers quoted 1 5/16 to 1⅜ per cent. for three months' bills and 1¾ to 1 7/8 per cent. for sixes, but sixes occasionally touched 2 per cent., and then the market was described as firm. Yesterday, however, both two and three months' bills could be discounted at 1¼ per cent., and it was difficult to get 1⅜ per cent. on a four months' bank bill, although some houses gave the rate as 1⅜ to 1½ per cent. The market was not really harder to-day, though bankers called notes firm in the afternoon because money was scarcer.

Such ease is the natural product of low rates for floating money. As the end of the year approaches seven-day money has become dearer, and 1¾ to 2 per cent. is now quoted for loans over the end of the month, but earlier in the week it was difficult to get more than 1 per cent. for seven-day loans, and day to day money not infrequently commanded less than 1 per cent. With such ease it may seem surprising that the Bank of England should calmly maintain its minimum discount rate at 2½ per cent., but the very fact that it does so should make the market cautious in estimating for a long continuance of the present apparent glut of floating credit, and there are circumstances attending the ease which are not wholly reassuring.

If we look at the Bank return it appears encouraging at most points. The reserve of £28,862,000 is £4,078,000 higher than it was at this time last year, and in spite of recent investing by the Bank its other securities at £30,023,000 are down £5,956,000 on the comparison of years. The market is thus in a better position both as regards the reserve and its indebtedness to the Bank than it was at the end of June last. Other deposits, too, although £706,000 lower now than they were then, amount to the rather comfortable figure of £46,167,000. If not absolutely assuring prolonged ease, these changes and improvements taken in conjunction with reduced industrial requirements appear to warrant the present dead low level of market rates. We have, however, to consider what the position would be were any strain to be suddenly put upon our market by political or financial obligations abroad. Contingencies of that kind are only too obvious, and the question is—would our Bank be able to furnish assistance to distressed finance in other countries or to meet the drafts upon its resources which complications abroad might bring? It is a reassuring fact that we have paid back all the gold we borrowed from France, and have allowed some £5,000,000 in additional of the metal to be bought up for Paris, but supposing Germany were suddenly to require £5,000,000 or £6,000,000 in gold, would we be able to let her have it? Certainly not with ease, and the disquieting fact about our present position is that we are still trading without regard to any appreciable margin or insurance fund against unpleasant events. In spite of the great ease of the short loan market, it is estimated that within the next three days the Bank of England will have to advance from £5,000,000 to £6,000,000 or even £7,000,000 to the market to enable it to tide over the end of the half-year. It took something like £1,000,000 towards this to-day. Compared with what the Bank used to be called upon to furnish in the war years and for a year or two after, the highest of these sums is small, but it shows just as much as the larger borrowings of those years did how persistent is the habit of our credit dealers to use up the last shilling of their balances in endeavouring to turn an honest penny of profit. We have no spare cash, and extreme cheapness is not in any degree sought to be corrected by the banks. They make no effort to put aside balances at the present time so as to get better rates upon the proportion they might still be willing to lend. Gold is not accumulated at all except by accident. On the balance of foreign bullion movements last week the Bank gained only £12,000, and it has retained no more than £3,465,000 of the metal imported since the beginning of the year. France is allowed to take away all that comes into the open market, Germany will be allowed to take it, anybody can come and take it, and we seem not to be in the least degree apprehensive that carelessness in this respect can ever produce any unpleasant consequences. To be sure the Bank last week gained £528,000 in coin returned from the active circulation, but that is merely one more indication of how bad business is throughout the country. Circulation is stagnating because people cannot use the money, and its return to the Bank of England is not an indication of increased financial strength so far as the country at large is concerned. The reserve would be reduced as fast as or faster than it has increased were commerce to improve to any important extent, and the gold pinch once more grip the credit market.

Contrast the action of the Bank of England, of our market as a whole, for the Bank depends largely upon the market, with that of the Bank of France, which has diligently and continually sought to increase its

stock of gold. Last week there was an increase of £838,000, making the total £126,055,000, and at the same time the note circulation fell back by £1,760,000. The Reichsbank has also been busy lately gathering in gold, and has raised its stock, as revealed in the return of the 23rd inst., to £55,891,000, the increase since the previous return having been £2,032,000, so that, in spite of an increase of £799,000 in the note circulation, it is still nearly £14,800,000 below the tax free legal maximum. Our market is content to let these accumulations go on, and has apparently no desire whatever to copy the policy they disclose.

In view of the much-mentioned Russian loan, it is interesting to observe that the last return of the Imperial Bank of Russia shows a further decrease of £714,000 in the amount of its gold reserve held abroad. That reserve is, therefore, now down to less than £13,000,000, and must be considered an insufficient protection to the foreign bondholder, whose requirements amount to a good deal more than that every six months. The domestic gold reserve, however, is £588,000 up, and still amounts to nearly £92,000,000, so that the note circulation of £110,000,000 is amply covered, whatever the position of the foreign creditor may be.

SILVER.

Continued buying by the bazaars not only had the effect of frightening the "bears," but induced a certain amount of forward business, and prices rose rapidly to 25⅜d. per oz. for cash and 25 7/16d. per oz. for future delivery. The improvement, however, brought out sellers, and with supplies more abundant, quotations relapsed to 25 3/16d. for both positions. They recovered 1/16d. of this loss on Thursday, but with the purchases for the Eastern steamer completed, business came to a standstill, and prices were marked down again to 25d. per oz. for both spot and forward metal. Last week's sale of the full amount of Council drafts on India appears to have been due to exceptional circumstances, and tenders for the Rs. 10,00,000 offered on Wednesday only amounted to Rs. 1,55,906. The whole were for bills which were allotted at 1s. 3 29-32d. per rupee. Next week another Rs. 10,00,000 will be offered.

The Stock Markets.

No perceptible improvement in business has taken place this week, and none was to be expected. Spasmodic activity develops now and then, but dealings soon die away, and members of the Stock Exchange are either idle or occupied in trying to account for the inertia of markets. They have a story to the effect that all the available capital of the city is locked up in underwriting. That is, no doubt, exaggeration, but there must be an unpleasant amount of bankers' money engaged in this direction at the present time, although some of the new issues that were at first failures have been gradually passing into the hands of the investor. This has notably been the case with the Moscow loan, but even of that there must still be a considerable amount in the hands of the underwriters or of the second-stage intermediaries to whom they sold, and there is much Canadian and not a little Argentine scrip also unplaced. Brokers, however, are fairly confident that when the July dividends are disbursed money will come into the market in amounts sufficient to give a fillip to business. They rely also upon the influence of low rates for money. People will not leave their balances with their bankers at 1 per cent., and in their efforts to get a better yield are sure to buy stocks and shares. All this is true enough, and if there is sufficient money of the kind, an increase in activity may be counted upon, and may last throughout July. There is, however, no money available for large speculative movements, and the public is by no means disposed to abandon the cautious and inquiring attitude it has so long maintained. Not all the efforts and expenditure of the South African group has persuaded the man with money to lose to resume his dabbling in Kaffir shares, and there is so much touting in that market about economy prolonging the life of mines and the probability of continued high dividends that the caution may just as well continue to be exercised. The public has

no more reason to believe the glowing presentments about South Africa set before them by the Press, whose opinions can be purchased, than it has to trust the sanguine vaticinations of gentlemen like Mr. Pierpont Morgan, who have much paper to sell for gold.

And beyond all transitory influences affecting markets, they are obsessed still alike by the needy condition of most governments and by the simmering of political trouble in various parts of the world. All nations, without exception, are living beyond their means, and the world's prosperity, so called, is a creature of finance to an extent never before seen in the history of mankind. One day there must be a liquidation, and governments must return to saner methods of conducting national affairs, but until some event like a great war or a great bankruptcy occurs and is sufficiently important and startling to force governments to call a halt, the extravagance now seen must continue to eat into the vitals of the people, consume savings, and render such prosperity as can be manufactured a product of credit much more than of substantial increases in wealth. In one sense wealth is doubtless increasing nearly everywhere. It always does increase in times of peace, but it is questionable whether the increase is not mortgaged to an extent far in excess of its intrinsic worth through the eagerness of governments and corporations to reap the hoped-for harvest as soon as it is sown. Rabelais' Panurge was not much more reckless than some countries, governments, and people alike when he consumed his corn in the grass, and piled up debts with lightning rapidity. It is this extravagance which really lies at the bottom of the general uncomfortableness; the doubt and uncertainty that haunts stock markets, and causes everyone connected therewith to live in a state of suppressed doubt, not knowing whether the paper dealt in is worth what it changes hands at, or whether it would not be dear at two-thirds or half the price.

Contangoes.

Small though speculation has been, the arrangement of the account on Wednesday disclosed some increase in the position open for the rise amongst Home Railways. Contangoes rarely went as high as 5 per cent., but they were quite ½ to 1 per cent. above the rates of a fortnight ago, so that members who borrowed at 2 to 2¼ per cent. had a comfortable margin in lending again, everything allowed for. Banks did not do a great deal at 2 per cent. in Stock Exchange advances, but 2¼ was by no means a severe figure, and the demand for new money sensibly exceeded the payings off. On Foreign Government bonds money was also rather dearer, but the rates upon American or Argentine Railways were either the same as in the middle of the month or ½ per cent. lower, and Grand Trunk third preference stock continued scarce for delivery, but on Hudson's Bay shares the contango was again heavier at 3s. to 4s. Altogether it was an easy enough account to arrange, and the differences were seldom of an onerous kind one way or another, but there has been some increase in commitments for the rise.

Trustee Securities.

In the circumstances it is not to be expected that even the best classes of stocks will show much elasticity. They droop after every slight rise, or at best stand still. Consols lost ground last week, and they have not made it up in the week now closing, although a few pence better. Irish Land stock, however, continues firm enough, and various London County Council stocks have gained another fraction, but Bank of England stock continues to be offered with unpleasantly suggestive persistence, and yesterday it touched 268½, closing not better than 270. Contrasted with this, the stock of the Bank of Ireland has rallied 4, and the steady fall in Bank of England stock excites some uneasiness. People are asking what on earth is the matter. Will the Bank reduce its dividend? Is it going to write down the value of its securities, or what? Probably the market curiosity will not be gratified, and we have no reason to suppose that anything of a startling nature could be revealed in any case, but the Bank does not disclose its position at any time beyond what the weekly figures show, and the holders of its stocks are therefore an easy prey to the alarmist. For all that it may very well be that the weakness of the stock is due to selling on account of deceased estates upon a market always narrow and difficult to deal in, because no jobber will take up a large line of such an expensive security and hold it until buyers come forward to relieve him. India stocks are still heavy, with nothing going on in them, and the Domestic Corporation list is perfectly stagnant. Colonial inscribed stocks, too, just hold their own, and attract very little attention of any kind. The movements amongst Colonial and Foreign Corporation stocks are also rare and insignificant.

Foreign Government Stocks.

An effort has been made this week to work up Russian bonds on the Paris Bourse, so as to facilitate the placing of the new so-called "internal" loan of £20,000,000. On the week, however, prices are lower, and the anarchy in Persia, together with the position in Turkey, indispose the public, here at all events, to take any hand in sustaining this market. German 3 per cents. are also heavy on the new Prussian issue, and in spite of cheaper money in Germany, but Japanese bonds have been steady, and some little recovery has taken place in one or two of the later Brazilian issues, as well as in Argentine loans. Take it altogether, though, the Foreign Government bond market is very much of a desert so far as business goes.

Home, Indian and Colonial Railway Stocks.

There is no "go" in the Home Railway market, and it is useless harping about it. Prices have not fallen much during the week so far as the leading stocks are concerned, and North-Western and Lancashire and Yorkshire are actually 10s. up as a result of that "fusion" story, but Midland deferred is down ¾ and Great Northern, South-Eastern, South-Western, Great Western, District, and, above all, Metropolitan stocks have been flat, especially towards the end of the week. Metropolitan is actually 4 down on the week, and the price has got back to 38. Very little business has been seen amongst debenture, guaranteed and preference issues, but the Great Central preference have been busy shedding the recent advance, as was to be expected. Traffic receipts were again poor, and, according to the *Railway News*, fell off £90,709, making the decrease for the 25 weeks expired £1,003,098. Dividends must, therefore, come down.

Outside Grand Trunk stocks, and to a smaller extent Canadian Pacific, very little dealing has gone on amongst Colonial stocks, but Grand Trunk second preference has been driven up 4 by the repurchases of bears, and third preference and ordinary have also rallied, while Canadian Pacific have just held last week's figure. Indian Railways have been dull, with most of the few changes the wrong way.

United States and Foreign Railway Stocks.

Changes on the week are also in every case down amongst Yankee Railroad shares, Baltimore, Chesapeake, Louisville, Illinois Central, New York Central, Norfolk and Union Pacific being the ones that have suffered most, falling from 2 to 5½, but mercifully the British public is very little interested, and the professional play has died down amazingly even in Union Pacific shares, gamblers in which have been disappointed by the flash-in-the pan sort of success of the company's new bond issue. Nor is there anything doing in bonds. Just now and then a bargain occurs which seems to be as often a sale as a purchase. It is best so.

Argentine Railways have suffered from the apathy of the public, but have not further receded in price. On the contrary, B.A. and Pacific and B.A. Western stocks have recovered, and most of the others are steady, being, as a rule, let alone. The Foreign Railway market, as a whole, is in the same condition, and

changes amongst prices are rare, so that no movements worth dwelling upon have taken place. Both Leopoldina and San Paulo stocks have hardened a little, but United Railways of the Havana debenture issues have shown some disposition to recede.

Banks, Breweries and Industrial Securities.

Less than a dozen changes have taken place in the group of Bank shares during the week, and the only movement exceeding 10s. has been a rise of 1 in the old bonds of the Agricultural Bank of Egypt. Among Home banks, London City and Midland and Parr's are ½ better.

Brewery stocks are just as usual, and not worth lingering over, the only change of magnitude being a fall of 4½ in Ind, Coope's "B" debenture stock.

Dock stocks are left alone, and there is precious little doing amongst Commercial and Industrial securities. Prices may be considered steady, since a majority of the changes have again been favourable, but seldom from much trace of business. Shares and bonds like Bradford Dyers and the English Sewing Cotton have betrayed weakness, but Hotel shares and bonds are steady, and there has been a slight recovery in the preference shares of George Newnes, Limited, while Mazawattee shares have slipped back 1s. or 2s. Havana Cigar preference shares have also been rather unpleasantly depressed, but Mond Nickel preference shares have risen to 7½, and a good many debentures show some improvement, including those of the Pacific Phosphate Company and Peek, Frean, and Co., as well as the bonds of several of the hotel companies.

Apart from a decline of 3¼ in the stock of the Electric Light and Power Company, and a drop of 26½ in the debenture stock of the Indian Electric Supply Company, nothing has happened this week in the Electric list to deserve mention, unless indeed we point to a rise of 2 in the shares of the Canadian Electric Company, in which, however, there seems to have been no business going on here.

Financial Land and Investment, Gas and Other Minor Groups.

On the week Hudson's Bay shares have lost 3, the report having been less gratifying to the bulls than they had hoped for, but the price is still about 88 to 88½. All Peruvian Corporation stocks have rallied a little, and there has every day been some business in them. Peter Walker and Sons' Proprietary Corporation debenture stock has been marked down 12, but whether any of it was sold we cannot say. As against these declines, Midland Freehold Land Preference stock has risen 3 and Australian Estates 1st Debenture stock 5, also without business shown. Nothing happened amongst Financial Trusts worth giving a line to, but their securities seem steady on the whole, though why they should move up or down, the business done does not enable one to guess.

Gas stocks keep steady on the whole in spite of a slight recoil in Gas Light ordinary, and Insurance shares have scarcely moved at all during the week, the only change worth mentioning being a rise of ½ in London Guarantee and Accident shares.

A fair number of movements have occurred in the Iron, Coal and Steel group, amongst them an advance of 2½ in the debenture stock of Beyer, Peacock and Co., of 1 in the debenture stock of Dorman, Long and Co., of 2 in Lysaght's debenture stock, of 4 in Shelton Iron second debentures, and of 2 in United Collieries debentures. Amongst shares the changes are also favourable in most cases, but never important.

Amongst Shipping things Cunard's shares, both fully and partly paid, are ½ down, and in the Tea, Coffee and Rubber group Anglo-Ceylon stock is 2½ higher. The debentures of the Dumont Coffee Company have also nearly reached par. All is quiet amongst Telegraphs and Telephones, with prices much where they were a week ago, and nothing exciting in any way has occurred amongst the Tramway and Omnibus group, where, however, London General Omnibus stock has recovered a little, and was yesterday dealt in at 42 for the mid-July account. Mexican Tramways common stock is also 1½ up.

Friday Evening.

Whether paying or receiving, the small effort required seems to have been quite enough, and no energy has been left for market operations. In the Consol market, as an observant jobber remarked, "Stocks are firm, but there is no demand for them or for money either. Still cheap money is bound to tell in the end." Home Rails were a little higher with the thermometer. Trunks put on about ⅜ all round in anticipation of the May revenue statement due on Monday. Americans sagged, and, so to speak, didn't come over at all from Wall Street, where the early closing and the holiday to-morrow stopped business. Among things Miscellaneous there was a demand for Smithfield and Argentine Meat, which put on 1s. 6d., and although Indian Electric Supply and Traction debentures rested after their sensational fall of 30 yesterday on an attempt to sell £500 stock, the price of 60-70 is no indication that they have touched gravel. Paris sent over selling orders and depressed Tintos, which close at 64½, and Kaffirs, which are about 1/16 off generally. In some quarters this was put down to liquidation in connection with the bank failure in Munich, but the trouble there was probably of American origin. The scrip of the new Canadian loan is just about par.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: Irish Ld. Stk. and Acct. both ¼, to 91-¼, Exchequr. 3 p.c. Bds. ¼, to 100⅛-⅜, Mauritius 2, to 95-7, Turks. Guar. 1, to 104-6, Bk. of Ireland 4, to 315-23. **Fall:** Bk. of England 1⅛, to 268-72, India 1926 Acct 1, to 74-6

CORPORATION AND COUNTY STOCKS.—Rise: L.C.C. 3 p.c. Acct. ¼, to 93-½, do. 3½ p.c. and Acct. both ¼, to 102-½, do. Scrip. 1¼, to 73-½.

Answers to Correspondents.

**** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

A. B. S.—We are sorry to say that we do not see any prospect of a recovery, and on the whole it will perhaps be better to sell.

A. C.—Tempting, prospects good and business growing. Yes, we hold 1s. to your credit.

H. B.—The company has been spending too much capital, and the present condition of the market is not calculated to encourage a speedy advance. Cheap money might send the stock up, but the chance is too small to make a speculative purchase advisable.

W. J. H.—Unless there is a profit we should hold, as the company was not involved in the mess the other companies of the same name have fallen into.

E. J. T.—There is certainly no benefit in making the exchange, but, at the same time, we should be inclined to hold for a recovery. This exhausts your deposit.

G. H. W.—Of the stocks you name, No. 2 is the best. No. 1 is also good, but less marketable, and as for No. 3, we think it had better be left alone.

A. G.—Smaller trade, fewer great works going on are principal reasons. We hardly think the time has yet come to buy.

Pen.—(1) We regret to say we think these should be sold, for prospects grow darker. (2) These also are not worth keeping. The company is being beaten by its competitors and is very poorly managed altogether, so that it is losing trade.

H. B.—We think we know what they are really worth, or nearly, but the price is swayed by gamblers, and we cannot make a guess worth anything. If money hardens, the shares may drop like a plummet, but just now the price looks like holding within 10 or 15 per cent. of the present figure.

Virginia.—It is a monopoly, of course, and over-capitalised. Still, these bonds should be amply covered, and we think a purchase reasonable.

A brochure entitled "A Builder of Canada," just issued by the Canadian Northern Railway Company, and obtainable for 6d. at Bond Court House, London, E.C., is both useful and interesting. It tells of the progress of the railway in 11 years, the country through which it passes, and the industries which have accompanied it, and contains many photographs of places of interest, incidents of farming, mining, and electrical development, and, lastly, the districts where the best shooting and fishing can be obtained. Seekers after new homes should get the work.

CORDOBA CENTRAL BUENOS AYRES EXTENSION RAILWAY, LIMITED.

The engineers of this line report that the surveys, plans, expropriation of land and earthworks are practically finished, with the exception of the entrance into Buenos Ayres, where the earthworks have only just been commenced. Work in connection with the bridges was delayed owing to the depth it was found necessary to sink the foundations in order to reach good solid material, but about 35 per cent. of the permanent bridges and culverts are complete and the retaining wall of the entrance into Buenos Ayres has been commenced. The rails have been laid from Rosario for 165 kilometres and at the Buenos Ayres end for 70 kilometres, some 120 kilometres being already open to local traffic and the contractors anticipate that the line will be sufficiently finished to allow of its being provisionally opened to through traffic before the end of the year. After lengthy negotiations with the Executive Government and the Municipality the definite plans for the entrance into Buenos Ayres have been finally approved and provide for the location of the retaining wall at a distance varying from 50 to 120 metres further out in the river than was originally contemplated. The additional cost involved will, under the works contract, form an extra, but as compensation the company secures a permanent low level entrance and is relieved of the obligation to raise its lines so as to enter on the high level whenever called upon to do so. Contract expenditure for the year was £718,538 making a total under this head of £1,572,441, outlay on land for administration building in Buenos Ayres comes to £106,433, and with £575,000 paid for the concession and administration and other charges the total spent to date is £2,291,897 leaving £335,862 of the capital originally raised still in hand. Since the closing of the accounts £250,000 of the debentures have been issued, and it is proposed to issue the balance of £1,240,000 at an early date.

AFRICAN BANKING CORPORATION.

In the half-year ended March 31 last this company's gross profit, including £102,702 brought forward, was much the same as that for the corresponding half-year, and after allowing a few pounds more at £10,555 for rebate besides writing off £1,029 for depreciation of furniture and placing £2,000 to the staff guarantee and savings fund as before, the directors again pay a dividend at the rate of 6 per cent. per annum, leaving £9,974 or £1,010 more to be carried forward. These results are all the more creditable in view of the fact that business seems to have been shrinking as might be expected from the depressed condition of South Africa. Thus the note circulation is down £87,054 at £234,616, and the liability on current and deposit accounts at £4,058,372 is £217,628 lower, but there is an increase of £34,097 in the drafts, acceptances, endorsements and bills rediscounted, an item standing at £273,287. Among the assets coin, bullion and notes held show a decline of £61,541 at £762,186, but cash at banks and lent at call or short notice is £181,800 up at £412,832, so that these two categories taken together show an increase of over £111,000. Investments, principally in home and Colonial Government securities, are also £38,411 up at £417,427, but bills of exchange purchased at £1,022,401 show a decrease of over £52,000 and bills discounted, loans and advances are £335,331 lower at £2,322,811. The liability on acceptances is £6,387 less at £48,116. Bank premises, furniture and stamps stand at £153,030, the total of the balance-sheet being £5,138,804.

IMPERIAL OTTOMAN BANK.

No doubt the high rates for money enabled this strong bank to keep up its profits last year, for otherwise its figures are suggestive of the contraction of business. Probably, however, the decrease did not occur until almost the year's end. Be this as it may, the profits for 1907, after allowing for bad and doubtful debts, were only £3,360 less at £519,927, and when the larger balance of £20,841 brought forward is considered, the disposable revenue is very little less than it was a year ago. After deducting the statutory £73,786 required to be added to the reserve it is £638 less than in the previous year. The committee of the bank recommends the usual dividend of 18s. per share, equal to 9 per cent. for the year, and has £16,982, or £3,859 less left to carry forward. The balance-sheet which foots up at £21,023,670 shows a reduction of about £91,000 in the note circulation of £1,090,764. Bills payable are also down £1,200,000 at £1,704,232, and the decrease in current account balances is about £136,500 at £10,382,329. Fixed deposits are also £6,347 less at £1,359,376. That business has stagnated is just as obvious from the changes in the assets. Thus cash has risen by £1,157,542 to £3,467,959, while at the same time money lent at call and notice is down £269,000 to £1,555,441 and bills receivable are less by £302,000 at £3,084,873. Investments show the most noticeable change of all being down £1,204,616 to £3,165,328. "Current accounts of sundries" also show a reduction of £475,716 at £2,937,416 and advances on securities are £797,105 lower at £4,175,317. Bank premises and real estate stand at £259,028, the aggregate of these four items being £10,537,090. Then comes the statutory advance to the Turkish Government, which remains at the previous figure of £909,091, but there is a remarkable increase of over £506,000 in the participations of the bank in other advances to this Govern-

ment, the total of which was at December 31 last £1,378,643. Altogether adding in the "current account" with the Government which stagnates at £90,572, the total commitments of the bank in the fortunes of the Sultan's Government amounted at the date of the balance-sheet to £2,379,000.

NATIONAL BANK OF NEW ZEALAND.

In the March half-year this company's gross profits were up £7,375 to £174,919. A larger balance by £1,152 at £10,319 was also brought forward, so that although the working expenses at £84,375 showed an increase of £4,232 on the corresponding half-year the directors had no difficulty in paying the usual dividend at the rate of 10 per cent. with a bonus of 2 per cent., and in again adding £25,000 to the reserve fund besides appropriating £4,000 as bonus on the salaries of the staff and giving the officers' pension fund £3,000 as against £3,500 a year ago. The balance left to carry forward was £11,363. A year ago, however, £5,000 was allocated in reduction of cost of premises, and there is no mention of that in the report before us. On the contrary, the item landed property, premises and furniture shows an increase of about £9,200 on the year at £79,808. The balance-sheet may be said to indicate steadiness in the circumstances, although the note circulation has gone back £16,494 to £267,134. Current and deposit account liabilities, however, show an increase of £79,127 at £3,760,526 and bills payable are down only £38,221 at £458,546. Coin and bullion, money at call, &c., shows an increase of £238,500 at £1,208,541, the coin and bullion being £952,548 of this and the money lent or deposited £255,993. Investments have gone down by £45,470 to £201,244, and bills receivable and advances at £3,762,226 show a reduction of £152,273, the aggregate of the balance-sheet being £5,251,819.

JOHN BROWN AND CO., LIMITED.

Several changes are noticeable in the report and balance-sheet of this important engineering, mining and shipbuilding company for its year ended March 31 last, and they are not all to our liking. To begin with profits amounted to only £218,405 or £15,833 less than in the previous year, and adding to this the balance of £63,970 brought forward, which was £1,238 larger than that of the previous year, the nett amount available for distribution after meeting debenture interest and allowing for depreciation on an unmentioned scale is £14,595 less. Directors, however, make up the dividend to 10 per cent. for the year by a final payment of 1s. 6d. per share on the fully-paid and of 1s. 1½d. on the part-paid shares and have £65,388 left to carry forward. A year ago, however, £50,000 was taken from profits in reduction of the capital expenditure account, and this year nothing is assigned. But the directors have the excuse that the nett sum realised by premiums on the new share issue after deducting expenses was £195,292, and the whole of this has been appropriated to writing down cost of the freehold and leasehold land, buildings, works, blast furnaces, shipyards, collieries, shares in Spanish mines and other companies, &c. The total of this agglomerate, however, is none the less £1,088,000 more than it was a year ago at £3,910,881. And it would surely have been reasonable to expect a considerable increase in profits from this large further outlay of capital in the acquisition of new businesses and other extensions. Perhaps the time has not been long enough to allow the full benefit of the new investments, works, &c., to come into play, and we must hope the best. Meanwhile sundry creditors are owed £114,199 more than a year ago at £646,432, while sundry debtors figure at only £44,410 more at £550,830. Stock, on the other hand, is almost £140,000 down at £434,187, so that the position of the balance-sheet does not look so pleasant as it ought to do. It may be only a temporary change for the worse, but the company undoubtedly owes more and has less evidence of flourishing times in the stock or debts due to it or in proportion to the larger amount of capital involved. Cash and bills stand just at £15,627 or only £289 more than a year ago. The directors state in their report that the depreciation in the shipbuilding industry is seriously affecting that branch of the company's business, but that colliery operations have shown a decided improvement, although the decline in the prices for pig-iron has in the later months of the year seriously affected the price of coke. After mentioning the successful launching of the *Lusitania* and that satisfactory progress is being made with Government orders for vessels of war, it is added that the Frodingham purchase and the acquisition of an interest in the firm of Harland and Wolff have been completed, both incidents pointing to a closer linking up of shipbuilding interests under the lead of this powerful company. Its balance-sheet now totals up to £4,932,739, and that is a powerful lot of capital to render productive in present circumstances.

TREDEGAR IRON AND COAL CO., LIMITED.

The boom in the coal trade last year proved of very considerable benefit to this company, and the directors describe the trading for the twelve months ended March 31 as the most successful in its history. Prices rose rapidly and continued high until the end of 1907 when a set-back occurred, but the company was fortunate enough to have made substantial contracts and sales before the drop came, and the position is said to be satisfactory. The output of coal only increased by 21,459 tons to 1,626,058 tons, while the production of coke was reduced by 18,333 tons to 59,600 tons owing to the directors having found it more advantageous to dispose of the small coal than to pass it through the coke ovens. Yet the profit on working account was no less than £54,628 larger at £183,236, and as interest on loans, &c., took £2,046 less at £4,606 the nett surplus, including £1,226 brought forward, amounted to £179,857 as against £123,051. The directors naturally take advantage of this fine revenue to raise the dividends on the "A" and "B" shares from 7½ per cent. to 10, but in doing so they have not overlooked the necessity of making provision for the future and in addition to setting aside an extra £25,000 to the reserve for sinking they write off £20,000 against £10,000 for depreciation and carry forward £2,423 or £1,147 more. Capital expenditure for the year was £15,882 but £42,887 was debited for freehold royalties, properties sold, &c., and, after making allowance for the sum now written off, this item is £27,005 down at £992,686 against which the reserve will now amount to £175,000. Stocks have been reduced by £12,589 to £26,826, but debtors owe £129,481 compared with £73,239 due to creditors, and cash has risen by £49,497 to £101,185. A further £50,000 of the Oakdale Navigation Collieries, Limited, share capital has been allotted to this company making a total of £100,000 held, of which £62,500 has been paid in calls and including this investments are £72,554 up at £131,326. As the company's own capital is only £824,335 it has had to raise £155,255 on debentures and £48,390 by loans.

HOWARD AND BULLOUGH, LIMITED.

In its 14th report covering the year ended May 31 last, the board of this company makes a most gratifying exhibit. Profit after making unspecified allowances for depreciation, bad and doubtful debts and paying the directors' fees was £270,370, or £72,302 more than in the preceding year, and there was £10,744 brought forward, so after meeting the debenture interest and paying the dividend on the preference shares together with three quarterly dividends of 2 per cent. each upon the ordinary shares, the balance is sufficient to enable the board to make up the ordinary share dividend to the usual 8 per cent. and to give a bonus of 1s. 6d. per share as against 1s. a year back, so that altogether the distribution for the year is 15½ per cent. against 13 per cent. Then £25,000 against £45,000 is put to the reserve fund, raising it to £300,000 and £100,000 as compared with £30,000 a year ago is carried to the dividend reserve, making it £130,000. £14,864 will then remain to be carried forward. Property assets in the balance-sheet continue to creep up, the increase after writing off depreciation being £8,106 for the past year, and making the total £895,456. Book debts stand at £277,848, and investments, including shares in Howard and Bullough (American Machine Company), and other outside securities figure at £390,234. Cash is £28,000 down at £103,382, and stock-in-trade stands at £163,817. The company owes sundry creditors only £52,887, and it is altogether in an excellent position.

HUDSON'S BAY COMPANY.

This old company's trading year ends on May 31, and it was not particularly profitable in 1907-8. The trading profit at £141,594 was fully £56,000 less than in 1906-7, and the income from sales of land came to £98,450 less at £160,428, so that altogether the income was down nearly £133,000, but then £21,567 more was brought forward from the previous year at £117,874. The directors are accordingly able to make up the dividend to £3 for the year by a final distribution of £2, as already announced, this comparing with £4 5s. in the previous year. A balance of £119,897 will then remain to carry forward. The company has given £1,000 to the Quebec tercentenary fund. Land sales comprised only 21,214 acres, for which the company is to receive $267,364, or an average of $12.60 per acre. In the previous year 140,089 acres were sold at an average price of $9.78 per acre, and even that price was pretty well double what the company looked to get, or did get, before the recent land boom now in a state of collapse began. It will not lose by the slower sale or by the default of purchasers who have bought under the stimulus of the land-gambling spirit, for when instalments cease to be paid the land reverts to its owner and the company has still in hand 3,588,762 acres, exclusive of 963 acres which have come back to it under cancelled sales. Altogether the sales for the past year amounted in sterling to £80,580, including the town lots, of which $124,792 worth were sold compared with $256,350 in the previous year. A year ago the total sales, including these town lots, came to £334,312, but there is not the same decrease in the receipts as in the sales because the instalments are falling due upon the old contracts, and accordingly receipts from this source last year came to £235,295 as against £327,687 in the preceding year. The directors look upon the present restriction of land sales as merely a temporary recoil, and no doubt that is true enough, although it may be some years before we see another outburst of eager gambling in land such as the collapse in the United States last October brought to an abrupt stop, and even the good harvest now looked for will not immediately bring back the buyers in mobs.

CANADA COMPANY.

This old company was not quite so successful in disposing of its lands during the period from January 1 to May 30, and although it sold 161 acres more at 294¾ acres the average price was only $9.27 against $36.67 a year ago. Considerably less land was leased with right of purchase, the total being only 1,953½ acres at $13.78 compared with 3,346¾ acres at $14.61, but 12 town lots brought $35.40 per lot against 16 for $19.10. Receipts from purchase money for land sold or converted to freehold were £1,787 lower at £7,300, rents, interest, &c., produced £451 less at £4,021 and lumber receipts dropped from £673 to £311, but mineral and prospecting fees rose by £123 to £620 making the total revenue £13,152 against £15,629. Cash in hand and bills receivable are £2,656 down at £11,471, while liabilities have only been reduced by £190 to £2,037. The available balance is therefore £2,466 smaller at £9,434 and the

dividend for the half-year to July 10 is reduced from 25s. to 20s. per share.

BARCLAY, PERKINS, AND CO., LIMITED.

Various adverse influences affected the statement of this company's board for the year ended March 31 last. General trade depression, especially in London, and the cold and wet weather are blamed for a reduction of about 5 per cent. or 26,240 in the number of barrels of beer sold, which was only 501,964. Then the company has suffered by the destruction of its freehold maltings at Bishop's Stortford. The loss was not entirely covered by insurance, but apparently there will be little or nothing to make good after the site and salvage of the old premises have been sold. Enough will thus be found to pay for the new property bought to replace that destroyed. After making full allowance, as the board deems it, for depreciation, the profits, deducting £55,916 for bad and doubtful debts, came to £145,052, which is enough to pay the debenture stock interest and the dividend on the 4 per cent. preference shares, but the directors are not able to pay any final dividend on the ordinary shares, which accordingly have to go with the 1 per cent. per annum distributed last November. A year ago the dividend was 3 per cent. Gross profits at £186,259, it may be said, fell off by nearly £19,000, and after allowing for other adjustments, including an increase of £2,114 in the interest on investments, the entire revenue was £17,721 down at £202,235, and this was aggravated a little by the increase of £1,783 in the licence compensation levies, which took £4,590. Depreciation on buildings, &c., got £1,036 less at £49,591 and interest on mortgages, &c., took £1,263 more, so that the final result was a decrease of nearly £20,000 in the balance carried to profit and loss. Changes in the balance-sheet are not of very great significance, but the goodwill stands at £358,989 as before, and after allowing for additions during the year, freehold and leasehold property, plant, machinery, &c., have been written down by £20,899 to £697,792. Loans to publicans are £119,760 less at £2,472,717, this being the amount minus the reserve of £308,250. Stocks of beer held, &c., &c., also show a decline of £5,818 at £195,020, but investments of various kinds, chiefly outside the business, are £14,364 up at £604,483 and cash is £7,708 better at £32,132, the total of the balance-sheet being still £5,319,579. On the liabilities side sundry creditors are down £10,547, but loans secured on investments have risen by nearly £65,000 to £315,093, while publicans, trade, and other deposits are £69,398 less at £223,003, and the mortgage sinking fund, general reserve, and depreciation of investments reserve, together £302,726, show a reduction of £38,780, but the liabilities on mortgages of public-houses are £7,998 up at £102,693. There is nothing of a sinister kind to be inferred from any of these changes, which are just much what might be expected from the present condition of the brewery trade in general, but we think the directors were wise to abstain from paying any further dividend on the ordinary shares.

BIECKERT'S BREWERY, LIMITED.

Owing to a variety of causes the steady progress of this company received a check during the twelve months ended March 31 when the big increases in trading profits of the two previous years were followed by a drop of £18,977 to £85,628. One of the causes contributing to this result was special losses arising out of the strike and lockout at the brewery at Buenos Ayres and another was the general rise in wages and other expenses throughout the Argentine, but a third, and perhaps the principal, reason was the lack of revenue from the new brewery at Llavallol. It had been anticipated that the first section of this brewery would be in effective operation for the summer season, but although brewing commenced towards the end of December it was found impossible to put the beer on the market before February. Trading profits were therefore lower, as above noted, and as receipts from discount, interest and exchange, &c., also fell off by £2,389 to £3,684, the total income including £5,083 or £994 more brought forward was £20,372 down at £94,395. On the other hand, administration expenses were reduced by £1,981 to £3,424 and debenture interest took £4,303 less at £14,277, so that the decrease in the disposable surplus was reduced to £14,088 at £76,694. Preference dividend absorbed an extra £1,932 at £14,308, while a much larger sum of £40,440 was required to maintain the dividend of 15 per cent. in the ordinary stock owing to the issue of fresh capital. The outlook, however, is apparently hopeful enough to justify the directors in taking this course, although it necessitates their cutting down the appropriation to reserve by the considerable sum of £28,680 to £15,000. After making these payments and providing £633 for interest in the instalments on new shares issued in July the balance left to be carried forward amounts to £6,312 or £1,229 more. In addition to the sum transferred from revenue the reserve has been credited with £15,801 from nett premiums in 3,040 new shares issued raising the fund to £137,256. Additions to property account less sales and depreciation were £10,892 making a total of £771,233 exclusive of the Llavallol Brewery, on which a further £167,884 was spent, making £225,046 to date. Another 10,000 shares were issued in January on which £2 per share has been paid up together with £6,230 for calls in advance, so that the total share capital on March 31 was £612,390, while the debenture debt amounted to £339,037. Notwithstanding the fresh funds brought into the business the heavy outlay has temporarily reduced the cash and investments by £70,890 to £8,933. Floating liabilities, too, are £58,628 higher at £113,504 in consequence of increases of £28,208 to £102,418 in debtors, £18,456 to £52,877 in stocks of materials and £26,587 to £99,839 in stocks of bottles, casks, &c. The directors, however, report that the second section of the new brewery is nearly finished, and that there is no reason to doubt that the completed brewery will be in operation throughout the whole of the 1908-9 season, while the new branches at Incuman, Bahia Blanca and at the Boca in Buenos Ayres are finished. Provided therefore that no fresh strikes or other difficulties are encountered the prospects seem good.

SOUTH AFRICAN BREWERIES, LIMITED.

Although this company had the benefit of a full year's working of the Durban Breweries purchased in 1906, and has also installed a lager beer plant at Port Elizabeth, its profits for the year ended March 31 showed a heavy decrease. Further economies in working expenses were effected, the directors say, and the strictest supervision was in no way relaxed, yet profits, after deducting all local expenses, depreciation and bad and doubtful debts, were £25,859 lower at £220,348. Whether this figure represents the full shrinkage in business or not, it is impossible to say, as so much depends on the allowance for depreciation in each year, and that information the directors are careful not to disclose. Administration charges were a trifle lower at £8,383 and £9,800 more at £17,344 was brought forward giving a total of £244,627 at the credit of nett revenue account compared with £260,900 a year ago. The directors, however, deem it advisable to adopt precautionary measures as regards their trading assets, although they consider that signs are not wanting that an improvement in general business may reasonably be expected in the near future. In addition, therefore, to the usual provision for depreciation and bad debts they have set aside £30,000 as a general cover for any further depreciation. The dividend on the ordinary shares is consequently cut down from 20 per cent. to 15 leaving £18,993 or £1,649 more to be carried forward, but even so this result must be considered satisfactory under the circumstances. Expenditure on property was £47,613 making a total of £1,546,323, but this is more than balanced by a reduction of £51,990 to £237,244 in trade investments at cost. Against these two items there are the reserve now amounting to £642,932, the fund having been increased by £195 from premium on shares issued and the special reserve of £30,000 now created. Outlay on plant, machinery, &c., exceeded the depreciation allowance by £2,825 raising the total to £249,608. Creditors are £23,783 down at £45,580, while debtors have been reduced by £11,418 to £120,862, and trade loans and mortgages are £5,633 lower at £308,429, but stocks are £8,283 up at £148,434 and shipments in transit are valued at £11,942. Cash shows a decrease of £95,391 at £86,286, but against this short loans against securities come to £91,500 or £74,500 more.

DISTILLERS CO., LIMITED.

Thanks no doubt to the inclusion in the accounts of this company for the year ended May 15 last of the business of the Ardgowan and Vauxhall distilleries, which have been its property and worked by it for the whole year, the exhibit of profits again shows an increase. What is called the "balance from the distillery working accounts, interest and dividends from investments" gives an amount of £247,255, which is £21,256 more than in the previous year, and as £593 more at £13,452 was brought forward, the disposable balance is up nearly £22,000. The directors accordingly pay the preference dividend, make up the dividend on the ordinary shares to 10 per cent. for the year and place £40,000 from profits to the depreciation and reserve account besides £5,000 to the insurance fund. The addition to the reserve would make its total £320,000, but £20,000 of it is taken to write down the cost of the works. In the balance-sheet, which seems to be more detailed, land and buildings figure at £720,065 and plant and utensils at £310,292. Investments are entered at £227,642 and sundry debtors at £481,660 against only £132,317 due to sundry creditors, but the stock of spirits, grain, warehouse rent, &c., a curiously mixed item, shows an increase of £188,235 at £1,149,183. It must be costly to carry, and we notice that "carriage on spirits in bond" is entered at £43,989 on the liabilities side, but do not know quite what that means. Cash and bills receivable, however, amount to £223,000 which looks comfortable, only the mortgage debts of the company over and above its paid-up capital of £1,480,100 come to £920,000 and debenture interest alone takes £44,673. Income-tax last year absorbed £8,360 and general charges, including management, law expenses and directors' fees, took £11,455.

"SHELL" TRANSPORT AND TRADING CO., LIMITED.

To all appearance this company has done very much better last year than in the preceding one, its year closing on December 31 and the accounts are again produced at an earlier date. Including the balance brought forward, and after deducting the cost of issuing the additional capital, management, legal and other expenses, the credit to profit and loss was £713,818, which is £321,447 more than that of the previous year. Apparently this profit comes from the dividends received upon shares in the Anglo-Saxon Company and in the Bataafsche Petroleum Maatschappij, and we have looked at the abstract balance-sheets of these two companies enclosed with the report of the "Shell" company, but have no means of interpreting the figures, and must leave them alone. All we are told in the "Shell" company's report is that the value of the shares held by it in these two companies has been taken at cost, and the figure in the balance-sheet is £4,017,822. Details are given illustrating the distribution of this large amount of money, and will be interesting to proprietors. Altogether £320,000 has been added to the reserve last year, of which £150,000 comes from the premium on the new shares, the remaining £170,000 being taken from the revenue. Revenue also provides £100,000 for the reserve fund, so that altogether the reserve account foots up at £720,000, which is a comfortable total, although

all in the business. Creditors are owed £247,168, the two companies owned or controlled by the "Shell" company being owed the most, and the company has no debtors on current account against this, but £515,809 was due to it by the two above-named companies. Cash of all kinds stood at £138,055 in the balance-sheet, and apart from the large figures into which the properties run, which may be quite justified by events, the balance-sheet looks healthy enough. After making all adjustments and distributions £63,818 will remain to be carried forward against about £2,370 brought in.

BIBI-EYBAT PETROLEUM CO., LIMITED.

We wish all Russian petroleum companies showed the same improvement as this one does, although no dividend is paid for 1907. Production apparently was uninterrupted, and during the 363 days the company was able to work, there was a steady output of oil, the average yield of the 24 wells being 31,665 poods. For the year the production was 2,816,000 poods more than in 1906 at 11,494,500 poods. Of this increase 2,419,131 poods were sold and delivered, including the Government's share of 40 per cent. for royalty. Allowing for the increased quantity of 276,600 poods consumed for fuel this actually caused a reduction of nearly 58,000 poods in the stock in hand on December 31 (O.S.) at 162,830 poods. As the business was larger so were the profits of the Russian company, whose shares the English one holds. The gross gain was 402,759 roubles, the total being 514,994 roubles, and after deducting the 307,054 roubles set aside for amortisation and reserve, 107,180 roubles more will remain as nett profit at 207,940 roubles made up to nearly 209,000 roubles by the small balance brought forward. So a dividend of 200,000 roubles, or twice as much, has been paid by the Russian to the English company. This means £20,938, and the gross profits of the English company are put at £25,024. After meeting debt interest £6,875 and London expenses £3,116 there remains £15,033 from which £2,838, being the debit balance shown at the end of 1906, is debited, leaving £12,196 to be carried forward. The balance-sheets of both the Russian and the English companies are presented and seem clean enough, but there was about £61,500 fresh capital spent by the Russian company during the year. Its total amortisation and reserve balances, however, amount to about £75,500.

NEW EASTERN INVESTMENT CO., LIMITED.

Following on the reduction of expenses of £5,000 indicated in the last report, the directors of this magnificently unfortunate company have resorted to a more drastic operation still, and have amputated three parts of the issued capital, cutting away with this useless incubus a total deficit of £599,094. There is no, nor any use in, crying over spilt milk. The situation is faced heroically, and the company enters on a new phase of life, and to some extent with clipped wings owing to the absorption of Angelo Deep by East Rand Proprietary Mines, a move which conduced to the present course of action. The decks are now clear of wreckage, and fair sailing may be made even if prosperity be denied. In the year under review ended December 31 last £68,148 was debited to profit and loss account for depreciation of investments. Expenses exceeded receipts of £7,789 by £199 only, so that the total debit is increased by £68,348 to, as mentioned above, £599,094. For the year 1909 a nett income is anticipated of £11,000. With the usual balance-sheet is given a *pro formâ* balance-sheet, dated June 5, showing the position as on the reduced capital, and it may be convenient to take them together. Investments and participations are £97,719 down at £147,869, including a sale of £5,750 made a year ago for future settlement. In the new balance-sheet they will appear at £195,343, certain unquoted Industrial securities included being written up to a figure representing the directors' estimate of their present value. Mining values are £38 higher at £115,387, and are reduced for the new company to £55,172, closely approaching their market value. Debtors are lower by £25,338 at £12,809 and will be that amount less £5 from June 5. Bills receivable at £15,000 and cash at £23,462 or £4,414 more will appear as £16,500 and £11,310 respectively, and in the new account will appear £17,160, shares sold for future settlement. Creditors have been paid off £10,595 to £81,200, and reappear £996 less at £80,204; liability on shares purchased for future settlement has come down by £30,402 to £32,301, and will still be open for £27,965, and capital will in future be £200,000 in shares of 5s. each. The contingent liability on partly paid shares, however, will be £3,858 greater at £43,490 as from June 5. There is no abandonment of assets in the rearrangement, and the directors hope to commence payments of dividends early in 1909.

BROOKE, BOND AND CO., LIMITED.

Apparently this company's profit fell back by £3,264 in the past year to £15,442, but as £3,754 was brought forward the amount available for distribution was £19,196, out of which the dividend has been made up to 10 per cent. for the year as usual and £100 against £200 a year ago placed to the provident fund, while the directors' commissions take £460, quite a modest amount. These payments made, £3,636 will remain to be carried forward. The balance-sheet shows a decrease of £26,493 in the stocks on hand, whose total is £77,589. Cash, on the other hand, is up £15,409 at £21,149. Investments, all in first-class securities, whose aggregate value is £134,217, exclusive of £14,896 held in the shape of shares in other trading companies, shows a depreciation of £8,506, which is not taken into account in the balance-sheet, but the reserve fund amounts to £144,000, so there is no cause for grumbling in that fact. The company owes £16,683 to sundry creditors, and sundry debtors, including bills receivable, owe it £30,375. Freehold premises remain at the original figure of £38,952, and there is really no reason why they should not.

INDIAN ELECTRIC SUPPLY AND TRACTION COMPANY.

This company, which was established in 1905 to construct a tramway in Cawnpore and its suburbs and to carry on an electricity supply business in that city, cannot be said to have made an auspicious start. Capital expenditure has been in excess of the estimates, partly because the plague delayed completion of the works and partly because revenue has not come in to meet the debenture interest so soon as was expected. The natives of Cawnpore have not yet been educated to the point of finding the trams a necessity, and the returns from them have fallen far short of anticipations. On the supply side, however, the outlook is more promising, as over 8,000 8 c.-p. lamps are already connected and a considerable number are being added. The revenue account was only opened on July 1 last, and for the half-year showed a loss in India of £2,043 to which were added £834 for London office expenses, including £450 for directors' fees unpaid, £3,750 for construction debenture interest and £56 for interest on overdraft, and after deducting transfer fees there was a loss of £6,682 to be carried forward. Capital expenditure to date, including establishment expenses and debenture interest during construction amounts to £122,402 and supervising engineer's commission is £6,120. The directors say that they have made arrangements for the financial requirements, including debenture interest up to the end of this year. It will be necessary, however, in the early part of next year to raise further funds to pay off the indebtedness incurred and to provide for the extensions of the mains.

IMPERIAL RUSSIAN COTTON AND JUTE FACTORY, LIMITED.

When the directors of this company made an issue of £80,000 pre-preference shares in June last they seemed fairly hopeful of the prospects, and stated that the accounts up to that time indicated that the profits for the year should be sufficient to provide the promised 10 per cent. dividend. These anticipations, however, have not been fulfilled, partly because of the failure of the crops in the districts immediately affecting the company's operations and partly because the factory had to be put on short time in October owing to the small demand. Gross profits for the twelve months ended December 31 to January 13 amounted to £13,688 in addition to which £280 came in from bad debts recovered and £75 from miscellaneous receipts, giving a total of £14,043. But, on the other hand, outgoings, including £3,010 for repairs and maintenance of buildings and machinery and £8,599 for debenture and other interest, took £18,500, so that the nett result was a loss of £4,457. Even this figure is only arrived at by omitting to make provision for depreciation, although it is admitted that the property account of £210,913 includes a sum for hemp machinery now out of use which is in excess of its realisable value. Heavy accumulations of stock, mainly through inability to dispose of the common hessians manufactured early in the year against the harvest bring the total of this item up to £61,097, and in spite of the help obtained from the pre-preference shares the company has had to borrow £36,157. Debtors at £13,754 exceed creditors by £1,638 and cash and bills come to £2,734, but the outlook nevertheless is far from cheerful.

AFRICAN ASSOCIATION, LIMITED.

This combination of firms trading with Southern Nigeria, or West Africa generally, continues to make excellent exhibits, and last year the available balance was £75,423, out of which the ordinary shares have got 12 per cent. altogether in dividend, and after putting aside £3,500 to contingencies fund, less such amount as may be voted for the directors, there is £35,340 to be divided between the ordinary and the founders' shares. Out of the ordinary half a bonus dividend of ½ per cent. is paid, and about £16,000 carried to the ordinary shares reserve. From the founders' £17,670 a dividend of £15 per share, making with the £5 interim dividend £20 per share for the year is declared, leaving £750 to carry forward. The directors say that the company's stocks are fully marketable, of sound value and recent shipment, and the investments of the companies continue to show a value largely exceeding their total cost. Full percentages have been written off all the Coast properties, and the buildings, boatage, &c., continue to be kept up out of revenue. The insurance fund is now £82,090, and the ordinary reserve fund will be raised to £169,990 after the accounts now submitted have been passed. Really a splendid exhibit.

EGYPTIAN HOTELS, LIMITED.

The generally felt disinclination to spend money has been illustrated in a reduction of profits of hotels of about £13,000 to £38,140 for the year ended April 30, and the nett profit is correspondingly lower at £10,350. With £8,899 from last year £19,249 is now disposable, out of which the preference shares are provided for and the ordinary dividend is reduced by half to 10 per cent. leaving a carry-forward of £1,000. The charge for redemption of debentures and compensation paid the Compagnie Internationale des Grands Hotel totalled £9,666 against £11,400 in the previous year, and £10,050 has been spent on maintenance of buildings, &c., &c. Land and buildings, allowing for additions and sales, are £173 lower at £818,112, and plant and furniture is £3,230 higher at £132,730, that amount being added to effects at Shepheard's Hotel. Goodwill is unchanged at £12,578. Compensation paid for cancellation of agreement with Compagnie Internationale has been written down £2,571 to that amount leaving only one-seventh still to be reckoned with. Provisions account to £9,467, horses and carriages to £2,682, and cash to £15,556. Trade balances are a little the wrong side, £3,441 against £2,966, and reserve does not seem too ample at £5,750, but the debenture sinking fund amounts to £28,800, and

when £120,000 overdue proceeds of lands sold comes to hand, the total will practically permit the repayment of all outstanding debentures.

CHAMPDANY JUTE CO., LIMITED.

In spite of considerable fluctuations in the prices of raw materials and manufactured goods this company was able to place its output for the year ended April 30 on satisfactory terms. Profits at the Champdany mill amounted to £11,092 and at the Wellington mill to £22,232 and with £2,874 brought forward the disposable total was £27,234 better at £36,198. Of this £11,000 or £5,000 more is allowed for depreciation and £16,000 is put to reserve after which shareholders get a dividend of 4 per cent., the first since 1894-5 when 2½ per cent. was paid, and £1,318 is carried forward. Capital outlay less depreciation stands at £269,691 against which the reserve and insurance funds come to £33,177 and are all in the business. Stocks are very heavy at £221,573 and the company has been forced to borrow considerable sums, £239,826 being due to Messrs. James Finlay and Co. and £11,846 to shareholders and others for deposits. Sundry creditors at £5,269 exceed debtors by £1,331 and cash in hand amounts to £1,114, so that further borrowing will be necessary to provide funds for the dividend now declared.

GLOBE TELEGRAPH AND TRUST CO., LIMITED.

Receipts from interest, &c., for the year ended May 31 amounted to £215,795 compared with £249,842 for the previous twelve months, and after providing for all charges £210,295 was left. Adding the considerably larger balance of £26,565 brought in the disposable total was £236,860 against £248,597, but owing to the difference of one month less is required for dividends, so the directors are able to raise the distribution on the ordinary shares by 2s. 6d. to 5⅞ per cent. with a small increase of £640 to £27,206 in the balance carried out. Investments at cost show practically no change at £3,194,691, and the item of "differences on securities realised" and deficiency on capital issued for acquisition of securities is likewise unaltered at £427,624, but cash comes to £11,412 less at £105,583.

NEW GENERAL TRACTION CO., LIMITED.

This company's revenue from dividends, interest, &c., on its holdings in various undertakings for the twelve months ended March 31 show an improvement of £4,125 at £18,893, which was mainly due to an increase of £4,975 to £9,956 in the payment by the Darby, Media and Chester Street Railway. Dividend receipts from the Coventry company, although identical in amount with those of the previous year, really represent a higher rate of dividend as the 1906 figures included £613 paid on account of 1905. In addition this company now pays £751 for interest. The results of the Norwich company's working were disappointing owing to a reduction of over 80,000 in the number of passengers carried and the income from this source fell off by £1,370, while the Douglas Southern company also yielded less. With £913 from commission on the new contract at Coventry and a trifle from transfer fees the total income was £19,808 compared with £14,784. On the other hand debenture and other interest required £2,117 more at £16,493 and general expenses were slightly heavier at £2,508, but there was nothing to be provided this time compared with the heavy sums written off in connection with the Philadelphia undertaking a year ago, and after providing for sundry small items a nett profit of £264 was left against a loss of £17,241. This goes in reduction of the debit balance brought forward, but there is still a heavy deficit of £26,520 to be wiped out, while discount on debentures issued in 1904-5 still figures as an asset for £8,100 and preliminary charges on new undertakings come to £375. In the meantime the arrears of preference dividend are being piled up, and as nothing has been paid on these shares for seven years the total now amounts to £105,000. Shares and mortgage bonds taken in part payment for work done and shares acquired at cost have a balance-sheet value of £648,773, having been reduced by £5,000 during the year, but with regard to this item the auditors state that the securities are not capable of valuation by them and the outlook seems far from promising. Loans amount to £56,333 or £1,633 more and in addition the company owes £5,000 on bills payable and £10,688 to sundry creditors, but against these there are £28,446 due by the Coventry company for construction work, £4,404 to come in from sundry debtors and £4,936 in cash.

MINOR NOTICES OF COMPANY REPORTS.

AMERICAN FREEHOLD LAND MORTGAGE COMPANY OF LONDON, LIMITED.—Owing to an exceptional collection during the previous year of about £2,000 in arrear the receipts of interest for the year ending March 31 show a decline of £1,574, being £87,193 against £88,767. Including £1,914 brought in or £726 more, and fees and profits on sales, &c., the total revenue is £89,878, and as expenses show a slight increase the disposable surplus is £999 lower at £39,752. Out of this the dividend of 8 per cent. on the ordinary shares is maintained and £1,000 less at £17,000 put to reserve, leaving the carry forward £1 higher at £1,914. Loans on first mortgage of freehold lands and property are £26,276 higher at £1,201,725. Real estate stands at £7,460, and lands formerly in real estate now sold at £6,651. Cash, including £10,029 agents' balances since received, totals £31,022. Sunday creditors are owed £3,342 against £316 to come from debtors, and reserve aggregates with the year's addition the round sum of £100,000.

ASSAM-BENGAL RAILWAY.—Altogether up to December 31 last this company has sunk about £8,720,000 in its undertaking, and of that total £872,000, taking the rupee at 1s. 4d., represents interest chargeable to capital and the amounts debited to expense account, which is a thoroughly English and Indian though not a thrifty way of keeping a thing going. Last half-year capital expenditure was about £76,000. Traffic receipts showed a small increase at about Rs. 25,44,000 against Rs. 23,69,369 in the corresponding half of the previous year, but there was really no nett revenue, for working expenses took 83.90 per cent. of the income, which, however, was an improvement on the corresponding half-year when they took 86.66 per cent. Thus the nett earnings were only Rs. 4,09,488, and that sum is retained under the contract by the Secretary of State in reduction of the charges for interest incurred by him. The shareholders, however, get their fixed guaranteed dividend at the rate of 3 per cent. per annum, payable on the 1st of next month.

BADULIPAR TEA CO. (ASSAM).—The output for 1907 fell short of the previous crop by 24,397 lbs. at 852,174 lbs., and at the same time the price realised dropped by 0.69d. to 8.81d. Profits, including £3,633 brought forward and deducting £940 for income-tax and manager's commission, were £11,117, and after paying preference dividend the ordinary shares get 12 per cent. and £3,917 is carried forward. Block account is valued at £80,000 or the exact amount of the capital, and as the stocks are large at £15,642 the company has to depend a good deal on credit. Bills payable and other liabilities amount to £10,742 and £2,712 is due for loans and interest against which debtors owe £3,319, cash comes to £1,192, and in addition to £1,160 spent on account of the current season £1,185 has been advanced to coolies.

BARGANG TEA COMPANY.—The success of the last few years was not continued during 1907, and a decrease of 41,198 lbs. at 500,536 lbs. in the output was accompanied by a drop of 0.43d. to 8.23d. in the average price. Gross receipts were £2,357 down at £17,213, but there was a little saving in expenses, and with £154 more at £1,009 brought forward the nett balance, after making sundry adjustments, was £3,737 against £5,609. The reduction, however, is serious enough, and the directors have not only to ignore the reserve, which a year ago got £1,000, but the dividend on the ordinary shares is cut down from 15 per cent. to 10, leaving £1,137 or £128 more to be carried out. Creditors and bills payable are £1,194 down at £2,848, but in addition the company now owes £572 to its bankers, while on the other hand a small increase of £265 to £1,262 in sundry debtors is neutralised by decreases of £434 to £8,273 in stocks and £610 to £156 in cash.

BULAWAYO MARKET AND OFFICES COMPANY.—Bulawayo is not exactly a hive of industry, and rents have had to be reduced to keep the property tenanted, so that revenue for the 18 months ended December 31 shows a further decline amounting to £5,698 gross, made up of £211 from market commissions, &c., £4,851 rents and £636 interest and fees. But expenses, including £694 depreciation, took all but £605 of this, which is carried forward. Property and buildings are lower by £3,409, balance of depreciation and additions and sales of £369, at £24,778. Cash comes to £9,153, and £6,500 is lent on security at short notice, no other items seeming to require comment. The market branch business, which has hitherto shown a loss, has been leased at £360 a year.

BORELLI TEA COMPANY.—The crop from the Phoolbari estate for 1907 was 48,061 smaller at 587,070 lbs. and the price realised fell by 0.19d. to 8.16d., while the Hanchurah output showed a decrease of 3,162 lbs. at 235,830 lbs., but realised 0.22d. more at 8.12d. Gross receipts were £2,038 down at £27,948 and expenses rose by £269 to £25,440, and after providing managers' commission and adding £482 brought forward the nett surplus amounted to £2,783 or a decrease of £1,779. Debenture interest and preference dividend having been paid, the ordinary shares receive 2 per cent. against 4 per cent. a year ago, and the sum carried out is reduced by £255 to £227. Bills payable and sundry creditors are £251 down at £11,529 and drafts in transit are much about the same at £1,077, but the company has had to borrow £963 from its bankers. On the other hand, stocks are £1,920 up at £13,333, but debtors have been reduced by £1,827 to £2,003 and cash has dropped by £971 to £137. Block account at £85,740 is £100 down, owing to a sale of land, but machinery and buildings are unchanged at £5,515 and the investment in Tezpore Tramway shares remains at £1,680, while the company, of course, has no reserve of any kind.

BUDDERPORE TEA COMPANY.—The crop for 1907 was 53,376 lbs. up at 208,038 lbs., while the average price improved by 0.63d. to 6.95d. per lb. and with £78 from tea seed and £48 from miscellaneous receipts the nett profits amounted to £1,375. Deducting the debit balance of £242 brought forward and £69 for manager's commission, £1,064 was left, out of which three years' preference dividend takes £540, after which the ordinary shares get 10 per cent. and £224 is carried out. The capital is a tiny one of £6,000, and as the whole of this is in the property the company has to depend largely on credit. Liabilities to creditors and on bills payable come to £1,026, and £2,768 is due on loans, but debtors owe £1,648, stocks are valued at £2,119, and cash comes to £668.

BUENOS AYRES ELECTRIC TRAMWAYS CO. (1901), LIMITED.—These accounts cover the 15 months ended March 31 last, and the result of that period was that after paying debt interest and setting aside £2,530 to the sinking fund for the debenture stock and deducting the credit balance brought from the previous balance-sheet amounting to £2,639, the debit to be carried forward is £1,931. When this balance has been wiped out depreciation of rolling stock, plant, &c., will be duly provided for, the directors say. When dividends will come it will therefore be vain to inquire. Receipts from all sources came to £99,016,

and all but £13,772 of this was absorbed in working charges. Debenture interest took £15,812 and the redemption fund £2,530, so that the actual debit on the 15 months' working, apart from the balance forward, was £4,571.

CHARGOLA TEA ASSOCIATION.—The 1907 crop fell off by 95,994 lbs. to 2,070,338 lbs., and the cost of production was 0.42d. heavier at 4.89d. per lb., but these drawbacks were compensated for by an advance of 0.93d. to 7.28d. in the price realised, and nett profits rose by £3,490 to £21,009. Balance brought in was £300 larger at £5,586, giving a total of £26,595, and in addition to repeating the dividend of 10 per cent. on the ordinary shares the directors pay a bonus of 2½ per cent. Then £4,000 is put to reserve against £2,500 added to the depreciation fund a year ago, and £1,000 or £125 less is transferred to the fire and hail insurance fund, leaving £5,829 to be carried forward. Estates purchase and extensions account remains at £153,020, but the sisal garden expenditure has risen by £1,708 to £5,384 against which the reserves and insurance fund now stand at £14,500, exclusive of the £5,000 dividend equalisation fund. Floating liabilities are slightly lower at £17,401, while on the other hand a reduction of £6,642 to £225 in sundry debtors is accounted for by increases of £5,772 to £7,689 in cash and £1,265 to £37,491 in tea stocks.

CLAYTON ANILINE COMPANY.—No working statement is given, but nett profits for the year ended April 30 are declared at £8,482 giving with £548 brought forward a disposable sum of £9,030. This provides preference dividends and a repetition of 5 per cent. on the ordinary shares, and £150 towards sinking fund for contingent liability on preference shares, and leaves £795 to go to next account. Works and plant figure at £100,004, repairs and renewals to the extent of £36,361 having been charged to revenue since May, 1897. Land account stands as at April, 1907, at £5,831. Patents also remain unaltered at 30s., additions of £372 having been charged to revenue. Processes have been written down from £45 to nil. Stocks (discounted) represent £40,231 and debtors and cash come to £20,240, while the only liability, besides £1,972, or with the year's contribution £2,122 preference share redemption account, is £9,757 due to sundry creditors.

DUMONT COFFEE COMPANY.—The crop for 1907 showed a decrease of no less than 43,197 cwt. at 87,925 cwt., but the falling off seems to have been anticipated after the big crops of the two preceding years. To a small extent it was compensated by an advance of 6s. 3d. to 44s. 3d. per cwt. in the price, but expenses, partly because of the new export duty, were 4s. 2d. higher at 32s. 8d., in spite of a more favourable rate of exchange. Profits, including £10,224 or £2,078 less from railways, stores, &c., were £12,257 down at £63,429, but the balance of £47,317 brought in was considerably larger, and after meeting London office charges of £3,590 the disposable surplus was £107,155 compared with £113,846. Debenture interest requires £21,070 of this, and the directors are able to distribute 9¼ per cent. or 2 per cent. less on account of arrears of preference dividend and to add £1,768 to the sum carried out, raising it to £49,085. After payment of the final instalment of 5½ per cent. now declared the arrears outstanding will amount to £105,000. Estates purchase account remains at £1,200,000 against a share capital of £799,990 and a debenture debt of £383,100, while the reserve stands at the old figure of £40,000. A considerable decrease of £47,069 to £6,959 in floating liabilities has been effected by reductions of £27,069 to £104,161 in Fazenda current account and £28,107 to £15,270 in cash balances.

ENDOGRAM TEA COMPANY.—A small increase of 21,640 to 353,705 lbs. in the crop for 1907 was accompanied by a reduction of 0.35d. to 5.82d. in the cost, while the average price rose by 0.62d. to 7.07d. Profits were consequently £1,341 better at £1,946, but a debit of £1,633 was brought in, and after deducting £130 for depreciation and £88 for manager's commission the nett surplus was only £95. Bills payable are £6,039 down at £1,145, and other floating liabilities are moderate enough, but the directors have had to borrow £3,200, and even with that cash in hand comes to no more than £83, while tea stocks are £1,751 smaller at £4,474, in addition to which debtors owe £361. Block account, buildings and machinery are valued at £41,170 or £1,170 more than the paid-up capital and against this the reserve is only £1,000.

GREAT SOUTHERN OF SPAIN RAILWAY COMPANY.—Receipts from passengers for 1907 improved by £1,387 and merchandise traffic yielded £3,738 more, but live stock and minerals both fell off a little, leaving the total revenue £4,770 up at £96,330. All of this and more was swept away by an increase of £5,966 in locomotive expenses, due partly to the higher cost of coals and materials and partly to the heavy cost of repairs occasioned by bad water. Traffic expenses were £1,382 larger, and although maintenance of way and carriage repairs showed substantial reductions the nett result after paying £17,968 or £485 less to the Hornillo Company in respect of ore traffic was a loss of £820 against £871. Exchange differences produced a further loss of £867 compared with a profit of £2,613 a year ago, and interest charges took £802 more, so that after deducting £188 for interest received the deficit for the year amounted to £8,068 or £5,937 more, and the debit balance was increased to £14,500. New wagons and water supply, &c., cost £3,070, making the capital outlay to date £1,472,264 and a further £7,000 of the £112,500 credit obtained on security of £200,000 first mortgage debenture stock has been called up, bringing the total to £82,000. Creditors at £20,127 exceed debtors by £12,060 and cash amounts to no more than £9,824.

ISA BHEEL TEA CO. (SYLHET).—This little company has not yet reached the producing stage, and its crop last year only amounted to 24,320 lbs., yielding £105. Miscellaneous receipts were £42, and as expenditure came to £4,247, a balance of £4,090 was charged to block account. Total outlay on the property is now £14,328, and as the paid-up capital, including £1,135 for calls in advance, is only £13,135 the company has had to raise £2,343 by temporary loans. Current liabilities are £474 against £192 due from sundry debtors, £105 in stocks, £586 in cash and remittances in transit, and £709 for advances to coolies. A final call of 5s. per share was made on January 1, but as this will not provide sufficient funds, the capital was increased by 5,000 £1 shares, which were allotted at a premium of 7s. per share.

JAVA RUBBER AND PRODUCE COMPANY.—Owing to unfavourable weather, the coffee crop last year was a failure, and only 269 piculs were harvested, producing £608, but ground nuts, pepper, &c., brought in £1,091, and interest and miscellaneous receipts brought the total revenue up to £1,765. Expenditure in Java and London, however, took £2,821 and the dividend paid in May £483, and after deducting £475 from the previous account a debit balance of £1,064 was carried forward. A beginning has been made in tapping the Castilloa rubber trees, but no estimate has been framed as to the probable output. During the year 359 acres of forest land were planted with Para rubber and coffee, making the total cultivated area 1,390 acres, and the expenditure on the estates now amounts to £32,684 against a paid up capital of £31,956, and a reserve of £473 formed from profits made before registration of the company. Creditors, therefore, including £1,846 due to vendors, are comparatively heavy at £4,246, while the company has £449 to come in from debtors and £2,478 in cash.

JETINGA VALLEY TEA COMPANY.—Along with an increase of 52,868 lbs. to 1,054,831 lbs. in its 1907 crop this company secured an advance of 0.42d. to 7.40d. in the average price, while the cost only rose by 0.13d. to 5.57d. A much larger quantity of tea seed was also sold, and with £957 or £526 more from this source the nett profits were £2,213 up at £9,097, to which were added £1,239 brought forward and £20 from transfer fees, giving a total of £10,356 compared with £7,836. Preference dividend having been paid the ordinary shares get an extra 3 per cent. at 8 and £1,000 each are put to extension fund and reserve against £750 for the provision of further labour a year ago, leaving £397 less at £842 to be carried forward. The £1,000 now set aside is the first attempt the company has made to form a reserve fund, although block account stands at £106,982 or over £54 per cultivated acre. Sundry liabilities, including the labour reserve of £750, are £1,897 higher at £13,457, but debtors are £2,924 up at £7,692 and cash comes to £2,313 or £868 more, while stocks of tea and tea seed are valued at £11,010.

J. G. WHITE AND CO., LIMITED.—For the year ended February 29 this company's nett profit from contracts, engineering and finance was £39,323 or £1,049 less than in the previous year. The balance forward, however, was nearly £2,000 more at £18,312, so the directors again pay a 6 per cent. dividend on the preferred and ordinary shares, and add a bonus of 2 per cent. to the holders of both classes of shares against 1 per cent. a year ago. They also again place £20,000 to reserve, and have £16,249 left to carry forward. Allied as this company is with the Waring-White Building Company and other enterprises, its business necessarily ranges far and wide, and it is at present carrying out works in Buenos Ayres, Montevideo, Para (Brazil), and Dumbarton, while it has secured contracts for an electric supply installation at Arbroath and for the supervision of tramway works in Santos (Brazil). Since the date of the balance-sheet securities entered there at £144,248 have been reduced by £24,752 worth of them, sold at a profit which will come into the current year's accounts. The average yield in interest and dividends on these investments was equal to 6¼ per cent. on the valuation for the past year. The company has nearly £64,000 in cash besides its investments, sundry debtors owe it £146,000, and contract retentions and work in progress come out at £55,453 nett. Purchase of business stands at £47,975 and the company owes sundry creditors £157,765.

JOHN SOMERVILLE AND COMPANY.—The year ended March 31 brought in a nett profit of £3,258 after writing off £3,353 for depreciation and provision for bad and doubtful debts. The balance from last year of £388 raised the disposable sum to £3,646. Out of this the preference dividend for the period from September 30, 1901, to December 31, 1901, is paid and £1,146 carried forward, subject to directors' fees. Heritable property, plant and goodwill are valued at £160,527, after deducting £6,050 bonds secured on certain properties. Stocks are taken at £105,911, of which £69,731 has been assigned on security of liabilities and £49,559 is due from book debts. Against these £108,936 is owing on trade account with a contingent liability of £179,911 in respect of bills under discount, including bills, for which stocks and securities are held. Cash comes to £2,035. Owing to the disorganised state of the whisky market, the Licensing Bill and the Whisky Commission a more stringent valuation than usual has been made of stocks. This and dear materials have, it is claimed, reduced the year's profits.

LAKE COPAIS COMPANY.—Receipts from rents for the year ended December 31 were £36,415, and with £1,028 profit in farms department and £859 from other sources the total income was £39,202. After providing for administration and other charges, including £3,224 written off for depreciation and £600 for bad debts, and providing for interest on the

prior lien bonds, the nett profits amounted to £9,418. Of this £2,000 is put to reserve and £1,400 to suspense account, after which interest at the rate of 3 per cent. per annum is paid on the 4 per cent. "A" debenture stock, and £78 is added to the balance of £6,018 at the credit of the interest account for that stock. The company has a share capital of £655,570 and has raised £513,840 by various issues of debenture stock and prior lien bonds. Against this purchase account stands at £649,000, construction account at £204,284, land purchase account at £13,538, and buildings, plant, and electrical plant, live stock, &c., less depreciation, make up a further £24,833, while £258,010 is represented by a suspense account for excess of expenditure over receipts and interest and discount on debentures during construction. Creditors come to £3,075, but debtors owe £2,661, stocks are valued at £9,859, and the company still has £21,640 in cash.

Linggi Plantations, Limited.—The crop of rubber from the Linggi Estates amounted to 61,297 lbs. dry, exceeding the estimate for the year's output by 25,797 lbs., and the 1906 crop by 44,069 lbs., and the newly acquired Bukit Nanas Estates produced in the six months to December 31 49,443 lbs. dry, making a total output of 110,740 lbs. The cost of collecting, preparing, and marketing in London, including every possible item of expenditure, came to 1s. 6½d. per lb., and the average price realised was 3s. 11½d. for Linggi and 3s. 8d. for Bukit Nanas rubber, while it is anticipated that increased production, &c., will materially reduce the cost per lb. Revenue for the year ended December 31 amounted to £21,759 gross, being £18,379 from rubber, £1,554 from coffee, and £1,826 from rubber seeds and plants and miscellaneous receipts. Outgoings abroad absorbed £7,223 and in London £876, giving a disposable balance, including £65 transfer fees and £1,035 brought in, of £14,760. After paying preference dividend and directors' and managers' stipulated remuneration 20 per cent. is paid on the ordinary shares and £4,157 is carried forward. Linggi Estates now stand in the balance-sheet at £55,019, being increased by £13,841 spent during the past year, less £293 depreciation of buildings, &c., and Bukit Nanas Estates enter the assets at £70,460, being £63,500 purchase price, and £6,960 expended since acquisition, the two properties together representing £125,479 against issued capital of £72,878. Advances to coolies amount to £1,484. Stocks of rubber are valued at £12,986, of which £9,306 has since been realised, and cash is £10,455, but creditors want £7,699 against £1,369 owing to sundry creditors, and £6,246 is due to the Bukit Nanas Syndicate. The company now owns 7,900 acres, of which 4,006 are planted with approximately 64,000 trees. The manager's estimate for 1908 is from 250,000 to 300,000 lbs. of rubber, while the coffee output will be cut down to half. During the past year the ordinary shares have been converted into 2s. shares, and the nominal capital increased to £100,000, in order to effect the purchase of the new property, and also to provide further working capital.

London Shoe Company.—Nett profits for the year ended February 29, after deducting £1,610 for leasehold redemption and structural alterations were £6,192. Debenture interest requires £1,121 of this, and preference dividend £3,575, leaving a balance of £1,496, which the directors propose to add to reserve in conformity with the policy approved on previous occasions by the majority of the ordinary shareholders. This self-denial on the part of the ordinary shareholders is certainly necessary if the company's position is to be rendered thoroughly sound. Goodwill stands at £29,500, leasehold interests at £47,750, fixtures at £6,228, and stocks at £54,340, and although it is true that the redemption of the leases is provided for by an insurance sinking fund, the reserve seems inadequate at £7,326, especially as it is all in the business. Trading balances are decidedly adverse, £10,267 being due to creditors against £6,042 to come in, and cash amounts to no more than £1,648, out of which £1,117 has to be found for preference dividend accrued. Debenture issue expenses figure as an asset for £1,814 and at the present rate of progress will take a good few years yet to wipe out.

Majuli Tea Company.—The average price obtained by this company in 1907 was only slightly lower than that for the previous year at 8.28d., but the crop fell off by 176,246 lbs. to 1,353,718 lbs., and gross proceeds were consequently £6,540 lower at £46,739. Including £1,850 brought forward and £86 from interest, &c., the nett balance after payment of the preference dividend was £3,073 against £8,608, so not only is the ordinary dividend cut down from 6 per cent. to 2½, but the reserve gets nothing compared with £1,000 a year ago, and £1,176 less at £674 is carried forward. Floating liabilities, including £1,241 on wages deposit account, are £2,476 down at £11,584, but the company has had to borrow £3,121 from its bankers, and on the other hand an increase of £1,558 to £5,732 in sundry debtors is more than neutralised by a decrease of £3,713 to £17,761 in stocks. Cash is £6,404 down at £532 in consequence of an increase of £4,551 to £7,310 in buildings and machinery, but block account is unaltered at £107,500, against which the reserve remains at £10,000.

Metropolitan Association for Improving the Dwellings of the Industrious Classes.—Gross rents on 1,421 tenements and 22 shops and offices amounted to £26,664, a decrease of £24, showing a return of slightly over 11 per cent. on the capital cost. Outgoings on taxes, repairs, &c., took £627 less, so that the profit of £13,046 was £603 better. With £31 against £88 brought in and £16 less from investments, the total receipts were £13,399. General expenditure and interest on loans and debentures required £120 less, so that the disposable balance is £45 better at £8,725, after transferring £476 to guarantee fund. The dividend of 4½ per cent. is therefore repeated on the ordinary stock, and £76 is carried forward. On capital account there has been no increase in expenditure, and the debit balance is decreased by the receipt of £781 interest on sinking funds to £8,479. The guarantee fund of £12,200 is represented by £10,002 invested and £4,198 advanced to capital account. Cash is £828 up at £1,922, in addition to which the loan at bank of £900 has been extinguished. Residence in the association buildings seems to encourage an increase in population, for not only is the death rate 13.18 per 1,000 against 14.6 for the entire metropolis, but the birth rate of 31.24 compares with 25.6 per 1,000. Infant mortality, however, on a higher scale does much to check this tendency.

Monks, Hall and Company.—Trading profits of this iron and steel bar, hoop and wire rod manufacturing business for the twelve months ended May 2 amounted to £15,852, and in addition a profit of £3,914 was realised on sale of investments, making with £4,811 brought forward a total of £24,577. Debenture interest took £4,987 of this, £245 was written off extensions and £200 went in a donation to Warrington Infirmary, and after paying preference dividend and income-tax and transferring £2,100 to debenture account £9,792 was left. In view, however, of the present uncertain outlook, and also with the object of strengthening the position of the company the directors do not see their way to recommend the payment of a dividend on the ordinary shares. Additions to property cost £5,725, making a total of £239,543, a figure regarding which the auditors seem doubtful, and the company has nothing in the shape of a reserve beyond the debenture redemption fund, now standing at £7,500, so that the position could do with a good deal of strengthening. Debtors at £49,376 exceed creditors by £8,098, stocks are valued at £77,877 and investments at £4,400, while cash amounts to £28,069.

Pondicheri Railway Company.—Receipts from coaching traffic for the year 1907 improved by Rs. 4,955, and those from goods traffic were Rs. 7,001 up, but miscellaneous revenue fell off a little, leaving the total income Rs. 11,183 better at Rs. 66,209. Working expenses increased by no more than Rs. 1,754 to Rs. 32,244, the percentage to receipts being 48.7 per cent. against 55.4 per cent., leaving the nett revenue at Rs. 33,965 compared with Rs. 24,536. After deducting administration expenses the balance was Rs. 25,534, of which half was paid to the French Colonial Government and the remainder was brought home at the exchange of 1s. 4d. per rupee. With £393 brought forward and £36 from interest, &c., the disposable total was £1,281, and out of this dividends aggregating 12 per cent. have been paid, leaving £438 to be carried to the new account. Capital account shows a credit balance of £722, and this together with the profit is represented by the cash in hand amounting to £1,793.

Pyman Steamship Company.—Gross profits for the twelve months ended May 7 were £56,947, of which £29,475 was retained as nett, and with £3,794 brought in gave a total of £33,269 for disposal. Of this £16,000 is reserved for depreciation, after which a dividend of 5 per cent. is paid and £4,882 is carried forward. The general reserve of £10,713 appearing in the previous balance-sheet has been eliminated by the directors appropriating £4,000 of the amount for depreciation of the fleet, and adding the balance to the mutual insurance, special repairs and renewals account. With the amount now written off the depreciation allowance to date is £113,926, reducing the book value of the fleet to £417,494, or about £5 15s. 6d. per ton, while the renewals, &c., account stands at £48,088. Creditors and bills payable come to £12,778, against £2,831 due from debtors, £5,667 in cash and £22,667 for steamers' current voyages and average claims pending. Debenture issue expenses were reduced by £300 during the year, but still figure as an asset for £4,550.

Rajmai Tea Company.—The average price obtained for the 1907 crop was practically the same as in the previous year at 8.62d., but the quantity available was 37,214 lbs. less at 961,865 lbs. Sales of tea seed, however, produced £1,885 more at £4,390, and the gross revenue was £660 up at £38,964, but expenses were again heavier, and the nett profits showed a decrease of £309 at £8,344. With a considerably larger balance of £7,911 brought forward, the disposable total was £17,183 compared with £14,351, and in addition to putting £5,000 to a reserve for new extensions against nothing a year ago, the directors raise the dividend by 2 per cent. to 12 per cent., and repeat the bonus of 3s. per share, carrying forward £4,623 or £3,288 less. Estates remain at £55,814, but £2,287, representing cost of upkeep of 150 acres of three and two-year-old tea and last year's extensions of 100 acres has been capitalised, and it is to cover this and future extensions that the above-mentioned reserve has been created. The other reserves remain at £30,000, of which £10,000 is employed as working capital, and the remainder is invested in securities valued at £25,667. Creditors are £391 higher at £3,025, and the overdraft at the bank has risen by £4,909 to £7,000, while on the other hand stocks are £2,651 larger at £17,870, cash is £2,466 up at £2,984 and debtors have dropped a little to £3,614.

Real Estate Corporation of South Africa.—The general commercial depression in Johannesburg has affected the profits of this company for the year ended March 31 to the extent of £4,067 compared with the previous year, and including £093, the gross revenue amounts to £30,243. Outgoings for repairs, general expenses, interest on debentures and discount on new issue absorb £16,516, leaving a nett profit of £13,727, and giving, with £5,153 brought forward, a disposable balance of £18,880. Out of this £5,000 is set aside for depreciation of buildings, and

a dividend of 5 per cent. is paid, leaving £6,380 to go forward. Property at Kimberley stands at £217,554 or £1,235 higher, £1,483 having been added during the year, and £248 deducted as value of buildings destroyed by fire. Kimberley property is increased by £236 to £8,877, and the total of £226,431 is written down out of the year's profits to £221,431. Shares in other companies represent £13,237. Cash comes to £1,696 and £2,755 is owing by debtors in Johannesburg against £3,424 due by the company, principally in London. The reserve of £15,498 is unchanged. The debenture debt of £52,000 matured on January 1 last, and was renewed to the extent of £42,700 and the balance paid off, and £13,850 has been borrowed mostly on the security of £18,000 debentures, part of a further £22,300 created.

ROSEHAUGH TEA AND RUBBER COMPANY.—This company took over the property of the Rosehaugh Tea Company, Ceylon, in June, 1907, and has an issued capital of 180,000 preference and 304,000 ordinary shares, of which 138,300 preference and 224,100 ordinary were issued as fully paid. Nett profits from July 1 to December 31, 1907, amounted to £22,724, and after providing for home charges and interest and writing off £875 for depreciation £19,681 was left. Out of this a dividend at the rate of 10 per cent. per annum is paid on the ordinary shares and £689 is put to reserve leaving £1,987 to be carried forward. A sum of £15,980 was realised from premium on 79,900 ordinary shares, of which £5,669 went to pay costs of winding up the old company and the preliminary expenses of the new one, and £10,311 was put to reserve, making this fund £11,000. Outlay on the property was £24,602, making a total of £442,427, and the company has consequently had to borrow £14,666 from its bankers. Other creditors come to £9,570, against which stocks are valued at £12,227 and debtors owe £670. Cash is insignificant at £7, and coast advances, less a reserve of £354, seem very heavy at £7,225.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.—The premium income for 1907 was £408,977 and the interest income £212,091. Claims took £403,852 and commission and expenses £55,787, or £13 12s. 10d. per cent. of the premium income. As a result of the year's business the life fund, however, was reduced by nearly £50,000 to £5,481,108. But this was entirely because severe provision has been made for depreciation, the directors having written off £77,438 out of profits and carried £100,000 to suspense account out of the balances in hand to meet an estimated depreciation of £177,438. The combined effect of these operations has been to reduce the profits of the quinquennium by £127,438. Nevertheless, the profit brought out by the actuarial valuation as at March 1 last was £397,380, and out of this the directors declare a reversionary bonus at the rate of 26s. per cent. per annum together with an intermediate bonus of 20s. per annum on policies that become claims before the next investigation.

SEAGAR, EVANS AND COMPANY.—Despite the drastic reduction of capital carried through last year, by which the ordinary shares were extinguished and the preference reduced by three-fifths, there still seems to be too much for the earning powers of the company, and £39,558 of it is invested in stocks, which return a yield of about 3¼ per cent., while 4¼ per cent. is paid on the debenture debt of £135,566. Including the sum of £1,300 received from investments, the gross trading profit amounted to £14,022. Transfer fees added another £7, and a profit on investment sold brought in £198, which is applied in reduction of plant account. After providing for debenture interest there remains a divisible sum of £5,493, out of which 4 per cent. is paid on the share capital and £157 is carried forward. This distribution compares with a dividend at the rate of 3¾ per cent. paid this time last year and 1 per cent. for the period 1905-6, so that some small improvement is being made. Goodwill, licences, and trade marks represent £16,281, leasehold premises only £3,340, Glen Tarras premises £1,000, and plant and machinery £8,122. Stock amounts to £60,836, cash to £4,541 and £5,175 is in hand of trustees for debenture-holders. Investments have already been referred to, and the colossal sum, considering the general position, of £135,852 is due from debtors, while only £2,707 is owing to creditors. The directors speak of larger reserves being possibly necessary in the event of the passing of the Licensing Bill, but no working statement is provided exhibiting any allowances made, nor does any reserve whatever figure in the balance-sheet, but, taking the figures that are given, it does not seem that any very great loss could be sustained, however drastic a Bill were passed.

SINGLO TEA COMPANY.—As blights were less prevalent on this company's estates during 1907 the crop from the Assam gardens increased by 183,525 lbs. to 1,374,749 lbs., and the Dooars output was 58,670 lbs. up at 865,944 lbs. Cost of production was reduced by 0.63d. to 6.02d. at the first-named, but the price realised also fell by 0.64d. to 8.84d., while at the Dooars gardens an advance of 0.30d. to 7.55d. in the price was accompanied by a slight reduction to 4.78d. in cost. Nett profits from all sources rose by £3,163 to £18,316, but London office charges and managers' commission took rather more, and after providing for debenture interest the surplus was £2,999 better at £12,787. Deducting from this the debit balance brought forward, £9,556 was left, out of which the preference dividend is paid for the first time in eight years, and £1,000 is set aside to provide for the premium on redemption of the debentures in 1911, leaving £1,731 to be carried forward. Liabilities to sundry creditors and on bills payable have been reduced by £3,220 to £29,366 against a decrease of £2,910 to £34,036 in stocks, but debtors owe £12,140 or £3,334 more and cash is £7,500 up at £9,030. Estates are unaltered at £230,105, representing a very heavy figure per cultivated acre, and the auditors once more refer to the question of depreciation in their remarks on the balance-sheet.

S. P. AUSTEN AND SON.—The gross profits for the year ended April 30 at the Wear Dockyard, Sunderland, amounted to £10,041, and after providing for depreciation and debenture interest there remains £4,030, to which must be added £18,273 from last account, giving £22,303 disposable. Of this £2,000 is written to reserve against contingencies on book debts, the interim dividend, and 3 per cent. on the ordinary shares paid and £14,203 carried out. Land, docks, and goodwill with plant, &c., are taken at £160,284. Stocks and works in progress at £8,387. Cash and bills come to £40,562, and debtors to £19,254 against creditors for £8,162.

TEDCASTLE, MCCORMICK AND COMPANY.—Nett trading profit for the year ended March 31, after providing all necessary allowances, including £8,000 written off goodwill, premises, steamships, &c., and £3,000 placed to reserve for depreciation of investments, amounts to £9,541, making, with £2,693 brought forward, a disposable balance of £12,534. Preference dividend paid 5 per cent. is distributed on the ordinary shares, and £3,034 is carried forward. Goodwill and property all included, with cost of a new steamer and depreciation allowed, figures at £196,372. Investments aggregate £105,198, and cash comes to £8,750. Debtors owe £40,471 against £28,342 due to creditors, and reserves total £64,300.

TINGRI TEA COMPANY.—The taste of prosperity enjoyed in 1906 was not repeated last year, as although the crop was only 5,861 lbs. smaller at 552,976 lbs., gross receipts fell off by £2,119 to £25,219 owing to a reduction of 0.73d. to 10.94d. in the price obtained. Profits were further affected by the higher cost of rice and other food grains and by the larger number of coolies sent up to the gardens, which caused an increase of £3,922 to £21,500 in expenses. Difference in exchange took an extra £290 at £1,544, so that the nett balance, including £685 or £134 more brought in was £5,604 smaller at £2,731. The reserve, of course, is the first thing to suffer under the circumstances, especially as the directors put £2,000 to that fund a year ago, but even then the balance is only made sufficient to pay a dividend of 4 per cent. against 10 by reducing the sum carried out to £467. A sale of land for £209 brings the block account down to £57,300, against which the reserve remains at the insignificant total of £3,000. Bills payable and sundry creditors are £3,010 up at £11,842, and in addition the company has had to borrow £733 from its bankers, but notwithstanding this cash comes to no more than £74 or £1,246 less, while an increase of £3,684 to £12,984 in stocks is off-set by a decrease of £3,131 to £2,854 in sundry debtors.

WILLIAM COOKE AND COMPANY.—The result of the year's working ended March 31 shows a nett profit of £21,786, making, with £3,460 brought in, a disposable balance of £25,246. Out of this, after paying preference dividend, £2,000 is transferred to reserve, £8,000 to renewals and improvements, and 10 per cent. distributed on the ordinary shares, including a bonus of 2½ per cent., leaving £3,496 to go forward. Property account stands at £135,115, tools, engines, wagons, &c., at £21,516, stocks at £38,797. Cash is negligible at £317, and £36,663 is due from debtors against £32,106 owing to sundry creditors and bankers' advances of £11,431. Reserve now totals £15,000 and renewals fund £14,000, both of which are employed in the business.

The *Socialist Review* for July gives prominence to a discussion of the visit of the King to Russia. An article on the international aspect of the visit by Sir Charles Dilke, Bart., M.P., another by Mr. H. N. Brailsford on the relation between British Liberalism and the Russian Government, and a third, by Mr. Henry W. Nevinson, describing the judicial murders which he saw during a recent visit to Russia, will be the leading features of the *Review*. Mr. Chiozza Money, M.P., writes upon the waste of capital necessitated by modern industrial conditions. Mr. Harley has an interesting page in the life of Garibaldi, hitherto unwritten, telling of his relation to the early International Peace and Socialist movements, whilst Professor Alfred Russel Wallace concludes an interesting statement of how to remedy the unemployed problem.

Coupons due July 10 of the Imperial Japanese Government 4½ per cent. loan (second series) for £30,000,000 will be paid by the Yokohama Specie Bank, Limited.

At their meeting on Thursday the directors of the Niger Company, Limited, allotted the £175,000 new 5 per cent. debenture stock offered to holders of the company's outstanding debentures (which expire on the 1st proximo) and to the general body of shareholders.

A coming issue, probably next week, is a 5 per cent. 30-year gold bond of the Michigan United Railways Company, which works over 200 miles of line in an industrial, agricultural, and populous part of the United States. The company represents a gradual consolidation of several smaller electric lines, and has exclusive franchises in the cities it traverses. The loan to be offered here will be for $1,000,000, and is in the hands of the National Provincial Bank and Messrs. Sperling. It ranks along with the bonds already in existence.

Mexican Light and Power Company.—Gross earnings for May $471,195, increase $84,717; nett earnings $225,609, decrease $10,497; surplus $28,762, decrease $10,497. Ratio of expenses to receipts, 52½ per cent. against 38¼.

A Liverpool telegram states that the negotiations for the amalgamation of the Union Maritime Insurance Company, Liverpool, and the Indemnity Marine Insurance Company of London have fallen through.

NEXT WEEK'S MEETINGS.

MONDAY, JUNE 29.

Assam Company.—5, Laurence Pountney Hill, E.C., 2 p.m.
Brooke, Bond and Co.—Winchester House, noon.
Californian Petroleum Refinery.—Winchester House, noon.
Cordoba and North-Western Railway.—Salisbury House, noon.
Darien Gold Mining.—Manchester, noon.
Dumont Coffee.—Winchester House, noon.
Egyptian Hotels.—11, Ironmonger Lane, E.C., 3 p.m.
Forbes Rhodesia Syndicate.—2, London Wall Buildings, E.C., noon.
Himan Concessions.—Winchester House, noon.
Indian Electric Supply and Traction.—Orient House, noon.
J. G. White and Co., 9, Cloak Lane, E.C., noon.
Mitterberg Copper.—Winchester House, 12.30 p.m.
Peruvian Pacific Railway.—Winchester House, 2.30 p.m.
Pigg's Peak Development.—7, Finsbury Circus, E.C., noon.
San Sebastian Nitrate.—Winchester House, 2.30 p.m.
Taitapu Gold Estates.—Winchester House, noon.
United States Brewing.—Winchester House, noon.
Venture Corporation.—Salisbury House, noon.

TUESDAY, JUNE 30.

Anglo-Argentine Trams.—Winchester House, noon.
Anglo-Japanese Bank.—Winchester House, 12.30 p.m.
Assam Bengal Railway.—Bishopsgate House, E.C., noon.
Bieckert's Brewery.—Institute of Chartered Accountants, 3 p.m.
Burma Ruby Mines.—Cannon Street Hotel, noon.
Chadburn's (Ship) Telegraph.—Liverpool, noon.
Cordoba Central B.A. Extension.—Dashwood House, 3 p.m.
Globe Telegraph and Trust.—Electra House, 1 p.m.
Golden Blocks, Taitapu.—Institute of Chartered Accountants, 12,30 p.m.
Gt. Cobar North.—Westminster Palace Hotel, noon.
Gt. Southern of Spain Railway.—2, Broad Street Place, E.C., noon.
Homocea.—Winchester House, noon.
Hornillo Company.—2, Broad Street Place, E.C., 2.30 p.m.
Imperial Russian Cotton and Jute.—19, Cullum Street, E.C., 2 p.m.
John Brown and Co.—Sheffield, noon.
Lodden Deep Leads (Victoria).—Salisbury House, noon.
London and Continental Investment.—Salisbury House, noon.
Madras Railway.—Salisbury House, 3 p m.
Mines Corporation of New Zealand.—Salisbury House, 3 p.m.
New Century Engine.—Salisbury House, noon.
New Eastern Investment.—Winchester House, 11.30 a.m.
New General Traction.—20, Bishopsgate Street, E.C., 2.30 p.m.
Northern Transvaal Lands.—Winchester House, noon.
Ohlsson's Cape Breweries.—Cannon Street Hotel, 3 p.m.
Shell Transport and Trading.—Winchester House, 11 a.m.

WEDNESDAY, JULY 1.

African Association.—Liverpool, 2 p.m.
Arica and Tacna Railway.—31, Lombard Street, E.C., 1 p.m.
Brown Hill Extended.—Winchester House, noon.
Buenos Ayres and Belgrano Trams.—Winchester House, 3 p.m.
Champdany Jute.—Glasgow, 11 a.m.
Rhodesia, Limited.—Salisbury House, noon.
Singlo Tea.—Winchester House, 2 p.m.
South African Breweries.—Winchester House, noon.

THURSDAY, JUNE 25.

Bibi-Eybat Petroleum.—28, Bishopsgate Street, E.C.

MINING RETURNS.

Alaska Mexican.—Crushed 20,909 tons ore; value, $21,403; saved 325 tons sulphurets; value, $16,479.

Alaska United.—Crushed 18,030 tons ore; value, $23,285; saved 370 tons sulphurets; value, $10,940.

Duff Development.—Recovered 221 ozs.

Esperanza.—Crushed 12,083 tons dry ore; concentrates shipped 425 tons dry ore; value, $160,532; profit, £10,375.

Kelly's Queen Block.—Treated 167 tons quartz; value £1,225.

Komata Reefs.—Crushed 2,200 tons; £3,600.

Mount Lyell.—Ore treated 30,967 tons. In addition 512 tons purchased ore and metal bearing fluxes. Converters produced 750 tons blister copper, containing:—Copper, 740 tons; silver, 54,184 ozs.; gold, 1,452 ozs.

New Chuquitambo.—Treated 4,000 tons. Received 15 kilos gold. Value £1,750.

North Broken Hill.—Treated 2,680 tons crude ore, assaying 16.1 per cent. lead, and 6.4 ozs. of silver per ton, producing 457 tons concentrates, containing 318 tons 15 cwts. lead, and 9,186 ozs. silver.

"O.K." Copper.—Treated 817 tons crude ore, producing 69 tons fine copper.

Ouro Preto.—Ore 6,460 tons, 2,087 ozs.; total value produce, £8,340.

Pfeiffer's Day Dawn.—Treated 997 tons value, including residues, £3,023.

Rhodesia Matabeleland Development.—Crushed 678 tons, 141 ozs.; tailings 315 tons, 15 ozs.

United Rhodesia.—Jumbo: 2,275 tons, 1,294 ozs. Inez: 901 tons, 404 ozs. Properties on tribute: 4,600 tons, 1,409 ozs.; 7,776 tons, 3,107 ozs.

Waihi Grand Junction.—Crushed 3,938 tons, yielding £6,035.

Zinc.—2,650 tons tailings for 1,003 tons zinc concentrates, containing 461 tons zinc, 76 tons lead, and 15,045 ozs. silver, and 18 tons leady concentrates, containing 9.90 tons lead and 374 ozs. silver.

COMPANY MEETINGS.

AUSTRALIAN ESTATES AND MORTGAGE COMPANY, LIMITED.

A meeting of the first debenture stockholders of this company was held on Monday at the Cannon Street Hotel, E.C., Mr. Stanley Boulter (chairman of the Law Debenture Corporation, the trustees for the first debenture-holders) presiding.

The notice convening the meeting having been taken as read, Mr. Andrew Williamson (vice-chairman of the company) said: I am sure it must be a matter of regret to us all that, owing to temporary indisposition, Mr. Malcolmson, the chairman of the Australian Estates Company, is prevented from being with us to-day. He has asked me to take his place. The circular which accompanied the notice calling this meeting very clearly explains its object, and has left but little for me to say to you by way of explanation. As you are aware, in 1901, owing to a long series of droughts which had overtaken the various Australian colonies, we found it necessary to come to you to ask you to grant power to the company to raise further working capital, and we asked you to give us a power to borrow to the extent of £300,000 on security ranking prior to your own and the other debenture stocks on terms set out in the resolutions submitted to you. Before submitting these resolutions to you, the board had very carefully thought out the whole subject, and were satisfied, as they then explained to you, that what they then asked you to do was in your own best interests, as well as in the interests of all concerned. We considered it very undesirable that this power should be restricted to any definite time limit, and you granted the power without any such restriction. We, however, gave you our verbal assurance that, as soon as the financial position of the company was such as to justify it, this prior lien should be rescinded. Although for some time after the granting of the prior lien we had a continuation of unfavourable seasons, for during the whole of the year 1901 the drought continued unabated, and our annual report for the year 1902 stated that the drought during the year 1902 had without doubt been the most severe ever experienced in Australia since it became a British colony, an improvement then set in, and the years 1903, 1904, 1905, and 1906 were good seasons, some of them exceptionally so. These good seasons, together with good management of the estates in Australia and good prices for wool and stock, have resulted in a very satisfactory recovery on the part of the company, and, in the opinion of the board, we have reached the time when we ought to give effect to our assurance, and it is with sincere pleasure that I am here to-day to propose the resolution, copies of which you hold in your hands. The prior lien scheme had to deal with a variety of interests, and was of necessity an intricate and complicated one, but it has worked exceedingly well, and, in our own opinion, it has now served its purpose, as the necessary working capital has been accumulated out of the profits of the subsequent years, and accordingly the time has come when our assurance to you that the scheme would be only a temporary measure should be given practical effect to. It was left entirely to the company to decide when the time had come when these borrowing powers should be rescinded, and we could have gone on for some time longer without any one having any right to challenge our action, but it was our desire to act in the fullest manner up to the spirit of our understanding with you, and we recognised that the position of the company was now so strong that we felt the honourable course towards you was to relieve you of this prior charge on your security. Not only are we doing so, but we have also agreed that for the future no dividend shall be paid to the shareholders unless a reserve fund of £60,000 shall have been again accumulated and maintained, for, as has been clearly explained, as soon as these prior lien facilities are rescinded, the reserve account of £150,000 will be applied in writing down the existing debit balance of profit and loss account. This existing reserve account is only technically a reserve account in terms of the scheme, for side by side with it there is a still larger amount at the debit of profit and loss account. This new reserve account of £60,000, which will be accumulated out of surplus profits, will be a general reserve, and will be available for all or any of the purposes of the company other than the payment of dividend, and will undoubtedly strengthen your security. The company hope and expect that a very much larger reserve than that will be gradually built up and maintained, in the interests of all concerned. I am sure that it is as great a satisfaction to our chairman to-day, Mr. Boulter, who represents the Law Debenture Corporation, your trustees, as it is to the directors and to yourselves that the company is able, at so early a date, to come forward and relieve you of this prior charge. I may mention to you that, although we took power to borrow to the extent of £300,000 we have never needed to exercise this power to the full extent, and we have carried out to the letter your expressed desire that those borrowings should be in the form of temporary advances by our bankers, though power was given us to raise prior lien debenture stock if necessary. The scheme has proved itself a good one; it has done excellent work and we can now all bid it adieu with every satisfaction. The properties of the company have been cared for and maintained in a high state of efficiency, the company's flocks have made a splendid recovery from the disastrous effects of the droughts, both in number and in quality, and altogether your security for your debenture stock is, in my opinion, materially greater to-day than it was when you granted the prior lien facilities. As you are aware, under the present arrangements of the trust deed for the

first debenture stock, as well as for the other debenture stocks, every one attending the meeting needs to have the debenture stock certificate with him, and it is only by the stock certificates present at the meeting that the voting power goes. This is found in practice to be exceedingly inconvenient, and many people who are not able to attend are so reluctant to part with their certificates that they practically are unable to vote. Many have their certificates at their bankers or at safe deposits or other repositories for safe custody, and it causes them much unnecessary trouble to get them out. We have thought it well—and we have the entire approval in this of our friends, the Law Debenture Corporation, your trustees—to take the opportunity of the present meeting to include in the resolutions submitted to you provisions for altering this and substituting in place representation by proxy. Mr. Williamson concluded by moving the first resolution providing for the recission of the prior lien borrowing powers.

Mr. C. E. Bright, C.M.G., seconded the resolution, which was carried unanimously.

Mr. Williamson next moved the second resolution, which provided for representation at meetings by proxy.

Mr. E. N. Senior seconded the resolution, which was carried.

The Chairman: It is a matter of great congratulation to us to be assembled here to-day to pass resolutions which are unusual and, I think, unique. Those of us who can cast our minds back to the year when we all had such gloomy forebodings, and when circumstances presented such little hope, can look upon the properties of this company as they are to-day and regard the change which has come over the whole situation as little less than magical. A bounteous nature has done for us what no one in the world could have done, and we are now reaping a rich reward for patience and for labours which have been given to this company of a most exacting and praiseworthy character. In this respect I feel that one ought specially to mention the name of Mr. Andrew Williamson. In the dark days, when some of us took what was then thought to be a pessimistic view of the situation, Mr. Williamson was always hopeful and did not hesitate to give expression to his views, and I think that the debenture-holders, the shareholders, and every one connected with this company are under a very deep debt of gratitude to Mr. Williamson, not only for the shrewd business instinct that he displayed on that occasion, but also for his very wise management of the affairs of the company. At the present moment everything is bright and cheerful and fills us with hope for the future of the company. (Hear, hear.)

Meetings of the "A" and "B" debenture stockholders, at which Baron Bruno Schröder (one of the trustees for the "A" debenture-holders) and Mr. Stanley Gray (one of the trustees for the "B" debenture-holders) respectively presided, were subsequently held, and similar resolutions passed.

GREAT COBAR.

The first ordinary general meeting of Great Cobar, Limited, was held on Thursday at River Plate House, Finsbury Circus, E.C., Mr. Andrew Haes, the chairman of the company, presiding.

The Secretary (Mr. A. Johnston) having read the notice convening the meeting and also the certificate of the auditors,

The Chairman said the position of the company fifteen months ago was one of considerable anxiety for the directors, because they had to provide an enormous plant capable not only of treating very large quantities of ore, but of treating it very much more cheaply. In the first instance the directors had intended to have the plant entirely constructed in America, but for some unexplained reason the American firm refused to carry out the contract. This turned out to be a blessing in disguise, for had they provided American machinery entirely they would have had to pay, under the new Australian tariffs, a much higher duty. The old plant, although not a very efficient one, was good enough, in the opinion of the board, to have a considerable amount of money spent upon it in order to continue producing copper while the new plant was being installed. By this means a very considerable amount of money had been earned—far more than it was thought possible to earn with the plant. When the new plant was in running order—as it would be very shortly—the old plant would be taken out and parts of it made use of for minor purposes. He congratulated the shareholders on the results achieved. There was no statement made in the company's prospectus but had been absolutely carried out to the letter, and in his experience he had never known another mining venture of which that might be said. Even the reports of their mining engineers had been so correct that had they known in advance they could not have made them more correct. After referring to one or two items in the accounts which needed explanation, the Chairman said the balance of profit brought down was the fine amount of £238,431. This was a highly satisfactory result. With regard to the item preliminary expenses and underwriting commission, for which it was stated in the auditors' certificate no provision had been set aside out of the profits, the provision made for the redemption of the debentures by the assignment of £100,000 of the profits in any year, beginning with the present year, was considered ample by the board for writing off all these requirements, particularly having regard to the fact that there were five years' ore supplies blocked out ready for the new plant at full working capacity. According to the trust deed, the first £100,000 was to be deducted from the profits in each year. If, in any one year, the profits did not reach that amount, the debentures would run one year longer. The directors, after careful consideration, had come to the conclusion that there was no fear of that occurring. The profits had been, and would continue to be, such that the writing off of the £100,000 would be done every year with the greatest ease. With regard to the £62,903 carried forward, it was a balance due to the shareholders and not to the debenture-holders, and the directors intended at a future date to distribute it among the shareholders in the form of dividends. Some few people thought that the amount of £100,000 would never be reached. All he had to say to that was, when once the new plant was set going it would achieve the amount of £100,000 in a very few months, and a good deal more besides. The great object of the directors in the arrangement of the plant had been to promote cheapness of cost. Everything in the plant wherever possible was worked by electric power. When the new plant was running their profits would increase enormously. The mine was there, the ore was there; the percentage of ore was practically what they originally thought it was. It did not go out in depth, as had been said. That was an important point. He wished to impress upon shareholders that, even if the £100,000 was not found for the debentures, there was no default. It simply went on for one year longer. The results had proved that they would be in a position to pay off the £100,000 within the present year.

The Chairman concluded by reading a cablegram received from the manager of the mine on June 23, reading: "Furnaces finished; boilers under steam; tested all engines in the power-house. We have not finished bonding the railways. It has been necessary to make 1,000 bonds which cannot be purchased in Australia. Informed will be finished in 16 days. Starting probably three to five weeks." It added the report on the last crosscut in the mine on the 10th level: "No. 36 shows 75 ft. of good ore. The face of the crosscut is in clean ore"—the last sentence signifying that they had not by any means got through the ore.

Mr. J. D. Kendall, in seconding the adoption of the report, said his attention had been drawn to an article which appeared in the Financial Supplement of the *Times* of June 19 last, dealing with the Great Cobar and Chesney Mines. He had intended ignoring it, but as so many shareholders appeared to attach importance to it, he proposed to answer it in detail. Mr. Kendall proceeded to answer seriatim the points in the *Times* article, which, he stated, was "simply saturated with misstatements of fact." The writer had evidently never seen either the Cobar or the Chesney mine, and therefore must have got his information at second-hand. He (Mr. Kendall) repudiated the suggestion which seemed to be contained in the article, that visitors were excluded from the mine because the engineer had formed an unfavourable opinion of it. The exclusion of visitors was due to the fact that they had no officials available to show them round, and was brought about by a party of 35 belonging to a Sydney scientific society asking for permission to go over the mine. The statements in the *Times* article, he contended, were not based on facts, and satisfied everybody present that there was no foundation for the criticism contained therein.

Mr. Fisher considered that, as the article must have affected the market for their shares, and, in his opinion, was libellous, some further action should be taken by the board beyond merely refuting the article at the general meeting.

The Chairman, replying to a remark by one of the shareholders as to the market value of the company's shares, said the Great Cobar had been subjected to a great deal of severe and unjust criticism on the Stock Exchange, made with a view to depressing the shares.

The adoption of the report was then put, and carried unanimously.

DHARWAR GOLD MINES.

The sixth ordinary general meeting of the shareholders in the Dharwar Gold Mines, Limited, was held on Tuesday at Cannon Street Hotel, E.C., Captain W. Bell McTaggart (the Chairman) presiding.

The Secretary (Mr. John Ponsford) read the notice convening the meeting and the report of the auditors.

The Chairman said: The expenditure in India and in England for twelve months to March 31, 1908, chargeable to revenue account, amounted to £10,774, against which have been placed various receipts, totalling £305, leaving a balance of expenditure of £10,469, which has been transferred to profit and loss account. In addition to the foregoing, the capital expenditure has amounted to £1,298. The financial position of the company at March 31 last may be summarised as follows: To be received on account of 12,705 new shares at 12s. 6d., £7,940; on account of balance of premium on same, viz., 2s. 6d. each, £1,528; on account of calls outstanding, £77; in all £9,547. Less amounts paid in anticipation, £685, making £8,862; cash in London and in India, £1,217; sundry debtors, £6,946; which, after deducting liabilities, as per balance-sheet, of £2,710, shows a balance of resources of £14,315, so that, I am glad to say, the company is in a very satisfactory position. The company also possessed at that date 18,386 fully-paid shares in the Dharwar Reefs Company, Limited, but since then the latter has been placed into voluntary liquidation for the purpose of reconstruction, on the basis of a 5s. assessment of the shares of the new company. It was a part of the scheme of reconstruction that every member of the old company should be entitled to claim as of right an allotment of one share of the new company, credited with the sum of 15s. as paid up thereon, for every share held in the old company. Accordingly, the Dharwar Gold Mines, Limited, became entitled to apply for a similar number of shares, namely, 18,386, in the new company, which, in view of the prospects of that concern, they have done. The shares in the New Dharwar Reefs Company have actually been over-subscribed for,

some of them at a substantial premium, so that the reconstruction scheme has been a complete success, and your board have good grounds for anticipating a successful future for that company. With regard to the option of purchase of Block No. 22A, granted to the Mysore Gold Mining Co., Limited, for a term of three years from March 1, 1907, it will be observed from the report of Mr. Collins that during the past year the Mysore company have made important discoveries on the adjoining block, and, in his opinion, the mining outlook there is distinctly favourable. This block of land on which you have given an option to the Mysore Gold Mining Company must not in any way be confounded with the option block which they held from the Dharwar Reefs Company, and on which they are carrying on active operations. This block of yours lies immediately to the east of the ground they are prospecting, and, as a matter of fact, contains their deeps, and you will see that the option they have is extended for a period of nearly three years. Of course, I am not in a position to say whether they will exercise that option or not, but it appears nearly certain, if they exercise their option to take up the Dharwar Reefs property, that, as the reefs dip towards our ground, they will be compelled to take up the option on your block also, and this seems more especially likely, because some extensive prospects have been discovered on the easterly reef in the block which they are prospecting—that is, the reef nearest to your block. Of course, it will depend a good deal on what the dip of the reefs may prove to be, in sinking, but that they dip towards your blocks is now, practically speaking, certain. Our policy is to continue the vigorous development of the Hosur block, in the hope that the mine will soon have reached a stage of importance sufficient to justify its flotation as a separate concern, and when that happens a substantial profit should accrue to this company. In the Attikatti block, work is for the moment confined to further testing the lode laterally at the depth of 350 ft., in view of the presence at surface of old workings along its course, particularly in a northerly direction.

Mr. John Taylor seconded the motion, which was adopted.

AFRICAN BANKING.

The thirty-fifth ordinary general meeting of the African Banking Corporation, Limited, was held on Thursday at Cannon Street Hotel, E.C., Mr. J. D. Alexander (Chairman) presiding.

The Chief Manager (Mr. G. W. Thomson) having read the notice convening the meeting and the auditors' report,

The Chairman said: I think on this occasion I may say—without, I hope, being thought too optimistic—that after a prolonged period of depression business in South Africa is beginning to show signs of improvement. The export from the Cape of wool, ostrich feathers, mohair, hides, skins, corn and meal has considerably increased, but there is a marked falling off in the import of breadstuffs. South Africa is beginning to realise that she can produce a great deal of what at one time was imported as a matter of course. The country districts of Cape Colony are doing well. More attention is paid to the quality of wool. The wine trade is scarcely in a satisfactory state, but with Government encouragement and the possibilities of extending the market through preferential duties with Canada and other British colonies, a change for the better may be expected. The total value of all imports into Cape Colony for the year 1907 was £49,000,000, as compared with £47,000,000 for 1906, and the exports were £53,000,000, as compared with £49,000,000—an increase in both directions. In the Orange River Colony trade conditions are sound. Since 1902 there has been a steady improvement in the condition of the farmer. Wheat has been specially good, the yield being more than sufficient for the colony's needs. The export of wool continues to increase. In 1907 it amounted to £795,000, as against £606,000 in 1906. Diamonds were exported to the value of £1,148,000, an increase of £387,000 during the year. These statistics are evidence that the Orange River Colony has made substantial progress during the past year. In Natal the output of all the coal mines for 1907 amounted to 1,530,000 tons, an increase of 290,000 tons over the output for 1906, and of 400,000 tons over that for 1905. The coal mines are gradually extending their markets, and steady supplies are sent to India for use on the railways there. Tea has made steady progress during the past year. There is an increase of 200,000 lbs. in the manufacture, making a total output of 2,200,000 lbs. The total area of tea plantations throughout the colony amounts to nearly 6,000 acres. Natal tea is steadily gaining in public favour, and the prospects of the industry for the future are extremely satisfactory. As regards sugar, the acreage under cultivation continues to grow, and new and improved machinery has been erected at various mills. Maize to the extent of 85,000,000 lbs. was shipped from Durban to Europe last year. Natal maize obtained the best prices in the markets of Europe, and it had the advantage of reaching these markets two or three months sooner than the supply from other exporting countries. In Natal there is more land in cultivation than ever, and greater attention is being given to every department of farming. In Rhodesia prospects are at present as hopeful as in any other part of South Africa. The gold output, largely as a result of the work of individuals or syndicates working on the tribute system, is steadily on the increase. There are prospects also of a steadily increasing tobacco crop. A powerful syndicate has been formed to acquire and consolidate a number of asbestos interests in the Victoria district. There is also reason to believe that, in consequence of the visit to Rhodesia last year of a committee of the directors of the British South Africa Company, we shall see improved administration. Possibly a land settlement scheme may be propounded which will attract agricultural settlers, and that is as important to Rhodesia as mining development. In the Transvaal the mines are making progress not only in the amount of gold produced but in economy of working. Although the mines are doing well, the conditions of business in Johannesburg have not so far correspondingly improved. There is too much competition in trade considering the diminished population, and one of the most striking features of the general decline is the fall in the property market. In spite, however, of these adverse circumstances, I was glad to notice that Lord Selborne, in opening the Transvaal Parliament on the 15th of this month, expressed the opinion that more prosperous times were surely coming. The Land Bank, he said, had done much to help agriculture, and the Government's Chinese repatriation policy had been a complete success. As regards South Africa generally, the collapse of the diamond trade is an important fact in connection with the affairs of the country at the present moment. For many years this industry maintained a high level of prosperity, but during the latter part of last year, owing to the crisis in the United States and other causes, a curtailment of production became necessary. The total value of the world's gold production in 1907 was £82,200,000, as compared with £81,000,000 in 1906. In round figures, South Africa furnished £30,000,000 worth of that output, America £24,000,000, Australasia £15,000,000, the remainder coming from South America, Europe and the East Indies. A country that can produce such an enormous amount of the precious metal cannot continue for ever in a state of depression. One of the most interesting questions at the present moment in connection with South Africa is the endeavour that is being made to reconcile differences in the financial requirements and economic policies of the various South African Governments. The ultimate aim towards which circumstances seem to be tending is the federation or unification of the South African colonies. There are many difficulties to be overcome before that object can be attained, but no doubt it will be reached in time. It is a question of the highest importance to the banking interests of the country, and it will no doubt afford opportunities for a revision by all the banks acting in concert of note issues, securities and banking procedure, and possibly for the introduction of uniform banking law, free from the unscientific restrictions that have in the past done so much to hamper the legitimate expansion of trade. After dealing with the balance-sheet, the Chairman said: In these exceptionally difficult times our object has been to pursue a patient and prudent course. We have endeavoured to meet the legitimate requirements of our customers, but never hesitated to decline business, however tempting, that did not seem to be essentially sound.

Mr. R. Littlejohn (Deputy-Chairman) seconded the motion, which was carried unanimously.

EMPIRE OF INDIA AND CEYLON TEA.

The twelfth annual meeting was held at Winchester House, Old Broad Street, on Wednesday, Mr. F. T. Verner presiding.

The Secretary (Mr. H. F. Turner) having read the notice calling the meeting and the auditors' certificate,

The Chairman said: Gentlemen, you will have gathered that although we have had a fairly satisfactory year we have not done so well as in 1906. The garden revenue account shows a total reduction in profits of £3,376, compared with the previous year, and a decrease in expenditure of £481. The profit and loss account shows a nett profit of £35,959 or a reduction of £4,930. We recommend a dividend of 10 per cent. on the ordinary shares for the year. The amount carried forward is £5,666, equal to 16 per cent. of the nett profits. We do not on this occasion put more to reserve, but we are carrying forward a balance of some £3,000 larger than last year. A good deal was said at our last meeting on the subject of reserve funds. I see no reason to modify the remarks I then made, although they did not meet with the approval of two or three of the shareholders present. These gentlemen were in favour of paying smaller dividends and putting more to the reserve. One speaker stated that a larger amount placed to reserve enhances the value of the shares in the market. This appears to be a somewhat fallacious argument. I find that a tea company with which I am connected has not only paid largely increased dividends during the last two years, but has also placed during that period £30,000 additional to the reserve, and yet the ordinary shares of the company stand lower than they did twelve months ago. However, as I said last year, the board are fully alive to the advantage of further strengthening the reserve as opportunity occurs. When I had the pleasure of addressing you last, I did not look for a larger crop, but I anticipated a higher general average price and, under normal conditions, a further increase in profits. As regards our Assam gardens, this has not been realised. The conditions were somewhat abnormal. The great demand for common teas prejudicially affected the price for the finer kinds of tea grown in Assam, and our average was .36d. lower. The season was also an unfavourable one for production, the crop showing a decrease of 2,625 maunds. As regards this company as a whole, there have been some material compensations. Our interests are spread over three districts, and higher prices have ruled for our Dooars and Ceylon teas. Although our profits are smaller, due allowance must be made for the adverse factors affecting our Assam gardens—the smaller crop, the abnormal state of the tea market, and the increased cost owing to the scarcity of rice. It is not with any desire of airing my opinion in public that I now ask you to turn to the question of the tea duty. I would much prefer to confine my remarks simply

to the internal affairs and working of this company, but a tea company comes under a different category to most others, for the industry on which we depend is overburdened with a tax of 65 per cent. It is in this over-taxation that the great danger to our prosperity lies. What is this tax? It is a food tax. It is a tax on the produce of one part of the Empire—India and Ceylon—in order to raise revenue for another part of the Empire—the United Kingdom. Is this Free Trade? Is it fair trade? It is neither one nor the other; it is a grievous and unjust tax upon a British industry and upon tea consumers, especially the poor. At present we have a Radical Government, with Ministers posing as the apostles of "free trade" and "temperance." Although they have given pledges to reduce this tax, what have they done during the last two years to carry out their promises? Nothing. They have reduced the duty on sugar on the alleged grounds that it is less of a luxury than tea. Over 90 per cent. of the sugar consumed in this country is of foreign growth, while over 90 per cent. of the tea consumed in the United Kingdom is of British growth. The tax on sugar is now about 14 per cent., the tax on tea is 65 per cent. I have said that the great danger to the prosperity of this industry lies in over-taxation. I will exemplify this as briefly as possible. Every reduction of duty in the past has resulted in a large increase in the consumption of British-grown tea. Since 1900, when the duty was raised for several years, the expansion was entirely checked, and we find for the year 1907 as compared with 1906 not only a falling off in the consumption of British-grown tea, but an increase of 4½ millions in the consumption of China tea. Again, since the raising of the duty in 1900, the whole trade and industry has been more disorganised and dislocated than has ever hitherto been experienced. During the whole of the past season market prices for tea have never approximated to their intrinsic values. Under normal conditions the teas of an ordinary garden show a difference of at least 6d. per lb. betwen their lowest and their best qualities. For months during the past year the margin of difference has not been more than ⅛d. to ¼d. per lb.; in some instances we have obtained as high a price for our dust as for our broken Pekoe. On March 31 last a question was submitted to Mr. Asquith on the large amount of low-class China teas which had been consigned to this country. In the official reply, Mr. Asquith, after stating "that the Board of Customs has no 'official information' on the subject," goes on to point out that: "Under the Act of 1875 tea cannot be excluded from consumption merely because it is of low character. It must be so bad as to be unfit for human food. I understand that the increased demand for tea in various countries has caused prices to harden considerably, and that the enhanced value has attracted to this country importations of low-class tea for blending purposes to meet the demand for tea at a low price. Such tea, though of low quality, would nevertheless not be unfit for human consumption, and I do not think it would be to the interests of the poorer classes of the community to discourage the use of the cheaper kind of tea." With a reduction of 3d. in the duty there would be no reason for the poorer classes being forced to buy the China tea of low quality referred to by Mr. Asquith. They would be able to purchase good, sound tea of British growth and manufacture. The latest reports from our gardens are favourable.

Mr. W. S. Wells seconded the resolution.

Mr. T. Carritt said he had listened with much attention to the chairman's very interesting speech, and particularly to his remarks with reference to the subject of taxation. He (the speaker) thought most people who were engaged in the industry entirely agreed with the views expressed by the chairman. With regard to the answer received from the Chancellor of the Exchequer about the common tea of China being used by the poor people, and that it was quite right it should be used and sold cheaply to them, he wished to mention in confirmation of what the chairman had stated, that he had seen a great lot of that class of tea, and it was such rubbish that he was absolutely sure no person in Whitechapel would buy it. It could only be used by blenders of tea as make-weight, and consequently the quality of better-class tea was depreciated. He thought that was a point which should be made more widely known. In conclusion, he congratulated the directors on the report which they had presented, and expressed his pleasure at hearing that they had taken up such a strong position with regard to the taxation of tea.

The motion was carried unanimously.

BRITISH ELECTRIC TRACTION.

The ordinary general meeting of the British Electric Traction Company was held on Thursday, at Salisbury House, London Wall, E.C., Sir Charles Rivers Wilson (chairman) presiding.

The Secretary (Mr. Charles H. Dade) read the notice convening the meeting and the auditors' report.

The Chairman said that the directors considered the best way of removing the unwarranted impression which seemed to prevail that the general position of the company was not satisfactory was to give every possible information concerning not only the affairs of the company, but also of the associated companies. The report had therefore been made very full and complete in order to show to the shareholders and the public that the company was in a strong and sound financial position and capable of undertaking new business. Although the business done in the year had yielded a moderate reward for the inception and creation of the various undertakings, those undertakings were working at less profit than they had every reason to think would be the case. The subscribed share and debenture capital was £4,949,969, the amount due to creditors was only £12,570, and the debenture interest accrued was £46,623, so that apart from the reserve for depreciation and the balance at net revenue account, the total on the debit side of the balance-sheet was £5,009,165. To meet this there were assets amounting to £5,058,653, and of this large amount the intangible items, like expenditure on Acts of Parliament and other rights and powers which might or might not be realised, and goodwill represented only £18,528, so that there was a surplus of assets of about £631,000, and the important question for the shareholders was whether the depreciation of the securities held was greater or less than the surplus. With regard to this question, the directors could only give the shareholders the fullest information, and leave them to form their own opinion. The difficulties of making an accurate valuation of the numerous investments and undertakings controlled by the company were so great that the directors were unable to attempt it. The net profit amounted to £203,194, and, after deducting debenture interest and bringing forward the balance from last year, there remained £118,824. The directors had decided that £35,000 should be added to the general reserve, that £35,393 should be carried forward, and £48,431 applied to the payment of a dividend on the preference shares equal to 3 per cent. for the year. They regretted the dividend was not larger, but the important thing was to reassure the shareholders that the directors were not paying dividends at the expense of the future stability of the company. They had been working 13 years, and had established a large number of undertakings which had proved of great advantage to the community. In the early years they made profits on promotion, and looked to making profits on the undertakings when promotion profits ceased, but had been, to some extent, disappointed. The undertakings were well established, and were not over-capitalised. The reason for this was to be found in the legislative and municipal conditions. Electric traction was not generally adopted in this country for nearly 10 years after electrical tramways had been demonstrated to be sound commercial undertakings in America and on the Continent, because it was impossible to embark capital under the terms of the original Tramways Act. Parliament had yielded to the clamour in favour of municipal trading, and added to this was the constant demand by the public for increased facilities and reduced fares. Hence the difficulty of making profits. It was not, however, to be assumed that the improvement in nett profits was entirely dependent upon the amelioration of the legislative and municipal conditions. They would make every effort to increase their receipts and reduce expenditure. The point to emphasise was that they were in a position to undertake new business, and that they had ample resources for initiating new enterprises, and were considering how far this could be done abroad and in the colonies.

Mr. H. O. Arnold-Forster, M.P., seconded the motion, and said that after looking carefully into the company's affairs since his appointment as a member of the board, with Mr. P. D. Tuckett, 12 months ago, he had come to the conclusion that theirs was a genuine business concern, organised and controlled with high professional skill. Taken as a whole, it was a growing business, and was destined to grow. In view of the depreciation of the securities, it appeared to Mr. Tuckett and himself that only one policy was possible, and that was one which should have for its principal object the restoration of the full credit of the company.

Mr. Croft said the greater part of the shareholders would be very thankful to the directors and would endorse their policy. The credit of the company had been no doubt depressed and there was need for restoring it, and the policy foreshadowed eminently guaranteed that that would be the case.

The Chairman, in reply, expressed appreciation at the kindly spirit in which the shareholders had met the directors. There had been great disappointments, no doubt, but the directors wished to take the shareholders fully into their confidence. The position was not at all disheartening.

The resolution was carried unanimously.

Letters of allotment for the issue of 15,000 £10 5½ per cent. preference shares of the Morgan Crucible Company have been posted.

Messrs. J. Henry Schröder and Co. have received a cable from their Santos agents advising them that they have further encashed £6,150 in respect of the surtax collected weekly, for the service of the State of San Paulo 5 per cent. Exchequer bonds, making a total of £825,150 encashed since Aug. 1.

Messrs. J. S. Morgan and Co. are prepared at any time up to and including June 30, 1908, to purchase at par in cash at 22, Old Broad Street, all coupons falling due July 1, 1908, of Erie Railroad Prior Lien Bonds and General Lien Bonds issued under the company's First Consolidated Mortgage.

IMPERIAL JAPANESE GOVERNMENT FOUR AND A-HALF PER CENT. LOAN (SECOND SERIES) FOR £30,000,000.

NOTICE IS HEREBY GIVEN that the COUPONS due 10th July next will be PAID on and after that date between the hours of 11 and 3 (Saturdays excepted), by the Yokohama Specie Bank (Limited), at 120, Bishopsgate Street Within, E.C., where Lists may be obtained, and Coupons must be left three clear days for examination prior to their payment.

For the Yokohama Specie Bank (Limited),
T. S. NISHIMAKI, Manager.

120, Bishopsgate Street Within, London, E.C.
25th June, 1908.
